1199. ACTION OF FORSSMAN ANTISERUM ON BLOOD VESSELS OF SKIN IN GUINEA-PIGS. E.M.I.Berkinshaw-Smith, R.S.Morgan and G.P.Wright: Brit. J. exp. Path., 1962, 43, 665-673 (Dept. Path., Guy's Hosp. Med. Sch., London, England) The action of Forssman Ab, studied histol. and microscopically in the living animal, were mainly vasculonecrotic. Impaired blood flow apparently caused tissue damage, with lesions resembling the reversed passive Arthus phenomenon. D.L.Gardner

ANTIBODY FORMATION

1200. CELLULAR DISCRIMINATION BETWEEN INDIGENOUS AND FOREIGN MATTER. S.V.Boyden: J. theoret. Biol., 1962, 3, 123-131 (Dept. Expt. Path., Curtin Sch. Med. Res., Australian Nat. Univ., Canberra, Australia) A brief review of current knowledge concerning the mechanism by which cells, such as⁵w.b.c. are able to distinguish between 'indigenous' and 'foreign' macromolecules. The immunity reaction is given special consideration. Emphasis is laid on the possibility that 'recognition' by phagocytes and similar cells may be a Immorally mediated phenomenon. CF.Blane

1201. ANTIBODY FORMATION. IV. FORMATION OF RAPIDLY AND SLOWLY SEDIMENTING ANTIBODIES AND IMMUNOLOGICAL MEMORY TO BACTERIOPHAGE O X 174. J.W.Uhr and M.S.Finkelstein: J. exp. Med., 1963, 117, 457-477 (Med. Dept., New York Univ. Sch. Med., New York, N.Y., U.S.A.) Injn. of OX174 bacteriophage into guinea-pigs stim. 19 S Ab at first and 7 S later. At low dose levels the 19 S formation was dose-dependent. The amount of 19 S in the serum could double in 6 to 8 hr. suggesting tflat the amount produced per cell was increasing, in addition to proliferation of the Ab-producing cells. Following a single injn. 19 S synthesis ceased at 10 days after which 19 S disappeared from the circulation with a half life of appiox. 24 hr. A 2nd injn. on day 5 or 9 prolonged 19 S synthesis.[#] Synthesis was also prolonged by injn. of OX174 with endotoxin or by 400 r whole-body X-irradiation 24 hr. after the injn. into rabbits. The 7 S response was detected about 1 week after immunisation at rates independent of the dose, continued for months and led to an Ab response (immunol. memory) during which only 7 S was detected. H.E.HJones

1202. Y-GLOBULIN AND ANTIBODY FORMATION IN VITRO, n. PARALLEL OBSERVATIONS ON HISTOLOGICAL CHANGES AND ON ANTIBODY FORMATION IN THE WHITE AND RED PULP OF THE RABBIT SPLEEN DURING THE PRIMARY RESPONSE, WITH SPECIAL REFERENCE TO THE EFFECT OF ENDOTQXIN. H.L. Langevoort, R.M.Asafsky, E.B.Jacobson, T. de Vries and G.J.Thorbecke: J. Immunol., 1963, 90, 60-71 (Dept. Histol., Univ., Groningen, Netherlands) The 'red'*

IMMUNOLOGY AND EXPERIMENTAL PATHOLOGY

and 'white*' pulp of spleens of rabbits inj. with 10 mg. of BCG or 10 mg. of BCG + 10 μ g. of endotoxin were cultured separately. An increase in the no. of haemocytoblasts occurred in the 'white' pulp from 1 day after Ag injn. Ab formation in vitro occurred at the time of immature plasma cell proliferation (day 4 to 7) and was much more pronounced in the 'red*' than in the 'white' pulp. Most of the plasma cells were found on the border of the *red* and 'white' pulp. Endotoxin enhanced the reactions.

N.R.Jing

1203. FOETAL RESPONSE TO ANTIGENIC STIMULUS. I. PLASMA CELLULAR AND LYMPHOID REACTIONS IN THE HUMAN FOETUS TO INTRA-UTERINE INFECTION. A.M.Silverstein and R.J.Lukes : Lab. Invest., 1962, 11, 918-932 (Armed Forces List. Path., Washington, D.C., U.S.A.) That human foetuses are capable of immunol. response is suggested and discussed with particular reference to congenital syphilis and toxoplasmosis. Autopsy material from 19 cases was studied histol. and plasma cellular and lymphoid reactions assessed. Infected foetuses developed lymphoid tissue more rapidly than controls, the extent of lymphoid and plasma cell response being related to the severity of the disease.

A.M.Mackay

1204. PROPERTIES OF PHAGE-NEUTRALISING ANTIBODIES PRODUCED BY NEWBORN RABBITS. B.Pemis, I.Ghezzi and M.Turri: Nature, Lond., 1963, 197, 807-808 (Clin. Lavoro 'Luigi Devoto', Univ., Milano, Italy) Rabbits inj. within 24 hr. of birth with E.coli T2 bacteriophage in the foot pad produced sp. Ab within 4 to 5 days which was heat-labile, C-dependent and sedimented at 19[^], thus somewhat resembling properdin in the adult.

GM.Lewis

1205. DEVELOPMENT OF IMMUNE RESPONSE. AGGLUTININ RESPONSE TO SALMONELLA FLAGELLAR ANTIGENS IN NEWBORN RABBIT. JJ.Bellanti, D.V. Eitzman, J.B.Robbins and R.T.Smith: J. exp. Med., 1963, 117, 479-496 (Pediat. Dept., Univ. Florida Coll. Med., Gainesville, Fla., U.S.A.) Newborn rabbits were induced to form high titre flagellar agglutinins by the 7th to 10th day of life by injn. of large amount of Salmonella flagellar Ag. A y 1 macroglobulin Ab was first obtained and 77 S y 2 globulins did not appear until the 4th to 5th week of life. In adult animals the macroglobulin Ab was produced for only 3 to 5 days before the 7 S Ab appeared. The infant macroglobulin appeared to be identical with the adult macroglobulin Ab.

H.E.HJones

1206. IMMUNE RESPONSE IN COLD-ACCLIMATED MICE. R.RJ.Chaffee and CM.Martin: Proc. Soc. exp. Biol., N.Y., 1962, 111, 375-377 (Div. Life Sci., Univ. California, Riverside, Calif., U.S.A.) Neither acclimation at 4° nor de-acclimation at 25°, each of 4 weeks, resulted in significant change in the circulating Ab response to i.p. injn. of coliphage strain T2r⁺.

M.M.Shapland

1207. EFFECT OF VARIOUS EXPERIMENTAL PATHOPHYSIOLOGICAL CONDITIONS ON ANTIBODY PRODUCTION. I. INFLUENCE OF DIETS WITH DIFFERENT PROTEIN CONTENTS. L.Bertok and F.Kemenes. n. **METHIONINE DEFICIENCY.** L.Bertok, F.Kemenes and G.Simon: ZJmmun.-Forsch., 1962, 124, 270-279, 280-285 (Vet. Sch., Budapest, Hungary) Six groups of rats were kept on diets of equal caloric value but differing in protein (casein) content: 0, 5% 10% 20% (control), 40% and 80%. On the 23rd day all the rats were infected i.p. with virulent Leptospira ictero-

haemonchiae. They were killed at 56 days. The mean titres of Abrose from 1:1738 (no protein) to 1:6964 (40% protein), but fell off in the 80% protein group. Similar expt. were performed with rats fed on a methionine-deficient diet (glue instead of casein). They produced a mean Ab titre of 1:2528 (controls 1:7510, P< 0.01). Rats given ethionine produced very little Ab and half of them died.

(English) D.P.Winstanley

1208. EFFECT ON ANTIBODY PRODUCTION OF INJECTION OF AN α_2 -PROTEIN FRACTION. J.F.Mowbray: Nature, Lond., 1963, 197, 1019 (Med. Unit. St.Mary's Hosp., London, England) A fraction from serum chromatographed on DEAE cellulose and eluted with 0.5 M pH 5 acetate buffer prolonged the survival time of rat skin homografts and prevented an immune response in rabbits to human albumin or r.b.c. if inj. 1-2 hr. before the Ag.

G.M.Lewis

1209. EFFECT OF LARGE DOSES OF O2-GLYCOPROTEIN FRACTION ON SURVIVAL OF RAT SKIN HOMOGRAFTS. J.F.Mowbray: Transplantation, 1963, 1, 15-20 (M et al ^) St. Mary's Hosp., London, England) Survival of skin homografts between rats of 2 outbred albino strains from different sources was prolonged, in 20% of cases for over 8 months, by i.p. injn. of 25-100 mg. of an O,2" glycoprotein fraction of rat, human or bovine plasma, given within 1 hr. and 72 hr. after grafting. No prolongation resulted if the 1st injn. was given 4 hr. after grafting. In rabbits, the homologous plasma fraction was more effective than human or bovine. No effect was observed on the survival of second-set grafts in either spp. The phenomenon is believed to result from non-sp. suppression of the early stages of the immune response.

J.R.Anderson

1210. ACQUIRED TOLERANCE TO SKIN HOMOGRAFTS IN MICE. I. HISTOLOGICAL ANALYSIS OF LYMPHOID TISSUES BEFORE DURING AND AFTER LOSS OF TOLERANCE. B.F.Argyris: J. exp. Med., 1963, 117, 543-560 (Zool. Dept., Univ., Syracuse, N.Y., U.S.A.) Acquired tolerance to CBA skin homografts gave way to a chronic rejection after 2 months in many C3H mice neonatally inj. with CBA spleen cells. An immune response was observed histol. in the lymphoid tissues of many 4-month old tolerant mice. During graft rejection the immune response was limited to the lymph nodes but was also seen in the spleen after rejection of a 2nd graft by post-tolerant mice. These expt. suggest the development of a host-v.- graft reaction in seemingly tolerant CBH mice, and that tolerance is dependent on a critical balance between the immune potential of the host and the donor cells. As mice mature their immune potential may increase and the host-v#-graft reaction increase to the point where skin grafts are rejected.

H.E.HJones

1211. INDUCTION OF HOMOGRAFT TOLERANCE IN ADULT MICE BY SUBLETHAL X IRRADIATION AND INJECTION OF HOMOLOGOUS SPLEEN CELLS. A.Fefer and W.C.Davis: Transplantation, 1963, 1, 75-78 (Dept. Med., Stanford Univ., Palo Alto, Calif., U.S.A.) The conditions were investigated for inducing tolerance in DBA/2 mice to BALB/c skin grafts by prior whole-body X-irradiation and injn. of the recipients with BALB/c spleen cells. Graft survival was invariably prolonged, sometimes for over 7 months, by 300-400 r (200 r was ineffective), followed 24 hr. later by i.p. injn* of 1% to 100% of the cells obtained from a BALB/c mouse spleen. Injn. of spleen cells 1 hr. or 72 hr. after X-ray was ineffective. Grafts placed 6-17 days after injn.

showed prolonged survival; those placed concomitantly with the injn. were rejected normally. X-rays alone were without effect, and spleen-cell injn. alone hastened rejection. All attempts to induce tolerance across an H-2 difference failed.

J.R.Anderson

1212. LOSS OF PARTIAL TOLERANCE FOLLOWING SUBLETHAL IRRADIATION. W.H.Stone and R.D.Owen: *Transplantation*, 1963, 1, 107-115 (Div. Biol., California Inst. Technol., Pasadena, Calif., U.S.A.) Bi-weekly injn. of sheep r.b.c. were given to rats for 8 weeks, starting within 24 hr. of birth. At 10 weeks some of the rats received 600 r of total body X-irradiation. After further injn., the serum was tested for Ab to sheep r.b.c. Partial tolerance was induced by the early injn., particularly when measured by saline agglutinin titres, but tended to disappear spontaneously, particularly when tested by haemolysin titres. At 18-31 weeks the irradiated animals had developed higher Ab titres, particularly saline agglutinins, than those not irradiated. It is concluded that X-irradiation caused a loss of tolerance. 133 out of 171 rats died before completion of the expt.

J.R.Anderson

1213. DETERMINATION OF SPECIFIC IMMUNOLOGICAL TOLERANCE IN RADIATION CHIMERAS. D.W.Van Bekkum: *Transplantation*, 1963, 1, 39-57 (Radio-biol. Inst.T.N.O., Rijswijk (Z.H.) Netherlands)

'Complete*' chimaerism was produced in various mouse strain combinations by injn. of marrow cells into X-irradiated adults. Reactivity of the chimaeras* donor-strain cells was determined by injn. of spleen cells into newborn mice and examining for graft-vs-host reaction. Sp. tolerance of donor-strain cells for host tissue was rapidly lost on transfer to a new host of different antigenic constitution, sp. tolerance for the new host being developed. When large numbers of lymph node cells were transferred with the marrow cells, tolerance was maintained temporarily in the new host. The results are regarded as evidence against tolerance being an irreversible change and against its being attributable to elimination of clones.

J.R.Anderson

1214. INFLUENCE OF HOST'S SEX ON INDUCTION OF TOLERANCE OF HOMOLOGOUS TISSUES. D.B.Wilson: *Transplantation*, 1963, 1, 79-82 (Wistar Inst., Philadelphia, Pa., U.S.A.) Newborn rats of strongly ¹isto-incompatible strains (BN and Lewis) received an i.v. injn. of marrow cells, and 8-10 weeks later a skin graft, from ² of the other strain. A significantly higher proportion of ² then (¹ tolerated the grafts for over 50 %²ys. In similar expt. with strains of mice having H-2 compatibility, spleen cells were used to induce tolerance, and in some expt. F1 hybrid cells to avoid runt disease: no significant sex differences in induction of tolerance were observed.

J.R.Anderson

1215. MODIFICATION OF IRRADIATION EFFECTS THROUGH ACTIVELY ACQUIRED TOLERANCE TO HOMOLOGOUS BONE MARROW GRAFTS. D.H.Shaw and H.Vermund: *Proc. Soc. exp. Biol.*, N.Y., 1963, 112, 212-216 (Dept. Radiol., Univ. Wisconsin, Madison, Wis., U.S.A.) Pigeons (*Columba livia*) were made tolerant to skin grafts from hybrid *Clivia*¹ and *Coli*². Some were used as donors, some as hosts. Animals were X-irradiated with 2500 rad and inj. with 250 x 10⁶ bone marrow cells. The tolerance of the donor to the host to which its bone marrow was transplanted increased the survival time as compared with the control.

D.N. Wheatley

1216. ADOPTIVE TOLERANCE TRANSFER OF THE TOLERANT STATE. B.F.Argyris: *J. Immunol.*, 1963, 90, 29-34 (Dept. Embryol., Carnegie Inst. of Washington, Baltimore, Md., U.S.A.) Tolerance to skin homografts was induced in mice by i.v. neonatal injn. Lymphoid cells from these mice were transferred to lethally X-irradiated mice of both host and donor strain. The transferred lymphoid cells were mutually tolerant and the host and donor cells from the tolerant animal tolerated each other's type of skin grafts. The tolerance was due to a sp. inhibn. of the immunol. response.

N.R.ling

1217. USE OF ANTIGENIC TISSUE EXTRACTS TO WEAKEN IMMUNOLOGICAL REACTION AGAINST SKIN HOMOGRAFTS IN MICE. P.B.Medawar: *Transplantation*, 1963, 1, 21-38 (Nat.Inst.Med.Res., London, England) The effects of injn. of crude antigenic extracts of donor-strain lymphoid tissue upon the survival of subsequently applied skin grafts of A to C3H mice (strongly incompatible) and of C3H to CBA mice (weakly incompatible) was investigated. Paniculate A-strain Ag injn. i.p. or i.v. sensitised the C3H mice, whereas semi-sol. A Ag sensitised only when inj. i.p. Both 'semi-sol.' and paniculate C3H Ag, inj. i.p., i.v. or sub-dermally, prolonged C3H homograft survival in CBA mice. For both strain combinations, injn. of Ag acted synergistically with X-irradiation, a-methopterin or hyperimmune iso-Ab (but not with Typan Blue) in prolonging homograft survival.

J.R.Anderson

1218. REPRESSION OF DELAYED HYPERSENSITIVITY TO CONJUGATED SERUM ALBUMIN DURING IMMUNE PARALYSIS INDUCED IN GUINEA-PIG BY HETEROLOGOUS PROTEINS. T.Neveu, G.Biozzi, B.N.Halpern, A.Banellec and P.Liacopoulos: *Nature*, Lond., 1963, 197, 1023-1024 (Chair Méd., Expt. Coll. de France, Paris, France) Delayed hypersensitivity reactions to picrylated guinea-pig serum albumin produced in guinea-pigs were inhib. by injn. several days previously of large doses of human or bovine serum proteins, Y^globulins being particularly effective. This immune paralysis lasted only a few weeks. Complete suppression of delayed hypersensitivity was only produced when both systemic and local routes of injn. were used.

G.M.Lewis

1219. IMMUNOLOGICAL UNRESPONSIVENESS PRODUCED IN ADULT GUINEA-PIGS BY PARENTERAL INTRODUCTION OF MINUTE QUANTITIES OF HAPten OR PROTEIN ANTIGEN. J.R.Battisto and J.Miller: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111, 111-115 (Dept. Microbiol., A. Einstein Coll. Med., Yeshiva Univ., New York, N.Y., U.S.A.) Injn. of micro amounts of picryl chloride or bovine Y-globulin into the mesenteric veins prior to sensitisation suppressed delayed hypersensitivity and Ab formation.

M.M.Shapland

1220. INTERFERENCE OF NEWBORN LYMPHOID CELLS WITH ESTABLISHMENT OF IMMUNOLOGICAL UNRESPONSIVENESS TO A PROTEIN ANTIGEN. M.W.Cohen and G.J.Thorbecke: *Proc. Soc. exp. Biol.*, N.Y., 1963, 112, 10-12 (Dept. Pathol., New York Univ. Med. Sctu., N.Y., U.S.A.) Injn. of neonatal thymus and spleen cell suspensions into neonatal mice 2-6 hr. after injn. of 10 mg. of bovine serum albumin resulted in immunol. responsiveness to Ag-challenge at 30-40 days of age. The majority of animals not receiving lymphoid cells at birth were unresponsive to the Ag at 30-40 days.

D.N.Wheatley

1221. ANTIBODY RESPONSE OF RATS DEPLETED OF LYMPHOCYTES BY CHRONIC DRAINAGE FROM THE

IMMUNOLOGY AND EXPERIMENTAL PATHOLOGY

THORACIC DUCT. D.D.McGregor and J.L.Gowans: *J. exp. Med.*, 1963, 117, 303-320 (Dunn Sch. Pathol., Univ., Oxford, England) Chronic lymph drainage from a thoracic duct fistula in rats reduced the lymph node wt. and small lymphocyte content. The primary immune response to tetanus toxoid or sheep r.b.c. was severely depressed or abolished in such animals. Immunol. reactivity could be supplied by injn. of small lymphocytes. The response of lymphocyte-depleted rats to a second injn. of tetanus toxoid was normal. H.E.H Jones

1222. SUPPRESSION OF ANTIBODY FORMING CAPACITY WITH THYMECTOMY IN THE MOUSE. B.W.Papermaster, A.P.Dalmasso, C.Martinez and R.A.Good: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111, 41-43 (Ped. Res. Labs., Variety Club Heart Hosp., Minneapolis, Minn., U.S.A.) Antigenic stimn. with T2 bacteriophage was almost completely abolished by thymectomy performed within 24 hr. of birth. M.M.Shapland

1223. SUPPRESSION OF THE HOMOGRAFT REACTION BY THYMECTOMY IN THE MOUSE. A.P.Dalmasso, C.Martinez and R.A.Good: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111, 143-146 (Dept. Physiol., Variety Club Heart Hosp., Univ. Minnesota Med. Sch., Minneapolis, Minn., U.S.A.) Thymectomy before 24 hr. after birth inhibits immunol. maturation sufficiently to permit acceptance of skin homografts of wide antigenic disparity. M.M.Shapland

1224. SUPPRESSION OF BLOOD GROUP AGGLUTINABILITY OF HUMAN ERYTHROCYTES BY CERTAIN BACTERIAL POLYSACCHARIDES. R.Ceppellini and M.Landy: *J. exp. Med.*, 1963, 117, 321-338 (Univ., Turin, Italy) R.b.c. coated with bacterial capsular polysaccharides were not aggl. by Ab to the blood group Ag. This could not be due to prevention of Ab uptake. Aggl. by Rh-incomplete Ab was restored to the original titre only after the polysaccharide-coated r.b.c. had been subjected to 10 alternate exposures to globulin and anti-globulin. Haemaggl. by Newcastle, mumps and influenza viruses was also suppressed. It is possible that the polysaccharide effect on immune aggl. can be explained as interference with lattice formation. H.E.H Jones

1225. IMMUNOLOGICAL PARALYSIS PRODUCED IN MICE BY KLEBSIELLA PNEUMONIAE TYPE 2 POLYSACCHARIDE. B.A.Batshon, H.Baer and M.F.Shaffer: *J. Immunol.*, 1963, 90, 121-126 (Dept. Microbiol., Tulane Univ. Sch. Med., New Orleans, La., U.S.A.) Mice inj. with varying amounts of Klebsiella pneumoniae type 2 polysaccharide were subsequently challenged with living homologous organisms after varying intervals of time. Of 3 prep. of polysaccharide one was essentially non-toxic and non-immunising, the other 2 were approx. equal in antigenicity. N R.Ling

1226. SPECIFIC IMMUNOLOGICAL UNRESPONSIVENESS TO SYNTHETIC POLYPEPTIDE ANTIGENS. M.Sela, S.Fuchs and M.Feldman: *Science*, 1963, 139, 342-343 (Weizmann Inst. Sci., Rehovoth, Israel) Immunol. unresponsiveness to 2 synthetic polypeptide Ag was produced in adult rabbits by treatment with 6-mercaptopurine, and in newborn animals by injn. of the Ag alone. A normal response to ovalbumin was shown by the "tolerant" animals. G.M.Lewis

1227. PROLONGED SURVIVAL OF HOMOGRAFTS IN MICE TREATED WITH EACA [6-AMINO-N-CAPROIC ACID]. R.W.Gillette, AJFindley and H.Conway:

Transplantation, 1963, 1, 116-117 (Dept. Surg. Cornell Med. Center, New York, N.Y., U.S.A.) Letter to editor. J.R.Andeison

1228. SUPPRESSION OF HOMOGRAFT RESPONSE BY PRE-TREATMENT WITH ANTITUMOUR AGENTS. S.R. Humphreys, J.P.Glynn and A.Goldin: *Transplantation*, 1963, 1, 65-69 (Lab. Chem. Pharmacol., Nat. Cancer Inst., N.I.H., Bethesda, Md., U.S.A.) The suppression of the homograft response in C57BL *a* mice by antitumour agents was assessed by giving the agents for 5 days and 24 hr. later injecting s.c. leukaemic (L 1210) spleen cells from (BALB/c X DBA/2J)Fi cfmice. Tumour growth was regarded as a measure of the effectiveness of suppression of the immune response. Of the agents tested, Mephelan and triethylene melamine were equally and the most effective, then, in decreasing order, Cytoxin, X-rays, 6-mercaptopurine and amethopterin.

J.R. Anderson

IMMUNOCHEMISTRY

1229. IMMUNOCHEMICAL STUDY OF RABBIT Y-GLOBULIN ALLOTYPEs. S.Leskowitz: *J. Immunol.*, 1963, 90, 98-106 (Dept. Bacteriol., Harvard Med. Sch Boston, Mass., U.S.A.) Rabbit Ab to purified y-globulin (inj. as an alum ppt. or in oil adjuvant) were shown by precipitin studies to be directed towards Ag determinants occurring on fragments I and II. Similar allotype sp. Ab could be produced in goats by immunisation with one type of rabbit y globulin and absorption with another type. Immunisation with sp. ppt., containing rabbit Ab in Freund adjuvant, produced an Ab sp. for human y-globulin in addition to the rabbit allotype-sp. Ab. N.R.Ling

1230. ELECTROPHORETIC DETERMINATION OF C-REACTIVE PROTEIN [CRP] WHICH APPEARS FOLLOWING SURGERY. M.Hornung and T.M.Morris: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111, 25-30 (Dept. Microbiol., Tulane Univ. Sch. Med., New Orleans, La., U.S.A.) Electrophoretic examination of post-operative sera containing CRP showed a rise in a -globulin. $(\text{NH}_4)_2\text{SO}_4$ fractionation of CRP revealed no y -globulin.

M.M.Shapland

1231. RELATION OF IMMUNOLOGICAL AND ENZYMIC PROPERTIES TO STRUCTURAL MODIFICATIONS OF PEPSINOGEN. R.Amon and G.E.Perlmann: *J. biol. Chem.*, 1963, 238, 963-968 (Rockefeller Inst., New York 21, N.Y., U.S.A.) Pepsinogen and tyrosylated pepsinogen were antigenic, the latter stimulating production of larger amounts of Ab. Although pepsinogen, tyrosylated pepsinogen, and iodinated pepsinogen had some antigenic sites in common, the antisera reacted most strongly with their homologous Ag. Pepsin cross-ppt. with Ab to tyrosylated pepsinogen but not with antipepsinogen, which showed greater similarity of the conformation characteristics with the tyrosylated deriv. than between the enzyme and its zymogen. In the passive cutaneous anaphylaxis technique, pepsin reacted both with antipepsinogen and with Ab to tyrosylated pepsinogen. Iodinated pep'sinogen, although 80% inactivated, reacted fully with the Ab to pepsinogen, showing that the enzymic and antigen⁺ sites of the protein differ.

J.N.Ashley

1232. TWO MAJOR TYPES OF NORMAL 7 S Y-GLOBULIN. M.Mannik and H.G.Kunkel: *J. exp. Med.* 1963, 117, 213-230 (Rockefeller Inst. Med. Res., New York, N.Y., U.S.A.) Normal 7 S human y-globulin consisted of 2 antigenic groups of mol., corresponding to group 1 or group 2 multiple myeloma proteins and Bence-Jones proteins. The possible existence of a 3rd antigenic group constituting about 10% of the total normal Y-globulin is discussed. H E H Jones

1233. RECOVERY OF ANTIBODY COMBINING ACTIVITY BY INTERACTION OF DIFFERENT PEPTIDE CHAINS ISOLATED FROM PURIFIED HORSE ANTI-TOXINS.

F.Franek and R.S.Nezlin: *Folia Microbiol.*, 1963, 8, 128-130 (Dept. Immunol., Microbiol. Inst., Czechoslovak. Acad. Sci., Prague, Czechoslovakia) Ab specificity of horst antitoxins was determined by the H^{*} chain but the presence of L-chain was necessary for formation of a fully active combining site. L chains of one Ab could not be fully substituted for by L chains from an Ab of different specificity isolated from another individual.

J.R.Sargent

1234. PRECIPITIN REACTION BETWEEN NATURALLY OCCURRING HUMAN DEXTRAN-REACTING ANTIBODIES AND SICr TAGGED DEXTRAN. L.Jacobsson and R.Wikstr'Om: *Scand. J. clin. Lab. Invest.*, 1963, 15, Supp. 69, 114-120 (Dept. Clin. Chem., Royal Med. Sch., Umea, Sweden)

There were different types of naturally occurring human dextran-reacting Ab, the presence of which was most readily explained by the cross-reactivity of dextran. The use of [⁵¹Cr]dextran is suggested to be a convenient method in the study of dextran-reacting Ab.

KJones

1235. FLUORESCENT ANTIBODY STAINING. II. INHIBITION BY SUB-OPTIMALLY CONJUGATED ANTIBODY GLOBULINS. G.Goldstein, B.H.Spalding and W.B. Hunt, jun.: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111, 416-421 (Dept. Microbiol., Univ. Virginia Sch. Med., Charlottesville, Va., U.S.A.) Max. brightness of sp. staining was only obtained after fractionation on DEAE-cellulose column to separate the optimally conjugated from the over- and under-conjugated globulins.

< M.M.Shapland

1236. COMPARISON OF FLUORESCEIN-LABELLED Y" GLOBULINS PURIFIED BY RIVANOL AND DEAE CHROMATOGRAPHY. L.H.Frommhagen and MJ.Martins: *J. Immunol.*, 1963, 90, 116-120 (Viral and Rickettsial Dis.Lab., California State Dept. Publ. Hlth., Berkeley, Calif., U.S.A.) Prep. of fluorescein-labelled y-globulins obtained by Rivanol [2-ethoxy 6, 9 diaminacrine-lactate] fractionation were comparable to DEAE Y" globulin in recovery of Ab and specificity of fluorescent staining. In some virus-cell systems (NH)aSO₄ pptd. globulins conjugated at low fluorescein-protein ratios &¹⁰d passed through Sephadex* were comparable. N.R.Iing

1237. THE APPLICATION OF IMMUNE E.M. TO THE DEMONSTRATION OF ANTIGENIC SITES IN BIOLOGICAL SYSTEM. J.F.Metzger and C.W.Smith: *Lab. Invest.*, 1962, 11, 902-911 (Inst. Path., Washington, D.C., U.S.A.) A.M.Mackay

1238. USE OF ANTIGEN CELLULOSE SUSPENSIONS FOR THE ISOLATION OF SPECIFIC ANTIBODIES. N.R. Gydal and R.R.Porter: *Biochim. biophys. Acta*, 1963, ^1, 185-187 (Dept. Immunol., St. Mary's Hosp. Med. Sch., London, England) A more detailed study of Pbell's method indicated that Ab could be prep. on a 10~200 mg. scale free of inactive protein. B.M.Stevens

1239. NON-IMMUNE GEL PRECIPITIN TESTS WITH AN ENZYME ANTIGEN. J.L.Niece and J.T.Barrett:

Nature, Lond., 1963, 197, 1021 (Dept. Microbiol., Sch. Med., Univ. Missouri, Columbia, Miss., U.S.A.)

Expt. with bovine carboxypeptidase A and its rabbit anti-serum revealed spurious precipitin bands in gel tests, one due to enzymic activity and one to a degradation product. It is concluded that in such systems, spurious bands may arise from the enzymic activity of an Ag functioning only as an enzyme, or conversely, the antigenic activity of an enzyme functioning only as an Ag.

1240. ELECTROPHORETIC AND IMMUNOLOGICAL CLASSIFICATION OF M-COMPONENTS IN SERUM. R.Bachmann and C.-B.Laurell: *Scand. J. clin. Lab. Invest.*, 1963, 15, Supp. 69, 11-24 (Dept. Clin. Chem., Gen. Hosp., MalmO, Sweden)

The prep. of rabbit antisera for immunol. classification of M-components and the criteria used for the classification of M-components are described. The paper electrophoretic distribution of the M-components of the different immunol. types is described. The prop. of the M-components are discussed, and it is concluded that all the components studied have immunoglobulin characteristics.

KJones

1241. IMMUNOELECTROPHORESIS ON CELLULOSE ACETATE. B.Laurent: *Scand. J. clin. Lab. Invest.*,

1963, 15, 98-101 (Dept. Clin. Chem., Univ. Hosp., Turku/Abo, Finland).

KJones

1242. SPECTROPHOTOMETRIC INVESTIGATIONS OF THE REACTION BETWEEN A HAEMOLYTIC VIRUS AND SPECIFIC HAEMOLYSIS-INHIBITING ANTIBODIES

USING THE VIRUS OF ATYPICAL FOWL-PEST [NEWCASTLE DISEASE VIRUS]. A.R.Neurath: *Z. Immun.-Forsch.*, 1962, 124, 164-172 (Res. Inst. Bioveta, Nitra, Czechoslovakia)

The action of a haemolytic virus in the presence of decreasing concn. of sp. antiserum was followed by spectrophotometric measurement of the Hb released. The method was capable of mathematical analysis.

(German) D.P.Winstanley

1243. QUALITATIVE DIFFERENCES IN THE MECHANISM OF COMPLEMENT FIXATION. F.Peetoom, K.W.Pondman, M. van der Hart and JJ. van Loghem: *Nature, Lond.*, 1963, 197, 911 (Dept. Immunochem., Central Lab., Netherlands Red Cross Blood Transf. Serv., Plesmanlaan 125, Amsterdam, Netherlands)

An anti-C^f serum was obtained by immunising rabbits with egg albumen/anti-egg albumen ppt. with bound human C. Sensitised Lewis cells removed anti-C'3a and anti-C'4, whereas r.b.c. sensitised with incomplete cold Ab exhausted anti-C'4 only in vivo; sensitised r.b.c. from patients with cold-type haemolytic anaemia absorbed neither.

G.M.Lewis

1244. PREPARATION OF COMPLEMENT REAGENTS BY MEANS OF GEL FILTRATION. K.-E.Fjellstrom: *Acta path. microbiol. scand.*, 1962, 54, 439-448 (Dept.

Clin. Chem., Univ. Hosp., Uppsala, Sweden)

A new method for the prep. of reagents R1 and R2 for C^f titration is described. Gel filtration by means of Sephadex G25 and an elution buffer of low ionic strength and pH were used to ppt. C^f 1 in the euglobulin fraction, leaving C^f 2 in the supernatant pseudoglobulin fraction. In this way the time necessary for prep. could be reduced an hr. The reagents obtained fulfilled the criteria for adequate R1 and R2.

L.Friedmann

IMMUNOLOGY AND EXPERIMENTAL PATHOLOGY

1245. MEASUREMENTS OF COMPLEMENT BY AGGLUTINATION OF HUMAN R.B.C. REACTING IN IMMUNE-ADHERENCE. K.Nishioka: *J. Immunol.*, 1963, 90, 86-97 (Lab. Microbiol., Hughes Med. Inst., Miami, Fla., U.S.A.) Measurements of immune adherence haemagglutination were made in 7 Ag-Ab systems: hen albumin, bovine serum albumin, bacteriophage T2, Brucella abortus, Salmonella typhosa, S. enteritidis and sheep r.b.c., using 1-0 ml. of reaction mixture containing 2×10^7 human r.b.c. The same reaction mixture required 100 to 200 times as much serum to induce immune haemolysis. At least 4 components of C were required. N.R.Ling

EXPERIMENTAL ONCOLOGY

1246. ULTRASTRUCTURAL ALTERATIONS IN HAMSTER CHEEK POUCH EPITHELIUM IN RESPONSE TO CARCINOGEN. M.A.Istgarten, J.T.Albright and P.Goldhaber: *Arch. oral Biol.*, 1963, 8, 145-165 (Dept. Oral Histopathol., Harvard Sch. Dent. Med., Boston, Mass., U.S.A.) 7,12-Dimethylbenzanthracene applications produced a marked disturbance in the intercellular relationship of epithelial cells. Widening of the intercellular spaces occurred on the 2nd day. Similar changes which may facilitate the penetration of a carcinogen to the stratum germinativum and the underlying connective tissue occurred when non-carcinogenic xylene was applied. The most striking feature of the tumour cells was a peculiar clumping of tonofibrils on the periphery of the cytoplasm, with depletion of the tonofibrils in the rest of the cytoplasm. *

1247. EFFECT OF CASTRATION AND OF ADDITIONAL HORMONAL TREATMENTS ON THE INDUCTION OF CERVICAL AND VULVAL TUMOURS IN MICE. A. Glucksman and CP.Cheney: *Brit. J. Cancer*, 1962, 16, 634-652 (Strangeways Res. Lab., Cambridge, England) ? C3H and Strong A mice were painted intravaginally with a 1% acetone so ln. of DMBA, once weekly. Ovariectomy increased the incidence of mucoepidermoid carcinomas of cervix. Treatment of castrate mice with progesterone increased the adenocarcinomatous content of the tumours, whereas stilboestrol resulted in induction of squamous cell carcinomas only. In treated mice there was a papilloma incidence in the cervix of 31%, compared with 7% in intact mice. The vulval tumour yield was much higher in castrates than in intact animals. There were no significant differences in response between the 2 strains. D.Hamer

1248. INDUCTION OF MAMMARY CANCER IN RATS. E.Boyland and K.L.Sydnor: *Brit. J. Cancer*, 1962, 16, 731-739 (Chester Beatty Res. Inst., London, England) A soln. of 7,12-dimethylbenz-[a]-anthracene in arachis oil was fed to rats in 3 doses at fortnightly intervals. 5 strains of rat were used: Wistar, Sprague-Dawley, Chester Beatty, August and Marshall. Tumour incidence was very high (90-100%) in the first 4 strains but was zero in the case of the Marshall strain. Tumour development took longer in August strain but a similar high yield developed. 1 'Sty of uracil or thymine in diet reduced tumour induction. D.Hamer

1249. TRICYCLOQUINAZOLINE [TCQ] CARCINOGENESIS: INTERACTION OF CARCINOGEN WITH SKIN COMPONENTS. R.W.Baldwin, H.C.Palmer and M.W.Partridge: *Brit. J. Cancer*, 1962, 16, 740-748 (Cancer Res. Lab., Univ., Nottingham, England) TCQ

is an epidermal carcinogen for mouse skin. Skin extracts were hydrolysed and fractionated to determine location and binding of the carcinogen. Unlike hydrocarbon carcinogens there was no evidence of firm binding of TCQ to epidermal proteins at any stage during carcinogenesis nor to nucleic acid fractions. The carcinogen did not appear to be associated with any particular lipid fraction.

D.Hamer

1250. NEOPLASMS OF RAT URINARY BLADDER AND LIVER. R.Oyasu, D.A.Miller, J.H.McDonald and G.M. Hass: *Arch. Path.*, Chicago, 1963, 75, 184-190 (Presbyterian-St. Luke's Hosp. Div. Path., Chicago, Ill., U.S.A.) Charles River Wistar o rats approx. 6 weeks old were fed synthetic diets containing 0*06% 2-acetylaminofluorene (2-AAF). Two groups received also 1*6% and 3*2% indole. Rats receiving indole survived longer than those treated with 2-AAF alone. The incidence of bladder tumours was highest in 2-AAF/indole rats. With increase in indole ingestion, benign liver tumours became more common, but malignant liver neoplasms decreased in no. 2-AAF/Indole rat bladder tumours were correlated with the degree of liver damage. No tumours were found in rats fed indole without 2-AAF. R.Mitchell

1251. EFFECTS OF TUMOUR INITIATING AGENTS ON MOUSE SKIN SULPHYDRYL LEVELS. G.Calcutt and D. Doxey: *Brit. J. Cancer*, 1962, 16, 806-810 (Mount Vernon Hosp., Northwood, Middx., England) Strong A mice were given skin paintings with tumour initiating agents and, at intervals up to 24 hr. total-SH and TCA-Sol.-SH were determined in the skin. There was no general reaction pattern by which active initiators could be distinguished from related inactive compounds. D.Hamer

1252. SHORT-TERM TEST FOR CARCINOGENICITY. P.M.Peacock: *Brit. J. Cancer*, 1962, 17, 701-706 (Royal Beatson Mem. Hosp., Glasgow, Scotland) A range of polycyclic hydrocarbons (deriv. of pyrene and anthracene) were tested against embryonic skin, lung, stomach and urinary bladder homografts in BALB/c mice. Tumours were induced in more than one type of tissue by active compounds and only 16 weeks was necessary to obtain a reaction. The results obtained correlated well with the known carcinogenic prop. of the hydrocarbons examined. D.Hamer

1253. RELATION BETWEEN PSEUDOPREGNANCY AND THE CHEMICAL INDUCTION BY FOUR CARCINOGENS OF MAMMARY AND OVARIAN TUMOURS IN BALB/c MICE. C.Biancifiori and F.Cashcera: *Brit. J. Cancer*, 1962, 16, 722-730 (Univ. Study, Perugia, Italy) In BALB/c mice pseudopregnancy enhanced mammary carcinogenesis by hydrocarbons e.g. DMBA from 5% to 47%, benzopyrene from 0% to 35%. 1,2:5,6-dimethylbenzanthracene and methylcholanthrene, given orally in almond oil, induced granulosa cell tumours of the ovary in virgin and pseudopregnant mice. D.Hamer

1254. CHOLESTEROL AS A CARCINOGEN. L.Hieger: *Brit. J. Cancer*, 1962, 16, 716-721 (Chester Beatty Res. Inst. London, England) Strain differences in the susceptibility of mice to tumour induction by cholesterol were examined. The cholesterol was given by s.c. injn. of 0-02 ml. of 9% soln. in olive oil. Precautions were taken to

ensure that variation in results was not attributable to variation in the vehicle or to outside contamination with carcinogens. Strains Buffalo (16/50) and BRO (9/50) were particularly sensitive and the latter strain also developed sarcomas (4/35) from injn. of croton oil (0*4%) alone.

D.Hamer

1255. INFLUENCE OF CROTON OIL STIMULATION ON TUMOUR INITIATION BY URETHANE IN MICE. A.W. Pound and J.R.Bell: Brit. J. Cancer, 1962, 16, 690-695 (Pathol. Dept., Brisbane Hosp., Brisbane, Queensland, Australia) cf mice of the 'Hall*' strain were inj. with urethane at various intervals before a 20-week period of weekly paintings with croton oil in acetone. Some groups of mice also received croton oil paintings prior to urethane injn. Paintings with croton oil at 18, 24 or 48 hr. before urethane injn. increased the tumour yield, but paintings at shorter or longer periods before injn. had no measurable effect.

D.Hamer

1256. LUNG CARCINOGENESIS BY URETHANE IN NEW-BORN, SUCKLING, AND ADULT SWISS MICE. G.De Benedictis, G.Maiorano, L.Chiaco-Bianchi and L.Fiore-Donati: Brit. J. Cancer, 1962, 16, 686-689 (tost. Anat. Patol., Univ., Bari, Italy) Newborn mice inj. with a single dose of urethane developed lung tumours more rapidly and in higher yield than mice receiving urethane at a young adult age. Urethane given to lactating mothers induced lung tumours in a high % of offspring. Indirectly it was shown that urethane was passed on through the maternal milk.

D.Hamer

1257. A POSSIBLE TWO-STAGE MECHANISM IN RHABDOMYOSARCOMA INDUCTION IN RATS. N.Haran-Ghera, N.Trainin, L.Jiore-Donati and I.Berenblum: Brit. J. Cancer, 1962, 16, 653-664 (Dept. Expt. Biol., Weizmann Inst. Sci., Rehovoth, Israel) Albino rats of Wistar origin were used and effects of partial X-irradiation of body coupled with partial hepatectomy were studied. Many tumours were obtained, mainly sarcomas: 31/92 in rats having X-rays followed by hepatectomy, 21/92 when hepatectomy preceded X-irradiation, 26/96 with X-rays alone. 7/9 rhabdomosarcomas occurred in abdominal scars when X-rays followed hepatectomy, suggesting that X-rays acted as an initiating factor and wound healing as a promoting factor.

D.Hamer

1258. CANCER INDUCTION IN HAMSTERS BY HUMAN TYPE 12 ADENOVIRUS. EFFECT OF AGE AND OF VIRUS DOSE. Y.Yabe, J.J.Trentin and G.Taylor: Proc. Soc. exp. Biol., N.Y., 1962, 111, 343-344 (Div. Expt. Biol., Baylor Univ. Coll. Med., Houston, Tex., U.S.A.) The susceptibility of newborn hamsters to induction of sarcomas decreased rapidly with increasing age at the time of injn. For a given age at time of injn., the incidence of tumours induced was directly proportional to the inj. virus dose.

M.M.Shapland

1259. SEARCH FOR VIRUS IN HUMAN MALIGNANCIES. E. IN VIVO STUDIES. AJ.Girardi, M.R.Hilleman and R.E.Zwickley: Proc. Soc. exp. Biol., N.Y., 1962, 111, 84-93 (Div. Virus and Tiss. Cult. Res., Merck Inst. Therap. Res., West Point, Pa., U.S.A.) No statistically significant difference was found in tumour incidence of Swiss mice and hamsters inoc. with specimens crj^{yed} fr^m human malignant tissues when compared with ^ tr^s.

M.M.Shapland

1260. BIOLOGICAL AND PHYSICO-CHEMICAL FEATURES OF A BLASTOMOGENIC AGENT FROM HUMAN SARCO-

MATOUS TISSUE. A.LAgeenko: Folia Biol., Praha, 1963, 9, 27-33 (Hertzen State Oncol. Inst., Moscow, U.S.S.R.) The agent was inactivated by addition of *Vjo* formalin soln. and on irradiation with radioactive cobalt (125, 400 r). Activity was not influenced by u.v., and only partially affected by ether treatment. The material could be maintained in an active condition for up to 2 weeks in 50% glycerine at -14°. The agent was shown to be a nucleoprotein complex by enzyme degradation expt.

M.S.Laverack

1261. REACTION OF CERTAIN MOUSE AND HAMSTER TUMOUR TISSUE CULTURES TO POLYOMA VIRUS.

H.E.Pearson: Proc. Soc. exp. Biol., N.Y., 1962, 111, 332-334 (Dept. Publ. Hlth., Univ. S. California Sch. Med., Los Angeles, Calif., U.S.A.) Tumour cells were classified according to their reaction to polyoma virus. Group 1 cells had no morphological changes and virus only persisted a few weeks (murine RC carcinoma and HT6 fibrosarcoma); Group 2 cells had variable degrees of cytolysis and morphological changes and virus persisted several weeks (L2 and 1210 lymphomas); Group 3 cells had no morphological change with persistent virus (adenocarcinoma WT, Pearson); Group 4 cells had cytolysis with virus persisting for months (unclassified mouse tumour).

M.M.Shapland

1262. MALIGNANT NEOPLASMS INDUCED IN RATS BY EXTRACTS FROM HUMAN SARCOMATOUS TISSUE.

A.I.Ageenko: Folia Biol., Praha, 1963, 9, 20-26 (Hertzen State Oncol. Inst., Moscow, U.S.S.R.) Cell-free extracts from sarcomas taken from human patients were inj. i.p. into rats in two doses 21 days apart. Sarcomas were induced in the rats (11%) in various situations, with a latency of 17*2 months. Rats previously X-irradiated (200 or 150 r) were slightly more susceptible (14-8% developed tumours) and showed a shorter latency (14-7 months). Animals treated with 20-methylcholanthrene or DMBA in doses of 0*005 mg. s.c. showed a tumour incidence of 20*1% with a latency of 11*1 months. The tumour-inducing activity was heat labile at 90° for 40 min.

M.S.Laverack

1263. MECHANISM OF ACTION OF SHOPE RABBIT PAPILLOMA VIRUS. I. INDUCTION OF ARGINASE IN INFECTED CELLS. S.Rogers and M.Moore: J. exp. Med., 1963, 117, 521-542 (Univ. Tennessee Mem. Res. Center, Knoxville, Tenn., U.S.A.)

Evidence is presented showing that information of synthesis of arginase is derived from the virus and not from the rabbit. Domestic rabbit papillomas induced with purified virus derived from wild rabbit papillomas contained an Ag like a wild rabbit Ag, which was distinct from arginase, the protein coat of the virus, or the Vx-2 Ag. The presence of the wild rabbit Ag seemed to indicate integration of the virus DNA in the host genome of the wild rabbit.

H.E.H.Jones

1264. INDUCTION OF MALIGNANCY IN VITRO IN NEW-BORN HAMSTER KIDNEY TISSUE INFECTED WITH SIMIAN VACUOLATING VIRUS (SV40). A.S.Rabson and R.L.Kirchstein: Proc. Soc. exp. Biol., N.Y., 1962, in 323-328 (Nat. Cancer Inst., Nat. Inst. Hlth., Bethesda Md., U.S.A.)

Cell cultures of newborn hamster kidney infected with SV40 consisted of rapidly growing sheets of cells. Cell suspensions from these cultures inj. into newborn hamsters produced tumours as early as 17 days after injn. Tumours were mainly undifferentiated with areas of adenocarcinoma, sarcoma, and in one case, epidermoid carcinoma.

M.M.Shapland

1265. A DIETARY FACTOR INFLUENCING LYMPHOID TUMOUR OF THE CHICKEN. C.OlsOn, T.N.Fredrickson, S.Tekeli and H.R.Bird: Proc. Soc. exp. Biol., N.Y., 1962, 111, 44-47 (Dept. Vet. Sect., Univ. Wisconsin, Madison, Wis., U.S.A.) An increased incidence of lymphoid tumours in expt. exposed birds was observed after inclusion of one particular batch of cod-liver oil in the diet, but not with a 2nd batch.

M.M.Shapland

1266. EFFECT OF URETHANE ON PULMONARY TUMOURS PRODUCED BY METHYLCHOLANTHRENE. R.H.Rigdon: Tex. Rep. Biol. Med., 1963, 21, 65-73 (Dept. Path., Univ. Texas Med. Branch, Galveston, Tex., U.S.A.)

Pulmonary neoplasms in the duck resulting from the intratracheal injn. of methylcholanthrene were not influenced by the intratracheal injn. of urethane when the latter was given before, at the same time, or following the methylcholanthrene injn. Pulmonary tumours in ducks were greater when the methylcholanthrene was given to birds 35 days old than in those 101 days old. AJ.Martin

1267. EFFECT OF RNA FROM NORMAL BONE MARROW ON LEUKAEMIC MARROW IN VIVO, S. de Carvalho: Nature, Lond., 1963, 197, 1077-1080 (Lab. Haematol., Doctors' Hosp., Cleveland, Ohio, U.S.A.) Following intra-osseous instillation of normal marrow RNA to patients with leukaemia, a marked drop in the no. of leukaemic cells and marked increase in the no. of erythroblasts, myelocytes and megakaryocytes occurred in marrow, but not peripheral blood. This effect was transient. I.v. injn. of EDTA followed by normal marrow to leukaemic patients induced similar transient changes in peripheral blood. J.R.Sargent

1268. CHANGES IN SERUM PROTEINS DURING METHYL CELLULOSE INDUCED REGRESSION OF MURPHY-STURM LYMPHOSARCOMA. Z.Hruban, A.Lazar and A^lesers: Lab. Invest., 1963, 12, 25-32 (Pathol. Dept., Chicago Univ., 111, U.S.A.) For 38 days i.p. injn. of methyl cellulose were given to tumour-bearing rats starting before and after transplantation. Serum electrophoretic patterns were studied at intervals during tumour regression, when high levels of α -globulin, elevated β -globulin, but normal total protein were noted. This occurred despite the delayed immune response to tumour as evaluated by the appearance of splenic pyroninophilic cells and lymphocytes. A.M.Mackay

1269. INFECTION AND MALIGNANT TUMOURS. III. EFFECT ON TUMOURS OF PHAGE LYSATES OF HAEMOLYTIC STREPTOCOCCI. E.A.Christensen: Acta path. microbiol. scand., 1963, 57, 175-187 (Statens Serum Inst., Strept. Dept., Copenhagen, Denmark) Brown-Pearce carcinoma could be inhibited in young rabbits by lysates of haemolytic streptococci provided that: the doses were so large that they approached the toxic level; the injns. were distributed over 3 weeks starting between the 2nd and 8th day after transplantation. Lysates of haemolytic streptococci did not prolong the median survival time of mice with Ehrlich ascites carcinoma.

Uriedmann

1270. ATTEMPTED TUMOUR THERAPY COMPLICATED BY A VIROID ASSOCIATE OF THE TUMOUR. K.Lapis and A.J.S.Davies: Brit. J. Cancer, 1962, 16, 763-769 (Chester Beatty Res. Inst., London, England) The effects of Degranol or X-irradiation, both with or without bone marrow therapy, was tested on the survival of CBA mice carrying transplanted NK/Ly ascites tumours. Recovery was very low and from a study of the anaemia of

the mice it was concluded that the animals died before haematopoietic recovery, due to presence of a virus or virus-like entity in the tumour.

D.Hamer

1271. ANAEMIA ASSOCIATED WITH THE NK-LYMPHOMA IN MICE. A.J.S.Davies, A.M.Crassand K.Lapis: Brit. J. Cancer, 1962, 16, 770-781 (Chester Beatty Res. Inst., London, England) NK/Ly ascites cells, and serum or r.b.c. from tumour-bearing CBA mice induced anaemia on injn. into other CBA mice. This did not seem to be due to Ab reaction. It was concluded on the basis of filtration, deactivation and similar studies that the agent, designated NKLA, was viroid in nature. D.Hamer

1272. DINITROPHENOL INHIBITION OF PITUITARY ADENOMA FORMATION IN MICE FED PROPYL THIOURACIL. D.W.King, F.G.Bock and G.E.Moore: Proc. Soc. exp. Biol., N.Y., 1963, 112, 365-366 (Biol. Sm., Roswell Park Mem. Inst., Springville, N.Y., U.S.A.) Addition of 0.5 g. of 2,4-DNP/kg. of diet reduced the incidence of pituitary adenomata induced with propylthiouracil in C57BL mice. Tumours which formed in the diet supplemented group were not circumscribed adenomata.

D.N.Whcatley

1273. INFLUENCE OF TUMOUR FRACTIONS ON INCIDENCE OF SPONTANEOUS MAMMARY TUMOURS IN C3H/HeJ MICE. L.G.Nutini, J.E.Prince, A.G.Duarte, R.Juhasz and E.S.Cook: Proc. Soc. exp. Biol., N.Y., 1963, 112, 315-318 (Div. Exp. Med., Inst. DM Thomae, Cincinnati, Ohio, U.S.A.) The incidence of spontaneous turnouts in C3H, HeJ virgin mice was reduced by treatment of the young animals with one to 6 injns. of an alcohol-sol., protein-free extract from a transplantable tumour (dbrB adenocarcinoma in DBA/l mice) or spontaneous tumours (In these C3H mice). The treatment was probably most effective in the early stages if injn. i.p. but the effect of the 2 extracts given i.v. did not show any significant effect until some 225 days after the beginning of the expt.

D.N.Wheatley

1274. USE OF IMMUNOLOGICALLY COMPETENT CELLS IN THE TREATMENT OF CANCER: EXPERIMENTS WITH A TRANSPLANTABLE MOUSE TUMOUR. M.F-A. Woodruff and M.O.Symes: Brit. J. Cancer, 1962, 16, 707-715 (Dept. Surgical Sci., Univ., Edinburgh, Scotland) An A-strain mammary carcinoma was transplanted into A-strain mice. 5 days later groups of mice were subjected to various treatments, involving 400 r whole-body radiation plus injn. of allogeneic lymphoid cells from CBA mice or CBA immunised against the A-tumour. Tumour development was retarded or prevented but there was no increase in survival time due to early death from graft-vs-host reaction. Amethopterin did not prevent this complication.

D.Hamer

1275. CHEEK POUCH OF THE SYRIAN HAMSTER AND IMMUNITY TO HETEROTRANSPLANTATION OF A MURINE LEUKAEMIA. R.A.Adams: Nature, Lond., 1963, 197, 1021-1023 (Children's Cancer Res. Fdn, Children's Hosp., Boston, Mass., U.S.A.) Murine leukaemia AK-4 was successfully transplanted into lethally X-irradiated hamsters when introduced i.v. by orbital puncture. Prior exposure of the host to AK-4 or some other leukaemic strains prevented leukaemic re-population of the bone marrow and viscera upon challenge after irradiation. Failure of many transplants to grow in the cheek pouch was due to an immunological reaction. A slight radiation protective effect was noted in animals given prior exposure to AK-4 cells.

G.M.Lewis

1276. BIBLIOGRAPHY OF TUMOUR TRANSPLANTATION. ADDENDUM No.6. A.H.Handler: *Transplantation*, 1963, I, 118-127 (Lab. Tumour Transplantation, Children's Cancer Res. Found., Boston, Mass., U.S.A.) This continues the bibliography section of *Transplant. Bull.* The addendum gives 201 ref. for the whole of 1961.

J.R.Anderson

1277. AUTO-IMMUNE SELECTION OF CARCINOMA CELLS IN MAN. R.B.Goudie: *Nature*, Lond., 1963, 197, 1020 (Univ. Dept. Pathol., Western Infirmary, Glasgow, Scotland) Consideration of the incidence of carcinoma in 3 common diseases involving auto-immunisation in man (thyroiditis, ulcerative colitis and Pernicious anaemia) suggests that auto-Ag loss and immunol. selection occur in tumours of the thyroid, colon and possibly the stomach. CM.Lewis

1278. IN VITRO STUDIES OF MAMMALIAN SOMATIC CELL VARIATION. I. DETECTION OF H-2 PHENOTYPE IN CULTURED MOUSE CELL LINES. II. ISO-IMMUNE CYTOTOXICITY WITH CULTURED MOUSE LYMPHOMA AND SELECTION OF RESISTANT VARIANTS. H.M.Cann and L.A.Herzenberg: *J. exp. Med.*, 1963, 117, 259-265, 267-284 (Gen. Dept., Stanford Univ. Med. Sch., Palo Alto, Calif., U.S.A.) I. The isoantigenic phenotype of the H-2 locus was detected by isohaemagglutinin absorption in a line of mouse lymphoma cells and in 2 established lines of fibroblastic mouse cells. Quant. absorption suggests that there was a higher concn. of H-2 isoAg in the lymphoma cells than in the other 2 lines.

II. When lymphoma cells were incubated with anti-H-2 isoAb and C¹¹¹ 99% of the cells were killed. The viability of cells exposed to Ab alone was unaltered. This effect was sp. for the Ab to the isoAg of the H-2 locus. Variant cells resistant to the cytotoxic action of anti-H-2 isoAb were isolated from lymphoma cell populations surviving multiple exposures to isoAb and C¹¹¹. These could be distinguished morphol. from the sensitive parent-cell line, and possessed a lower concn. of the H-2 isoAg than the Parent cells. H.E.H.Jones

1279. RAT LIVER CELL ANTIGENS DURING THE EARLY STAGES OF AZO DYE CARCINOGENESIS. R.W.Baldwin: *Brit. J. Cancer*, 1962, 16, 749-756 (Cancer Res. Lab., Univ., Nottingham, England) Livers from Wistar rats which had been fed a diet containing 0.06% of 4-Qimethylaminobenzene were fractionated and the cyto-Pksmic Protein fraction analysed immunochem. by agar gel diffusion. There were changes in concn. of normal antigenic components during the early stages of dye feeding and an abnormal Ag was found which did not cross-react with Ag of normal liver. A cross-reaction was obtained between proteins from treated liver and antiserum to | dye-albumin conjugate, indicating that the abnormal Ag in the dye-treated liver contained bound carcinogen. * D.Hamer

1280. LACK OF STAINING OF TESTICULAR TUMOURS BY ANTI-SPERM AND ANTI-TESTIS ANTIBODIES. ^Hiramoto, JJurand, J.Bemecky and D.Pressman: *Pfoc. soc. exp. Biol.*, N.Y., 1962, 111, 505-507 (Dept. Biochem. Res., Park Mem. Inst., Buffalo, N.Y., U.S.A.) [^]Testicular Ag could not be detected by immuno-fluorescence using S¹²⁵I antisera to human testis, seminal fluid and sperm on testicular tumours. M.M.Shapland

1281. A MODIFICATION OF COMPLEMENT FIXATION TEST FOR ESTIMATION OF ROUS SARCOMA VIRUS ANTIBODIES IN TURKEY AND CHICKEN SERUMS. W.Oka-

zaki, H.G.Purchase, T.N.Fredrickson and B.R.Bttrmester: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111, 377-380 (U.S. Reg. Poultry Res. Lab., E. Lansing, Mich., U.S.A.)

M.M.Shapland

1282. CYTOTOXIC ACTIVITY OF ISOANTIBODY ON SARCOMA 1. I.Chouroulinkov, E.A.Boyse and L.J.Old: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111, 263-265 (Div. Exp. Chemotherapy, Sloan-Kettering Inst. Cancer Res., New York, N.Y., U.S.A.) Under suitable in vitro expt. conditions Sarcoma 1 was completely sensitive to cytotoxic isoAb. M.M.Shapland

1283. PASSIVE TRANSFER OF IMMUNITY TO SARCOMA 1 WITH SERUM. M.E.Phillips and C.A.Stetson: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111, 265-270 (Dept. Path., New York Univ. Sch. Med., N.Y., U.S.A.) Passive transfer of immunity to Sarcoma 1 was achieved with immune serum. The effect of isoAb on this tumour was qual. similar to that reported for other transplantable tumours and may account for rejections of Sarcoma 1 homografts. M.M.Shapland

1284. SPECIFICITY OF ANTISERA TO MOUSE ASCITES TUMOUR IN RABBITS IMMUNOLOGICALLY DEPRESSED WITH MOUSE RED CELLS. A.E.Reif, L.M.McVety and E.R.Klein: *J. Immunol.*, 1963, 90, 24-28 (Biochem. Sect., Dept. Surg., Tufts Univ. Sch. Med., Boston City Hosp., Boston, Mass., U.S.A.) One half of the young in 3 litters of rabbits were i*ij. with washed mouse r.b.c. on the day of birth and several times thereafter until day 38 post-natal. The other half (controls) were left uninj. At 9 to 12 months one half of the rabbits in both depressed¹ and control groups were immunised with mouse r.b.c., the other half with L4946 mouse tumour. Antisera from 'depressed' rabbits immunised with (a) r.b.c. had haemagglutinin, haemolysin and cytolytic titres of 17, 6 and 6 times lower than controls (b) tumour cells-6, 2 and 2 times lower. N.R.Ling

1285. TISSUE CELL ANTIGENS: ANTIGENS OF MOUSE TUMOUR CELL GHOSTS. Chaughton and D.A.L. Davies: *Brit. J. exp. Path.*, 1962, 43, 488-495 (Microbiol. Res. Estab., Porton, Wilts., England) Hypertonic NaCl soln. was used to disrupt Landschitz ascites tumour cells. Cell ghosts with 25% of cell mass contained all non-absorbed Ag found in intact cells, but only 10% of the original nucleic acid. D.L.Gardner

1286. PARENCHYMAL CELL DAMAGE AND BILE DUCT ACTIVITY IN THE PRECANCEROUS LIVER. P.M.Sutton: *Brit. J. Cancer*, 1962, 16, 619-625 (Univ. Coll. Hosp. Med. Sch., London, England) Wistar rats of both sexes were maintained on a diet containing 0.06% p-dimethylaminoazo-benzene and given once weekly inhalations of CHCl₃. The development of tumours was compared with appropriate control groups. There was a much greater bile duct proliferation and earlier appearance of cholangiofibrosis than with dye alone. Cholangiofibrosis did not seem to be an essential precursor of liver tumours, although cholangiocarcinomas did in a few cases develop in regions of fibrosis. D.Hamer

1287. HAEMORRHAGIC DISEASE INDUCED BY FOWL TUMOUR VIRUSES. J.G.Carr: *Brit. J. Cancer*, 1962, 16, 626-633 (B.E.C.C. Unit, Poultry Res. Centre, Edinburgh, Scotland) 'Haemorrhagic disease' originates when viruses are inj. into chick embryos. The tissue distribution of the disease in embryos was similar for all viruses which induce it, a finding not compatible with the hypothesis that the action is by necrosis of proliferating

IMMUNOLOGY AND EXPERIMENTAL PATHOLOGY

endothelium. The disease was invariably associated with areas of extra-medullary haematopoiesis and the infection of these by the virus is believed to be the cause of the condition.

D.Hamer

1288. ISOLATION OF CANCER CELLS FROM BLOOD AND THORACIC DUCT LYMPH BY FILTRATION. O.P.Foss.
O.T.Messelt and L.Efskind: *Surgery*, 1963, 53, 241-246 (Oslo, Norway) Detection of cancer cells in the blood was improved by filtering body fluids through Millipore filters of pore size 10 μ (OS) and Wire cloth filters. These selectively removed the larger, predominantly tumour cells. The wire-cloth filter provided the best separation but the cells could not be examined on the filter in the same way as the Millipore prep.

D.N.Wheatley

1289. EXPERIMENTAL FACTORS INFLUENCING HEPATIC METASTASES. XII. EFFECT OF INCREASED ARTERIAL BLOOD FLOW. S.H.Lee, B.Fisher and E.R.Fisher: *Proc. Soc. exp. Biol.*, N.Y., 1963, 112, 126-128 (Dept. Surg., Med. Sch., Univ., Pittsburgh, Pa., U.S.A.) By increasing arterial blood supply of the liver, the no. of Walker-256 carcinoma metastases in the liver was increased. This result suggests that the previous idea that poor oxygenation of the liver increased metastatic 'takes' is not necessarily true, but that hepatic trauma is probably involved when increased incidence of metastases occurs.

D.N.Wheatley

1290. POLAROGRAPHIC CHARACTERISTICS AND CONCENTRATIONS OF PROTEIN AND SIALIC ACID IN THE SERUM OF RATS AFTER INTRAPERITONEAL INJECTIONS OF POLYCYCLIC HYDROCARBONS. C.E.Searle and D.L.Woodhouse: *Brit. J. Cancer*, 1962, 16, 794-805 (Med. Sch., Univ., Birmingham, England) Stock albino rats were given i.p. injn. of various polycyclic hydrocarbons and the polarographic characteristics of die serum were examined over a period of 10 months. Sialic acid and total protein were also determined. DMBA and 1,2:5,6-dibenzanthracene were used, and also the weak carcinogen, 2 β -6-dimethyl-benzanthracene and non-carcinogenic, 1,2:3,4-dibenzanthracene. No consistent polarographic behaviour was observed but the expt. were complicated by development of considerable ascites in rats after injn. of DMBA. There was a transient rise in sialic acid after the injn.

D.Hamer

1291. EFFECT OF ADRENOCORTICAL ADENOCARCINOMA ON GLYCOGEN DEPOSITION IN RAT LIVER. A.S.Mulay: *Proc. Soc. exp. Biol.*, N.Y., 1963, 112, 292-294 (Lab. Path., Nat. Cancer Inst., N.I.H., Bethesda, Md., U.S.A.) Presence of a transplantable adrenocortical adenocarcinoma produced by a diet containing p-dimethyl-aminoazobenzene in rats did not effect glycogen deposition in the liver even in adrenalectomised rats carrying the tumour. Thus the tumour is not suspected to have any glucocorticoid secretion.

D.N.Wheatley

1292. PATHOLOGY OF TUMOURS AND OTHER LESIONS OF GUINEA-PIG LUNG. L.M.Franks and F.C.Chesterman: *Brit. J. Cancer*, 1962, 16, 696-700 (Imperial Cancer Res. Fund., London, England) Routine autopsies were performed in 1080 guinea-pigs, many of which had been used in expt. Lung lesions, in particular, were studied and very many animals showed focal inflammatory lesions. Epithelial hyperplasia was also common and 4 lung tumours (papillary adenomas) were observed.

D.Hamer

1293. HISTOCHEMICAL AND E.M. STUDIES OF A FUNCTIONING INSULINOMA. S.S.Lazarus and

B.W.Volk: *Lab. Invest.*, 1962, 11, 1279-1294 (Albert Res. Inst., Jewish Chronic Dis. Hosp., Brooklyn, N.Y., U.S.A.) The observations indicate that the insulinoma is a tumour of ductular epithelium with differentiation mainly to β -cells.

A.M.Mackay

EXPERIMENTAL PATHOLOGY

1294. PATHOGENESIS OF RESPIRATORY ANTHRAX IN MACACA MULATTA. C.CBerdjis, C.A.Gleiser, H.A. Hartman, R.W.Kuehne and W.S.Gochenour: *Brit. J. exp. Path.*, 1962, 43, 515-524 (U.S. Army Med. Unit, Fort Detrick, Md., U.S.A.) Monkeys were infected with a spore suspension of *Bacillus anthracis* (Vollium 189 strain) by aerosol inhalation. Provided previous parasitic lung disease was present, such as bronchiolitis due to *Pneumonyces simicola*, the bronchiolar wall became the site of necrotising bronchiolitis.

D.L.Gardner

1295. EXPERIMENTAL PARENTERAL ANTHRAX IN MACACA MULATTA. C.CBerdjis, C.A.Gleiser and H.A. Hartman: *Brit. J. exp. Path.*, 1963, 44, 101-114 (U.S. Army Med. Unit, Fort Detrick, Md., U.S.A.) Pathol. lesions of systemic anthrax infection are described following cutaneous inocn. Following local germination of spores, bacteria spread by lymphatics and blood to cause septicaemia which occurred earlier with large inocula and was often accompanied by lung infection. Other visceral lesions were common when death occurred later after smaller inocula.

D.L.Gardner

1296. HKTOPATHOGENESIS OF MOUSEPCK. I. RESPIRATORY INFECTION, n. CUTANEOUS INFECTION. J.A.Roberts: *Brit. J. exp. Path.*, 1962, 43, 451-461, 462-468 (Dept. Microbiol., Australian Nat. Univ., Canberra, Australia) I. Mice were infected with ectromelia virus by aerosol inhalation. Alveolar macrophages or respiratory mucosal cells were shown to contain virus first by fluorescence microscopy using rabbit anti-vaccinia serum. Virus was detected in regional lymph nodes on the 3rd day after infection in macrophages, accompanied by growth in lymphatic endothelium. Virus was also shown to spread from the olfactory mucosa via the perineurium of the olfactory nerve.

II. Following infection of mouse skin with ectromelia virus, dermal cells or cells of the stratum Malpighi were identified as containing virus by the fluorescent Ab technique. Spread of infection was mainly dermal. Epidermal cell proliferation in such primary infections, followed by autoradiography with ^3H -labelled thymidine, was not in vims-infected cells and may be a non-sp. response.

D.L.Gardner

1297. EFFECTS OF ENDOTOXIN ON HAEMODYNAMICS OF STOMACH. E.D.Jacobson, E.S.Dooley, J.B.Scott and E.D.J.Frohlich: *J. clin. Invest.*, 1963, 42, 391-395 (Reed Army List. Res., Washington, D.C., U.S.A.)

The vascular effects of endotoxin on the perfused dog stomach were investigated by employing an acute prep. in which blood flow was held const. The expt. results are interpreted to suggest that the increased gastric vascular resistance observed after giving endotoxin was mediated by circulating vasoactive substances elaborated at sites remote from the stomach.

K

Jones

1298. ENDOTOXIN SHOCK IN THE PRIMATE. R.P.Gubert: Proc. Soc. exp. Biol., N.Y., 1962, 111, 328-331 (Dept. Educ. and Res., Evanston Hosp. Assoc., Evanston, 111, U.S.A.) Hypotension in the monkey caused by the i.v. injn. of bacterial endotoxin was caused by decreased venous return. M.M.Shapland

1299. LOCALISATION OF ENDOTOXIN IN THE WALLS OF THE PERIPHERAL VASCULAR SYSTEM DURING LETHAL ENDOTEXAEMIA. H.S.Rubenstein, J.Fine and A.H.Coons: Proc. Soc. exp. Biol., N.Y., 1962, 111, 458-467 (Labs. Surg. Res., Beth Israel Hosp., Boston, Mass., U.S.A.) *E. coli* endotoxin was localised by immunofluorescence in the walls of die peripheral vascular system in dogs killed 10 and 90 min. after injn. of lethal dose of endotoxin and in the animal that died from endotoxaemia. It is thought that the endotoxin acts directly upon these sites producing the peripheral vascular collapse. M .M .Shapland

1300. EFFECT OF STAPHYLOCOCCAL ENTEROTOXIN ON DERMAL REACTIVITY TO ADRENALINE. V.Bokkenheuser, M.A.Cardella, E.A.Gorynski, G.G.Wright and E.Neter: Proc. Soc. exp. Biol., N.Y., 1962, 112, 18-21 (Dept. Bacteriol., Med. Sch., Buffalo, N.Y., U.S.A.) S-6 strain *Staphylococcus aureus* enterotoxin prep. inj. i.v. or i.d. caused dermal lesions at sites of subsequent i.d. injn. of adrenaline. The toxic factor was heat stable and antiserum did not neutralise the toxic effects. It is suggested, that enterotoxin differs from endotoxin in that it will not provide a provoking dose for a Schwartzman reaction. D.N.Wheatley

1301. HAEMOLYTIC SHOCK. V. THE ROLE OF HKT-AMINE. VI. L.Szabo and CHadnagy: Z. Immun.-Forsch., 1962, 124, 133-139, 140-148 (Physiol. Inst., Tirgu-Mures-Marosvasarhely, Rumania) V. In expt. on dogs and cats, muscle fatigue was noted in the course of haemolytic shock. This was not solely due to the fall in blood pressure. In dogs pretreated with histamine, haemolytic shock was milder than in controls. For these Reasons it is asserted that histamine or histamine-like substances play a part in haemolytic shock.

VI. Haemolytic shock in dogs was accompanied by various changes, including hepatic vein spasm, increased taph production and abnormal respiration. Repeated I²⁵- of blood was less effective in causing shock than the *st injn. Physostigmine accentuated the shock. T g. (German) D .P. Winstanley Ado. 2. **MYOCARDIUM OF THE DOG IN HAEMORRHAGIC SHOCK. A HKTOCHEMICAL STUDY.** A.M.Martin *d D.B.Hackel: Lab. Invest., 1963, 12, 77-91 (Pathol. Dept., Duke Univ. Med Center, Durham, N.C., Di V^s*A⁰) 2° mongrel dogs were bled under Nembutal/for^t-uretilane anaesthesia and a shock state maintained thl * to 2 hr. The blood was returned to the animals and 2 J. were killed 15 min. to 5 weeks later, when myo-^shi^m w^as Prepared f^r a histol. and histochem. study. c^rLi^ral and enzyme alterations indicative of early myo-^rai^s damage are described. A.M.Mackay

1303. MECHANISM OF SHOCK: EFFECT OF LIMB IS-CHA MA ON NON-ESTERIFIED FATTY ACIDS OF RAT PLASMA. H.B.Stoner: Brit. J. exp. Path., 1962, 43, 556-563 (Toxicol. Res. Unit., M.R.C. Lab., Carshalton, Surrey, England) In fed albino rats, non-afte^red Plasma fatty acids were much increased 4 hr. feu Junction of bilat. hind-limb ischaemia; levels "en the ischaemia was relieved. The response was

depressed by reducing sympathetic nervous system activity. In fasting intact rats high fatty acid levels were not increased by ischaemia. D.L.Gardner

1304. THYMUS AND INFLAMMATION. R.J.Girerd and G. Di Pasquale: J. Endocr., 1963, 26, 209-213 (Warner-Lambert Res. Inst., Morris Plains, N.J., U.S.A.) Although thymectomy alone reduced the inflammation in cotton pellet and granuloma pouch procedures, there was no effect on formaldehyde-induced paw-oedema. Cortisone was effective in suppressing the inflammatory response of thymectomised rats to the same procedures. C.F.Blane

1305. HIGHER SUSCEPTIBILITY TO THIOL COMPOUNDS OF PROTEASE IN HEALING SITES OF ARTHUS-TYPE INFLAMMATION AND ITS BIOLOGICAL SIGNIFICANCE. H.Hayashi, K.Udaka, M.Koono and M.Yoshimura: Brit. J. exp. Path., 1962, 43, 575-580 (Dept. Path., Kumamoto Univ. Med. Sch., Kumamoto, Japan) Protease extracted from sites of the Arthus phenomenon in rabbits was activated by reduced glutathione to greater extent than protease from normal sites. D.L.Gardner

1306. SOLUBLE COLLAGEN IN ACUTE INFLAMMATION. C.Olsen and B.K.Forscher: Proc. Soc. exp. Biol., N.Y., 1962, 111, 126-127 (Dept. Biochem., Univ. Kansas City Sch. Dent., Mo., U.S.A.) Histol. observations of collagen fibres in acute inflammation indicate that its disappearance and reappearance was due to proteolysis and de novo resynthesis. M.M .Shapland

1307. QUANTITATIVE RELATION BETWEEN CERTAIN FIBRINOLYSIN FACTORS AND INFLAMMATION. E.Aschheim, V.Tsulcu and A.L.Copley: Proc. Soc. exp. Biol., N.Y., 1963, 112, 434-436 (Dept. Pathol., New York Univ. Med. Sch., N.Y., U.S.A.) Radioiodine extravasation was used to study the effect of 2 fibrinolysins on inflammation induced with histamine dihydrochloride or with plasminogen. 400 U of fibrinolysin were effective. D.N.Wheatley

1308. RELATION OF INFLAMMATION TO CHEMICAL CONSTITUTION OF INJURIOUS AGENTS. PHARMACOLOGY OF INFLAMMATION. E.L.Opie: J. exp. Med., 1963, 117, 425-448 (Rockefeller Inst. Med. Res., New York, N.Y., U.S.A.) Inflammatory reactions caused by i.p. injn. of chemicals were measured by the vol. of peritoneal fluid, the no. of leucocytes and the amount of exuded protein. Inflammation increased with ion dissociation and with increase of valency of both basic and acid ions. Salts of heavy metals which ppt. proteins caused more active inflammation than other electrolytes. Histamine and arginine produced similar inflammation. The amino compounds urea, citrulline and creatinine, glycine, alanine, histidine, arginine and histamine produced inflammatory reactions in the order of severity with which they caused necrosis on i.d. injn. Acids and alkalis were inflammatory when pH approached 1 and 11 respectively, but not at neutral pH. H.E.HJones

1309. PATHOGENESIS OF FEVER. XI. QUANTITATIVE FEATURES OF FEBRILE RESPONSE TO LEUCOCYTIC PYROGEN. D.L.Bomstein, CBredenberg and W.B.Wood: J. exp. Med., 1963, 117, 349-364 (Massachusetts Gen." Hosp. Med. Dept., Boston, Mass., U.S.A.) The febrile response of trained rabbits inj. i.v. with leucocytic pyrogen was only related to the dose at the lower levels of dosage. Above these doses there existed a hyperthermic ceiling at which the response was relatively const, over a wide dosage range. When sufficiently large doses of

IMMUNOLOGY AND EXPERIMENTAL PATHOLOGY

pyrogen were inj. this ceiling was exceeded and a biphasic fever was produced which resembled the usual response to bacterial endotoxin. Similar biphasic fever resulted from continuous infusions of relatively low concn. of leucocytic pyrogen at a const. rate, and to repeated injn. of moderate doses of the pyrogen. When large daily doses were inj. the biphasic response followed the 1st injn. only. Thereafter a state of tolerance existed in which the secondary rise in temp. failed to occur and which persisted as long as the daily injn. were given. During tolerance the response to small doses was depressed. H.E.H.Jones

1310. EFFECT OF PARTIAL HEPATECTOMY ON AUTOLOGOUS TAIL TENDON IMPLANTED IN TOE RAT LIVER. L.Montfort and R.Pérez-Tamayo: Proc. Soc. exp. Biol. N.Y., 1962, 111, 507-509 (Unidad Patol., Fac. Med., Univ. Nac. Autonoma de Mexico, Mexico City, Mexico) In both partially and non-hepatectomised rats autologous tail tendon implants were equally encapsulated, calcified and stim. a foreign body reaction. Both surrounding capsule and tendon were still present after 91 days. M.M.Shapland

1311. INTRAVASCULAR PLATELET CLUMPING IN RABBITS. A.Hughes and R.S.Tonks: J. Path. Bact., 1962, 84, 379-390 (Nevill Hall Hosp., Abergavenny, Wales) Intravascular platelet clumping in rabbits was produced by i.v. injn. of autogenous, artificially clumped platelets, by intragastric NaH₂PO₄ along with s.c. injn. of 2-O-methyl-9CX-chloro-cortisol acetate, or by i.v. injn. of horse serum. In all cases, damage to pulmonary arteries, endocardium and myocardium was similar: Ag-Ab complex was not required for production of these lesions. Cortisone given to rabbits receiving horse serum injn. prevented platelet clumping and tissue lesions: when given to animals receiving i.v. injn. of autogenous artificially clumped platelets, lesions still developed. D.Murray

1312. HISTOGENESIS OF BASEMENT MEMBRANES. G.B. Pierce jun., A.R. Midgley jun. and J.S.Ram: J. exp. Med., 1963, 117, 339-348 (Path. Dept., Univ. Michigan, Ann Arbor, Mich., U.S.A.) The formation of basement membranes was studied with fluorescent Ab techniques in a parietal yolk sac carcinoma of the mouse. The Ab stained the secreted basement membrane-like material as well as the basement membranes of epithelial structures and vessels, and reticulin. After absorption with reticulin and vascular basement membranes of the spleen, and Ab stained only the basement membrane-like material, Reichert's membrane and the basement membranes of the epithelial cells. The yolk sac cells were shown to secrete the basement membrane (Reichert's membrane) upon which they rested by the localisation of ferritin-labelled Ab to the endoplasmic reticulin of the secreting cells. The basement membranes of the epithelial cells are an epithelial secretion and not a condensation of ground substance since they are antigenically different from connective tissue elements. H.E.H. Jones

1313. DISAPPEARANCE RATE OF TRY PAN BLUE IN RAT PLASMA AFTER INTRAPERITONEAL INJECTION.

H.Thilander: Acta path. microbiol. scand., 1963, 57, 57-59 (Dept. Path. Med. Sch., Umea, Sweden) Injn. of 1 ml. of 1% aq. soln. of Trypan Blue/100 mg. body wt. at 24 hr. intervals for 6 days produced no evident signs of toxicity. There was an accumulation of the stain in the plasma, and electrophoresis showed much of it to be in the free state. The results show that if intense vital staining is required for fairly short expt. periods, a suitable interval between the i.p. injn. is 24 hr. Longer periods

involve a risk of toxic action due to accumulation of free Trypan Blue in the plasma. L.Friedmann

1314. PHOTODYNAMIC ACTION I. MECHANISMS OF PHOTODYNAMIC CYTOTOXICITY. R.P.Bolande and L.Wurz. n. THE EFFECTS OF PHOTODYNAMIC ACTION ON CERTAIN PROPERTIES OF HUMAN SERUM. R.P.Bolande, L.Wuiz and E.E.Ecker: Arch. Path., Chicago, 1963, 75, 115-122, 123-126 (Inst. Path., Western Res. Univ., Cleveland, Ohio, U.S.A.)

I. Expt. on direct and indirect photodynamic action of Eosin Y are described in fibroblast strains U^ao, L and FS4. U^ao, L and FS4 were equally susceptible to the direct action whereas strain L was significantly more resistant than the other 2 to indirect action. The cytotoxicity of pre-irradiated eosin was quenched by the addition of glucose or horse serum. It is postulated that the direct cytotoxicity is due to the attack of continuously generated triplet dye molecules on cellular substrate while the indirect action is due to the toxic effect of oxidation products of the dye on the cells.

n. Using Eosin Y, Toluidine Blue and Haematoxylin in-HCl, 0.02% in normal pooled serum, as photosensitisers photodynamic action caused a loss of albumin with an increase of total globulin. Individual globulin peaks became indistinguishable except the Y-peak, which reflected persistence of blood agglutinins. The photosensitisers could decomplement sera, all 4 components being equally suppressed. This decomplexation was associated with destruction of natural cytotoxicity to fibroblast strains U^ao, FS4 and L, mouse ascites tumour Ehrlich (EA) and sarcoma 180. R.Mitchell

1315. ROLE OF MASTOCYTES IN REGIONAL FIXATION OF BLOOD-BORNE PARTICLES. H.Selye, G.Gabbiani and B.Tuchweber: Brit. J. exp. Path., 1963, 44, 37-46 (Inst. Méd. Chir. expt., Univ. Montreál, Que., Canada) Polymyxin, which discharges granules from mast cells, caused localisation of C particles around the injn. site when given i.v. to rats simult. with India ink. When polymyxin was given before India ink many lung capillaries were found occupied by thrombi containing C*. The presence of many mast cells in the lung is suggested as the cause for uptake of C. D.L.Gardner

1316. PROTECTIVE ACTION OF CERTAIN HORMONES AND VITAMINS AGAINST LATHYROGENIC DRUGS. J.M.Cameron, T.G.Pirie and R.A.Robb: Brit. J. exp. Path., 1962, 43, 496-505 (Dept. Path., South Gen. Hosp., Glasgow, Scotland) Lathyrism was produced in young o' chicks with acetone semicarbazone. Using the wt. gain and mean ash content of bone as guides to protection, a-tocopherol (vit. E) and possibly prednisolol* were partly effective. D.L.Gardner

1317. EFFECT OF LATHYROGENIC COMPOUNDS ON GLYCOGEN CONTENT OF CHICK EMBRYO LIVER. CLLevene: Brit. J. exp. Path., 1962, 43, 596-599 (Dunn Sch. Path., Univ., Oxford, England) Assay <*↑ the glycogen content of livers of 16-day chick embryos treated 2 days previously with 6 lathyrogenic compounds showed no correlation between the effect on glycogen aff solubility of bone collagen. D.L.Gardner

1318. ECLAMPSIA-LIKE SYNDROME IN RATS TREATED WITH POLY VINYL ALCOHOL. C.E.Hall and O.Hall: Tex. Rep. Biol. Med., 1963, 21, 16-27 (Univ. Texas* Med. Sch., Galveston, Tex., U.S.A.) Rats inj. sty with 1 c.c. of 5% polyvinyl alcohol daily for several *.

and maintained on a 1% NaCl drinking soln. developed severe hypertension, anaemia and the usual nephrotic syndrome. The mortality reached 75% before the expt. was ended; 4 became comatose or unconscious for a period of time prior to death. Autopsy showed hepatosplenomegaly and enlargement of the hearts and kidneys. A comparison is made between the expt. condition and the toxæmia of pregnancy, in which the clinical and pathologic findings are strikingly similar. AJ.Martin

1319. EFFECT OF GOLD THIOGLUCOSE INJECTIONS ON SURVIVAL, ORGAN DAMAGE AND OBESITY IN THE RAT. J.W.Wagner and J.de Groot: Proc. Soc. exp. Biol., N.Y., 1963, 112, 33-37 (Dept. Anat., Univ. California, San Francisco, Calif., U.S.A.) Long-Evans and Sprague-Dawley rats were inj. with 0·1-0·75 mg./g. of gold thioglucose i.p. Starvation increased the survival time of treated animals but young animals on normal diets showed an LD-50 (14 days) of 0·25 mg./g. There was a small incidence of ventromedial hypothalamic lesions and when animals survived with near lethal doses, obesity occurred. There was less susceptibility to brain lesions with ? animals. The goldthioglucose also had effects on the stomach, pancreas, testes and caused a triphasic response in the blood-glucose content.

D.N.Wheatley

1320. CARDIAC LESIONS IN EXPERIMENTAL HYPERTENSION. R.D.Moore, M.D.Schoenberg and S.Koletsky: Arch. Path., Chicago, 1963, 75, 28-44 (Inst. Path., Western Reserve Univ., Cleveland, Ohio, U.S.A.) Adult of Wistar rats developed cardiac lesions rapidly after renal artery ligation. Alterations in structure in small blood vessels were studied using various stains and pre-enzymic treatments. Fibrinoid material was a product of fibroblasts, endothelial cells and non-cellular protein constituents of blood. R.Mitchell

1321. ARTERIOLAR NECROSIS IN ADRENAL-REGENERATION HYPERTENSION: INFLUENCE OF PREVENTIVE TREATMENT WITH HYDRALAZINE ON TISSUE ELECTROLYTES. D.L.Gardner and P.W.Brooks: Brit. J. exp. Path., 1963, 44, 31-37 (Dept. Path., Univ., Edinburgh, Scotland) Hypertension was induced in rats by adrenal enucleation and high Na intake. Hypertensive arteriolar necrosis and necrotising arteritis were prevented by intermittent treatment with hydralazine. After 56 days, treated animals were found to have higher Extracellular fluid (inulin) space than untreated, whereas ¹⁴Na content of dry, fat free samples of aorta was significantly lowered. D.L.Gardner

***322. DESMOSTEROL DEPOSITION IN HUMAN AND EXPERIMENTAL ATHEROSCLEROSIS.** J.H.Herndon, jun. and M.D.Siperstein: Circulat. Res., 1963, 12, 228-234 (Dept. Int. Med., Univ. Texas Southwest Med. Sch., Dallas, Tex., U.S.A.) In human patients in rabbits on an atherosclerotic diet, the blocking of ¹⁴M step desmosterol-cholesterol by 'triparanol' [MER 29] led to accumulation of desmosterol in arterial lesions. R.E.Moore

23. THROMBO-ATHEROSCLEROSIS IN AORTIC VENOUS AUTOGRRAFTS. L.M.Rivkin, M.Friedman and S.O.Byers: Brit. J. exp. Path., 1963, 44, 16-23 (Expt. Surg. Lab., Mount Zion Hosp., San Francisco, Calif., U.S.A.) Segments of rabbit external jugular vein ^{were autologous} grafted into lower abdominal aortae, leaving ¹⁰¹ ^{assec*} aort^c channels. Following electrolytic induction of thrombus, atheromatosis, produced by a high esterol/fat diet, developed in similar manner in

grafted venous segments, and in intact aortae. In bypassed aortae, the process resembled that in intact venae cavae. D.L.Gardner

1324. DEVELOPMENT OF PSEUDOINTIMA LINING

FABRIC GRAFTS OF AORTA. H.W.J.Florey, SJ.Greer, J.Kiser, J.CF.Poole, R.Telander and N.T.Werthessen: Brit. J. exp. Path., 1962, 43, 655-660 (Dunn Sch.

Path., Univ., Oxford, England) Dacron grafts inserted into aortae of baboons were lined by endothelium, growing partly from the divided ends of the aorta and partly from small vessels opening into the lumen of the graft. Around these vessels endothelial islands arose. Fibroblasts, collagen, macrophages and polymorphs were identified beneath the endothelium after 3 weeks but smooth muscle and elastic appeared later.

D.L.Gardner

1325. MUCOPOLYSACCHARIDES IN ATHEROMATOUS AORTA. R.C.Curran and W.AJ.Crane: J. Path. Bact., 1962, 84, 405-412 (Path. Dept., St. Thomas's Hosp.

Med. Sch., London, England) Mucopolysaccharide distribution was studied histochem. in aortic tissue obtained at necropsy from 30 human subjects whose ages ranged from 4 days to 84 yr. SO₄ uptake in vitro was studied autoradiographically with ³⁵SO₄. The development of atherosclerosis was accompanied by increased formation of mucopolysaccharides, not only in intima but also in the adjacent media.

D.Murray

1326. COLLAGEN CONTENT OF NORMAL AND ATHEROSCLEROTIC HUMAN AORTIC INTIMA.

C.I.Levene and J.CF.Poole: Brit. J. exp. Path., 1962, 43, 469-471 (Dunn Sch. Path., Univ., Oxford, England)

The collagen content of 43 normal and of 58 atherosclerotic intima was determined by assaying hydroxyproline. Normal intima contained a mean of 20% collagen (dry wt.), atherosclerotic intima a mean of 31%. A tendency in normal intima for collagen to increase with age was found, but in neither normal nor atherosclerotic intima was a sex difference in content found.

D.L.Gardner

1327. PULMONARY EMBOLISM BY SMALL BLOOD CLOTS. R.Marshall and P.R.Allison: Thorax, 1962, 17, 289-297 (Radcliff Infirmary, Oxford, England) 20 ml. of finely divided blood clot was inj. into 10 anaesthetised* dogs. There was transient rise of pulmonary artery pressure and transient rapid shallow breathing. Lung compliance fell and diffusing capacity of lungs for CO was decreased. 60 ml. to 80 ml. of clot given in divided doses on one day was tolerated, but 40 ml. to 60 ml. given one week later was fatal.

P.R.Slade

1328. ACONITINE INDUCED PULMONARY OEDEMA.

L.D.Seager and C.D.Wood: Proc. Soc. exp. Biol., N.Y., 1962, 111, 120-121 (Dept. Pharm., Univ. Arkansas

Med. Center, Little Rock, Ark., U.S.A.) Acute pulmonary oedema was induced by bilat. injn. of dil. soln of aconitine into the preoptic area of the hypothalamus" of rats.

M.M.Shapland

1329. DISPOSAL OF INHALED PARTICULATE MATTER,

A UNIFYING HYPOTHESIS. A.G.Heppleston: Amer. J. Path., 1963, 42, 119-131 (Dept. Pathol., Royal Victoria Infirmary, Newcastle-upon-Tyne, England).

D.G.Scott

1330. IN VITRO STUDIES ON UTILISATION OF [1-14C] GLUCOSE BY GUINEA-PIG LUNGS IN EXPERIMENTAL BAGASSOSIS. V.N.Singh, T.A.Venkitasubramanian and R.Viswanathan: Brit. J. exp. Path., 1962, 43,

IMMUNOLOGY AND EXPERIMENTAL PATHOLOGY

661-664 (Chest Inst., Univ.. Delhi, India) Lungs of guinea-pigs with expt. bagassosis had an increased glycogen content, into which [$1-14^{\text{C}}$]glucose was incorporated at an increased rate. D.L.Gardner

1331. EXPERIMENTAL BAGASSE DISEASE OF THE LUNG.

H.F.Smetana, H.G.Tandon, R.Viswanathan, T.A. Venkitasubramanian, S.Chandrasekhar and H.S. Randlawa: Lab. Invest.. 1962, 11, 868-884

(Vallabhbhai Patel Chest Inst., Univ. Delhi, India) Bagassosis in millworkers was studied including bagasse air contamination, bacteriology and chemistry. Bagasse powder was introduced to the lungs of several laboratory animals by various means and the lung histology studied. Inhalation of carbohydrate and ash fraction of bagasse provoked a similar response to native bagasse as did sterile bagasse powder. Inhalation of sterilised bacterial and fungal cultures of bagasse gave a dissimilar response. The extent of the lesions was proportional to air dust concn. Hypersensitivity to a bagasse protein Ag was not elicited. A.M.Mackay

1332. ULTRASTRUCTURAL VARIATIONS OF THE JEJUNUM IN THE MALABSORPTION SYNDROME.

O.Núñez-Montiel, C.A.Bauzá, O.Brunser and H.Sepúlveda: Lab. Invest., 1963, 12, 16-24 (Lab. Est. de la Gastroenteritis, Inst. Venezolano de Investigaciones Científicas, Apartado 1827, Caracas, Venezuela)

Jejunal mucosa from 14 and rectal mucosa from 3 humans with coeliac disease was studied by light and E.M. Diagnostic findings were shortened microvilli, absent terminal web and decreased surface cell height. Other variable changes were noted in mitochondria, Brunner's glands, lamina propria, Meissner's plexus. Bacteria and parasites were absent. A.M.Mackay

1333. THE EFFECT OF OESTROGEN ON THE LIVER IN VIRAL HEPATITIS. W.A.Jones and R.B.Cohen: Amer. J. Path., 1963, 42, 237-246 (Dept. Pathol., Harvard Med. Sch., Boston, Mass., U.S.A.) D.G.Scott

1334. AN E.M. STUDY OF EARLY CYTOPLASMIC ALTERATION IN HEPATIC PARENCHYMAL CELLS OF MOUSE LIVER DURING NECROSIS IN VITRO (AUTOLYSIS). B.F.Trump, P.J.Goldblatt and R.E.Stowell: Lab. Invest., 1962, 11, 986-1015 (Armed Forces Inst. Path., Washington, D.C., U.S.A.)

Mouse liver slices were incubated in a warm sterile environment for up to one hr. after death and compared with tissue fixed for E.M. in 30 sec. Up to 15 min. few changes occurred. Mitochondrial granules disappeared first. Later the organelles swelled and outer membranes ruptured. Vesicular profiles of ergastoplasm increased in no. and size. Membrane-limited inclusion bodies altered later. The plasma membrane at the bile canaliculus formed elaborate concentric membranous structures, whereas, disruptive changes occurred at the sinusoid. A.M.Mackay

1335. HEPATIC CELL DEGENERATION. CORRELATION OF FINE STRUCTURAL WITH CHEMICAL AND HISTOCHEMICAL CHANGES IN HEPATIC CELL INJURY PRODUCED BY CARBON TETRACHLORIDE IN RATS.

C.T.Ashworth, F.J.Luibel, E.Sanders and N.Arnon: Arch. Path., Chicago, 1963, 75, 212-225 (Dept. Path., Univ. Texas South Western Med. Sch., Dallas, Tex., U.S.A.) Following i.p. CCI₄ to adult cf Sprague-Dawley rats (0[#]66 cc./100 gm.) cellular changes were studied. Evidence of cell damage was found at 1 hr. after injn., consisting of centrilobular loss of glycogen.

RNP, reduction or absence of oxidative and phosphorylytic enzymes, increased density of mitochondria and disarrangement of endoplasmic reticulum. A morphol. appraisal of cloudy swelling is submitted and also of hydropic degeneration. R.Mitchell

1336. DIETARY METHOD FOR RAPID INDUCTION OF RAT CIRRHOSIS WITH OBESITY. G.F.Wilgram and D.J.Ingle: Arch. Path., Chicago, 1963, 75, 201-205 (Dept. Physiol., Univ. Chicago, Chicago, Ill., U.S.A.) A method is described whereby cirrhosis and obesity can be induced in Sprague-Dawley rats after 6 weeks of force-feeding a diet high in fat and cholesterol. R.Mitchell

1337. EFFECTS OF ADRENALECTOMY IN EXPERIMENT^A NON-DIETARY CIRRHOSIS. J.A.H.Campbell: Brit. J. exp. Path., 1963, 44, 66-71 (Dept. Path., Univ. Cape Town Med. Sch., Observatory, Cape Province, South Africa) In rats, monolobular liver fibrosis produced by i.v. injn. of egg yolk became rapidly progressive when both adrenals were excised and injn. continued. Unless cortisone was given or regeneration of adrenals occurred* death quickly occurred, but such progress only continued while egg yolk injn. was continued. D.L.Gardner

1338. HEPATIC DAMAGE BY RETICULO-ENDOTHELIA^A INTERFERENCE. E.R.Fisher and B.Fisher: Arch. Path., Chicago, 1963, 75, 191-195 (Path. Dept., Univ. Pittsburgh, Pa., U.S.A.) Blockade of the RE system with Proferrin [Saccharated iron oxide] in rats and Profem¹⁷ Carbon and Thorotrast in rabbits was accompanied by significant elevation of serum GOT and serum GPT. Stimn. of the RE system in rats with endotoxin-lipopoly saccharide of *E. coli* i.p. gave elevation of serum GOT and decrease in serum GPT but had no effect in rabbits. I.v. Proferrin (2mg./100 g.) produced elevation of serum GOT in both animals and a decrease in serum GC^A in rabbits. Lp. BCG (0.5 mg.) only elevated serum GOT in rabbits. R.Mitchell

1339. BASIC FACTORS IN THE PATHOGENESIS OF PANCREATITIS. R.E.Hermann: Cleveland Clin. Quart., 1963, 30, 1-10 (Dept. Gen. Surg., Cleveland Clin., Ohio, U.S.A.) Basic factors involved in the pathogenesis of acute and chronic pancreatitis are: obstruction of the pancreatic duct, bile reflux into the pancreatic ductal system, infection, trauma to the pancreas, vascular ischaemia, circulating proteolytic enzymes, and an allergic response to previous sensitisa*tion. No direct evidence of a toxic effect of alcohol or other agents on the pancreas was obtained. G.M.Lewis

1340. EFFECT ON RENAL GLomerular EPITHELIAL CELLS OF PROTEINURIA INDUCED BY INFUSIONS OF HUMAN SERUM ALBUMIN IN RABBITS AND RATS. R.Lannigan and E.G.McQueen: Brit. J. exp. Path., 1962, 43, 549-555 (Dept. Path., Univ. Birmingham England) Human albumin infusions caused severe proteinuria in 4 rabbits and 2 rats. Extensive loss of r^o processes of glomerular epithelial cells found in only 1 rabbit but in neither rat. Infusion of dextran into 3 rabbits caused neither proteinuria nor foot process damage. D.L.Gardner

1341. MERCURY NEPHROTOXICITY IN THE RAT. I. FACTORS INFLUENCING THE LOCALISATION OF TUBULAR LESIONS. A.E.Rodin and C.N.Crowson: Amer. J. Path., 1962, 41, 297-307 (Dept. Lab. Misericordia Hosp., Edmonton, Alta., Canada) Rats received HgCl₂ in doses of 0.005 mg. and 0.1 mg.

IMMUNOLOGY AND EXPERIMENTAL PATHOLOGY

fluorescence was selective, corresponding to the distribution of vacuolar lesions. The selective localisation of leukoencephalopathies may be related to an innate prop. of white matter permitting or facilitating spread of noxious agents.

G.M.Lewis

1352. ENCEPHALOPATHY IN MICE FOLLOWING INOCULATION OF SCRAPE SHEEP BRAIN. J.A.Morris and D.C.Gajdusek: *Nature, Lond.*, 1963, 197, 1084-1086 (N.I.H., Bethesda, Md., U.S.A.) A chronic, progressive, degenerative disease of the c.n.s. has been induced in mice inoc. with brain material obtained from a sheep with naturally acquired scrapie. There was a remarkable parallel between the bizarre clinical manifestations and course of expt. induced disease in mice and the clinical pattern of scrapie in sheep. G.M.Lewis

1353. INFLUENCE OF ANOXIA ON RESPIRATORY ENZYMES IN RAT BRAIN. M.Macdonald and R.G. Spector: *Brit. J. exp. Path.*, 1963, 44, 11-15 (Paediatric Res. Unit, Guy's Hosp. Med. Sch., London, England) Anoxia (atm. of N) following unilat. common carotid artery ligation in the rat caused lesions in the forebrain with progressive loss of activity of selected enzymes, demonstrated qual. Thus cytochrome oxidase activity first diminished after 1/ hr., ATPase after 5 hr. All enzymes examined were much diminished in activity after 20-24 hr. D.L.Gardner

1354. INDUCTIVE FACTORS IN GLIOSIS. K.A.Osterberg and L.W.Wattenberg: *Proc. Soc. exp. Biol., N.Y.*, 1962; 111, 452-455 (Dept. Path., Univ. Minnesota Sch. Med., Minneapolis, Minn., U.S.A.) Morphol. and histochem. studies of the glial reaction during Wallerian degeneration in the dorsal column of the spinal cord of rats have shown that it is independent of altera-

tions of the blood-spinal cord barrier. These data suggest that substances inducing gliosis may pre-exist in normal c.n.s. tissue.

M.M.Shapland

1355. MODIFICATION OF LOVELL, PRYCE AND BOAKE'S GUINEA-PIG SKIN TEST. ITS POSSIBLE USE IN THE SEMI-QUANTITATIVE EVALUATION OF THE ACTIVITY OF VARIOUS DISEASES. INCLUDING COLLAGEN DISEASE. R.Jaques: *Experientia, Basel*, 1963, 19, 79-80 (Harmaceut. Labs., Ciba AG., Basel, Switzerland) Thirty-three out of 36 normal sera inj. i.d. into guinea-pig skin produced no haemorrhage or necrosis, whereas 89% of 108 sera from patients with various diseases produced skin lesions rating from + to +++, the greatest response being from sera from patients with rheumatoid arthritis, psoriatic arthritis or ankylopoietic spondylitis. R.S.Tonks

1356. EFFECT OF CHRONIC IRRITATION ON MELANOGENESIS IN SKIN. R.S.Snell: *Brit. J. exp. Path.*, 1962, 43, 581-586 (Dept. Anat., Univ. Durham, Newcastle-upon-Tyne, England) Mechanical irritation of guinea-pig skin by a scalpel blade produced an increase in the amount of free melanin and in the no. of melanocytes. Acanthosis was accompanied by an increase in the melanin content of the basal epidermal layer. D.L.Gardner

1357. EFFECT OF COLLAGENASE ON INTACT MUSCLE FASCIA OF RATS IN VIVO. H.H.Gruenagel and A.Gruenagel: *Z. Ges. exp. Med.*, 1963, 136, 517-531 (Anat. Inst., Univ. Clinic, Freiburg i.Br., Germany) Topical application of collagenase prep, from proteolytic enzymes of *Clostridium histolyticum* and *C.welchii* to the fascia of the thigh in rats (200 jg. in powder form) caused dissolution of the connective tissue which was max. after 8-12 hr. (German) P.F.Meyc

GENERAL

(INCLUDING STRUCTURE AND VARIATION)

- 1358. SPOT-PLATE TECHNIQUE FOR MEASURING BACTERIAL DENSITIES.** R.S.Sathyarayana, L.J. Hetling and D.R. Washington: Indian J. exp. Biol., 1963, 1, 101-103 (Environ. Eng. Div., C.E. Dept., Rensselaer Polytech. Inst., Troy, N.Y., U.S.A.)

A procedure has been developed for accurately determining the bacterial population required in a study of the growth kinetics of Pseudomonas fluorescens. The spot-plate technique overcomes many of the disadvantages of the standard pour-plate. Selected tabulations and visual examples of spot-plate are given. *

- 1359. NEW TECHNIQUES FOR COUNTING COLONIES DEVELOPED ON MEMBRANE FILTERS.** Torloni: Biotech. Bio eng., 1962, 4, 411-412 (Dept. Chem. Eng., Escola Politecnica, Univ. São Paulo, São Paulo, Brazil) The filter is sat. with culture medium, dried, pressed over a slightly heated counting plate, and the stains produced by each colony counted.

R.H.Kimberlin

- 1360. CELL STRUCTURE AND QUANTITATIVE GRAM STAIN OF BACILLUS MEGATERIUM.** R.Scherrer: J. gen. Microbiol., 1963, 31, 135-145 (Inst. Hyg. and Bact., Univ. Basel, Switzerland) Gram staining in a B. megaterium strain was compared in intact organisms and lysozyme-treated bacilli. Intact bacteria showed a greater uptake of Crystal Violet than all lysozyme-depolymerised forms and iodine uptake was dependent on and corresponded with this uptake. Cell wall showed little uptake of these substances. On Gram differentiation with 95% (v/v) ethanol, intact bacteria lost much less dye-iodine complex than lysozyme-treated forms. The cell wall formed a barrier to ethanol extraction and chem. integrity of the cell wall is a prerequisite for Gram Positivity. K.Brew

- 1361. SOME MICROSTRUCTURES OF COMPLEX MORPHOLOGY OBSERVED IN PREPARATIONS OF CARBONACEOUS CHONDrites MADE UNDER STERILE CONDITIONS.** G.Mamikunian and M.H.Briggs: Nature, Lond., 1963, 197, 1245-1248 (Jet Propulsion Lab., California Inst. Technol., Pasadena, Calif., U.S.A.) A selection of photographs of some micro-features of complex morphology occurring in sterile prep. of meteorites is presented. All prep. examined contain a variety of rare microstructures in the size-range £• 20 p which have a complex morphology and have not yet been identified. It is suggested that most of these objects are unusual mineral grains or terrestrial materials which have contaminated meteorites during museum storage.

G.M.Lewis

- 1362. ANTARCTICA: THE MICROBIOLOGY OF AN UNFROZEN SALINE POND.** G.H.Meyer, M.B.Morrow, °.Wyss, T.E.Berg and J.L.Littlepage: Science, 1962, 138, 1103-1104 (Dept. Microbiol., Univ. Texas, II, Austin, Tex., U.S.A.) A distinctive aerobic micro-flora Population was found in saline ponds in Antarctica, low ° or 8a° nisms are adapted to growth at high salt concn., temp, and low org. content of the medium; though claimed to this natural habitat, they could be adapted to artificial culture.

G.M.Lewis

- 1363. BACTERIAL GROWTH AT LOW POPULATION DENSITIES.** H.W.Jannasch: Nature, Lond., 1963, 197, 1322 (Inst. Microbiol., Univ. Göttingen, Germany)

In cultures of Spirillum serpens, expt. on the effect of O₂ and ascorbic acid on the yield demonstrated that the reducing power of the cells became rate-limiting when the population density was below a certain value.

G.M.Lewis

- 1364. CALORIC REQUIREMENTS OF RAT INTESTINAL MICRO-ORGANISMS.** A.N.Booth: Life Sci., 1963, No. 3, 215-218 (West. Regional Res. Lab., Albany, Calif., U.S.A.) A gain in wt. equiv. to that produced by 0.5 g. D-glucose was obtained when neomycin was added to the diet of rats on restricted caloric intake, and a decrease in moisture-free faecal output was observed.

It is concluded that 10% of the dietary caloric intake of rats is required to support the population of intestinal micro-organisms.

K.Jones

- 1365. BACTERIAL TRANSFORMATION: AN ANTIGEN SPECIFIC FOR 'COMPETENT' PNEUMOCOCCI.** G.Nava, A.Galis and S.M.Beiser: Nature, Lond., 1963, 197, 903-904 (Dept. Microbiol., Coll. Physn. and Surg., Columbia Univ., New York, U.S.A.)

Globulin fractions obtained from rabbits immunised with transformable pneumococci inhib. transformation for the 3 markers studied (resistance to streptomycin, micromycin and erythromycin), whereas globulin from rabbits immunised with non-competent cells had no effect on transformation. It is suggested that an Ag is associated with 'competence' in pneumococci, this being the receptor that has been postulated to occur on the surface of transformable cells; this Ag must be lost in the non-competent cell.

G.M.Lewis

- 1366. MICROBIAL TRANSFORMATIONS OF STEROIDS.**

XXI. MICROBIAL PREPARATION OF 1,4-ANDROSTADIENE DERIVATIVES. A.Capek, O.Hanc and M.Tadra: Folia microbiol., 1963, 8, 120-123 (Res. Inst. Pharm. and Biochem., Prague, Czechoslovakia) A⁴-Androstanediene-3,17-dione can be prep. in SQ% yield from A4-androstene-3,17-dione using Fusarium lateritium. 1-Dehydrotestolactone is formed only in traces but is produced in 40% when progesterone is used. Dehydroepiandrosterone is not metabolised by F. lateritium. 1-Dehydrotestosterone can be prep. in 55-60% yield from A4-androstene-3,17-dione using F. lateritium.

J.R.Sargent

- 1367. GROWTH OF RHIZINA UNDULATA Fr. AND ITS PRODUCTION OF CELLULOSE- AND PECTIN-DECOMPOSING ENZYMES.** B.Norkrans and A.Hammarström: Physiol. Plant. 1963, 16, 1-10 (Dept. Microbiol., Royal Pharm. Inst., Stockholm, Sweden)

Under the prevailing culture conditions, the optimal temp, for growth was 20°, and optimum pH 3. Nitrate, NH₄⁺ and amino N₂ were assimilated as well as some sugars. Yeast nucleic acids stimulated growth. Cellulolytic and pectinolytic enzymes were formed in induced synthesis. Casein hydrolysate and an amino acid mixture depressed formation of pectinolytic enzymes.

LDJ.Phillips

BACTERIA

- 1368. GLUCOSE CATABOLISM IN NEISSERIA MENINGITIDIS.** K.Jyssum and S.Jyssum: Acta path. microbiol.

MICROBIOLOGY

scand., 1962. 55. 437-446 (Bact. Inst., Univ. Oslo. Norway) Meningococci possess the enzyme systems necessary for a conversion of glucose 6-phosphate to pyruvate and glyceraldehyde-3-phosphate corresponding to the Entner-Doudoroff cleavage. Enzyme catalysed reactions have also been demonstrated which permit a catabolism via the oxidative pentose phosphate pathway.
I.Friedmann

1369. BRITISH COOPERATIVE CLINICAL GROUP 1961. GONORRHOEA STUDY. Brit. J. vener. Dis.. 1963. 39. 1-14. A total of 161 clinics participated in this study. Of male patients in England and Wales 47*2% were born in the U.K., 21*6% in the West Indies and 25*5% elsewhere. Of female patients with gonorrhoea 82P/o were born in the U.K., 9*8% in the West Indies and 8*2% elsewhere. Of male patients 6*3% were aged 15-19 yr., 27*1% 20-24 yr. and 66*6% were in all other age groups. Of females 25-8% were aged 15-19 yr. 37*6% 20-24 yr. and 36*6% were in all other age groups. The problems of gonorrhoea in male immigrants and predominantly U.K.-born teenagers, although obviously overlapping in some places, did not appear to be synchronous.
R.R.Willcox

1370. DEVELOPMENT OF GOOD ROUND CHARACTER. SPECULATION ON ORIGINS OF STAPHYLOCOCCUS. E.J.F.Gale: J. appl. Bact., 1962, 25, 309-323 (M.R.C. Unit Chem. Microbiol., Biochem. Dept.. Univ. Cambridge. England) Review. 50 ref. D.Hide

1371. INTRODUCTION TO CHAOS, OR CLASSIFICATION OF MICROCOCCI AND STAPHYLOCOCCUS. S.T.Cowan: J. appl. Bact., 1962, 25, 324-340 (Central Public Health Lab., London, England) An account is given of the main characters used in the classification of staphylococci and micrococci, i.e., pigmentation, biochem. reactions, production of staphylocoagulase, fibrinolysin and haemolysins, phage-typing and serology and antigenic structure. D.Hide

1372. MICROCOCCI ISOLATED FROM NORTH SEA. J.I.W.Anderson: J. appl. Bact., 1962, 25, 362-368 (Bact. Dept.. Univ. Glasgow. Scotland) 205 strains of Gram-pos., catalase-pos. cocci isolated from the North Sea were subdivided into 17 sub-groups according to their biochem. characters. D.Hide

1373. WATER RELATIONS OF STAPHYLOCOCCUS AND MICROCOCCI. J.H.B.Christian and J.A.Walther: J. appl. Bact.. 1962. 25, 369-377 (Div. Food Preservation, C.S.I.R.O., Ryde, N.S.W., Australia) Review. 17 ref. D.Hide

1374. FOOD POISONING: ANALYSIS OF STAPHYLOCOCCAL TOXINS. F.S.Thatcher and J.Robinson: J. appl. Bact., 1962. 25, 378-388 (Microbiol. Sect.. Food and Drug Directorate, Dept. Nat. Hlth. and Welfare, Ottawa, Canada) Review. 34 ref. D.Hide

1375. PHAGE-TYPING AND EPIDEMIOLOGY OF STAPHYLOCOCCUS AUREUS INFECTION. M.T.Parker: J. appl. Bact., 1962. 25, 389-402 (Cross-Infection Ref. Lab., Central Public Health Lab., London. England) Review. 40 ref. D.Hide

1376. STAPHYLOCOCCI AND MICROCOCCI ASSOCIATED WITH DAIRYING. M.E.Sharpe. F.K.Neave and B.Reiten J. appl. Bact.. 1962. 25. 403-415 (Nat. Inst. Res. in Dairying. Univ.. Reading. England) Bacteria found in raw milk are derived from infected udders and contaminated milk. Enterotoxin producing staphylococci reproduce rapidly during cheese making when infected raw milk is used. These organisms die rapidly as the pH drops. Cheese of neutral pH values contained numerous staphylococci. D.Hide

1377. MICROCOCCI AND COAGULASE NEGATIVE STAPHYLOCOCCI IN CURED MEATS AND MEAT PRODUCTS. A.G.Kitchell: J. appl. Bact.. 1962. 25. 416-431 (Low Temp. Res. Stat.. Cambridge, England) Review. 77 ref. D.Hide

1378. COAGULASE TEST IN IDENTIFICATION OF PATHOGENIC STAPHYLOCOCCI. R.B.Morrison: J. appl. Bact., 1962, 25, 432-435 (Bact. Dept., Anderson Coll., Univ., Glasgow, Scotland) The mode of action of coagulase and the methods used for testing for its production are described. D.Hide

1379. TELLURITE-EGG YOLK MEDIUM FOR ISOLATION AND IDENTIFICATION OF STAPHYLOCOCCI IN HOSPITALS. V.G.Alder, W.A.Gillespie and L.J. Waller: J. appl. Bact.. 1962. 25. 436-440 (Path. Dept., Bristol Royal Infirmary, Bristol, England) As tellurite-egg yolk medium detects the presence of small no. of S. aureus in clinical specimens, the significance of the presence of this organism could be exaggerated. In the bacteriol. examination of clinical specimens this medium should be used in conjunction with other media. D.Hide

1380. PERFORMANCE OF AN EGG YOLK-TELLURITE MEDIUM IN PRACTICAL USE. A.C.Baird-Parker: J. appl. Bact.. 1962. 25. 441-444 (Unilever Res. Lab., Colworth House, Sharnbrook, Bedford. England) Results from seven different laboratories indicate that egg-tellurite-glycine-pyruvate agar is superior to other media for isolation of Staphylococcus aureus from a wide range of food materials. D.Hide

1381. OXIDASE ACTIVITY OF STAPHYLOCOCCUS. K.J.Steel: J. appl. Bact., 1962, 25, 445-447 (Nat. Collection Type Cultures, Colindale Av., London, England) 82 strains of coagulase-pos. staphylococci had no oxidase activity but 23 of 66 strains of coagulase* neg. staphylococci showed oxidase activity. There was no correlation between other biochem. characters and oxidase activity. D.Hide

1382. SOURCES OF STAPHYLOCOCCAL INFECTION IN SURGICAL WOUND SEPSIS. H.F.M.Bassett. W.G. Ferguson. E.Hoffman. M.Walton, R.Blowers and C.A. Conn: J. Hyg., Lond., 1963, 61, 83-94 (Shotley Bridge Hosp., Shotley Bridge, Durham, England) In the 2 hospitals studied, staphylococcal wound sepsis was as frequent in patients who were not nasal carriers as in those who were and skin carriers suffered no more sepsis than non-carriers. Wound sepsis arose more frequently from cross-infection than from self-infection. In one hospital, 21*6% of presumed operating-room infections were

MICROBIOLOGY

in.

witn organisms similar to those of carriers in the surgical team, but only 10% of presumed ward infections showed this similarity. J.B.Derbyshire

1383. POST-OPERATIVE WOUND INFECTION IN PROVINCIAL GENERAL HOSPITAL. B.Moore and A.M.N.Gardner: J. Hyg. Lond., 1963, 61, 95-113 (Public Health Lab.. Exeter, England) Post-operative wound infections were studied in 559 surgical patients. The overall incidence of staphylococcal sepsis was 8*6%, but the figure was lower in carriers than in non-carriers. The incidence of sepsis was higher in individuals who carried staphylococci of phage type 80/81 than in carriers of other strains. J.B.Derbyshire

1384. MULLER *S PHENOMENON AND ITS RELATIONSHIP TO PLASMINOGEN ACTIVATION AND TO BLOOD CONSTITUENTS PRODUCING OPACITY IN AGAR GEL. J.G.P.Hutchison: J. Path. Bact., 1962, 84, 289-306 (Univ. Dept. Bact.. Western Infirmary. Glasgow. Scotland) A factor responsible for this Phenomenon is prep. by pptn. with acidic ethanol from cell free extracts of Staphylococcus aureus. Opacity of agar gel produced by denaturation of Hb and interaction of Hb with serum proteins is necessary to demonstrate the phenomenon. The staphylococcal extract is rich in staphylokinase: its action is prevented by inhibitors of staphylokinase. of plasminogen and of plasmin. D.Murray

1385. GROWTH OF STAPHYLOCOCCI IN HUMAN SERUM. S.Fletcher: J. Path. Bact., 1962, 84, 327-335 (Univ. Dept. Bact., Western Infirmary, Glasgow, Scotland) Coagulase-pos. staphylococci grow in human serum containing 5% broth while coagulase-neg. strains fail to do so. Inhibn. of growth of coagulase-neg. strains occurs with serum diluted to 17^{5%} and buffered at pH 8*2-8*8: the inhibitor is active only in the alk. range of pH values and is heat-stable. Inhibn. is not abolished by growth of coagulase-pos. strains, by addition of heat-killed organisms or by addition of coagulase. It is abolished by many proteinaceous Materials. D.Murray

'S6. STAPHYLOCOCCAL LIPOLYSIS AND PIGMENTATION. A.T.Willis and G.C.Turner: J. Path. Bact., 1962, 84, 337-347 (Bact. Dept.. Sch. Med.. Leeds, England) The lipolytic activity of staphylococci jawing on agar media containing tributyrin, egg yolk or man fat does not provide a reliable means of distinguishing coagulase-pos. from coagulase-neg. strains. Growth on agar media containing 1% glycerol mono-^ctate greatly enhances colonial pigmentation. Coagulase-pos. strains are yellow or orange; coagulase-neg. strains are usually porcelain-white. D.Murray

1387. EXPERIMENTAL STAPHYLOCOCCAL INFECTION IN MICE. D.D.Smith: J. Path. Bact., 1962, 84, 359-365 (Univ. Dept. Bact., Western Infirmary, Glasgow, Scotland) Twelve strains and variants of Staphylococcus aureus, representing a wide range in the production of coagulase and of O_r, f_r- and y-lysins p^{re} tested for virulence by i.v. injn. into W-Swiss or vi⁺on albino mice. Production of these substances in ³⁵SO₄ alone or in combination is not apparently corre-
AdY? *** Pathogenicity nor is no. of diffusible Ag. is Utl^m of (X-lysin and of y-lysin from 2 strains tox⁺ to Porton mice: p^{lysin} and coagulase are not in v^{iv} strains producing Otoxin in vitro also produce it D.Murray

1388. EFFECT OF HYPOTHERMIA ON COURSE OF ACUTE INFECTION IN RAT. J.H.Jones and P.J. Campbell: J. Path. Bact., 1962, 84, 428-433 (Path. Dept.. Queen's Univ. Belfast. N. Ireland) Male Wistar rats were inj. i.v. with Staphylococcus aureus (PS/5 strain). Hypothermia was induced by i.p. injn. of pentobarbitone sodium, immersion in ice and finally exposure to cold stream of air. Animals were maintained at 20° for 12 hr. and then rewarmed in a waterbath at 40°. The septicaemia was aggravated and led to increased mortality. D.Murray

1389. FUNCTION OF MAMMARY LYMPHATICS IN STAPHYLOCOCCAL AND STREPTOCOCCAL MASTITIS IN SHEEP. A.K.Lascelles: Brit. J. exp. Path., 1962, 43, 627-638 (Dept. Exp. Path., Australian National Univ., Canberra, Australia) There was a rapid increase in flow and protein content of lymph from mammary gland of sheep infected with staphylococci or streptococci. Lymph flow decreased 12-24 hr. after infection especially in those animals in which gangrenous mastitis developed. D.L.Gardner

1390. INTESTINAL FLORA IN CLOSED PEDIATRIC COMMUNITY. L.S.Cohen and L.E.Cluff: Amer. J. Hyg., 1962, 76, 262-266 (Dept. Med., Johns Hopkins Univ. Sch. Med., Baltimore, Md.. U.S.A.) Staphylococcus albus in combination with a Gram-neg. bacillus occurred in 72% in S. aureus in 4% of specimens collected. PJ.Baron

1391. BEHAVIOUR OF CONCENTRATED STAPHYLOCOCCAL COAGULASE PREPARATIONS IN IMMUNO-DIFFUSION TESTS. K.A.Borchardt, W.A.Pierce, jun. and M.F.Shaffer: Tex. Rep. Biol. Med., 1963, 21, 3-11 (Dept. Microbiol., Tulane Univ. Med. Sch., New Orleans, La., U.S.A.) Rabbits were immunised with (a) cone, coagulase prep, obtained by acid- and ethanol-fractionation of cultures grown in brain heart infusion dialysate medium, or (b) whole cells from strains (42D and 81) of Staphylococcus aureus grown under conditions favouring or depressing coagulase production. Reactions of such antisera in immuno-diffusion tests with coccal extracts or with the cone, coagulase prep, demonstrated well the antigenic inhomogeneity of the latter. AJ.Martin

1392. INFLUENCE OF HOST AGE AND DNA PRECURSORS ON INTRACELLULAR STAPHYLOCOCCI. M.G.Sheyaganji, J.A.Peterson and W.Braun: Proc. Soc. exp. Biol., N.Y., 1962, 11, 438-441 (Inst. Microbiol., Rutgers, State Univ., New Brunswick, N.J., U.S.A.) In vitro studies have shown that virulent staphylococci survive longer in monocytes derived from newborn rabbits than from adult animals. Addition of DNA precursors and MgSO₄ to the culture medium increased intracellular survival in adult animal monocytes but not in those from newborn. M.M.Shapland

1393. TEST IN AGAR MEDIUM FOR PRODUCTION OF DNase BY STAPHYLOCOCCI. H.Osowiecki and W.T.Dobrzanski: Bull. Acad. pol. Sci., 1963, 11, 85-86 (Dept. Microbiol. and Hyg.. Sch. Med., Warsaw, Poland) A qual. test. J.E.Hobbs

1394. L-FORMS AND PROTOPLASTS OF GROUP A STREPTOCOCCI. II. CHEMICAL AND IMMUNOLOGICAL PROPERTIES OF CELL MEMBRANE. E.H.Freimer: J. exp. Med., 1963, 117, 377-399 (Rockefeller Inst. Med. Res., New York, U.S.A.)

MICROBIOLOGY

Bacterial membranes were isolated from Group A streptococci after the cell walls had been enzymically dissolved. Membranes obtained by differential centrifugation of mechanically disrupted streptococci were chem. and serol. identical with them. Membranes were different from the cell walls and composed of 72% protein, 26% lipid and Zfo carbohydrate. Immunol. precipitin analysis showed that the Ag of the membranes was distinct from those of the cell walls and of the cytoplasm, and is common to the membranes of Group A streptococci. It can be distinguished by immunodiffusion from related Ag present in the membranes of several other groups of haemolytic streptococci. This Ag does not cross-react with Ag in the membranes of other Gram-pos. cocci.

H.E.HJones

1395. EFFECT OF PERIODATE ON CELL WALL ANTIGENS OF STREPTOCOCCI. C.S.Cummins and H.D. Slade: Proc. Soc. exp. Biol. N.Y., 1962, 111, 360-363 (Dept. Microbiol., Northwestern Univ. Med. Sch., Chicago, 111., U.S.A.) In 11 of 23 strains tested the serol. reactivity was destroyed by O'OM periodate in 2 hr.

M.M.Shapland

1396. ISOLATION OF GROUP SPECIFIC PRODUCTS FROM LACTOBACILLUS CASEI AND L. CASEI VAR. RHAMNOSUS. K.W.Knox: J. gen. Microbiol., 1963, 31, 59-72 (Inst. Dental Res., United Dental Hosp., Sydney, Australia) Serol. reactive products from 4 strains of L. casei (serol. groups B and C) and 2 strains of L. casei var. rhamnosus (serol. group C) were obtained as the sol. indiffusible products from Streptomyces muralyuc enzyme-hydrolysed cell wall prep. Rhamnose is the major component in group B organisms and glucose in L. casei group C prep. Two products differing considerably in composition were obtained from each strain of L. casei var. rhamnosus. The serol. prop. of the prep. are described and found to confirm the division of L. casei strains into 2 serol. groups.

K.Brew

1397. SEROLOGICAL CLASSIFICATION OF VARIETIES OF LACTOBACILLUS CASEI. J.Glastonbury and K.W. Knox: J. gen. Microbiol., 1963, 31, 73-77 (Inst. Dental Res., United Dental Hosp., Sydney, N.S.W., Australia) The serol. prop. of 35 strains of L. casei and the carbohydrate components of corresponding cell-wall prep. were compared. All L. casei var. rhamnosus were of serol. group C whereas L. casei var. casei strains belonged to group B or C. The major cell wall component of group B strains was rhamnose. Of group C strains, only L. casei var. rhamnosus contained rhamnose in the cell wall. Galactose and glucose were major cell-wall components of all group C strains.

K.Brew

1398. STUDIES ON ANTIGENIC STRUCTURE OF MYCOBACTERIA WITH GEL DIFFUSION TECHNIQUE. F.Gimpl and J.Weissfeiler: Acta microbiol. Acad. Sci. hung., 1962, 9, 175-181 (Dept. Microbiol., Inst. Exp. Med., Acad. Sci. Hung., Budapest, Hungary) Virulent and attenuated human and bovine Mycobacterium strains showed no serol. differences but their antigenic structure differed considerably from some saprophytic strains. The antigenic components of 2 atypical strains were usually common with the mammalian ones. The antigenic structure of M. phlei and M. fortuitum differed markedly from each other but no serol. difference was found between M. butyricum and M. smegmatis.

S.Igali

1399. COMPARATIVE SEROLOGICAL STUDY OF MYCOBACTERIUM AVIUM, M. ULCERANS, M. BALNEI AND M. MARINUM BY MEANS OF DOUBLE DIFFUSION-IN-GEL METHODS; PRELIMINARY INVESTIGATION.

A.Lind and M.Norlin: Scand. J. din. Lab. Invest., 1963, 15, Supp. 69, 152-163 (Dept. Bacteriol., Univ. of Goteborg, Sweden) All 4 strains of mycobacteria studied had at least one Ag factor in common. There were close serol. relationships between M. avium and M. ulcerans, and between M. balnei and M. marinum. Serol. dissimilarities were found between the 2 first-mentioned strains and 2 latter strains.

K.Jones

1400. MYCOBACTERIUM LEPRAEMURUM IN TISSUE CULTURE. R.J.W.Rees and R.D.Tee: Brit. J. exp. Path., 1962, 43, 480-487 (Nat. Inst. Med. Res., Mill Hill, London, England) Rat leprosy bacillus (M. leprae) grown in rat fibroblast culture was a source of sol. Ag, mainly of polysaccharide nature. Non-multiplying organisms produced no Ag. No Ag was found in fibroblasts when bacteria multiply.

D.L.Gardner

1401. MYCOBACTERIUM OBTAINED FROM THE GOLDEN HAMSTER (CRICETUS AURATUS) AFTER INOCULATION WITH LEPROMATOUS TISSUE. C.H.Binford: Lab. Invest., 1962, 11, 942-955 (Geographic Path. Div., Armed Forces Inst. Path., Washington, D.C., U.S.A.) Mycobacterial granulomas of hamster (C. auratus) ear and testis were obtained by inocn. with human leprosy. The organism is readily passed serially from hamster to hamster, grows well only in ears, foot pad and testes, and can produce Schaumann bodies and amyloidosis. It differs from Mycobacterium leprae. Some animals are resistant to infection.

A.M.Mackay

1402. EFFECT OF SOME METALS AND VITAMINS ON THE GROWTH AND VITAMIN B₁₂ PRODUCTION OF NOCARDIA RUGOSA. C.Spalla: G. Microbiol., 1961, 9, 224-235 ('Farmitalia'. Milano, Italy)

N. rugosa required biotin for growth. Using alumina to remove metals from the medium, Zn, Fe and Mn were necessary for vit. B₁₂ production. Fe and Zn stim. both growth and vit. B₁₂ production and acted synergistically in increasing the vit. B₁₂ production. Mn only promoted growth and Cu had no effect at all.

(Italian) G.N.Godson

1403. NEW SPECIES OF NOCARDIA CAPABLE OF OXIDISING STEROIDS AT THE 16a-POSITION. C.Spalla, A.Amici and M.Bianchi: G. Microbiol., 1961, 9, 248-253 ('Farmitalia'. Milano, Italy) A new species has been isolated and described and named N. italica. The organism possesses ability to introduce an OH group at the 16(X-position of a steroid mol.

(Italian) G.N.Godson

1404. MICROBIAL TRANSFORMATIONS OF STEROIDS. XX. TRANSFORMATION OF REACTIONS OF STEROIDS AS A DIAGNOSTIC FEATURE IN CLASSIFICATION OF ACTINOMYCETES. O.Vondrova and A.Capek: Folia Microbiol., 1963, 8, 117-119 (Inst. Microbiol., Czechoslovak Acad. Sci., Prague, Czechoslovakia) On the basis of reaction with progesterone Actinomycetes can be divided into 3 groups: (a) spp. which transform progesterone in the 16^o-t-position, (b) spp. transforming progesterone in the 6^o-position, (c) spp. which do not transform progesterone.

J.R.Sargent

1405. RECOMBINATION IN STREPTOMYCES OF HETEROKARYOTIC ORIGIN. ANALYSIS OF RECOMBINANTS. J.Horváth: Acta microbiol. Acad. Sci. hunfr'

1962, 9, 189-195 (Inst. Microbiol., Univ. Agricult. Sci., GSdSlo*. Hungary) Interspecific unstable recombinants were synthesised and analysed on the basis of their morphol. characters and antibiotic production. The colour, the micro-morphol. of the aerial mycelium and the antibiotic production were inherited independently. S.Igali

1406. TERMINAL PHASE OF ANTHRAX. H.Smith and J.Keppe: Brit. J. exp. Path., 1962, 43, 684-686 (Microbiol. Res. Establishment, Porton, Wilts., England) A commentary on low O₂ concn. found in terminal rabbit anthrax by Nordberg et al. Measurement of anoxia terminally is regarded as misleading. D.L.Gardner

1407. ANTHRAX TOXIN: CAUSATIVE AGENT IN THE DEATH OF RHECUS MONKEYS. F.Klein, D.R.Hodges, B.G.Mahlandt, W.I.Jones, B.W.Haines and R.E.Lincoln: Science, 1962, 138, 1331-1333 (U.S. Army Biol. Lab., Fort Detrick, Frederick, Md., U.S.A.)

Evidence is presented that rhesus monkeys infected with anthrax die of toxæmia, since the toxin increases in concn. in both blood and lymph as the disease progresses. Sterile toxin alone causes death. A rapid toxæmic death occurs after injn. of 10^{5.1} *Bacillus anthracis* spores, although 10¹ spores or less require 20 or more hr. of growth in vivo to cause death. The use of antitoxin to combat anthrax is advocated. G.M.Le'wis

1408. FRACTIONATION OF CELL CONSTITUENTS OF *BACILLUS MEGATERIUM* IN A POLYMER TWO-PHASE SYSTEM. V.Hofsten and Baird: Biotech. Bioeng., 1962, 4, 403-410 (Inst. Biochem., Univ., Uppsala, Sweden) Using an aq. 2-phase system containing dextran and polyethylene glycol, a suspension of disrupted cells was fractionated into cell walls, lipid granules and sol. cell material after a few counter-current distributions. A mixture of whole cells and protoplasts was fractionated and if NaCl was added to the system, vegetative cells and spores could be separated. R.H.Kimberlin

1409. BASE EXCHANGE AND HEAT RESISTANCE IN BACTERIAL SPORES. G.Aldepton and N.Snell: Biochem. biophys. Res. Comm., 1963, 10, 139 (Western Peg. Res. Lab., Albany, Calif., U.S.A.) *Bacillus megaterium* spores have a relatively high cation ^change capacity. Heat resistance varies with the cation imposition of the medium. B.Ketterer

1410. FRACTIONATION OF CLOSTRIDIUM WELCHII S-ANTIGEN ON CELLULOSE ION EXCHANGERS. P.O.Thomson: J. gen. Microbiol., 1963, 31, 79-90 (Dept. Anaerobic Bacteriol., Wellcome Res. Labs., Langley Court, Beckenham, Kent, England) A low-^protein medium for production of *C. welchii* frjerfringens ^Prototoxin is described. ^Ag in young cultures in this ^edium was mainly in the form of prototoxin. The purity of ^Ag was 5Kb and fractionation of the protein on DEAE-V*d CM-celluloses implied the presence of proteins intermediate between G-prototoxin and C-toxin. These increased in concn. and no. on prolonged incubation of cul-^T's. The intermediates were probably formed from ^Procotoxin by degradation. Results suggest that these ij^Pounds are non-toxic but could become activated in ^animal body. Physical data and amino acid composi-^n of e-prototoxin are presented. K.Brew

1411. INTERACTIONS BETWEEN CLOSTRIDIUM SEPTI-CUM AND *C. HISTOLYTICUM* TOXINS AND ANTI-

TOXINS. M.Sterne and G.H.Warrick: J. Path. Bact., 1962, 84, 277-288 (Wellcome Res. Lab., Beckenham, Kent, England) Antitoxin and toxin are assayed in vivo by i.v. injn. in mice and by i.d. injn. in guinea-pigs and in vitro by haemolysis of horse r.b.c. The sera of horses hyperimmunised with *C. septicum* culture filtrates contain Ab to *C. histolyticum* toxin and vice versa. An apparent fall in the homologous *septicum* antitoxin titre of *septicum* antisera occurs on addition of the heterologous *histolyticum* toxin. This is due to dissociation of the *histolyticum* toxin-*septicum* antitoxin complex on addition of homologous *septicum* toxin. D.Murray

1412. IMPORTANCE OF SAMPLE SIZE IN STUDIES BASED UPON THE SEROLOGICAL CLASSIFICATION OF *E. COLI*. K.L.Vosti, A.S.Monto and L.A.Rantz: Proc. SOC. exp. Biol., N.Y., 1962, 111, 201-204 (Div. Inf. Dis., Stanford Univ. Sch. Med., Palto Alto, Calif., U.S.A.) Most of the serol. O groups of *E. coli* present in a single specimen were identified by examination of only 5 colonies but the possibility of finding additional strains was not exhausted even by a study of 25 colonies. M.M.Shapland

1413. SEROLOGICAL RELATIONS THAT MAY LEAD TO ERRONEOUS DIAGNOSIS OF *E. COLI* INFECTIONS BY MEANS OF FLUORESCENT ANTIBODY TECHNIQUES. B.R.Davis and W.M.Ewing: Amer. J. clin. Path., 1963, 39, 198-202 (Communicable Disease Center, Public Health Service, U.S. Dept. Health, Atlanta, Ga., U.S.A.) Inter-relationships were found between various Enterobacteriaceae Ag and the OB groups of *E. coli* which have been associated with infantile diarrhoea."* B.A.Woodger

1414. COMPARATIVE STUDIES ON *SALMONELLA TYPHI* GROWN IN VIVO AND IN VITRO. I. VIRULENCE, TOXICITY, PRODUCTION OF INFECTION-PROMOTING SUBSTANCES AND DPNase ACTIVITY. A.L.Olitzki and D.Goldinger. II. EFFECT OF EXTRACTS FROM NORMAL AND INFECTED ORGANS ON BACTERICIDAL SERUM ACTION ON STRAINS GROWN IN VIVO AND IN VITRO. A.L.Olitzki and O.Kaplan: J. Hyg. Lond., 1963, 61, 1-19, 21-31 (Bacteriol. Dept., Hebrew Univ. Hadassah Med. Sch., Jerusalem, Israel)

I. The lethal dose for mice of *S. typhi* strain Ty2 grown i.p. in mice was lower than that of in vitro cultures, but strain O 901 did not behave in this way. Extracts of infected spleens and livers had a greater infection-promoting effect in mice than extracts of normal organs. Glycogen and Na taurocholate also enhanced virulence. Infected organ extracts and extracts of bacteria grown in vivo showed high NADase activity. Infected organ extracts produced Ab to sol. bacterial Ag in rabbits. Spleen grown bacteria absorbed host Ag and produced anti-spleen precipitins in rabbits.

II. *S. typhi* was more sensitive to the bactericidal action of immune serum when the bacteria were in the lag or exponential phases of growth. Non-multiplying cells in a non-nutritive medium were resistant to serum. Organ extracts from mice infected with strain Ty2 inhib. the bactericidal action of serum on this strain, but to a less extent on strain O 901. J.B.Derbyshire

1415. IMMUNOGENIC SIGNIFICANCE OF Vi AND O ANTIGENS OF *SALMONELLA TYPHI* IN MOUSE-PROTECTING TEST. K.Rauss and I.Kétyi: Acta microbiol. Acad. Sci. hung., 1962, 9, 197-208 (Inst. Microbiol., Univ. Med. Sch., Pécs, Hungary) The Vi and O Ag of *S. typhi* are immunol. equiv. The protective power of the combined treatment equals the sum of their separate immunogenic value. S.Igali

MICROBIOLOGY

1416. ENDOTOXIC ACTIVITY OF L-FORMS DERIVED FROM SALMONELLA PARATYPHI B. B.L.Dasinger and E.Suter: Proc. Soc. exp. Biol., N.Y.. 1962. 111. 399-400 (Dept. Microbiol.. Coll. Med.. Univ. Florida. Gainesville, Fla., U.S.A.) L-forms derived from S. paratyphi B are 5*5 to 9*0 times less toxic than their parent bacterial form. Toxicity remains relatively const. during successive transfers in die L-state. M.M.Shapland
1417. PREPARATION AND PROPERTIES OF AN ALUMINIUM CITRATE-ENDOTOXIN COMPLEX FROM SALMONELLA ENTERITIDIS. W.T.Haskins, E.Ribi. M.Landy, R.L.Anacker and K.C.Milnen Proc. Soc. exp. Biol.. N.Y., 1963. 112. 113-119 (Dept. HEW. Pub. Health Service. N.I.H., Rocky Mountain Lab.. Hamilton, Mont., U.S.A.) Phenol treated aq. ether extracted endotoxin from S. enteritidis was complexed by reacting with UAIH4 and citric acid soln. The resultant complex was very sol. in water and showed little contamination with amino acids. It retained a high biol. activity. D.N.Wheatley
1418. COLONIAL VARIANTS OF SHIGELLA FLEXNERI. L.Kerekes: Acta microbiol, Acad. Sci. hung.. 1962. 9. 123-132 (State Inst. Hygiene, Budapest, Hungary) Under oblique transmitted light new colonial variants with altered antigenic structures and virulence were detected and described among strains of S. flexneri on yeast agar plates. S.Igali
1419. EFFECT OF PSEUDOMONAS TABACI ON THE METABOLISM OF STARCH IN TOBACCO LEAVES. L.Lpvrekovich, Z.Klement and G.L.Farkas: Nature, Lond.. 1963, 197, 917 (Res. Inst. for Plant Protection, Budapest, Hungary) The toxin-induced chlorotic halo formed in tobacco leaves infected with P. tabaci contains no starch. Injn. of bacteria-free culture filtrate into the leaves caused a striking fall in phosphorylase activity concomitant with the decrease in starch content; amylase activity was not affected. Phosphorylase activity in vitro was not inhib. by the culture filtrates. G.M.Lewis
1420. CAPSULAR POLYSACCHARIDE OF KLEBSIELLA PNEUMONIAE TYPE A (STRAIN 1265). S.A.Barker. J.S.Brimacombe, J.L.Eriksen and M.Stacey: Nature, Lond., 1963, 197, 899-900 (Chem. Dept., Univ., Birmingham, England) The acidic polysaccharide of K. pneumoniae type A (strain 1265) consisted of glucose, fucose, glucuronic acid and an oligosaccharide which hydrolysed to glucuronic acid, glucose and lyxose. The presence of 1:3 linkages in the polysaccharide is indicated by rapid formation of saccharinic acids in alkali, failure to oxidise with periodate. and through methylation studies. G.M.Lewis
1421. IMMUNOCHEMICAL STUDIES ON SOME SEROLOGICAL CROSS-REACTIONS IN THE KLEBSIELLA GROUP. V. REAPPEARANCE OF FUCOSE IN THE CAPSULAR POLYSACCHARIDE OF A FUCOSE-LESS STRAIN OF K. OZAENAE TYPE AE. S.D.Henriksen and J.Eriksen. VI. CHEMICAL ANALYSIS OF THE CAPSULAR POLYSACCHARIDE OF KLEBSIELLA TYPE 3 (C) AND OF TWO CROSS-REACTING STRAINS. J.Eriksen and S.D.Henriksen. Vn. SEROLOGICAL REACTIONS OF SOME STRAINS OF TYPE 3(C) AND SOME CROSS-REACTING STRAINS. S.D.Henriksen and J.Eriksen: Acta path. microbiol., scand., 1962, 54, 382-386. 387-390. 391-397 (Bact. Inst., Oslo Univ., Norway) V. Fucose was found in the capsular polysaccharide of a previously fucose-less Klebsiella

strain, originally classified, as type AE. The appearance of fucose reduced rather than enhanced the cross-reactivity of the strain with other fucose-containing strains of type AE. This and the fact that fucose in this polysaccharide disappeared after oxidation with periodic acid in contrast to the fucose of other strains suggest that the fucose of this strain may have a different location.

VI. Four different strains of Klebsiella sero-type 3, classified as the spp. K. rhinoscleromatis, ozaenae, Dneumoniae (Citrobacter?^) and aerogenes had capsular polysaccharides of the same qual. and quant, composition; also a cross-reacting strain of K. aerogenes. Another strongly cross-reacting strain related to enterobacter contained 2 additional sugar components.

VII. Capsular polysaccharides from strains of K. rhinoscleromatis, K. ozaenae, K. pneumoniae and Aerobacter (Klebsiella) aerogenes, all classified as type 3, had the same serol. specificity. They contained a small quantity of a second, strain-sp. Ag, possibly an O-Ag. Of 2 cross-reacting strains one had almost the same specificity as type 3, but contained 2 additional sugar components, whereas the other, which gave only a moderate cross-reaction with type 3, had the same composition as the type 3 polysaccharides. I.Friedmann

1422. SPINAL CORD COMPRESSION FOLLOWING VERTEBRAL OSTEOMYELITIS DUE TO ALKALESSENS-DISPAR. J.Briggs and R.G.Lascelles: J. clin. Path., 1963. 16, 155-157 (Dept. Clin. Path.. St. Thomas's Hosp.. London. England) A member of the Alkalescens-Dispar group was isolated from a spinal osteomyelitic lesion in man, but Ab to this organism was not found in the patient 's serum. J.B.Derbyshire

1423. ELECTRON MICROSCOPE STUDY OF PENICILLIN-INDUCED SPHEROPLASTS IN VIBRIO CHOLERAE. A.C.Shipstone and S.C.Agarwala: Indian J. exp. Biol.. 1963. 1, 103-105 (Central Drug Res. Inst., Lucknow, India) E.M. study of spheroplasts of V. cholerae cellst produced by growing the cells on papain-meat digest-agar containing penicillin, has revealed a residual cell wall in the spheroplasts. Formation of spheroplasts is quicker and more complete when V. cholerae cells are grown on a solid medium. Evidence has been obtained for binary fission in the naked spheroplasts.

1424. CHOLERA VACCINE. I. PROTECTIVE ANTIGENS OF HAFFKINE INSTITUTE CASEIN HYDROLYSATE CHOLERA VACCINE. II. PURIFICATION. S.H.Asmani and S.S.Rao: Indian J. Microbiol.. 1962, 2, 51-54, 55-58 (Haffkine Inst., Bombay, India) I. The heat-stable protective Ag in Haffkine Inst. cholera vaccine was one of 4 O Ag present in the supernatant; 7 heat-labile H Ag were also present.

II. Protective Ag were purified from heated casein hydrolysate cholera vaccine af'er lyophilisation and extracted first with ethylene glycol followed by TCA and saline. The protective Ag appears to be a polysaccharide with low N2 content. • G.M.Lewis

1425. SOLUBLE PROTECTIVE ANTIGEN FROM BORDETELLA PERTUSSIS PREPARED WITH SODIUM DEOXYCHOLATE. G.Barta: J. Immunol., 1963, 90, 72-80 (Connaught Med. Res. Labs., Univ. Toronto, Canada) The optimal conditions for solubilisation of the protective Ag are: 0-5-1 '0% deoxycholate pH 8[#]5, 0-2°, and a reduction in O.D. of 40-50%. Approx. l&fo of the bacterial dry wt. was dissolved under these conditions. The sol. fraction was virtually non-toxic. Soln. of protective Ag could be sterilised by millipore filtration. N.R.Ling

1426. BRUCELLA ANTIGENS. II. CYTOPLASMIC AND CELL-WALL FRACTIONS. J.Roux and A.Serre: Ann. Inst. Pasteur, 1963, 104, 238-245 (Fac. Méd.. Univ., Montpellier, France) It has been possible to prepare cell-wall fractions of 3 spp. of Brucella which were free from cytoplasmic Ag, but it was more difficult to prepare cytoplasmic Ag free from cell-wall contaminants. This has been demonstrated by double-diffusion in gel and immunoelectrophoresis in presence of corresponding immune sera. It was not possible to demonstrate one fraction sp. for Brucella spp. (French) B.Payne

1427. CHEMICAL BASIS OF VIRULENCE OF BRUCELLA ABORTUS. III. FOETAL ERYTHRITOL A CAUSE OF LOCALISATION OF B. ABORTUS IN PREGNANT COWS. A.E.Williams, J.Keppie and H.Smith. IV. IMMUNOGENIC PRODUCTS FROM B. ABORTUS GROWN IN VIVO AND IN VITRO. H.Smith, J.Keppie, J.H.Pearce and K.Witt: Brit. J. exp. Path., 1962, 43, 530-537. 538-548 (Microbiol. Res. Estab., Porton, Wilts., England) III. Erythritol was found cone, in chorion, cotyledons and foetal tissue. Erythritol in vitro stim. B. abortus growth in fig. quantities, and enhanced infection in 1-5 day calves.

IV. Crude cell wall extracts from B. abortus were immunogenic for guinea-pigs and for mice; cytoplasmic constituents were not. Both complex and synthetic media were used to prepare culture filtrates with immunogenic prop. D.L.Gardner

1428. HABITAT OF 'BACTERIUM EURYDICE¹'. L.Bailey: J. gen. Microbiol., 1963, 31, 147-150 (Rothamsted Exp. Stn., Harpenden, Herts., England) The alimentary canal of adult bees is the main source of 'Bacterium eurydice' [Achromobacter eurydice] which spreads between bees and to larvae, pollen and honey, from the mouths of infected adults. Most natural spread happens when foraging activity is greatest, probably because infected adults then collect and contaminate pollen which is soon eaten by the young brood-rearing bees. K.Brew

1429. INFLUENCE OF TEMPERATURE ON THE SIZE AND SHAPE OF BACTERIUM ANITRATUM. B.Brzin: Acta path. microbiol. scand.. 1963, 57, 188-198 (Vaccine-afdeling, Statens Seruminst. Copenhagen, Denmark) Striking changes in the size and shape of B. anitratum, occur dependent on temp, due to inhibn.of cell division at 37°, while the organisms continue to grow to oversized cells at the same temp. The dependence on temp, of cell growth in the strains described is different from that of cell reproduction. Aerobiosis and adequate humidity of the media used are important co-factors in this process. LFriedmann

1430. ROLE OF SERUM AND TISSUE LYSOZYME UPON TREPONEME IMMOBILISATION REACTION. M.Metzger: Amer. J. Hyg.. 1962, 76, 267-275 (Dept. Protozoology, Ludwik Hirszfeld Inst. Immunol., Polish Acad. Sci., Wroclaw, Poland) The lysozyme normally present in £ and immune serum influences the kinetics of the treponeme immobilisation reaction. Removal of the enzyme increases the rate of immobilisation but does not abolish completely. PJ.Baron

1431. FALSE POSITIVE REACTIONS IN TREPONEMAL TESTS. AJJulian, J.Portnoy and H.N.Bossak: Brit. J. vener. Dis., 1963, 39, 30-32. Immobilising Ab against T. pallidum were produced in goats immunised ^{J^1*} normal rabbit testicular homogenates. Absorption of ^{nur}nan sera with normal rabbit testicular homogenates did not affect their reactivity in the TPI and FTA tests. R.R.Willcox

1432. FRACTIONATION STUDIES OF ANTIBODIES DETECTED IN SEROLOGICAL TESTS FOR SYPHILIS. J.Portnoy, AJJulian, J.F.Smith and A.Harris: Brit. J. vener. Dis., 1963, 39, 33-36. Continuous flow paper electrophoresis was employed to fractionate 5 human sera obtained from 2 patients with early syphilis, 2 persons presumed non-syphilitic and 1 biol. false-pos. reactor. R.R.Willcox

1433. ENHANCEMENT BY LYSOZYME OF THE SENSITIVITY OF TREPONEMA PALLIDUM IMMOBILISATION [TPI] TESTS. J.F.Kent and J.B.De Weerdt: Brit. J. vener. Dis., 1963, 39, 37-40. The incorporation of 0.0075% lysozyme in treponemal survival medium affected a 3- to 4-fold increase in the sensitivity tests for TPI Ab. This increase, superimposed on that achieved by incubating for 40 hr. instead of the usual 18 hr., resulted respectively in 7-8 fold and 15-16 fold mean increases in the titres of syphilitic human and rabbit sera. R.R.Willcox

1434. HAEMOLYSIS IN IDENTIFYING EATON'S PLEUROPNEUMONIA-LIKE ORGANISM. W.A.Clyde, jun.: Science, 1963, 139, 55 (Dept. Paediatrics, Sch. Med., Univ. North Carolina, Chapel Hill, N.C., U.S.A.) Eaton's pleuropneumonia-like organism may be differentiated from other mycoplasma strains by its ability to cause clear haemolysis of mammalian r.b.c. G.M.Lewis

1435. GENITAL STRAINS OF HUMAN PLEUROPNEUMONIA-LIKE ORGANISMS. D.K.Ford and M.Duvernet: Brit. J. vener. Dis., 1963, 39, 18-30. Pleuropneumonia-like organisms were demonstrable in the urethral exudate of 24 of 100 service recruits, 55 of 100 gaol inmates and in 84 of 100 patients with non-gonococcal urethritis. The T strain was found in 21, 47 and 79% respectively in the 3 groups. R.R.Willcox

1436. MYCOPLASMA (PPLO) STRAINS WITH LYtic ACTIVITY FOR MURINE LYMPHOMA CELLS IN VITRO. P.M.Kraemer, V.Defendi, L.Hayflick and L.A.Mason: Proc. Soc. exp. Biol., N.Y.. 1963, 112, 381-387 (Wistar Inst. Anat. Biol., Philadelphia, Pa., U.S.A.) The lytic activity of various PPLO mycoplasma viral strains designated 'B-7' and '12-3' against murine lymphosarcoma cells in culture (L5178Y and P388 Di) has been demonstrated. There is no lytic effect on other normal cell cultures. Any effect of B-7 in vivo upon ascitic lymphosarcoma was obscured by host effects and no difference in susceptibility to the tumour was found in treated or untreated animals. D. N# Wheatley

RICKETTSIAE AND VIRUSES

1437. ECOLOGY OF ROCKY MOUNTAIN SPOTTED FEVER IN WESTERN MONTANA. I. ISOLATION OF RICKETTSIA RICKETTSII FROM WILD MAMMALS. W.Burgdorfer, V.F.Newhouse, E.G.Pickens and D.B. Lackman: Amer. J. Hyg.. 1962, 76, 293-301 (N.I.H., Rocky Mountain Lab., Hamilton, Mont., U.S.A.) Seven highly virulent strains of R. rickettsii were recovered; 1 from the blood of a snowshoe hare, 1 from the spleen of a golden-mantled ground squirrel and 5 from the spleen tissues of chipmunks. p.j.Baron

MICROBIOLOGY

1438. PRODUCTION OF RICKETTSIA BURNETI ANTIGEN FOR COMPLEMENT FIXATION TESTS BY TRYPSIN PURIFICATION OF YOLK-SAC SUBSTANCE. K.Linde and H.Urbach: *Z. Immun.-Forsch.*, 1962, 124, 240-248 (Hyg. Inst., Univ. Jena, Germany)
Yolk sacs infected with R. burnetii are triturated with sand and the resulting suspension is purified by centrifugation followed by treatment with 1% trypsin for 48 hr. at 42°. The yield is 4-6 times larger than that obtained by other methods.
(German) D.P.Winstanley

1439. INDUCTION OF PROLONGED LATENCY IN PSITTACOSIS INFECTED CELLS BY AMINOPTERIN. M.Polland and N.Sharon: *Proc. Soc. exp. Biol.*, N.Y., 1963, 112, 51-54 (Lobund Lab., Univ. Notre Dame, Notre Dame, Ind., U.S.A.) Psittacosis virus was used to infect cultured McCoy cells (derived from human synovial tissue). Virus was sensitive to aminopterin up to 20 hr. after infection, after which a factor arose which led to less sensitivity. Folinic acid reversed the aminopterin effect even after 4 weeks of latent infection with aminopterin present. However folinic acid differs from the virus desensitising factor by having beneficial effects on both tissue culture cells and virus whilst the latter benefits primarily the virus. D.N.Wheatley

1440. STUDY BY FLUORESCENCE MICROSCOPY OF REPLICATION OF LYMPHOGRANULOMA VENEREUM VIRUS IN HeLa CELL MONOLAYERS. G.Furness and G.W.Csonka: *J. gen. Microbiol.*, 1963, 31, 161-165 (Lister Inst. Preventive Med., Chelsea, London, England) HeLa cells infected with a single lymphogranuloma virus and stained with Acridine Orange showed one particle of RNA of 2 μ diam. in fluorescence microscopy of the cytoplasm after 7 hr. at 37°. 2 particles after 12 hr. and an exponentially increasing no. thereafter with a mean generation time of 2 hr. At 18-21 hr. a vacuole was formed round those initial bodies and at 21-24 hr. smaller particles staining orange to yellowish green appeared. Yellowish green particles (DNA) had almost entirely replaced the initial bodies by 33 hr. and the no. then decreased as virus was released. K.Brew

1441. GROWTH OF TRACHOMA AND INCLUSION BLENNORHOEAE VIRUSES IN EMBRYONATED EGGS. P.Reeve and J.Taverne: *J. Hyg., Lond.*, 1963, 61, 67-75 (M.R.C. Trachoma Res. Unit, Lister Inst., London, England) Seven strains of trachoma virus and 4 strains of inclusion blennorrhoea virus were titrated in the yolk sacs of embryonated eggs. Some strains killed the embryos more rapidly than others, and these strains produced relatively few elementary bodies per LD₅₀, and formed inclusions in HeLa cells. On passage, the virulence of 3 strains was enhanced, and they began to form inclusions in HeLa cells. J.B.Derbyshire

1442. ANTIGENIC STRUCTURE OF HERPES SIMPLEX VIRUS. K.E.Schneweis: *Z. Immun.-Forsch.*, 1962, 124, 173-196 (Hyg. Inst., Univ. Gottingen, Germany) The N Ag is thermolabile and reacts with neutralising Ab. The V Ag is thermostable and reacts in the CF test. S Ag is not well defined, and may merely be an altered fraction of N or V Ag.
(German) D.P.Winstanley

1443. NEUTRALISATION OF ANIMAL VIRUSES. m. EQUILIBRIUM CONDITIONS IN THE INFLUENZA VIRUS-ANTIBODY SYSTEM. IV. PARAMETERS OF THE INFLUENZA VIRUS-ANTIBODY SYSTEM. S.Fazekas de St.Groth and R.G.Webster. *J. Immunol.*

1963, 90, 140-150, 151-164 (Dept. Microbiol., Australian Nat. Univ., Canberra, Australia) III The quantal assay system of influenza virus multiplying in surviving allantois is suited to the quant. study of neutralisation. The final equilibrium is the same whether approached from the side of virus or Ab excess. Changes in test vol. lead to predictable shifts of equilibrium. The effect of non-infective virus particles is compatible only with random reversible combination of Ab mol. with Ag sites.

IV. Counts of virus particles of haemagglutinating and infective units are presented for the same prep, and 2 techniques are developed for estimating the no. of Ab mol within sera ($\pm 30\%$). The no. of Ag sites/virus particle is calc. to be of the order of 2000 for each virus tested. The equilibrium const. of the Ag-Ab reaction were between 9×10^{10} and 5×10^{11} and were significantly different for each pair of reactants. N.R.Ling

1444. OBSERVATIONS OF SOME LITTLE-KNOWN ADENOVIRUSES. L.Rosen, J.F.Hovis and J.A.Bell: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111, 166-171 (Lab. Inf. Dis., Nat. Inst. Allergy and Inf. Dis., Bethesda, Md., U.S.A.) Adenoviruses types 9, 10, 12, 13, 16, 17, 24, 25, 26, 28. BP-6 and BP-7 were isolated from anal specimens of children in whom increased homotypic haemaggl. inhibn. Ab levels were found. M.M.Shapland

1445. EFFECT OF ORGANIC AND INORGANIC ACIDS ON POLIOVIRUS AT 50°. C.Wallis and J.L.Melnick: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111, 305-308 (Dept. Virol., Baylor Univ. Coll. Med., Houston, Tex., U.S.A.) Type 1 attenuated poliovirus was stabilised at 50° at pH 4*0-5*0 in acetic, oxalic and lactic acids, at pH 4*0 in citric, tartaric, benzoic and salicylic acids and at pH 3*0-5'5 in HCl, HNO₃, H₃PO₄ and H₂SO₄. Type 1 virulent strain was inactivated almost completely at 50° in these acids. M.M.Shapland

1446. COMPARISON OF NEUTRALISATION RATE AND AGAR DIFFUSION METHODS FOR INTRATYPIC SERO* DIFFERENTIATION OF POLIOVIRUSES. W.A.Woods, R.A.Weiss and F.C.Robbins: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111, 401-404 (Dept. Pediatrics, Cleveland Met. Gen. Hosp., Cleveland, Ohio, U.S.A.) Comparable results were obtained for antigenicity of polioviruses using the McBride neutralisation rate test and the Melnick agar diffusion test. M.M.Shapland

1447. POLIOVIRUS NEUTRALISING PROPERTIES OF EQUINE AND OTHER SERA. G.Plummer: *Nature*, Lond., 1963, 197, 870-872 (Wellcome Res. Lab., Beckenham, Kent, England) Inhibitors for poliovirf* in equine sera were most active against type II virus and least against type I, and cause progressive neutralisation of poliovirus during incubation. The inhibitors were stable up to 63° and ppts. as y-globulins. Horses inj. with attenuated virus developed Ab slowly and showed no clinical reaction. Poliovirus could not be isolated from horses. It is suggested that these inhibitors are Ab to Ag common to enteroviruses. G.M.Lewis:

1448. OUTBREAK OF POLIOMYELITIS IN A PARTIALLY VACCINATED POPULATION. THE EPIDEMIC IN GOTHENBURG IN 1961. T.Anden and E.Lycke: *Acta path. microbiol. scand.*, 1963, 57, 73-80 (Municipal Virol. Lab., Gothenburg, Sweden) 100 cases were registered. 50 of which were of a paralytic nature. The

MICROBIOLOGY

137

attack rate per 100000 population was 24*7. The attack rate was highest among children in the pre-school age-groups and lowest among the school-children who were vaccinated to *d&Jo*. Eleven of the affected individuals had received 3 injn. with poliovaccine. The vaccine efficacy was 98*7% as regards reduction of paralytic polio and 91-9% if based on the figures for aparalytic as well as paralytic polio.

LFriedmann

1449. POLIOVIRUSES AND FLIES; EPIDEMIOLOGY OF ENTEROVIRUSES IN URBAN AREA. T.Wayne Downey: Yale J. Biol. Med., 1963, 35, 341-352 (Dept.

Epidemiology and Pub. Hlth., Yale Univ. Sch. Med., New Haven, Conn., U.S.A.) Flies were trapped during 2 successive summers in several areas and were studied using monkey kidney tissue culture techniques to determine how readily enteroviruses could be isolated from them, and whether any correlation existed between the strains isolated from flies and those from patients. In the first year an epidemic of poliomyelitis occurred and it was found that poliovirus type 1 strains, similar to strains isolated from patients, could be recovered in areas with a high degree of infection. In the second yr. the converse was observed when there was no clinical disease and no enteroviruses were recovered from flies.

J.B.Parish

1450. MEASLES AND POLIOVIRUS ANTIBODIES IN COMMERCIAL PREPARATIONS OF HUMAN γ -GLOBULIN.

V.J.Cabasso, K.H.Kiser, F.H.Clarke and M.R.Stebbins: J. Immunol., 1963, 90, 81-85 (Viral and Rickettsial Res. and Biol. Production Section, Lederle Labs., American Cyanamid Co., Pearl River, N.Y., U.S.A.) Commercial prep. (23 lots) of human γ -globulin derived from placental extracts were titrated in HeLa cell cultures for Ab neutralising measles virus using cytopathology as an indicator. Titres ranged between 10*2*70 and 10-3*30/O*1 ml. of globulin. Titres of poliomyelitis Ab by the metabolic inhibn. test on monkey kidney cells were 10-3-91 and 10-4*39/0*25 ml. of globulin for type L 10-4-09 and 10-4*70 for type II and 10-3-79 and 10-4 * 39 fo, type m.

1456. COMPARISON OF CHICKEN EMBRYONIC CELL CULTURES AND MICE FOR DETECTING NEUTRALISING ANTIBODY TO JAPANESE ENCEPHALITIS VIRUS [JEV]. USE OF MICROCULTURES FOR VIRUS- AND SERUM-DILUTION NEUTRALISATION TESTS. T.Miura and W.F.Scherer: Amer. J. Hyg., 1962, 76, 197-208 (Dept. Microbiol., Univ. Minnesota, Minneapolis, Minn., U.S.A.) Similar results were obtained in

virus-diln. neutralisation tests for Ab to JEV with weanling mice, inoc. intracranially, and with chicken embryonic cell cultures under agar medium. Serum-diln. neutralisation tests for JEV Ab were performed in micro-cultures of chicken embryonic cells under agar medium. Diln. titres > 1 in 4 were obtained with serum found pos. or equivocal by virus-diln. test.

Pj.Baron

1457. VARIATION IN SIZE OF PLAQUES PRODUCED IN TISSUE CULTURE BY STRAINS OF WESTERN EQUINE ENCEPHALITIS VIRUS [WEE]. I.D.Marshall, R.P. Scrivani and W.C.Reeves: Amer. J. Hyg., 1962, 76, 216-224 (Divn. Epidemiology, Sch. Pub. Hlth., Univ. California, Berkeley, Calif., U.S.A.)

Plaques formed by strains of WEE in chick embryo tissue cultures under agar varied in size from 1*4 to 13*8 mm. diam. Large plaques (7 mm. and larger) were characteristic of field strains. Predominant plaque type was varied by passage procedure.

Pj.Baron

1458. VIRUS OF VENEZUELAN EQUINE ENCEPHALOMYELITIS [VEE] IN TRINIDAD, W.I. I. THE 1943-1944 EPIZOOTIC. W.D.Tigertt and W.G.Downs: SEROLOGICAL STATUS OF HUMAN BEINGS. W.D.Tigertt, T.O.Berge and W.G.Downs. III. REISOLATION OF VIRUS. W.G.Downs, L.Spence and T.H.G.Aitken: Amer. J. trop. Med. Hyg., 1962, 11, 822-834, 835-840, 841-843 (Rockefeller Foundn., New York, U.S.A.)

I. A detailed chronology of the events associated with the 1943-1944 epizootic in Trinidad is presented. Findings are assessed and all known data appertaining to human infection are reviewed.

II. A total of 687 sera from adults and children in 3 areas of Trinidad were tested for the presence of neutralising Ab against VEE virus. In southwestern Trinidad, the area involved in the 1943-44 epizootic, Ab were found only in sera from individuals living in 1944. In the Port of Spain area, evidence of post-1944 experience with the virus was very slight. By contrast, in the non-epizootic area of central Trinidad, an appreciable incidence of

MICROBIOLOGY

serol. positivity was found in all age groups, including children born after 1944, some even born as late as 1949. Possible explanations for these last findings are discussed. Of these, the most tenable postulates the existence in this area of a well-established focus of VEE virus, or a closely related strain, which produces essentially symptomless infection in man. Possible origins of this focus are considered.

H1. Isolation of numerous strains of VEE virus from mosquitoes, sentinel mice and field rodents in Trinidad in 1959, 1960 and 1961 is reported. These constitute the first recoveries of this agent in Trinidad since the original isolations in 1943.

A.A.Zimmerman

1459. VIRUS OF VENEZUELAN EQUINE ENCEPHALOMYELITIS. m. DISTRIBUTION IN TISSUES OF EXPERIMENTALLY INFECTED MICE. J.B.Tasker, M.L. Miesse and T.O.Berge: Amer. J. trop. Med. Hyg., 1962, 11, 844-850 (Dept. Pathol. Bact., New York State Vet. Coll., Ithaca, N.Y., U.S.A.) A study

was made of the rates and sites of accumulation of equine encephalomyelitis virus in tissues of young adult mice following infection by a peripheral route. Virus accumulated more slowly in brain, but eventually reached the highest content found in any other organ.

A.A.Zimmerman

1460. INHIBITION OF ARBOR VIRUSES (GROUP A) BY A PROTEIN-LIKE CONSTITUENT OF A CORYNEBACTERIUM. D.H.Carver and K.Naficy: Proc. Soc. exp. Biol., N.Y., 1962, 111, 356-360 (Res. Div. of Inf. Dis., Children's Hosp. Med. Cen., Boston, Mass., U.S.A.) A factor (BIF) has been demonstrated in an unidentified sp. of Corynebacterium which inhibits multiplication of 2 group A arbor viruses, Sindbis and Chikungunya, in cultures of human amnion and chick embryo cells. Evidence is presented that inhibn. occurs after the virus has entered the cell.

M.M.Shapland

1461. ARTHROPOD-BORNE VIRUSES IN SOUTH-CENTRAL FLORIDA. J.R.Henderson, N.Karabatsos, A.T.C.Bourke, R.C.Wallis and R.M.Taylor: Amer. J. trop. Med. Hyg., 1962, 11, 800-810 (Dept. Epidemiol. and Publ. Hlth., Yale Univ. Sch. Med., New Haven, Conn., U.S.A.) An account is given of an ecological study carried out in Florida to determine the nature and distribution of arbor viruses.

A.A.Zimmerman

1462. ELECTRON MICROSCOPY OF NEUROTROPIC AFRICAN HORSE-SICKNESS VIRUS. A.Polson and D.Deeks: I. Hyg., Lond., 1963, 61, 149-153 (Virus Res. Unit, Cape Town Univ. Med. Sch., Cape Town, S. Africa) African horse-sickness virus was purified from infected mouse brain extracts by a combination of polyethylene glycol pptn., ultracentrifugation and zone electrophoresis. The purified material still contained normal brain components, but virus particles could be recognised. These were 70-80 mji diam., and they were estimated to have 92 rod-shaped sub-units radiating from a spherical body.

J.B. Derbyshire

1463. RECENT EPIDEMIOLOGICAL DATA ON INFECTIOUS HEPATITIS. C.Solt: Acta microbiol. Acad. Sci. hung., 1962, 9, 157-165 (State Inst. Hygiene, Budapest, Hungary) The present epidemiol. state, age specificity, relation between age sp. morbidity and seasonality and lethality data on infectious hepatitis in Hungary is discussed in detail.

1464. MEASLES IN NIGERIAN CHILDREN. A STUDY OF THE DISEASE IN WEST AFRICA. AND ITS MANIFESTATIONS IN ENGLAND AND OTHER COUNTRIES DURING DIFFERENT EPOCHS. D.Morley, M.Woodland and W.J.Martin: J. Hyg., Lond., 1963, 61, 115-134 (Wesley Guild Hosp., Illesha, W. Nigeria) A description of the clinical characteristics of measles in Nigeria.

J.B.Derbyshire

1465. PROPAGATION IN TISSUE CULTURE OF CYTOPATHIC AGENTS FROM PATIENTS WITH RUBELLA-LIKE ILLNESS. T.H.Weller and F.A.Neva: Proc. Soc. exp. Biol., N.Y., 1962, 111, 215-225 (Dept. Trop. Pub. Hlth., Harvard Sch. Pub. Hlth., Boston, Mass., U.S.A.) Propagation of viruses, isolated from urine and blood from patients with rubella-like illness, in primary human amnion cultures produced cytopathic changes characterised by aggregation of nuclear material and presence of inclusion bodies. It is suggested that these viruses may be responsible for a significant proportion of illnesses now clinically diagnosed as rubella.

M.M.Shapland

1466. RECOVERY OF RUBELLA VIRUS FROM ARMY RECRUITS. P.D.Parkman, E.L.Buescher and M.S. Artenstein: Proc. Soc. exp. Biol., N.Y., 1962, 111, 225-230 (Dept. Virus Dis., Walter Reed Army Inst. Res., Washington, D.C., U.S.A.) A virus recognised by its capacity to multiply in grivet monkey kidney cultures and to interfere in such cultures with subsequent multiplication of ECHO-11 virus, was isolated from army recruits with rubella, but rarely from those hospitalised at the same time or place with scarlet fever.

M.M.Shapland

1467. ISOLATION IN TISSUE CULTURE OF AN INTERFERING AGENT FROM PATIENTS WITH RUBELLA. J.A.Veronelli, H.F.Maassab and A.V.Hennessy: Proc. Soc. exp. Biol., N.Y., 1962, 111, 472-476 (Dept. Epidemiol., Sch. Pub. Hlth., Ann Arbor, Mich., U.S.A.) Agents interfering with the growth of ECH-11 virus in primary or continuous grivet monkey kidney cells were recovered from upper respiratory secretions of 7 rubella patients. Rise in the neutralising prop. of the sera obtained in the convalescent period as compared with the acute sera was a const. feature in all specimens tested.

1470. INTERFERING PROPERTIES OF SIMIAN VIRUSES.

G.Plummer: Brit. J. exp. Path.. 1963. 44, 58-65
(Wellcome Res. Labs., Beckenham, Kent, England)
Monkey kidney cultures were used to study production by 4 simian viruses of interferon and their sensitivity to interferon prep, from inactivated influenza A virus. Only strain SV 5 stim. interferon production. SV 5 and foamy virus were sensitive to interferon but SV 40 was insensitive.

D.L.Gardner

1471. ELECTRON MICROSCOPIC STUDIES ON DEVELOPMENT OF VESICULAR STOMATITIS VIRUS IN KB CELLS. M.Mussgay and J.Weibel: J. cell Biol.. 1963. 16. 119-129 (I.V.I.C., Dept. de Virol. Caracas, Venezuela)

The virus inoculum subjected to 12 Passages through KB cell cultures was added to the growth medium of 2-day old cell cultures containing $5 \times 10^6 \times 10^8$ cells per flask and incubated for 1 hr. The non-adsorbed virus was removed and cells were harvested 1, 4, 7, 10, 14 and 20 hr. after inocn. and centrifuged. The supernatant was assayed by the plaque test in chick embryos and electron micrographs of infected cells studied. After 10 hr. virus rods were observed attached to cytoplasmic membranes, inside vacuoles and on the surface membrane of the cells. The origin of these membranes remains obscure. Spherical particles possibly related to foci development were observed at these sites.

1472. STRESS AND SUSCEPTIBILITY TO VIRAL INFECTION. I. RESPONSE OF ADRENALS. LIVER, THYMUS, SPLEEN AND PERIPHERAL LEUKOCYTE COUNTS TO SOUND STRESS. II. SOUND STRESSES AND SUSCEPTIBILITY TO VESICULAR STOMATITIS VIRUS.

M.M.Jensen and A.F.Rasmussen: J. Immunol.. 1963, 90, 17-20, 21-23 (Div. Virol., Dept. Infections Dis., Univ. California Med. Sch., Los Angeles, Calif., U.S.A.) I. Daily 3 hr. exposures to high-intensity sound induced adrenal hypertrophy in mice. Peripheral v.b.c. counts responded biphasically to this stressor, exhibiting a leucopenia during and a leucocytosis following the stress period on each day. Leucopenia was not seen in stressed adrenalectomised mice. n. The susceptibility of mice to intranasally inoculated virus was significantly increased by daily exposure to sound. Periods of high intensity sound (123 db). Adrenalectomised mice inoc. on the 2nd day of stress responded like manner. Animals inoc. before stress were more susceptible whereas those inoc. after were more resistant to virus than controls.

N.R.Ling

1473. EXPERIMENTAL INFECTION WITH RESPIRATORY Syncytial VIRUS IN SEVERAL SPECIES OF ANIMALS. J.V.Coates and R.M.Chanock: Amer. J. Hyg., 1962, 16, 302-312 (N.I.H. Pub. Hlth. Serv., Nat. Inst. Allergy and Inf. Dis., Bethesda, Md., U.S.A.)

was recovered from the upper part of the respiratory tract of ferrets, mink and a marmoset after intranasal inoculation of the A-1 strain. At least a 4-fold rise in either neutralising Ab, or both, in ferrets, guinea-pigs, AKR mice and chinchillas was seen.

1474. ENCEPHALOMYOCARDITIS [EMC] VIRUS AND ITS RNA: SEDIMENTATION CHARACTERISTICS.

J. SEDIMENTATION COEFFICIENTS OF ENCEPHALOMYOCARDITIS VIRUS AND ITS RNA. A.T.H.Burness, S. M. and F.W.Clothier. **H. SEDIMENTATION PROPERTIES OF INFECTIVE RNA EXTRACTED FROM ENCEPHALOMYOCARDITIS VIRUS.** L.Montagnier and

F.K.Sanders: Nature, Lond.. 1963. 197. 1177-1178. 1178-1181 (M.R.C. Lab., Carshalton, Surrey, England) I. S of EMC virus using haemagglutinin activity and virus infectivity as markers was 161-164 S. i of virus RNA using infectivity as marker was 37 S.

II. 32P-labelled EMC virus RNA was prep, by infecting ascites cells with EMC in the presence of [³²P]phosphate. Phenol extraction of purified virus from this system yielded an RNA which was infective as judged by ability to form plaques on agar suspensions of susceptible cells. The bulk of this infective RNA appears to consist of mol. each of which corresponds in size to the total RNA content of 1 virus particle.

J.R.Sargent

1475. PNEUMONIA VIRUS OF MICE [PVM] IN CELL CULTURE. R.W.Tennant and T.G.Ward: Proc. Soc. exp. Biol., N.Y.. 1962. 111, 395-398 (Dept. Microbiol., Georgetown Univ. Sch. Med. and Dent., Washington, D.C., U.S.A.)

Evidence has been presented for the growth of PVM in suckling hamster kidney cell culture monolayers. Tissue components which combine with the virus *in vivo* were not detected in culture fluids. Propagation in cell culture appears to free PVM from the Riley Agent present as a contaminant of the animal passaged virus.

M.M.Shapland

1476. ISOLATION OF A VIRUS FROM INFECTIOUS BOVINE KERATO-CONJUNCTIVITIS [IBKC]. J.A.Sykes, L.Dmochowski, C.E.Grey and W.O.Russell: Proc. Soc. exp. Biol., N.Y.. 1962. 111, 51-56 (Sect. Virol., Univ. Texas M.D., Tex., U.S.A.)

A DNA containing virus, cytotoxic to bovine and human cells, was isolated from biopsy material from eyes of cattle with IBKC. Per nasal installation of virus containing tissue culture fluids induced classical IBKC. Seria from animals with expt. induced disease neutralised the cytotoxic effect of the virus.

M.M.Shapland

1477. CYTOPATHIC EFFECT OF INFECTIOUS LARYNGOTRACHEITIS VIRUS IN CULTURES OF CHICKEN EMBRYO KIDNEY CELLS. A.M.Watrach and L.E. Hanson: Proc. Soc. exp. Biol., N.Y.. 1963. 112, 230-232 (Dept. Vet. Path. and Hyg., Coll. Vet. Med., Univ. Illinois, Urbana, Ill., U.S.A.)

Chicken embryo kidney cells cultured in Hank's BSS, lactalbumin hydrolysate and 20% sheep serum were infected with virus strain N71851 which derived from a chicken with laryngotracheitis in 1953. Five days after infection the treated cultures were showing necrotic cells with giant multinucleate cells present and many nuclear inclusion bodies. There was also some increase in cytoplasmic vacuolarity and granularity. The nuclear inclusion bodies were found to be DNA-containing material. Pycnosis was present also. Giant cells were found as early as 18 hr. after infection and the nuclear inclusions as early as 12 hr.

D.N.Wheatley

1478. EFFECT OF A MURINE HEPATITIS VIRUS ON THE LIVER. AN ANATOMIC AND HISTOCHEMICAL STUDY. W.A.Jones and R.B.Cohen: Amer. J. Path.. 1962. 41. 329-342 (Dept. Pathol., Harvard Med. Sch., Boston, Mass., U.S.A.)

Mice were inoc. with a homogenate of liver containing a virulent strain of mouse hepatitis virus. A reduction in the activity of most of the oxidative enzymes preceded histol. changes by 24 hr. Enzyme aberrations affected all lobules equally whereas histol. changes were of random distribution. Although the earliest histol. changes, foci of necroses involved both sinusoidal lining and hepatic cells it is thought that the initial site of virus attack is the Kuppfer cell.

D.G.Scott

MICROBIOLOGY

1479. MOUSE HEPATITIS VIRUS INFECTION AS A HIGHLY CONTAGIOUS, PREVALENT, ENTERIC INFECTION OF MICE. W.P.Rowe, J.W.Hartley and W.I.Capps: Proc. Soc. exp. Biol., N.Y., 1963, 112, 161-165 (Dept. HEW, Natl. Inst. Allergy and Infectious Dis., Bethesda, Md., U.S.A.) Mouse hepatitis virus could be demonstrated in faeces of weanling mice from infected mothers. Young mice in an animal house showed a higher mortality when expt. mice with hepatitis virus were also present. Hepatitis viral infections are highly contagious and can be transmitted by the faeces from infected mice very easily. D.N.Wheatley
1480. USE OF CENTRIFUGAL FORCE TO PROMOTE ADSORPTION OF MYXOMA VIRUS TO CELL MONOLAYERS. B.L.Padgett and D.L.Walker: Proc. Soc. exp. Biol., N.Y., 1962, 111, 364-367 (Dept. Med. Microbiol., Univ. Wisconsin Med. Sch., Madison, Wis., U.S.A.) Max. plaque-forming units of myxoma virus were obtained after centrifugation for 15 min. at 1900 g on to preformed monolayers of rabbit kidney and heart fibroblast cells. M.M.Shapland
1481. ACCENTUATION OF PLAQUES OF MYXOMA AND FIBROMA VIRUSES BY IMMUNE SERUM. M.S.Moore and D.L.Walker: Proc. Soc. exp. Biol., N.Y., 1962, 111, 493-497 (Dept. Med. Microbiol., Univ. Wisconsin Med. Sch., Madison, Wis., U.S.A.) Addition of sp. antiserum to the agar overlay enhances plaque development by 2 or 3 days and enables a count to be made on an unstained cell sheet. M.M.Shapland
1482. INDUCED LATENT INFECTION OF MONKEYS WITH VACUOLATING SV-40 PAPOVA VIRUS. VIRUS IN KIDNEYS AND URINE. A.Ashkenazi and J.L. Melnick: Proc. Soc. exp. Biol., N.Y., 1962, 111, 367-372 (Dept. Virol. and Epid., Baylor Univ. Coll. Med., Houston, Tex., U.S.A.) High titre SV-40 virus was isolated from the urine of green monkeys in the first 4 weeks of infection. Neutralising Ab were recovered from blood and urine late in the infection period. 3 to 8 months after infection, when there was no virus in urine, SV-40 was detected in kidney biopsies when grown as explants in tissue culture. M.M.Shapland
1483. DEFECTIVENESS OF ROUS SARCOMA VIRUS. H.Hanafusa, T.Hanafusa and H.Rubin: Proc. nat. Acad. Sci., Wash., 1963, 49, 572-580 (Virus Lab., Univ. California, Berkeley, Calif., U.S.A.) The high titre strain of Rous sarcoma virus is defective since it cannot generate the production of new infectious virus unless a helper virus such as Rous-associated virus is multiplying in the same cell. The ability to cause malignant transformation is expressed continuously and does not require the production of mature virus. Both the potential for virus production and the ability to transform cells are perpetuated in a cell line by hereditary transmission. J.R.Sargent
1484. PROPERTIES OF BACTERIOPHAGE DERIVED FROM E. COLI K235. M.A.Jesaitis and J.J.Hutton: J. exp. Med., 1963, 117, 285-302 (Rockefeller Inst. for Med. Res., New York, U.S.A.) A bacteriophage was isolated from the colicinogenic strain of *E. coli* K235 and characterised. It is related to the virus morphol., serol. and, possibly, genetically, and bears no relationship to the T-even phages. It was shown that the phage and colicine K differ both in their host range and in their immunol. specificity, and that the prophage does not

induce colicinogenesis in its host bacterium. It was concluded that the formation of colicine K and the phage in *E. coli* K235 are controlled by different genetic determinants.

H.E.Hjones

1485. EFFECTS OF MITOMYCIN AND ALPHA RAYS ON THE CAPACITY OF E. COLI B FOR PHAGE T3.

F.Hercík: Folia biol., Praha, 1963, 9, 42-50 (Inst. Biophysics, Czech. Acad. Sci., Brno, Czechoslovakia)

The phage-forming capacity of *E. coli* was studied following the action of a-ray irradiation upon cultures, with prior and later treatment with mitomycin. Mitomycin reduces the capacity for phage production, the decrease being proportional to the time the *E. coli* is left in contact with mitomycin. Capacity is reduced at a greater rate when mitomycin is added after irradiation, but the 2 factors do not act synergistically since the combined effects are less than the summed effects of the 2 separate treatments. It is probable that changes in DNA of the *E. coli* caused by mitomycin and irradiation differ qual.

M.S.Laverac*

1486. EFFECT OF HEAT ON THE ABILITY OF A HOST STRAIN TO SUPPORT THE GROWTH OF A STAPHYLOCOCCUS PHAGE. E.A.Asheshov and M.P.Jevons:

J. gen. Microbiol., 1963, 31, 97-107 (Staphylococc* Ref. Lab., Central Public Hlth. Lab., Colindale, London, England) A group of epidemiol. related *Staphylococcus aureus* strains became sensitive to typing phage 187 after holding the inocula at 56° for 2 min. TW strains were lysogenic and the interference of the carried phage, phage 5504', against phage 187 was overcome w. the heat treatment. Phage 187 grown in heated cocci was capable of lysing unheated lysogenic organisms and multiplication of phage 5504' appeared to be necessary for multiplication of phage 187. U.v. irradiation had a similar but lesser effect than heating.

K.BreV

1487. SPONTANEOUS LYSIS IN LYSOGENIC STAPHYLOCOCCI. E.D.Rosenblum and M.B.Laughlin: Proc. Soc. exp. Biol., N.Y., 1963, 112, 156-158 (Dept. Microbiol., Univ. Texas, Southwestern Med. Sch., Dallas#, Tex., U.S.A.)

The differential between free phag in slowly lysogenic cultures when plated for its plaque-forming capacity with spun (2000 r.p.m. for 10 min.) cultures when staphylococci were used has been studied. Plating out over time on streptomycin or penicillin medium with antibiotic resistant strains effected the plaque-forming freq. It was considered that the increas¹ in cell concn. with time caused considerable readsopt¹ of phage which became inactive in this state.

D.N. Wheat*

1488. ISOLATION AND SOME CHARACTERISTICS OF BACILLUS SUBTILIS PHAGES WITH TRANSDUCING ACTIVITY. G.Ivánovics and K.Csiszár: Acta microbiol. Acad. Sci. tang., 1962, 9, 209-218 (Inst. Microbiol., Univ. Med. Sch., Szeged, HungaT)

Temperate phages of *B. subtilis* were isolated from soil samples by means of the authors' streptomycin method and prototrophy was transduced to some auxotrophs. Phages with marked temperate character and with transducing activity possessed a poor plaque forming ability on complete media and therefore their assay could be carried out effectively on a synthetic medium contain[^] glutamic acid and glycerol.

S. K.

1489. INCREASE OF PLANT VIRUS INFECTION BY MAGNESIUM IN THE PRESENCE OF PHOSPHATE.

C.L.Kado: Nature, Lond., 1963, 197, 925-926 < >
Plant Pathol., Univ. California, Berkeley, Calif. u*

MICROBIOLOGY

141

The infectivity for their host plants of alfalfa mosaic, cucumber mosaic, tobacco necrosis, tobacco rattle and tobacco mosaic viruses was decreased by Mg alone, but increased by phosphate; the magnitude of the phosphate effect was significantly increased by Mg, the effect being greater for the less stable viruses. K, Na and Ca ions had no effect.

1492. AGROPYRON MOSAIC AS A DISEASE OF WHEAT IN CANADA. J.T.Slykhuis: Canad. J. Bot., 1962, 40, 1439-1447 (Plant Res. Inst., Res. Branch, Canada Dept. Agric., Ottawa, Canada) Wheat is more susceptible to manual inocn. with agropyron mosaic virus than Agropyron repens or any other grass seedlings. Symptoms appear in 6 days at 20° and 25° and are most pronounced at 25°. No symptoms develop on wheat kept at 10° or 35° for 19 days, but sap from these plants is infectious. Field tests show that the virus can be perpetuated on immature wheat. No natural vector of the virus has been determined.

1496. ISOLATION OF HISTOPLASMA CAPSULATUM AND MICROSPORUM GYPSEUM FROM SOIL AND BAT GUANO IN PANAMA AND THE CANAL ZONE.

R.L.Taylor, M.H.Shacklette and H.B.Kelley: Amer. J. trop. Med. Hyg., 1962, 11, 790-795 (Mycology Section, Middle America Res. Unit, Balboa Heights, Canal Zone) Eight potential areas of histoplasmosis endemicity in the Republic of Panama and the Canal Zone were located by the isolation of H. capsulatum from soil or bat guano.

A.A.Zimmerman

1497. NATURALLY ACQUIRED HISTOPLASMOSIS IN THE MAMMALS OF THE PANAMA CANAL ZONE.

R.L.Taylor and M.H.Shacklette: Amer. J. trop. Med. Hyg., 1962, 11, 796-799 (Mycology Section, Middle America Res. Unit, Balboa Heights, Canal Zone)

The endemicity of 2 areas in the Canal Zone, where clinical cases of histoplasmosis had occurred, was established by recovery of Histoplasma capsulatum from animals with naturally acquired histoplasmosis. H. capsulatum was isolated from 12 spiny rats (Proechimys semispinosus). 7 common opossums (Didelphis marsupialis) and 4 four-eyed opossums (Philander o. fuscogriseus).

A.A.Zimmerman

1498. INFECTION WITH HISTOPLASMA DUBOISII IN DIFFERENT EXPERIMENTAL ANIMALS. M.Okudaira and J.Schwarz: Mycologia, 1961, 53, 53-63 (Clin. Lab., Jewish Hosp., Cincinnati, Ohio, U.S.A.)

Expt. infection with H. duboisi in animals, shows that this sp. may possess biol. and morphol. prop. different from H. capsulatum.

J.G.Brown

1499. GENUS CANDIDA BERKHOUT. I. TYPING OF CANDIDA ALBICANS (ROBIN) BERKHOUT.

A.Kockova-Kratochvilova, J.Sandula and L.Hronska: Folia microbiol., 1963, 8, 109-116 (Chem. Inst., Slevah Acad. Sci., Czechoslovak Acad. Sci., Bratislava, Czechoslovakia) 111 strains isolated from various sources and originally identified as C. albicans are described. These strains have been typed by assessing the average size of blastopore cells, by detection of chlamydospores, by tests on agar with phosphomolybdic acid and by serol. tests.

J.R.Sargent

1500. EFFECTS OF VISIBLE LIGHT ON RESPIRATION IN YEAST. P.Matile: Ber.schweiz. bot. Ges., 1962, 72, 236-261.

The effect of light on respiration of yeast cells and isolated mitochondria maintained under aerobic conditions was studied. Endogenous respiration was increased by light but O₂ absorption was inhib. after 1 hr. of illumination and blocked entirely by long exposure to light. Glucose respiration was inhib. by light, but CO₂ output was not affected. The succinoxidase activity of the mitochondria was inhib. The light effect was independent of temp.

M.Blandin

1501. ZINC TOXICITY IN BREWER'S YEAST.

I.J.Witham: Nature, Lond., 1963, 197, 1113 (Dept. Biochem., Univ. Western Australia, Nedlands, Perth, Australia) Saccharomyces carlsbergensis grown in media containing toxic concn. of ionic Zn shows a significant reduction in O₂ uptake, aerobic and anaerobic fermentation, and cytochrome oxidase activity, indicating interference by the Zn with the levels of haem enzymes.

G.M.Lewis

1502. OSMOTIC BEHAVIOUR OF S. CEREVIAE AS AFFECTED BY BIOTIN DEFICIENCY. A.H.Rose:

J. gen. Microbiol., 1963, 31, 151-160 (Dept. Bacteriol., King's Coll., Univ. Durham, Newcastle-upon-Tyne, England) The extinctions of dilute suspensions of S. cerevisiae in phosphate buffer containing

MICROBIOLOGY

different NaCl concn. were followed as an index of osmotic behaviour. The extinction of biotin-optimal yeast suspensions increased as NaCl concn. increased to 1^o5M but yeast grown in unsupplemented or aspartate or olate + aspartate supplemented biotin-deficient medium showed a decrease in extinction. Yeast grown in oleate-supplemented biotin-deficient medium showed osmotic behaviour resembling biotin optimal yeast in NaCl concn. up to 0^o7M. The differences in behaviour were due to increased permeability to Cl⁻, accompanied by increased permeability to H₂PO₄⁻ and high mol. wt. solutes.

K.Brew

1503. CHANGES IN THE RATE OF FERMENTATION OF MALTOSE DURING PROPAGATION OF INDUSTRIAL BAKERS' YEAST. K.Beran, J.Huba and J.Hospodka: *Folia Microbiol.*, 1963, 8L 93-101 (Dept. Tech. Microbiol., Inst. Microbiol., Czech. Acad. Sci., Prague, Czechoslovakia) Yeast cells show a relatively constancy to ferment glucose, but maltase activity as well as the character of anaerobic fermentation of maltose undergo changes depending on the character of cultivation. Maltase activity in cell-free prep. shows an initial drop and then is maintained fairly const. throughout growth cycle until termination of growth when a rapid drop occurs.

J.R.Sargent

1504. NEW METHOD FOR QUANTITATIVE DETERMINATION OF MEMBERS OF THE GENUS SACCHAROMYCES IN MIXTURES WITH OTHER YEAST GENERA.

L.Silhankova: *Folia Microbiol.*, 1963, 8, 102-108 (Dept. Biol. Sci. Coll. Chem. Technol., Prague, Czechoslovakia) The method is based on the relatively high resistance of Saccharomyces to phenylhydrazine. The method can be used for detecting Saccharomyces individuals in cannery or wine-making raw materials and products, for purity control of production and collection strains of yeast and for detecting contamination with Saccharomyces spp. during fodder yeast production.

J.R.Sargent

1505. VARIANT STRAIN OF SACCHAROMYCES CEREVIAE INDUCED BY PALUDRINE. C.V.Pichappa and E.R.B.Shanmugasundaram: *Ann. Biochem.*, 1963, 23, 75-80 (Univ. Biochem. Lab., Madras, India)

Three variants of S. cerevisiae resistant to higher amounts of paludrine were obtained by growing them in the presence of the drug. One of them was stable though its resistance to the drug was only about twice that of the parent strain. The prop. of stable variant bore close resemblance to those of the parent culture.

K.Jones

1506. ONTOGENY OF APOTHECIA OF PYRONEMA DOMESTICUM. E.J.Moore: *Amer. J. Bot.*, 1963, 50, 37-44 (Plant Pathol. Dept., Cornell Univ., Ithaca, N.Y., U.S.A.) Investigation of P. domesticum

showed that a single hyphal strand produces a cluster of antheridia and ascogonia; each pair of like or unlike sex differentiation, and each cluster forms one apothecium. Nuclear migration from the antheridia follows plasmogamy and an ascogenous system develops from each ascogonium. Sterile hyphae arise from the stalk cells supporting the ascogonia and antheridia. Proliferation of all structural elements brings about apothecial expansion. Comparisons are made with P. omphalooides.

1507. BEAUVERIA TENELLA. [FUNGUS]. T.C.Cordon and J.H.Schwartz: *Science*, 1962, 138, 1265-1266 (U.S. Dept. Agric, Philadelphia, Pa., U.S.A.) B. tenella, an insect pathogen, grows well and sporulates

freely in submerged culture. Enzymes that loosened bovine hair that was found in broth cultures were not produced in the presence of chitin, and substitution of peptone broth for peptone-glucose broth did not increase their concn. Under certain conditions, oxalic acid was the main product in the peptone medium. G.M.Lewis

1508. LIGHT AND THE ASEXUAL REPRODUCTION OF PILOBOLUS. R.M.Page: *Science*, 1962, 138, 1238-1245 (Dept. Biol. Sci., Stanford Univ., Calif., U.S.A.) The responses of Pilobolus to light, as well as its specialised nutrition, are considered as manifestations of the adaptation of this fungus to its environment.

G.M.Lewis

1509. EFFECT OF TEMPERATURE ON ASCOGONIAL AND PERITHECIAL DEVELOPMENT IN CERATOCYSTIS FAGACEARUM. F.W.Cobb, jun., C.L.Fergus and W.L. Stambaugh: *Mycologia*, 1961, 53, 91-97 (Dept. Bot. and Plant Path., Pennsylvania State Univ., University Park, Pa., U.S.A.) C.fagacearum colonies grown at 15°, 20° and 27° produced significantly fewer perithecia than at 24°. No ascogonial formation or perithecia than at 24°. No ascogonial formation or perithecial development occurred at 1Cf or 3(f). Optimum temp. for conidiation is 20°. Temp. affected the length and width of perithecial necks.

J.G.Brown

1510. FUNGAL LUMINESCENCE. M.D.Berliner:

Mycologia, 1961, 53, 84-90 (AVCO, Wilmington, Mass., U.S.A.) Mature cultures of Panus stipticus kept at 10° and 40° for 2 weeks showed some luminescence. Optimum range for light emission was 18°-26°. Cultures exposed to X-irradiation of 0^o3 r-20 r showed a large increase in luminescence intensity in 2-3 hr., whilst those exposed to 100 r-5000 r showed a sharp increase in 30 sec.-3 min.

J.G.Brown

1511. MORPHOLOGICAL RESPONSE OF TRICHOPHYTON MENTAGROPHYTES TO METHIONINE. D.T.Klein:

J. gen. Microbiol., 1963, 31, 91-96 (Dept. Microbiol. and Immunol., Einstein Coll. Med., N.Y., U.S.A.) Granular T. mentagrophytes cultures changed their growth habit when grown on a medium containing the 19 L-amino acids in hydrolysed casein as source of N. The response was not shown when methionine was omitted. Pleomorphic cultures of T. mentagrophytes grown on this medium were not modified. The methionine effect was used successfully to differentiate between normal granular cultures and pleomorphic cultures, and atypical pleomorphic isolates could be classified as metabolically granular or pleomorphic.

K.Brew

1512. COEXISTENCE OF PULMONARY MYCOSIS AND AMOEBOIC ABSCESS OF THE LIVER. REPORT OF 6 AUTOPSY CASES. A Gonzalez-Mendoza, H.Brandt and A.Gonzalez-Licea: *Amer. J. trop. Med. Hyg.*, 1962, 11, 786-789 (Unidad de Patol., Fac. de Med. U.N.A.M., Hosp. General, Mexico, D.F., Mexico)

1

Autopsy and clinical findings on 6 cases of pulmonary aspergillosis associated with hepatic amoebic abscess are reviewed. In no case was aspergillosis suspected on clinical grounds. The possible mechanisms involved in this uncommon association are discussed. A brief review of the literature concerning pulmonary aspergillosis is given¹

OTHER MICRO-ORGANISMS

(Some abstracts on Protozoa, Diatoms, etc. may be found in the Experimental Zoology and Botany Sections)

1513. EPIDEMIOLOGY OF TOXOPLASMOSIS. D.G.Fleck: J. Hyg., Lond., 1963, 61, 61-65 (Publ. Hlth. Lab., Swansea, Wales) Serum samples from normal adults and from suspected toxoplasmosis patients were tested for toxoplasma Ab by the dye test. Only the patients with choroiditis had higher titres than normal. The no. of pos. sera from patients with cat-scratch fever was not significantly greater than in the normal group.

J.B.Derbyshire

1514. ELECTRON MICROSCOPE STUDIES OF REPRODUCING AND INTERKINETIC TOXOPLASMA. M.A. Gavin, T.Wanko and L.Jacobs: J. Protozool., 1962, 9, 222-234 (Ophthalmol. Branch, Nat. Inst. Neurol. Dis. and Blindness, N.I.H., Bethesda, Md., U.S.A.)

The reproduction of Toxoplasma gondii obtained 9 days after i.p. inocn. of mice, was investigated in osmium fixed and sedimented mouse peritoneal exudate. T.gondii appeared to be an intracellular parasite and its re-production could occur in one of 3 ways. Firstly there is a schizogonic cycle, with at least 4 progenies delineated within a rosette-shaped, multi-nucleated Toxoplasma cell. The second form is a special type of schizogony, where only 2 merozoites are produced within 1 parent. It would appear that binary fission can also occur. From the investigation it is concluded that the genus Toxoplasma belongs to the class Sporozoa.

R.J.Walker

1515. ELECTRON MICROSCOPE STUDY OF TOXOPLASMA CYSTS IN MOUSE BRAIN. T.Wanko, L.Jacobs and M.A.Gavin: J. Protozool., 1962, 9, 235-242 (Ophthalmol. Branch, Nat. Inst. Neurol. Dis., N.I.H., Bethesda, Md., U.S.A.) Toxoplasma aggregates in sub-acute and chronically infected mouse brain were studied with special regard to interparasitic relationships, encapsulating wall formation and host-parasite interaction. The parasites within a cyst are separated by an ^paque substance which appears to be a component of the ^st wall. The cyst wall also consists of vesicular and membranous structures which it is suggested are derived from the endoplasmic reticulum of the host wall. The cyst wall is however independent of the host cell membrane.

R.J.Walker

1516. TRYPANOSOMA EVANSI INFECTION IN GOATS. * EXPERIMENTAL INFECTION. J.Samaddar and B.S. 2nd II. HAEMATOLOGICAL STUDIES. J.Samaddar, B-S.Gill and D.K.Sen. III. BIOCHEMICAL STUDIES. Ifamaddar: Indian J. Microbiol., 1962, 2, 63-66, J⁶;70, 71-74 (Indian Vet. Res. Inst., Izamagar, U.P., India)

Developed a mild and cryptic form of surra accompanied by intermittent fever. Infection could be detected by mouse blood tests but rarely by microscopic examination of the blood.

?: evansi infection in goats is accompanied by changes involving microcytic hyperchromic anaemia and leucopenia. Neutrophils and monocytes increased.

in progressive decrease in total serum protein accompanied T. evansi infection in goats. Albumin/globulin ratio increased with rise in temp. The cholesterol level in serum fell progressively.

G.M.Lewis

1517. LEKMANIASIS IN THE SUDAN REPUBLIC. VI. CLINICAL AND LABORATORY ASPECTS OF KALA-AZAR IN HOSPITALISED PATIENTS FROM UPPER NILE PROVINCE. P.F.D. Van Peenen and T.P.Reid, jun.: Amer. J. trop. Med. Hyg., 1962, 11, 723-730 (Dept. Epidemiol. and Biostatistics, U.S. Naval Med. Res. Unit No.3, Cairo, U.A.R.) Clinical and laboratory findings in 30 autochthonous cases of kala-azar from an area in the centre of Upper Nile Province, Republic of Sudan, are presented. The value of culture techniques and of bone marrow puncture in the diagnosis of the disease is emphasised. In general, kala-azar in this area appears to resemble visceral leishmaniasis as encountered elsewhere: however, a case fatality rate of over 20% apparently due to complications in hospitalised patients, the absence of leishmania in the peripheral blood, and the finding of patients from all age groups is contrary to the usual pattern of the disease in other countries. The significance of these findings is discussed.

A.A.Zimmerman

1518. MALARIA PARASITES: FLUORESCENT ANTIBODY TECHNIQUE FOR TISSUE STAGE STUDY.

R.L.Ingram and R.K.Carver: Science, 1963, 139, 405-406 (Lab. Parasite Chemother., Nat. Inst. Allergy and Inf. Dis., Chamblee, Ga., U.S.A.) Tissue forms of Plasmodium gallinaceum and P.cynomolgi B and PT strains were stained by the fluorescent Ab technique using immune sera labelled with fluorescein isothiocyanate. The technique permits a study of the immunol. relationships among tissue stages of malaria parasites and of the cycle in mammalian hosts. Previously undescribed exoerythrocytic stages of simian malaria in monkeys were observed by this method.

G.M.Lewis

1519. PARASITOLOGICAL SURVEYS ON INDIAN RESERVATIONS IN MONTANA, S. DAKOTA, NEW MEXICO, ARIZONA AND WISCONSIN. D.M.Melvin and M.M. Brooke: Amer. J. trop. Med. Hyg., 1962, 11, 765-772 (Dept. Hlth., Educn. and Welfare, Atlanta, Ga., U.S.A.) The results of stool examinations from 907 and anal swabs from 1324 Indians on 5 reservations in the U.S. are discussed. 69% of the Indians examined were pos. for one or more organisms. No clear-cut correlation could be found with environmental conditions.

A.A.Zimmerman

1520. PARASITIC INFECTION IN RELATION TO ANAEMIA AND STOMACH ACID VALUES IN THE NEGROID POPULATION OF CURACAO. B.Vinke and W.Jansen: Amer. J. trop. Med. Hyg., 1962, 11, 781-785 (Dept. Int. Med., St. Elisabeth Hosp., Curacao)

The highest rate of parasitic infection is in the immigrant negroes whilst the immigrant whites have the highest rate of pathogenic intestinal bacilli. In the indigenous groups anaemia is more prevalent among the poor.

AGENTS ACTING AGAINST MICRO-ORGANISMS

(See also Pharmacology)

ANTIBIOTICS AND CHEMOTHERAPY

1521. MODIFIED RAPID PLATE METHOD FOR DETERMINING THE ANTIBIOTIC SENSITIVITY OF BACTERIA. J.M.Moses, B.N.Joshi, V.H.Kalgi and

MICROBIOLOGY

R.K.Gadgil: Indian J. Microbiol., 1962, 2, 58-62
 (Dept. Patbol., Grant Med. Coll., Bombay, India)
 The method uses a mixture of Methylene Blue and Azure I dyes. Tests using penicillin, streptomycin, tetracycline, chlortetracycline and chloromycetin and 6 different bacteria gave better results than the standard disc agar diffusion method.

CM.Lewis

1522. PENICILLIN THERAPY OF EXPERIMENTAL STAPHYLOCOCCAL SEPTICAEMIA IN MICE EXPOSED TO COLD. J.H.Jones and P.H.Campbell: J. Path. Bact., 1962, 84, 433-437 (Path. Dept., Queen's Univ., Belfast, N. Ireland) Male VSBS strain mice are inj. i.v. with Staphylococcus aureus (PS/5 strain). Doses of penicillin ordinarily effective in controlling the resulting septicaemia are ineffective following intermittent exposure of the mice to 2-4°. In vitro studies show that low incubation temp. (less than 34°) diminish the effect of penicillin in S. aureus cultures but potentiate that of tetracycline.

D.Murray

1523. IN VITRO ACTIVITY OF STAPHYLOMYCIN. SPECTRUM, ROUTINE SENSITIVITY TESTS, AND CROSS-RESISTANCE. V.F.Thomsen: Acta path. microbiol. scand., 1963, 57, 120-128 (Pneumococcus Dept., Statens Seruminst., Copenhagen, Denmark) The new antibiotic staphylomycin is produced by a sp. related to Streptomyces virginiae. It is closely related to oleandomycin. The in vitro activity of staphylomycin was determined against 175 strains belonging to 19 different genera. The inhibitory concn. against Staphylococcus pyogenes was about 0.2 µg./ml. Staphylomycin affects almost exclusively the Gram-pos. bacteria and is particularly active against Gram-pos. cocci. No cross-resistance of staphylomycin has been demonstrable with penicillin G, tetracyclin, chloramphenicol and erythromycin.

LFriedmann

1524. ANTIGENIC VARIATION, VIRULENCE, MOTILITY AND POPULATION STUDY OF CHLORAMPHENICOL RESISTANT AND SENSITIVE STRAINS OF SALMONELLA THYPHI. I.S.Mathur, S.B.Misra, S.Ghatak and S.K.Gupta: Indian J. exp. Biol., 1963, 1, 70-75 (Central Drug Res. Inst., Lucknow, India) Chloramphenicol resistance has been developed, on gradient plates of Szybalski in a multi-step fashion, in 5 standard strains of S. typhi. Watson V strain loses its motility permanently in the presence of 250-300 µg./ml. of chloramphenicol. Chloramphenicol resistance developed is unstable as shown by growing resistant mutants in drug-free nutrient broth and keeping them at 4°. Back mutation to sensitivity occurs rapidly in the chloramphenicol resistant variant of strain Ty-2. No difference is noticed in virulence of chloramphenicol resistant mutants and their sensitive parents. Antigenic variations is present in resistant mutants even after 2 passages in drug-free heart infusion agar as shown by Ouchterlony and agar-gel electrophoresis techniques. *

1525. ANTIBIOTIC ACTIVITY OF MICRO-ORGANISMS ISOLATED FROM THE RUMEN. O.Spalla: G. Microbiol., 1961, 9, 221-225 ('Farmitalia', Milano, Italy) Out of 500 micro-organisms isolated from the rumen of 6 animals, 58% were found to produce antibiotic substances that were active against one or several of 11 bacterial spp. selected from widely different genera for screening purposes. (Italian)

G.N.Godson

1526. ANTIBIOTIC ACTIVITY OF AMINOSIDIN SUL-

PHATE. B.Scarpa: G. Microbiol., 1961, 9, 213-220 (1st. microbiol., Univ., Cagliari, Italy) 140 strains of staphylococci, isolated from pathol. material and human carriers, were screened for resistance to various antibiotics. When tested against 60 µg./ml. of antibiotic, in vitro, 11.6% of the strains were resistant to chloramphenicol, 10.4% to streptomycin, 26.1% to penicillin and none against aminosidin. (Italian)

G.N.Godson

1527. COLKTIN (COLISTINMETHANESULPHONATE) IN EXPERIMENTAL SYPHILIS. J.W.Clark and B.B.Brown: Brit. J. vener. Dis., 1963, 39, 28-29. I.m. injn. of colistinmethanesulphonate in aq. soln. every 8 hr. for 6 days in doses of 1, 5 and 10 mg./kg. daily had no effect on primary rabbit syphilis.

R.R.Willcox

1528. INVESTIGATION OF SUBMERGED PRODUCTION OF THE ANTIBIOTIC CYANEIN. V.Betina, P.Nemec and H.Strmenova: Folia Microbiol., 1963, 8, 125-127 (Dept. Technical Microbiol. and Biochem., Fac. Chem., Slovak Coll. Technol., Bratislava, Czechoslovakia) Penicillium cyaneum S-II produces cyanein satisfactorily even under submerged conditions of cultivation. Semi-synthetic media containing molasses and coin-steep were less suitable for production than synthetic media containing trace elements.

J.R.Sargent

1529. GLUCOSE METABOLISM OF STREPTOMYCES RIMOSUS. I.Horváth and A.Szentirmai: Acta microbiol. Acad. Sci. hung., 1962, 9, 105-11G (Dept. Microbiol., Res. Inst. Pharm. Industry, Budapest, Hungary) Investigations of intermediary metabolism of glucose showed that loss of oxytetracycline production in S.rimosus is closely connected with decrease of activity "5F" the hexose monophosphate shunt and increase of the Embden-Meyerhof pathway. The active acetate formed from pyruvic acid presumably plays an important role in the production of oxy tetracycline.

S.Igali

1530. SYNTHESIS AND ANTIBACTERIAL ACTIVITY OF N⁴-(L-VALYL-L-VALYL)SULPHANILAMIDE AND ANALOGUES. S.Shankman, S.Makineni and V.Gold: Arch. Biochem., 1963, 100, 431-435 (Pasadena Fdn. Med. Res., Pasadena, Calif., U.S.A.) N⁴-(L-valyl-L-valyl)sulphanilamide inhib. growth of Pediococcus cerevisiae which was not inhib. by sulphamamide. The mode of action appeared to differ from that of sulphamides. Similar findings were obtained with Lactobacillus plantarum, L. casei and Leuconostoc mesenteroides.

B.M.Stevens

1531. EFFECT OF PUROMYCIN ON THE REPLICATION OF WESTERN EQUINE ENCEPHALITIS [WEE] AND POLIOMYELITIS VIRUSES. E.Wecker: Nature, Lond., 1963, 197, 1277-1279 (Wistar Inst. Anat. and Biol., Philadelphia, Pa., U.S.A.) Puromycin inhibits formation of infectious viral RNA in HeLa cells infected with polio and WEE viruses. Removal of puromycin from infected cells results in rapid synthesis of viral RNA without a lag phase. It is indicated that HeLa cells can synthesize viral RNA without prior synthesis of new proteins.

J.R.Sargent

1532. TRIACETYLOLEANDOMYCIN (EVRAMYCIN) IN LYMPHOGRANULOMA INGUINALE. J.L.Fluker: Brit. J. vener. Dis., 1963, 39, 24-27. Thirteen patients with lymphogranuloma inguinale were treated with tri-acetyloleandomycin, in most cases with 250 mg. 4 times daily for 10 days. The results were very good or excellent in 8 cases, good or improved in 3, while in 2 cases no response was noted.

R.R.Willcox

MICROBIOLOGY

145

1533. TROBICIN (ACTINOSPECTACIN) IN NON-GONOCOCCAL URETHRITIS. R.R.Willcox: Brit. J. vener. Dis., 1963, 39, 21-23. Of 30 patients given single injn. of 1-4 g. Trobicin alone 27 were followed and there were 16 recurrences (59.2%) within 3 months. Of 42 patients given Trobicin combined with sulphadiazine there were 13 recurrences (38%) within 3 months. The drug did not appear to have any particular activity in non-gonococcal urethritis. R.R.Willcox

1534. CHANGES IN INTRACELLULAR CONSTITUENTS OF CANDIDA ALBicans ON NYSTATIN AND AMOPHOTERICIN B TREATMENT. A.Ghosh and J.J.Ghosh: Ann. Biochem., 1963, 23, 113-121 (Dept. Appl. Chem., Univ. Coll. Sci. Technol., Calcutta, India) Lower concn. of nystatin and amphotericin B acted as fungistatic and higher concn. as fungicidal, higher concn. reducing the intercellular level of free metabolic pool. 13-20% of the protein content and 28-30% of the RNA content decreased, while that of DNA remained unaffected. The significance of the findings is discussed. K.Jones

1535. INHIBITORY ACTIVITY ON YEASTS OF FLAVOFUNGIN AND DESERTOMYCIN. L.Ferenczy, J.Zsolt and J.Uri: Acta microbiol. Acad. Sci. hung., 1962, 9, 183-187 (Inst. Plant Physiol., Univ. Szeged, Hungary) Flavofungin inhib. completely the growth of 50 yeast strains at a concn. of 50 µg./ml. The inhibitory effect of desertomycin was considerably weaker. Both antibiotics are produced by Streptomyces flavofungini. S.Igali

OTHER AGENTS

1536. ANTIBACTERIAL ACTION OF HUMAN SALIVA. III. CO-FACTOR REQUIREMENTS OF A LACTOBACILLUS BACTERICIDIN. BJ.Zeldow: J. Immunol., 1963, f0. 12-16 (Sch. Dent., Univ. Washington, Seattle, Washn U.S.A.) The co-factor necessary for activation of a salivary bactericidin active against Lactobacillus acidophilus ATCC 4357 was identified both in vitro and in vivo as CNS-. Although I" in sufficient concn. would also substitute for the co-factor the amount required was incompatible with the concn. found in saliva. N.R.Iing

1537. INHIBITORY EFFECT OF SIMPLE ALIPHATIC AMINES ON INFLUENZA VIRUS IN TISSUE CULTURE. E.M.Jensen and O.C.Liu: Proc. Soc. exp. Biol., N.Y., 1963, 112, 456-459 (Smith Kline and French Labs., Res. and Develop. Div., Philadelphia, Pa., U.S.A.) The effects of various aliphatic amines were studied on growth of influenza virus in dog kidney cells in tissue culture. The most effective compounds were n-propylamine and tert. butylamine. The activity is often masked by toxicity of the substance. It is suggested that the amines behaved in a similar fashion to lumecamycin. D.N.Wheatley

1538. MECHANISM OF ACTION OF INTERFERON. H.B. Levy, L.Snellbaker and S.Baron: Life Sci., 1963, No. 3, 204-209 (Lab. Biol. Viruses, Nat. Inst. Allergy and Infec. Dis., U.S. Publ. Hlth. Serv., Bethesda, Md., U.S.A.) Interferon exerted an inhibitory action on incorporation of pHLiridine into rapidly labelled RNA in

chick embryo fibroblast cells infected with Sindbis virus. Some results of the studies on the effect of interferon on uninfected cell metabolism are also reported, and possible mechanisms for its action are discussed. K.Jones

1539. CYTOCHEMICAL ASSAY OF INTERFERON PRODUCED BY DUCK HEPATITIS VIRUS. E.A.Sueltenfuss and M.Pollard: Science, 1963, 139, 595-596 (Lobund Lab., Univ. Notre Dame, Ind., U.S.A.) A microscopic, cytochem. technique for assay of interferon is described. The development of psittacosis virus in chick embryo cells is checked at the non-infective 'red ball' stage when the tissue is exposed to interferon produced in homologous cells by duck hepatitis virus. G.M.Lewis

1540. EFFECT OF 8-AZAGUANINE ON SYNTHESIS OF VACCINIA VIRUS. J. Cogniaux-le Clerc: Brit. J. exp. Path., 1962, 43, 587-595 (Inst. Pasteur du Brabant, Brussels, Belgium) 8-Azaguanine added with vaccinia virus to culture medium inhib. virus synthesis in chick embryo cells. Guanine or guanosine suppressed this action but only incompletely if addition was delayed 1-2 hr. Incorporation of 8-azaguanine into cellular RNA did not cause inhibn. if 8-azaguanine was absent from culture medium during infectious cycle. D.L.Gardner

1541. EFFECT OF 8AZAGUANINE ON THE GROWTH AND VIABILITY OF BACILLUS MEGATERIUM. R.Mangalo and J.T.Wachsman: J. Bact., 1962, 83, 27-34 (Dept. Microbiol., Univ., Illinois, 111., U.S.A.) Addition of 8-azaguanine to exponentially growing cells of Bacillus megaterium inhibits growth after a lag of approx. 30 min. However [2-¹⁴C]8-azaguanine is incorporated into the nucleic acids in a linear fashion without a detectable lag. The inhibitory action is reversed by purines and their deriv., but not by uridine, thymine or cytidine. 8-azaguanine is bactericidal, especially where growth (RNA synthesis) is possible. Growth in the presence of a complete amino acid mixture, either before or during exposure to 8-azaguanine, increases the rate of killing. Chloramphenicol has little or no effect on the bactericidal action of the analogue. C.Toothill

1542. MARINE BACTERIA WITH ANTI-YEAST ACTIVITY. J.D.Buck, S.P.Meyers and K.M.Kamp: Science, 1962, 138, 1339-1340 (Inst. Marine Sci., Univ. Miami, Fla., U.S.A.) Bacteria isolated from sea water and marine sediments were tested for activity against Bacillus megaterium, Staphylococcus aureus, E. coli, Pseudomonas aeruginosa, Saccharomyces cerevisiae, Rhodotorula minuta, Candida albicans and Cryptococcus neoformans; activity against the yeasts was most frequently encountered. G.M.Lewis

1543. ANTIBACTERIAL EFFECT OF NATURAL NON-COUMARIN PIGMENTS ON STAPHYLOCOCCUS AUREUS. P.M.Naha: India J. Microbiol., 1962, 2, 91-94 (Dept. Microbiol., Bosehst., Calcutta, India) Both streptomycin-sensitive and resistant strains of S.aureus were sensitive to the antibacterial effect of cyann, and less so to orcein, carmine, apigenin and haematoxylin. CM.Lewis

1544. EFFECT OF URANYL NITRAIE ON THE GROWTH OF SYNECHOCOCCUS CEDRORUM Sauv. S.K.Sarkar: Indian J. Microbiol., 1962, 2, 79-88 (Dept. Bot., Banaras Hindu Univ., Varanasi, India) S. cedrorum was exposed to ionising radiation by incorporation of uranyl nitrate in the medium. A strain developed

MICROBIOLOGY

by abnormally long cells and lack of division. The new strain showed decreased reduction of triphenyl tetrazolium chloride in the presence of succinate compared with the parent strain, presumably due to reduced enzyme concn.

G.M.Lewis

1545. EFFECTS OF p-MERCAPTOETHANOL AND DITHIODIGLYCOL ON GROWTH OF E.COLI AND S.CEREVISIAE. S.limbosch-RoUn: Ex p. Cell Res., 1963, 29, 61-72 (Lab. Morphol. Ani., Univ. Ubre de Bruxelles, Belgium) g-Mercaptoethanol and dithiodiglycol inhib. cell division in bacteria and yeast cultures, but this action did not appear to be due to any change in the redox potential of the culture medium. The reduction of dithiodiglycol to mercaptoethanol in the presence of bacteria and yeasts is attributed to the action of a disulphide reductase. The respiratory process was not the essential target of mercaptoethanol inhibn., since the latter occurred whether the yeast cells were able to respire or not.

(French) K.Jones

1546. EVALUATION OF THE ANTIBACTERIAL EFFECT OF PRESERVATIVES, WITH SPECIAL REFERENCE TO PHEMEROL AND THIOMEROSAL. P.E.Christensen: Acta path. microbiol. scand., 1963, 57, 104-110 (Serum and Toxoid Dept., Statens Seruminst., Copenhagen, Denmark) Quaternary ammonium compound benzetonium chloride (phemerol) in a concn. of 100 $\mu\text{g}/\text{ml}$, had a bactericidal effect on the test organisms including the *Pseudomonas aeruginosa* group. 50 $\mu\text{g}/\text{ml}$. showed a marked antibacterial activity while this was partially or totally lost for several strains if the concn. was reduced to 25 $\mu\text{g}/\text{ml}$. A synergistic action between thiomerosal and pemerol could be demonstrated for a *P. aeruginosa* culture partially resistant to the 2 com* pounds separately.

L.Friedmann

1547. GLYCIDALDEHYDE VAPOUR AS DISINFECTANT. F.W.Dawson: Amer. J. Hyg., 1962, 76, 209-215 (Dept. Microbiol., Evanston Hosp. Assn., 111, U.S.A.) Glycidaldehyde vapour is capable of inactivating bacterial spores and vegetative micro-organisms. Inactivation rate is dependent on R.H., ambient temp, and chem. concn. of the glycidaldehyde.

P.J.Baron

1548. DIFFERENTIAL RESPONSES OF PARAMOECIUM AURELIA TO CIGARETTE COMPONENTS. H.Wang: Nature, Lond., 1963, 197, 946-948 (Dept. Anat., Stritch Sch. Med., Loyola Univ., Chicago, 111, U.S.A.) Effects of tobacco, main-stream smoke, ash of whole cigarettes, and ash of cigarette papers were studied on *P. aurelia*. Tobacco and main-stream smoke caused marked tranquillisation of cells followed by death. Ash of whole cigarettes and cigarette papers initially induced increased motility, followed by death. Main-stream smoke was the most toxic component studied. Possible use of *P. aurelia* in studies of toxicity of cigarette components is suggested.

J.R.Sargent

1549. EFFECT OF VARIOUS POST-IRRADIATION TREATMENTS ON ULTRA-VIOLET IRRADIATED SHIGELLA SONNEI. M.Nakamura and C.M.Ramage: J. Hyg., Lond., 1963, 61, 77-82 (Montana State Univ. Bot. Dept., Missoula, Mont., U.S.A.) The following factors were studied for their effect on the survival of *S. sonnei* following u.v. irradiation: the composition of the recovery medium, incubation temp, and time interval between irradiation and plating. A chem. defined medium gave a higher recoverey rate than complex media

such as nutrient agar. An incubation temp. of 37° was more favourable for recovery than 15°, 27° or 44°. Recovery of irradiated organisms was increased by holding the cells in 0.15M phosphate buffer for 2i hr. before plating.

J.B.Derbyshire

1550. INCREASED SURVIVAL OF U.V.-IRRADIATED SHIGELLA SONNEI BY DECREASING THE SURFACE TENSION. M.Nakamura and C.M.Ramage: Nature, Lond., 1963, 197, 1028-1029 (Dept. Bot., Montana State Univ., Missoula, Mont., U.S.A.) Addition of surface tension lowering substances, Na taurocholate, Tween 20' or Na sulphosuccinate, to the suspending medium prior to u.v. irradiation of *S. sonnei*, increased the recovery of irradiated cells.

G.M.Lewis

1551. BOWIE AND DICK AUTOCLAVE TAPE TEST. L.H.Bowie, J.C.Kelsey and G.R.Thompson: Lancet, 1963, i, 586-587 (Royal Inf., Edinburgh, Scotland) The use of heat-sensitive indicator tape is recommended for testing sterilisers.

G.H.Bell

1552. IONS AND THERMAL RESISTANCE. STUDIES ON GROWTH. CLjunger: Physiol. Plant, 1963, 16, 121-131 (Dept. Microbiol., List. Plant Physiol., Lund, Sweden) Normal max. temp. of bacterial activities were raised by addition of various ions to the growth medium. The ions Mg, Ca, Na and K inhib. growth of *E. coli* at lower temp, but sdm. at temp. near the max. growth temp.

I.D.J.Phillips

SOIL MICROBIOLOGY

1553. NITRIFICATION OF ARTHROBACTER GLOBIFORMIS. H.B.Gunner: Nature, Lond., 1963, 197, 1127-1128 (Microbiol. Res. Inst., Canada Dept. Agrio Ottawa, Canada) A strain of *A. globiformis*, a ubiquitous soil inhabitant, oxidises ammonia to hydroxyl amine, nitrite, nitrate, and possibly a gaseous intermediate.

CM.Lewis

1554. UPTAKE OF AMINO ACIDS BY BACTERIA PRESENT IN RHIZOSPHERE AND NON-RHIZOSPHERE SOILS. A.K.Banerjee and M.K.Mukherjee: Indian J. Microbiol., 1962, 2, 41-44 (Jute Agric. Res. Inst., Barrackpore, West Bengal, India) Jute seedlings secrete amino acids through the roots; this affects die proportion of amino acid-dependent bacteria in the rhizosphere* CM.Lewis

1555. INFLUENCE OF GIBBERELLIC ACID APPLICATION ON OXYGEN UPTAKE BY RHIZOSPHERE AND FALLOW SOIL MICRO-ORGANISMS. P.Chandra: Indian J. e*P Biol., 1963, 1, 108-109 (Lab. Plant Physiol., Oregon State Univ., Corvallis, Ore., U.S.A.) Gibberellic acid, when applied at 50, 100 and 200 p.p.m. rates to fallow soil and a rhizosphere soil in which *Festuca arunacea* Schreb. plants were grown for 8 weeks stim. 02**" take by micro-organisms in fallow soil but depressed 02 uptake by micro-organisms in rhizosphere soil. The rate of application of gibberellic acid had no significant effect on 02 absorption by micro-organisms in fallow sou but had a significant effect on O2 uptake by micro-organisms in rhizosphere soil. *

1556. MICRO-ORGANISMS IN THE INTESTINES OF EARTHWORMS. J.N.Parle: J. gen. Microbiol., 1963, 31, 1-11 (Soil Microbiol. Dept., Rothampsted Exp.

MICROBIOLOGY

147

Stn., Haipenden, Herts., England) A rapid increase in no. of actinomycetes and bacteria, but not fungi was found during the passage of food through the worm gut. The main agents digesting cellulose and chitin appear to be enzymes produced by the worm rather than micro-organisms. Rate of movement of material through the intestine depends on whether the animal is feeding or not. In burrow formation, material passes in 12 hr.

K.Brew

1557. MICROBIOLOGICAL STUDY OF EARTHWORM CASTS. J.N.Parle: *J. gen. Microbiol.*, 1963, 31, 13-22 (Soil Microbiol. Dept., Rothampsted Expt. Stn.,

Haipenden, Herts., England) Filamentous fungi and yeasts increased in no. rapidly after production of worm casts, but not the initially numerous bacteria and actinomycetes. Increased growth of fungi was shown by measurements of hyphal length. A declining respiratory activity and increasing aggregate stability with ageing casts was shown, possibly due to formation of bacterial resting stages and increasing amounts of fungal hyphae respectively. Polysaccharide, and total and mineral N levels of casts were greater than those of soil. NH₃ was the major form of org. N and was rapidly converted to nitrate.

K.Brew

PHARMACOLOGY

ANTIBIOTICS AND CHEMOTHERAPY

1558. PLASMA CONCENTRATIONS AND ANTIBACTERIAL ACTIVITY OF SULPHADIAZINE AND TRIPLE SULPHAPYRIMIDINES IN MAN. L.Weinstein and C.A. Samet: Amer. J. med. Sci., 1963, 245, 52-57 (Dept. Med. Tufts Univ. Sch. Med., Boston, Mass., U.S.A.) Triple sulphapyrimidines produce, on the whole, higher (chem. determined) blood levels of sulphonamides than an equivalent dose of sulphadiazine. Little or no correlation exists between plasma drug concn. and antibacterial activity. E.E.Hobbiger

1559. SYNTHESIS AND PHYSIOLOGICAL PROPERTIES OF SOME HETEROCYCLIC-AROMATIC SULPHIDES AND SULPHONES. IV. BIOLOGICAL INVESTIGATIONS. P.A.Van Zwieten, LMeltzer and H.O.Huisman: Rec. Trav. Chim. Pays-Bas, 1962, 81, 616-623 (Org. Chem. Lab., Univ., Amsterdam, Netherlands) The ability of some new halogen-substituted heterocyclic-aromatic sulphides and sulphones to kill the red spider mite Tetranychus cinnabarinus has been investigated. They show little ability to kill adults but have varying abilities to kill the eggs. G.C.Barr

1560. ADMINISTRATION OF MAXIMUM DOSES OF CHLORAMPHENICOL. B.A.Waisbren, CSimski and P.L.Chang: Amer. J. med. Sci., 1963, 245, 1-12 (Infect. Dis. Control Unit., Milwaukee County Gen. Hosp., Wis., U.S.A.) Observations in 95 patients who had been treated with the highest tolerated doses of chloramphenicol failed to reveal any drug-induced toxicity. The average dose of chloramphenicol given amounted to 64 g. E.E.Hobbiger

1561. CHLORAMPHENICOL AND ITS SULPHAMOYL ANALOGUE. R.MJiji, E.J.Gangarosa and F. de la Macorra: Arch. intern. Med., 1963, 111, 70-82 (Univ. Hosp., Redwood and Greene St., Baltimore, Md., U.S.A.) Chloramphenicol and its sulphamoyl analogue, given in doses of 49 to 68 mg./kg. body wt./day for 13 to 42 days, produced in healthy volunteers a reversible erythropoietic lesion, including vacuolisation of the proerythroblasts, elevation of serum iron, mild thrombocytopenia, and occasionally leukopenia. The bone marrow toxicity of chloramphenicol was less than that of its analogue. E.E.Hobbiger

1562. SUSCEPTIBILITY OF A TRACHOMA AGENT GROWN IN FL CELL CULTURES TO ANTIBIOTICS AND A SULPHA DRUG. H.Benkopf, P.Mashiah and Y. Becker: Proc. Soc. exp. Biol., N.Y., 1962, 111, 61-67 (Virus Lab., Hebrew Univ.-Hadassah Med. Sch., Jerusalem, Israel) Streptomycin, bacitracin and neomycin had no inhibitory effect on the development of T^{ang} strain of trachoma. Other antibiotics including chloramphenicol, erythromycin and chlortetracycline were tested but teta- and oxytetracycline were the most effective. Penicillin resembled tetracycline in its inhibitory effect on the later development cycle stages, whereas the effect of the sulpha drug was limited to the early stages. M.M.Shapland

1563. ROLE OF D-BENZYL PENICILLINIC ACID IN THE SENSITISATION OF R.B.C. JJ.Fischer and C.M.De-Simone: Biochim. biophys. Acta, 1963, 69, 412-414 (Dept. Pharmacol., Harvard Med. Sch., Boston, Mass., U.S.A.) Attempts were made to sensitise r.b.c. with

penicillins G, V and O or with a-phenoxyethylpenicillin, 2,6-dimethoxyphenylpenicillin, 6-aminopenicillanic acid, DL-penicillamine, D-benzylpenicillenic acid, penillic acid, penilloic acid or penicilloic acid. B.M.Stevens

1564. EFFECT OF PENICILLIN ON THYROXINE-BINDING BY PLASMA PROTEINS. M.LSurks and J.H.Oppenheimer: Endocrinology, 1963, 72, 567-574 (Endocrine Serv. Med. Div., Montefiore Hosp., N.Y.67, N.Y., U.S.A.) Penicillin was shown to increase the dialysis of [131I]thyroxine across a semi-permeable membrane, and enhance the uptake of [131I]thyroxine by r.b.c. in plasma. Electrophoretic and dialysis expt. have shown that penicillin reversibly inhibits the binding of thyroxine to its albumin carrier. H.C. Jones

1565. DIFFERENCES BETWEEN PENICILLINASES FROM GRAM-POSITIVE AND GRAM-NEGATIVE BACTERIA. J.T.Smith and J.M.T.Hamilton-Miller: Nature, Lond., 1963, 197, 976-978 (Dept. Bact., Guy's Hosp. Med. Sch., London, England) Major qual. differences exist between penicillinases from Gram-pos. and Gram-neg. cells. Penicillinases from Gram-neg. cells have marked specificity differences from those from Gram-pos. cells, each Gram-neg. sp. appearing to have a specificity pattern peculiar to itself. Penicillinases from Gram-neg. cells are not inducible, have a marked differential permeability barrier, differ in cell wall fixation from Gram-pos. penicillinases and have a lower activation energy than Gram-pos. penicillinase. J.R.Sargent

1566. PENICILLIKASE PRODUCTION IN SOME BACILLI. R.A.Day and R.Shah: Science, 1962, 138, 1108-1109 (Dept. Biol. Chem., Univ. Cincinnati, Ohio, U.S.A.) Penicillinase production in strains of Bacillus cereus and B. subtilis in response to 6 types of penicillin was measured. Enzyme production was a function of the type of penicillin used both in strains in which it was constitutive as well as in strains in which it was inducible. In the constitutive strains, some cases were noted of repressive effects and some of enhancement of enzyme production. G.M.Lewis

1567. ESTIMATION OF PENICILLINS AND PENICILLIN DESTRUCTION. J.M.T.Hamilton-Miller, J.T.Smith and R.Knco: J. Pharm., Lond., 1963, 15, 81-91 (Guy's Hosp. Med. Sch., London, England) Review. 97 rei. J.M.Whitmarsh

1568. BACTERIOSTATIC ACTIVITY OF OLEANDOMYCIN, TRIACETYLOLEANDOMYCIN AND SPIRAMYCIN ON MYCOBACTERIA. J.Viallier and J.Augagneur: C.R. Soc.Biol., Paris, 1962, 156, 1435-1457 (Lab. Pathol., Fac. Méd., Lyon, France) The bacteriostatic activity of oleandomycin, triacetyloleandomycin and spiramycin was tested on 7 strains of virulent mycobacteria of human origin and 47 strains of atypical mycobacteria. The activity of these compounds was greater in liquid media than in solid media. The bacteriostatic activity was more pronounced on saprophytic bacteria. The sensitivity of a strain was similar for each of the compounds tested. (French) M.A. Price

1569. EFFECT OF DIHYDROSTREPTOMYCIN TREATMENT ON GLUCOSE TOLERANCE OF TUBERCULOUS GUINEA-PIGS. V.N.Singh, T.A.Venkatasubramanian and R.Viswanathan: Indian J. exp. Biol., 1963, 1, 82-83. Glucose tolerance test performed on tuberculous guinea-pigs, tuberculous guinea-pigs treated with dihydrostreptomycin and normal guinea-pigs has shown

PHARMACOLOGY

that tuberculous guinea-pigs treated with the antibiotic and untreated tuberculous guinea-pigs exhibit normal and lower glucose tolerance respectively. The normalising effect of dihydrostreptomycin treatment on the lowered glucose tolerance of tuberculous guinea-pigs is ascribed to the general improvement in the tuberculous condition of the animals. *

1570. EFFECT OF STREPTOMYCIN AND KANAMYCIN ON THE COURSE OF EXPERIMENTAL TULARAEMIA IN GUINEA-PIGS. B.Lukas, M.Hejzlar and J.Libich: Folia Microbiol., 1963, 8, 80-88 (Military Inst. Hyg., Epidemiology and Microbiol., Prague, Czechoslovakia) Administration of streptomycin or Kanamycin (10 mg. daily doses) for 1 and 2 weeks after s.c. injn. with Pasteurella tularensis caused marked protection from death. Prolonged persistence of micro-organisms, however, occurred in regional lymph nodes and spleen. This effect was not observed when antibiotics were administered Prior to infection. Streptomycin caused an intense allergic reaction which was not observed with Kanamycin. J.R.Sargent

1571. STUDIES IN ANTIBACTERIALS. in. SYNTHESIS OF SOME HALOGENOCHALKONES. S.S.Vemkar and S.Rajagopal: Rec. Trav. Chim. Pays-Bas, 1962, 81, 710-712 (Chem. Dept., Kamatak Univ., Dharwar, S. India) The synthesis of some new chalkones is described. These have bacteriostatic activity for Staphylococcus aureus and E. coli. G.C.Barr

1572. GLUTARIMIDE ANTIBIOTICS. II. SYNTHESIS AND STEREOCHEMISTRY OF DL-NEOCYCLOHEXIMIDE, NEW ISOMER OF CYCLOHEXIMIDE. F.Johnson, W.D. Guowitz and N.A.Starkovsky. m. DETERMINATION OF STEREOCHEMISTRY OF METHYL GROUPS OF CYCLOHEXIMIDE ISOMERS BY NUCLEAR MAGNETIC RESONANCE SPECTROSCOPY. F.Johnson and N.A. Starkovsky: Tetrahedron Letters, 1962, 25, 1167-1171, 1173-1177 (Dow Chem. Co., Eastern Res. Lab., Framingham, Mass., U.S.A.) Letters. I.A.B.S.

!573. THE STRUCTURE OF ACTINOMYCIN C2 AND ACTINOMYCIN C3. H.Brockmann and P.Boldt: Naturwissenschaften, 1963, 50, 19-20 (Org. Chem. Inst., Univ. of Gottingen, Germany). (German) A. G. Wansbrough

1574. NEW CATIONIC ANTIMICROBIAL AGENT, N-DODECYL-4-AMINOQUINALDINIUM ACETATE (LAUROLINIUM ACETATE). W.A.Cox and P.F.D'Arcy: J. Pharm., Lond., 1963, 15, 129-137 (Allen and Hanbury Ltd., Ware, Herts., England) This agent (Laurodin) has bacteriostatic and bacteriocidal activity against Gram-pos. and neg. bacteria, fungi and some protozoa. Its activity is antagonised by anionic substances ^{but} some is retained in the presence of org. matter. It is ^{well} suited for topical use ^{sui} but is too toxic for parenteral [%] ***. J.M.Whitmarsh

1575. ISOLATION OF THE ACTIVE PRINCIPLES FROM A STRAIN OF BACILLUS SUBTIUS. M.Sen and P.Nandi: Indian J. Chem., 1963, 1, 135-136 (Bose Inst., Calcutta, India) Two antibiotic principles were isolated from strain B 344. LA.B.S.

1576. EFFECT OF 5-FLUOROURACIL ON THE ADRENAL-[^]CTQMKFn ANIMAL. B.Tipton and W.J.Regan: Surgery, 1963, 53, 495-499 (Surg. Res. Lab., St. [^]Mercy Hosp., Ann Arbor, Mich., U.S.A.) It has been found that human beings adrenalectomised and

oophorectomised and subsequently treated with 5-fluorouracil has led to fatal results in 3 known cases. The expt. performed with bitches has shown that fatality from 5-fluorouracil treatment after adrenalectomy and oophorectomy in 80% of the animals could be reduced to 0% by maintenance on high dose hydrocortisone administration along with the 5-fluorouracil. D.N.Wheatley

D.N.Wheatley

1577. THE GROWTH-STIMULATING EFFECT OF TSPA AND 5-FU ON CELLS OF SARCOMA 180. Y.A.El-Ghaffar: Cancer, Philad., 1963, 16, 8-12 (Cancer Res. Unit., Ein Shams Univ., Cairo, U.A.R.) Triethylenethiophosphoramide [TSPA] and 5-fluorouracil [5-FU] in relatively small doses were found to stimulate the growth of sarcoma 180 both *in vivo* or afterincubation of the tumour with these drugs before s.c. implantation in mice. This effect was only demonstrated when fractionated doses of the total stimulating quantity were given. An almost complete summation effect was shown when the 2 drugs were combined. Hyaluronidase had a growth-stimulating effect on the tumour *in vitro* and also augmented the stimulating effect of TSPA. An explanation for these results and the implications of the clinical use of these drugs are discussed. D.I. Connell

1578. IN VITRO TEST SYSTEMS FOR CANCER CHEMO-THERAPY. I. INHIBITION OF DEHYDROGENASES AND GROWTH IN THE EHRLICH ASCITES TUMOUR. J.A. DiPaolo: Cancer Res., 1963, 23, 184-190 (Roswell Park Mem. Inst., Buffalo, N.Y., U.S.A.) Methylbis (P-chloroethyl)amine [HN2], N,N^f-triethylenethiophosphoramide [TSPA], methotrexate, actinomycin D[AD] methylbis(3-chloroethyl)amine N-oxide [HN2O], benzyl (bis-(1-aziridinyl)phosphinyl) carbamate and 5-fluorouracil and, to a lesser extent, 6-mercaptopurine, ethyl-N-bis-(2, 2-dimethylenthylidenimido)-phosphorocarbamate and 5-mercaptouracil inhib. dehydrogenase activity, as indicated by Methylene Blue, in suspensions of fresh ELD ascites in agar pour plates and of ascites cultured in agar suspension. Growth of ascites in Petri dishes as monolayers overlaid by agar was inhib. by HN2, TSPA, AD and HN2O. With a completely defined medium all except 5-mercaptouracil inhibited. When cells from a culture in complete medium containing antimetabolite were incubated in test tubes at 37° before transfer to T-flasks all compounds began to inhibit growth within 72 hr. Some additional compounds were found inhibitory.

B.M.Stevens

1579. CONTROLLED-DOSE CHEMOTHERAPY AS AN ADJUNCT TO SURGERY. W.H.Wolberg, R.O.Johnson and A.R.Curreri: Cancer, Philad., 1963, 16, 5-7 (Surg. Dept., Cancer Res. Hosp., Univ. Wisconsin Med. Sch., Madison, Wis., U.S.A.) Following s.c. inoc. with cell suspension of 256 Walker carcinosarcoma, groups of white rats were put on 1 of 3 diets; (1) complete synthetic, (2) protein deficient, and (3) 5% dextrose in saline. From the 2nd day after tumour transplant the animals were given 5-fluorouracil for 6 days. Fifteen days after tumour transplant the animals were killed. The results indicated that by reducing the dose of 5-fluorouracil given in the post-operative period the toxicity is controlled without sacrificing the anti-tumour effect. D.J.Connell

1580. EFFECT OF ANTIMETABOLITES ON THE BIO-SYNTHESIS OF TETRACYCLINES. Goodman and P.A. Miller: Biotech. Bioeng., 1962, 4, 391-402
Lederle Labs. Div., American Cyanamid Co., Pearl River, N.Y., U.S.A.) Several antimetabolites including antifolics, **p**-amino benzoic acid antagonists and

PHARMACOLOGY

sulphonamides were tested. *Streptomyces aureofaciens* BC-41 produces 90-95% chlortetracycline and 5-10% tetracycline. Sulphadiazine caused the formation of a considerable proportion of 6-dimethyl chlortetracycline.

R.H.Kimberlin

1581. MECHANISM OF ACTION OF PHLEOMYCIN. A TUMOUR INHIBITORY ANTIBIOTIC. N.Janaka, H. Yamaguchi and H.Umezawa: Biochem. biophys. Res. Comm., 1963, 10, 171 (Inst. Appl. Microbiol., Univ. Tokyo, Japan) Results are given showing that phleomycin selectively inhibits DNA synthesis in *E. coli* and HeLa cells.

B.Ketterer

1582. BIOLOGICAL INTERRELATIONSHIPS IN THE CHEMOTHERAPY OF MOLONEY VIRUS LEUKAEMIA. J.P.Glynn, J.B.Moloney, M.A.Chirigos, S.R.Humphreys and A.Goldin: Cancer Res., 1963, 23, 269-278 (Lab. Chem. Pharmacol., Nat. Cancer Inst., Bethesda, Md., U.S.A.) Therapy of the transplantable leukaemia with Cytoxan, triethylene melamine, Melphalan or X-irradiation produced an appreciable no. of long term survivors most of which subsequently succumbed with widely disseminated lymphocytic neoplasia. The extensive survival time and the gross and microscopic pathology of this neoplastic process indicated that the virus associated with the initial cellular implant induced a primary leukaemia.

B .M .S te vens

1583. EFFECT OF ANTIBACTERIAL DRUGS ON WEIGHT OF MICE. R.Dubos, R.W.Schaedler and R.L.Costello: J. exp. Med., 1963, 117, 245-257 (Rockefeller Inst. Med. Res., N.Y., U.S.A.) NCS mice gain wt. rapidly¹ when fed a gluten diet deficient in several amino acids, but there was retardation of growth if these mice were given anti-bacterial drugs. Growth could not be entirely corrected by adding lysine and threonine to the gluten diet. Treatment with penicillin on any diet caused a retardation of wt. gain, which was more pronounced in mice on a semi-synthetic diet than when the mice were fed commercial pellets. These differences probably arise from the influence on drug-induced changes in the faecal flora of the composition of the diet. Drugs which retarded wt. gain of NCS mice, in contrast increased wt. gain in ordinary Swiss mice. It is probable that this is due to the more complex intestinal flora found in the Swiss mice.

H.E.Jones

1584. EFFECT OF ANTIBACTERIAL DRUGS ON FAECAL FLORA OF MICE. R.Dubos, R.W.Schaedler and M. Stephens: J. exp. Med., 1963, 117, 231-243 (Rockefeller Inst. Med. Res., N.Y., U.S.A.) Oral administration of penicillin, terramycin or chloramphenicol to NCS mice increased the no. of enterococci and Gram-neg. bacilli in the faeces, while causing the lactobacilli to disappear. Isoniazid administration had no effect. The faecal flora returned to its pretreatment state in less than 4 weeks of discontinuing administration of the drugs if the mice were fed with commercial pellets, but not if they were fed a semi-synthetic diet containing either 15% casein or 15% wheat gluten as protein. The faeces of penicillin-treated mice contained large no. of lactose-fermenting Gram-neg. bacilli, not found in untreated animals. These persisted for several months after discontinuance of the drug in mice fed casein or gluten diets, but they disappeared rapidly from mice fed pellets. Similar, but less striking, results were obtained in Swiss mice.

H.E.H.Jones

1585. NOTE ON THE EFFECT OF HAMYCIN ON ELECTROLYTES IN THE FROG HEART. H.R.K.Arora and V.Arora:

J. Pharm., Lond., 1963, 15, 149-150 (Dept. Pharmacol., Maulana Azad Med. Coll., New Delhi, India) Hamycin, an antifungal antibiotic, when presented to isolated heart effected an increase in the K content of the perfusion fluid. Changes in Na content were not observed. The effect is therefore digitalis-like.

J.M.Whitmarsh

1586. POLYSEROSITIS INDUCED BY PSICOFURARINE IN MAN AND COMPARATIVE TOXICITY IN THE RAT, MOUSE, DOG, CHICKEN AND MONKEY. R.W.Talley and R.G.Carlson: Toxicol. appl. Pharm., 1963, 5, 235-246 (Div. Oncol., H.Ford Hosp., Detroit, Mich., U.S.A.) Psicofurarine, a substance which has an antitumour activity against several transplanted rat tumours, was found to be devoid of any significant anti-tumour activity in man. Ten of 12 patients treated with the substance developed a serious reaction of the pericardium, pleura and/or peritoneum. Expt. in animals failed to throw any light on the cause of the drug-induced polyserositis in man.

E.E.Hobbiger

CENTRAL NERVOUS SYSTEM

1587. ASSESSMENT OF CONDUCTION ANAESTHESIA. G.C.Jefferson: J. Pharm., Lond., 1963, 15, 92-99 (Dept. Pharmacol., Univ., Manchester, England)

In frog sciatic nerve prep, the 'f₀ reduction of action potential gives a better assessment of conduction anaesthesia than does the regression of potential with time, and it bears a linear relationship to the log. of the concn. of local anaesthetic applied to the nerve.

J.M.Whitmarsh

1588. GAS CHROMATOGRAPHIC DETERMINATION OF METHOXYFLURANE IN BLOOD. R.H.Gadsden, W.M. McCord, E.F.Woods and E.E.Bagwell: Anesthesiology, 1962, 23, 831-836 (Depts. Biochem. and Pharmacol., Med. Coll. of South Carolina, Charleston, S.C., U.S.A.) A method for isolating methoxyflurane froif blood by distillation, and its detection and quant. measurement by the technique of gas chromatography is described. The vol. of blood sample needed is quite small (4 ml. for man) and the accuracy is within ± 5%

A.A.Zimmermann

1589. UPTAKE AND EXCRETION OF SUBANAESTHETIC CONCENTRATIONS OF NITROUS OXIDE IN MAN.

E.Salanitre, H.Rackow, L.T.Green, D.Klonimus and R.M.Epstein: Anesthesiology, 1962, 23, 814-822 (Dept. Anesthesiol., Coll. Physn. and Surgs., Columbi* Univ., New York, N.Y., U.S.A.) Good correlation was found in die composite uptake and excretion curves using 10% N₂O in O² in 5 awake supine subjects. The composite excretion curve was compared with a corresponding curve of a group of anaesthetised subjects. The 2 curves differed only in the upward displacement of the curve seen under anaesthesia. 15 references.

A.A.Zimmerman*

1590. EFFECT OF ANAESTHETIC AGENTS ON PATIENTS RECEIVING RESERPINE THERAPY. W.M.Munson and J.A.Jenicek: Anesthesiology, 1962, 23, 741-746 (Anesthesia and Operative Serv., Brooke Gen. Hosp., Brooke Army Med. Center, Ft. Sam Houston, Tex., U.S.A.) Administration of *Rauwolfia* alkaloids need

not be discontinued before anaesthesia and surgery. Withdrawing patients from reserpine therapy from 10 to V

PHARMACOLOGY

151

days before elective surgery does not ensure that circulatory instability will not occur. 41 references given.

A.A.Zimmerman

1591. EFFECT OF CYCLOPROPANE AND HALOTHANE ON THE BLOOD VOLUME IN MAN. E.Grable, A.J. Finck, A.L.Abrams and J.A.Williams: *Anesthesiology*, 1962, 23, 828-830 (Harvard Med. Sch., Boston, Mass., U.S.A.) Serial measurements of circulating Plasma vol. and r.b.c. mass were made in 10 patients undergoing cyclopropane anaesthesia and 10 patients undergoing halothane anaesthesia. The blood vol. were calc. by the summation of the r.b.c. mass and plasma vol. determined by simult. and independent radioisotope diln. assays. Cyclopropane caused no significant change, while halothane caused a 10-15% increase in blood vol. under the conditions studied. A.A. Zimmerman

1592. ACTIONS OF HALOTHANE AND NORADRENALINE IN THE ISOLATED MAMMALIAN HEART. W.Flacke and M.H.Alper: *Anesthesiology*, 1962, 23, 793-801 (Harvard Med. Sch., Boston, Mass., U.S.A.) Expt. on the heart-lung prep. of the dog suggests that the depressant effects of halothane and the stimulant actions of noradrenaline on the heart are in fact independent and that the 2 drugs do not interact at the same receptor.

A.A.Zimmerman

1593. MEPHENTERMINE AND CYCLOPROPANE-ADRENALINE ARRHYTHMIAS IN DOGS. H.W.EUliott: *Anesthesiology*, 1962, 23, 762-765 (Dept. Pharm. and Expt. Therap., Univ. California Med. Center, San Francisco, Calif., U.S.A.) Mephentermine was found incapable of reversing cyclopropane-adrenaline arrhythmias per se in dogs in contrast to its reported ability to decrease the incidence of ventricular fibrillation in dogs anaesthetised with cyclopropane and given adrenaline. A.A. Zimmerman

1594. A DOSE-EFFECT STUDY OF PRE-OPERATIVE MEDICATION IN CHILDREN. H.Rackow and E.Salannitri: *Anesthesiology*, 1962, 23, 747-754 (Dept. Anesthesiol., Coll. Phys. and Surgs., Columbia Univ., New York, U.S.A.) Data are presented on the dose-effect relationships of quinalbarbitone sodium [secobarbital], morphine and meperidine with reference to children.

A.A.Zimmerman

1595. ACUTE AND CHRONIC TOXICITY OF OXETHAZAINE: A HIGHLY POTENT LOCAL ANAESTHETIC. J.M.Glassman, A.Dervinis, W.J.Beachfield and J. Seifter: *Tcocicol. appl. Pharm.*, 1963, 5, 185-200 (Wyeth Labs., Inc., Radnor, Pa., U.S.A.) Oxethazine (N, N-bis-(N-methyl-N-phenyl-*tert*-butylacetamido)¹⁸P-hydroxyethylamine is 500 times more potent than cocaine as a local anaesthetic. It is devoid of irritant & P. and there is a considerable margin of safety for its intragastric, s.c., i.m., intrarectal and intravesicular route of administration. The i.v. toxicity is high and death is attributable to a depression of myocardial contractility and impairment of conduction in the heart. No toxic manifestations were observed in rats and dogs fed for months on a diet containing oxethazaine.

E.E.Hobbiger

1596. LOCAL ANAESTHETIC TOXICITY MODIFIED BY OXYGEN AND BY COMBINATION OF AGENTS. F.G. Daos, L.Lopez and R.W.Virtue: *Anesthesiology*, 1962, 23, 755-761 (Div. Anaesthes., Univ. Colorado of Med. Center, Denver, Colo., U.S.A.) Inhalation of 100% oxygen delayed the death of white female rats receiving 100% jets of procaine, chloroprocaine, mepivacaine or lidocaine. The addition of tetracaine resulted in additional toxicity. A.A. Zimmerman

1597. THIALKOBUMAL (BAYTINAL) AS AN INTRAVENOUS ANAESTHETIC FOR RABBITS. Bo.E:son Schildt and E.E: son Schildt: *Acta pharmacol.*, Kbh., 1962, 19, 377-388 (Res. Inst., Nat. Defence Dept. 1, Sundbyberg, Sweden) Thialisobuman (sodium salt of 5, 5-allyl-L2-methylpropyl]-thiobarbituric acid) in a 10% soln. has an anaesthetic index (ratio between lethal and anaesthetic dose) of 1:78 in rabbits where a dose of 90 mg./kg. i.v. over 4 min. produced a post-anaesthetic period of 165 min. R.S.Tonks

1598. FAILURE OF ETHANOL AND BARBITURATES TO ALTER BRAIN MONOAMINE CONTENT. D.H.Efron and G.L.Gessa: *Arch. int. Pharmacodyn.*, 1963, 142, 111-116 (Lab. Chem. Pharmacol., Nat. Heart Inst., Bethesda, Md., U.S.A.) The effects of ethanol 2 g./kg. i.v. on rabbit brainstem and rat brain 5HT and noradrenaline concn. are studied. 1 hr. after a single dose or after 7 daily doses amine concn. do not differ from those in control animals. S.E.Smith

1599. INFLUENCE OF CERTAIN RADIO-PROTECTORS ON THE ENZYME SYSTEM OF LIVER MICROSOMES DEGRADING HEXOBARBITONE. A.Thomou, C.Liébecq and Z.M.Bacq: *Arch. int. Pharmacodyn.*, 1963, 142, 271-273 (Biochem. Lab., Univ. IISG, Belgium)

The enzyme system in liver microsomes responsible for the oxidation of hexobarbitone was inhib. in vitro by cystamine, 5HT and histamine. (French) T.J.Sullivan

1600. DOSE-RESPONSE RELATIONS OF AMPHETAMINE-BARBUTRATE MIXTURES. R.Rushton and H.Ste4nberg: *Nature*, Lond., 1963, 197, 1017-1018 (Dept. Ptarmacol., University Coll., London, England) The effect of amphetamine-barbiturate mixtures on the spontaneous activity of rats was studied. Although high doses inhib. activity completely, at peak doses of amphetamine: amylbarbitone mixtures (1:20), activity was enhanced, but ataxia was present. When the ratio of drugs was 1:6*5 as is used clinically, a peak mixture dose produced a similar increase in activity without ataxia.

G.M.Lewis

1601. EFFECT OF α -METHYL-DOPA AND α -METHYL-META-TYROSINE α -MMT] ON AMPHETAMINE TOXICITY. H.Lai, S.Ginocchio and A.Shefner: *Life Sci.*, 1963, 3, 190-192 (Life Sci. Res. Dept., Armour Res. Fdn., Illinois Inst. Technol., Chicago, Ill., U.S.A.) α -Methyl-dopa and α -MMT protected against the increased toxicity of amphetamine in aggregated mice. This protection appeared to follow the same time-course as that found for effects of these agents on brain noradrenaline. K.Jones

1602. EFFECT OF α -METHYL-DOPA AND N-2-HYDROXYBENZYL-N-METHYL HYDRAZINE (NSD 1039) ON BLOOD PRESSURE OF RENAL HYPERTENSIVE RATS. R.A.Davis, DJ.Drain, M.Horlington, R.Lazare and A.Urbanska: *Life Sci.*, 1963, 3, 193-197 (Smith and Nephew Res. Ltd., Hunsdon Labs., Ware, Herts., England) The hypotensive action of α -methyl-dopa was not correlated with its ability to inhibit brain dopa/5HTP decarboxylase in the rat. It is suggested that the hypotensive action is caused by the decarboxylation products of α -methyl-dopa and not by the amino acid itself.

K.Jones

1603. EVALUATION OF A NEW RESPIRATORY STIMULANT: DIMEFLINE. W.P.Bailey, jun. and CL.Brinkman: *Amer. J. med. Sci.*, 1962, 244, 744-748 (Pulmonary Div., H. Ford Hosp., Detroit, Mich., U.S.A.)

PHARMACOLOGY

Dimefline, 3- methyl- 7- methoxy- 8- dimethylamino methyllavone hydrochloride, stimulates respiration when given i.v., but at the same time produces undesirable side effects, e.g. convulsions. E.E.Hobbiger

1604. NEUROPHARMACOLOGICAL EFFECTS OF TRYPTAMINE ACETATE. R.J.Matthews : Arch. int. Pharmacodyn., 1963, 142, 90-110 (Pharmacol. Dept. Upjohn Co., Kalamazoo, Mich., U.S.A.) Pharmacol. actions of tryptamine are studied in cats. Tryptamine 10 mg./kg. i.v. causes arousal patterns in the cortical e.e.g. which is not present in 'cerveau isolé' prep. Its effects in cats subjected to various brainstem lesions suggest that it produces activation of caudal parts of the brainstem reticular formation. S.E.Smith

1605. INFLUENCE OF CERTAIN CENTRAL DEPRESSANTS ON FIGHTING BEHAVIOUR OF MICE. G.Chen, B.Bohner and A.C.Bratton jun.: Arch. int. Pharmacodyn., 1963, 142, 30-34 (Res. Div., Parke, Davis and Co., Ann Arbor, Mich., U.S.A.) A comparative study was made of the suppressive activities of meprobamate, phenobarbitone, pentobarbitone, carbromal, chloral hydrate and trichloramate on fighting episodes induced in mice by foot shock. Suppression of lie fighting reaction appeared to be due to the sedative action these drugs had in common. T.J.Sullivan

1606. BEHAVIOURAL EFFECTS ON THE RAT OF BENZQUINAMIDE AND BENZQUINAMIDE-ALCOHOL COMBINATIONS. R.B.Fomey and F.W.Hughes: Arch. int. Pharmacodyn., 1963, 142, 237-242 (Dept. Pharmacol. and Toxicol., Indiana Univ. Sch. Med., Indianapolis, Ind., U.S.A.) Behavioural effects of benzquinamide are studied on weanling rats using avoidance responses. Benzquinamide 10-20 mg./kg. i.p. appears to reduce "anxiety" without affecting performance. Larger doses show general depressant effects which are exaggerated by ethanol 0.5 g./kg. given simult. S.E.Smith

1607. ADH-LIKE EFFECT OF TRANQUILLISERS IN AMPHIANS. N.Khazan, M.Ben-David and F.C.Sulman: Proc. Soc. exp. Biol., N.Y., 1963, 112, 490-494 (Dept. Appl. Pharm., Hebrew Univ. Sch. Pharm., Jerusalem, Israel) The effects of 17 different tranquillisers on the release of ADH are studied. The uptake of water was used as a measure of the ADH stimn. in *Bufo viridis* and *Rana pipiens*. Chlorpromazine had a strong, long-lasting effect (stronger than exogenous pitressin) and Phenothiazine deriv. with Cl in the 2-position and a dimethylaminopropyl group in the 10 position as a side chain were very effective. Such tranquillisers as chlor-diazepoxide, meprobamate, benactyzine and reserpine had no significant effect. Chlorpromazine had a slight effect on hypophysectomised animals' uptake of water suggesting that there is some hypothalamic secretion of ADH but that the bulk comes from the posterior pituitary. Oxytocin did not have an antagonistic effect on ADH in the animals used in this study. D.N.Wheatley

1608. THYMOL BASIC ETHERS AND RELATED COMPOUNDS: C.N.S. DEPRESSANT ACTION. A.Ashford, C.J.S. and F.J. Stephens: Nature, Lond., 1963, 197, 969-971 (Res. Dept., Crookes Lab., Park Royal, London, England) A series of basic ethers were synthesised derived from thymol which had c.n.s. depressant activity. Max. activity was obtained when a 0 -diethyl-aminoethyl side chain was attached. The probable structure of these compounds is discussed and compared

with that of morphine-like analgesics. Three compounds are described in some detail. G.M.Lewis

1609. THE SEDATIVE, CENTRAL ANALGESIC AND ANTICONVULSANT ACTIONS OF LOCAL ANAESTHETICS. T.Kopppanyi: Amer. J. med. Sci., 1962, 244, 646-654 (Dept. Pharmacol., Georgetown Univ. Med. Center, Washington, D.C., U.S.A.) Review. 52 ref. E.E.Hobbiger

1610. PSYCHOPHARMACOLOGY OF SPONTANEOUS ALTERNATION IN RATS. E.Grandjean and K.Battig: Helv. physiol. pharmacol. Acta., 1962, 20, 373-381 (Inst. Hyg. und Arbeitsphysiol., Eidg. Technische Hochschule, Zürich, Switzerland) Rats repeatedly arriving at the junction of a T-maze unit, alternate the direction of their exploration in 70-75% of tests. Amphetamine 1-4 mg./kg., Imipramine 5-20 mg./kg., amylobarbitone 10-40 mg./kg., Methaminodiazepoxide 20-80 mg./kg. reduced the % of alternation, chlorpromazine 0.75-3 mg./kg. increased it. All drugs except Meprobamate depressed the running speed to food. (German) V.Eisen

1611. E.E.G. AND BEHAVIOURAL ANALYSIS OF ANTI-CONVULSANT ACTION OF AMPHENIDONE IN THE RABBIT. W.CSteiner and H.E.Himwich: Arch. int. Pharmacodyn., 1963, 142, 1-8 (Thudicum Psychiat. Res. Lab., Galesburg State Res. Hosp., Galesburg, Ill., U.S.A.) In anaesthetised, curarised, artificially respired rabbits, thresholds for drug-induced convulsions were raised by pre treatment with amphenidone. It did not, however, abort seizures. In the conscious, unrestrained animal, pretreatment was effective against leptazol and picrotoxin but not against strychnine convulsions. T.J.Sullivan

1612. ANALEPTIC ACTIVITY OF TREMOR-PRODUCING AMINO-ALCOHOLS. J.P.Ayton and P.B.Marshall: J. Pharm., Lond., 1963, 15, 217-218 (Dept. Pharmacol., Queen's Coll., Dundee, Scotland) Activity was shown by 1,1, 3-triphenyl-3-amino-propan-1-ol and 1,1, 2-triphenyl-2-amino-ethanol. L.M.Whitmarsh

1613. CONVULSANT EFFECT OF HYDROXYLAMINE IN EPILEPTIC MONKEYS AND RATS. L.M.Kopeloff and J.G.Chusid: Proc. Soc. exp. Biol., N.Y., 1963, 112, 306-308 (Dept. Bacteriol., New York Psychiat. Inst., New York City, N.Y., U.S.A.) Monkeys made epileptic by cerebral application of alumina cream and rats made epileptic by intracerebral injn. of cobalt were found to be more susceptible to the convulsant effect of hydroxylamine than unoperated controls.

D.N.Wheatley
1614. GROWTH RETARDING AND GROWTH PROMOTING EFFECT OF CHLORPROMAZINE [CPZ] ON DEVELOPING AMBLYSTOMA MEXICANUM [AXOLOTL] EMBRYOS. Z.Eyal and H.Eyal-Giladi: Exp. Cell Res., 1963, 29, 394-399 (Dept. Surg., Hadassah Univ. Hosp., Jerusalem, Israel) Low concn. of CPZ cause increased growth in axolotl embryos, as shown by the measurements of surface area of the head of larvae. The biphasic effect of CPZ in vivo correlated well with its W¹ phasic effect on isolated enzyme systems. This effect is suggested to involve changes in P/O ratio as well as changes in mitotic activity. K.Jones

1615. REDUCTION BY CHLORPROMAZINE OF ULCERS DUE TO ACUTE STARVATION IN MICE. C.J.Pfeiffer, G.H.Gass and C.S.Schwartz: Nature, Lond., 1963

197, 1014-1015 (Dept. Physiol., Southern Illinois Univ., Carbondale, 111, U.S.A.) The incidence of gastric glandular ulcers in mice starved for 3 days was significantly reduced by injn. of chlorpromazine, 10 mg./kg. on the 1st day and 5 mg./kg on subsequent days. The drug caused lethargy, and decreased postural muscle tone; it may affect ulceration by decreasing gastric secretion or preventing stress hypoglycaemia. G M-Lewis

1616. EFFECTS OF MORPHINE HYDROCHLORIDE ON THE PREVENTION OF ULCERS INDUCED BY CONSTRAINING RATS. M. Simler, J. Schwartz and F. Schmid: C.R. Soc. Biol., Paris, 1962, 156, 1495.

1497 (Inst. Pharmacol., Strasbourg, France) ^{83/} of normal rats which had been constrained for 24 hr. developed ulcers. Two injn. of 6 mg. morphine hydrochloride per kg. prevented the appearance of gastric ^{14C}J[®]. A single injn. did not protect the animal. Injn. of L^{14C}-morphine showed that the majority of metabolites are eliminated within 12 hr. (French) M.A.Pnce

1617. CENTRALLY MEDIATED INHIBITION OF GASTRO-INTESTINAL PROPULSIVE MOTILITY BY MORPHINE OVER A NON-NEURAL PATHWAY. S. Margolin: Proc. Soc. exp. Biol., N.Y., 1963, 112, 311-315 (Scheruig Corp., Bloomfield, N.J., U.S.A.) Morphine sulphate inj. intracerebrally produced marked reduction in gastrointestinal activity (peristalsis) in albino mice. The use of many other known inhibitors of parasympathetic and sympathetic nerve activity e.g. aminophylline, atropine, strichine, had no effect on the morphine sulphate effect, nor had surgical disruption of the a.n.s. It is concluded that morphine sulphate initiates a neurohumoral factor which controls gut movements. D.N.Wheatley

1618. N-ALLYLNORQXYMORPHINE: A NEW POTENT NARCOTIC ANTAGONIST. F.F. Foldes, J.N. Luim, J. Moore and L.M. Brown: Amer. J. med. Sci., 1963, 245, 23-30 (Dept. Anesthesiol., Mercy Hosp., Pittsburgh, Pa., U.S.A.) N-Allyl oxymoipnone, 5 µg./kg. i.v., produced no significant respiratory or circulatory effects, but prevented the respiratory depressant effect, but not the circulatory effects, of axymorphone, ²⁰ fg./kg. i.v. The former also reversed the respiratory depression caused by axymorphone, meperidine or alptia-Ptodine and in this respect was 6 and 30 times more effective than levallorphan and nalorphine, respectively. E.E.Hobbiger

W19. RAPID SEPARATION OF DRUGS AND POISONS BY HIGH TEMPERATURE REVERSED PHASE PAPER CHROMATOGRAPHY. n. PHENOTHIAZINE TRANQUILLISERS AND IMIPRAMINE. in. ALKALOIDS. H.V. Street: Acta pharmacol. Khb., 1962, 19, 312-324, 325-329 (Dept. Forensic Med., Univ. Edinburgh, Scotland). R.S.Tonks

AUTONOMIC NERVOUS SYSTEM

162^a; RELATION BETWEEN CHEMICAL CONSTITUTION *m PHARMACOLOGICAL ACTION. M. Guyonneau: J. Physiol., Paris, 1962, 54, Suppl. 4 (Lab. de Pharm. [•] Fac. Med. Paris, France) Some relation-ship between the constitution of molecules having the general formula of $\pm c - P - (\text{CH}_2) - N <$,

in which P is a polar group, and their spasmolytic, ganglion-exciting or blocking and neuromuscular blocking prop, are reported. (French) A.Angel

1621. ANTICHOLINERGIC DRUGS AND THE CENTRAL CONTROL OF THIRST. L. Stein: Science, 1963, 139, 46-48 (Wyeth Lab., Philadelphia, Pa., U.S.A.) Atropine and scopolamine were compared with their quaternary analogues, the methyl nitrates, for effects on food and water intake in rats. All the drugs inhibited eating, but only the centrally active compounds inhibited drinking. Anticholinergic drugs evidently block drinking by a central effect and eating by a peripheral effect. G.M.Lewis

1622. PHARMACOLOGY OF (2-BENZILOXYETHYL)DIMETHYL (N-OCTYL)-AMMONIUM BROMIDE, A NEW SPASMOlytic AGENT. E.B. Sigg: Toxicol. appl. Pharm., 1963, 5, 225-234 (Geigy Res. Labs., Ardsley, N.Y., U.S.A.) The substance has an atropine-like action on the dilator pupillae muscle in mice, on the bronchi of guinea-pigs and on the gut and urinary bladder of anaesthetised dogs and cats. Its midriatic potency is 2% of that of atropine. Data on toxicity are reported. E.E.Hobbiger

1623. SMOOTH MUSCLE RELAXING EFFECT OF THYME (THYMUS VULGARIS L.). K.B.Jensen and O.K. Dyrud: Acta pharmacol., Khb., 1962, 19, 345-355 (Biol. Dept., Pharmaceur. Inst., Univ. Oslo, Norway) A 50% reduction in submaximal contractions induced by ACh in isolated smooth muscle prep, is possible with thyme extracts corresponding to 10-100 fig. dried herb/ml. Much higher concn. of extracts are needed to reduce contractions caused by 5HT, histamine, oxytocin and bradykinin. R.S.Tonks

1624. POST-TETANIC RELIEF OF NEUROMUSCULAR BLOCK. L. Wislicki and F. Benzakein: Arch. int. Pharmacodyn., 1963, 142, 23-29 (Dept. Pharmacol., Hadassah Med. Sch., Jerusalem, Israel) In pento-barbitone-anaesthetised cats partial gastrocnemius neuromuscular blockade by decamethonium or gallamine is antagonised by direct or indirect tetanic stimm. When tetanic stimm. is applied repeatedly the post-tetanic gains are often cumulative. S.E.Smith

1625. DETECTION AND DETERMINATION OF HYPOTENSIVE DRUGS IN HUMAN SERUM. S.L. Tompsett: Acta pharmacol. Khb., 1962, 19, 265-367 (Biochem. Lab., North Gen. Hosp., Edinburgh, Scotland) Serum levels of 10 µg./ml. of hexamethonium, bretylium and guanethidine can be determined using the Sakaguchi reaction on paper chromatograms. R.S.Tonks

1626. INFLUENCE OF GUANETHIDINE ON THE CATECHOLAMINE DEPLETING EFFECTS OF TYRAMINE IN THE RAT HEART. B. Bhagat: J. Pharm. Lond., 1963, 15, 152 (Dept. Pharmacol., Univ. Wisconsin, Madison, Wis., U.S.A.) Guanethidine had no effect. J.M.Whitmarsh

1627. RELEASE OF CATECHOLAMINES FROM THE ATRIUM OF THE DOG BY TYRAMINE. W.J. Hall and J.D. Sheehan: Nature, Lond., 1963, 197, 1116-1117 (Dept. Physiol., Univ. Coll., Cork, Ireland) The isolated right atrium of the dog in which the P receptors for catecholamines were blocked with dichloroisoproterenol released small amounts of a vasoactive substance on incubation with tyramine. The pharmacol. prop. of this substance indicated that it was a catecholamine. G.M.Lewis

PHARMACOLOGY

1628. SUPERSENSITIVITY OF THE CAT HEART TO CATECHOLAMINE-INDUCED ARRHYTHMIAS FOLLOWING RESERPINE PRETREATMENT. W.W.Fleming: Proc. Soc. exp. Biol., N.Y., 1962, 111, 484-486 (Dept. Pharm., West Virginia Univ. Med. Center, Morgantown, W. Va., U.S.A.) Pretreatment with reserpine for 7-28 days causes a significant increase in sensitivity of the cat heart to catecholamine-induced arrhythmias and there is indication that this sensitivity increases progressively with increased duration of reserpine treatment. M.M. Shapland

1629. ACTION OF CATECHOLAMINES ON BOVINE IRIS MUSCLE. B.Djahanguir: Arch. int. Pharmacodyn., 1963, 142, 276-278 (Expt. Therap. Inst., Univ., Liège, Belgium) On the sphincter iris muscle, isopropylnoradrianol caused [3] effects similar to those of adrenaline but weaker than those of isoprenaline. (French) T.J.Sullivan

1630. ACTION OF CATECHOLAMINES ON ISOLATED TRACHEAL MUSCLE OF THE GUINEA-PIG. R.Dejardin: Arch. int. Pharmacodyn., 1963, 142, 279-281 (Expt. Therap. Inst., Univ. Liège, Belgium) Adrenaline, isoprenaline and noradrenaline caused relaxation of ACh induced contraction of tracheal muscle. The prep, was desensitised to those three substances by (\pm)nor-metanephrine. (French) T.J.Sullivan

1631. SELECTIVE POTENTIATION OF SYMPATHOMIMETIC AMINES BY RESERPINE, SYROSINGOPINE, AND₂, 6-XYLYLCHOLINEETHER BROMIDE [TM-10] IN THE DOG. C.A.Ross, H-C.Wenger, C.T.Ludden and C.A.Stone: Arch. int. Pharmacodyn., 1963, 142, 141-151 (Merck Inst. Therap. Res., West Point, Pa., U.S.A.) In anaesthetised, vagotomised dogs, reserpine, syrosingopine and TM-10 potentiated the vasopressor responses to phenethylamine and tyramine, and only to a lesser extent those to noradrenaline and dopamine. Reserpine and syrosingopine were 40 times more potent than TM-10. Similar actions were not demonstrable with guanethidine, bretylium, methyldopa, iproniazid and cocaine. The phenomenon may be due to a sensitising action on catecholamine stores, upon which phenethylamine is presumed to act. T.J.Sullivan

1632. ANALYSIS OF ADRENERGIC BLOCKING ACTIVITY OF CYSTEAMINE. V.Varagid, R.Debijadji and S.E.I.Cić: Arch. int. Pharmacodyn., 1963, 142, 206-215 (Inst. Aviat. Med., Zemun, Yugoslavia) The adrenergic blocking actions of cysteamine are studied on rat b.p. and on isolated rabbit uterus, atrial and intestinal prep. In most tissues cysteamine appears to block both α and β receptors, though it does not influence the action of adrenaline on the rabbit duodenum. On guinea-pig ileum it produces a stimulant effect and potentiates the similar response to adrenaline. S.E.Smith

1633. ENZYME ACTION ON NORADRENALINE AND ADRENALINE. E.Jisalo: Acta pharmacol., Khb., 1962, 19, Suppl. 1, 1-90 (Dept. Pharmacol., Univ. Turku, Finland) Enzymic metabolism of noradrenaline and adrenaline takes place in homogenates of bovine heart, lung, uterus, small intestine, spleen, liver, kidney and brain tissue, and to a limited extent in skeletal muscle. Amphetamine and iproniazid did not produce 100% inhibn. of MAO in the tissues examined. R.S.Tonks

1634. EVIDENCE FOR RAPID TURNOVER OF NORADRENALINE IN RAT HEART AND BRAIN. S.Spector,

K.Melmon and A.Sjoerdsma: Proc. Soc. exp. Biol., N.Y., 1962, 111, 79-81 (Expt. Therap., NJH.L, Bethesda, Md., U.S.A.) Administration of an indolyl alkylarylpiperazine depletes the noradrenaline content of heart and brain within 3 hr. without affecting brain 5HT; return to normal being effected within 8 hr. M.M.Shapland

1635. PERIPHERAL NORADRENERGIC REACTIVITY. A.F. de Schaepdryver, M.Bogaert, A.L.Delaunois and P.Bernard: Arch. int. Pharmacodyn., 1963, 142, 243-259 (J.F. Heymans List. Pharmacol., Univ., Ghent, Belgium) In morphine-chloralose-anaesthetised dogs i.v. infusions of noradrenaline 0.5 µg./kg./min., L-dopa, dopamine or normetadrenaline do not sensitise hindleg vasoconstriction, splenic contraction and cardiac acceleration to postganglionic sympathetic stimulation, nor do they restore these responses after their abolition by reserpine, methyldopa or guanethidine pretreatment. S.E.Smith

1636. VARIABLE ACTION OF MAO-INHIBITING HYDRAZINES ON 5HT METABOLISM. E.Kirberger: Nature, Lond., 1963, 197, 1211-1212 (Nervenklin. der Stadt und Univ., Frankfurt am Main, Germany) Urinary excretion of 5-HIAA after oral loading with 5HT is decreased after treatment with the MAO inhibitors 'Marsilid', 'Marplan', 'Nardil' and 'Niamid', but only 'Marsilid' and 'Marplan' decreased the excretion after oral loading with 5-HIAA itself. The significance of this finding is discussed. CM.Lewis

1637. MECHANISM OF THE HAEMODYNAMIC EFFECTS OF HYDRALAZINE IN MAN. B.Ablad: Acta pharmacol. Khb., 1963, 20, Suppl. 1, 1-53 (Dept. Pharmacol., Univ., GÖteborg, Sweden) Hydralazines site of action in the peripheral vascular bed determines its haemodynamic effects in man. Given i.a. in low dosage to the forearm and hand, it decreases regional vascular resistance of long duration after a slow onset. It produces a pronounced relaxation of the resistance vessels and a smaller relaxation of the capacitance vessels. R.S.Tonks*

1638. LETHAL DOSE, PRESS OR EFFECT AND INTESTINAL ACTIVITY OF SOME PYRROLIDINE N-SUBSTITUTED NORNICOTINE DERIVATIVES. N.Mattila and A.Vartiainen: Acta pharmacol. Khb., 1962, 19, 330-336 (Dept. Pharmacol., Univ., Helsinki, Finland) Ethyl-, allyl-, benzyl-, acetyl- and carbaminoyl-nornicotine all produced a contraction of the isolated guinea-pig ileum which could be abolished by cocaine, hexamethonium or thiamine but hardly at all by atropine, except that caused by acetylnornicotine. R.S.Tonks

ENDOCRINES

1639. INHIBITION OF THE BIOLOGICAL ACTION OF THYROID HORMONES BY ACTINOMYCIN D AND PUROMYCIN. J.R.Tata: Nature, Lond., 1963, 197, 1167-1168 (Nat. Inst. Med. Res., Mill Hill, London, England) Administration of puromycin and actinomycin D to rats suppresses the physiol. action of L-thyroxine and 3, 5, 3'-triiodo-L-thyronine. It is concluded that stimm. of protein synthesis is an essential requirement for the full physiol. response to thyroid hormones. J.R.Sargent

1640. EFFECT OF 3:5:3'-TRIIODOTHYROACETIC ACID [TRIAC] ON THE IN VITRO OXYGEN UPTAKE OF LEUCOCYTES OF HYPOPIITUITARY PATIENTS. LProvan, CMurray and S.K.Bisset: Nature, Lond., 1963, 197, 1209-1210 (Univ. Dept. Med., Royal Infirmary, Glasgow, Scotland) 4 patients with untreated secondary hypothyroidism did not show the stimm. of O₂ uptake of their leukocytes treated with TRIAC as had been observed with primary hypothyroidism. One Patient treated with cortisone, did show this stimm., and it is suggested that cortisone facilitated the access of the thyroid hormone to the site of action; secondary adrenal insufficiency was present in the other patients.

G.M.Lewis

1641. THE USE OF SODIUM DEXTRO-THYROXIN IN PATIENTS WITH ANGINA PECTORIS. C.Moses, J.R. Jablonski, J.H.Sunder and L.B.Katz: Amer. J. med. Sci., 1962, 244, 731-735 (Ad.H.Gibson Lab. Sch. Med., Univ. Pittsburgh, Pa., U.S.A.) Dextro-thyroxin, 4 mg. daily, reduces the serum g-lipoprotein cholesterol level but has no effect on the serum CL-uprotein cholesterol and the triglyceride levels. In some patients this action is associated with an increased freq. of angina attacks. E.E.Hobbiger

1642. INHIBITION OF OVULATION AND THYROID GLAND ACTIVATION IN RAT BY NEMBUTAL. K.Brown-Grant: J. Endocr., 1963, 26, 299-300 (Dept. Human Anat., Univ. Oxford, England) Doses of sodium pentobarbitone which block ovulation when given to the pro-oestrus rat also significantly reduce the thyroid uptake of 131I. It is suggested that TSH as well as LH secretion is inhib. by barbiturate. CF.Blane

1643. EFFECT OF DEXAMETHASONE ON EXCRETION OF OESTRIOL AND FOLLICLE-STIMULATING HORMONE IN PATIENTS WITH STEIN-LEVENTHAL SYNDROME. W.R.Butt, A.C.Crooke, F.J.Cunningham and R.Palmer: J. Endocr., 1963, 26, 303-304 (United Birmingham Hosp., Dept. Clin. Endocr., Sparkhill, Birmingham, England) Urinary oestriol levels were raised in all the patients treated with dexamethasone. Where FSH levels were measured these were found to be concomitantly raised. It is postulated that suppression of pituitary ACTH secretion by administration of exogenous corticoid may lead to a compensatory rise in FSH production. CF.Blane

1644. CLINICAL AND SERUM LIPID EFFECTS OF A COMBINATION OF NORETHYNODREL PLUS ETHYNODIOL-3-METHYL ETHER IN POST-MENOPAUSAL WOMEN. R.W.Robinson, W.D.Cohen and N. Jjigano: Amer. J. med. Sci., 1962, 244, 736-743 (Wes. Lab. and Med. Div., Memorial Hosp., Worcester, Mass. - u.s.A#) The 3-methyl ether of ethynodiol given in a dose of 5 mg. daily has an estrogen-like effect on serum HPids. This does not take place when the dose is doubled. The side effects of treatment are described. E.E.Hobbiger

1645. INCREASED SURVIVAL TIME IN DYSTROPHIC JELLY TREATED WITH METHYLANDROSTENEDIOL J'ENANTHOYLACETATE. R.F.Borgman: Nature, 1963, 197, 1304-1305 (Dept. Food Technol., Wisconsin, U.S.A#) Treatment of mice bovine diet with muscular dystrophy (fdydy) with the anabolic steroid methylandrostenediol dienanthoylacetate, which is a weak lengthened survival time, but did not alter the disease syndrome. G*M.Lewis

1646. MECHANISM OF TRIPARANOL-INDUCED ADRENAL HYPERSTROPHY AND REDUCED ADRENAL FUNCTION. S.Gordon, S.Mauer, W.P.Cekleniak and R.Partridge: Endocrinology, 1963, 72, 643-648 (Biochem. Res., American Cyanamid Co., Pearl River, N.Y., U.S.A.) Expt. on triparanol administration to rats suggest that the adrenal enlargement and impaired adrenal function in intact rats was primarily due to adrenal steroid depletion. The failure of the enlargement to occur in hypophysectomised animals was thought to be due to failure of the adrenal feedback mechanism to stimulate the adrenals via the pituitary. H.C.Jones

1647. EFFECT OF HYDROCORTISONE ON EXPERIMENTAL SILICOTIC NODULE. R.C.Talley and B.Burrows: Proc. Soc. exp. Biol., N.Y., 1963, 112, 119-122 (Dept. Med., Univ. Chicago, 111, U.S.A.) Swiss mice were inj. i.v. with 7.5 mg. of sandstone with particles of 1-2 μ in size. Treatment with hydrocortisone was either concurrently with the silicotic material or 95 days subsequently. It was found by histol. examination of the left lobes of the liver at regular intervals after injn. that fibrosis was reduced as long as hydrocortisone treatment continued. D.N. Wheatley

1648. EFFECT OF HYDROCORTISONE ADMINISTRATION ON THE HYALURONIC ACID FRACTIONS OF SYNOVIAL FLUID IN RHEUMATOID ARTHRITIS. V.Nanto, P.Seppala and E.Kulonen: Clin. chim. Acta, 1962, 7, 794-799 (Dept. Med. Chem., Univ., Turku, Finland) The hyaluronate of the rheumatoid synovial fluids could be separated into fractions by a stepwise dissolution of the cetylpyridinium complex into salt soln. The distribution of the fractions is continuous but skewed. Physicochem. data on the fractions are given. Treatment with hydrocortisone affected the distribution of the fractions. V.M.Wootton

1649. INHALATION CORTICOSTEROID (DEXAMETHASONE PO₄) MANAGEMENT OF CHRONICALLY ASTHMATIC CHILDREN. S.B.Crepea: J. Allergy, 1963, 34, 119-126 (Med. and Res. Dept., Sahuaro Sch. for Asthmatic Children, Tucson, Ariz., U.S.A.) Dexamethasone PO₄ powder, particle size 0.5-4 μ and propelled by a fluorocarbon compound was inhaled daily by 29 asthmatic children between 6 and 13 yr. whose condition before this treatment had required maintenance with oral dexamethasone at a daily rate from 0.75-2.25 mg. The daily amount of powder inhaled was 0.67 mg., and all the children but one became symptom-free, requiring no other medication on average for 19 days, some relapses beginning after 2 days. The 24 hr. urinary 11-OH corticoid excretion was investigated in 15 children and found depressed. In 7 of them ACTH gel was given and increased the excretion promptly. In 7 of them ACTH gel increased the excretion promptly. It is concluded that less corticoid is necessary for the control of asthma if inhaled as powder than if given orally but that adrenocortical suppression occurs in both cases. H.Herxheimer

1650. COMPARATIVE ACTIONS OF CORTISONE, ANDROGENS AND VITAMIN B₁₂ ON BODY WEIGHT AND INCIDENCE OF DISEASE IN MICE. A.A.Ashburn, W.L. Williams and T.R.Arlander: Anat. Rec., 1962, 144, 1-17 (Dept. Anat., Univ. Mississippi Sch. Med., Jackson, Miss., U.S.A.) The report presents an account of the changes in body wt. and of the incidence of cardiac, hepatic and renal lesions in mice inj. with cortisone, or one of three androgens, or vit. B12. or with cortisone plus an androgen or vit. B12*. F.Beck

PHARMACOLOGY

1651. COMPARISON OF POTENCY ESTIMATES FOR GLUCOCORTICOIDS USING TWO THYMOLYTIC ASSAY PROCEDURES. S.J.Mauer, E.Heyder and I.Ringler: Proc. Soc. exp. Biol., N.Y., 1962, 111, 345-348 (Dept. Metabol. Chemother., Expt. Therap. Res. Sect., American Cyanamid Co., Pearl River, N.Y., U.S.A.) Comparison of thymolytic activity for glucocorticoids showed that the potency of the single injn. 48 hr. assay was 0.82 times that of the multiple inj. 5 day assay. M.M.Shapland

1652. ORAL THYMOLYTIC ACTIVITIES FOR RAT OF 21-PHOSPHATE AND 21-ACETATE ESTERS OF SOME ANTI-INFLAMMATORY STEROIDS. R.M.Atkinson, M.A.Pratt and E.G.Tomich: J. Endocr., 1963, 26, 297-298 (Glaxo Res. Ltd., Greenford, Middx, England) Although the acetates of prednisolone and cortisone were more potent orally than their alcohols, the acetate and the alcohol of betamethasone were approx. equipotent and dexamethasone acetate was less active than the alcohol. Phosphates of all 4 steroids were less active than the corresponding alcohol. G.J.F.Blanen

1653. QUANTITATIVE RELATIONSHIP BETWEEN CORTISOL PRODUCTION AND SPONTANEOUS OUTPUT OF URINARY TRYPSIN INHIBITOR IN MAN. H.J.Faarvang: Acta pharmacol. Khb., 1962, 19, 305-311 (Biol. Inst., Carlsberg Fdn., Copenhagen, Denmark) The total spontaneous trypsin inhibitor output in man is produced by cortisol. Cortisone has the same effect on the output of trypsin inhibitor and the sensitivities to cortisol and cortisone vary from person to person. R.S.Tonks

1654. ACTIVITY OF SOME RESPIRATORY ENZYMES IN LIVER MITOCHONDRIA OF RATS TREATED WITH CORTISONE AND ANABOLIC ANDROGENS. K.Kowalewski: Arch. int. Pharmacodyn., 1963, 142, 9-16 (Surg.-Med. Res. Inst., Univ. Alberta, Edmonton, Alta., Canada) Liver mitochondrial respiratory enzyme activity is studied in rats pretreated with corticosteroids. Cortisone 5 or 10 mg./day for 14 days inhibits succinic dehydrogenase. Norethandrolone 5 or 10 mg./day and methandienone 5 mg./day have no effect, nor does methandienone prevent the inhibitory effect of cortisone. None of the steroids affects cytochrome oxidase. S.E.Smith

1655. EFFECT OF RESERPINE ANALOGUE, METHYL-18-EPI-O METHYL RESERPATE HYDROCHLORIDE ON LACTOGEN RELEASE FROM RAT ANTERIOR PITUITARY. R.R.Gala and R.P.Reece: Endocrinology, 1963, 72, 649-657 (Dept. Dairy Sci., N. Jersey Agric. Stn., New Brunswick, N.J., U.S.A.) Expt. on rats show that the reserpine analogue, methyl-18-epi-O-methyl reserpate hydrochloride has a lactogen releasing action on the ant. pituitary. It prolonged the oestrous cycle, stim. mammary gland activity and decreased the ant. pituitary lactogen content in lactating females. H.C.Jones

1656. ACTION OF STEROIDS ON LYSERGIC ACID DIETHYLAMIDEMETABOLISM. J.R.Bergen, L.Perkins and M.Hayano: Proc. Soc. exp. Biol., N.Y., 1962, 111, 427-428 (Worcester Fdn., Expt. Biol., Shrewsbury, Mass., U.S.A.) In vitro metabolism of LSD in a rat liver homogenate fraction was significantly reduced by steroids in concn. as low as 10⁻⁶M. It is thought that this is due to blocking of LSD-receptor relationship in the cell. M.M.Shapland

GENERAL PHARMACOLOGY

1657. A FLUX-CARRIER HYPOTHESIS OF DRUG ACTION. D.Mackay: Nature, Lond., 1963, 197, 1171-1173 (Dept. Pharmacol., Sch. Med., Univ., Leeds, England) A flux-carrier hypothesis designed to explain the actions of drugs on ganglia and neuromuscular junctions contained features of both the receptor theory and potential theory. It is suggested that depolarisers, including ACh, may depolarise the post-synaptic membrane by penetrating it. G.M.Lewis

1658. INFLUENCE OF EXTERNAL FACTORS AND AROUSAL MECHANISMS ON THE RATE OF DRUG TOLERANCE DEVELOPMENT. S.Irwin: Arch. int. Pharmacodyn., 1963, 142, 152-156 (Neuro-pharmacol. Dept., Schering Corp., Bloomfield, N.J., U.S.A.) In rats, the rate of onset of tolerance to chlorpromazine was accelerated by increasing the intensity of the conditioned buzzer or unconditioned electro-shock stimulus employed in an avoidance study. It is suggested that the expt. situation, affecting behaviour and response to drugs, accounts for many diverse expt. findings. T.J.Sullivan

1659. ACTION OF SOME PSYCHOTOMIMETIC AGENTS ON EXCITATORY AND BIOCHEMICAL PROCESSES OF FROG SARTORIUS MUSCLE. L.C.Abood, C.M.Smith, I.Koyama and K.Koketsu: J. Neurochem., 1963, 10, 95-111 (Dept. Psychiat. and Biochem., Univ. Illinois Med. Coll., Chicago, Ill., U.S.A.) At 10-4-105 M in a Ca-free [EDTA-containing] medium methylpyrrolidylmethylcyclopentylphenylglycolate [PPG] 4 deriv. of piperidyl benzilate, atropine and cocaine inhib. lactate production and spontaneous twitching, and increased isometric contraction of the isolated muscle. 105M PPG in Ca-free media also increased hexose-6-phosphate and glycogen levels but phosphocreatine and ATP levels remained normal. Under similar conditions PPG prolonged neg. after potentials following electrical stim. of the muscle. On switching from a Ca-containing to a Ca-free medium the usual drop in resting potential was retarded by 10⁻⁵M PPG. These results are discussed with respect to PPG action being mediated by the Ca and PO₄ effects on excitatory membranes. R.Woodman

1660. RELATIONSHIP OF PLASMA SALICYLATE CONCENTRATION TO URINARY SAUCYLATE EXCRETION RATE. E.Nelson and G.Levy: Nature, Lond., 1963, 197, 1269-1270 (Sch. Pharm., State Univ. New York, Buffalo, N.Y., U.S.A.) Both plasma salicylate level and data on urinary excretion rates of salicylate are satisfactory indicators of the relative absorption rates of orally ingested salicylates. J.R.Sargent

1661. INHIBITION OF MALIC DEHYDROGENASE BY SALICYLATE AND RELATED COMPOUNDS. M.J.H. Smith and C.Bryant: J. Pharm., Lond., 1963, 15, 189-191 (King's Coll. Hasp. Med. Sch., London, England) The enzyme in rat liver mitochondria w& inhib. by salicylate and resorcylate, this was reversed by nicotinamide adenosine dinucleotide. A general structural requirement for inhibitory activity appears to be a phenolic OH group in the o position to a COOH group, except that 2-hydroxyphenylacetate also inhibits. J.M.Whitmarsh

1662. PHARMACOLOGICAL AND CHROMATOGRAPHIC DIFFERENTIATION BETWEEN A SECONDARY KININ FROM HUMAN URINE AND BRADYKININ. K.B.Jensen, U.

PHARMACOLOGY

157

and A.M.VennerOd: *Acta pharmacol. Kbh.*, 1962, 19, 337-344 (Biol. Dept., Pharmaceut. Inst., Univ., Oslo, Norway) Assays with the rat uterus and guinea-pig ileum or rat b.p. distinguished between synthetic bradykinin and a secondary kinin (Z2) from human urine. Indices of discrimination of 12 and 15 respectively were obtained.
R.S.Tonks

1663. UTERINE RELAXANT PROPERTIES OF BRADYKININ IN VITRO. R.Landesman, W.L.Campbell and K.Wilson: *Nature, Lond.*, 1963, 197, 1208-1209 (Cornell Univ. Med. Coll., Dept. Obstet., New York, N.Y., U.S.A.) In non-pregnant human uteri, 0-2 /ig./ml. bradykinin Produced a significant relaxant response in 57% of tests. In pregnant uteri, 0-8 jig./ml. completely inhib. spontaneous or induced contractions. G.M.Lewis

1664. METABOLISM OF DRUGS. XXXVII. ENZYMIC OXIDATION OF METHYLHEXABITAL. II. REVERSIBLE OXIDATION OF 3-HYDROXY-METHYLHEXABITAL [3-OH-MHB]. K.Toki, S.Toki and H.Tsukamoto: *J. Biochem. Tokyo*, 1963, 53, 43-49 (Inst. Pharmaceut. Sci., Fac. Med., Kyushu Univ., Fukuoka, Japan)

The sol. fraction of rabbit liver contained an enzyme which oxidised 3-OH-MHB to 3-keto-methylhexabital. NAD and NADP were equally effective as H acceptors. Coenzymes appeared to be rather firmly bound. β -Chloromeicurbenzoate, a,d'-dipyridyl and α -Phenanthroline inhib. FAD, FMN, Methylene Blue, ferri-cyanide, menadione, glutathione, cystine ora-lipoic acid activated in the presence of pyridine nucleotide. B.M.Stevens

1665. BIOCHEMISTRY AND PHARMACOLOGY OF 6-URACIL METHYL SULPHONE [UMS]. W.A.Creasey and R.C.Haff: *Cancer Res.*, 1963, 23, 462-467 (Dept. Pharmacol., Yale Univ. Sch. Med., New Haven, Conn., U.S.A.) UMS inhib. the conversion of ribonucleotides to deoxyribonucleotides by mammalian tissue. UMS was rapidly destroyed in vivo by reaction with ^3H containing compounds. During i.a. infusion of UMS in dogs a much larger concn. gradient was set up between Rin*ed* and contralat. limbs than that attained during infusion of Evans Blue. UMS did not interfere with orotic acid metabolism. B.M.Stevens

1666. CLINICAL AND PHARMACOLOGICAL STUDIES WITH 2^f, 3\ 5*-TRIACETYL-6-AZAURIDINE. W.A. freasey, M.E.Fink, R.E.Jiandschumacher and P.Cala-J*esi: *Cancer Res.*, 1963, 23, 444-453 (Dept. Int. Med., Yale Univ. Sch. Med., New Haven, Conn., U.S.A.) The compound, fed to 11 patients with advanced neoplastic disease, was absorbed rapidly from the gastrointestinal tract. Significant blood levels of 6-azauridine were maintained in the 8 hr. between doses of ^{14}C -cetylated deriv. Examination of the fate of i.v. ^{14}C -cetylated deriv. and *ol* urinary orotidine and ^3H acid excretion indicated that the conversion of ^3H acid to uridine nucleotides was depressed during ^{14}C -Py. Metabolic effects and clinical changes were ^{14}C -able to those produced by equiv. i.v. doses of 6-azauridine. B.M.Stevens

1667. AUTORADIOGRAPHIC STUDIES ON THE DETRITION OF [3H]MEPROBAMATE IN THE BODY. J.Ewaldsson: *Arch. int. Pharmacodyn.*, 1963, 142, 169 & Pharmacol., Royal Vet. Coll., Stockholm Sweden) The distribution of PHbieprobamate is studied with autoradiography. One minute after ^{3}H -injection the largest quantities are found in the liver,

adrenals, intestine and kidneys. Renal excretion occurs rapidly and all tissue levels decrease equally rapidly. S.E.Smith

1668. NOTE ON THE METABOLISM OF o-(2-ETHOXY-ETHOXY)-BENZAMIDE TO o-(CARBAMOYL)-PHENOXYACETIC ACID INlrFAN. AJ.Cummings: *J. Pharm. Lond.*, 1963, 15, 212-214 (Nicholas Res. Inst., Slough, Bucks., England) After oral administration of the first-named the only metabolic product was the 2nd. J.M.Whitmarsh

1669. PHYSICO-CHEMICAL EXPERIMENTS WITH PHOSPHATIDYL ETHANOLAMINE SOLS. D.C.Robins and I.L.Thomas: *J. Pharm. Lond.*, 1963, 15, 157-166 (Welsh Coll. Adv. Technol., Cardiff, Wales) Solubilities in some org. solvents were determined. Surface tension studies of aq. sols indicated marked surface-active prop. and showed that surface ageing occurs. The effects of pH, concn., mono- and divalent salts were investigated and are discussed. The critical micelle concn. is 0-002-0-01% w/v. The isoelectric point is at pH 3-1. J.M.Whitmarsh

1670. DIMETRIDAZOLE: ABSORPTION, EXCRETION AND METABOLISM IN TURKEYS. G.L.Law, G.P.Mansfield, D.F.Muggleton and E.W.Pamell: *Nature, Lond.*, 1963, 197, 1024-1025 (Res. Lab., May and Baker Ltd., Dagenham, Essex, England) Examination of faeces and urine of turkeys by polarography and colorimetry after feeding 1-300 mg./kg. dimetridazole showed that 64% of the dose was excreted within 3 days. Radiochem. methods following administration of [^{14}C]dimetridazole in drinking water showed that no detectable amounts of the compound or its metabolites remained in the tissues 3 days later. Chromatographic techniques showed that metabolites included nitroimidazoles, hydroxymethyl deriv. and conjugated glucuronides. G.M.Lewis

1671. DETERMINATION OF POLDINE METHYL METHSULPHATE IN BIOLOGICAL FLUIDS. P.F.Langley, J.D. Lewis, K.R.L.Mansford and D.Smith: *J. Pharm. Lond.*, 1963, 15, 100-106 (Beecham Res. Lab., Ltd., Betchworth, Surrey, England) The substance is coupled with Methyl Orange and simult. extracted in a mixture of ethylene dichloride and isopentanol. The extract is acidi-fied with alcoholic H_2SO_4 and the O.D. of the pink colour is read at 525 mji. Recovery was 99.2 \pm 1.8%. The pH for coupling must be 4-9. Prolinol methyl methosulphate does not couple. J.M.Whitmarsh

1672. TEST FOR METABOLIC ATTACK ON TRIS (HYDROXYMETHYL)AMINOMETHANE AND HYDROXYMETHYL SERINE IN THE RAT. H.R.Christensen and J.Clifford: *Proc. Soc. exp. Biol., N.Y.*, 1962, 114, 140-143 (Dept. Biol. Chem., Univ. Michigan, Ann Arbor, Mich., U.S.A.) Tris undergoes no significant metabolic oxidation in the rat. M.M.Shapland

1673. PREPARATION AND MEASUREMENT OF THE SURFACE ACTIVITY OF A SERIES OF 4-ALKYL-1¹-SPIROLIPIPERIDINIUM BROMIDES. J.Thomas and D. Clough: *J. Pharm., Lond.*, 1963, 15, 167-177 (Dept. Pharm., Univ., Manchester, England) The prep. are described. The surface tension of aq. soln. is reported. None of the compounds formed micelles in the concn. range studied. The relationship between micelle formation of quaternary NH_4 ions and antibacterial activity is discussed. J.M.Whitmarsh

PHARMACOLOGY

1674. PREPARATION OF PORPHYROXINE FROM OPIUM.

K.Genesi and D.G.Faimilo: J. Pharm., Lond., 1963, 15, 197-201 (Dept. Nat. Hlth., Tunney's Pasture, Ottawa, Canada) An extract of opium was passed through columns of Florisil and alumina (basic and neutral). Elution with solvents of varying polarity yielded poiphyroxine. The m.p., spectral and paper chromatographic findings are reported. J.M .Whitmarsh

1675. MODE OF ACTION OF TYRAMINE. MJ.Davey

and J.B.Jarmer: J. Pharm., Lond., 1963, 15, 178-182 (Pfizer Ltd., Sandwich, Kent, England) Repeated administration to the isolated perfused guinea-pig heart lowered the pos. inotropic response and the nor-adrenaline content of the heart decreased. A decrease also occurred when phenylethylamine and guanethidine were administered until no further pos. inotropic effect was obtained, but amphetamine, bretylium and ephedrine in similar circumstances did not bring about such a decrease. J. M. Whitmarsh

1676. PHARMACOLOGICAL ACTION OF TYRAMINE ON THE CARDIOVASCULAR SYSTEM IN MAN. M.L.

Mashford, D.A.Wolochow and W.A.Mahon: Proc.Soc. exp. Biol., N.Y., 1962, 111, 308-311 (Clin. Pharm. Div. Med. Serv. Lemuel Shattuck Hosp., Boston, Mass., U.S.A.) I.v. injn. of tyramine in man causes elevation of b.p. and total peripheral resistance, but inconsistent effects on cardiac output and pulse rate. Changes in the site of impulse formation and conduction were observed in the e.c.g. M.M.S hap land

1677. MODIFICATION OF CARDIOVASCULAR EFFECTS OF THEOPHYLLINE BY 7-DIHYDROXYPROPYL SUBSTITUTION. C.B.Nash and E.Manley: Arch. int. Pharmacodyn., 1963, 142, 67-73 (Pharmacol. Dept., Tennessee Univ. Med. Units, Memphis, Tenn., U.S.A.)

Dihydroxypropyl theophylline [DHPT] was 10 to 20 times less potent than aminophyllin in increasing coronary flow and as a myocardial stimulant in anaesthetised dogs and on isolated cat hearts. In unanaesthetised animals it had a more prolonged action and relatively less effect on heart rate. TJ.Sullivan

1678. NITRITES. XX. PHARMACOLOGICAL STUDIES WITH 1-ETHYGLYCERYL TRINITRATE [EGT]. R.M.

Burgison, G.G.Lu, F.K.Bell and J.C.Krantz, jun.: Proc. Soc. exp. Biol., N.Y., 1962, 111, 245-247 (Dept. Pharm., Sch. Med., Univ. Maryland, Baltimore, Md., U.S.A.) It has been shown that EGT quant, and qual. evokes the same character of coronary dilation as does glyceryl trinitrate. M.M.Shapland

1679. BIPHASIC ACTION OF DIGITOXIN ON VAGAL CONTROL OF THE HEART. T.Godfraind and A.

Godfraind-De Becker: Arch. int. Pharmacodyn., 1963, 142, 288-290 (Pharmacol. Lab., Lovanium Univ., Leopoldville, Congo) Digitoxin caused a biphasic effect on vagal stimm. of the mammalian heart in vivo. After i.v. injn. vagal bradycardia was at first potentiated, but subsequently the heart rate reverted to sinus rhythm. (French) T.J.Sullivan

1680. ANALYSIS OF KC1-DIGITOXIN ANTAGONISM.

T.Godfraind and A.Godfraind-De Becker: Arch. int. Pharmacodyn., 1963, 142, 291-292 (Pharmacol. Lab., Lovanium Univ., Leopoldville, Congo) By measuring antagonism between digitoxin and histamine, and varying KC1 content in the digitoxin soln. it was concluded that antagonism between KC1 and digitoxin was only

partly competitive. There appeared to be 2 types of digitoxin receptor, only one of which could be antagonised by KC1. (French) TJ.Sullivan

1681. BINDING OF QUINIDINE TO MYOCARDIAL CELLULAR COMPONENTS. R.B.Arora, J.N.Sharma, T.K.

Tarak and Y.R.Saxena: J. Pharm. Lond., 1963, 15, 151 (Dept. Pharmacol., All-India List. Med. Sci., New Delhi, India) A letter. J.M.Whitmarsh

1682. CONTROLLED OBSERVATION OF PROLONGED ORA& TREATMENT WITH PERSANTIN. G.Neuhaus, D.

Lerche and L.Seki: Z.Kreisl.-Forsch., 1963, 52, 164' 170 (Cardiol. Dept., I. Med. Clin., Free Univ., Berlin, Germany) Persantin, a piperidine-pyrimidine deriv., was given for several months (12*5 mg. by mouth 3-4 times daily) to 11 male patients with angina d effort whose e.c.g. showed marked ST segment depression during induced hypoxia; periods of treatment were repeatedly interrupted by periods of placebo medication. Periods of treatment were associated with statistically significant improvement in symptoms and also in the e.c.b' response to hypoxia. This improvement was lost during periods of placebo medication. (German) P.F.Meyer

1683. PHARMACOLOGICAL STUDIES OF 2, 6-BIS(I-

PIPERIDYL METH YL)-4-(a, a - DIMETHYLBENZ YL)-PHENOL DIHYDROCHLORIDE (Ro 2-5803) ON CARP^ VASCULAR SYSTEM. V.N.Sharma and K.P.Singh: Arch. int. Pharmacodyn., 1963, 142, 185-197 (Dept' Pharmacol. and Expt. Ther., S.M.S. Med. Coll., Jaipur, India) The cardiovascular actions of Ro 2* 5803 [Rhythmol] are investigated in dogs and on isolated frog and rabbit heart prep. It has hypotensive, neg. ino* tropic and chronotropic actions similar to those of quini'dine and anti-arrhythmic effects more potent than those of quinidine. S.E.Smith

1684. CARDIOVASCULAR ACTIONS OF 2, 6-BIS[2-

HYDROXYETHYL]AMINO]-4, 8-DIPIPERIDINOPYRI' MIDO[5,4-D]PYRIMIDINE[RA-8]. M.Ben, G.C.BO**¹, C.C.Scott and M.R.Warren: Arch. int. Pharmacodyn.* 1963, 142, 228-236 (Warner-Lambert Res. Inst., Morris Plains, N.J., U.S.A.) Following intracoronary or i.v. administration in dogs RA-8 produces coronary vasodilatation. By mouth RA-8 is ineffective. S.E.Smith¹

1685. EFFECTS OF SODIUM SELENITE ON SEVERAL :

BLOOD COMPONENTS. M.A.Heinrich, jun.: Tc**f appl. Pharm., 1963, 5, 267-271 (Dept. Physiol. and Pharmacol., Sch. Med. Sci., State Univ. S. Dakota*, Vermillion, S. Dak., U.S.A.) The effect of sodW selenite, given to dogs i.v. in doses up to 2 mg./kg. on & levels of plasma Na, Ca, P, K, lactate, pyruvate and proteins, on the haematocrit and the venous pH was investigated. The observed changes are thought to be due to a combination of 'adrenaline' release, reduction in cardiac output and plasma flow, haemo-concn., and enzyme inhibn. E.E.Hobbiger

1686. EFFECT OF HEPARIN, PROTAMINE, DICOUMAROL, STREPTOKINASE AND 6 -AMINO-n-CAPROIC ACID [EACA] ON THE GROWTH OF HUMAN CELLS IN VITRO. A.Iisnell and L.Mellgran: Acta path. micr. biol. scand., 1963, 57, 145-153 (Dept. Path., Uni*

Gothenberg, Sweden) Human cell strains grown directly on glass in fluid medium containing 1 to 125 ^{125I} heparin showed no inhibn. of cell growth. Protamine, coumarol, streptokinase, and EACA all inhib. the growth with rising concn. LFriedman

1687. CONTROL OF ANTICOAGULANT THERAPY. P.A. Owren: Arch. intern. Med., 1963, 111, 248-258 (Univ. Hosp., Oslo, Norway) A survey of new tests, illustrated by results obtained by the author.

E.E.Hobbiger

1688. A STUDY WITH LOW AND HIGH MOLECULAR WEIGHTS OF HEXODIMETHRINE BROMIDE - AN ANTIHEPARIN AGENT. E.T.Kimura, P.R.Young and C.H.Barlow: Proc. Soc. exp. Biol., N.Y., 1962, 111, 37-41 (Res. Div., Abbott Labs., North Chicago, Ill., U.S.A.) Increase in i.v. toxicity and in vitro mast cell disruption are interrelated through an increase in Polymer average mol. wt. Polymers of varying toxicity can be fractionated by dialysis without loss of anti-heparin potency. M.M.Shapland

1689. STUDIES IN THE FIELD OF DIURETIC AGENTS. VII. 4-CHLORO-2^f-METHYL-3-SULPHAMOYL-BENZANILIDE. V.Petrow, O.Stephenson and A.M. Wild: Vm. SOME MISCELLANEOUS DERIVATIVES. G.B.Jackman, V.Petrow, O.Stephenson and A.M. Wild: J. Pharm. Lond., 1963, 15, 138-148, 202-211 (B.D.H. Ltd., Graham St., London, England) VII. A new route to the anilides of 4-halogeno-3-sulphamoylbenzoic acid is described. They, and in particular the title compound, are potent orally active diuretic agents. VIII. New deriv. of 4-chloro-3-sulphamoylbenzoic acid and of 4-chloro-3-sulphamoylaniline are described along with some formally related quinazolones. J.M.Whitmarsh

1690. 5-CHLORO-2-CYCLOHEXYL-1-OXO-6-SULPHAMOYL KOINDOLINE [M AND B 8430]: A NEW DIURETIC. E.J.Cornish, G.E.Lee and W.R.Wragg: Nature, Lond., 1963, 197, 1296-1297 (Res. Lab., May and Baker Ltd., Dagenham, Essex, England) Analogues of the diuretic chlorothiazide, in which pterocyclic ring was modified, were synthesised. The isoindolene, M and B 8430, was 100 times as active as chlorothiazide on oral administration to rats and dogs; the onset and duration of diuresis and the excretion of J_{ia} and K ions were very similar for equipotent doses of the 2 compounds. The therapeutic dose appeared to be about 50 mg. a day and was well tolerated.

G.M.Lewis

1691. THE VASCULAR EFFECT OF THE THIAZIDE DIURETICS. J.Conway and H.Palmero: Arch. intern. Med., 1963, 111, 203-207 (Dept. Med., Univ. Hosp., Ann Arbor, Mich., U.S.J.V.) Chlorothiazide reduces peripheral vascular resistance in man. It is thought that a change either in body content or in distribution of water or electrolytes, is responsible for this action. The hypotensive action of chlorothiazide is not related in magnitude to its diuretic action nor are the 2 processes closely related in time. E.E.Hobbiger

1692. COMPARISON BETWEEN EFFECTS OF CARINAMIDE AND PROBENECID ON THIOSULPHATE SECRETION IN THE RENAL TUBULES OF THE DOG. ^Berglund: Acta pharmacol. Khb., 1962, 19, 371-CAH⁸ (B.P.-Pharmacol., Univ. Goteborg, Sweden) lev-carbamide inhibits thiosulphate secretion at plasma lev¹³ of u¹³ fi./ml. whereas probenecid did not at car^u? to and above 150 μ g./ml. The SO₂ group in carbamide may have an affinity for a thiosulphate-tube cells, a characteristic probenecid to it due to the attachment of the SO₂ group benzene ring. R.S.Tonks

1693. ANTAGONISTIC RELATIONSHIP BETWEEN myo-INOSITOL AND 2-O, C-METHYLENE-myo-INOSITOL IN ANIMALS. P.A.Weinhold, N.Thanukrishna Iyer and L.Anderson: Proc. Soc. exp. Biol., N.Y., 1963, 112, 165-168 (Dept.Biochem., Agric. Coll., Univ. Wisconsin, Madison, Wis., U.S.A.) Mice of the Taconic strain were given 2-O, C-methylene-myo-inositol i.p. and were found to tolerate 20 to 30 mg./kg. but 40 mg./kg. caused severe depression of the growth rate. Necrosis of epithelial cells of the kidney were found as early as 8 hr. after injn. Histol. examinations of other organs revealed that only the stomach and the spleen were somewhat affected also. Blood urea was found to be high and therefore it was believed the kidney was damaged due to uraemia. It is suggested that this deriv. of myo-inositol may be acting competitively with the parent compound which has some as yet unknown role in the metabolism of kidney epithelial cells.

D.N.Wheatley

1694. EFFECTS OF VASOACTIVE DRUGS ON SERUM ELECTROLYTES IN HYPERTENSIVE AND NORMOTENSIVE HUMANS. M.A.Greene, AJ.Boltax, M.Niv and E.S.Scherr: Proc. Soc. exp. Biol., N.Y., 1962, 111, 423-427 (Cardiopulm. Lab., Dept. Med., Bronx Hosp., New York City, N.Y., U.S.A.) No significant changes in serum Na, K and Cl were observed after administration of trimethaphan or phenylephrine to normal and hypertensive humans indicating that extravascular electrolytes are better evaluated by direct analysis of tissues. M.M.Shapland

1695. FAT ACCUMULATION IN ACUTE LIVER INJURY. K.R.Rees and V.L.Shotlander: Proc. Roy. Soc. B², 1963, 157, 517-535 (Dept. Chem. Pathol., University Coll. Hosp. Med. Sch., London, England) Various aspects of the triglyceride cycle were studied in rats treated with liver poisons. Within 2 hr. of poisoning with CCl₄, there is an inhibn. of the synthesis of the protein moiety of lipoprotein and damage to the secretory mechanism. With dimethylnitrosamine, inhibn. of protein synthesis precedes damage to the secretory mechanism of the endoplasmic reticulum by many hr., while thiocacetamide, which produces necrosis without the accumulation of fat, has no effect on the triglyceride cycle.

G.M.Lewis

1696. SIDE EFFECTS OF TRIPARANOL THERAPY. H.O. Perry, R.K.Winkelmann, R.W.P.Achor and T.J.Kirby, jun.: Amer. J. med. Sci., 1962, 244, 556-559 (Mayo Clin. and MayoFdn., Rochester, Minn., U.S.A.) Triparanol, which blocks the formation of cholesterol from its immediate precursor, causes ichthyosis, loss of hair and a change in the colour of the hair. This is more pronounced in othan in ? E.E.Hobbiger

1697. A PHARMACOLOGICALLY ACTIVE SUBSTANCE IN MAMMALIAN TISSUE EXTRACTS. J.H.Gaddum and M.W.Smith: Proc. Roy. Soc. B², 1963, 157, 492-506 (A.R.C. Inst. Animal Physiol., Babraham, Cambridge, England) When substance P was assayed in crude extracts of guinea-pig tissues by the goldfish intestine test system, estimates more than 1000 times too high were obtained. The substance responsible for this effect was purified and identified as undine diphosphate. G.M.Lewis

1698. EFFECT OF PILOCARPINE ON ACID SOLUBLE PHOSPHATE COMPOUNDS OF RAT FOLLOWING HEPATECTOMY. W.A.Robinson, W.A.Engle and D.L Smith: Proc. Soc. exp. Biol., N.Y., 1962, 111, 477I 479 (Dept. Pharm., Univ. Colorado Sch. Med., Denver,

PHARMACOLOGY

Colo., U.S.A.) I.p. injn. of sodium diphenylhydantoin 10 days before and continuation of treatment after partial hepatectomy resulted in an increased rate of liver regeneration from day 2 to 5 after operation. No effect was observed when the drug was given only after operation.
M.M.Shapland

1699. EFFECT OF PILOCARPINE ON ACID-SOLUBLE PHOSPHATE COMPOUNDS OF RAT SUBMAXILLARY GLANDS. R.H.Dreisbach and E.Gerlach: Proc. Soc. exp. Biol., N.Y., 1962, 111, 526-529 (Inst. Physiol., Freiburg i. Br., Germany) Administration of pilocarpine increases the rate of entry of ^{32}P into rat submaxillary glands by approx. 20% but does not seem to effect ^{32}P incorporation into or concn. of, creatine phosphate or adenosine phosphates in the glands.
M.M.Shapland

1700. EXPERIMENTAL RESEARCH ON A NEW SYNTHETIC ANTI-HISTAMINE, CINNARAZINE. B.N.Halpem, C.Stiffel, M.Liacopoulos-Briot and L.Conovici: Arch. int. Pharmacodyn., 1963, 142, 170-184 (Centre Allergie and Immunol. Res., Broussais Hosp., 96 Rue Didot, Paris, France) Cinnarazine is N-*bsnzhydryl*- N^1 -cinnamyl-piperazine. It protected guinea-pigs against the effects of histamine aerosols, against lethal systemic doses of histamine and against anaphylactic shock. It antagonised the action of histamine on isolated intestine. It did not affect normal cardiovascular, respiratory or digestive functions, had low toxicity and was long acting. (French) TJ.Sullivan

1701. INFLUENCE OF COMPOUND 48/80 ON TUMOURS TRANSPLANTED TO THE HAMSTER CHEEK POUCH. MJMJCetzel and Y.Kobayashi: Proc. Soc. exp. Biol., N.Y., 1962, 111, 22-25 (Worcester Fdn. Expt. Biol., Shrewsbury, Mass., U.S.A.) Treatment with compound 48/80 (a histamine release agent) increased the rate of cheek pouch rejection of mouse ascites tumour cells.
M.M.Shapland

1702. CHEMICAL DETERMINATION OF ABSOLUTE CONFIGURATION OF LYSERGIC ACID. P.A.Stadler and A.Hofmann: Helv. chim. Acta, 1962, 45, 2005-2011 (Pharm.-chem. Forschungslab., Sandoz A.G., Basel, Switzerland) The abs. configuration of natural lysergic acid was determined as (5R:8R) by ozonisation of 6-methyl-8-methylene-7-keto-ergolene and subsequent oxidation with performic acid to D-N-methyl-aspartic acid which was identified in the form of its di-n-propyl ester. (German) A.D.Smith

1703. LYSERGIC ACID DIETHYLAMIDE: ITS EFFECTS ON A MALE ASIATIC ELEPHANT. LJ.West, CM. Pierce and W.D.Thomas: Science, 1962, 138, 1101-1102 (Dept. Psychiat., Univ. Oklahoma Sch. Med., Oklahoma City, Okla., U.S.A.) 0-1 mg./kg. LSD was inj. into a sexually mature male elephant. He quickly developed a tonic left-sided seizure, in which mild clonic movements were present and died by strangulation due to laryngeal spasm less than 2 hr. later despite attempts at therapy with promazine and pentobarbital. The temporal gland contained no dark brown secretion as is released during musth; it contained 2 distinct types of cell suggesting that it may function as an exocrine and endocrine organ. The possible role of the temporal gland and psychotomimetic substances in the causation of musth in male elephants is discussed.
G.M.Lewis

1704. INFLUENCE OF LYSERGIC ACID DIETHYLAMIDE ON EXPERIMENTAL ALLERGIC ENCEPHALOMYELITIS. DJ.O'Brien, F.W.Hughes and L.Newberne: Proc. Soc. exp. Biol., N.Y., 1962, 111, 490-493 (Dept. Pharm., Indiana Univ. Sch. Med., Indianapolis, Ind., U.S.A.) Administration of LSD to guinea-pigs inj. with homologous brain adjuvant reduced the incidence of paralysis and mortality rate.
M.M.Shapland

1705. SUPPRESSION C¹ EXPERIMENTAL ALLERGIC ENCEPHALOMYELITIS BY CYTOTOXIC DRUGS. D.B. Calne and S.Leibovitz: Nature, Lond., 1963, 197, 1309-1310 (Dept. Expt. Med., Guy's Hosp., London, England) The production of expt. allergic encephalomyelitis in guinea-pigs and the formation of haemolysin to sheep cells was inhibited by treatment with daily injn. of the alkylating agent cyclophosphamide (20 mg./kg.) or the folic acid anti-metabolite 4-amino-N-methyl-pteroylglutamic acid (5 mg./kg.). G.M.Lewis

1706. INHIBITION OF PURINE METABOLISM IN EHRIICL ASCITES CARCINOMA CELLS BY PHENANTHRIDIN-IUM COMPOUNDS RELATED TO ETHIDIUM BROMIDI J.F.Henderson: Cancer Res., 1963, 23, 491-495 (Dept. Pharmacol., George Washington Univ. Sch. Med., Washington, D.C., U.S.A.) Only 1 deiv. of the 10 examined markedly inhib. the incorporation of glycine into nucleic acid and proteins in vitro but all the deriv. inhib. the incorporation of adenine into nucleic acids.
B.M. Stevens

1707. RAPID MEMBRANE FILTRATION TECHNIQUES FOR STUDYING THE ACTION OF 6-THIOGUANINE ON TUMOUR CELLS IN VITRO. F.U.Brown, M.Klein, T¹* Kandaswamy and H.C.Mandel: Cancer Res., 1963, 23, 254-259 (Dept. Pharmacol., George Washington Univ. Sch. Med., Washington, D.C., U.S.A.) Leukaemia L1210 ascites cells, sensitive to 6-thioguanine, were incubated aerobic ally in a glucose-balanced salts medium with glutamine and rates of incorporation of various isotopic precursors were examined by radio-assay of various cell fractions on membrane filters. Incorporation of precursors represented net synthesis rather than exchange. Thioguanine decreased P^3C formate and methyl labelled [^{14}C]thymidine uptakes into the acid-insol. fraction by approx. 50% and 30% respectively but did not affect [^{35}S]methionine of [2- ^{14}C]acetate incorporation. Incorporation of [^{14}C]formate into nucleic acids was inhib. but proteins were only slightly affected* Molar activities of isolated nucleic acid bases were reduced.
B.M.Stevens

1708. SUPPRESSION OF THE IMMUNE RESPONSE BY DRUGS IN COMBINATION. S.Bieber, G.B.Eliot, GH¹* Hitchings, D.C.Hooper and H.C.Nathan: Proc. Soc. exp. Biol., N.Y., 1962, 111, 334-337 (Wellcome Re* Lab., Tuckahoe, N.Y., U.S.A.) Combinations of purine with pyrimidine analogues were tested for their effect on formation in mice of haemagglutinins to r.b.c.* Greater than additive effects were obtained with 6-mercaptopurine and thioguanine in combination with 5* bromodeoxyuridine, 4-thiodeoxyuridine, 5-acetoxy-uracil and 6-azauracil plus urethane.
M.M.Shapland

1709. PYRETOGENIC EFFECTS OF BACTERIAL LIPO-POLYSACCHARIDE AND THE ASSAY OF ANTIPYRE* DRUGS IN RATS. C.A.Winter and G.W.Nuss: Toxic* appl. Pharmacol., 1963, 5, 247-256 (Merck Inst.

PHARMACOLOGY

161

Therap. Res., West Point, Pa., U.S.A.) *The rat does not, as commonly supposed, exhibit an aberrant response to pyrogens but gives a reasonably uniform and predictable hyperthermic response to i.p. or i.v. injn. of bacterial pyrogen (lipopolysaccharide prepared from *E. coli*). The hyperthermic response is related to the log dose of the pyrogen over a wide range of doses and can be adapted to die assay of antipyretic drugs.*

E.E.Hobbiger

1710. EMETIC EFFECT OF PURIFIED STAPHYLOCOCCAL ENTEROTOXIN IN CATS. W.G.Clark, G.J.F.Vanderhoof and H.L.Borison: Proc. Soc. exp. Biol., N.Y., 1962, 111, 205-207 (Dept. Phaim., Univ. Utah Coll.

Med., Salt Lake City, Utah, U.S.A.) Intra-ventricular administration of toxin did not elicit vomiting. Chemoceptor trigger zone ablation did not influence emetic response to i.v. toxin. Midbrain transection abolished die emetic response. It is possible that this stimulus is similar to that produced by X-rays and nitrogen mustard.

M.M.Shapland

1711. SEARCH FOR POTENT HYPOGLYCAEMIC AGENTS:

PART IE. MODE OF ACTION WITH SPECIAL REFERENCE TO BIGUANIDES. S.P.Paul, A.N.Bose and U.P. Basu: Indian J. exp. Biol., 1963, 1, 76-79 (Bengal Immun. Res. Inst., Calcutta, India) *In vivo administration of biguanides, particularly Ad3 (a-phenethyl biguanide hydrochloride) and Ad4 (p-phenethyl biguanide hydrochloride) under condition of carbohydrate loading does not cause depletion of liver and muscle glycogen but raises the plasma inorg. P level. In fasting guinea-pigs, blood lactate concn. are also found to be increased after biguanide administration. Both tolbutamide and insulin under similar conditions show hypophosphataemia and increased accumulation of liver and muscle glycogen. ¹⁷¹¹ vitro addition of biguanide does not have any appreciable effect on the sponaneous glucose release and glyco-genolysis of liver slices, but succinic dehydrogenase activity of liver homogenate is inhib. Ad3 in comparison to ^obiguanides in equiv. doses, however, shows no significant hypeiphosphataemia and no alteration in blood lactate concn.*

1712. STUDIES ON THE EFFECT OF TOLBUTAMIDE ON INSULIN SECRETION. E.Anderson and F.X.Wherry: Proc. Soc. exp. Biol., N.Y., 1962, 111, 446-450 (Nat. Inst. Arthritis and Met. Dis. N.I.H., U.S. Dept. H.E.W., Bethesda, Md., U.S.A.) *I.v. injn. of Na foibutamide had no effect on the insulin secretion rate ¹⁷¹¹ dates fasted for 24 hr.*

M.M.Shapland

1713. TOE UTILISATION OF SCHARDINGER DEXTRINS BY THE RAT. G.H.Andeisen, F.M.Robbins, F.J. Domingues, R.G.Moores and C.L.Long: Toxicol. appl. pharmac., 1963, 5, 257-266 (Res. Center, Gen. Foods of Pn., New York, N.Y., USA) *The metabolism of ³H-labelled starch and a- and β -dextrin, i.e. cyclic dextrins composed of 6 and 7-D-glucopyranose units linked by 1- \rightarrow 4 bonds as in amylose, was investigated in the rat. Starch was initially metabolised more rapidly than the dextrins, but after 24 hr. the total amount metabolized was the same. Starch and dextrins also produced the same distribution of radioactivity in the body.*

E.E.Hobbiger

1714. ANGIOTENSIN H DEGRADATION BY HUMAN COHIN PLASMA FUNCTIONS. R.L.Wolf, M.Mendlovitz, S.E.Gitlow, J.Roboz and N.Naftchi: Proc. Soc. exp. Biol., N.Y., 1963, 112, 209-212 (Dept. Med., Mt. Sinai Hosp., New York City, N.Y., U.S.A.) *It*

has been found that Angiotensin n- IS1j could be degraded more rapidly by heat inactivated Cohn fractions of human serum than by untreated fractions. Hie Cohn fraction V was easily the most active and appeared electrophoretically and from its solubility in cold-ethanol like an albumin.

D.N.Wheatley

1715. ALIMENTARY ABSORPTION OF SOME ENTERIC-COATED NaCl AND KCl TABLETS. V.Wynn and J. Landon: J. Pharm. Lond., 1963, 15, 123-128 (Surg. Unit, St. Mary's Hosp., London, England) *Absorption was satisfactory with tablets coated with a mixture of cellulose acetate phthalate, acacia, sucrose, gelatin, CaSO₄ and talc ('nuseal'). Of 3 other brands one was poorly absorbed, producing diarrhoea, a 2nd was poorly absorbed by 1 in 5 patients, a 3rd was moderately satisfactory. All brands passed the in vitro tests for disintegration of B.P. (1958, App. 21B).*

J.M.Whitmarsh

1716. ABSORPTION AND EXCRETION OF CASTOR OIL IN MAN. W.C.Watson, R.S.Gordon jun., A.Kannen and AJover: J. Pharm., Lond., 1963, 15, 183-188 (N.I.H., Bethesda, Md., U.S.A.) *The amount of absorption is inversely related to the dose and in 4 g. doses is complete. Fat balance studies were made both with 1311 labelled oil and by a new method depending on the rapid detection of ricinoleic acid by gas-liquid chromatography on a silicone gum column. Improved methods for collecting and extracting faecal lipid are described.*

J.M.Whitmarsh

1717. SOME IN VITRO TESTS ON Na GLUCONATE-DIHYDROXOALUMINATE. IE. A SOLUBLE BUFFER ANTACID. F.Giessmith: J. Pharm. Lond., 1963, 15, 114-122 (Beecham Res. Lab. Ltd., Brentford, Middx., England) *A 40% w/v aq. soln. of a complex considered to be the title compound was compared with existing antacid prep. A dose of 4 ml. had high neutralising capacity, speed of action and buffering power. The soln. did not ppt. protein.*

J.M.Whitmarsh

1718. STABILITY OF LIQUID MULTIVITAMIN PREPARATIONS DURING USE. T.K.Murray, O.Pelletier and J.A.Campbell: J. Phaim. Lond., 1963, 15, 192-196 (Dept. Nat. Hlth., Tunney's Pasture, Ottawa, Canada) *Six prep. were examined for thiamine and vit. A and C stability. No losses occurred during storage of unopened bottles. Destruction of vitamins was increased by daily opening for sampling. Stability at R.T. was unsatisfactory. It is suggested that expiry dates should take account of loss during normal use. Retrovitamin A was found in one prep., indicating the need for more detailed study.*

I.M.Whitmarsh

1719. ACTION OF ANTI-INFLAMMATORY DRUGS ON THE PERMEABILITY OF MESENTERIC MESOTHELIUM TO PLASMA PROTEIN. B.J.Northover: J. Pharm. Lond., 1963, 15, 153-154 (Dept. Pharm., Christian Med. Coll., Vellore, S. India) *Rat mesentery offers a useful in vitro system of testing these drugs.*

J.M.Whitmarsh

1720. EFFECT OF PROPHYLACTIC BETHANECHLORIDE ON POST-OPERATIVE REHABILITATION. G.A. Jansen, A.E.Kreiger, T.A.Miller, R.H.Huff and D.K. Kubo: Arch. int. Pharmacodyn., 1963, 142, 17-22 (Dept. Pharmacol. and Expt. Therap., Med. Sch., Calif. Univ., Los Angeles, Calif., U.S.A.) *Dogs were submitted to partial jejunectomy, and the post-operative progress of 5 receiving 5 mg. bethanechol*

PHARMACOLOGY

chloride by s.c. inj. after operation was compared with 5 controls. It was found that the drug reduced the incidence of urinary retention, diminished peristalsis and absence of defaecation.

1727. EFFECTS OF COPPER SULPHATE, SODIUM PENTACHLOROPHENATE AND A SULPHONATED HYDROCARBON ON THE EGGS OF ONCOMELANIA. L.W.Chi and L.R.Winkler: *Amer. J. trop. Med. Hyg.*, 1962, 11, 851-854 (Dept. HLoL, Immaculate Heart Coll., Los Angeles, Calif., U.S.A.) The effects of 3 molluscicides on the eggs of *O. formosana* are discussed. It is found that sodium pentachlorophenate is the most effective in preventing hatching.

A.A.Zimmerman

1728. STUDIES ON THE SNAKE VENOMS OF THE NEAR EAST*. WALTERINNESIA AEGYPTIA AND PSEUDOCERASTES FIELDII. S.Gitter, CM.Perlmutter, J.H.Boss, E.Livni, R.Rechnic, N.Goldblum and A. de Vries: *Amer. J. trop. Med. Hyg.*, 1962, 11, 861-868 (Dept. Prev. Med., Hebrew Univ., Hadassah Med. Sch., Jerusalem, Israel) The venoms of *W. aegyptia* and *P. fieldii* are found to be predominantly neurotoxic, but possess also haemorrhagic and hepatotoxic activity.

A.A.Zimmerman

1729. FORMATION OF METHAEMOGLOBIN BY p-AMINO* PROPIOPHENONE [PAPP] IN MAN. G.Paulet, "X.Aubertin, L.Laurens and J.Bouirelier: *Arch. int. Pharmacodyn.*, 1963, 142, 35-51 (Physiol. Lab., Fac. Med., Rennes, France) The long acting effect of PAPP in causing methaemoglobinæmia after oral administration was studied because of the protective effect of methaemoglobinæmia against cyanide intoxication. The drug caused up to 48% methaemoglobinæmia, lasting about 4 hr. which was well tolerated by humans aged 23 to 52 yr. It is suggested that 80-100 mg. PAPP taken 30 min. before exposure to risk of cyanide poisoning would give substantial protection.

1731. MERCURY NEPHROTOXICITY IN THE RAT. H. INVESTIGATION OF THE INTRACELLULAR SITE OF MERCURY NEPHROTOXICITY BY CORRELATED SERIAL TIME HISTOLOGIC AND HISTOENZYMIC STUDIES. A.E.Rodin and CN.Crowson: *Amer. J. Path.*, 1962, 41, 485-495 (Dept. Lab. Med., Misericordia Hosp., Edmonton, Alta., Canada). D.G.Scott

1732. SOME CHEMICAL AND BIOTAL CHARACTERISTIC OF BOTTOM DEPOSITS IN A STREAM POLLUTED BY SUGAR FACTORY AND DISTILLERY WASTES. P.Ray⁵ Indian J. exp. Biol., 1963, 1, 109-111 (Central India* Fish. Res. Sub-Stn., Allahabad, India) In river V&W (Bihar), a stream polluted by sugar factory and distilled wastes, the polluted zone is found to show a high carbon/nitrogen ratio, low value of dissolved O₂, high ammonia concn. associated with high abundance of Oligochaete St. Chironomids and bacteria, and absence of Molluscs. I*⁶ significance of carbon/nitrogen ratio rather than their abs. values in demarcating polluted from unpolluted z<& has been discussed, and it is shown that merely an abs. ii¹ increase in either org. matter, carbon or nitrogen does not indicate pollution and that carbon/nitrogen ratio is the crucial factor.

TOXICOLOGY

1722. SUBSTITUTED DITHIOCARBAMATES AND RELATED COMPOUNDS AS TRICHOMONACIDES. R.M. Michaels, LJ.Peterson and G.L.Stahl: *J. Pharm. Lond.*, 1963, 15, 106-113 (Upjohn Co., Kalamazoo, Mich., U.S.A.) In vitro the most active compound was Na dimethylthiocarbamate, causing 90% inhibn. of *T. vaginalis* and *T. foetus* at 0*07 fig./ml. the other compounds being active at 0*17-115 |ig./ml. There was no direct correlation between in vitro and in vivo activity. Na 4-morpholinecarbodithioate was the most active in mice infected s.c. with *T. vaginalis* but would not cure those infected i.v. In s.c. infected mice Na 1-pyrrolidine-carbodithioate and bis (dimethylthiocarbamyl) sulphide were effective at low but not at higher doses. This is explained in terms of differences in solubility of metal complexes formed.

J.M.Whitmarsh

1723. EXPERIMENTAL INDUCTION OF CIGUATERA TOXICITY IN FISH THROUGH DIET. P.Helfrich and A.H.Banner: *Nature*, Lond., 1963, 197, 1025-1026 (Hawaii Marine Lab., Univ. Hawaii, Honolulu, Hawaii) The non-toxic fish *Acanthurus xanthopterus* were fed for many months on flesh of a fish containing ciguatera toxin. They then became toxic when fed to mongoose, proving that the toxin causing ciguatera may be passed through the food chain.

G.M.Lewis

1724. IMMUNOGENIC ACTIVITY OF THE LARVAL STAGES OF HAEMONCHUS PLACEL. J.C.Ross: *Nature*, Lond., 1963, 197, 1221-1222 (Vet. Res. Div., Min. Agric, Stormont, Belfast, N. Ireland) Expt. in which the antihelmintic 'Neguvon'¹ was used to terminate infection of calves with *H. placei* at different stages, showed that the early 5th stage of the larva is of prime importance in producing immunity.

G.M.Lewis

1725. COMPARATIVE SUBACUTE TOXICITY FOR RABBITS OF CITRIC, FUMARIC, AND TARTARIC ACIDS. E.W.Packman, D.D.Abbott and J.W.E.Harrison: *Toxicol. appl. Pharm.*, 1963, 5, 163-167 (LaWall and Harrison Res. Labs., Inc., Philadelphia, Pa., U.S.A.) Rabbits fed for 150 days on a diet containing the Na salts of fumic, citric or tartaric acid in a concn. equiv. to 5% of the org. acids in the diet showed no gross or histopathol. changes.

E.E.Hobbiger

1726. SAFETY EVALUATION STUDIES OF CALCIUM EDTA. B.L.Oser, M.Oser and H.C.Spencer: *Toxicol. appl. Pharm.*, 1963, 5, 142-162 (Food and Drug Res. Labs., Inc., Maspeth 78, N.Y., U.S.A.) Rats and dogs fed for 2 yr. and 1 yr.^f respectively, on a diet estimated to contain up to 250 mg. calcium EDTA/kg. body

PHARMACOLOGY

- 1733. EFFECT OF PHENYLALANINE [Phe] ON TOXICITY OF S-(DICHLORO-VINYL)-L-CYSTEINE [DCVC] IN THE RAT AND THE CALF.** M.O.Schultze, R.F.Derr, N.S.Mizuno, D.D.Joel and J.H.Sautter: Proc. Soc. exp. Biol., N.Y., 1962, 111, 499-502 (Dept. Agric. Biochem., Univ. Minnesota, St. Paul, Minn., U.S.A.)

Both enantiomers of Phe. when inj. i.p. into rats can greatly reduce the toxicity of DCVC. To be most effective the DCVC and Phe. must be given simult., a delay of 1 hr in injn. of Phe. markedly reduces its effect. Injn. of L-Phe. has no effect on the toxicity of DCVC in calves.

M.M.Shapland

- 1734. ALIPHATIC AMIDES OF CYCLIC AMINES AND TOLYL MALEIMIDES AS MOSQUITO REPELLENTS.** B.H.Alexander and M.Beroza: J.econ. Entomol., 1963, 56, 58-60 (Entom. Res. Div., Agric. Res. Serv., U.S.D.A., U.S.A.) Compounds were tested at 10% strength by exposing arms covered with treated cotton stockings in cages of *Aedes aegypti* mosquitoes. Amides *j?* *C₄*, *c₄* and *CQ* cyclic amines showed excellent repellency when the straight-chain acid was monobasic in the *C₆-C₈* range. Dibasic acid diamides were ineffective. The *o*-form was a much more effective repellent than the *m* or *p*-tolyl maleimides.

H.W.Spencer

- 1735. POISONING BY ORGANIC PHOSPHORUS PESTICIDES POTENTIATED BY PHENOTHIAZINE DERIVATIVES.** T.B.Gaines: Science, 1962, 138, 1260-1261 (Toxicol. Sect., Communicable Dis. Center, U.S. publ. Hlth. Serv., Atlanta, Ga., U.S.A.) Repeated administration of chlopromazine and promazine increased the toxicity of a single dose of parathion in rats, the effect being more marked in males. Promazine did not increase the toxicity of Phosdrin for female rats.

G .M.Lewis

- 1736. DIMINUTION OF IMIPRAMINE MORTALITY IN HYPOTHYROID MICE.** A.J.Prange jun., M.A.Lipton and G.N.Love: Nature, Lond., 1963, 197, 1212-1213 (Sch. Med., Univ. N. Carolina, Chapel Hill., N.C., U.S.A.) Hyperthyroid mice are significantly more sensitive to imipramine than hypothyroid mice significantly less sensitive, than euthyroid mice, to the mortal effects of imipramine.

CM.Lewis

- 1737. TOXICOLOGICAL STUDIES ON BRIGHTENERS.** F. H.Snyder, D.L.Oddyke and H.L.Rubenkoenig: Toxicol. appl. Pharm., 1963, 5, 176-183 (Procter and Gamble Co., Miami Valley Lab., Cincinnati, Ohio, U.S.A.) The acute oral toxicity, carcinogenic activity (skin) and skin-sensitising prop. of 5 substances which are widely used as 'optical bleaches' in household detergents was investigated. The results indicate that the substances are innocuous in the concn. at which they are used.

E.E.Hobbiger

- 1738. EFFECT OF AET ON γ RAY RADIATION CATARACTS.** CHanna and J.E. O'Brien: Arch. int. Pharmacodyn., 1963, 142, 198-205 (Pharmacol. Dept., Vermont Univ. Med. Coll., Burlington, Vt., U.S.A.) Protective compound S, 2-aminoethylisothiouromium bromide hydrobromide [AET] was given to rats just before radiation of one eye with 2000 r of γ -radiation, the other being killed, [³H]thymidine was inj. into each chamber of each eye to serve as a marker of cell division in the DNA synthetic phase of division. AET treatment saved marked protection against early radiotoxic-induced changes in the lens, compared with controls.

T.J.Sullivan

- 1739. REVERSAL OF NITROGEN MUSTARD INTOXICATION BY 5HT ANTAGONIST.** J.B.Field, A.Mireles and E.C.Dolendo: Proc. Soc. exp. Biol., N.Y., 1962, 111, 1-3 (Inst. Cancer and Leukaemia Res. Culver City, Calif., U.S.A.) The mortality and leukopenia resulting from i.p. injn. of a nitrogen mustard (mechlurethamine) was considerably reduced by i.p. injn. of the 5HT antagonist, 1-(N-methyl-piperidyl 1-4) 3-phenyl 1- 4- benzyl- pyrazolone. M.M.Shapland

- 1740. ANTIMETABOLITE IMIDAZOLE AS A PESTICIDE.** R.J.Pence: J. econ. Entomol., 1963, 56, 1-7 (Dept. Entom., Univ. California, Los Angeles, Calif., U.S.A.) This antimetabolite of histamine and nicotinic acid is a safe pesticide, 1% satisfactorily controlling these fabric-feeding insects: *Tineola bisselliella*, *Attagenus piceus*, *Anthrenus flavipes* and *A.verbasci*. It is synergised by boric acid. Compared with imidazole, histamine, its hydrochloride and diphosphate showed reversal effects on *A.flavipes* larvae. Spread cereals sprayed with 1% aq. imidazole when dry were exposed to *Oryzaephilus surinamensis*, *Ste^obium paniceum*, *Trichogramma confusum*, *Tenebrio molitor* and *Plodia interpunctella* and appreciable mortality of them resulted. Imidazole is a promising mosquito larvicide, expt. effective against various insects and related arthropods but has little residual effect on hard surfaces through atm. evaporation.

H.W.Spencer

- 1741. INSECTICIDE ABSORBED BY THE C.N.S. OF SUSCEPTIBLE AND RESISTANT COCKROACHES EXPOSED TO Dieldrin.** J.W.Ray: Nature, Lond., 1963, 197, 1226-1227 (Biochem. Dept., A.R.C. Pest Infestation * Lab., London Rd., Slough, Bucks., England) The concn. of dieldrin in the tissues and nerve cords of *Blattella germanica* after topical application of the compound in acetone was the same in both resistant and susceptible insects. Resistance is not, therefore, due to failure of the compound to penetrate the nerve cord.

G.^A.Lewis

- 1742. SUSCEPTIBILITY OF HONEYBEES TO SOME INSECTICIDE SPRAY FORMULATIONS USED ON CITRUS.** L.H.Wiese: S. Afr. J. agric. Sci., 1962, 5, 557-588 (Plant Protection Res. Inst., Pretoria, S. Africa)

I.A.B.S.

- 1743. RESPONSE OF CITRUS RED MITE TO CHEMICAL STERILANTS.** A.W.Cressman: J. econ. Entomol., 1963, 56, 111 (Entom. Res. Div., Agric. Res. Serv., U.S.D.A., Ryeiside, Calif., U.S.A.) In this mite *Panonychus citri*, unfertilised eggs produce d. Tepa, * apholate and aphamide were the most effective compounds. At 0-1%, fecundity of? and viability of esas was reduced.

H.W.Spencer

- 1744. PURIFICATION AND POTENCY OF SEX ATTRACTANT FROM INTRODUCED PINE SAWFLY DIP-SIMILK.** J.E.Casida, H.C.Coppej and T.Watseka, J. econ. Entomol., 1963, 56, 18-24 (Univ. Wisconsin, Madison, Wis.) S.s S. ^ ^ day from emergence in gelatin capsules 200 virgin *i* flies were placed in a 2 quart screen-lidded jar with crumpled filter paper till death after 5-7 days. F1 & were fed with sugar and also the paper and jar were rinsed with ether. Such extracts were dried with Na₂SO₄, filtered and cone, by slow ether evaporation. The glass-paper wash was the most potent, 'fly-washes' were not attractive. The attractant was released by* from 6 hr. after removal from capsules. In the field virgin were attractive 30 sec. after capsule removal *tellustasTafta?* which is a possible mechanism of attractant destruction.

H.W.Spencer

PHARMACOLOGY

- 1745. RESISTANCE TO DDT IN THE MOSQUITO FISH, GAMBUSIA AFFINIS.** S.B.Vinson, C.E.Boyd and D.E. Ferguson: Science, 1963, 139, 217-218 (Dept. Entomol., Mississippi State Univ., State Coll., Miss., U.S.A.) A significant resistance to DDT was noted in mosquito fish bred in areas that have a long history of insecticide applications. CM.Lewis
- 1746. ISOLATION OF DDT, PARATHION AND LINDANE FROM BIOLOGICAL FATTY MATERIALS BY LIQUID-LIQUID PARTITION CHROMATOGRAPHY.** M.D.Abdallah and CA.Landheer: J. Chromatography, 1962, 9, 245-247 (Lab. Org. Chem., Agric. Univ., Wageningen, Netherlands) Notes. P.D.Dawkins
- 1747. EFFECT OF CARBON TETRACHLORIDE INTOXICATION ON TOE ACTIVITY OF ENZYMES OF TOE UREA CYCLE IN TOE LIVER OF THE RAT.** F.Rossi and P.McLean: Nature, Lond., 1963, 197, 1207-1208 (1st di Patol. Gen., Univ. de Padova, Italy) As early as 90 min. after treatment of rats with CCl₄, there was an increase in the 2 mitochondrial-linked enzymes, carbamyl phosphate synthetase and ornithine transcarbamylase, while other enzymes of the urea cycle, located in the sol. fraction of the cell, were completely unchanged. Later, as the liver wt. increased, the levels of all the enzymes of the urea cycle fell. G.M.Lewis
- 1748°. LIVER LIPID PEROXIDE LEVELS IN CARBON TETRACHLORIDE POISONING.** R.E.Priest, E.A.Smuckler, OJV.Iseri and E.P.Benditt: Proc. Soc. exp. Biol., N.Y., 1962, 111, 50-51 (V.A. Hosp., Univ. Washington-Sch. Med., Seattle, Wash., U.S.A.) Lipid peroxides play no significant role in the early phase of CCl₄ poisoning. M.M.Shapland
- 1749. EFFECT OF TREATMENT ON EXPERIMENTAL LIVER CIRRHOSIS IN RATS. II. EFFECT OF GLUCOCORTICOIDS, ANDROGENS AND TOLBUTAMIDE ON THIOACETAMIDE-CIRRHOSIS.** P.Rottger, F.Nolte, H.A.Kfflin and W.Creutzfeldt. IE. EFFECT OF GLUCOCORTICOIDS, WITH OR WITHOUT ANTIBIOTICS AND ANDROGENS, ON CCl₄-CIRRHOSIS. R.Discher, H.Laaf, and W.Creutzfeldt and H.A.Kfflin: Z. Ges. exp. Med., 1963, 136, 486-499, 500-516 (Med. Univ. Clin., Freiburg i.Br., Germany) II. Liver damage was induced in rats by acute or prolonged poisoning with CH₃C₆NH₂(2 doses of 175 mg./kg.in 24 hr. or 40 mg./kg. daily for 12 weeks by mouth). The histol. changes in the liver were unlike those of human cirrhosis and were characterised by intense proliferation of bile ducts. The

histol. changes in the liver were not modified when poisoned rats were treated with steroids, androgens or tolbutamine.

III. Liver damage was induced in rats by twice weekly s.c. injn. for 12 weeks of 0-75 ml./kg. CCl₄. Rats treated simult. with cortisone (2*5-25 mg./kg. s.c.) or prednisolone (0-3-0*6 mg./kg.s.c.) showed less proliferation of connective tissue than untreated poisoned rats. This protective effect which was not seen when steroids were given by mouth did not suffice to prevent the development of cirrhotic changes nor were steroids able to prevent fatty infiltration of the liver. Treatment with penicillin and streptomycin reduced the mortality of CCl₄ intoxication without modifying the moiphol. changes in the liver. Androgens were ineffective.

(German) P.F. Meyer
1750. STUDIES IN DETOXICATION BY MEANS OF THE ISOLATED PERFUSED LIVER. E.A.Eisenlord and C.H.Hine: Toxicol. appl. Phaim., 1963, 5, 129-141 (Dept. Pharmacol. and Expt. Ther., Univ. California, San Francisco, Calif., U.S.A.) The uptake of ethanol, pentobarbitone, morphine and lead by the isolated perfused liver of normal rats and of rats previousB treated with CCl₄ or allyl alcohol, was investigated. It was found that the livers of allyl-alcohol-treated rats had a reduced uptake of ethanol and pentobarbitone, whereas both CCl₄ and allyl alcohol treatment increased the uppta* of lead but failed to affect the uptake of morphine.

E.E.Hobbiger
1751. HYDRAZINE-INDUCED ALTERATIONS IN RAT LIVER. A CORRELATION OF CHEMICAL AND HISTOLOGICAL CHANGES IN ACUTE HYDRAZINE INTCKI' CATION. J.S.Amenta and E.H.Johnston: Lab. Invest. 1962, 11, 956-962 (Military Environmental Path. Div., Armed Forces Inst. Path., Washington, D.C., U.S.A.) One s.c. injn. of hydrazine sulphate produced periportal and midzonal accumulation of lipid and glycogen loss in rat liver. Glycogen accumulation is in** paired. The lesion is rapidly repaired within 72 hr. both necrosis and inflammation being absent. A.M.Mackay

1752. THE HAEMOPOIETIC TISSUE TOXICITY OF BENZENE VAPOURS. W.B.Deichmann, W.E.MacDonald and E.Bemal: Toxicol. appl. Pharm., 1963, 5, 201-224 (Dept. Pharmacol., Univ. Miami Sch. Med., Fla., U.S.A.) Rats exposed for several wee[* to benzene vapour concn. of 61 p.p.m. or higher, admin*! stered for 5 hr./day on 4 days/week, developed leucopenia It is thought that the margin of safety presently accepted for benzene is small compared with that of other substances.

E.E.Hobbiger

METHODS

1753. THE STUMP-TAILED MACAQUE: A PROMISING LABORATORY PRIMATE. A.Kling and J.Orbach: Science, 1963, 139, 45-46 (Inst. Psychosomatic and Psychiat. Res., M.Reese Hosp., Chicago, 111., U.S.A.) *Macaca speciosa* is a very suitable primate for neuro-Psychol. investigation. G.M.Lewis

1754. PHYSICAL FACTORS GOVERNING FLOW OF CONTRAST SUBSTANCES THROUGH CATHETERS. R.N. Cooley and L.B.Beentjes: Amer. J. Roentgenol., 1963, 89, 308-314 (Dept. Radiol., Univ. Texas Med. Branch, Galveston, Tex., U.S.A.) The data suggest that in most cases Blasius's Law, rather than Poiseuille's, should ^ used in calculating flow rates. Examples are given of the application of a suitable formula. D.E.Evans

1755. SIMPLE RESPIRATOR FOR LABORATORY USE. F.Palec'ek: J. appl. Physiol., 1963, 443-444 (Pharmacol. Dept., Res. Inst. Natural Drugs, Prague, Czechoslovakia) A Hg interrupter has been developed to ^ apply intermittent pos. pressure breathing to small animals. The apparatus is simple but must be used on restrained animals. H.C.Jones

1756. PULSE-RATE MONITOR ALLOWING CONTINUOUS REGISTRATION WITH INSTANTANEOUS, STEADY AND LINEAR RESPONSE. H.Krause: Z. Kreisl.-Forsch., 1963, 52, 128-138 (Physiol. Inst., Univ. Freiburg i. Br., Germany) A new pulse-rate monitor with instant response to changes in pulse rate is described, and the circuit is illustrated. (German) P.F.Meyer

1757. REMOVAL OF DISTORTION FROM INDICATOR DILUTION CURVES WITH ANALOGUE COMPUTER. J.K.Cooper, J.-R.Schweikert, T.G.Arnold, jun. and W.W.Lacy: Circulat. Res., 1963, 12, 131-137 (Dept. Med., Vanderbilt Univ. Med. Sch., Nashville, Tenn., U.S.A.) Corrections could be made by manually adjusting the computer to match 'input' and 'output' ^ sensitometercurves. Catheter shape affected the correct- ^ in Presumably by altering flow patterns. R.E.Moore

1758. SILVER-SILVER CHLORIDE ELECTRODE AS A NON-POLARISABLE BIOELECTRODE. W.Feder: J. appl. Physiol., 1963, 18, 397-401 (Med. Dept., Chicago Univ., Chicago, 111., U.S.A.) A method for the prep. of ^ S/AgCl electrodes for biol. use in the microvolt range is ^ described. Measurements of \pm 5 μ V can be made accurately, H.C. Jones

1759. MOUNTING OF MICROELECTRODES FOR INTRACELLULAR RECORDINGS OF CONTRACTILE TISSUES. P.-H.Benoit: C.R. Soc. Biol., Paris, 1962, 156, 1465-if66 (Lab. Physiol. anim., Fac. Sci. Paris, Centre CM? ^ Ord? y. France) A method is described for intracellular recording of electrical activity in the heart of ^ ^ The microelectrodes were mounted on a thin poly- ^ ^{ta}ne caPiHary tube containing 3M KC1 and made by caW¹⁰? ^ t catheter tubing in a small film. The electri- ^ distance of the capillary was such that this method ^ ^ ot 1 ^ ^ the sensitivity of the recording technique. ^ ^ apportion of KC1 at the junction of the capillary ^ ^ microelectrode was prevented by liquid parafin. ^ ^ French} M.A.Pnce

1760. LOW PROFILE ELECTRODE SYSTEM FOR RECORDING ECTICAL E.E.G. OF UNANAESTHETISED RATS.

S.F.Gottlieb, R.VJagodzinski and W.J.Semerau: J. appl. Physiol., 1963, 18, 442-443 (Res. Lab., Linde Co., Div. Union Carbide Corp., Tonawanda, N.Y., U.S.A.) A technique is described for rapid chronic insertion of e.e.g. electrodes 6-0 mm. long using a template which fits the rat's head. H.C.Jones

1761. PERMANENTLY IMPLANTED ELECTRODE FOR ELECTROMYOGRAPHY OF THE DIAPHRAGM IN THE WAKING CAT. A.Schoolman and B.R.Fink: Electroenceph. clin. Neurophysiol., 1963, 15, 127-128 (Dept. Neurol. Surg., Coll. Physns. Suigns., New York, N.Y., C.B.B.Downman

1762. A SUBMINIATURE RADIO E.E.G. TELEMETER FOR STUDIES OF DISTURBED CHILDREN. R.Vreeland, C. Collins, L.Williams, C.Yeager, A.Gianascol and J. Henderson, jun.: Electroenceph. clin. Neurophysiol., 1963, 15, 327-329 (Res. and Develop. Lab., Univ. California Med. Center, San Francisco, Calif., U.S.A.) C.B.B.Downman

1763. A MULTIPLE CHANNEL E.E.G. TELEMETERING SYSTEM. F.T.Hambrecht, P.D.Donahue and R.Melzack: Electroenceph. clin. Neurophysiol., 1963, 15, 323-326 (Res. Lab. Electronics, M.I.T., Cambridge, Mass., U.S.A.) Circuit and working details. C.B.B.Downman

1764. AN AMPLIFIER WITH CONSTANT UNITY GAIN FOR MICROELECTRODE STUDIES. R.Elul and A.Tamari: Electroenceph. clin. Neurophysiol., 1963, 15, 118-122 (Rogoff Lab. Physiol., Hadassah Med. Sch., Jerusalem, Israel) C.B.B.Dovnman

1765. SIMPLE METHOD OF SECURING CONNECTORS TO THE HEADS OF ANIMALS FOR E.E.G. RECORDINGS. J.I.Jimenez and I.Escobar: Electroenceph. clin. Neurophysiol., 1963, 15, 123-124 (Physiol. Dept., Univ. Antioquia Sch. Med., Medellin, Colombia, S. America) C.B.B.Downm:n

1766. MULTIPURPOSE CANNULA FOR ACUTE AND CHRONIC INTRACEREBRAL CHEMICAL AND ELECTROPHYSIOLOGICAL STUDIES. J.W.Wagner and J. de Groot: Electroenceph. clin. Neurophysiol., 1963, 15, 125-126 (Dept. Anat., Med. Center, Univ. California, San Francisco, Calif., U.S.A.) C.B.B.Downman

1767. MICROSCOPE AS STEREOTAXIC INSTRUMENT FOR RAT. TJ.Barry, W.D.Hagamen and J.E.Sherlock: J. appl. Physiol., 1963, 18, 445-446 (Anat. Dept., Cornell Univ. Med. Coll., N.Y.U.S.A.) A methods described whereby the ordinary microscope can be cheaply converted into an accurate stereotaxic instrument for the rat. H.C.Jones

1768. COMPUTER PROGRAMME FOR ANALYSIS OF DATA FROM 'PARALLEL LINE' BIOLOGICAL ASSAYS T.Thoislund and C.A.Paulsen: Endocrinology, *1963, 72, 663-665 (Med. Dept., Univ. Washington Med. Sch Seattle, Wash., U.S.A.) A programme for computer analysis of parallel time bioassay data has been devised All important indices of precision, analysis of variance tables, slopes and relative potency estimates are obtained with this method. H.C.Jones

PHYSIOLOGY

BODY TEMPERATURE

- 1769. CAUSES OF DIURNAL BODY TEMPERATURE RHYTHM IN MAN, WITH REFERENCE TO OBSERVATIONS DURING VOYAGE.** K.Ogata and T.Sasaki: Jap. J. Physiol., 1963, 13, 84-96 (Dept. Physiol. Hyg., Inst. Constitutional Med., Kumamoto Univ., Kumamoto, Japan) The time of morning rise in body temp. coincided best with the respective local time, and less with the respective longitude, the time of sunrise or sunset. During severe vertigo due to sea-sickness, the temp. rise in the daytime was suppressed, but the morning rise did not disappear under any circumstances. It is suggested that the mechanism for the establishment and maintenance of diurnal body temp. rhythm is primarily attributable to the inner rhythm of functional pattern which has been acquired mainly through vestibular functions. **K. Jones**
- 1770. SKIN TEMPERATURE AFTER EATING: EVIDENCE BEARING UPON A THERMOSTATIC CONTROL OF FOOD INTAKE.** AJ.Stunkard, W.L.Clovis and S.M. Free: Amer. J. med. Sci., 1962, 244, 622-627 (Dept. Psychiat., Univ. Pennsylvania, Philadelphia, Pa., U.S.A.) Nineteen subjects were fed a meal containing 120 g. of protein, after adaptation to an ambient temp. of 21°. A rise of 1° in skin temp. of the thumb occurred within 30 min. ($p < 0.025$). No skin temp. changes were observed at 5 other sites and obese and non-obese subjects gave the same results. **E.E.Hobbiger**
- 1771. THERMAL COMFORT IN HOT HUMID TROPICS OF AUSTRALIA.** C.H.Wyndham: Brit. J. industr. Med., 1963, 20, 110-117 (Dept. Physiol., Med. Sch., Univ. Witwatersrand, Johannesburg, S. Africa) From questionnaires completed by 'white' subjects, it was found that the upper limits of 'effective' temp. at which 50% of the subjects felt comfortable were 25°5' and 25°5' for day and night respectively. No restrictions were placed upon clothing. Continued exposure to a high or low temp. led to some adaptation of the 'comfort limits'. **D.E.Evans**
- 1772. EVIDENCE OF THERMAL SWEATING IN FOOT PAD OF THE CAT.** D.P.C.Lloyd: Proc. nat. Acad. Sci., Wash., 1963, 49, 492-496 (Rockefeller Inst., N.Y., U.S.A.) Activity of sweat glands was studied by observation of potential changes and impedance changes across the foot pad. Innervated glands showed spontaneous potential variations which changed to a limited degree in the temp. range 37°5'-39°5'. Above this temp. a rapid increment occurred in the level of spontaneous potential variations. Impedance across the foot pad decreased slightly over the temp. range 37°-40° and decreased rapidly at temp. > 40°. **J.R.Sargent**
- 1773. TEMPERATURE REGULATION OF ESKIMOS, INDIANS AND CAUCASIANS IN BATH CALORIMETER.** F.A.Milan, J.P.Hannon and E.Evonuk: J. appl. Physiol., 1963, 18, 378-382 (Physiol. Dept., Arctic Aero Med. Lab., Fort Wainwright, Alaska, U.S.A.) Eskimos had higher rates of heat production and heat loss and higher metabolic rates than Athapascan Indians who had higher values than Caucasian subjects. The Eskimos had the lowest % of body fat and it is calc. that the lower insulation in Eskimos is independent of lack of fat and reflects a greater peripheral blood flow. **H.CJones**
- 1774. ARTIFICIAL ACCLIMATISATION OF WOMEN TO HEAT.** B.A.Hertig, H.S.Belding, K.K.Kraning,

D.L.Batterton, C.R.Smith and F.Sargent, II: J. appl. Physiol., 1963, 18, 383-386 (Grad. Sch. Publ. Hlth., Pittsburgh Univ., Pa., U.S.A.) Nine female subjects became acclimatised to heat as shown by reduced pulse rate, reduced rectal temp., and lower skin temp. **H.CJones**

1775. DIFFERENT EFFECTS OF HYPOTHERMIA ON TWO SYNDROMES OF POSITIVE ACCELERATION. E.R. Stiehm: J. appl. Physiol., 1963, 18, 387-392 (Aviation Med. Acceleration Lab., U.S. Naval Air Development Center, Johnsville, Pa., U.S.A.)

Normal rats have a decreasing survival time when subject to headward acceleration up to 30 g, above which only slight decreases are seen. Hypothermia decreases tolerance to headward acceleration at 20 jj but increases it at acceleration over 30 g. The effect is max. at 40 g, when the survival time is considerably greater in hypothermic animals. **H.CJones**

WORK AND METABOLISM

1776. DIFFERENCES BETWEEN ETHNIC GROUPS IN PHYSICAL WORKING CAPACITY. C.H.Wyndham, N.B.Strydom, J.F.Morrison, J.Peter, C.G.Williams, G.A.G.Bredell and A.Joffe: J. appl. Physiol., 1963, 18, 361-366 (Appl. Physiol. Lab., Transvaal and Orange Free State Chamber of Mines, Johannesburg, S. Africa) Max. O₂ uptake /kg. body wt. was similar, about 48 ml./min./kg. for Caucasian, Bantu and Bushmen d¹ subjects. O₂ consumption against work rate is lower for Bantu and Bushmen than for Caucasian. **H.CJones**

1777. ENERGY COST OF RUNNING. R.Margaria, P.Cerretelli, P.Aghemo and G.Sassi: J. appl. Physiol., 196⁴, 18, 367-380 (Physiol. Lab., Univ., Milano, Italy) Energy expenditure has been calc. from calorimetric measurements for athletes running at different speeds any gradients. With inclines -20 to + 15% the net kcal./kg./km. was related to incline rather than speed. Athlete subjects showed values 5-7% lower than non-athletes. **H.CJones**

1778. KINETICS AND MECHANISM OF OXYGEN DEBT CONTRACTION IN MAN. R.Margaria, P.Cerretelli, P.E. Di Prampero, C.Massari and G.Torelli: J. appl* Physiol., 1963, 18, 371-377 (Physiol.Lab., Univ.Milano, Italy) O₂ consumption during exercise was found to increase exponentially with time, the max. level generally being independent of the intensity of the exercise. Blood pyruvic acid level increased similarly but to a max. level which is higher the greater the intensity of w* exercise. Blood lactic acid increased linearly with time and reached a max. value towards the end of exercise. It also increased with the intensity of the exercise. **H.CJones**

1779. FACTORS MODIFYING DURATION OF THE SWIMMING TEST ON RATS AND MICE: INFLUENCE OF TEMPERATURE AND WEIGHT. B.Coquet, B.Drevon, A.Cier, G.Roche and J.Aphatie: C.R. Soc. Biol., ?& 1962, 156, 1403-1407 (Inst. Physiol., Fac. Méd., Lyon, France) There was a linear relationship between the duration of swimming of rats and the wt. SUF ported. With a wt.> 5% of the body wt. the animal did not swim continuously. Max. duration of swimming observed in rat at a water temp. of 25°. In mice max. duration was observed at a temp. of 38°. (French) **M.A.Price**

PHYSIOLOGY

167

1780. VARIANCE AS MEASURE OF TREMOR AMPLITUDE. J.E.Randall and J.M.Metzger: *J. appl. Physiol.*, 1963, 18, 440-441 (Physiol. Dept., Missouri Univ. Med. Center, Columbia, Mo., U.S.A.) An analogue computer is described which provides a moving estimate of variance of a voltage obtained from a transducer sensitive to body tremor movements. H.C.Jones

1781. DIET AND HISTAMINE IN THE RUMINANT. O.V. Sjaastad and H.Stormorken: *Nature*, Lond., 1963, 197, 907-908 (Dept. Physiol., Vet. Coll. Norway, Oslo, Norway) Histamine was extracted from the rumen liquor in sheep by passage through ¹Amberlite resin. Histamine levels increased sharply after ingestion of silage, which contains large amounts of histamine. The absence of symptoms of intoxication after silage feeding are attributed to efficient detoxication of histamine in the liver. G.M.Lewis

1782. INFLUENCE OF INTRAVENOUS GLUCOSE ON BLOOD INSULIN ACTIVITY AND ON GLUCOSE UPTAKE OF DIAPHRAGM AND ADIPOSE TISSUE OF RATS. M.C.Garcia-Fernandez and J.L.R-Candela: *Biochim. biophys. Acta*, 1963, 71, 172-177 (List. 'G.Marañón', Madrid, Spain) Glucose injn. into ⁰ increased diaphragm glucose uptake and plasma insulin activity after 10 min. An inhibn. of glucose uptake by epididymal adipose tissue was observed for 60 min. 10 ^min. after L-leucine injn. blood insulin and glucose up-^{J^e} by diaphragm and adipose tissue were all increased. Total inhibn. of glucose uptake by adipose tissue after glucose injn. was not produced in adrenalectomised rats. B.M.Stevens

1783. CONTROL OF ADIPOSE TISSUE LIPASE ACTIVITY BY SYMPATHETIC NERVOUS SYSTEM. R.Maickel, H.Sussman, K.Yamada and B.Brodie: *Life Sci.*, 1963, No.3, 210-214 (Lab. Chem. Pharmacol., Nat. Heart Inst., Bethesda, Md., U.S.A.) The administration [^]catecholamines stim. adipose tissue lipase, and elevated the level of plasma free fatty acids in rats. It is concluded that the activation of the adipose tissue lipase by sympathetic nervous system is a unique confluence of biochem. and physiol. in which a neurohormone released at nerve endings stimulates a biochem. mechanism. K.Jones

1784. ADIPOKINETIC ACTIONS OF ADRENOCORTICO-TROPHIN, THYROID STIMULATING HORMONE, VASOPRESSIN, a- AND S-MELANOCYTE-STIMULATING HORMONES, FRACTION H, ADRENALINE AND NORADRENALINE IN THE RABBIT, GUINEA-PIG, HAMSTER, RAT, PIG AND DOG. D.Rudman, SJ. Jawn and M.F.Malkin: *Endocrinology*, 1963, 72, 527-543 (Med. Dept., Columbia Univ., New York, N.Y., U.S.A.) ACTH, TSH, a- and p -MSH, arginine vasopressin, fraction H, noradrenaline and adrenaline were all found to have adipokinetic activity in one or more mammalian sp. The slope of the dose-response curves was similar for the first 6 of these substances. The magnitude of the action varied markedly from one sp. to another. H.C.Jones

SKIN AND BONE

1785. INDIRECT ESTIMATION OF DERMAL LOSSES OF K IN HUMAN METABOLIC BALANCE STUDIES.

B.Isaksson and B.SjOgren: *Scand. J. clin. Lab. Invest.*, 1963, 15, Supp. 69, 108-113 (Metab. Ward, Med. Clin. II, Sahlgrenska sjukhuset, Univ., GÖteborg, Sweden) Daily mean dermal loss of K in 3 human subjects was 7.9, 9.0 and 4.0 mequiv. respectively, as calc. indirectly from the results of orthodox balance technique combined with repeated determinations of total exchangeable K in the body. K.Jones

1786. GAS TRANSFER ACROSS SKIN IN MAN. R.A. Klocke, G.H.Gurtner and L.E.Farhi: *J. appl. Physiol.*, 1963, 18, 311-316 (Physiol. Dept., Univ. Buffalo Med. Sen., Buffalo, N.Y., U.S.A.) The outward transfer of inert gases across the skin of the forearm and hand has been measured for He, Ar, and N₂. Transport was limited by diffusion through the skin barrier, but it increased with temp, indicating that capillary blood flow also plays a part. H.C.Jones

1787. RACIAL DIFFERENCES IN SKIN RESISTANCE. L.C. Johson and N.L.Corah: *Science*, 1963, 139, 766-767 (Navy Med. Neuropsychiat. Res. Unit., San Diego, Calif., U.S.A.) Negro subjects have a higher skin resistance than a comparable white population. There was no difference in other autonomic variables or reactivity. It is suggested that the thicker stratum comeum in Negroes or a difference in no. of eccrine sweat glands may be the reason for this result. G.M.Lewis

1788. SKIN RESISTANCE LEVELS AND GALVANIC SKIN RESPONSE: UNILATERAL DIFFERENCES. P.A.Obrist: *Science*, 1963, 139, 227-228 (Dept. Psychiat., Univ. North Carolina, Chapel Hill, N.C., U.S.A.) Differences in skin resistance between the 2 sides of the body were found in 3 normal human subjects. The left side had the higher resistance, and levels were higher during rest than during learning stress. In 2 subjects, unilat. differences were found in galvanic skin response. G.M.Lewis

1789. SKIN RESISTANCE RECORDING IN THE UNRESTRAINED RAT. S.Kaplan and R.Kaplan: *Science*, 1962, 138, 1403-1404 (Dept. Psychol., Univ. Michigan, Ann Arbor, Mich., U.S.A.) Skin resistance can be measured in the unrestrained rat on a grid floor through which a subthreshold current is passed. The resistance varied between 50 kohm and 2 Mohm according to the degree of alertness and stimulus situation. G.M.Lewis

1790. STIMULATION OF BONE RESORPTION BY PARATHYROID HORMONE IN TISSUE CULTURE. LG.Raisz: *Nature*, Lond., 1963, 197, 1015-1016 (Dept. Pharmacol., Univ. Rochester Sch. Med., Rochester, N.Y., U.S.A.) Rats 15-16 days pregnant were inj. with 45ca, then the radius and ulna of their embryos removed 3 days later and cultured in vitro. Addition of parathyroid hormone stimulated bone resorption, which was correlated with release of Ca into the medium. The response was related to the dose of parathyroid extract and may be due to a direct effect on Ca transport. G.M.Lewis

1791. INHIBITION BY HYPOPHYSECTOMY OF ORGAN LESIONS NORMALLY PRODUCED BY PARATHYROID HORMONE OR DIHYDROTACHYSTEROL [DHT]. H.Selye, G.Gabbiana and Pjean: *Lab. Invest.* 1962, 11, 1332-1339 (Inst. Med. et de Chir. exp., Univ. Montreal, Canada) Expt. in rats indicate that soft tissue calcification and osteitis fibrosa-like bone changes induced by parathormone or DHT are inhib. but not prevented by hypophysectomy. This does not prevent DHT induced hypercalcemia. A.M.Mackay

PHYSIOLOGY

1792. NATURE OF 'IMPERFECT' ELASTICITY OF ARTICULAR CARTILAGE. S.M.Elmore, L.Sokoloff, C.Norris and P.Carmeci: *J. appl. Physiol.*, 1963, 18, 393-396 (Nat. Heart Inst., N.I.H., Bethesda, Md., U.S.A.) The compression of articular cartilage under static loading has been measured during immersion. Measurements in salt soln. have shown that previously reported 'imperfect' elasticity is an artefact.
H.C.Jones

MUSCLE

1793. FURTHER STUDY OF ELECTRICAL RESPONSES IN SLOW AND TWITCH MUSCLE FIBRES OF THE FROG. R.K.Orkand: *J. Physiol.*, Lond., 1963, 167, 181-191 (Biophys. Dept., University Coll., London, England) Individual muscle fibres in the tonus bundle of the frog's iliofibularis were found to be innervated either by slowly conducting or rapidly conducting motor axons. Single or repetitive nerve stimm. produced all or none action potentials in muscle fibres innervated by rapidly conducting axons, but never elicited a muscle spike from fibres innervated by slowly conducting axons. As a result of relatively low output of transmitter from the nerve terminals a single impulse in some rapidly conducting axons produced only a sub-threshold end-plate-potential in some twitch muscle fibres. *

1794. METABOLISM OF PHOSPHOCREATINE DURING AN ISOMETRIC TETANUS IN THE FROG SARTORIUS MUSCLE. C.Maréchal and W.F.H.M.Mommaerts: *Biochim. biophys. Acta*, 1963, 70, 53-67 (Dept. Med., Los Angeles County Heart Assocn. Cardiovasc. Res. Lab., Univ. California, Los Angeles, Calif., U.S.A.) The rate of phosphocreatine breakdown in anaerobic iodoacetate poisoned muscle in the course of tetanisation at 0° was $0.28 \mu\text{mole/g.sec}$, apart from the earliest moments. The rate was const, for up to 60 sec. until almost all the phosphocreatine was exhausted, although the tension decreased by 0.89%/sec. and was not affected by dividing the stimm. period into several tetani. An extra-metabolism, proportional to the no. of tetani and not their durations, averaged $0.33 \mu\text{mole/g.tetanus}$. A small part of this was due to elastic work and internal shortening during tension generation and a larger part is suggested to represent the residual activation heat during relaxation.
B.M.Stevens

1795. SOME EFFECTS OF CALCIUM AND MAGNESIUM IONS ON GUINEA-PIG UTERINE MUSCLE. P.C.Clegg P.Hopkinson and V.R.Pickles: *J. Physiol.*, Lond., 1963, 167, 1-17 (Physiol. Dept., Univ., Sheffield, England) Spontaneous rhythmical contractions of guinea-pig uterus *in vitro* are increased by increasing the external [Ca] within the range 0.1-3 mM, and decreased by increasing [Mg] within the range 0-10 mM. The sensitivity to vasopressin is increased by either ion. The sensitivity to component A (a lipid stimulant extracted from menstrual fluid) depends in a more complex way on the concn. of both ions. The results suggest that whereas vasopressin acts at one site in the uterine cell, component A acts at 2 sites, one of which may be intracellular and also controls the spontaneous* contractions. *

1796. EFFECT OF TETRAETHYL AMMONIUM ION ON THE ELECTRICAL ACTIVITY OF SMOOTH MUSCLE CELL. T.Suzuki, A.Nishiyama and H.Jnomata:

Nature, Lond., 1963, 197, 908-909 (Dept. Appl. Physiol., Tohoku Univ., Sch. Med., Sendai, Japan) Tetraethylammonium ion (15 mM) caused marked prolongation of action potentials in the taenia coli of guinea-pig.
C.M.Lewis

1797. MECHANISM OF ACTION OF 5-HYDROXY-TRYPTAMINE. F.Cugurra and S.Parodi: *Arch. int. Pharmacodyn.*, 1963, 142, 52-66 (Pharmacol. Inst., Genoa Univ., Italy) The action of 5HT on the isolated rat stomach strip is studied. Relationships between 5HT concn. and the size of contraction and between the rates of perfusion and recovery from contractions suggest that the reaction between 5HT and the receptors is bimolecular. (Italian)
S.E.Smith

BLOOD

1798. DETERMINATION OF THE TOTAL DRY MASS OF HUMAN ERYTHROCYTES BY QUANTITATIVE E.M. J-F.Bahr and E.Zeikler: *Lab. Invest.*, 1962, 11, 912-917 (Armed Forces Inst. Path., Washington, D.C., U.S.A.) The dry mass of r.b.c. from 7 persons was estimated by photometric evaluation of E.M. neg. of r.b.c. smears. Results agree with those of interference microscopy and microradiography and are remarkably uniform. The median wt. is 29.9×10^{-12} g.
A.M.Mackay

1799. ERYTHROCYTE-LFE-SPAN, RED CELL MASS AND PLASMA VOLUME OF NORMAL GUINEA-PIGS AS DETERMINED BY USE OF CHROMIUM-51, PHOSPHORUS-32 LABELLED DIISOPROPYL FLUOROPHOSPHONATE [DF³²P] AND IODINE-131 LABELLED HUMAN SERUM ALBUMIN. P.W.Edmondson and J.R.Wyburn: *Brit. J. exp. Path.*, 1963, 44, 72-80 (M.R.C. Radiobiol. Res. Unit, Harwell, Berks., England) DF³²P was used to label guinea-pig r.b.c., life-span of which was found to be 79 days, using packed vol. to measure activity. When 51Cr was used life-span was found to be 81 days. Figures for rats and mice using DF32P were similar to those obtained by others.
D.L.Gardner

1800. POSSIBLE EXISTENCE IN OR ON ERYTHROCYTES OF A SPECIFIC CORTisol BINDING AGENT. P. de Moor and O.Steno: *J. Endocr.*, 1963, 26, 301-302 (Lab.voorExp.Geneskunde, Rega-Inst., Univ.Klinieken St. Rafael, Leuven, Belgium) No evidence was obtained to support the concept of a sp. cortisol-binding agent in or on human r.b.c.
G.F.Blane

1801. REVERSIBLE AGGLOMERATION USED TO REMOVE DIMETHYLSULPHOXIDE FROM LARGE VOLUME OF FROZEN BLOOD. C.E.Huggins: *Science*, 1963, 139, 504-505 (Harvard Med. Sch., Boston, Mass., U.S.A.) Reversible agglomeration of r.b.c in the presence of glucose, sucrose or glycine(probably mediated by r.b.c. y-globulin copptn.) has proved a simple, effective and inexpensive method for rapidly removing dimethylsulphoxide from thawed blood for transfusion.
G.M.Lewis

1802. CONCENTRATION OF DILUTE HAEMOGLOBIN SOLUTIONS WITH SEPHADEX. B.Deutsch, R.D. Levere and J.I.Vine: *J. clin. Path.*, 1963, 16, 183 (Downstate Med. Center Dept. Med., New York, N.Y., U.S.A.) Approx. 3-fold concn. of Hb soln. was achieved by the addition of Sephadex, a hydrophilic polysaccharide, without pH change or Hb denaturation.

PHYSIOLOGY

Oxford, England) The Coulter electronic counter was used to count platelets in platelet-rich plasma by reducing the aperture and increasing the aperture current setting and discriminator voltage. Results obtained by this technique were as accurate as those from visual counting.

J.B.Derbyshire

1816. EFFECT OF ADP ON THE CONCENTRATION OF PLATELETS IN CIRCULATING BLOOD. G.V.R.Born and M.J.Cross: Nature, Lond., 1963, 197, 974-976 (Dept. Pharmacol., Royal Coll. Surgeons, Lincoln's Inn Fields, London, England) Infusion of 10^{-2} M ADP into cats caused an immediate fall in concn. of circulating platelets; lower concn. had no effect. AMP and adenosine did not significantly affect the platelet count. The effect of ADP appeared to be independent of changes in b.p. It aggregated platelets in plasma in vitro, a second addition of ADP being less effective than the first.

G.M.Lewis

1817. PLATELET CLUMPING IN VIVO. A.J.Honour and J.R.A.Mitchell: Nature, Lond., 1963, 197, 1019-1020 (Dept. Regius Prof. Med., Radcliffe Infirmary, Oxford, England) If a cerebral cortical artery in the rabbit brain was pinched firmly with ophthalmic forceps so as to produce slight bleeding and transient vasoconstriction, white bodies composed of platelets formed spontaneously at the site of injury and embolised; ADP, ATP or 5HT did not affect their size or rate of production. Very gentle pinching of the arteries which caused no bleeding did not produce white bodies, unless ADP, ATP or 5HT were applied to the site. 5HT antagonists prevented platelet clumping by 5HT but not by ADP or ATP. Sofne inhibn. of platelet clumping was effected by fluoroacetate, mono-iodoacetate, and Na azide, but not by CN⁻ or DNP.

G.M.Lewis

1818. HAEMOSTATIC EFFECTS OF HETEROLOGOUS PLATELETS IN THROMBOCYTOPENIC RATS. A.J. Roy, H.Yoshimura and I.Djerassi: Proc. Soc. exp. Biol., N.Y., 1962, 111, 15-18 (Children's Cancer Res. Fdn., Harvard Med. Sch., Boston, Mass., U.S.A.) Transfusion of fresh human platelets reduced the output of r.b.c. into the lymph. The effect of homologous platelets was more marked and persistent.

M.M.Shapland

1819. ACTION OF NEAR EASTERN VIPERIDAE VENOMS ON HUMAN BLOOD PLATELETS IN VITRO. S.Aloof, C.Kirschmann and A. de Vries: Arch. int. Pharmacodyn., 1963, 142, 216-227 (Dept. Expt. Biol., Rogoff Med. Res. Inst., Tel Aviv, Israel) The actions of snake venoms from *Echis colorata* on human blood platelets are investigated". Thromboplastin generation and clot retraction are diminished. At high concn. the venom lyses the platelets and releases pyrophosphatases. These actions are inhib. by the presence of plasma. It is suggested that these effects are mediated by a venom protease. *Vipera palaestinae* venom has no such actions.

S.E.Smith

1820. EFFECTS OF VARIOUS FACTORS ON BLOOD CLOTTING SYSTEM. (A) INFLUENCE OF THYROID FUNCTION. (B) EFFECT OF EXERCISE. (C) EFFECT OF OEDEMA DRAINAGE. (D) EFFECT OF VENOUS CONGESTION. O.Egeberg: Scand. J. clin. Lab. Invest., 1963, 15, 1-7, 8-13, 14-19, 20-28 (Inst. Thrombosis Res., Univ. Hosp., Rikshospitalet, Oslo, Norway).

K.Jones

1821. COAGULATION OF BLOOD IN TEMPERATURE ACCLIMATISATION. P.Griminger, H.S.Weiss and K.G.Hollands: Nature, Lond., 1963, 197, 1118 (Lab. Nutr., Rutgers State Univ., New Brunswick,

N.J., U.S.A.) Chickens were kept for at least 3 months at 32°, 21° or f. There was a trend towards hypocoagulability of the blood with increasing environmental temp. Birds kept at the higher and lower temp, lost wt. and the females decreased in productive activity. There was no difference in body or blood temp. Haematoctiits increased with decreasing ambient temp.

1822. BLOOD CLOTTING : THE FORCE OF RETRACTION. E.Rubenstein: Science, 1962, 138, 1343-1344 (Dept. Med., Stanford Univ. Sch. Med., Calif., U.S.A.)

The max. force of clot retraction induced by platelets in human venous blood was about 1.2×10^4 dyne/cm², equal to about 9 mm. Hg; this is sufficient to deform many soft tissues and to allow clots to retract in vivo.

CM.Lewis

1823. INFLUENCE OF SURFACE CHARGE OF PHOSPHOLIPIDS ON THEIR CLOT-PROMOTING ACTIVITY.

D.Papahadjopoulos, C.Hougie and D.J.Hanahan: Prd Soc. exp. Biol., N.Y., 1962, 111, 412-416 (Dept. Biochem., Univ. Washington, Seattle, Wash., U.S.A)

¹ Thromboplastic activity' of a particular phospholipid emulsion derived from beef brain or egg yolk, depends largely on the surface charge of the particles (as measured by electrophoresis).

M.M.Shapland

1824. ANTI-COAGULANT EFFECTS OF CONCENTRATED CEPHALIN IN THROMBOPLASTIN GENERATION TEST. K.J.Coffield and M.A.Cocanour: J. appl. Physiol., 1963, 18, 325-328 (Inst. Med. Res., Toledo, Ohio, U.S.A.) Cone, suspensions of phospholipid (cephalin) inhibit thromboplastin generation through inactivation of factors V and VIII.

H.C.Jones

1825. ELEVATION OF PLASMA ANTITHROMBIN IN AGEING ARTERIOSCLEROTIC SUBJECTS. L.O.PilgejT. am, A.CSchram and D.A.Loegering: J. appl. Phys., 1963, 18, 329-333 (Arteriosclerosis Res. Lab., St. Barnabas' Hosp. Res. Fdn., Minneapolis, Minn., U.S.A.) Plasma antithrombin activity was measured in subjects that had fully recovered from the trauma of myocardial infarct, and it was found to be increased up to 33%.

H.C.Jones

1826. MILD HAEMOPHILIA A: PROBABILITY OF A VARIANT. A.J.Quick: Amer. J. med. Sci., 1962, 244, 535-547 (Dept. Biochem., Marquette Univ. Sch. Med., Milwaukee, Wis., U.S.A.) Evidence is presented which indicates that a deficiency of a hitherto recognised factor may, in addition to factor VIII, be involved in haemophilic bleeding.

E.Hobbiger

1827. SIALIC ACID IN FIBRINOGEN AND "VULCANISATION" OF THE FIBRIN CLOT. K.Laki and N.Chandrasekhar: Nature, Lond., 1963, 197, 1267-1268 (Nat. Inst. Arthritis and Metabol. Dis., Bethesda, Md., U.S.A.) Studies on the mode of action of blood clotting factor (Laki-Lorand Factor, fibrin stabilizing factor, fibrinase) which is activated by thrombin indicate that this factor enzymically removes sialic acid from fibrinogen. Removal of sialic acid from fibrinogen allows the introduction of strong bonds between fibrin mol. (vulcanisation).

J.R.Sargent

1828. IN VIVO ACTIVATION OF FIBRINOLYTIC ENZYME SYSTEM OF DOGS. F.B.Taylor, J.Singeton, Jr. and A.F.Bickford, jun.: J. appl. Physiol., 1963, 18, 334-336 (Cardiovasc. Res. Inst., Univ. California Med. Sch., San Francisco, Calif., U.S.A.) Infusions of streptokinase and plasmin into dogs result in an enhanced lysis of blood clots, a temporary lowering of serum plasminogen and plasmin levels, and a temporary decrease in plasma fibrinogen levels.

H.C.Jones

171

- 1829.** THE COURSE OF FIBRINOLYSIS. M.J.Whichelow
Proc Soc exp Biol N.Y. 1962, 111, 129-131 (Univ. Virginia Sch. Med., Charlottesville, Va., V.S.A.) The max. rate of fibrinolysis was proportional to the amount of plasminogen incorporated into the clot. This rate at const. Plasminogen assay was a measure of the amount of activator (urokinase) added. M.M.Shapland
- 1830.** EFFECTS OF PHYSICAL EXERCISE ON BLOOD CLOTTING AND FIBRINOLYSIS. S.G.Iatridis and Fergusson: J. appl. Physiol., 1963, 18, 337-344 (Physiol. Dept., N. Carolina Univ. Med. Sch., Chapel Hill, N.C., U.S.A.) Normal subjects showed a shortening of whole blood clotting time after strenuous exercise, plasma factors VIII and XII rose during this time and fibrinolytic activity increased. Hageman-deficient subjects did not show these changes with exercise.
- 1831.** T.O. ESTIMATION OF HEPARIN CO-FACTOR IN SERUM. J.J.Temperley: J. clin. Path., 1963, 16, 119 (Sch. Path. Trinity Coll., Dublin, Ireland) The effect of heparin on the thrombin clotting time in the presence of excess heparin. The thrombin thrombin time was measured as the time taken for bovine of Ca. to clot pure bovine fibrinogen in the presence of J.B.Derbyshire
- 1832.** DISTRIBUTION OF UL-AMINO N, UREA N AND TOTAL PROTEIN BETWEEN ERYTHROCYTES AND WVSMA IN HEALTHY MALES AND FEMALES. K.B. Jornesjo: Scand. J. clin. Lab. Invest., 1963, 15, 69, 25-37 (Dept. Clin. Chem., Central Hosp., the distribution of ex-amino N and non-protein N with sex differences found in signif. with Sher r.b.c./plasma ratio in females, while urea Vatp. all distributed between r.b.c. and plasma blyk? in both sexes. But the abs. values of urea N in 183 W're significantly lower in *.* K. Jones
- 1833.** BLOOD VOLUME, TOTAL PROTEIN AND TOTAL CHOLESTEROL IN NORMAL AND DIABETIC HAMSTERS. E.L.House, B.Pausky, R.Raphaely, J.Palmer, J.M.Jacobs: Anat. Rec., 1962, 144, 25-30 (Dept. Anat., New York Med. Coll., Flower and Fifth Ave. Hosp., New York, N.Y., U.S.A.) Observations on blood volume, total protein and total cholesterol in the young hamsters induced diabetic hamsters and animals compared with young and adult control. F.Beck
- 1834.** IT ELECTROLYTES AND COLLOID BLOOD PRESSURE OF PLASMA SERUM AND PLASMA SERUM ALBUMIN SOLUTION. B.Goetzman: Proc. Soc. exp. Biol., N.Y., 1962, 111, 43-44 (Dept. of Medicine, Univ. Minnesota, Minn., U.S.A.) Toluidine Blue and Neutral Red had no significant effect on ³⁵Ca in vitro colloid-osmotic pressure of dog plasma and serum or 6% bovine serum albumin.
- 1835.** HYPERLIPIDOPATHY INDUCED HYPERLIPIDAEMIA IN DOGS. K.R.Woods, E.B.Freeman and A.Kellner: Proc. Soc. exp. Biol., N.Y., 1962, 111, 257-261 (Dept. Path., New York Hosp/Cornell Med. Center, N.Y., U.S.A.) Repeated s.c. injn. or i.v. infusion of H₂O caused immediate elevation of plasma non-esterified fatty acids, accumulation of kidney and liver VPerUpaemia. M.M.Shapland
- 1836.** INTENSIVE METHOD FOR ESTIMATION OF GLUCOSE IN BLOOD AND OTHER FLUIDS BY

AUTOANALYSER. G.Discombe: J. clin. Path., 1963, 16, 170-172 (Central Middx. Hosp., London, England) An enzymic micro-method for glucose estimation was developed. This was based on the Hill and Kessler method, which was modified by pptn. of F¹¹ before dialysis and replacing the phosphate buffer by a tris-maleic acid-NaQH buffer. This enabled a reagent containing less peroxide and glucose oxidase to be used without significant reduction in sensitivity. J.B.Derbyshire

- 1837.** TURNOVER OF GLYCEROL IN PLASMA. J.H. Hagen: Life Sci., 1963, No.3, 170-174 (Dept. Physiol., Univ. Manitoba, Winnipeg, Canada) The turnover of plasma glycerol was measured using ¹⁴C-glycerol. The calc. half-life was 2.01 min. and 1.32 min. in 2 sets of expt. respectively. K Jones
- 1838.** EFFECT OF INSULIN ON CONCENTRATION OF PLASMA GLYCEROL. J.H.Hagen: J. lipid Res., 1963, 4, 46-51 (Dept. Physiol., Univ. Manitoba, Winnipeg, Canada) I.v. infusion of insulin into anaesthetised rabbits causes a decrease in concn. of plasma glycerol. Insulin does not alter the in vitro release of glycerol from mesenteric adipose tissue of fasting rabbits, either in the presence or absence of glucose. Insulin increases the rate of disappearance of infused glycerol in vivo.

- J.R.Sargent
- 1839.** SIMPLE METHOD FOR DETERMINATION OF PLASMA CORTICOIDS. B.P.Murphy, W.Engelberg and C.J.Pattie: J. clin. Endocr., 1963, 23, 293-300 (Clin. Invest. Unit, Queen Mary's Veterans' Hosp., Montreal, Canada) The steroid-binding prop. of plasma is used to estimate cortisol and corticosterone in human plasma. This method requires 1 ml. of test plasma and gives S.D. ± 1 µg. over the range of 0-10 µg./100 ml., and is not affected by haemolysis or by drugs which interfere with other methods. K. Jones
- 1840.** EVIDENCE FOR MULTIPLE CALCIUM POOLS IN THE BLOOD OF DOGS. M.J.Wiester, S.H.Whitla and R.Goldsmit: Nature, Lond., 1963, 197, 1170-1171 (Radioisotope Lab., V.A. Hosp., Cincinnati, Ohio, U.S.A.) 48 hr. following injn. of ⁴⁵Ca into dogs, the sp. activity of total blood Ca (protein-bound + complexed + ionic forms) differed from that of ultrafilterable blood Ca (complexed + ionic forms). The sp. activity of ultrafilterable blood Ca was also greater than that of excreted Ca, suggesting that complexed and ionic forms of Ca are treated differently in the renal tubule. J.R.Sargent

- 1841.** PLASMA POTASSIUM CHANGES DURING RE-BREATHING IN DOGS. R.I.Lade and E.B.Brown, jun.: Proc. Soc. exp. Biol., N.Y., 1963, 112, 330-331 (Dept. Physiol., Univ. Minnesota, Minneapolis, Minn., U.S.A.) Dogs were made to rebreathe the same air for 90 min. under anaesthesia. As the CO₂ tension rose, the blood K concn. rose gradually, not transiently, until it remained const. after about 60 min. for the rest of the rebreathing time. On returning the dogs to air there was a sudden further increase in the K level in the blood.

- D.N.Wheatley
- 1842.** SERUM POTASSIUM LEVELS IN HYPERVENTILATED DOGS. K.D.Hall and F.H.Reeser, jun.: Proc. Soc. exp. Biol., N.Y., 1962, 111, 251-252 (Dept. Anesth., Duke Univ Med. Center, Durham, N.C., U.S.A.) Hyperventilation of anaesthetised dogs caused a slight increase of scrum K concn. in the first 4 min. 2nd then a marked decrease during the next 2 hr. The K level did not begin to increase until at least 20 min. after cessation of hyperventilation. M.M.Shapland

PHYSIOLOGY

1843. POTASSIUM LEVELS, ACID-BASE BALANCE AND MASSIVE BLOOD REPLACEMENT. O.Schweizer and W.S.Howland: Anesthesiology, 1962, 23, 735-740 (Dept. Anesthesiology, Mem. Hosp. for Cancer and Allied Dis., New York, N.Y., U.S.A.) The major factor responsible for the elevation of the serum K level during operation is a decrease in pH value of the blood. In the presence of both extensive tissue trauma and uncompensated metabolic acidosis there is a consistent increase in the level of K during operation in comparison with the preoperative value. A.A.Zimmerman

1844. DECREASE IN PLASMA POTASSIUM DURING THE DISULFIRAM ETHANOL REACTION IN RABBITS.

T.Brundin, W.Green and E.S.Perman: Acta pharmacol., Khb., 1962, 19, 389-391 (Dept. Physiol., Karolinska Inst., Stockholm, Sweden) A significant decrease in plasma K occurs during the disulfiram-ethanol reaction in awake rabbits. Increased arterial pH, associated with the hyperventilation during the reaction may be of importance for this hypopotassemia. R.S.Tonks

1845. ACTION OF POTASSIUM AND CALCIUM ON HISTAMINE BINDING ACTION OF SERUM. J.-L. Parrot and M.Mordelet-Dambrine: J. Physiol., Paris, 1962, 54, 579-590 (Lab. Physiol. path., Hop. Boucicaut, Paris, France) In rats and guinea-pigs treated with K, serum loses its histamine binding ability for periods up to several weeks, this binding ability could be restored by Ca injn. In asthmatic patients whose serum showed reduced histamine binding a single i.v. injn. of Ca gluconate restored the binding and produced simultaneously a marked clinical improvement. (French) A.Angel

1846. EFFECT OF OESTROGENIC SUBSTANCES ON TOTAL IRON LEVEL IN BLOOD AND OTHER TISSUES OF ALBINO RATS. B.Dutta and A.K.Mukherjee: Indian J. exp. Biol., 1963, 1, 91-95 (Dept. Physiol., Presidency Coll., Calcutta, India) The effect of oestrogenic substances, both natural and synthetic, on Fe metabolism in rats has been investigated. In oestrogen-treated rats, the blood Fe level shows a significant fall as compared to the untreated rats. Fe content of liver and kidney increases in oestrogen-treated animals whereas a lowering of Fe content in spleen and bone marrow is observed. The rise in Fe level in liver and kidney and fall in spleen and bone marrow is attributed to the action of oestrogen on bone marrow in the regeneration and formation of r.b.c. Low r.b.c. count in oestrogen-treated animals also indicates the action of oestrogen on bone marrow. A controlling action of oestrogen on Fe metabolism in rats is suggested. *

1847. NEW METHOD FOR DETERMINATION OF SERUM IRON. R.Sanford: J. clin. Path., 1963, 16, 174-177 (N.S.W. Red Cross Blood Transf. Serv., Sydney, N.S.W., Australia) The method depended on the release of Fe from its complex with transferrin by the combined action of Teepol and ascorbic acid, without pptn. of the serum proteins. Fe estimation was from the colour developed following the addition of orthophenanthroline. J.B.Derbyshire

BODY FLUIDS AND ELECTROLYTES

1848. DETERMINATION OF Cu IN CEREBROSPINAL FLUID BY ACTIVATION ANALYSIS. K.Kjellin: J. Neurochem., 1963, 10, 89-93 (Dept. Neurol., Serafimerlasarettet, Stockholm, Sweden) Cs.f. from 15 psychoneurotic patients (defined as free from somatic

disease) was sampled by a new technique that avoids contamination with Cu from the puncture needle and other instruments. With a modified procedure for fractionating the sample, after neutron activation, by ion exchange, values of 1.4 ± 0.4 /ig./Cu/100 ml. cs.f. were obtained. This value compares with 5.50 /ig./100 ml. cs.f. found by other workers and is similar to the values for serum. Evidence for cs.f. Cu being bound to protein is presented. R.Woodman

1849. DETERMINATION OF Na IN BODY FLUIDS BY GLASS ELECTRODE. E.W.Moore and D.W.Wilson: J. clin. Invest., 1963, 42, 293-304 (Med. Serv., Lemuel Shattuck Hosp., Dept. Publ. Hlth., Boston, Mass., U.S.A.) A method is described for the rapid and reproducible determination of Na in body fluids by selective glass electrodes. Results by this technique agreed with flame photometer values within about 2% . K.Jones

1850. EFFECT OF HYDROGEN ION ON THE RATES OF MIGRATION OF SODIUM AND POTASSIUM IONS: POSSIBLE RELATIONSHIP TO MAGNETISM. W.K. George: Nature, Lond., 1963, 197, 1209 (Wihuri Re* Inst., Helsinki, Finland) Movements of Na, K, and Cl ions occurred across a dialysis membrane influenced by a strong magnetic field. Ca and Mg did not change in concn. G.M.Lewis

1851. OBSERVATIONS IN EXPERIMENTAL Mg DEPLETION. R.Whang and L.G.Welt: J. clin. Invest., 1963, 42, 305-313 (Dept. Med. Sch. Med., Univ. North Carolina, Chapel Hill., N.C., U.S.A.) The characteristics of Mg depletion in * rats are described and the possible mechanisms for the alterations are discussed* The K loss is considered as a consequence of Mg at the tissue level, rather than as due to a renal tubular defect in conserving K. K.Jones

RESPIRATION

1852. CHRONIC TRACHEOSTOMY IN DOGS. O.G.Tbi'lenius and C.B.Vail: J. appl. Physiol., 1963, 18, 439-440 (Physiol. Dept., Chicago Univ., Chicago, 111., U.S.A.) A surgical procedure is described for producing a chronic tracheal opening in dogs. A hole is cut in the trachea and the skin is inverted over the surface and sutured to the tracheal mucosa. H-C.Jones

1853. ACOUSTIC TRANSMISSION CHARACTERISTICS OF THORAX. R.Zalter, H.C.Hardy and A.A.Luisad*: J. appl. Physiol., 1963, 18, 428-436 (Div. Cardiov^ Res., Chicago Med. Sch., Chicago, 111., U.S.A.) Attempts have been made to resolve the acoustic transmission characteristics of the thorax in dogs. Sounds were recorded using a microphone applied to the chest by suction. Sounds were introduced into the heart using a small underwater loudspeaker on a cardiac catheter. H.C.Jones

1854. MUSCLE-TRANSDUCER METHOD OF RECORD^A RESPIRATORY MOVEMENTS IN SMALL ANIMALS. B.Bhatia and V.N.Rao: J. appl. Physiol., 1963, 18, 418-419 (Def. Sci. Lab., Metcalfe House, Delhi, India) Respiratory movements of unrestrained sm^A animals can be recorded using 2 wires of dissimilar roe* inserted into the abdominal or intercostal muscles. &¹ this way the muscles act as a transducer, the respiratory movements altering the electrical resistance of the muscle which alters the e.m.f. generated between the wires. H.C.Jones

PHYSIOLOGY

173

*^{1855.} CIRCULATORY AND VENTILATORY EFFECTS OF EXERCISE IN SMOKERS AND NON-SMOKERS. R.B. Chevalier, J.A.Bowers, S.Bondurant and J.C.Ross: *J. appl. Physiol.*, 1963, 18, 357-360 (Krannert Heart Inst., Indianapolis, Ind., U.S.A.) There was no difference between smokers and non-smokers in pulmonary junction or O₂ uptake achieved in max. exercise. The O₂ debt accumulation was greater, and heart rate before and after exercise was faster in smokers. H.C.Jones

^{1856.} CARDIOPULMONARY EFFECTS OF LARGE PNEUMOTHORAX IN CONSCIOUS AND ANAESTHETISED DOGS. K.H.Kilburn: *J. appl. Physiol.*, 1963, 18, 279-283 (U.S. Army Med. Res. and Nutr. Lab., Fitzsimmons Gen. Hosp., Denver, Colo., U.S.A.) A Pneumothorax of twice the functional residual capacity was induced in conscious and pentobarbital anaesthetised dogs by intrapleural injn. of air. Greater cardiopulmonary depression occurred in anaesthetised animals and compensatory mechanisms were reduced. H.C.Jones

^{1857.} NEW METHOD FOR MEASUREMENT OF COMPLIANCE AND RESISTANCE OF LUNGS AND THORAX. M.B.McIlroy, D.F.Tierney and J.A.Nadel: *J. appl. Physiol.*, 1963, 18, 424-427 (Cardiovasc. Res. Inst., Univ. California Med. Sch., San Francisco, Calif., U.S.A.) The compliance of lungs and thorax has been measured on trained subjects by analysing small relaxed expirations. Vol. and flow of air and oesophageal pressure are recorded. The results obtained were reproducible but different from those of previous reports. H.C.Jones

^{1858.} COMPARISON OF STATIC VOLUME-PRESSURE RELATIONS OF EXCISED PULMONARY LOBES OF DOGS. N.R.Frank: *J. appl. Physiol.*, 1963, 18, 274-278 (Physiol. Dept., Harvard Univ. Sch. Publ. Hlth., Boston, Mass., U.S.A.) The vol.-pressure relations of the lobes of excised dog lungs were studied during deflation from a max. distension pressure. At a given pressure most of the lobes held similar gas volumes per unit weight. H.C.Jones

^{1859.} FACTORS LIMITING DEPTH OF MAXIMAL INSPIRATION IN HUMAN SUBJECTS. J.Mead, J.Milic-Emili and J.M.Turner: *J. appl. Physiol.*, 1963, 18, 295-296 (Physiol. Dept., Harvard Sch., Boston, Mass., U.S.A.) Oesophageal and gastric pressures have been measured in trained and untrained subjects during voluntary capacity manoeuvres. From the results it is concluded that in trained subjects the limitation to further expansion arises from elastic recoil of the respiratory system and from diminishing effectiveness of inspiratory muscles at high lung vol. H.C.Jones

^{1860.} PULMONARY NITROGEN CLEARANCE IN RELATION TO AGE IN HEALTHY MALES. A.Bouhuys: *J. Appl. Physiol.*, 1963, 18, 297-300 (Lab. Clin. Univ., Hos. P*, Leiden, Netherlands) The distribution of inspired gas in the lungs, estimated from N₂ clearance measurements, showed little change in subjects from 24-65 yr. but there was a greater range of variation among older subjects. H.C.Jones

^{1861.} CHANGE IN DIFFUSING CAPACITY WITH BLOOD ¹⁴N₂ IMPROVED ISOLATED LUNG PREPARATION. Rosenberg: *J. appl. Physiol.*, 1963, 18, 269-273 (Univ. Montreal, Canada) The isolated lung preparation, used at lung S prep, has been improved so that ¹⁴N₂ up to 500 ml./min. can be used. Pulmonary diffusing capacity for CO increased with blood flow. H.C.Jones

^{1862.} ALVEOLAR-ARTERIAL DIFFERENCE IN OXYGEN TENSION AND PHYSIOLOGICAL DEAD SPACE IN NORMAL MAN. J.M.Raine and J.M.Bishop: *J. appl. Physiol.*, 1963, 18, 284-288 (Med. Dept., Birmingham Univ., Queen Elizabeth Hosp., Birmingham, England) The alveolar-arterial O₂ tension difference in man increased with age and the alveolar O₂ pressure decreased with age. The physiol. dead space: tidal vol. ratio increased with age in the supine position but not when subjects were sitting. H.C.Jones

^{1863.} CHANGING STATE OF BREATHING DURING INHALATION OF CO₂ STUDIED WITH AN INEXPENSIVE RECORDING CO₂-ANALYSER. J.L.Anderton and E.A.Harris: *Quart. J. exp. Physiol.*, 1963, 48, 370-381 (Dept. Therapeut., Edinburgh Univ., Scotland) A simple method is described for recording alveolar CO₂ tension. From data obtained from the changing state of hyperventilation due to CO₂ in the inspired air the steady-state ventilatory response to CO₂ has been derived. H.C.Jones

^{1864.} TRANSIENT RESPONSES TO CO₂ BREATHING OF HUMAN SUBJECTS AWAKE AND ASLEEP. F.J.D.Fuleihan, T.Nakada, J.T.Suero, E.S.Merrifield, R.E.Dutton, S.Permutt and R.L.Riley: *J. appl. Physiol.*, 1963, 18, 289-294 (Dept. Environmental Med., Johns Hopkins Univ., Baltimore, Md., U.S.A.) The respiratory response to breathing 4% CO₂ in O₂ was measured in awake and sleeping subjects. In the control period ventilation was lower in sleeping subjects but the response to 4% CO₂ was the same for both groups. H.C.Jones

^{1865.} OXYGEN AND CARBON DIOXIDE TENSIONS AS FACTORS IN RESPIRATION AFTER APNOEA FROM HYPERVENTILATION. K.Sugioka, D.A.Davis, M. Hinternhoff, R.L.McKnight and D.C.Grosskreutz: *Anesthesiology*, 1962, 23, 776-782 (Dept. Surg., Univ. N. Carolina Sch. Med., Chapel Hill., N.C., U.S.A.) Hyperventilation results in increased arterial O₂ tension while arterial CO₂ tension falls to very low levels. The resumption of respiration following the apnoea of hyperventilation occurs when the pCO₂ drops to low levels and at low PCO₂ and is independent of the CO₂ tension at that time. Dangerous levels of hypo-oxia may occur during apnoea after hyperventilation with gas mixtures containing 20-25% O₂ if respiratory assistance is not given in the interval between the onset of apnoea and the resumption of respiration. A.A.Zimmerman

^{1866.} EVIDENCE THAT PCO₂ OF MIXED VENOUS BLOOD IS NOT REGULATOR OF VENTILATION DURING EXERCISE. W.F.Storey and J.Butler: *J. appl. Physiol.*, 1963, 18, 345-348 (Cardiovasc. Res. Inst., Univ. California Med. Sch., San Francisco, Calif., U.S.A.) Patients with intracardiac left-right shunts showed increased ventilation during exercise even when pulmonary arterial blood showed no rise in PCO₂. H.C.Jones

^{1867.} EFFECT OF CO₂ ON HYPERVENTILATION INDUCED BY VIBRATION. W.A.Young, D.B.Shaw, L.J. Buckles, J.S.Outerbridge, C.E.Reeves and J.C.Truman: *J. appl. Physiol.*, 1963, 18, 349-352 (Cardioresp. Serv. McGill Univ., Montreal, Canada) Hyperventilation which occurred in human subjects during passive whole-body vibration, was not increased further by the addition of CO₂ to the inspired air. It is concluded that observed differences between subjects in their responses to vibration are not due to differences in sensitivity to CO₂. H.C.Jones

^{1868.} EFFECT OF CORTICOTROPIN ON EXHALED CARBON DIOXIDE OF MICE. W.L.Miller and J.J.Krake:

PHYSIOLOGY

Endocrinology, 1963, 72, 518-522 (Met. Dis. Res., Upjohn Co., Kalamazoo, Mich., U.S.A.) A commercial ACTH prep, increased the amount of expired CO₂ from mice. Corticosterone did not have this effect. The response was not seen after treatment of the ACTH with NaOH or H₂O₂ and was restored after reactivation with cysteine. H.C.Jones

1869. SOLUBILITY OF CO₂ IN SERUM FROM 15-38°. W.H.Austin, E.Lacombe, P.W.Rand and M.Chatterjee: J.appl.Physiol., 1963, 18, 301-304 (Cardiol.Dept., Maine Med.Center, Portland, Maine, U.S.A.) Measurements of the solubility of CO₂ in serum from 15-38° resulted in different values from those based on water solubility. New solubility factors and pK values have been calc. for the solubility of CO₂ in serum. H.C.Jones

1870. BLOOD O₂ SATURATION DETERMINED SPECTROPHOTOMETRICALLY. W.Falholt: Scand. J. clin. Lab. Invest., 1963, 15, 67-72 (Dept.Clin.Biochem., City and County Hosp., Viborg, Denmark) A simpler method is described for the determination of blood O₂ satn*. Comparison of the results with those obtained by Van Slyke analysis, gave a regression line $y = 1^*204x - 1^*76$, y being the spectrophotometric results, x the Van Slyke results. S.D. of the difference between double analyses was 0*53%. K.Jones

1871. EFFECTS OF ACIDOSIS AND ALKALOSIS ON RESISTANCE OF MICE TO HYPO-OXIA. I.Nordin and L. Lundholm: Acta pharmacol., Kbh., 1962, 19, 356-364 (Pept.Pharmacol., Univ.Gothenburg, Sweden) 0*135-0*27mg.HCl/g. mouse inj.s.c. substantially increased the animals* resistance of hypo-oxia and they tolerated a greater reduction in their O₂ consumption than control animals. 0*63 mg.NaHCO₃/g.mouse had the reverse effect. R.S.Tonks

HEART

1872. SIMPLE METHOD OF KEEPING THE HEART f AUVE¹ AND FUNCTIONING OUTSIDE OF THE BODY FOR PROLONGED PERIODS. F.Robicsek, P.W.Sanger and F.H.Taylor: Surgery, 1963, 53, 525-530 (Dept. Thoracic Surg., Charlotte Mem. Hosp., Charlotte, N.C., U.S.A.) Dogs' hearts have been kept 'alive' outside the body for as long as 16 hr. This was done by ligation of all vessels except the aorta and the pulmonary artery and vein. The aorta was connected to a buffer soln. reservoir placed 1 m. above the heart and the pulmonary vessels were taken out with the heart and lungs entire. Blood leaving the heart by the aorta circulated around the cardiac blood vascular system and mixed also with the reservoir. The blood from the right ventricle remained unimpeded in its course through the lungs and back to the heart. Every 4 hr. the excised prep, being kept at 35-37°, 15 ml. of a 25% glucose soln. with 5 I.U. insulin and 20 mg. heparin were added to the blood. D.N.Wheatley

1873. IN VITRO STUDIES ON SINGLE BEATING RAT HEART CELLS. I. GROWTH AND ORGANISATION. n. INTERCELLULAR COMMUNICATION. L.Harary and B.Farley: Exp. Cell Res., 1963, 29, 451-465, 466-

474 (Dept. Biophys., Sch. Med., Univ. California, Los Angeles, Calif., U.S.A.) I. Single beating cell which continued to beat up to 40 days were prep, from young rat heart. Two types of cells were seen; independent leading cells which beat spontaneously, and following cells which beat only upon contact with beating cells*. Single independently beating cells grew into synchronous! beating nets of cells and eventually developed into beating fibres. The process of differentiation was accompanied by loss of striation and cessation of beating.

II. Cells beating at an independent rate became synchronous upon physical contact, indicating that the com* munication of rate of beating was through protoplasmic contact. The rate of beating was determined by the fastest beating cell. Despite the superimposed rate, each cell retained potentially its own inherent rate of beating* K.Jones

1874. RATE OF RESTITUTION AND SELF-REGULATION OF CONTRACTILITY IN MAMMALIAN HEART MUSCLE. V.Kruta and P.Bravený: Nature, Lond., 1963, 197, 905-906 (Dept. Physiol., Fac. Med., UnV Brno, Czechoslovakia) Expt. on guinea-pig atrium, suggest that the velocity of contractility restitution, wh# follows the premature beat, is increased, while a longer interval causes a decrease in the rate of restitution. The fact that activation, besides triggering the contractile mechanism, modifies the rate of contractility restitution* and with it the strength of contraction according to the length of the preceding interval, may be of definite physiol. significance in a muscle adapted for rhythmic activity, allowing for self-regulation. CM.Lewis

1875. ELECTRICAL ACTIVITY OF ATRIOVENTRICULA* CONDUCTING TISSUE OF TOAD, STUDIED BY MINUTE SUCTION ELECTRODE. T.Kanno: Jap. J. Physiol., 1963, 13, 97-111 (Dept. Physiol., Fac. Mej Univ. Tokyo, Japan) The features of A-V potenti^ of isolated toad's heart were different from those of the atrium and ventricle, as recorded with a suction electr^ The propagation of excitation in the A-V pathway was uniform and the conduction velocity was low. The uitf form conduction through the pathway was well maintain even when the A-V interval was prolonged at low teillP* But increase in driving rate changed the uniform conduction into a decremental conduction. K.Jones

1876. INFLUENCE OF POTASSIUM AND CALCIUM O\$, BEHAVIOUR OF ISOLATED RAT ATRIA. R.R.Paradisi Proc. Soc. exp. Biol., N.Y., 1963, 112, 483-486 (V* Pharmacol., Med. Sch., Univ. S. California, Los Angeles, Calif., U.S.A.). Rat atria were isolated in Krebs-Ringer bicarbonate medium at 30° and were tr| sed with 95% O₂:5% CO₂. The K concn. was 6mM and after immersion in this concn. the atrial K and water $\frac{d}{dt}$ tent was not changed as compared with freshly isolated atria, even after stimm. at 200stim./min. In K-free medium there was a 57-4% reduction in K content of the atria at this stimm. after 2 hr. After 20 min. in ** medium the atria showed idiopathic rhythm and gre*tet contractile force with some fibrillation. The behavi^ self-stimulating atria under these conditions was deter* mined. There was a temporary, adrenaline-sensitive* increase in rate of contraction followed by a slow rate when adrenaline had no effect. The rate had a direct , relationship to the Ca concn. D.N.Wheatley

PHYSIOLOGY

175

1877. EFFECTS OF GLUCOGENIC AMINO ACIDS ON FROG'S HEART. H. B.P.Chakravorti, A.C.Katki and S.S.Bandodkar: Ann. Biochem., 1963, 23, 139-144 (Grant Med. Coll., Bombay, India) Effects of 3 Stocogenic amino acids on frog's heart were compared. His escape phenomenon was observed when frog's heart Was perfused continuously with Ringer's soln. containing glutamic acid. Aspartic acid and histidine did not show such effect, although glutamic acid is one of the metabolic products of both. The site and mode of action of "te amino acids, especially glutamic acid, are discussed.

KJones

1878. UPTAKE AND METABOLISM OF TRITIATED NORADRENALINE IN THE ISOLATED CANINE HEART. C.A.Chidsey, RX.Kahler, L.L.Kelminson and E.Braunwald: Circulat. Res., 1963, 12, 220-227 (Cardiol. Branch, Nat. Heart Inst., Bethesda, Md., U.S.A.) ¹³⁷noradrenaline was infused into the blood-perfused Elated dog heart. Uptake was 74% in a single passage, ¹³⁷its subsequent spontaneous release was largely (39 to °Y%) as normetanephrine. Tyramine caused an increased release of unmetabolised noradrenaline. R.E.Moore

1879. EFFECT OF SPLENECTOMY ON CARDIOVASCULAR RESPONSE TO INJECTED METHYLCELLULOSE. C.E.Hall and O.Hall: Proc. Soc. exp. Biol., N.Y., 1962, 111, 153-156 (Carter Physiol. Lab., Univ. Texas Med. Branch, Galveston, Tex., U.S.A.) ¹³⁷Pleurectomised methylcellulose-treated rats developed significant cardiac hypertrophy compared with similarly seated intact animals. This is interpreted as reflecting increased damage caused by methylcellulose in animals deprived of one of the organs most concerned with removal. M.M.Shapland

1880. NUCLEIC ACID STUDIES IN EXPERIMENTAL CARDIOMEGLY. R-G.Sumner and H.D.McIntosh: Circulat. Res., 1963, 12, 170-175 (Dept. Med., Duke Univ. Med. Center, Durham, N.C., U.S.A.) Cardiac enlargement was induced in growing rats via the ¹³⁷emia of an Fe and Cu deficient diet (cow's milk). Total RNA and protein contents and the RNA:DNA ratio Dif greater in the enlarged hearts than in controls, but inf. tent and RNA concn. were not changed. It is "ferred that the myocardial cells enlarge. R.E.Moore

1881. LEFT VENTRICULAR OXYGEN UTILISATION IN INTACT DOGS : EFFECT OF SYSTEMIC HAEMOGYNYMATIC FACTORS. W.A.Neill, H.J.Levine, R.J. Gagman and R.Gorlin: Circulat. Res., 1963, 12, 163-169 (Med. Clin., Peter Bent Brigham Hosp., Boston, Mass. #1 u.s.A.) ¹³⁷O₂ uptake was linearly related to the product of mean systolic aortic pressure and systolic ejection period per min. in dogs under a variety of anaesthetics. R.E.Moore

1882. VARIATIONS IN SPONTANEOUS MOVEMENT, CARDIAC FREQUENCY AND RESPIRATORY FREQUENCY DURING SLEEP UNDER INFLUENCE OF VARIOUS STATES OF FATIGUE. G.Schaff, C.Marbach and J.J. Vogt: C.R.Soc. Biol., Paris, 1962, 156, 1517-1522 (Lab. de Physiol. appliquée, Fac. Méd., Strasbourg, France) There was no correlation between spontane-

ous movement, cardiac freq. and respiratory rate of *d* subjects, recorded continuously for 8 hr. during sleep. Spontaneous movement was weak during the early hr. of sleep but increased progressively towards morning. There was a decrease in cardiac and respiratory rate. Lack of sleep on previous nights decreased the early spontaneous movements but was without effect on heart and respiratory rate. Neither muscular work or a varying temp, during the previous day influenced the 3 parameters under study during sleep. (French) M.A.Price

1883. EFFECTS OF ALCOHOL AND COFFEE ON CARDIAC FREQUENCY, AND RESPIRATORY FREQUENCY DURING SLEEP. C.Marbach, G.Schaff and M.T. Schwertz: C.R. Soc. Biol., Paris, 1962, 156, 1522-1525 (Lab. de Physiol. appliquée, Fac. Méd., Strasbourg, France) In *d* subjects the effect of alcohol taken previously was to increase cardiac freq. during sleep. This increase was marked during the first half of the night. The respiratory rate was slightly increased throughout the period of sleep. Caffeine decreased cardiac freq. during sleep with a greater decrease during the second half of the night. There was no apparent effect on respiratory rate. (French) M.A.Price

1884. SLOWING OF HEART AT BEGINNING OF EXERCISE. F.N.Craig and E.G.Cummings: J. appl. Physiol., 1963, 18, 353-356 (Appl. Physiol. Branch, U.S. Army Chem. Res. Lab., Army Chem. Center, Md., U.S.A.) At the beginning of exercise at 18° an increase in heart rate was observed, but at 3° or after atropine injn. either a smaller increase, no change, or a decrease in heart rate was observed. H.C.Joies

1885. INCO-ORDINATION OF CARDIAC CONTRACTION IN CLINICAL CONDITIONS; AS JUDGED BY THE BALLISTOCARDIOGRAM AND THE PULSE DERIVATIVE. L.Starr and S.Ogawa: Amer. J. med. Sci., 1962, 244, 663-680 (Dept. Therapeut. Res., Univ. Pennsylvania Med. Sch., Philadelphia, Pa., U.S.A.) Simult. records of the first time deriv. of the pulse and of the ultra low-freq. b.c.g. permit a detailed analysis of abnormal myocardial dynamics. They also give information on peripheral circulation since it is possible to determine pulse wave velocity and rate of fall of the pressure during diastole. E.E.Hobbiger

1886. FUNCTION OF NORMAL AND HYPERTRPHIED HEARTS DURING PERfusion OF A MAIN CORONARY ARTERY WITH UNSATURATED BLOOD OR COLLOIDAL ISOTONIC SOLUTIONS AT SYSTEMIC PRESSURES. P.C.Petropoulos: Amer. Heart J., 1963, 65, 514-524 (Presbyterian Med. Center, San Francisco, Calif., U.S.A.) In acute occlusion of the ant. descending coronary artery ventricular fibrillation did not occur when the distal part of the artery was perfused for periods of 30 min. at systemic pressure with heparinised donor blood obtained from the right atrium of donor dogs (rate: 4 ml./min.) or with dextran soln. Ventricular fibrillation occurred in all animals when venous blood was given at low pressures of approx. 20 mm. Hg. In expt. on dog hearts hypertrophied as the result of an aorto-left atrial shunt there was also no ventricular fibrillation when the distal part of the cut coronary artery was perfused with venous blood at systemic pressure. P.F.Meyer

1887. CARDIAC DEFIBRILLATION WITH INTRACARDIAC INJECTION OF KC1. G.Friese, E.Nusser and H.Dengler: Z.Kreisl.-Foisch., 1963, 52, 152-163 (Med. Univ.

PHYSIOLOGY

Clin., (Ludolf-Krehl Clin.), Heidelberg, Germany) KCl, 30-40 mg./kg. inj. into the right atrium, terminated ventricular fibrillation induced electrically in anaesthetised cats; spontaneous conversion was an unlikely explanation as ventricular fibrillation was allowed to continue for several min. during which external cardiac massage was employed. The mean time interval before sinus rhythm was restored was 5 min. 27 sec. Only occasionally was it possible to defibrillate the heart with intracardiac adrenaline. Intracardiac procain amide stopped ventricular fibrillation but caused subsequent cardiac arrest which proved resistant to treatment.

(German) P.F. Meyer

1888. PATHOGENESIS OF ATRIAL INFARCTION. EXPERIMENTAL DATA. Cl.Chappel and D.S.Kahn: Amer. J. Path., 1962, 41, 455-463 (Ayerst Res. Lab., St. Mary's Mem. Hosp., Montreal, Canada) Rats fed normal or various salt diets with or without DOCA were inj. s.c. with isopropylnoradrenaline. A K deficient diet and pretreatment with DOCA both intensified the development of ventricular infarcts. The factors operating in the development of expt. atrial infarction are discussed. D.C.Scott

1889. QUANTITATION OF VALVULAR INSUFFICIENCY IN MAN BY ANGIOCARDIOGRAPHY. H.Sandler, H.T. Dodge, R.E.Hay and C.E.Rackley: Amer. Heart J., 1963, 65, 501-513 (Med. Serv., V.A. Hosp., Seattle, Wash., U.S.A.) A quant. estimate of regurgitant flow in valvular heart disease was obtained in 37 patients by comparing left ventricular stroke vol. calc. from biplane angiograms of the left ventricle with forward flow measured with the Fick or dye diln. method. Regurgitant flow 3-4 times the forward flow was found in patients with severe valvular incompetence. In 15 subjects, aortic or mitral valve orifice sizes as calc. from these data agreed closely with findings at operation or post-mortem examination. P.F. Meyer

1890. FIRST DERIVATIVE OF BRACHIAL PULSE. NORMAL STANDARDS AND ABNORMALITIES ENCOUNTERED IN HEART DISEASE. L.Starr and S.Ogawa: Amer. Heart J., 1963, 65, 482-494 (Dept. Therap. Res., Univ. Pennsylvania Sch. Med., Philadelphia, Pa., U.S.A.) The first deriv. of the brachial pulse was electrically recorded in 68 healthy subjects and in 107 patients. The pattern in health and disease is described. P.F.Meyer

1891. RELATIONSHIP BETWEEN FRACTIONS OF Q-T INTERVAL. E.Simonson, L.D.Cady, jun. and M.Woodbury: J. appl. Physiol., 1963, 18, 402-404 (Physiol. Hyg. Lab., Minnesota Univ., Minneapolis, Minn., U.S.A.) The regressions and correlations between the R-R, Q-T and QRS intervals, the S-T segment duration and T wave duration were determined in human subjects using a computer analysis. The regressions of all intervals were linear, the correlation of the R-R and Q-T interval was significant with all but the QRS interval and the contributing factor to the slope of the Q-T interval against heart rate was the length of the S-T segment. H.C.Jones

1892. FREQUENCY COMPONENTS AND POSITIONAL CHANGES IN ELECTROCARDIOGRAM OF ADULT RAT. E.T.Angelakos and P.Bernardini: J. appl. Physiol., 1963, 18, 261-263 (Physiol. Dept., Boston Univ. Med. Sch., Boston, Mass., U.S.A.) The QRS wave of the e.c.g. of rats was analysed and it was found that it could

be represented by sine wave freq. of 50-400 c/s. The QRS axis was sensitive to positional changes.

H.C.Jones

1893. EFFECTS OF HAEMODIALYSIS AND OF GLUCOSE-INSULIN ADMINISTRATION ON PLASMA POTASSIUM AND ON THE ELECTROCARDIOGRAM. B.Surawicz, A.S.Kunin and E.A.H.Sims: Circulat. Res., 1963, 12, 145-151 (Dept. Med., Univ. Vermont Coll. Med., Burlington, Vt., U.S.A.) Plasma K concn. in dogs under halothane was reduced the same amount by both procedures, and the e.c.g. changes were similar. R.E.Moore

1894. ELECTROCARDIOGRAPHS ANALYSIS BY A COMPUTER SYSTEM. C.A.Caceres: Arch. intern. Med., 1963, 111, 196-202 (Instrumentation Unit, Heart Dis. Control Program, Washington, D.C., U.S.A.)

E.E.Hobbiger

CIRCULATORY SYSTEM

1895. RHEOLOGY OF BLOOD AND FLOW IN THE MICROCIRCULATION. E.W.Merrill, E.R.Gilliland, G.Cokelet, H.Shin, A.Britten and R.E.Wells, jun.: J. appl. Physiol., 1963, 18, 255-260 (Dept. Chem. Eng., M.I.T., Cambridge, Mass., U.S.A.) The yield stress and stress-shear rate function of whole blood have been measured in a Couette type viscometer. The data obtained fit the Casson equation and the yield stress calc. from the equation equalled the measured yield stress within $\pm 10\%$. The yield stress was independent of temp. H.C.Jones

1896. NEW METHOD FOR INDIRECT RECORDING OF ARTERIAL PRESSURE IN UNANAESTHETISED RATS. B.Korol and W.McShane: J. appl. Physiol., 1963, 18, 437-439 (Microbiol. Dept., Med. Res. Lab., Chas. Pfizer and Co. Inc., Groton, Conn., U.S.A.) Mean arterial pressure in unanaesthetised rats has been measured using venous occlusion and an infants' ear-piece oximeter which measures the entrance of arterial blood. When measurements were compared with direct recordings in unanaesthetised rats they were found to be 8-10 mm. Hg lower using the oximeter. H.C.Jones

1897. METHODS OF ALTERING CIRCULATORY DYNAMICS TO IMPROVE ROENTGEN EXAMINATION OF THE CARDIOVASCULAR SYSTEM. B.Nordenström: Amer. J. Roentgenol., 1963, 89, 233-253 (Dept. Thoracic Radiol., Karolinska Sjukhuset, Stockholm, Sweden) A review. 38 ref. D.E.Evans

1898. SERVOANALYSIS OF CAROTID SINUS REFLEX EFFECTS ON PERIPHERAL RESISTANCE. A.M.Scher and A.C.Young: Circulat. Res., 1963, 12, 152-162 (Dept. Physiol. and Biophys., Univ. Washington Sch. Med., Seattle, Wash., U.S.A.) The isolated perfused carotid sinus of dogs and cats under chloralose was subjected to pressure changes. Systemic pressure responses varied according to the level of carotid pressur^{**} in the most sensitive carotid pressure range up to 8-fold (dogs) or 14-fold (cats) changes in systemic pressure occurred. R.E. Moore

PHYSIOLOGY

177

1899. MECHANISM OF ARTERIAL PRESSURE OSCILLATIONS CAUSED BY COMPRESSING CEREBRAL ARTERY. K.Sagawa: Jap. J. Physiol., 1963, 13, 1-13 (Dept. Physiol., Yokohama Univ. Sch. Med., Yokohama, Japan) The addition of a side pressure of ISO-tonic character on the carotid artery elicited sustained oscillations in the mean arterial pressure level of dogs, by recording the cerebral perfusion pressure and the cerebral blood flow simult., the roles of the Starling's resistance used to add side pressure were demonstrated. The expt. results are interpreted to reveal the feedback nature of arterial pressure oscillation elicited by adding toe side pressure upon the cerebral arterial pressure.

K.Jones

1900. EFFECTS OF STARVATION ON CARDIOVASCULAR SYSTEM OF TOE CHICKEN. J.A.Vogel and P.D.Sturkie: Proc. Soc. exp. Biol., N.Y., 1963, 112, 111-113 (Physiol. Sect., Rutgers Univ., New Brunswick, N.J., U.S.A.) White Leghorns were used to demonstrate the effect of starvation on cardiac behaviour. Animals were starved for 8 days and then many facets of their cardiophysiol. were investigated. Heart rate, systolic b.p. and body wt. all fell in almost linear fashion, if the animals were handled there was an enhancement of the heart rate almost to the normal (unstarved) value.

D.N.Wheatley

1901. VASCULAR SMOOTH MUSCLE: DUAL EFFECT OF CALCIUM. D.F.Bohr: Science, 1963, 139, 597-599 (Dept. Physiol., Univ. Michigan, Ann Arbor Mich., U.S.A.) The first part of the contractile response of helical strips of rabbit aorta to adrenaline is suppressed by elevation of Ca concn.; the second is potentiated. This suggests that the rate-limiting factor P* the former is membrane excitability (depressed by greased Ca), while that for the latter is the role that ?: Plays in coupling membrane excitation with the development of tension by the contractile protein (a function that is augmented by increased Ca). G.M.Lewis

1902. PREFERENTIAL SITES OF ATHEROMA AND HAEMODYNAMICS IN CURVES AND DIVISIONS OF VESSELS. K.Dropmann: Z.Kreisl.-Forsch., 1963, 52, 171-183 (Med. Univ. Clin., Munster-Westfalen, K.Germany) Considerations of pressure and flow relationships which obtain when streams divide and the to $\Delta^{10\%}$ in size and in the angle between them lead to suggestion that atherosomatous changes are likely to 4 $\Delta^{10\%}$ in the part of the arterial wall over which hydrostatic pressure is minimal.

(German) P.E. Meyer
PROPERTIES OF
NORMAL AND VARICOSE
STUDIED IN
Scand. J. cli

E.Arenander:
5, 37-44 (Dept.
Pharmacol., Univ. Goteborg, Sweden)

Varicose veins showed reduced contractility and extensibility compared with normal veins under various U&T conditions. This reduced contractility and extension of varicose veins are suggested to be amibuttle histol. demonstrable degeneration of the muscular and elastic components of the vessel wall. K.Jones

1903. CARDIOVASCULAR STUDIES ON COPPER-DEFICIT SWINE, n. MECHANICAL PROPERTIES OF AORTA. W.F.Coulson and W.H.Cames: Lab. Invest., 1962, 11, 1316-1 Salt La extension
behaviour of transverse loops of aorta from control and Cu-deficient swine was examined. The latter showed a 4-fold

tensile strength decrease probably due to alterations in elastin and collagen or the pattern of their mutual insertion.

A.M.Mackay

1905. RELEASE OF A THROMBOPLASTIC SUBSTANCE FROM ARTERIAL WALLS BY ADRENALINE. T.Shimamoto and T.Ishioka: Circulat. Res., 1963, 12, 138-144 (Dept. Clin. Physiol. and Med., Tokyo Med. and Dental Univ., Japan) Rabbit aortae were perfused and the perfusate tested for thromboplastic activity by its effect on the Ca clotting time of citrated plasma. Clotting time was prolonged by adrenaline in certain doses but not by noradrenaline, and the adrenaline effect was prevented by nialamide in vivo. R.E.Moore

1906. COMPARATIVE STUDY OF EFFECT OF ADRENALINE AND NORADRENALINE ON CARDIOVASCULAR SYSTEM OF TURTLE, ALLIGATOR, CHICKEN AND OPOSSUM. T.K.Akers and C.N.Peiss: Proc. Soc. exp. Biol., N.Y., 1963, 112, 396-399 (Dept. Physiol., Stritch Med. Sch., Loyola Univ., Chicago, 111, U.S.A.)

Cardiovascular responses of turtles, alligators, chickens and opossums were compared with i.v. injn. of adrenaline and noradrenaline. The duration of response to noradrenaline was longer in the opossum than to adrenaline and it is suggested that there is no sp. enzyme system to degrade noradrenaline whilst there is one for adrenaline. The opposite is true in the case of the chicken and the respective substances are believed to be the neurotransmitters in the animals concerned. D.N.Wheatley

1907. INFLUENCE OF INTRAVASCULAR PRESSURE ON VASCULAR RESPONSE TO ADRENALINE. E.Aschheim, B.W.Zweifach and M.B.Engelberg: Proc. Soc. exp. Biol., N.Y., 1962, 111, 238-241 (Dept. Path., N.Y. Univ. Med. Center, N.Y., U.S.A.) The vasoconstrictor effect of adrenaline on the isolated perfused rabbit ear varied with the perfusion pressure. The drop in flow caused by a given dose was a const. fraction of the original value, suggesting that tension developed by vascular smooth muscle depends on the initial stretch.

M.M.Shapland

1908. VASCULAR RESPONSES PRODUCED BY HISTAMINE BY ION TRANSFER. D.L.Abramson, S.Tuck, jun., A.M.Zayas, T.M.Donatello, L.S.W.Chu and R.E. Mitchell: J. appl. Physiol., 1963, 18, 305-310 (Dept. Phys. Med., Univ. Illinois Med. Coll., Chicago, 111, U.S.A.) Administration of histamine by ion transfer through the skin of the hand or forearm resulted in an increase in blood flow to these parts. Vasodilation also occurred in the opposite forearm and flushing of the face and neck was seen.

H.C.Jones

1909. NEUROGENIC COMPONENT OF CHRONIC RENAL HYPERTENSION. J.W.McCubbin and I.H.Page: Science, 1963, 139, 210-215 (Res. Div., Cleveland Clin. Fdn., Cleveland, Ohio, U.S.A.) Infusion of angiotensin or renin into dogs affects the sympathetic nervous system so that response to any drug that depends for its action on release of noradrenaline at the myoneural junction is increased. The direct vasoconstrictor action of angiotensin is not an essential part of the enhanced response. In dogs with acute and chronic expt. renal hypertension, the pressor response to tyramine was enhanced. The ability of angiotensin to intensify the effect of normal neurogenic vasomotor activity, together with an upward reset of the carotid sinus buffer mechanism may account for the neurogenic component of renal hypertension.

PHYSIOLOGY

1910. NATURE OF ARTERIAL HYPERTENSION. LH.Page: Arch, intern. Med., 1963, 111, 103-115 (Res. Div., Cleveland Clin. Fdn., Cleveland, Ohio, U.S.A.) A critical survey. 20 ref. E.E.Hobbiger

1911. USE OF CORONARY CINE-ARTERIOGRAPHY FOR ESTIMATION OF RELATIVE FLOW IN THE ANTERIOR DESCENDING CORONARY ARTERY IN DOGS AFTER EXPERIMENTAL SURGICAL CONSTRICTION. W.H. Sewell: Amer. J. Roentgenol., 1963, 89, 261-268 (V.A. Hosp., Oteen, N.C., U.S.A.) A radio-opaque catheter was passed from the carotid or femoral artery to the aortic bulb, and the tip positioned under fluoroscopic observation so that its jet impinged upon the orifice of the coronary artery. From observation of the width of the shadow and its rate of travel, changes in rate of flow could be calc. D.E.Evans

1912. PHASIC AND MEAN BLOOD FLOW IN CANINE SEPTAL ARTERY AND AN ESTIMATE OF SYSTOLIC RESISTANCE IN DEEP MYOCARDIAL VESSELS. R.W. Eckstein, T.W.Moir and T.E. Driscoll: Circulat. Res., 1963, 12, 203-211 (Dept. Med., Western Res. Univ. Sch. Med., Cleveland, Ohio, U.S.A.) Flow was monitored (orifice meter) and adjustable clamps placed on the pulmonary artery or aorta in dogs under morphine-chloralose with open chests. Elevation of right ventricular pressure increased the back-flow in early systole and reduced the mid-systolic forward flow. Pressures much in excess of aortic were required to cause forward flow in mid-systole when right ventricular pressure was high. Some 16% of the common left coronary flow entered the septal artery. R.E.Moore

1913. THEBESIAN DRAINAGE OF THE SEPTAL ARTERY. T.W.Moir, R.W.Eckstein and T.E.Driscoll: Circulat. Res., 1963, 12, 212-219 (Dept. Med., Western Res. Univ. Sch. Med., Cleveland, Ohio, U.S.A.) [ISIfl-albumin was inj. into the septal artery of dogs with open chests under morphine-pentobarbital. Diln. curves from various sampling points indicated that 80% of the flow in this artery (and hence about 13% of left coronary artery flow) drains directly into the right ventricle. R.E.Moore

1914. PHYSIOLOGICAL ROLE OF CORONARY CONSTRICCTOR FIBRES. I. EFFECT OF CORONARY VASOMOTORS ON SYSTEMIC BLOOD PRESSURE. II. ROLE OF CORONARY VASOMOTORS IN METABOLIC ADAPTATION OF CORONARIES. M.Szentiványi and Ajuhász-Nagy: Quart. J. exp. Physiol., 1963, 48, 93-104, 105-116 (Physiol. Inst., Med. Univ., Debrecen, Hungary)

The coronary constrictor fibres of dogs under morphine-chloralose anaesthesia were found to be tonically active. The activity was increased by clamping the common carotids. A reflex fall in b.p. was seen when coronary constriction was increased, and this did not occur after vagotomy.

II. In dogs under morphine-chloralose anaesthesia the metabolic adaptation of the coronaries measured by the hyperaemic response, was increased by clamping the common carotids. This effect was abolished by blocking the coronary vasomotor pathways. It is suggested that constrictor nerve tone is important for the metabolic adaptation of the coronaries. H.C.Jones

1915. EFFECTS OF RESPIRATION ON AORTIC PRESSURE AND FLOW. R.Shabetai, N.O.Fowler and M.Gueron: Amer. Heart J., 1963, 65, 525-533 (Cardiac Lab., Cincinnati Gen. Hosp., Cincinnati, Ohio, U.S.A.)

In control animals, respiratory changes in aortic pressure were attributable to an inspirator/ decrease in left ventricular stroke vol., and transmission of the inspirator fall in intra-thoracic pressure into the aorta. During induced cardiac tamponade the increase in the inspiratoiy decline of aortic pressure (pulsus paradoxus) was caused by a greater fall in left ventricular stroke vol. and not by a decrease in peripheral arterial resistance or greater decline in intrathoracic pressure. During tracheal obstruction the exaggerated inspiratory decline in aortic pressure was caused by increased fluctuations in intra-thoracic pressure and not by greater inspiratory fall in left ventricular stroke vol. The phase relationship between aortic and pulmonary arterial pressures was related to the slope of the intrapleural pressure as it climbed from the bottom of inspiration to its expiratory value. P.F. Meyer

1916. PULMONARY CAPILLARY BLOOD VOLUME IN DOG: EFFECTS OF 5-HYDROXYTRYPTAMINE. R.C. Young, H.Nagano, T.R.Vaughan, jun. and N.C.Staufr J. appl. Physiol., 1963, 18, 264-268 (Cardiovasc. Re* Inst., Univ. California Med. Sch., San Francisco, Calif., U.S.A.) Changes in pulmonary capillary vol. were estimated from changes in pulmonary diffusing capacity for CO in anaesthetised dogs. 5HT administra* tion resulted in increases in pulmonary capillary blood vol. and it is concluded that 5HT causes pulmonary ven^ constriction. H .C Jones

1917. EFFECT OF ALVEOLAR HYPO-OXIA ON ZONAL DISTRIBUTION OF PULMONARY BLOOD FLOW. K.T.* Fowler and J.Read: J. appl. Physiol., 1963, 18, 244' 250 (Med. Dept., Univ., Sydney, Australia) Redistribut. of pulmonary blood flow was studied by means * cardiogenic oscillations in expired gas tensions after in' due tion of alveolar hypo-oxia. In some subjects there was no vascular response but in others there was a respo^ consisting of preferential lower zone vasoconstriction. H.C.Jones J

1918. EVIDENCE FOR PULMONARY VENOCOMSTRICTM IN BRISKET DISEASE. H.Kuida, TJ.Tsagaris and H^' Hecht: Circulat. Res., 1963, 12, 182-189 (Dept. Int. Med., Univ. Utah Coll. Med., Salt Lake City, Utah, U.S.A.) The acute disease, a syndrome of pulmonary hypertension and heart failure in cattle COD' sequent upon exposure to high altitude, was associated with an increased pressure gradient between a pulmonary artery wedged catheter and the left ventricle at the end of diastole in some animals. R.E.Moore

1919. CARDIOGENIC OSCILLATIONS AS INDEX OF PULMONARY BLOOD FLOW DISTRIBUTION. K.T.PJ lerand J.Read: J. appl. Physiol., 1963, 18, 233-24J (Med. Dept., Univ., Sydney, Australia) A relating ship has been developed between the amplitude of cat^ genic oscillations in expired gas tensions and the ratio of blood flows through the upper and lower zones of &L erect human lung. The amplitude of the oscillations P^ been measured and the ratio of upper to lower zone W^ flow determined with a reproducibility of ± 20%. H.C.Jone*

1920. BALANCE OF BLOOD FLOW AND GAS EXCHANj DURING PARTIAL HEART-LUNG BYPASS. M.A.H. and P.M.Galletti: J. appl. Physiol., 1963, 18, 251 254 (Physiol. Dept., Emory Univ., Atlanta, Ga., U.S.A.) During partial heart-lung bypass an increas in the extracorporeal blood flow results in a proportional decrease in pulmonary blood flow, thus the total tissue

PHYSIOLOGY

179

penus is not significantly different from normal. The decrease in pulmonary blood flow is accompanied by a less marked decrease in pulmonary ventilation.

H.C.Jones

1921. PRESSOR EFFECT OF INCREASED CEREBROSPINAL FLUID PRESSURE AND VERTEBRAL ARTERY OCCLUSION WITH AND WITHOUT ANAESTHESIA. C.J. Dickinson and J.W.McCubbin: *Circulat. Res.*, 1963, 12, 190-202 (Res. Div., Cleveland Clin. Fdn., Cleveland, Ohio, U.S.A.) Increasing the c.s.f. pressure in dogs (intraventricular cannula) was associated with systemic pressor responses which were slow to establish (i-2 min.) and slow to accommodate. Pentobarbital reduced the response. R.E.Moore

1922. ARTERIAL BLOOD SUPPLY TO CAT DIAPHRAGM WITH A NOTE ON VENOUS DRAINAGE. T.J.Biscoe and A.Bucknell: *Quart. J. exp. Physiol.*, 1963, 48, 27-33 (War Dept., Chem. Def. Exp. Est., Porton Down, Salisbury, Wilts., England) The blood supply to the diaphragm of cats has been shown to arise from 3 main sources: the 8th-13th intercostal arteries, the internal mammary arteries and the abdominal aorta. Individual variations were often seen. The venous blood drains into the intercostal veins, the internal mammary vein, and the inf. vena cava. H.C.Jones

1923. EFFECT OF ETHYL ALCOHOL UPON SPLANCHNIC HAEMODYNAMICS. S.M.Horvath and P.W.Willard: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111, 295-298 (Dept. Phys. Educ., Univ. California, Coleta, Calif., U.S.A.) No significant change was observed in splanchnic blood flow during or after alcohol infusion although metabolic studies indicate hepatic depression. M.M.Shapland

1924. PORTAL VEIN LIGATION IN MICE; ^ T A L HYPERTENSION, COLLATERAL CIRCULATION AND BLOOD FLOW. A.W.Cheever and K.S.Warren: *J.appl. Physiol.*, 1963, 18, 405-407 (Parasitic Dis. Lab., N.I.H., Bethesda, Md., U.S.A.) A technique is described for partial and complete portal ligation. Collateral circulation was well developed 3 days after ligation. There was an initial ^ in Portal b.p. which eventually returned to normal and die hepatic blood flow was not significantly different from control after 3 days. H.C.Jones

1925. RENAL VASOCONSTRICTION INDUCED IN DOG BY OCCLUSION OF THE PORTAL VEIN. H.Umarch and M.Tanche: *C.R. Soc. Biol.*, Paris, 1962, J56, 1438-1440 (List. Physiol., ^ c. Med., Lyon, France) Occlusion of the portal vein in spinal dog faulted in vasoconstriction of the Perfused kidney in g. This effect was not obtained when the splanchnic vein were sectioned. The vasoconstriction occurred ^ w/ distension of the mesenteric vascular bed & * " n stimn. of nerve endings in the regioi of & e "Sature. (French) M^Price

1926. LOCAL REGULATION OF EFFECTIVE BLOOD FLOW IN MUSCLE. C.Hyman, R.L.Paldino and E. Zimmermann: *Circulat. Res.*, 1963, 12, 176-181 (Dept. Physiol., Univ. S. California Sch. Med., Los Angeles, Calif., U.S.A.) Microclearance of water from the rat spinotrapezius and macroclearance of ^ from the rabbit gastrocnemius were used as indicators of "active" blood flow. In almost all e*pt,ja forced Nation of blood flow by temporary occlusion or by

local heating was followed by an exact quant, repayment of the deficit or excess. R.E.Moore

NERVOUS SYSTEM

1927. PERIODIC NATURE OF SPONTANEOUS PERIPHERAL NERVOUS SYSTEM ACTIVITY. A.A.Alexander, R.Roessler and N.S.Greenfield: *Nature*, Lond., 1963, 197, 1169-1170 (Wisconsin Psychiat. Inst., Univ. Wisconsin, Madison, Wis., U.S.A.)

Spontaneous rhythmic activity in peripheral physiol. systems was investigated by means of a variance spectrum analysis of resting levels of the psycho-galvanic response, finger blood vol., heart rate and e.m.g. The findings are discussed in relation to the hypothesis of individual stereotypy. GM Lewis

1928. SOME PROPERTIES OF CONDUCTANCE CHANGES AT THE END-PLATE MEMBRANE DURING THE ACTION OF ACETYLCHOLINE. N.Takeuchi: *J. Physiol.*, Lond., 1963, 167, 128-140 (Dept. Physiol., Univ. Utah Coll. Med., Salt Lake City, Utah, U.S.A.)

By use of the electroporation application of ACh at an end-plate of frog's sartorius the reversal membrane potential of the ACh potential was investigated in various ionic concn. of the soln. The reversal potential depended on the outside concn. of Na and K, but not on Cl⁻ in wide range of concn. changes. The relations between the reversal potential and the external concn. of Na or K suggest that the ratio of Na and K conductance of the end-plate membrane produced by ACh is altered by the external concn. of K. *

1929. EFFECTS OF CALCIUM ON CONDUCTANCE CHANGE OF TOE END-PLATE MEMBRANE DURING TOE ACTION OF TRANSMITTER. N.Takeuchi: *J. Physiol.*, Lond., 1963, 167, 141-155 (Dept. Physiol., Univ. Utah Coll. Med., Salt Lake City, Utah, U.S.A.)

In the end-plate of frog's sartorius an increase in external Ca concn., [CSLIQ], changed the reversal potential of end-plate current to the neg. side. Increasing [Ca]_o changed slopes of the relationships between the reversal potential and the external concn. of Na or K. In hi^h [Ca]_o a weak localised shortening was observed around the tip of ACh pipette accompanied with the small ACh potential. The clamping current through an end-plate produced by ACh suggests that increasing [Ca]Q reduces the Na conductance with little or no effect on K conductance and the end-plate membrane may become slightly permeable to Ca ion by the ACh action. *

1930. EFFECT OF X-RAYS ON ELECTRICAL PROPERTIES OF MAMMALIAN NERVE AND MUSCLE. N.Allen and J.G.Nicholls: *Proc. Roy. Soc. B.*, 1963, 157, 536-

561 (Univ. Lab. Physiol., Oxford, England) Irradiation of isolated rat phrenic-diaphragm prep, by 70-150 kr X-rays irreversibly blocks neuromuscular transmission. The block is not accompanied by any change in the size of action or resting potentials, membrane const, or miniature potentials recorded with intracellular electrodes, or in the size of action potentials recorded in the nerve. Records made at the motor end plate showed that the cause of the block is a 'presynaptic' failure of impulse

PHYSIOLOGY

propagation in the i.m. part of the nerve, possibly by depolarisation of points where the axons branch.

G.M.Lewis

1931. BEADING PHENOMENA OF MAMMALIAN MYELINATED NERVE FIBRES. S.Ochs: *Science*, 1963, 139, 559-560 (Dept. Physiol., Indiana Univ. Med. Center, Indianapolis, Ind., U.S.A.) Fresh nerves from rabbits and rats, when subjected to a small stretch, show a beading phenomenon in which the larger fibres appear as a series of dilations and constrictions at intervals of 40-75 μ . The effect is reversed quickly on relaxation of the nerve and is not an artifact of the special technique used to show the phenomenon.

G.M.Lewis

1932. CONDUCTION VELOCITY AND RESIDUAL LATENCY IN THE HUMAN ULNAR NERVE AND THE EFFECTS ON THEM OF ETHYL ALCOHOL. M.D.Low, J.V.Basmajian and C.M.Lyons: *Amer. J. med. Sci.*, 1962, 244, 721-730 (Dept. Anat., Queen's Univ., Kingston, Ont., Canada) When the blood alcohol level rises above 100 mg./100 ml., neuromuscular transmission is facilitated. The degree of facilitation is directly related to the blood alcohol level. E.E.Hobbiger

1933. PORPHYRIA AND NEURONAL DYSFUNCTION. G.W.Holt: *Amer. J. med. Sci.*, 1963, 145, 95-108 (1829 High St., Denver, Colo., U.S.A.) A review, illustrated by case reports. 55 ref. E.E.Hobbiger

1934. ACTIVITY OF FUSIMOTOR FIBRES INNERVATING MUSCLE SPINDLES IN THE INTERCOSTAL MUSCLES OF THE CAT. T.A.Seais: *Nature*, Lond., 1963, 197, 1013-1014 (Dept. Physiol., Australian Nat. Univ., Canberra, Australia) Recordings were made in cats of the efferent discharges present in more than 60 isolated filaments that innervated either the external or internal intercostal muscles. Spikes of 2 distinct sizes with distinct patterns of discharge were observed, correlating with expiratory and inspiratory phasing of activity. The activity of motor units was correlated with the large spikes so that the small spikes must arise in fusimotor fibres. Inhalation of CO₂ enhances and hyperventilation abolishes the periodic discharges. It is concluded that intercostal muscle spindles are regulated through their fusimotor fibres by a central control.

G.M.Lewis

1935. EFFECT OF OESTRADIOL ON SPINAL CORD CONVULSION IN DEVELOPING RATS. A.Vemadakis and P.S.Timiras: *Nature*, Lond., 1963, 197, 906 (Dept. Physiol., Univ. California, Berkeley, Calif., U.S.A.) 1 mg./kg. oestradiol was administered to rats daily from the 8th to 11th day after birth and spinal cord convulsions elicited at 12 and 21 days after birth. Oestradiol treatment significantly decreased the duration of flexion and increased the reflex excitability of the spinal cord.

G.M.Lewis

1936. EFFECTS OF STIMULATION OF CEREBELLAR AND THALAMIC NUCLEI UPON SPINAL a MOTONEURONES OF CAT. K.Sasaki and T.Tanaka: *Jap. J. Physiol.*, 1963, 13, 64-83 (Dept. Physiol., Fac. Med., Univ., Kyoto, Japan) The cerebellar control over the spinal function was analysed by testing the effect on the spinal monosynaptic reflex and by recording intracellular potentials from a-motoneurones in lumbar segments of cat. The stimulating effects of the ventral-lat. nucleus of the thalamus on the a-motoneurones were also examined-

K.Jones

1937. SYNAPTIC TRANSMISSION AT SUPERIOR CERVICAL GANGLION RE-INNERNATED BY PHRENIC NERVE F.Alonso-deFlorida, R.Zapata, L.Ramirez and E.Kabela: *Life Sci.*, 1963, No.3, 163-169 (Dept. de Fisiol., Escuela de Med., U.N.A.M., Ciudad Univ., Mexico, D.F.) The action potential of the sup. cervical ganglion of cat was usually simple, the component waves, when composite, varying among different ganglia. There was a one-to-one relationship between input and output volleys, convergence, recruitment, prolonged facilitation and fatigue. But quant. differences between normal and re-innervated ganglia were observed. K.Jones

1938. ROLE AND ORIGIN OF NORADRENALINE IN THE SUPERIOR CERVICAL GANGLION. H.Reinert: *J. Physiol.*, Lond., 1963, 167, 18-29 (Pharmacol. Dept., Pfizer Ltd., Sandwich, Kent, England) Noradrenaline was detected in the outflow of isolated perfused normal and denervated ganglia of cats, its concn. ranging from 2-16 mfig./ml. After orthodromic and antidromic stimn. of normal and antidromic stimn. of denervated ganglia an increase of noradrenaline in the outflow is observed. Repeated administration of MAO inhibitors increases the noradrenaline content of ganglia of rabbits but the height of the evoked action potential recorded in vitro remains unchanged. After reserpine the evoked ganglionic action potential increases gradually; identical increases occur, however, in control expt., and no correlation was found between the degree of amine depletion and the potentiation of action potential after reserpine. The progressive increase of the action potential was absent, however, when recording was done in vitro (rabbits) or when dehydration in vivo was prevented by continuous infusion of saline soln. (cats). Noradrenaline released from ganglia originates from the posV ganglionic adrenergic neurones and under physiol. conditions this noradrenaline does not affect the release of ACh or its action on the subsynaptic soma membrane. *

1939. SOME PROPERTIES OF AFFERENT PATHWAY IN FROG CORNEAL REFLEX. K.Kornacker: *Exp. Neurol.*, 1963, 7, 224-239 (Dept. Biol. and Res. Lab. Electron. ics, M.I.T., Cambridge, Mass., U.S.A.) The sped'ficity of the stimulus of the corneal reflex in the frog w^{as} examined by recording from the medulla oblongata at the level of the sixth nerve nucleus. P.W.Nathan

1940. EYE-CENTERING AND VESTIBULO-OCULAR REFLEX IN MAN. G.H.Begbie: *J. theoret. Biol.*, 1963 4, 215-222 (Dept. Physiol., Univ., Edinburgh, Scotland) .The vestibulo-ocular reflex is considered as the manifestation of a control system which tends to keep the eyes centered in the head. An equation is derived to describe the behaviour of the system in the absence of vision.

C.F.Blane

1941. EFFECT OF UNILATERAL EYE REMOVAL ON CHOLINESTERASE ACTIVITY OF OPTIC TECTUM & ADULT FROGS. A.Hess: *Anat. Rec.*, 1961, 140, 2» 305 (Dept. Anat., Univ. Sch. Med., St. Louis, Mo., U.S.A.) Removal of one eye in adult frogs causes * reduction in the neuropil in the superficial tectal layer* of the contralat. side, but the 2 halves of the brain can't not be differentiated from each other after cholinesterase⁶ staining. It is concluded that the cholinesterase is pro^{bly}ably located in the neurones.

F.Beck

1942. INFLUENCE OF MICRO-ELECTRODES ON NEUR^A DISCHARGE PATTERNS IN THE AUDITORY SYSTEM*

P.E.Stopp and I.C.Whitfield: J. Physiol. Lond., 1963, 167, 169-180 (Neurocommunication Res. Unit., Univ. Birmingham, England) Records were made from single units in the trapezoid body of the cat while simultaneously a test electrode was inserted into the corresponding coeruleus nucleus. Changes in the spontaneous firing rate were observed which averaged about 20% ($p < 0.01$)¹⁾. Such changes might be either increases or decreases according to the position of the test electrode. There was in general no relation between the stimulus freq. for the test electrode response and that for the recording electrode response, nor did existing grid current make any effect. So that the effect appears to be a non-sp. one due simply to the presence of the electrode in the nuclear mass.

W43. MIDBRAIN RETICULAR INFLUENCES UPON SINGLE NEURONES IN LATERAL GENICULATE NUCLEUS.

T.Ogawa: Science, 1963, 139, 343-344 (Dept. Physiol., Univ. Sydney, Australia) Study of the effect of electrical stimm. of the cat midbrain reticular formation upon patterns of discharge of single lat. geniculate neurones was studied using a 256-channel sealer analyser. Stim. increased the rate of spontaneous discharge of geniculate neurones and enhanced their ability to respond to intermittent light. G.M.Lewis

1944. ACTION OF BLOOD PRESSURE ON ASCENDING RETICULAR ACTIVATING SYSTEM WITH SPECIAL REFERENCE TO ADRENALINE-INDUCED E.E.G.

AROUSAL. W.Baust, H.Niemczyk and J-Vieth: Electroenceph. clin. Neurophysiol., 1963, 15, 63-78 (Physiol. Inst., Univ., Heidelberg, Germany) In cats rise of b.p., following adrenaline, vasopressin or mechanical induction, was accompanied by arousal. When b.p. was held const. during adrenaline inj. arousal was delayed and of shorter duration. Local infusion of saline into mesencephalic reticular formation also caused arousal. The b.p. rise is the predominant factor in so-called adrenaline-arousal. C.B.B.Downman

1945. OESTRADIOL: EVIDENCE FOR ITS DIRECT EFFECT ON HYPOTHALAMIC NEURONES. R.F.M.Newton: Science, 1963, 139, 223-224 (Dept. Biol. Princeton Univ., Princeton, N.J., U.S.A.)

¹⁾Plantation of oestradiol directly into the arcuate nucleus of the hypothalamus of rats causes a decrease in the number of the nucleoplasm of the neurones, to 20-30%. Plants in the mammillary nucleus caused similar effects. These changes were accompanied by atrophy. Return to that earned by hypophysectomy of the ovaries and uterus of the rat and testes and accessory glands suggested that these hypothalamic neurones are 30-40% sensitive to circulating oestrogen, which may decrease synthesis of some humoral factors. G.M.Lewis

1946. HYPOTHALAMIC TEMPERATURE IN CAT DURING READING AND SLEEP. T.Adams: Science, 1963, 139, 610 (Dept. Physiol., Univ. Washington Sch. Med., Seattle, U.S.A.)

Ant. hypothalamic temp. 38.5°C in unanaesthetised cats resting at air temp. 20-22°C. Chronically implanted thermistor bead. Fresh cold milk (5%) caused an immediate drop in hypothalamic temp., and a period of 10-15 min. at body temp. During sleep is approx. 1°C lower and characterised by widely varying, slow freq. oscillations, compared with the higher, more precisely controlled temp. when awake. G.M.Lewis

1947. HYPOTHALAMIC STIMULATION AND ASCORBIC ACID CONTENT OF ENDOCRINE GLANDS OF THE ALBINO RAT. J.Snyder and S.A.D* Angelo: Proc. Soc. exp. Biol., N.Y., 1963, 112, 1-4 (Daniel Baugh Inst. Anat., Jefferson Med. Coll., Philadelphia, Pa., U.S.A.) Electrical stimm. of the pre-optic and supra-optic regions of the hypothalamus caused adrenal hypertrophy but did not affect the ascorbic acid level in the ant. pituitary. The onset of oestrus was delayed. No change in ascorbic acid level was found in the adenohypophysis of rats rendered persistently in oestrus by rostral hypothalamus electrocautery previously. D.N.Wheatley

1948. INFLUENCE OF TEMPERATURE ON BALANCE BETWEEN EXCITATORY AND INHIBITORY CEREBRAL SYSTEMS. A CONTRIBUTION TO THE CAUDATE-HYPOTHALAMIC ANTAGONISM. M.Kawakami and E.Gellhom: Electroenceph. clin. Neurophysiol., 1963, 15, 230-237 (Lab. Neurophysiol., Univ. Minnesota, Minneapolis, Minn., U.S.A.)

Recording electrical activity of exposed cortex in immobilised cats, with and without high-freq. lesions in post. hypothalamus, the effect of changes of body temp. (37-25°) was observed on spontaneous spindles and on those induced by caudate stimm. Falling temp. affects both types of spindle similarly but the changes are absent with hypothalamic lesions or with Dial-urethane anaesthesia. Falling body temp. affects tonic hypothalamic activity. C.B.B.Downman

1949. MIDBRAIN COURSE OF DESCENDING PATHWAYS MEDIATING SHAM RAGE BEHAVIOUR. G.Carli, A. Malliani and A.Zanchetti: Exp. Neurol., 1963, 7, 210-223 (Inst. Patol. Med., Univ. Siena, Italy)

In thalamic cats the lat. hypothalamus was stim. electrically to induce sham rage behaviour; the effect of various lesions on this behaviour was observed. P.W.Nathan

1950. THALAMIC MECHANISMS INVOLVED IN CORTICAL DESYNCHRONISATION AND RECRUITING RESPONSES. J.D.Schlag and F.Chaillet: Electroenceph. clin. Neurophysiol., 1963, 15, 39-62 (Dept. Anat., Sch. Med., Univ. California, Los Angeles, Calif., U.S.A.)

In flaxedil-immobilised or encéphale isolé cats, mesencephalic transection prevented e.g. arousal from stimm. of intralaminar and midline thalamic nuclei, and cortical recruiting responses could not be blocked. Partial interruption at meso-diencephalic junction sparing tegmental reticular system, and also other transverse and longitudinal lesions had the same results. C.B.B.Downman

1951. EXCITABILITY CHANGES IN NON-SPECIFIC THALAMIC NUCLEI DURING CORTICAL SPREADING DEPRESSION IN THE RAT. J.Bures, O.Buresová, T. Weiss and E.Fifková: Electroenceph. clin. Neurophysiol., 1963, 15, 73-83 (Inst. Physiol., Czechoslovak Acad. Sci., Prague, Czechoslovakia)

Firing rate of non-sp. thalamic units was recorded during unilateral spreading depression of cortex in curarised unanaesthetised, or anaesthetised, rats. Without anaesthetic or with chloralose there was lateralisation of effect, but with Dial effect was bilat. Recruiting responses from the non-sp. thalamus are reduced by spreading depression in the overlying cortex. Findings indicate descending cortical influence on non-sp. thalamic regions. C.B.B.Downman

1952. ELECTROPHYSIOLOGICAL STUDIES OF SUB-CORTICAL-CORTICAL RELATIONS IN MAN. E.M. Housepian and D.P.Purpura: Electroenceph. clin.

PHYSIOLOGY

Neurophysiol., 1963, 15, 20-28 (Dept. Neurol. Surg., College Physn. and Surgn., Columbia Univ., New York, N.Y., U.S.A.) In dyskinetic patients, low freq. stimn. of non-sp. thalamic projection system caused recruiting responses. These could be distinguished from augmenting responses evoked by stimn. of sp. thalamo-cortical paths, and from capsular, radiation, and striatal activation. Non-sp. nuclear stimn. also caused increase of tremor and arousal, while sp. relay stimn. did not. C.B.B.Downman

1953. HIPPOCAMPAL ABLATION AND PASSIVE AVOIDANCE. R.L.Isaacson and W.O.Wickelgren: *Science*, 1962, 138, 1104-1106 (Dept. Psychol., Univ. Michigan, Ann Arbor, Mich., U.S.A.) Rats were trained to enter a small food compartment, when hungry, for a food reward, then given an electric shock when eating. Rats with cortical lesions would not enter the box subsequently for several days, but this avoidance reaction was very slight and transient with animals with bilat. hippocampal ablation. G.M.Lewis

1954. 'CAUDATE-INDUCED' CORTICAL POTENTIALS. COMPARISON BETWEEN MONKEY AND CAT. S.Goldring, L.U.Anthony, P.E.Stohr and J.L.O'Leary: *Science*, 1963, 139, 772 (Beaumont-May Inst. Neurol., Washington Univ. Sch. Med., St. Louis, Miss., U.S.A.) In the monkey, caudate stimn. never produced cortical responses, and only activation of the internal capsule evoked the potential complex which has been attributed to caudate stimn. in the cat. G.M.Lewis

1955. UNIT ACTIVITY IN TEMPORAL CORTEX DURING AMYGDALOID SEIZURES IN CATS. S.Yamamoto: *Electroenceph. clin. Neurophysiol.*, 1963, 15, 221-229 (Dept. Neurol. Neurosurg., McGill Univ., Montreal, Canada) Immobilised cats with minimal thiopentone showed activity of units in ectosylvian and sylvian cortices following amygdaloid stimn. This was accompanied by electrocorticographic pattern of arousal, especially in auditory area. 56.8% of units showed increase of spontaneous activity, 27.4% showed no change, while 15.8% showed reduced activity; these changes were usually sustained during the stimn. Amygdaloid stimn. temporarily depressed click responses though unit responses were facilitated. C.B.B.JDownman

1956. PARTICIPATION OF CORTICAL SENSORY AREAS IN THE ELABORATION OF EXTRAPYRAMIDAL MOTOR RESPONSES. P.Ascher, Djassik-Gerechenfeld and P. Buser: *Electroenceph. clin. Neurophysiol.*, 1963, 15, 246-264 (Lab. Neurophysiol. Comp., Fac. Sci., Paris, France) In cats under chloralose anaesthesia, the generalised jerks occurring on abrupt visual acoustic or somaesthetic stimn. are accompanied by long-latency discharges in lumbo-sacral ventral roots (L.6, L.7, S.1). These persist after bilat. ablation of motor cortex or interruption of both bulbar pyramids. They may be considered essentially extrapyramidal. (French) C.B.B.Downman

1957. EFFECT OF SENSORY STIMULATION UPON MINOR TREMORS IN MAN. T.Ozaki, K.Sato, T. Awazu, K.Mimura, N.Honda, S.Teramoto and K. Kitajima: *J&pJ.Physiol.*, 1963, 13, 24-32 (2nd Dept. Physiol., Nagasaki Univ. Sch. Med., Nagasaki, Japan) The effects of rhythmic or random photic and sonic stimn. on minor tremor [MT] in human body surface were studied. From the expt. data, it is suggested that the central process of the neuromuscular system such as

augmentation and inhibn. might be represented respectively by the increase and decrease of driven MT during various sensory stimn. K.Jones

1958. FUNCTIONAL ROLE OF CORTICAL ACOUSTIC AREAS IN EXCITATORY AND INHIBITORY PROCESSES IN ACOUSTIC CONDITIONED REFLEX. M.Tanaka: *Jap. J. Physiol.*, 1963, 13, 33-53 (Dept. Physiol., Fac. Med., Kyoto Univ., Japan) In dogs whose cortical acoustic areas or sub-areas were bilat. removed, the pos. cond. refl. as excitatory processes were essentially unimpaired. From this and other data, it is suggested that the excitatory process in the acoustic cond. refl. can be compensated by remaining cortical areas or subcortical centres. However, for the satisfactory fulfilment of the inhibitory process, the presence of the acoustic area was indispensable. K Jones

1959. RETICULAR MODIFICATION OF SOMATO-SENSORY CORTICAL RECOVERY FUNCTION. M.Schwartz and CShagass: *Electroenceph. clin. Neurophysiol.*, 1963, 15, 265-271 (Psychiat. Dept., State Univ. Iowa, Iowa City, Iowa, U.S.A.) In gallamine-immobilised cats somatosensory cortical recovery of evoked activity on peripheral nerve stimn. was estimated by the conditioning-test stimulus pair technique Mesencephalic reticular formation stimn. speeded recover by an effect on the thalamic relay. These appear to be 2 reticular mechanisms each affecting different portions of the recovery curve. Change of response amplitude is at least partially independent of mechanisms of early recovery effects. C.B.B.Downman

1960. RESPONSE ARREST ASSOCIATED WITH CORTICOFUGAL PROJECTION OF CHEMICALLY INDUCED LOCAL SEIZURE DISCHARGE. D.E.Fleming: *Electroenceph. clin. Neurophysiol.*, 1963, 15, 84-90 (Div. Neurol., Univ. Utah Coll. Med., Salt Lake City, Utah, U.S.A.) Cats with chronic indwelling cortical and subcortical electrodes and ventricular catheter were trained to give flexion response to repetitive click stimn* ACh-induced seizure abolished the conditioned response only when there was corticofugal discharge to subcortical reticular system, whereas conditioned breathing changes were unaffected. C.B.B.Downman

1961. ELECTROCORTICAL ACTIVITY IN THE RAT X-IRRADIATED DURING EARLY DEVELOPMENT. M.B.H. B.G.Clendinnen and J.T.Eayrs: *Electroenceph. clin. Neurophysiol.*, 1963, 15, 91-104 (Dept. Anat., Med. Sch., Edgbaston, Birmingham, England) X-irradiation of foetal rats caused disorganisation of development of cortex and of corpus callosum. Accompanying changes in electro-cortical activity were related to the structural changes but were less than expected. Recruiting responses were relatively little affected, and the role of thalamo-cortical integration in aspects of spontaneous activity is discussed. C.B.B.Downman

1962. COMPARISON OF EFFECTS OF ELECTROCORTICAL ACTIVITY OF GENERAL BODY COOLING AND LOCM COOLING OF SURFACE OF BRAIN. L.J.Bindman, O& Lippold and J.W.T.Redfearn: *Electroenceph. clin. Neurophysiol.*, 1963, 15, 238-245 (Dept. Physiol., Univ. Coll., London, England) In anaesthetised rat[†] cortex was locally cooled by surface pool of cooled fluid[‡] applied to an exposed region. Cooling the somatosensory cortex increased size of second pos. and neg. waves of evoked potential. Background activity decreased and

PHYSIOLOGY

183

cortical surface became more neg. Effects reversed on warming. Local cooling increases excitation within cortex, possibly by altered synaptic activity.

C.B.B.Downman

1963. EFFECT OF TELENCEPHALIC ABLATIONS ON AMPLITUDE OF POTENTIALS IN THE CENTRE MEDIAN EVOKED BY SOMATIC STIMULATION. M.Meulders, J.Mission, J.Colle and D.Albe-Fessard: *Electroenceph. clin. Neurophysiol.*, 1963, 15, 29-38 (Centre d'Etudes Physiol. Nerveuse, 4 Av. Gordon Bennett, Paris, France) Evoked potentials in centre median [CM] following somatic stimn. are greatly increased in amplitude when the cat passes from waking into chloralose anaesthesia. After wide telencephalic ablations the CM response is large and unaffected by chloralose. In the awake or thalamic cat, but not the chloralosed cat, external stimn. and midbrain reticular stimn. cause reduction of CM response.

(French) C.B.B.Downman

1964. DEXINHIBITION AFTER PREFRONTAL LESIONS AS A FUNCTION OF DURATION OF INTERTRIAL INTERVALS. S.Brutkowski and J.Dabrowska: *Science*, 1963, 139, 505-506 (Dept. Neurophysiol., Nencki Inst. Expt. Biol., Warsaw, Poland) Dogs were trained preoperatively in both pos. and inhibitory cond. food refl. on a schedule of either a 15 sec. or 1 min. intertrial interval. After lesions had been made in the piedial surface of the prefrontal cortex, errors of disinhibn. occurred in both schedules and in association with an increased 'drive' for food. In contrast, lesions of the dorsolat. prefrontal cortex produced the disinhibn. syndrome only in the group tested at short intervals and no increased food-directed activity was noted. The Quality of disinhibn. in prefrontal animals evidently depends on the placement of the lesion. G.M.Lewis

1965. INTRACELLULAR POTENTIAL DURING ELECTRICALLY INDUCED SEIZURES. M.Sawa, N.Maruyama and S.Kaji: *Electroenceph. clin. Neurophysiol.*, 1963, 15, 209-220 (Brain Res. Inst., Univ. Sch. Med., Niigata, Japan) In barbiturate-anaesthetised cats, mtra-cellular potentials were recorded in motor cortex and hippocampus, during and after surface electrical stimn. Single shock caused a depolarising wave in the neurones, followed by hyperpolarisation. Repetitive fmn. at high freq. and intensity caused progressive Prolongation of depolarising wave with temporal summation of successive waves, the hyperpolarisation progressively decreasing. Finally neurones remained in sustained depolarisation. After cessation of stimn. sustained depolarisation continued with periodic fluctuations with current waves in corticogram. In late seizure, depolarisation diminished and hyperpolarisation reappeared.

C.B.B.Downman

1966. UNITARY ANALYSIS OF 'PROJECTED' EPILEPTIFORM DISCHARGES. C.Ajmone Maisan: *Electroenceph. clin. Neurophysiol.*, 1963, 15, 197-208 (E.E.G. and Clin. Neurophysiol., Nat. Inst. Neurol. & Blindness, Bethesda, Md., U.S.A.) In acute SJJ's a ¹⁸MTT barbiturated or cereau isole cats, local Penicillin or strychnine was used to set up epileptogenic CFI. J's differed from projected epileptic Process by substantially fewer units being activated and (2) firing pattern seldom showing high freq. bursts of spikes. Discussion is related to similar events in clinical e.e.g.

C.B.B.Downman

1967. A STUDY OF ABDOMINAL AURA. A STUDY OF ABDOMINAL SENSATIONS OCCURRING IN EPILEPSY AND PRODUCED BY DEPTH STIMULATION. J.M. Van

Buren: *Electroenceph. clin. Neurophysiol.*, 1963, 15, 1-19 (Branch Surg. Neurol., Nat. Inst. Neurol. Dis. and Blindness, N.I.H., Bethesda, Md., U.S.A.) In 100 cases of abdominal aura the sensation was referred to the midline epigastrium, sometimes rising. Associated symptoms were sensory, psychical and autonomic, tending to be distributed to body or proximal extremities. Medial temporal, basal ganglia and centrum medianum stimn. caused sensations similar to the aurae. During the spontaneous or elicited sensation balloon recording showed no change, or rarely inhibn. of gastric movement.

C.B.B.Downman

1968. LOCALISATION OF FOCAL BRAIN LESIONS BY ELECTROENCEPHALOGRAPHY. N.P.Bechtereva, I.V. Vvedenskaia, Y.V.Dubikaitis, T.S.Stepanova, B.S. Ovnatanov and V.V.Usov: *Electroenceph. clin. Neurophysiol.*, 1963, 15, 177-196 (A.L.Polenov Neurosurg. Inst., Leningrad, U.S.S.R.) Summary of experience in the Electrophysiol. Lab. of the Institute. In addition to conventional photic stimn., trigger photic stimn. and a test based on adaptation to darkness and drowsiness are useful. E.e.g. analysis includes auto- and cross-correlations of ranges of values within the e.e.g., and electroencephaloscopy may be helpful with electrocorticography in case of operation.

C.B.B.Downman

1969. AROUSAL EFFECTS ON EVOKED ACTIVITY IN A 'NON-SENSORY' SYSTEM. G.P.Frommer and R.B. Livingston: *Science*, 1963, 139, 502-504 (Lab. Neurobiol., N.I. Mental Hlth., Bethesda, Md., U.S.A.) Responses from motor cortex evoked by cerebellar stimn. have been recorded with chronically implanted electrodes from cats in different states of arousal. The response, which in the waking cat consists of a short latency biphasic component followed by one or more slower waves, was attenuated or abolished completely in association with e.e.g. and behavioural signs of decreased arousal. In contrast, responses in primary somatosensory cortex evoked by stimulating the bulbar trigeminal nucleus were enhanced during periods of decreased alertness.

G.M.Lewis

1970. EFFECTS OF UNILATERAL LESIONS IN SENSORI-MOTOR CORTEX ON MANIPULATION BY CATS. E.Forward, J.M.Warren and K.Hara: *J. comp. physiol. Psychol.*, 1962, 55, 1130-1135 (Stanford Univ., Calif., U.S.A.) Unilat. lesions were made in the sensori-motor cortex of 10 cats, which were tested pre- and post-operatively, together with a control group, on 3 manipulation tests and post-operatively only on a fourth test. The results showed transient spasticity, loss of placing reaction, sensory impairment and abnormal posturing, but no gross defects in locomotion.

J.R.Broome

1971. FUNCTION OF PREFRONTAL CORTEX IN TIMING BEHAVIOUR OF MONKEYS. J.S.Stamm: *Exp. Neurol.* 1963, 7, 87-97 (Queens Coll., Flushing, N.Y., U.S.JU Three groups of monkeys - with prefrontal lobectomy, cingulectomy, and normal controls, were trained in tests of delayed response. The cingulectomised monkeys and those with prefrontal lobectomies showed no impairment in response rates and in developing timing responses. The frontal lobes are not essential to the inhibn. of responses, recent memory, or temporal patterning of behaviour.

P.W.Nathan

1972. MANIFESTATIONS OF 'ACTIVATED' SLEEP IN THE RAT. J.E.Swisher: *Science*, 1962, 138, 1110 (Dept. Psychol., Univ. Florida, Gainesville, Fla., U.S.A.) A sleep phase similar to feline 'activated' sleep occurs regularly in normally sleeping rats, the e.e.g.

PHYSIOLOGY

differing from the waking of 'activated*' pattern in being dominated by 6-8% waves. The rats tend to undergo shifts in muscle tone, occasionally of considerable magnitude.

G.M.Lewis

1973. SLEEP BEHAVIOUR ELICITED BY ELECTRICAL STIMULATION OF CORTICAL AND SUBCORTICAL STRUCTURES IN THE CAT. P.L.Parmeggiani: *Helv. physiol. pharmacol. Acta*, 1962, 20, 347-376 (Inst. Physiol., Univ. Zürich, Switzerland)

Electrical stimulation of 541 sites in the caudate nucleus, hypothalamus, mesencephalon, mamillary bodies and adjacent structures produced sleep in 35%. In the caudate nucleus and the mamillary bodies, sleep was induced in 81-85%. Stimn. of the central grey matter of the mesencephalon did not produce sleep. The hippocampus is particularly associated with a first phase of restless prep. for sleep, the caudate nucleus with a second phase of light sleep with unchanged respiration, and the thalamus with a third stage of deep sleep with slowed respiration.

V.Eisen

1974. EXTREME SPINDLES: A CORRELATION OF ELECTROCORTICOGRAM SLEEP PATTERN WITH MENTAL RETARDATION. E.L.Gibbs and F.J.V.Gibbs: *Science*, 1962, 138, 1106-1107 (Neuropsychiat.Inst., CollMed., Univ.Illinois, Chicago, 111, U.S.A.) An electrocorticogram abnormality is described which is relatively common among children below 12 yr. who are mentally retarded, but is not correlated with epilepsy or cerebral palsy. This pattern consists of exaggerated spindles which are of higher voltage and more continuously present than in normal persons.

CM.Lewis

1975. ELECTROENCEPHALOGRAPHIC PATTERNS RESEMBLING THOSE OF SLEEP IN CERTAIN COMATOSE STATES AFTER INJURIES TO THE HEAD. G.E.Chatranian, L.E.White and D.Daly: *Electroenceph. clin. Neurophysiol.*, 1963, 15, 272-280 (Sect. Neurol., Mayo Clin., Rochester, Minn., U.S.A.) After severe head injuries followed by coma which evolved into stuporous or semi-comatose states resembling sleep, patients had an e.e.g. of sleep pattern with 14/sec. spindles, vertex sharp waves and K complexes. The electroclinical pattern may reflect transient and, since the clinical course was favourable, reversible derangement of midbrain reticular function.

C.B.B.Downman

1976. PROBLEM OF PERIODICITY OF THE ELECTRO-ENCEPHALOGRAM: STUDIES IN THE CAT. M.A.B. Brazier: *Electroenceph. clin. Neurophysiol.*, 1963, 15, 287-298 (Brain Res. Inst., Los Angeles, Calif., U.S.A.) In cats with chronically implanted electrodes electrical activity in different regions of cortex and of deep structures, e.g. lat. geniculate and sup. colliculus, have been related by auto- and cross-correlation. Strongest and most persistent rhythm was found in motor cortex, less in somatosensory and austr. suprasylvian, but rhythm was conspicuously absent in sp. visual and auditory areas. The periodic rhythms are most marked in those areas showing most conspicuous recruiting response, and may be dependent on the mechanism of these responses and of barbiturate spindle. Barbiturates probably remove an inhibitory component to uncover a suppressed rhythm. Impairment of consciousness evokes a slow 5 to 6/sec. rhythm throughout the brain.

C.B.B.Downman

1977. E.E.G. IN SIMULATED STRESSES OF SPACE FLIGHT WITH SPECIAL REFERENCE TO PROBLEMS OF VIBRATION. W.R.Adey, W.D.Winters, R.T.Kado and

M.R.Delucchi: *Electroenceph. clin. Neurophysiol.*, 1963, 15, 305-320 (Space Biol. Lab., Brain Res. Inst., Univ. California, Los Angeles, Calif., U.S.A.)

Cortical and subcortical electrical activity was recorded in macaques with chronic indwelling electrodes during body shaking over 5 to 40 c/s up to 2 g peak acceleration. Driving of brain rhythms at shaking freq. was noted in midbrain reticular formation, centrum medianum, visual cortex and hippocampal system. This was reduced by pentobarbital anaesthesia, was max. at 9-15/sec. and was at half-freq. from 15-20/sec. Performance in behaviour tests was reduced.

C.B.B.Downman

1978. INFLUENCE OF OCULAR MUSCLES UPON PHOTIC HABITUATION IN MAN. E.Carcfa-Austt, A.Vanzulli, J.Bogacz and R.Rodríguez-Barrios: *Electroenceph. clin. Neurophysiol.*, 1963, 15, 281-286 (Lab. Neurofisiol., Inst. Neurol., Hosp. Clínicas, Fac. Med., Montevideo, Uruguay)

Visual evoked response was recorded off the scalp, in subjects with controlled pupil size, to light flash in one eye. The response progressives decreased with habituation, the same changes being observed with eyes open or closed. Patients with congenital aniridia or complete ocular paralysis showed similar changes. In man pre-receptor elements do not participate decisively in the habituation waning of response.

C.B.B.Downman

1979. RELATION OF SIMPLE RESPONSE TIME TO BRAIN-WAVE FREQUENCY AND THE EFFECTS OF AGE. W.V. Surwill: *Electroenceph. clin. Neurophysiol.*, 1963, 15, 105-114 (Gerontol. Br., Nat. Heart Inst., N.I.H., Bethesda, Md., U.S.A.) Reaction time and average

period of e.e.g. within this time, were determined in 1^{oo} subjects of age 28 to 99 yr. A correlation coeff. of 0.72 was not affected by age. While there was a highly significant correlation between age and average period of e.e.g., there was a low but significant correlation between average reaction time and age. E.e.g. freq. change is basis of age-slowness of response time, and brain-wave cycle is basic time unit of response program*
ming of c.n.s.

C.B.B.Downman

1980. E.E.G. CHANGES DURING AND AFTER 14 DAYS OF PERCEPTUAL DEPRIVATION. J.P.Zubek, G.Welch and M.G.Saunders: *Science*, 1963, 139, 490-492 (Dept. Psychol., Univ. Manitoba, Winnipeg, Canada)

A progressive decrease in freq. in the a. range was observed during 14 day exposure of 3 human subjects to unpatterned light and white noise. The e.e.g. records were still abnormal 1 week later and long-lasting motivation^ losses were observed.

CM.Lewis

1981. APPLICATION OF PHASE DETECTION AND AVE& AGING TECHNIQUES IN COMPUTER ANALYSIS OF E.E.G. RECORDS IN CAT. W.R.Adey and D.O.Walter: *Exp. Neurol.*, 1963, 7, 18fe-209 (Dept. Anat. Physiol. Brain Res. Inst., U.C.L.A., Los Angeles, Calif., U.S.A.)

The e.e.g. records from the hippocampal system and midbrain reticular forms of cats picked up by implanted electrodes during the learning situation, were analysed by computing techniques.

P.W.Nathan

1982. EPENDYMAL CILIA: DISTRIBUTION AND A TIVITY IN THE ADULT HUMAN BRAIN. W.C.Worthington, jun. and R.S.Cathcart, III: *Science*, 1963, 13³, 221-222 (Med. Coll. South Carolina, Charleston, S.^ U.S.A.) Examination of about 200 samples of the ^ ependymal lining of adult human brains post-mortem reveals widespread distribution of cilia, which were

observed in motion in some cases. A local mechanism for rapid movement of the cs.f. is therefore present.

C.M.Lewis

1983. HISTOGENESIS OF THE CEREBRAL CORTEX.

M.Berry and J.T.Eayrs: *Nature*, Lond., 1963, 197, 984-985 (Dept. Anat., Univ. Birmingham, England) The histogenesis of layers of the cerebral cortex has been studied in rats of various gestational ages exposed to X-irradiation damage. The findings imply that cells destined to form the phylogenetically older infra-granular layers appear before those giving rise to the more recently acquired superficial laminae. G.M.Lewis

1984. WATER CONTENT OF IMMATURE RAT BRAIN

FOLLOWING CEREBRAL ANOXIA AND ISCHAEMIA.
R.G.SpectDr: *Brit. J. exp. Path.*, 1962, 43, 472-479 (Paediat. Res. Unit, Guy's Hosp. Med. Sch., London, England) In young Wistar rats more than 10 days or a unilat. ligation of common carotid artery, with anoxia caused by N₂ inhalation, resulted in cerebral oedema. Bilat. common carotid arterial ligation alone also caused oedema. In rats less than 10 days old oedema could not be produced by these means. D.L.Gardner

1985. NATURE OF ACh-LIKE ACTIVITY RELEASED

FROM BRAIN IN VIVO. J.C.Szerb: *Nature*, Lond., 1963, 197, 1016-1017 (Dept. Pharmacol., Dalhousie Univ., Halifax, Nova Scotia, Canada) The area of max. evoked potentials in the cat somatosensory cortex was perfused while the contralat. forepaw was continuously stim. The activity of the extracts on leech muscle and b.p. of the eviscerated cat gave evidence of the presence of considerable amounts of ACh and traces of Y~butyrobetaine. This was confirmed by chromatography of the perfusates. CM.Lewis

1986. AUGMENTATION OF O₂ CONSUMPTION OF RAT

BRAIN IN VITRO BY VARIOUS CARBOHYDRATE INTERMEDIATES. A.Livingstone, C.H.Williams and F.W.Barnes, jun.: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111, 75-78 (Psychophysiol. Res. Lab., V.A. Hosp., Perry Point, Md., U.S.A.) In vitro respiratory rate of rat brain is enhanced by citrate ion in dextrose and Krebs'-Ringer PO₄ buffer. Of the Krebs cycle intermediates tested as substrates individually, only lactate in Krebs-Ringer PO₄ maintained brain respiration better than dextrose. M.M.Shapland

1987. RELATION BETWEEN MYELINATION AND BINDING OF SODIUM AND POTASSIUM IN RAT BRAIN.
J.W.Wagner and B.Garoutte: *Proc. Soc. exp. Biol.*, N.Y., 1963, H2, 42-46 (Dept. Anat., Univ. California, San Francisco Med.Center, San Francisco,

In U.S.A.) By dialysing brain homogenates of 149 Evans rats which had received i.p. injn. of 24Na tta--K¹² n^r. Previously, the rate of binding of these cers was used as an indication of the uptake of Na and K during this period. About 3% of the Na and K was bound to not be dialysed in a period of 2 hr. There was J in g. of labelled Na or K in the brains of neonatal rats wet from weeks onwards the amount of bound fol. increased. The development of myelination was followed in frozen sections of the brains stained with Ptoxert's method. The increase in myelination and the passive binding of Na and K in the brains of growing frogs concurrently. D.N. Vidyarthy

SENSE ORGANS

1988. EYE MOVEMENTS IN MAN DURING WAKEFULNESS AND SLEEP. M.Jeannerod and J.Mouret: *C.R. Soc. Biol.*, Paris, 1962, 156, 1407-1410 (List. Physiol., Fac. Méd., Lyon, France) Electro-oculograms of human subjects were recorded during wake and sleep. During wakefulness the angular velocity of potential variations of the eye was 125°/sec. With the eyes closed the angular velocity was 65°/sec. and during the rhombencephalic phase of sleep 73°/sec. Statistical analysis of the results allowed the rapid movements during observation to be distinguished from movements during the phase of sleep. (French) M.A. Price

1989. INFLUENCE OF HEAD POSITION ON CENTRAL NYSTAGMUS IN RABBITS. J.Gutman, M.Chaimovitz and F.Bergmann: *Exp. Neurol.*, 1963, 7, 240-245 (Dept. Pharmacol., Hebrew Univ., Jerusalem, Israel) Tilting of the head, which by itself does not produce nystagmus, enhances central nystagmus. Tilting to the side to which the rapid phase of the nystagmus goes, increases the nystagmus. P.W.Nathan

1990. SELF-MAINTAINED VISUAL STIMULATION IN MONKEYS AFTER LONG-TERM VISUAL DEPRIVATION.

R.H.Wendt, D.F.Lindsley, W.R.Adey and S.S.Fox: *Science*, 1963, 139, 336-338 (Dept. Anat., Univ. California, Los Angeles, Calif., U.S.A.) Newborn monkeys reared in darkness for 16 months except for daily 1 hr. periods of exposure to unpatterned light were allowed to press a lever to obtain unpatterned light. The animals showed apparently insatiable responding, at rates extremely high compared with normal animals.

CM.Lewis

1991. PHASE SHIFTS IN THE HUMAN RETINA. F.Verhaegen: *Nature*, Lond., 1962, 197, 998-999 (Naturkundig. Lab., Univ. Amsterdam, Holland) Models based on diffusion and recombination of photochem. decomposition products inside the receptor cells of the human retina are consistent with a considerable amount of expt. data on reasonable adjustment of a few parameters. CM.Lewis

1992. SELECTIVE SENSITIVITY TO DIRECTION OF MOVEMENT INGANGLION CELLS OF THE RABBIT RETINA. H.B.Barlow and R.M.Hill: *Science*, 1963, 139, 412-414 (Sch. Optometry, Univ. California, Berkeley, Calif., U.S.A.) Expt. on single retinal units of the rabbit show that some cells respond to movement of a stimulus in 1 direction only. The same directional selectivity holds over the whole receptive field but the selected direction differs in different cells. The discharge is almost uninfluenced by the intensity of the stimulus spot, or by whether the spot is black or white.

G.M.Lewis

1993. AFTER EFFECT OF SEEN MOTION WITH A STABILISED RETINAL IMAGE. R.W.Sekuler and L.Ganz: *Science*, 1963, 139, 419-420 (Dept. Psychol., Brown Univ., Providence, R.I., U.S.A.) Prolonged inspection of uniformly moving contours affects differentially the luminance threshold for the detection of test contours as a function of their direction of motion. The results support an explanation of motion after-effect on the basis of direction-sp. cortical adaptation. G.M.Lewis

1994. THE EFFECT OF SODIUM ION CONCENTRATION ON THE ELECTRORETINOGRAM OF THE ISOLATED RETINA OF THE FROG. D.I.Hamasaki: *J. Physiol.*,

PHYSIOLOGY

Lond., 1963, 167, 156-168 (Physiol. Lab., Univ., Cambridge, England) The e.r.g. of the isolated retina of the frog was completely abolished when 95% of the Na in the Ringer soln. was replaced by choline or sucrose. The reduction in the e.r.g. with partial replacement of Na by choline was linearly related to the log. of the [NaT] in the test soln. The evidence suggests that the receptors were the structures mainly affected by the expt. procedures, and that during excitation there is a movement of Na into the receptors. The e.r.g. decreased when the retina was placed in K-free Ringer soln. *

1995. SCOTOPIC SPECTRAL SENSITIVITY IN THE MONKEY. D.S.Bough and A.M.Schrier: Science, 1963, 139, 493-494 (Hunter Lab. Psychol., Brown Univ., Providence, R.I., U.S.A.) The dark-adapted abs. threshold as a function of stimulus wavelength has been determined in rhesus monkeys. The monkeys' relative sensitivity was slightly higher than that of humans in the long wavelength portion of the spectrum.

C.M.Lewis

1996. BINASAL HEMIANOPIA AS AN EARLY STAGE IN BINOCULAR COLOUR RIVALRY. H.F.Crovitz and D.B. Lipscomb: Science, 1963, 139, 596-597 (V.A. Hosp., Durham, N.C., U.S.A.) A method is described by which an apparent binasal hemianopia can be established in colour fields; this can be maintained through changes in the spatial characteristics in the colour field which remains bipartite, without fusion of the colours or suppression of one eye.

G.M.Lewis

1997. NEUROPHYSIOLOGY OF AUDITION IN BATS.
I. INTENSITY AND FREQUENCY PARAMETERS.
H. TEMPORAL PARAMETERS. I. DIRECTIONAL LOCALISATION AND BINAURAL INTERACTION.
IV. RESISTANCE TO INTERFERENCE. A.D.Grinnell: J. Physiol., Lond., 1963, 167, 38-66, 67-96, 97-113, 114-127 (Biol. Labs., Harvard Univ., Cambridge, Mass., U.S.A.)

I. The effects of stimulus intensity and freq. on single unit and evoked potential auditory responses have been studied in the post. colliculi and more peripheral nuclei of the bats Myotis lucifugus and Plecotus townsendii. Evoked potential latencies were similar to those in cats, but changed less with change in intensity. In general, an increase in stimulus intensity led to an increase in response amplitude or firing rate. Above 40 or 50 db re threshold, however, responses frequently levelled off or fell in amplitude, sometimes disappearing altogether. Responses are present throughout the freq. range of the emitted orientation pulses, with thresholds down to ± 5 dbre $0^{\circ}0002$ dyne/cm.² at "best" freq.: around 40 kc in Myotis, 15 to 35 and 55-65 kc in Plecotus. Highest effective freq. were 150-200 kc in Myotis, 110-120 kc in Plecotus. Many single units had high intensity as well as low intensity thresholds. The post. colliculus exhibited dorso-ventral tonotopic localisation. Differential intensity and freq. discrimination was very accurate. Changes as small as $0^{\circ}2$ to $0^{\circ}5$ db in intensity or $0^{\circ}05\%$ in freq. have caused changes in response.

II. The effects of interval between stimuli and stimulus duration on evoked potential and single unit auditory responses were studied in the auditory nerve (Ni), a second order level (N2), the post. colliculus (N4), and the auditory cortex of the bats M. lucifugus and P. townsendii. At Ni, recovery of response to the second of 2 identical sound puffs was similar to that described in cats, but unlike the behaviour in cats, recovery was faster at N2 than at Ni, and still faster at N4, where 100% recovery was reached in 2 msec, on the

average. Recovery was much slower at the cortex. At N4 the second response often exceeds the first in size. This facilitation was found only with stimuli of 40 kc or higher freq. and was greater within 40 db of threshold than at higher intensities. Single units frequently fired to a second stimulus within $0^{\circ}5$ to 1 msec, and displayed as much as 20 db greater sensitivity to the second of 2 identical stimuli at intervals down to 1 or 2 msec. Other units were capable of accurately measuring the interval between stimuli. Stimulus duration markedly affected threshold and latency of some units. Recovery of N4 was shown to be only 50 to 75% reduced when the first pulse of a pair, 1 to 2 msec, apart, was 40 or 50 db more intense than the first. Moreover, when pulses are shorter than 3 to 5 msec, were used, a silent period between stimuli of $0^{\circ}5$ to $0^{\circ}8$ msec, was sufficient for 50% or greater recovery, regardless of stimulus intensity.

in. The effects of angle of incidence of an acoustic signal on evoked potential and single unit responses in the auditory nerve (Ni) and the posterior colliculus (N4) were studied in the bats M. lucifugus and P. townsendii. 'Directionality' on the horizontal plane is very similar in the 2 spp. Change in threshold with angle is much greater above than below 40 kc in Myotis, 50 kc in Plecotus. Despite die mixing of input from both ears to the colliculus, N4 is more directional than Ni. The average difference in threshold for Ni between angles of greatest and least sensitivity is about 34 db in both spp.; for N4 the average difference is 38-40 db with extremes up to 68 db. Two forms of binaural interaction appear to causing this enhancement of angular acuity. Single units are sometimes restricted to very small sectors from which they can be successfully stim. Changes in threshold of $0^{\circ}5$ to 9 db/degree have been observed. These evidences of sensitivity to changes in angle, taken with the apparent ability to detect intensity differences of $0^{\circ}5$ db or less, are theoretically sufficient to explain localisation to within 1° in the horizontal plane.

IV. Auditory evoked potentials and single unit responses in the auditory nerve (Ni) and the post. colliculus (N4) of the bats M. lucifugus and P. townsendii have & studied in a search for neural mechanisms by which a * > can recognise echoes of its own cries in the presence of other bats or background noise. Pulse duration, i nes¹ freq. and repetition rate are all analysed by the bat auditory system, suggesting that pulse recognition is possib¹! Moreover, the freq. of an initial sound is briefly Q-^.* msec.) 'coded' into the auditory system as a sensitisation to a similar sound. Resistance to interference by ther¹ noise is shown to be explainable by sharp tuning and sensitisation of portions of the auditory system, by the inherent directionality of either ear, and by binaural & actions reducing the effects of noise in the ear toward which a signal is arriving from an angle of slight sensitivity while the noise arrives from an angle of greater ^ sensitivity. The reduction of masking effect due to binaural interaction can be as much as 20 or 30 db and appears sufficient to account for the ability of Plecotus to detect wires in an intense broadband noise. ".*

1998. SIGNAL DETECTION IN THE RAT. M.H.Hack¹ Science, 1963, 139, 758-760 (Dept. Otolaryngology¹ New York Univ. Sch. Med., N.Y., U.S.A.) In an auditory detection expt., rats were run at fixed sound pressure levels, and their responses partitioned so that operating characteristics could be constructed. Meas¹ of detectability were calc. from the operating characteristics; these are a function of sound pressure levels, & rising as sound levels rise. G.M.Lewis

2000. PRELIMINARY STUDY OF SOME HEALTH HAZARDS IN THE PLASMA JET PROCESS. D.E.Hickish and P.J.R.Challen: *Brit. J. industr. Med.*, 1963, 20, 95-99 (Occup.Hyg.Serv., Slough, Bucks, England) The noise emitted by the jet was of the order 80 to 90 db over a wide range of freq. Three volunteers exposed to the noise for 1 hr. showed a mean shift of auditory threshold of 19 db at 4000 c/s, the loss being greater at higher freq., and persisting in one subject for 48 hr. Air samples taken within 4 ft. of the jet showed NO₂ concn. ^UP to 9-6 p.p.m. D.E.Evans

2001. STIMULATING EFFECTIVENESS OF CATIONS AND ANIONS ON CHEMORECEPTORS IN FROG TONGUE. S.Yamashita: *Jap. J. Physiol.*, 1963, 13, 54-63 (Dept. Physiol., Univ. Med. Sch., Kumamoto, Japan) Cations showed stronger stimulatory strength than anions, as measured by recording the integrated response of the glossopharyngeal nerve. The order of effectiveness was NH₄>K>Cs>Na>Li for monovalent ions of 1/2 M, and Ca>Sr>Mg>Ba for divalent cations of 1/64 M. In the anion series no remarkable difference in the response magnitude was observed. K.Jones

2002. TASTE PREFERENCES FOR SODIUM SALTS BY ADRENALECTOMISED RATS. M.Nachman: *J. comp. Physiol. Psychol.*, 1962, 55, 1124-1129 (Univ. California, Riverside, Calif., U.S.A.) Adrenalectomised and control rats were given a single 10 min. test preference between solns. of 5 different Na salts and non-Na salt. Both the adrenalectomised animals and J?Perated rats made Na-deficient by the use of a reacted diet showed an immediate preference for all the salts. It was concluded that this preference is based on drive-reducing. J.R.Brock

2003. INCREASED SENSITIVITY OF TASTE AND SMELL IN CYSTIC FIBROSIS. R.I.Henkin and G.F.Powell: *Science*, 1962, 138, 1107-1108 (Nat. Inst. Mental Hlth., Bethesda, Md., U.S.A) patients with cystic fibrosis showed that taste and smell were accompanied by a sensitivity to taste and smell substances in soln. at concn. much higher than those at which the substances are detected by normal persons. These abnormal thresholds were affected by the administration of carbon dioxide. C.B.B.Downman

2004. ELECTRICAL ACTIVITY OF THE OLFACTORY SYSTEM. F.P.Gault and R.N.Leaton: *Electroenceph. & Neurophysiol.*, 1963, 15, 299-304 (Dept. Psychol., New Haven, Conn., U.S.A.) In cats using indwelling electrodes electrical activity of nasal air flow. The slow potentials were necessary for the bursts of 40/sec. activity, increased both slow potentials and bursts. Activity in basolateral amygdala occurred only, but bilaterally, when there was a 40/sec. activity in the amygdala. C.B.B.Downman

2005. OLFACTORY THRESHOLD TECHNIQUE WITH NITROGEN DILUTION OF n-BUTANE AND GAS CHROMATOGRAPHY. R.A.Schneider, J.P.Costiloe, A.Vega and S.Wolf: *J. appl. Physiol.*, 1963, 18, 414-417 (Med. Dept., Univ. Med. Center, Oklahoma City, Oklahoma, U.S.A.) A technique is described for measuring the olfactory threshold of each side of the nose independently for n-butane in N₂. The subject sits in an air-conditioned room and the gases are applied through a nasal tip. The rate of flow and duration of the stimulus can be accurately controlled and are important in threshold determinations. The threshold gas concn. is determined by gas chromatography. H.C.Jones

DIGESTIVE SYSTEM

2006. CHOLINE ACETYLASE IN NORMAL AND DENERVATED SALIVARY GLANDS. I.Nordenfelt: *Quart. J. exp. Physiol.*, 1963, 48, 67-79 (A.R.C. Inst. Animal Physiol., Babraham, Cambridge, England) Chronic preganglionic parasympathetic denervation of the submaxillary gland of cats and rabbits reduced the choline acetylase activity of the gland to half that of the control gland. Post-ganglionic denervation of the submaxillary and parotid glands greatly reduced the choline acetylase activity. H.C.Jones

2007. RUMEN FUNCTION IN THE CAMEL. V.J.Williams: *Nature*, Lond., 1963, 197, 1221 (Dept. Physiol., Univ. New England, Armidale, N.S.W., Australia) The rumen contents of camels were low in N but high in volatile fatty acids. Unlike sheep and cattle, quite satisfactory rumen function could be maintained on a high roughage, low N₂ diet. G.M.Lewis

2008. A PERMANENT RAT GASTRIC FISTULA. S.A. Komaiov, S.P.Bralow and E.Boyd: *Proc. Soc. expt. Biol.*, N.Y., 1963, 112, 451-453 (Fels Res. Inst., Temple Univ. Med. Sch., Philadelphia, Pa., U.S.A.) A Pavlov type cannula is described for chronic gastric fistula in the rat. It produces no ill effects on the rat and is suitable for the study of interdigestive phase secretion. D.N.Williams

2009. TUBELESS GASTRIC ANALYSIS BY DYE TECHNIQUE. V.M.Smith, D.L.Abramson and R.P. Mallari: *Amer. J. med. Sci.*, 1962, 244, 749-755 (Dept. Med., Univ. Maryland Sch. Med., Baltimore)

2010. TUBELESS GASTRIC ANALYSIS BY DYE TECHNIQUE. V.M.Smith, D.L.Abramson and R.P. Mallari: *Amer. J. med. Sci.*, 1962, 244, 749-755 (Dept. Med., Univ. Maryland Sch. Med., Baltimore) The tubeless dye consists of a small ball of Methylene Blue covered by a thin rubber sheet and tied with catgut. When the pill is swallowed, the catgut is dissolved by stomach HCl. The dye is then absorbed and excreted in urine which takes on a blue-green colour. A pos. test was found in 98% of subjects with normal gastric secretion but a neg. test proved to be inconclusive. E.Hobbs

2011. RADIO-PHARMACOLOGICAL INVESTIGATION OF MODE OF ACTION OF α- AND β- RECEPTORS IN CARDIA OF RABBITS. H.J.Bohmig, F.v.Ocke and Ta? J.I. Ch: *Z. Ges. exp. Med.*, 1963, 136, 432-455 (Pharm. Inst., Univ. Vienna, Austria) The effect of adrenaline (1 µg./kg.) and N-isopropylnoradrenalin (0.3 µg./kg.) on cardiospasm induced by bilateral vagotomy was studied in rabbits radiologically, using

PHYSIOLOGY

image intensifier fluoroscopy and cinematography (12-16 frames/sec.) to observe the passage of contrast medium through the cardia. Both adrenaline and isopropylnoradrenaline had a spasmolytic effect, but whereas adrenaline caused sphincter relaxation, isopropylnoradrenaline re-established normal opening and closing rhythm of the cardia. The differences between adrenaline and isopropylnoradrenaline effects are explained by the site of action which in the former is believed to be predominantly α-receptors and in the latter purely β-receptors.

2013. INCIDENCE OF GASTRIC ULCERS IN SWINE.

T.W.Perry, A.A.Jimenez, J.E.Shively, T.M.Curtin, R.A.Pickett and W.M.Beeson: Science, 1963, 139, 349-350 (Dept. Anim. Sci., Purdue Univ., Lafayette, Ind., U.S.A.) Pigs fed heat-treated corn in the diet showed a 39% mortality from oesophagogastric ulcers, and excessive cornification and erosion of the stratified squamous mucosa. Treatment with thiamine, vit. B12, lysine or fish meal did not alleviate the condition. G.M.Lewis

2014. BLOOD PEPSIN DETERMINATIONS IN GASTRITIS.

M. de los Santos, W.R.Thayer, jun. and H.M.Spiro: Yale J. Biol. Med., 1963, 35, 353-360 (Dept. Int. Med., Yale Univ. Sch. Med., New Haven, Conn., U.S.A.) Blood pepsin determinations and gastric biopsies were carried out in 203 patients. In patients with normal gastric mucosa, blood pepsin was normal or elevated. In patients with biopsy-proven chronic superficial gastritis all blood pepsin levels were normal or elevated. In patients with atrophic gastritis or gastric atrophy blood pepsin levels were below normal. It is suggested this test might be useful as a screening test for patients with gastric atrophy who are likely to be cancer-prone.

2015. PROTEIN-LOSING GASTROENTEROPATHY. L.P. O'Meallie: Amer. J. med. Sci., 1963, 245, 109-116 (Dept. Med., Tulane Univ. Sch. Med., New Orleans, La., U.S.A.) A review. III references.

E.E.Hobbiger

2016. EFFECT OF ENTERICALLY SUPPLIED OXYGEN ON A DEVASCULARIZED LOOP OF ILEUM. B.Gottfried, N. Molomut and J.Patti: Surgery, 1963, 53, 484-489 (Waldemar Med. Res. Fdn., Port Washington, N.Y., U.S.A.) The histology of the ileum of rats has been studied after ligation, devascularisation and O₂ infusion.

The degenerative effects found under anoxic conditions could be prevented by O₂ infusion, i.e. the ileum was capable of O₂ uptake.

D.N.Wheatley

2017. ABSORPTION BY AN IN VITRO PREPARATION OF DOG INTESTINAL MUCOSA. A.Hakim, R.G.Lester and N.Lifson: J. appl. Physiol., 1963, 18, 409-413 (Physiol. Dept., Univ. Med. Sch., Minneapolis, Minn., U.S.A.) Pieces of dog intestinal mucosa consisting epithelium and lamina propria only, have been mounted and studied in vitro for absorption prop. The prep, transported water from Ringer soln. in the presence of glucose absorbed water against an osmotic gradient, transported glucose up a concn. gradient and took up Cl⁻ against a concn. gradient.

H.C. Jones

2018. GLUCOSE, AMINO ACID AND UREA INSORPTION FROM CANINE INTESTINE. J.H.Annegers: Proc. Soc. exp. Biol., N.Y., 1962, 111, 388-390 (Dept. Physiol., Northwestern Univ. Med. Sch., Chicago, 111, U.S.A.) Glucose and glycine insorption rates increased curvilinear when 20 to 280 mM concn. of each was perfused through isolated bowel loops in unanaesthetised dogs. Urea insorption exceeded glucose and glycine but tended to decrease as total osmolarity of perfusate increased. Glycine and urea interfered with glucose insorption when each V* substituted for NaCl, glucose similarly reduced glycine insorption.

M.M.Shapland

2019. FAT ABSORPTION FROM HUMAN GASTROINTESTINAL TRACT IN PATIENTS UNDERGOING TELE-THERAPY. R.J.Reeves, A.P.Sanders, K.W.Sharpe, J. Thorne and J.K.Sley: Amer. J. Roentgenol., 1963, 122-126 (Dept. Radiol., Duke Univ. Med. Center, Durham, N.Carolina, U.S.A.) Patients undergoing radiation to the lower abdomen, whether by conventional roentgen therapy or by ⁶⁰Co, showed malabsorption of glyceroltrioleate and oleic acid, but the effect occurred more frequently in the group undergoing 60Co treating.

2021. GASTROINTESTINAL SITES OF ABSORPTION AND ENDOGENOUS SECRETION OF CALCIUM AND PHOSPHOROUS IN DAIRY CALVES. P.T.Chandler and R.G.Cragle: Proc. Soc. exp. Biol., N.Y., 1962, 111, 431-434 (Agric. Res. Lab., Uxbridge, Tennessee, Oak Ridge, Tenn., U.S.A.) Using ¹⁴⁴Ce as an indicator, secretion of P into the rumen and omasum and absorption of Ca and P from the abomasum have been demonstrated. The sites of Ca absorption are not always associated with P secretion. Appreciable secretions of Ca and P were observed in the lower tract and were not balanced. W. equal absorption.

M.M.Shapland

2022. MUCOSAL ADSORPTION AND ABSORPTION OF VITAMIN B12 IN THE INTESTINE OF THE RAT. K. Okuda: Proc. Soc. exp. Biol., N.Y., 1962, 111, 323 (Dept. Med., Yamaguchi Med. Coll., Ube, Japan) Using the rat intestinal loop technique, it was denied that a large % of a physiol. dose of [60Co]vit. B12

PHYSIOLOGY

189

adsorbed to the mucosal surface in the presence of rat intrinsic factor [IF] at a faster rate than it was without IF, and EDTA markedly inhib. this in vivo adsorption. Two kinds of surface adsorption were involved, a physiol. Phase involving IF and a nonabsorptive P^{1**@^M.M.S.}

2023. BINDING OF VITAMIN B12 BY INTRINSIC FACTOR AND INTESTINAL ABSORPTION. K.Okuda: Clin. chim. Acta, 1962, 7, 780-787 (Dept. Med., Yamaguchi Med. Coll., Ube, Japan) The relationship between absorption-enhancing activity and binding power of intrinsic factor [IF] for vit. B12 was studied by the "intestinal loop" technique. IF activity was demonstrated in all the vit. B₁₂-binding effluents, but in none without binding power. Absorption of [⁶⁰Co]vit. B12 was much greater when it was bound to the source of IF at the time it was given, than when it was in free form. The vit.B12 binding power of the extract was heat-labile, and reduction in binding power resulted in proportional loss of activity. It is thought likely that the IF mol. has another active site besides the one for B12-binding, and this is also heat-labile. V.M.Wootton

2024. TECHNIQUE OF SPATIAL SEPARATION OF PANCREATIC AND BILE SECRETIONS IN ^T - RJ^*®¹¹: C.R. Soc. Biol., Paris, 1962, 156, 1421-1424 (Cun. Med. A, Hôp. Edouard Herriot, Lyon, France)

Transplantation of the bile and pancreatic duet, and anastomosis of the oesophagus and duodenum allow a reflux of pancreatic and gastric secretions in the oesophagus in rat. In 12 of 13 animals lesions of the oesophagus occurred. In animals with the stomach removed reflux of pancreatic secretions induced lesions of the oesophagus in 19 of 26 tests. Reflux of bile secretions resulted in esophageal lesions in 7 of 25 animals. (French) M.A. Price

2025. ACTION OF COMMERCIAL P¹PARA¹ON⁵ OF SECRETIN ON EXTERNAL PANCREATIC SECRETION OF THE RAT. C.Debray, C.VaiUe. U e L a g , C.Roze and M.Souchard: J. Physiol., Pans, 1962, 156, 549-577 (Cun. d'Hydrol. et de ClimatoL. Hôp. fcchat, Paris, France) Composition and method determining the potency of prep. of secretin according to their source, are reviewed. Five of these prep. have been studied in the rat anaesthetised with ^J ^P¹reative fee* on respiration as well as on heart rate. Similarities in actions have been shown, together V ^ S ^ activity. It is proposed that ap. « S S est ed. S ^ardbesYtup; the necessary catena are suggested. (French) A.Angel

2026. EARLY AND LATE OEDEMA OF PANCREAS. J.E.Hobbs, H.Lclhlak, S.Gogolcwska, Z.Wojas, WjSzy^chowski and J.Wycfotkowska: Bull. Acad. pol. bci., 1963, 11, 99-103 (Inst. Physiol., Lodz Pol. Acad. sci., Poland) Progressive blood hyperosmolality was produced in chloralose-anaesthetised dogs by means of 8h, const. rate, glucose infusions, sometimes with insulin. In some expt. phenomena of transudation in pancreas, peritoneal sac and parotid gland do not rise progressively but display 2 peaks of intensity. The first appears at blood sugar of approx. 1000 mg./100 ml., the 2nd at 3000 mg./100 ml. They are separated by an intermediary period during which, in spite of rising osmality, transudation phenomena disappear partially or even sometimes completely. J.E.Hobbs

2027. T OF INTRADUCTAL OR INTRAVASCULAR RADRENALINE INFUSION ON DEVELOPMENT OF

ACUTE HAEMORRHAGIC PANCREATITIS. N.T.McPhedran and S.B.Lee: Surgery, 1963, 53, 490-494 (Toronto Gen. Hosp., Toronto, Ont., Canada)

A variety of treatments of dogs with noradrenaline and urecholine via various routes have been performed to induce vascular spasms in the pancreas. The role played by pancreatic ischaemia in acute haemorrhagic pancreatitis was studied by this method. These treatments caused only 18% lethal cases due to acute haemorrhagic pancreatitis.

PHYSIOLOGY

V.Conard: Arch. int. Pharmacodyn., 1963, 142, 286-287 (Lab. Expt. Med., Free Univ., Brussels, Belgium) After duodenal infusion of glucose, hyperglycaemia and hyperinsulinaemia caused a fall in glucose production and an increase in its metabolism. (French) T.J.Sullivan

2033. INFLUENCE OF PREVIOUS FEEDING WITH A HIGH-FAT DIET IN LIVER STEATOSIS PRODUCED BY ACUTE STARVATION OR GROWTH HORMONE IN MICE. T.Braun, P.Fabry and R.Petrasek: Experiientia, Basel, 1963, 19, 47-48 (Physiol. Dept., Inst. Human Nutr., Prague, Czechoslovakia) Fasting, or a single dose of growth hormone, or a combination of both stimuli, lead to a substantial rise of liver fat in mice previously fed a control diet. R.S.Tonks

2034. BILIARY EXCRETION IN THE RABBIT. II. RELATIONSHIP BETWEEN CHEMICAL STRUCTURE OF CERTAIN NATURAL OR SYNTHETIC PENTACYCLIC TRITERPENES AND THEIR ICTEROGENIC ACTIVITY. PART I. THE SUBSTITUENTS ON CARBON ATOMS 3,17,22 AND 24. J.M.M.Brown, C.Rimington and B.C.Sawyer: Proc. Roy. Soc. B., 1963, 157, 473-491 (Dept. Physiol., Onderstepoort Vet. Res. Lab., Pretoria, S. Africa) The icterogenic activity in the rabbit of 4 new agents in the oleanane and 24-noroleanane series is shown to be based on the presence of a β -equatorially orientated hydroxyl group at C3 or a hydroxyl at C24 and a $22\bar{\beta}$ -angeloyl side chain on the triterpene mol. CM.Lewis

2035. DIETARY FATTY ACIDS AND PLASMA ALKALINE PHOSPHATASE [AP] AFTER BILE DUCT LIGATION. O.Butendorf: Proc. Soc. exp. Biol., N.Y., 1962, 111, 409-412 (Ben May Lab. Cancer Res., Univ. Chicago, 111., U.S.A.) Ligation of common bile duct caused a 3-fold increase in plasma AP in rats fed a diet containing unsat. fatty acid (oleic acid) but not in rats fed the same diet containing no oleic acid. Similar expt. with dogs caused a 60-fold increase in animals fed on a diet with or without unsat. fatty acids. M.M.Shapland

KIDNEY AND URINE

2036. QUANTITATIVE ESTIMATION OF VARIATION AMONG HUMAN RENAL GLOMERULI. R.L.Abrams, L.E.Lipkin and G.R.Hennigar: Lab. Invest., 1963, 12, 69-76 (Pathol. Dept., Coll. Med., State Univ., N.Y., U.S.A.) An analysis of variance among glomeruli from a single human kidney was performed to establish statistical parameters serving to characterise the kidney. A.M.Mackay

2037. EFFECT OF HYPOPHYSECTOMY, ADRENALECTOMY AND ACTH ADMINISTRATION ON COMPENSATORY RENAL HYPERTROPHY IN RATS. T.Astarabadi: Quart. J. exp. Physiol., 1963, 48, 80-84 (Physiol. Dept., Edinburgh Univ., Scotland) Compensatory renal hypertrophy in rats was unaffected by adrenalectomy but was absent in hypophysectomised animals. Administration of ACTH did not produce hypertrophy in hypophysectomised rats. H.C.Jones

2038. EFFECT OF GROWTH AND LACTOGENIC HORMONES ON RENAL COMPENSATORY HYPERTROPHY IN HYPOPHYSECTOMISED RATS. T.Asfarabadi:

Quart. J. exp. Physiol., 1963, 48, 85-92 (Physiol. Dept., Edinburgh Univ., Scotland) Administration of growth hormone to hypophysectomised rats after removal of 1 kidney was followed by partial compensatory renal hypertrophy. Prolactin treatment did not have this effect. It is suggested that growth hormone is not the only pituitary factor involved in this phenomenon. H.C.Jones

2039. INTERRELATIONSHIP OF HYPO-OXIA, ERYTHROPOIETIN AND THE RENAL JUXTAGLOMERULAR CELL. B.Goldfarb and L.Tobian: Proc. Soc. exp. Biol., N.Y. 1962, 111, 510-511 (Dept. Med., Univ. Minnesota Hosp., Minneapolis, Minn., U.S.A.) Rats were subjected to hypo-oxia without hypovolaemia by being kept at 0.5 atm. pressure for 12 hr. At the end of this period there was no change in the granularity of the H_{if}juxtaglomerular cells such as is associated with increased serum erythropoietin levels. M.M.Shapland

2040. RENAL CLEARANCE IN UN ANAESTHETISED GUINEA PIG: DEPRESSION OF INULIN CLEARANCE BY CREATININE. I.Oyen and J.W.Boylan: Proc. Soc. exp. Biol., N.Y., 1962, 111, 253-257 (Dept. Physiol* Univ. Buffalo Sch. Med., Buffalo, N.Y., U.S.A.) Inulin and urea clearances were consistently reduced by, prior administration of creatinine. M.M.Shapland

2041. RENAL EFFECTS OF RENIN IN NORMAL AND BUFFER-NERVE SECTIONED DOGS. F. del Greco, A.C.Corcoran and L.H.Page: Proc. Soc. exp. Biol., N.Y., 1962, 111, 3-7 (Res. Div., Cleveland Clin. Fdn., Cleveland, Ohio, U.S.A.) Buffer-nerve sectioned dogs (section of carotid sinuses and aortic depressor nerves) are more sensitive than normal dogs to & diuretic action of renin. M.M.Shapland

2042. DIURETIC ACTIVITY OF THREE PRIMARY FRACTIONS OF TOTAL NON-DIALYSABLE SOLIDS [TNDS] FROM HUMAN URINE. J.M.Little, E.A.Argall and W.Brooks: Proc. Soc. exp. Biol., N.Y., 1962, 111, 316-320 (Dept. Physiol., Wake Forest Coll.-Winston-Salem, N.C., U.S.A.) TNDS of normal human urine, partially fractionated by ultrafiltration & veronal buffer extraction, produced a significant increase in urine flow when administered to dogs i.v. and i.p. M.M.Shapland

2043. INFLUENCE OF MASSAGE OF SEMINAL VESICLES AND AMPULLAE AND OF COITUS ON WATER DIURESIS OF RAM. G.Peeters and M.Debackere: J. J. Endocr., 1963, 26, 249-258 (Dept. Physiol., Vet. & Univ., Ghent, Belgium) In hydrated rams with fistulated bladder massage of the seminal vesicles and, ampullae per rectum resulted in an inhibn. of water diuresis. A similar but weaker response was observed after coitus in some trials. These anti-diuretic effects could be matched by i.v. injn. of ftiysiolog. amounts of pituitary ADH. C_B 1a e

2044. DISTRIBUTION AND EXCRETION OF [^{14}C]AMINONUCLEOSIDE [PA] IN NORMAL AND NEPHROTIC RATS. C.S.Alexander, H.T.Nagasawa and J.W.Filbin: Proc. Soc. exp. Biol., N.Y., 1962, 111, 521-526 (Med. and R¹⁴tope. Serv., V.A. Hosp., Minneapolis, Minn., U.S.A.) In the 8 hr. following injn. of [^{14}C]PA, the normal rat excreted 65-70% of the dose in the urine, the kidney only contained 0-25%. Nephrotic rats excreted much less PA in the urine, the fact being attributed to retention in the characteristically increased body water pool. M.M.Shapland

² 45. MECHANISM OF EXCRETION OF UREA BY KIDNEY IN RABBIT. D.R.Drury, M.C.Almen and K.W.Ballard: Proc.Soc. exp. Biol., N.Y., 1962, 111, 123-125 (Dept. Physiol., Sch. Med., Univ. Southern California, Los Angeles, Calif., U.S.A.) In free flow expt. most of the urea excreted in the urine was filtered in the glomerulus. Prevention of urine flow for 2 min. caused urea to be transferred between blood and tubular fluid.

M.M.Shapland

2046. ISOLATION, IDENTIFICATION AND QUANTITATION OF TESTOSTERONE IN URINE OF NORMAL ADULTS AND IN PATIENTS WITH ENDOCRINE DISORDERS. A.M.Camacho and C.J.Migeon: J. clin. Endocr., 1963, 23, 301-305 (Dept. Pediat., Johns Hopkins Univ. Sch. Med., Baltimore, Md., U.S.A.)

K.Jones

² 47. INFLUENCE OF GLUCOCORTICOGENS AND ACTH CORTICOTROPHIC HORMONE ON OUTPUT OF HUMAN URINARY TRYPSIN INHIBITOR [AND HYALURONIDASE INHIBITOR]. H.J.Faervang: Acta Pharmacol., Kbh., 1962, 19, 293-304 (Biol. Inst., Carlsberg Fdn., Copenhagen, Denmark) Increased concn. of glucocorticosteroids increase the output of trypsin inhibitor. The sensitivity of the function to a given glucocorticosteroid shows large individual variations.

R.S.Tonks

² 48. URINARY EXCRETION OF VANILLYL-MANDELIC ACID IN DIFFERENT HUMAN POPULATIONS. J.G. Henrotte, G.Libotte and A.Dresse: Arch. int. Pharmacodyn., 1963, 142, 282-285 (Pathol. and Gen. Therapeutics Lab., Leon-Frederic Inst. Physiol., Liege Univ., Liege, Belgium) Urinary excretion of the acid was greater in poor, undernourished Indians than in other, better nourished human groups. There was a relationship between urinary content and the body wt. and cube of the height in the populations studied. (French) T.J.Sullivan

² 49. PARAPLEGIC DOGS: URINARY BLADDER EVACUATION WITH DIRECT ELECTRIC STIMULATION. A.Kantrowitz and M.Schamaun: Science, 1962, 138, 115-116 (Surg. Res. Lab., Maimonides Hosp., Brooklyn, N.Y., U.S.A.) Stimulation of the detrusor muscle implanted electrodes increased intravesical pressure markedly in both normal dogs and those with section of the lumbar spinal cord. The urine bladder completely emptied by this method for up to weeks post-operatively. Later, residual urine even after progressively higher voltages were applied.

G.M.Lewis

ENDOCRINE GLANDS

² 50. METHYLATION OF NORADRENALINE IN ADRENAL GLAND. J.-F.Cier and L.Peyrin: J. Physiol., Paris, 1962, 54, 537-547 (Inst. Physiol., Fac. Med., Lyon, France) Unlabelled or [¹⁴C]noradrenaline was added to homogenates of dog adrenal tissue. Adrenaline formed was shown firstly by the difference in adrenaline concentration in the mixture measured fluorimetrically by the hydroxylindole method, before and after incubation of the mixture for 1 hr. at 37°; and secondly by the presence of radioactive adrenauine in the incubated mixture. (French)

2051. TISSUE LEVELS OF NORADRENALINE AND ADRENALINE IN HAEMORRHAGIC SHOCK. B.Coleman and V.V. Glaviano: Science, 1963, 139, 54 (Dept. Physiol., Stritch Sch. Med., Loyola Univ., Chicago, Ill., U.S.A.)

Severe depletion of endogenous noradrenaline was observed in the brain, heart, liver and spleen of rabbits suffering from haemorrhagic shock, although the adrenaline content of these tissues was significantly elevated above those in controls. Skeletal muscle showed no alteration in the level of these compounds.

G.M.Lewis

2052. TISSUE CATECHOLAMINES IN CHRONIC RENAL HYPERTENSION. A.F. de Schaepdryver, A.C.Taquin, P.Bernard and C.Heymans: Arch. int. Pharmacodyn., 1963, 142, 260-266 (J.F. Heymans Inst. Pharmacol., Ghent Univ., Belgium) Expt. renal hypertension is induced in rats by tying ligatures around the poles of one kidney and removing the other kidney 7-10 days later. After 8-12 weeks catecholamine contents of brain, heart, spleen, liver, kidneys, muscle and adrenals do not differ from those of control animals.

S.E.Smith

2053. ELEVATION OF PLASMA ADRENALINE LEVELS PRODUCED BY GLUCAGON IN VIVO. E.J.Sarcione, N.Back, J.E.Sokal, B.Mehlman and E.Knoblock: Endocrinology, 1963, 72, 523-526 (Med. Div., Roswell Park Mem. Inst., N.Y. State Dept. Hlth., Washington, D.C., U.S.A.) A single glucagon injn. in anaesthetised dogs resulted in a rise in plasma glucose, lactate, and adrenaline levels. A 10 min. glucagon infusion resulted in an increase in adrenaline and noradrenaline in adrenal vein blood.

H.C.Joae

2054. WEIGHT OF HUMAN ADRENAL GLAND AND EFFECT OF PREPARATIONS OF CORTICOTROPIN OF DIFFERENT PURITY ON WEIGHT AND MORPHOLOGY OF HUMAN ADRENAL GLAND. G.P.Studzinski, D.C.F. Hay and T.Symington: J. clin. Endocr., 1963, 23, 248-254 (Jefferson Med. Coll., Philadelphia, Pa., U.S.A.) Purified ACTH prep. lost most of their ability to cause an increase in adrenal wt., to stimulate mitotic activity in the cortex and to cause lipid depletion of the cells of zona fasciculata. Purification appeared to remove a pituitary substance which potentiates ACTH action.

K.Jones

2055. INFLUENCE OF EPITHELIAL CELLS OF KIDNEY JUXTAGLOMERULAR APPARATUS ON STRUCTURE AND FUNCTION OF THE ZONA GLOMERULOSA OF THE ADRENAL CORTEX. M.Kohlhardt and D.Voth: Naturwissenschaften, 1963, 50, 2, 43-44 (Pathol. Inst., Univ., Mainz, Germany) Rats in metapiron adrenostasis were given angiotensin. Cellular activity in the zona glomerulosa increased after 30 min., together with activity in the kidney epithelium. This response to angiotensin, despite blockade of aldosterone production through the pituitary, indicates a direct connection between activity of the kidney and the adrenal cortex zona glomerulosa. (German) AJ.Wansbrough

2056. EFFECT OF ANGIOTENSIN II ON ADRENAL ASORBIC ACID. A.A.Carr and F.C.Barter: Proc. Soc. exp. Biol., N.Y., 1962, 111, 210-212 (Clin. Endocr. Branch, N.H.I., N.I.H., Bethesda, Md., U.S.A.) ACTH, but not angiotensin II, depletes adrenal ascorbic acid in hypophysectomised rats. This difference can be used to determine the presence of ACTH in fluids to stimulate steroidogenesis by the adrenal cortex.

M.M.Shr

PHYSIOLOGY

2057. CARDIOVASCULAR, HEPATIC AND RENAL LESIONS IN MICE RECEIVING CORTISONE, OESTRONE AND PROGESTERONE. A.D.Ashbum, W.Lane Williams and F.R.Cobb: *Yale J. BioLMed.*, 1963, 35, 329-340 (Dept. Anat., Univ. Mississippi Sch. Med., Jackson, Miss., U.S.A.) Youngd and ♀ mice were given daily s.c. injn. of cortisone acetate (2*5 mg. for 7 days), oestrone (1 mg. for 9 days), progesterone (1 mg. for 9 days), oestrone plus cortisone, or progesterone plus cortisone, and were killed 24 hr. later. Progesterone produced a slight increase in body wt. and oestrone a slight decrease. Cortisone produced inflammatory lesions in liver, kidneys and heart, which were not affected by the simult. administration of progesterone or oestrone. The combination of oestrone and cortisone produced cardiovascular damage in more than half the mice.

J.B.Parish

2058. EFFECT OF INJECTED CORTICOSTERONE ON THE RELEASE OF ACTH IN RATS EXPOSED TO ACUTE STRESS. J.R.Hodges and M.T.Jones: *J. Physiol.*, Lond., 1963, 167, 30-37 (Dept. Pharmacol., Royal Free Hosp. Sch. Med., London, England) Corticosterone was administered s.c. to rats in doses sufficient to raise the blood concn. of the steroid up to 4 times the max. level induced by stress. The animals were then subjected to the stress of sham adrenalectomy. Pretreatment with corticosterone did not diminish the further rise in corticosterone or the elevation in blood ACTH, and reduced only slightly the adrenal ascorbic acid depletion normally caused by the stress. Since the release of ACTH was not suppressed, it was considered that the secretion of the hormone is independent of changes in blood corticoid levels within the physiol. range. *

2059. MECHANISMS OF ACCUMULATION OF CORTICOSTERONE IN REGENERATING ADRENAL OF RAT DURING STRESS. B.Koch, C.Mialhe-Voloss and F. Stutinsky: *C.R. Soc. Biol.*, Paris, 1962, 156, 1503-1506 (Lab. Physiol., Fac. Sci., Strasbourg, France)

The total plasma and adrenal corticosterone level was similar in normal rats and rats in which the adrenal medulla had been destroyed. After stress the plasma level was similar in the 2 groups but the adrenal corticosterone level was higher in expt. animals. After unilat. adrenalectomy the adrenal concn. of corticosterone was equiv. to that in normal rats. (French) M. A. Price

2060. EFFECT OF HOUSING CONDITIONS AND SIMPLE EXPERIMENTAL PROCEDURES UPON CORTICOSTERONE LEVEL IN PLASMA OF RATS. A.M.Barrett and M.A.Stockham: *J. Endocr.*, 1962, 26, 97-105 (Dept. Pharmacol., Sch. Pharm., Brunswick Sq., London, England) Rats housed singly in undisturbed surroundings had plasma corticosterone level of 5*5 μ g./100 ml. Housing in groups of 20 and other forms of stress resulted in significantly higher levels, the response being evident within 15 min. of exposure to these stresses.

G.F.Blanc

2061. CORTISOL METABOLISM IN CASE OF HYPERTENSIVE FORM OF CONGENITAL ADRENAL HYPERPLASIA: DEMONSTRATION OF ABSENCE OF 110-DEHYDROXYLATION. J.W.Reynolds and R.A.Ulstrom: *J. clin. Endocr.*, 1963, 23, 191-196 (Dept. Pediat., Univ. Minnesota Med. Sch., Minneapolis, Minn., U.S.A.) High excretion of 11-deoxy-C₂₁-OH steroids did not result from metabolic transformation of cortisol or its metabolites, in a te-³clcortisol administered patient. The cortisol secretion rates indicated max. endogenous ACTH stimn. of the patient's adrenal glands under control conditions.

K. Jones

2062. STIMULATION OF SECRETION OF INSULIN BY ATP. J.L.R.Candela and M.C.Garcia-Femandez: *Nature*, Lond., 1963, 197, 1210 (Inst. 'G.Maranon' Velazquez 138, Madrid, Spain) Injn. of 10⁻²M ATP i.v. into rats stim. secretion of insulin, as evidenced by a greater plasma insulin effect and the increase of the glucose uptake of the diaphragm and of the epididymal fat. Hydrolysed ATP had no effect. G.M.Lewis

2063. DEGRADATION OF INSULIN BY TISSUE EXTRACTS OF NORMAL AND NEUROTIC RATS. H.L.Wildberger, H.T.Ricketts and L.Kegut: *Proc. Soc. exp. Biol.*, N.Y., 1963, 112, 168-170 (Dept. Med., Univ. Chicago, 111, U.S.A.) Sprague-Dawley rats were treated with nephrotoxic rabbit serum to induce nephritis. The insulin degrading capacity of homogenates from inflamed kidneys, liver and diaphragm was measured in 2 ways; cryst. insulin was incubated with the homogenates and the resulting mixture was inj. into animals to see the effect on blood sugar content as compared with the control. The other method was to follow the degradation by using [131]insulin. It was shown by both methods that the nephrotic kidney homogenates were less active than normal kidney homogenates in degrading insulin.

D.N.Wheatley

2064. DETERMINATION OF PLASMA INSULIN-LIKE ACTIVITY, USING HYPOPHYSECTOMISED-ADRENALECTOMISED RAT. K.Kosaka, T.Ide, N. Kuzaya and T.Kuzuya: *Endocrinology*, 1963, 72, 552', 562 (3rd Dept. Int. Med., Med. Fac., Univ. Tokyo, Japan) A method has been devised for the in vivo assay of plasma insulin in hypophysectomised-adrenalectomised rats. From injn. of test samples a regression line was plotted against log dose of standard insulin soln. The validity of the method was confirmed using [131]-insulin injn. 'Anti-insulin' hormones did not affect the assay.

H.C.Jones

2065. REGULATION BY CALCIUM OF PARATHYROID GROWTH AND SECRETION IN VITRO. L.G.Raisz: *Nature*, Lond., 1963, 197, 1115-1116 (Dept. Pharmacol., Univ. Rochester Sch. Med., Rochester, N.Y., U.S.A.) Parathyroid glands from chick embryos and rats were cultured in vitro. Increasing Ca concn. in the medium decreased the cytoplasmic vol. and reduced ttf no. of mitoses in chick embryo material. At low Ca concn., cytoplasmic growth was stim. The release of parathyroid hormone was tested by the bone-resorbing activity in cultures of rat embryonic bone labelled with 45 Ca. Low Ca stim. and high Ca depressed secretion of parathyroid hormone. Alterations in Mg or phosphate concn. did not produce these effects. CM.Lewis

2066. INFLUENCE OF PARATHYROIDS ON COMPOSITE OF RAT MILK. J.Neuenschwander and R.V.Talmage: *Proc. Soc. exp. Biol.*, N.Y.; 1963, 112, 297-299 (Biol. Dept., Rice Univ., Houston, Tex., U.S.A.) Parathyroidectomy of young Holtzman albino rats increased the total milk solids when the Ca level in the plasma was lower than in the controls. This effect cou^{nt} be abolished by keeping the rats on a high Ca diet or by preventing them from suckling their litters.

D.N.Wheatley

2067. FAILURE OF ANTERIOR HYPOTHALAMIC LESIO* TO PREVENT EITHER PITUITARY REACTIONS TO CASTRATION OR INHIBITION OF SUCH REACTION* BY OESTROGEN TREATMENT. E.M.Bogdanov: *Bio*crinology*, 1963, 72, 638-642 (Anat. Dept., Indian* Univ. Med. Sch., Indianapolis, Ind., U.S.A.)

PHYSIOLOGY

193

oestradiol administration was used to inhibit the cellular reactions of the pituitary to castration in rats. The presence or absence of a portion of the hypothalamus previously reported to be essential for the inhibn. of gonadotrophin secretion by gonad steroids, did not influence the action of oestradiol.

H.C.Jones

2068. CORRELATION BETWEEN TIME ELAPSED AFTER THYROIDECTOMY AND ACID PHOSPHATASE ACTIVITY IN RAT ADENOHYPOPHYSIS. V.Kmentová and V.Schreiber: *Folia biol., Praha*, 1963, 9, 68-71 (Lab. Endocrinol. Metab., Charles Univ., Prague, Czechoslovakia) Rats were thyroidectomised and killed 1, 14, 21 and 35 days after the operation. The wt. of Jte adenohypophysis increases with time during this period from 2.36 mg.% after 1 day to 3.13 mg.% at 14 days, declining again to 2.78 mg.% at 35 days. At the same time the relative and abs. acid phosphatase activities of the adenohypophysis both increased by about 100%. M.S.Laverack

2069. HAEMAGGLUTINATION-INHIBITION TECHNIQUE FOR ESTIMATING HUMAN GROWTH HORMONE. P.J. O'Connor and L.G.Skinner: *J. Endocr.*, 1963, 26, 219-231 (Paterson Res. Labs., Christie Hosp., Manchester, England) A haemagglutination-inhibiting technique described for the immunoassay of human growth hormone. This was considered satisfactory within the limitations described and gave the mean value of 261 ± 23 μ U/l. for 6 normal adult sera. CF.Blane

2070. STANDARDISATION OF BIOLOGICAL ACTIVITY OF HUMAN PITUITARY INTERSTITIAL CELL STIMULATING HORMONE [ICSH] IN TERMS OF HUMAN CHORIONIC GONADOTROPHIN. A.J.Lostroh, P.G. Squire and C.H.Li: *J. Endocr.*, 1963, 26, 215-218 (Hormone Res. Lab., Univ. California, Berkeley, Calif., U.S.A.) Conditions are reported under which comparison of the ICSH potency of a new homogeneous 3rd - from human pituitary tissue is made with HCG. An? Ind Prostate test in hypophysectomised dth rats o^{ne} a little interstitial cell repair test in hypophysectomised *^{as}e both applicable. CF.Blane

***^o7i: EFFECT OF ACUTE STRESS ON PITUITARY GLAND. I. CHANGES IN BLOOD AND PITUITARY ACTH CONCENTRATIONS.** J.Vernikos-Danellis. **II. ACTION OF ETHIONINE ON STRESS-INDUCED ACTH RELEASE.** B.H.Marks and J.Vernikos-Danellis. **III. ENDOCRINE GLAND BLOOD FLOW.** H.Goldman. **IV. UPTAKE OF SERINE-1-14C INTO ACTH.** D.Jacobowitz, B.H.Marks and J.Vernikos-Danellis: *Endocrinology*, 1963, 72, 574-581, 582-587, 588-591, 592-597 (Pharmacol. Lab., Ohio State Univ. Med. Coll., Columbus, Ohio) Expt. on the changes in pituitary ACTH concn. in rats subject to various stresses, suggest that the ability of the gland to release ACTH after stress depends on its ability to synthesise ACTH at that time.

II. Ethionine administration suppressed the release of pituitary ACTH following stress in rats. The effect was antagonised by methionine administration. The resting pituitary ACTH content was unaltered but the stress-induced rise following adrenalectomy was prevented by ethionine.

III. Ether stress increased the blood flow in the ant. pituitary and thyroid gland in female rats; post, pituitary, adrenal gland and median eminence flows were not affected. Adrenalectomised rats had elevated ant.

pituitary blood flows and following stress the blood flow in both the ant. and post, pituitary increased but that of the thyroid did not.

IV. Stress increased the uptake of [$I\text{-}^{14}\text{C}$]serine into the glacial acetic acid extract of the ant. pituitary. The radioactive material was identified as ACTH.

H.C.Jones

2072. PROLACTIN SECRETION IN VITRO: EFFECTS OF THYROID HORMONES AND INSULIN. C.S.Nicoll and J.Meites: *Endocrinology*, 1963, 72, 544-551 (Michigan State Univ., Physiol. Dept., East Lansing, Mich., U.S.A.) The presence of thyroxine and triiodothyronine in the medium of rat ant. pituitary gland cultures resulted in a higher prolactin level in the medium. Neither substance had any effect on the pigeon crop response to prolactin. The presence of insulin was not essential for prolactin secretion.

H.C.Jones

2073. EFFECT OF OESTROGEN ADMINISTRATION IN VIVO ON PROLACTIN RELEASE BY RAT PITUITARY IN VITRO. A.Ratner, P.Talwalker and J.Meites: *Proc. Soc. exp. Biol., N.Y.*, 1963, 112, 12-15 (Dept. Physiol., Michigan State Univ., East Lansing, Mich., U.S.A.) Oestrogen (oestradiol benzoate) administered to Sprague-Dawley rats for 6 days at a dosage of 50 μ g in sesame oil caused increase in the ant. pituitaries of 47% in size, an increase of prolactin content of 187% and in vitro incubation of the ant. pituitaries resulted in a 96% increment of prolactin over controls which received only sesame oil.

D.N.Wheatley

2074. METHOD FOR DETECTION AND ESTIMATION OF SMALL AMOUNTS OF ARGinine-VASOTOCIN.

P.J.Bentley: *J. Endocr.*, 1963, 26, 295-296 (Dept. Pharmacol., Univ. Bristol, England) An assay procedure for arginine-vasotocin is described utilising the natriferic effect on the frog-bladder prep. Responses are obtained with 0.1 mU/ml. soln. of the octapeptide.

CF.Blane

2075. DISSOCIATION BETWEEN THE CONTENT OF VASOPRESSIN AND NEUROSECRETORY MATERIAL IN RAT NEUROHYPOPHYSIS. A.M.Moses, T.F.Leveque, M.Giambattista and C.W.Lloyd: *J. Endocr.*, 1963, 26, 273-278 (V.A. Hosp., State Univ. New York, Syracuse, N.Y., U.S.A.) A decrease in the amount of neurohypophyseal neurosecretory material occurred in rats stressed by s.c. injn. of formalin over a period when vasopressin content remained const. In view of this apparent dissociation it is suggested that the neurosecretory material is a precursor or carrier for hormones of the neurohypophysis.

CF.Blane

2076. RELEASE OF ANTIDIURETIC HORMONE DUE TO COMMON CAROTID OCCLUSION AND ITS RELATION WITH VAGUS NERVE. S.Usami, B.Peric and S.Chien: *Proc. Soc. exp. Biol., N.Y.*, 1962, 111, 189-193 (Dept. Physiol., Coll. Physns. Surg., Columbia Univ., N.Y., U.S.A.) Occlusion of common carotid arteries caused elevation of plasma ADH concn. only if vagus nerves had been previously sectioned.

M.M.Shapland

2077. REFLEX NATURE OF RELEASE OF ANTIDIURETIC HORMONE UPON COMMON CAROTID SINUSES IN VAGOTOMISED DOGS. S.Chien, B.Peric, T.N.Ji, S.J. ff, T. W. T. S. S. Col. mb. Unk.

N.Y., U.S.A.) In vagotomised dogs there was no increase in plasma ADH concn. following: (a) common carotid occlusion if the carotid sinuses had been sectioned or (b) occlusion of external and internal carotid arteries above the bifurcation.

M.M.Shapland

PHYSIOLOGY

- 2078. EXTERIORATION OF THYROID GLAND AND MEASUREMENT OF ITS FUNCTION.** LRJalconer: J. Endocr., 1963, 26, 241-247 (Dept. Agric. Chem., Waite Agric. Res. Inst., Univ., Adelaide, Australia) A technique is described for transplantation of a thyroid lobe to below the neck skin of the ewe in continuity with a carotid artery-jugular vein loop. Blood samples taken from the jugular vein showed that secretory function in such exteriorised glands remains normal. G.F.Blane
- 2079. AMINO ACID- ^{14}C INCORPORATION INTO PROTEIN BY THYROID GLAND SLICES: EFFECTS OF THYROTROPHIC HORMONE INJECTIONS AND OF HYPOPHYSECTOMY.** E.Raghupathy, W.Tong and I.L. Chaikoff: Endocrinology, 1963, 72, 620-625 (Physiol. Dept., Univ. Calif., Berkeley, Calif., U.S.A.) Injn. of TSH increased the incorporation of [^{14}C]amino acids into protein by slices of guinea-pig thyroid gland. Hypophysecomy reduced the incorporation of [^{14}C]leucine into protein and TSH administration reversed the effect. H.C.Jones
- 2080. ACTION OF POTASSIUM THIOCYANATE ON THYROID METABOLISM IN RATS.** P.Blanquet, G. Meyniel, M.Croizet and M. Le Dain: C.R. Soc. Biol., Paris, 1962, 156, 1380-1383 (Lab. Physique, nucléaire, Fac. Méd., Bordeaux, France) Rats received injn. of 20 mg./day KCNS for 15 days. There was a decrease in the fixation rate of ^{131}I 1 hr. after the final injn. compared with normal animals. In animals receiving ^{131}I 24 hr. after the final injn. the fixation rate was similar to that of normal animals. There was a decreased rate of formation of thyroid hormones. In animals receiving a single dose of KCNS there was a linear relationship between KCNS concn. and the level of circulating hormones containing ^{131}I . (French) M.A.Price
- 2081. ACTION OF 6 n-PROPYLTHIOURACIL ON THYROID METABOLISM OF RAT.** P.Blanquet, G.Meyniel, M.CrDizet and M. Le Dain: C.R. Soc. Biol., Paris, 1962, 156, 1386-1389 (Lab. Physique nucléaire, Fac. Méd., Bordeaux, France) Rats received injn. of $^{2\pm 5.5}$ mg. 6 n-propylthiouracil during 8 days followed by ^{131}I . They were killed after 3-48 hr. I fixation did not exceed 3%, and 90% of this remained in the mineral state. The org. I⁻ content of the blood decreased during the 8 days but the total thyroid hormone level in the blood increased after 24 hr. to above the level in normal animals. In animals receiving a single dose of propylthiouracil the circulating org. I⁻ level was lower than in the first group. There was no secondary increase in the hormone level in the blood. (French) M.A.Price
- 2082. ACTION OF n-BUTYL 3, 5-DIODO-4-HYDROXYBENZOATE [IHB] ON THYROID METABOLISM IN THE RAT.** P.Blanquet, M.Croizet, G.Meyniel and M. Le Dain: C.R. Soc. Biol., Paris, 1962, 156, 1391-1398 (Lab. Physique nucléaire, Fac. Méd., Bordeaux, France) In rats receiving 10 mg. IHB followed by ^{131}I , there was an increase in the level of thyroid hormones in the blood and a decrease in circulating org. I⁻. These levels returned to normal after 72 hr. A second group of rats received 5-20 mg. IHB followed by ^{131}I 6-340 hr. later and were sacrificed 24 hr. after iodine injn. For a dose of 5 mg. the thyroid hormone level returned to normal after 160 hr. and the circulating hormone level returned to normal after 250 hr. (French) M.A. Price
- 2083. EFFECT OF HYPERTONIC SALINE INJECTIONS ON SECRETION OF THYROID HORMONES IN RABBITS AND**

- GUINEA-PIGS.** G.Feuer: Nature, Land., 1963, 197, 1176-1177 (Dept. Biochem., Inst. Psychiat., Univ., London, England) Acute stimn. of die neural lobe by administration of hypertonic NaCl soln., resulting in a relative deprivation of water in normal animals, led to an increased output of thyroxine in the circulation. The latter effect reached a max. 2-6 hr. after injn. of NaCl. J.R.Sargent
- 2084. DIPHASIC SEASONAL VARIATION OF SERUM PROTEIN-BOUND IODINE LEVEL.** G.Watanabe, M. Uematsu and K.Jiorii: J. clin. Endocr., 1963, 23, 383-386 (Dept. Hyg., Univ. Niigata Sch. Med., Japan) Levels of serum PBI in men and women varied similarly in the form of diphasic seasonal variations. The reduced level of serum PBI in winter and summer months is attributed to more rapid metabolism of the thyroid hormone in peripheral tissues without an immediate increase in the rate of its release from the gland. K Jones

- 2085. INFLUENCE OF L-TREODOOTHYRONINE ON STEROID HORMONE METABOLISM; STUDIES IN PATIENT WITH ADRENAL HYPERPLASIA (CUSHING* SYNDROME).** NJ.Gold and J.F.Crigler: J. clin. Endocr., 1963, 23, 156-166 (Dept. Pediat., Harvard Med. Sch., Boston, Mass., U.S.A.) K Jones

- 2086. EFFECT OF ALTERED THYROID FUNCTION UPON STEROID CIRCADIAN RHYTHMS IN MAN.** M.M.Martin, D.H.Mintz and H.Tamagaki: J. clin. Endocr., 1963, 23, 242-247 (Dept. Med. Georgetown Univ., Washington, D.C., U.S.A.) K Jones

- 2087. BLOOD THYROTROPIN LEVELS IN THYROTOKIC PATIENTS BEFORE AND AFTER HYPOPHYSECTOMY.** S.A. D'Angela: J. clin. Endocr., 1963, 23, 229-234 (Daniel Baugh Inst. Anat., Jefferson Med. Coll., Philadelphia, Pa., U.S.A.) Circulating TSH titres were measured in 5 patients with Graves' disease in whom thyroid function persisted at normal or supranormal* levels after total hypophysecomy. Hyperplasia and hypersecretion of the thyroid in this disease are not primarily attributable to change in TSH levels in the circulation. K Jones

- 2088. PARALLEL ASSAYS OF THYROTROPHIN, LONG-ACTING THYROID STIMULATOR AND EXOPHTHALMOS-PRODUCING SUBSTANCES IN SOME ENDOCRINE DISORDERS.** B.L.Pimstone, R.Hoffenberg and E.Black: J. clin. Endocr., 1963, 23, 336-345 (Dept. Med., Univ. Cape Town, South Africa). K Jones

REPRODUCTION AND GONADS

- 2089. EFFECT OF DIETHYLSTILBOESTROL, ACTH AND CORTISONE ON BODY AND ACCESSORY SEX ORGAN WEIGHTS IN HYPOPHYSECTOMISED RATS.** D.W. Snair: Toxicol. appl. Pharm., 1963, 5, 168-175 (Food and Drug Labs., Dept. Nat. Hlth. and Welfare, Ottawa, Canada) Hypophysectomised adult rats were treated with diethylstilboestrol, ACTH or cortisone. The oestrogen prevented the atrophy of the accessory organs (1) and caused a loss of body wt. (2), but had no effect on the wt. of the adrenal gland (3). ACTH was without effect on (1) and increased (3); the latter effect w

PHYSIOLOGY

195

not modified by the oestrogen. Cortisone reduced (2) but had no effect on (1) and (3); the first effect was enhanced by the oestrogen.

E.E.Hobbiger

2090. SEX DIFFERENCES IN GROWTH OF RATS, AND THEIR MODIFICATION BY A SINGLE INJECTION OF TESTOSTERONE PROPIONATE SHORTLY AFTER BIRTH. H.E.Swanson and J.J.Van der Werff ten Bosch: *J. Endocr.*, 1963, 26, 197-207 (Dept. Clin. Endocr., Univ., Leiden, Netherlands) The single s.c. dose of 0.5 mg. testosterone given on days 2 or 5 after birth had detrimental effects on the subsequent sexual development bothd and ? rats. Overall growth rate increased in \$ and decreased inc? so treated. CF.Blane

2091. GONAD-BRAIN RELATIONSHIP: PRECOCIOUS BRAIN MATURATION AFTER OESTRADIOL IN RATS. L.M.Heim and P.S.Timiras: *Endocrinology*, 1963, 72, 598-606 (Physiol. Dept., California Univ., Berkeley, Calif., U.S.A.) Brain maturation was measured in rats by electroshock seizure patterns. Oestradiol administration to newborn rats resulted in the seizure pattern appearing earlier. Other effects of oestradiol observed were the inhibn. of growth, pituitary hypertrophy, and ovary and thymus atrophy. H.C.Jones

2092. INFLUENCE OF PREGNANCY AND CORTISONE TREATMENT ON BROWN ADIPOSE TISSUE IN BATS. R.A.Sims, R.Allen and S.E.Sulkia: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111, 455-458 (Dept. Microbiol., Univ. Texas Southwestern Med. Sch., Dallas, Tex., V.S.A.) Lipid accumulation in the brown fat cells begins in early pregnancy reaching a max. level late in the gestation period. During and shortly after parturition tissue is essentially depleted of lipid, but 2 weeks after delivery lipid can be found again. Cortisone treatment of non-gravid bats causes lipid accumulation similar to that found in the pregnant animal. M.M.Shapland

2093. EFFECT OF MONTH OF CALVING ON THE GESTATION PERIOD OF INDIAN CATTLE. S.S.Prahu: *J. anim. Morph. Physiol.*, 1961, 8, 35-41 (Indian Vet. JteS/Inst., Izatnagar, U.P., India) Analysis of 9645 cows from various farms and breeds showed that those calving in September, October, November and December had shorter gestations than those calving in February months. This may be because the former get good feeding during the second half of pregnancy. C.D.Putnam

2094. EFFECT OF GEOGRAPHICAL LOCATION, SEX OF CALF AND PARITY OF THE GESTATION PERIOD OF CERTAIN INDIAN CATTLE BREEDS. S.S.Prahu, S.Mukherjee and S.N.Chatterjee: *J. anim. Morph. Physiol.*, 1961, 8, 22-34 (Indian Vet. Res. Inst., Izatnagar, U.P., & U.P.) Within 5 Indian cattle breeds there were significant differences in the duration of pregnancy at different farms, probably due to genetic impurity of the original source, and the use of bulls of unknown pedigree. In all breeds d calves were carried for longer than * calves. C.D.Putnam

2095. CORTISOL AND CORTISONE IN SALIVA OF PREGNANT WOMEN. M.S.Greaves and H.F.West: *J. Endocr.*, 1963, 26, 189-195 (Rheumatism Res. Unit, Nether Edge Hospt. - P. Sheffield, England) Raised levels of cortisol and cortisone were found in the saliva of women in the third trimester of pregnancy. Since there is evidence that these steroids were in the bound state suggested that the temporary remissions of

rheumatoid conditions which sometimes occur during pregnancy may be attributed to the high levels of corticoids in the connective tissues.

CF.Blane

2096. VAGINAL CORNIFICATION IN PERSISTENT-OESTROUS MICE. N.Takasugi: *Endocrinology*, 1963, 72, 607-619 (Zool. Dept., Univ. California, Berkeley, Calif., U.S.A.) Ovariectomy alone and with adrenalectomy or hypophysectomy did not prevent vaginal cornification in persistent oestrous mice. Antihistamine treatment or transplantation of the vagina into other mice also had no effect on cornification in many cases, and steroid hormone treatment only prevented cornification in some cases.

H.C.Jones

2097. INFLUENCE OF INDUCTION OF BREEDING ACTIVITY IN ANOESTROUS SHEEP ON LEVELS OF SOME CHEMICAL CONSTITUENTS OF UTERINE WASHINGS. R.B.Heap, D.M.Allen and G.E.Lamming: *J. Reprod. Fertil.*, 1963, 5, 209-215 (Nottingham Univ. Sch. Agric, Sutton Bonington, Loughborough, England) All of 10 maiden anoestrous sheep ovulated in response to injn. of progesterone and pregnant mares' serum though only 3 showed behavioural oestrous. Eleven lactating sheep treated similarly all ovulated but only 2 showed behavioural oestrous. Uterine washings from these 2 groups showed no difference in Na, K, PO₄, N₂ or carbohydrate content. Only the level of P was significantly different in the 2 groups and was greater in the lactating sheep than in maiden sheep at induced oestrous and 10 days later. The results are discussed in relation to differences in fertility between the 2 groups at the first induced oestrous cycle.

H.E.HJones

2098. INDUCED OESTRUS IN ANOESTROUS EWES BY USE OF PROGESTOGENS AND FOLUCE-STIMULATING HORMONE. V.G.Puisel and E.F.Graham: *J. anim. Sci.*, 1962, 21, 132-136 (Univ. Minnesota, Minneapolis, Minn., U.S.A.) Pretreatment of anoestrous ewes by daily injn. of progesterone (10 mg. cryst. in maize oil) over periods of 9-19 days, followed after 48 hr. (preferably 24 hr.) by injn. of FSH (15-50 mg.) produced oestrus in 91% and ovulation in 98% of cases in 3 days. The progesterone pretreatment was replaced satisfactorily by oral administration of 6-methyl-17-acetoxy-progesterone (10-60 mg.) daily for 12 days followed by FSH within 48 hr. This was 80% effective within 48 hr. (FSH alone was 18% effective). A single injn. of 17-hydroxyprogesterone-17-caproate (125 mg.) and a 25 mg. injn. of FSH after 12 days induced oestrus in 3 of 4 ewes treated, shorter intervals (10-8 days) between the injns. gave less satisfactory results.

A.G.Pollard

2099. EFFECT OF AUTOTRANSPLANTATION OF THYROID GLAND ON ONSET OF OESTRUS IN FERRETS. W.A.Marshall: *J. Endocr.*, 1963, 26, 279-285 (Dept. Anat., Univ. Birmingham, England) Denervation and transplantation of the thyroid gland to the deep surface of the rectus abdominis muscle had no effect on the normal onset of oestrus or the oestrus response to artificial lighting.

CF.Blane

2100. QUANTIFICATION OF THE OESTROUS CYCLE OF THE WHITE MOUSE. F.A.Lints, A.N.Mouravieff and F.E.Merckx: *Arch. biol. liège*, 1962, 73, 311-316 (Lab. Gen. Genet., Nat. Centre Radiobiol. and Genet., Inst. Agric., Univ., Heverle, Louvain, Belgium) A quantification of the oestrous cycle of the mouse has been attempted by counting the nucleated epithelial cells,

PHYSIOLOGY

cornified cells and w.b.c. in mouse vaginal smears. The relative β of the 3 types of cell characterise the stages of the oestrous cycle. It is suggested that the modification of these β offers a possible means of measuring the effects of physiol. treatment or of genetic variation.

(French) R.J.Walker

2101. ANTISERUM INHIBITION OF THE OESTROUS CYCLE IN NORMAL RATS. W.P.Young, R.Nasser and T.Hayashida: Nature, Lond., 1963, 197, 1117 (Dept. Anat., Univ. California Med. Center, San Francisco, Calif., U.S.A.) A prelim. report showing that a sp. rabbit antiserum to purified sheep pituitary ICSH can inhibit the oestrous cycle in adult tf rats. CM.Lewis

2102. INFLUENCE OF THE OESTROUS CYCLE AND OVARIECTOMY ON PHOSPHOLIPID CONTENT OF THE PINEAL GLAND IN THE RAT. J.Zweens: Nature, Lond., 1963, 197, 1114-1115 (Dept. Anat., State Univ. Groningen, Netherlands) In ♀ rats, the phospholipid content of the pineal gland decreases with age, and is linked with the oestrous cycle, being lowest just before ovulation and max. at di-oestrous. Ovariectomy causes an increase in phospholipids of the pineal gland. CM.Lewis

2103. GENITAL EFFECTS IN RAT OF POST-NATAL ADMINISTRATION OF ANDROGEN AND OESTROGEN. REACTIONS OF OVARY GRAFTED UNDER THE SPLENIC CAPSULE. G.Mayer and AJ.Thevenot-Duluc: C.R. Soc. Biol., Paris, 1962, 156, 1377-1378 (Lab. d'Histol., Fac. Méd., Bordeaux, France) Young rats received injn. of 500 /jg. oestradiol benzoate on the 1st and 4th day after birth. Others received 2-5 mg. testosterone propionate on the 4th day. After 4 months spontaneous ovulation and formation of corpora lutea was absent in ♀ rats of both groups. In cf rats from both groups there were testicular lesions. The ovary of rats receiving either oestradiol or testosterone which was grafted under the splenic capsule at 3 months, with ablation of the other ovary, contained numerous corpora lutea.

(French) M.A. Price

2104. EFFECTS OF ABLATION OF SUBMAXILLARY GLAND IN GUINEA-PIGS. IE. CHANGE OF FOLLICULAR FLUID AND ORIGIN OF ABERRANT OVARIAN FOLLICLES. K.Suzuki: Cytologia, 1961, 26, 468-474 (Shakujii Inst., Tokyo Med. Coll., Japan) Submaxillarictomised guinea-pigs showed abnormalities of ovarian follicular and tissue fluids in that these were coagulated and adherent to the ova, which began to degenerate. It is suggested that the submaxillary gland secretes an anti-coagulation enzyme. Coagulation appears to account for the high no. of binuclear ova (due to ooplasm fusion) and biovular follicles, and thus high twin no., in treated females. C.A.Stace

2105. DEVELOPMENT OF A FEEDBACK MECHANISM BETWEEN OVARY AND DIENCEPHALIC-HYPOPHYSEAL SYSTEM IN RAT. J.Presl, LHorsky, M.Henzl and J. Jirásek: J. Endocr., 1963, 26, 287-294 (Inst. for Care of Mother and Child, Prague, Czechoslovakia) The gonadotrophic activity and histol. structure of the anti-pituitary lobe were determined in rats 21 days following ovariectomy at intervals up to 50 days from birth. Evidence was obtained that the ovary-pituitary feedback was operative very early in post-natal life. CF.Blane

2106. OVARY OF 13-LINES GROUND SQUIRREL (CITELLUS TRIDECEMLINEATUS MITCHELL) AFTER ADRENALECTOMY. I.Chester Jones and I.W.Henderson: J. Endocr., 1963, 26, 265-272 (Dept.Zool., Sheffield

Univ., England) Female ground squirrels (*Citellus tridecemlineatus*) adrenalectomised in anoestrus remained healthy and developed no electrolyte disturbances in the 5 weeks of study. Cellular differentiation within or near to the ovaries of these animals, of a type not found in this vicinity in normal squirrels, was tentatively identified as being adrenocortical. CF.Blane

2107. INDUCTION OF LIMITED MULTIPLE OVULATIONS IN CATTLE. E.Schilling and W.Holm: J. Reprod. Fertil., 1963, 5, 281-284 (Max-Planck-Inst. ftr Tierzucht.und TierernShrung, Mariensee, Trenthorst, W.Germany) Prelim. comm. H.E.HJones

2108. SUPEROVULATION IN IMMATURE RAT FOLLOWING TREATMENT WITH PREGNANT MARES' SERUM [PMS] ALONE AND INHIBITION OF PMS-INDUCED OVULATION. MJCZarrow and D.L.Quinn: J. Endocr. 1963, 26, 181-188 (Dept. Biol. Studies, Purdue Univ., Lafayette, Ind., U.S.A.) Treatment with PMS alone was found to be sufficient to induce superovulation. Hypophysectomy virtually abolished this response as also did administration to intact rats of substances which interfere with neural transmission. Although combined PMS and HCG treatment would cause superovulation in the hypophysectomised animals this combination was rather less effective than PMS alone in intact rats. CF.Blane

2109. EFFECT OF HYPOTHYROIDISM, DIET AND LITTER SIZE ON SUPEROVULATION IN MOUSE AND RAT. E.D.Wilson, M.N.Runner and M-X.Zarrow: J. Reprod. Fertil., 1963, 5, 233-238 (Biol. Dept., Houston State Teachers Coll., Huntsville, Tex., U.S.A.) Litter size in mice influences the body growth of the young under normal conditions, on inadequate diet and under propylthiouracil [PTU] treatment. The larger litter size of 7 showed poorer growth than litters of 4, and the latte* developed larger ovaries when treated with PTU. There was no difference in the no. of ova released in the mice under different conditions of diet, PTU treatment and litter size. Increasing dosages of PTU caused a decrease in body wt. and in ova release in the rat. H.E.HJones

2110. COITAL BLOCK TO SUPEROVULATION IN HAMSTER. G.S.Greenwald: J. Reprod. Fertil., 1963, 5, 216-224 (Obstet. Gynaec. Dept., Kansas City, Kans., U.S.A.) Hamsters inj. with 60 I.U. pregnant mares serum [PMS] on day 1 of the oestrous cycle will ovulate 60 to 70 ova if they are isolated from ♂. If ? treated similarly are placed with males on day 2 or 3 coitus ta** place resulting in pseudopregnancy and the animals do not ovulate. If mating occurs late on day 3 ovulation occurs, presumably because the corpora lutea of the j previous ovulation regress at about this time. Animals Ig with 6 I.U. PMS plus 5 mg. progesterone on day 1 and W isolated from ♂ fail to ovulate, duplicating the effects * coitus. The results also indicate that the ovulation of ¹ follicles matured by PMS is due to endogenous gonadotro* phins rather than to the luteinising component of the P¹ prep. H.E.HJones

2111. VARIATION IN PROGESTERONE CONTENT OF BOVINE CORPUS LUTEUM OF THE OESTROUS CYCLE. S.E.Mares, R.G.Zimbleman and L.E.Casida: J. anim. Sci., 1962, 21, 266-271 (Univ. Wisconsin, Madisⁿ, Wis., U.S.A.) Corpora lutea from virgin heifers were examined at 2-day intervals from 3-19 days after oestrus. From 7-17 days the concn. and content of P¹ of progestrone increases, the concn. of 4-pregniene-20³-oij¹, one increased up to the 15th day and thereafter declif¹

PHYSIOLOGY

197

Free cholesterol concn. followed a course similar to that of the progestogens for 15 days but continued to increase subsequently. Concn. of RNA and DNA did not change significantly but the ratio, RNA/DNA decreased significantly over the 17 days. The wt. of corpora lutea changed little during 17 days but diminished subsequently; % dry matter in the tissue increased. The functional activity of the corpora lutea appeared to increase for approx. 15 days and then to decline. A.G.Pollard

2112. FAILURE OF TRANSIENT PROGESTERONE DEPRIVATION TO INDUCE OVA IMPLANTATION IN OVARIECTOMISED RATS. E.F.Nutting and R.K.Meyer: Proc. Soc. exp. Biol., N.Y., 1962, 111, 372-375 (Dept. Zool., Univ. Wisconsin, Madison, Wis., U.S.A.) Delay in ova implantation in rats ovariectomised on day 9 of pregnancy in response to daily injn. of progesterone was not affected by its temporary withdrawal on day 9, * and 10 or 13. Nidation was induced in the same animals shortly after beginning daily injn. of oestrone in combination with progesterone. M.M.Shapland

2113. NEW FACTOR ASSOCIATED WITH IMPLANTATION OF MOUSE EGG. I.B.Wilson: J. Reprod. Fertil., 1963, 5, 285-286 (Zool. Dept., Univ. Coll. N. Wales, Bangor, N. Wales) Prelim. comm. H.E.H.Jones

2114. RECORDING OF BIOELECTRICAL ACTIVITIES OF INTACT CHICK EMBRYOS IN OVO. A.Terzin, N.R. Jec and N.J.Bokonjic: Brit. J. exp. Path., 1963, 44, 88-100 (Inst. Virol., Med. Fac., Sarajevo, Yugoslavia) Technique is described for recording bioelectrical potentials from chick embryos by attaching electrodes through holes drilled in shell. Age accounts for differences in records which are divided into main categories: motion-current waves and pulse-waves. Effects of mump virus infection and of cooling are described. D.L.Gardner

2115. EFFECT OF TOTAL THYROIDECTOMY IN RABBIT FOETUS ON FOETAL CHOLESTEROL METABOLISM. J.G.Bearne and T.R.E.Pilkington: Nature, Lond., 1963, J97, 1302-1303 (Dept Anat., Middlesex Hosp. Med. Sch., London, England) A new technique for extracting the thyroid gland of rabbit foetuses is described and does not interfere with their ability to swallow amniotic fluid. After thyroidectomy on the 23rd day of intrauterine life, foetuses were recovered by Caesarean section on the 29th day, compared with their littermates. * *the serum cholesterol was measured* M.L.wis raised.

2116. ROLE OF VARIATIONS IN TOTAL GONADAL STEROIDS AND CORTICOSTEROIDS IN THE APPEARANCE OF DECIDUAL REACTIONS IN RAT. P.Burm ^G.Mayer: C.R. Soc. Biol., Paris, 1962, 156, 170-172 (Lab. d'Histo., Fac. Méd., Bordeaux, France) Administration of 1-5 ug./day oestradiol to rats receiving injn. of 2-5 fig/day progesterone resulted in the appearance of spontaneous decidual reactions. Traumatic decidual reactions could be induced in rats receiving oestradiol and progesterone, after adrenalectomy. Administration of com. J.D. deoxycorticosterone resulted in decreased development of traumatic decidua in adrenalectomised rats. (French) M.A.Price

2117. CURTAILMENT OF UTEROTROPHIC ACTION OF OESTROGEN BY IMPAIRED HISTAMINE LIBERATION IN ALLOXAN-DIABETIC RAT: REVERSAL BY II N

AND BY ADRENALECTOMY. D.D.Fowler, C.M.SzegO and S.J.Sloan: Endocrinology, 1963, 72, 626-637 (Zool. Dept., Univ. California, Los Angeles, Calif., U.S.A.) The action of oestrogen on the uterus of rats was inhib. in alloxan diabetic animals and this action was reversed by insulin treatment and adrenalectomy. The action of oestrogen was dependent on the release of uterine histamine which is deficient in alloxan diabetic animals. H. Jones

2118. IN VIVO STUDY OF VARIATIONS IN SENSITIVITY OF RAT UTERUS POST-PARTUM. J.M.Gueme: C.R. Soc. Biol., Paris, 1962, 156, 1500-1503 (Lab. Physiol. generale, Fac. Sci., Strasbourg, France) The sensitivity of the post-partum uterus of rat to oxytocin was decreased by hypophysectomy, adrenalectomy, ovariectomy, ovariectomy and adrenalectomy or partial pancreatectomy. Ablation of the post-hypophysis did not modify uterine sensitivity. (French) M.A. Price

2119. MELANOPHORE-EXPANDING SUBSTANCE FROM HUMAN PLACENTA. L.N.Karkun and D.P.Sen: Ann. Biochem., 1963, 23, 81-90 (Central Drug Inst., Lucknow, India) Extracts from human placenta showed some melanophore-expanding activity. The active substance seemed to be heat-stable, but alkali-labile. The time-response curve simulated that of human and ox pituitary melanophore-stimulating hormone, but the dose-response line did not. K. Jones

2120. SOME EFFECTS OF DENERVATING AND TRANSPLANTING MAMMARY GLANDS. J.L.Linzell: Quart. J. exp. Physiol., 1963, 48, 34-60 (A.R.C/Inst. Anim. Physiol., Babraham, Cambridge, England) Mammary glands of goats transplanted to the neck in one stage and therefore denervated showed normal functioning. When glands were transplanted to other animals the milk yield fell off rapidly after the first day. Glands transplanted in 2 stages grew less well than glands transplanted in 1 stage. The milk-ejection reflex appears to be relatively unimportant in goats. H.C.Jones

2121. MILK SECRETION IN RABBIT INDUCED BY INJECTION OF 5HT IN THE REGION OF THE HYPOTHALAMUS. R.Keyl, J.C.Czyba, C.Arnaud and H. Gueyffier: C.R. Soc. Biol., Paris, 1962, 156, 1414-1415 (Chaire d'Histo., Fac. Méd., Lyon, France) Non-pregnant rabbits received a daily injn. of 10 mg. 5HT for a week. 7 out of 12 rabbits showed milk secretion during the 2nd to 4th day of treatment. A similar result has been obtained by injn. of reserpine. (French) MJV .Price

2122. INFLUENCE OF THE METHOD OF ISOLATING URINARY GONADOTROPHINS ON THEIR BIOLOGICAL ACTIVITY. R.Vanden Driessche and M.J.Hans-Berteau: Arch. int. Phannacodyn., 1963, 142, 268-270 (Pharmacol. Lab., Free Univ., Brussels, Belgium) The proportions of FSH and LH in urinary gonadotrophin extracts varied according to the extraction technique employed. (French) T.J.Sullivan

2123. VASCULAR AND EX TRAVASCULAR RADIOACTIVITY AFTER INJECTION OF [6,7-3H]OESTRADIOL IN HUMAN BEING. M.R.Malinow, J.A.Mogulevsky, B.Lema and G.E.Bur: J. clin. Endocr., 1963, 23, 306-310 (Inst. Physiol., Med. Sch., Buenos Aires, Argentina) Radioautography was performed in most tissues from 4 terminal patients inj. shortly before death with [6, 7-3H]oestradiol. The hormone and/or its

PHYSIOLOGY

- metabolites were widely distributed throughout the body. K.Jones
2124. 2-METHCXYOESTRONE AS OESTROGEN METABOLITE IN HUMAN SUBJECT. P.Hobkirk and M.N.Ussen: *J. clin. Endocr.*, 1963, 23, 274-278 (Univ. Med. Clin. Gen. Hosp., Montreal, Canada) During the last 20-30 weeks of pregnancy, the level of 2-methoxyoestrone in the urine of 4 subjects ranges from 25 fig./24 hr. to 1 mg./24 hr. The behaviour of 2-methoxyoestrone is attributed to demethylation to form 2-hydroxy steroids. K.Jones
2125. OESTROGEN EXCRETION AS AN INDEX OF PLACENTAL FUNCTION. J.W.Greene, jun., J.C. Touchstone and H.Fields: *Araer. J. med. Sci.*, 1962, 244, 756-762 (Dept. Obstet., Univ. Pittsburgh Sch. Med., Philadelphia, Pa., U.S.A.) Review. 46 ref. E.E.Hobbiger
2126. FURTHER STUDIES ON EFFECTS OF OESTROGENS AND ANTI-OESTROGENS ON EARLY PREGNANCY IN MICE. L.Martin, R.I.Cox and C.W.Emmens: *J. Reprod. Fertil.*, 1963, 5, 239-247 (Vet. Physiol. Dept., Univ. Sydney, N.S.W., Australia) A no. of synthetic anti-oestrogens were shown to interrupt early pregnancy in mice, though it is not clear whether they do so by reason of their anti-oestrogenic or pro-oestrogenic activities since both prop. correlated with the ability of the compounds to interrupt pregnancy. An expt. which involved the simult. administration of dimethylstilboestrol and oestradiol failed to clarify the situation. H.E.HJones
2127. OESTROGEN ANTAGONISM: A COMPARISON OF EFFECTS OF VARIOUS ANTI-OESTROGENS ADMINISTERED SEPARATELY AND AS MIXTURES WITH OESTROGEN. R.A.Edgren, I.P.Weinberg and T.G.B. Cochran: *Endocrinology*, 1963, 72, 665-666. Administration of a series of anti-oestrogens, together with oestrogen to spayed mice had the same effect whether given mixed with the oestrogen or when the 2 substances were given separately. H.C.Jones
2128. METABOLISM OF [4-¹⁴C]PROGESTERONE IN YOUNG AND ELDERLY MEN. L.P.Romanoff, C.W. Morris, P.Welch, M.P.Grace and CPincus: *J. clin. Endocr.*, 1963, 23, 286-292 (Worcester Fdn. Expt. Biol., Shrewsbury, Mass., U.S.A.) The excretion of pregnanediol and the secretion rate of progesterone expressed as mg./day or as mg./g. creatinine were significantly less in elderly than in young subjects. The contrast between the age-related changes observed in progesterone and cortisol metabolism is discussed. K.Jones
2129. AN ANTI-ANDROGEN ASSAY USING THE CASTRATED MOUSE. R.I.Dorfman: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111, 441-443 (Worcester Fdn. Expt. Biol., Shrewsbury, Mass., U.S.A.) Anti-androgen assay, using the testosterone stim. castrated immature mouse employing the end-points of wt. of seminal vesicle and prostate, is reproducible and possesses better sensitivity than the method using the castrated rat. M.M.Shapland
2130. ASSAY OF S.C. INJECTED ANDROGENS IN CASTRATED RAT. R.I.Dorfman and A.S.Dorfman: *Acta endocr.*, Khb., 1963, 42, 245-253 (Worcester Fdn. Expt. Biol., Shrewsbury, Mass., U.S.A.) The wt. of the seminal vesicles, ventral prostate and levator ani have been used as end-points in an assay for androgens using s.c. injn. of castrated rats. The X values of precision were < 25% for the organ wt. and the sensi-

tivity of testosterone was 0.6 mg. inj. s.c. and daily for 10 days. Esterification increased the activity of testosterone whilst oxidation decreased it. Relative potencies of several androgens are given. H.B.Waynforth

2131. EFFECTS OF ABLATION OF SUBMAXILLARY GLAND IN GUINEA-PIGS. IV. CAUSE OF DETERIORATION OF THE TUBULES IN THE TESTES. K.Suzu^W
Cytologia, 1961, 26, 475-479 (Shakujii List., Tokyo Med. Coll., Japan) Submaxillaryectomised guinea-pigs showed coagulation of intercellular substances in the testes which is thought to cause the deterioration of the testicular tubules. The atrophy of the germ-cells also noted may similarly be due to coagulation in the germinal epithelium. It appears that the submaxillary gland secretes a testicular anticoagulation enzyme. C.A.Stace

2132. EFFECT OF THYROXINE ON MATURATION OF TESTES AND PROSTATE GLAND OF THE RAT. G.B. Talbert: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111, 290-292 (Downstate Med. Center, State Univ. N.Y.i Brooklyn, N.Y., U.S.A.) Maintenance of elevated thyroxine levels from birth to 36 days accelerates the maturation of seminiferous epithelium of the testes but at the same time reduces the rate of increase in wt. of the testes and the ventral prostate gland. M.M.Shapland

2133. TERMINAL FORMATION OF URETHRAL PLUGS IN MALE MICE. J.P.Rapp: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111, 243-245 (Penrose Res. Lab., Zool. Soc. of Philadelphia, Pa., U.S.A.) Urethral plug* of coagulated seminal fluid produced when mice are killed by ether inhalation but not when killed by s.c. injn. of Na pentobarbital, are not a natural cause of urinary obstruction. M.M*Shapland

2134. SPERMICIDAL EFFECTS STUDIED WITH PHOTOGRAPHIC METHOD: EFFECT OF SODIUM FLUORIDE. P.E.Lindahl and K.Wedin: *Exp. Cell Res.*, 1963, 29, 242-260 (Inst. Zoophysiol., Univ., Uppsala, Sweden) Assuming that sperm motility was blocked with F" by & hbn. of an enzyme involved in the motile mechanism curves relating probability of retained motility to time^e were adapted to expt. found points. The course of these curves were determined by 3 parameters, via. m, the no. of mol. in the cell of the relevant enzyme sensitive to F"; n, the no. of mol. of this kind which had to be inactivated before the cell stopped moving; and k, a rate const. Under all conditions, m remained the same, n varying with sperm, k increased with temp., and rose proportionately with the F" concn. K.Jones

2135. EVALUATION OF THE SPERMATOZOA AND SEMINAL PLASMA OF THE INFERTILE MALE. D.C. Tweed: *Cleveland clin. Quart.*, 1963, 30, 30-38. (Dept. Clin. Path., Cleveland Clin., Ohio, U.S.A.) Wide variations in the amount of DNA were found in spermatozoa from infertile men. The hormones, enzymes and other compounds present in seminal plasma* are reviewed and their possible relationship to infertility discussed. The role of immune phenomena are also considered, i.e. auto-immunity in the cf or Ag-Ab lespos^{V*} in the ? G.M.Le^{wls}

2136. CONTROLLING AND RECORDING RATES OF FREEZING AND DEFROSTING OF HUMAN SEMEN. M.Freund and J.Wiederman: *J. appl. Physiol.*, *⁹⁶³, 18, 407-409 (Physiol. Dept., N.Y. Med. Coll., and 5th Ave. Hosp., New York, N.Y., U.S.A.)

PHYSIOLOGY

199

Apparatus is described in which human semen has been frozen and defrosted over a wide range of rates. Freezing and thawing runs are repeatable and enable the effect of other variables to be studied. H. Clones

2137. QUESTIONABLE PROTECTION BY INTRACELLULAR GLYCEROL DURING FREEZING AND THAWING. J.K.Sherman: J. ceU. comp. Physiol., 1963, 61, 67-84 (Dept. Anat., Univ. Arkansas Sch. Med., Little Rock, Ark., U.S.A.) Evidence is presented that

suggests that the site of action of glycerol during freezing and thawing of unfertilised mouse eggs and bull spermatozoa is extracellular, and that intracellular glycerol is in fact detrimental to these cells. G.M.Lewis

2138. THE STIRRING OF THE MEDIUM BY BULL SPERMATOZOA. AJ.Reynolds and Lord Rothschild: Proc. Roy. Soc. B., 1963, 157, 461-472 (Cavendish Lab., Univ. Cambridge, England) The rate of respiration of bull spermatozoa is not increased by agitaton of the VIO or 1/5 suspensions. It was shown by expt. using a "aaometric flask of special shape that me sperm suspensions increase the effective diffusion coeff. of O₂ in medium by 900%. Photomicrographic studies confirmed the hypothesis that this was due to short-range Order in suspens? by attraction of the sp? This effect is decreased by reduction in temp, or sperm density. G.M.Lewis

2139. EFFECT OF pH ON SWIMMING-RATEOF BULL SPERMATOZOA. D.Tampion ^ ^ ^ J f ^ J. 49-200 (Physiol. Dept., Berks., England) The swimming rate of bull spermatozoa was measured microscopically when 10000 cells/ μ l. were in a medium of 0.014M phosphate at several pH levels. At pH 6.5 and 7.5 the results were the same as for unbuffered saline soln. At pH 8.5 swimming rate was initially improved but after 1 hr. the spermatozoa were swimming more slowly and fewer were surviving than in any other medium.

The significance of these results in relation to the swimming of spermatozoa in the Y tract is discussed.

H.E.H.Jones

2140. SWIMMING RATE OF BULL SPERMATOZOA IN VARIOUS MEDIA AND EFFECT OF DILUTION. D. Tampion and R. A .Gibbons: J. Reprod. Fertil., 1963, 5, 259-275 (Physiol. Dept.. N.I.R.D.. Shinfield, Reading, Berks., England)

The swimming rate of bull spermatozoa was measured by direct observation at a diln. of 20000 spermatozoa/Vl. in various media. Motility was maintained better in seminal fluid from die ejaculate that provided the cells than in physiol. saline, though the rate was not so good. 'Sperm extract' or Baker's medium gave slightly higher rates than saline. The cells swam more slowly in cow's cervical mucous than in any other medium and it was not possible to show any dependence of swimming rate on the concn. of the mucous. About 1/2 of the spermatozoa which had swum into the mucous were non-motile at the end of 1 hr. at all diln. If spermatozoa swum through a strip of mucous into saline the mean rate and freq. distribution of rates in the saline resembled those of controls directly dil. in saline much more than they resembled the figures for swimming rates in mucous. It was concluded that mucous does not have a 'selecting' effect on the swimming rate of spermatozoa. H. E. H. Jones

2141. OBSERVATIONS ON MAMMALIAN ACROSOME: EXPERIMENTAL REMOVAL OF ACROSOMES FROM RAM AND BULL SPERMATOZOA. R.R.Hathaway and E.F.Hartree: J. Reprod. Fertil., 1963, 5, 225-232 (Biol. Chem. Dept., Med. Coll., Univ. Utah, Salt Lake City, Utah, U.S.A.) Staining by Giemsa or PA-Schiff showed that 0.0125 N NaOH dissolved the acrosomes from washed spermatozoa, and that they could be detached as such from spermatozoa by 1.5 mM cetyl-trimethylammonium bromide or by shaking with glass beads. N₂ and sugar determinations on extracts from spermatozoa confirmed the removal of material from the cells. Release of hyaluronidase from the treated spermatozoa was also observed. Ram sperm extracts contain 4 Ag all similar to Ag in ram seminal plasma in double diffusion agar plates. The antisera were also capable of sperm aggln. H.E.H. Jones

ANIMAL BEHAVIOUR

PHYSIOLOGY OF BEHAVIOUR

2142. EFFECTS OF SOME METABOLIC INHIBITORS ON THE ROCKING RESPONSE OF A HEMILEUCINE MOTH. AJD.Blest and T.S.Collectt: Behaviour. 1963, 20, 207-220 (Dept. Zool., University Coll., London, England)

The rocking response by Automeris cinerea gradually wanes at 2⁷. Waning is accelerated by injn. of DNP and Na azide, except when moths have walked before rocking. When rocking is infrequent, waning only occurs just before knockdown. The response recovers after rest. High doses of cyanide induced convulsions, lower doses slightly delayed waning. J.R.Cockbain

2143. TASTE BY TOUCH: SOME PRELIMINARY EXPERIMENTS WITH OCTOPUS. MJ.Wells: J. exp. Biol., 1963, 40, 187-193 (Dept Zool., Univ., Cambridge, England) Twelve Octopus vulgaris were taught to discriminate by touch between porous objects soaked in soln. of substances in sea water. They can detect HCl, sucrose and quinine in sea water in concn. at least 100 times as dilute as the human tongue is capable of detecting in distilled water. The function of the "olfactory" organ and the use Octopus makes of its chemotactile sense are discussed. AJ.Martin

2144. INHIBITION OF QUEEN REARING BY QUEEN HONEY-BEES (APIS MELLIFERA L.) OF DIFFERENT AGES. C.G.Butler and P.N.Paton: Proc. roy. ent. Soc. Lond. A, 1962, 37, 114-116 (Rothamsted Expt. Stn., Harpenden, Herts., England) Young virgin queens of the sp. A. mellifera L. are less able to inhibit queen rearing by workers than older mated laying queens, not due to lack of 9-oxodecanoic acid but probably to shortage of some 'inhibitory scent'. Although at first the heads contain little 9-oxodecanoic acid, the amount increases from 5-10 days of age and remains high until the bees are old or about to be superseded or swarm. D.M.S.Perkins

2145. QUEEN CELL CONSTRUCTION IN HONEY BEE (APIS MELLIFERA L.) COLONIES HEADED BY QUEENS WITHOUT MANDIBULAR GLANDS [MG]. N.E.Gary and R.A.Morse: Proc. roy. ent. Soc. Lond. A, 1962, 37, 76-78 (Dept. Ent., Cornell Univ., Ithaca, N.Y., U.S.A.) Queens of the sp. A. mellifera L. without MG retain much of their capacity to inhibit queen rearing. Removal of a queen's MG did not appear to influence her rate of oviposition nor the foraging behaviour of her workers. D.M.S.Perkins

2146. SOME PHYSIOLOGICAL AND ECOLOGICAL ASPECTS OF LOCUST PHASES. F.O.Jubrecht: Trans, roy. ent. Soc. Lond., 1962, 114, 335-375 (Lab. d'Evol. des Êtres Organisés, Paris, France) Locusta migratoria, Nomadacris septemfasciata and Schistocerca gregaria were studied for the effect of crowding or isolating parents on the survival of unfed hatchlings. D.M.S.Perkins

2147. LYSERGIC ACID DIETHYLAMIDE [LSD-25]. XXXHI. EFFECT ON SURFACING BEHAVIOUR OF THE CARP AND POSSIBLE APPLICATION TO GAME CONSERVATION AND SURVIVAL KITS. H.A.Abramson, H.H.Gettner, M.P.Hewitt and G.Dean: J. Psychol., 1961, 52, 445-455 (Long Island Biol. Assocn., Cold Spring Harbor, N.Y., U.S.A.) Although 1800 compounds force-fed to carp have not produced directed movements, LSD-25 and (+)-lysergic acid ethylamide (LAE-32) caused surfacing behaviour. Carp up to 2 lb.

in wt. responded to the same concn. as Siamese fighting fish weighing only 1 g. CD Putnam

2148. THE RESPONSE OF THE FERAL PIGEON WHEN OFFERED ACTIVE INGREDIENTS OF COMMERCIAL REPELLENTS IN SOLN. CJ.Duncan: Ann. appl. Biol* 1963, 51, 127-134 (Dept. Zool., Univ., Liverpool, England) Caged pigeons were given different concn of repellent soln. in place of drinking water. The pigeon showed a high degree of discrimination, markedly rejecting JB-naphthol soln. It is suggested that some commercial repellents operate by irritant action rather than by i true gustatory repellency. J.R.Cockbain

2149. FLIGHT ENERGY AND ESTIMATED FLIGHT RANGES OF SOME MIGRATORY BIRDS. E.P.Odum, CE.Connell and H.L.Stoddard: Ibis, 1963, 105A, 515-527: Auk, 1961, 78, 515-527. Three classes of migrants are considered in relation to fat deposition : short-range migrants that become moderately obese, but begin migration before peak deposition; short-range migrants that attain moderate obesity but begin migration after the peak deposition levels have been reached; long-range migrants that become extremely obese just prior to long flights. Measured lipid levels and estimated flight ranges are presented for samples of birds (totalling 853 individuals of 15 spp.) killed during nocturnal migration at a Gulf coast TV tower in Florida, or collected from premigratory aggregations at inland loc&ities. Ibis

2150. ERYTHROCYTE ANTIGEN GENOTYPE AND BEHAVIOURAL TRAITS IN CHICKEN. J.Bennett, A.B. Woodruff, R.A.Anderson and W.E.Briles: Life Sci., 1962, No.12, 663-667 (Dept. Biol. Sci., N. Illinois Univ., DeKalb, 111, U.S.A.) Prelim. results wi# White Leghorn hens indicate that the B and C blood gff systems are involved in social dominance patterns and affect performance in simple choice learning in a T-maze. K.Jone*

2151. PLACEBO EFFECT IN THE RAT. RJ^ermstein-'' Science, 1962, 138, 677-678 (Psychol. Lab., HaV* Univ., Cambridge, Mass., U.S.A.) Scopolamine hydrobromide disrupts the learned behaviour of rats in * predictable manner. Physiol. saline mimics to some extent the effect of the drug when the 2 substances are inj. alternately. This placebo effect appears to be an J stance of simple Pavlovian conditioning. G.M.Lewis

2152. CHOLINERGIC TRACING OF A CENTRAL NEURAL CIRCUIT UNDERLYING THE THIRST DRIVE. A.E. Fisher and J.N.Coury: Science. 1962. 138, 691-699 (Dept. Psychol., Univ. Pittsburgh, Pa., U.S.A.) Cholinergic stimm. of any of a no. of interrelated limbic and diencephalic structures in the rat increases water intake. It is postulated that a generalised Papez circuit mediates the thirst drive, that the circuit is specifically and functionally sensitive to cholinergic action, and that the other primary drives depend on closely parallel neural circuits partitioned both structurally and biochem. C M.Lewis

2153. IS MEMORY A MATTER OF ENZYME INDUC^ C.E.Smith: Science, 1962, 138, 889-890 (San V? State Coll., Sa Jose, Calif., U.S.A.) Evidence ^ discussed which supports the hypothesis that the basis of memory lies in an increase in the concn. of enzymes ^ associated with transmitter substances, as a long-lag^ effect of stimn. GM^leve*

2154. DETECTION THEORY APPLIED TO ABSOLUTE SENSITIVITY OF SENSORY SYSTEMS. E.Eijkman and AJ.H.Vendrick: *Biophys. J.*, 1963, 3, 65-78 (Dept. Med. Phys., Univ. Nijmegen, Netherlands) Expt. data, mainly obtained from touch and warmth senses, is shown to fit a decision model more closely than a threshold model. The expt. suggest that an internal noise exists, which is a neural activity indistinguishable from the neural activity caused by small stimuli, and additive to these. For touch, the relationship between stimulus and neural activity is non-linear. D.Crathorn

2155. STRAIN DIFFERENCES IN ACTIVITY, EMOTIONALITY, BODY WEIGHT AND SUSCEPTIBILITY TO STRESS-INDUCED STOMACH LESIONS. J.O.Sines: *J. genet. Psychol.*, 1962, 101, 209-217 (Dept. Psychiat., Univ. Missouri Sch. Med., Columbia, Mo., U.S.A.) ^Pen-field behaviour and susceptibility to immobilisation-induced stomach lesions were studied in d and Y of 5 strains of laboratory rats. Strain differences were observed particularly in the d. The incidence of stomach lesions was pos. related to the amount of activity and defecation in the open field. J.R.Broome

2156. EFFECT OF TETANUS ON THE PARENTAL BEHAVIOUR IN THE RAT. A.A.Fedinec: *Nature*, Lond., 1963, 197, 497-498 (Dept. Anat., Univ.Tennessee Med. Unit, Memphis, Tenn., U.S.A.) Parental behaviour in ♀ rats as evidenced by nest building, licking ♀; vulva, cleaning of the new-born, eating of the afterbirth, retrieving, nursing and suckling, was greatly affected by injn. of 3 MLD tetanus toxin before parturition. CM.Lewis

2157. EFFECT OF BILATERAL SYLVIAN GYRUS ABLATIONS ON AUDITORY CONDITIONING IN DOGS. H.Chorazyna and L.Stepien: *Bull. Acad. pol. Sci.*, 1963, 11, 43-45 (Dept. Neurophysiol., Nencki Inst. Exp. Biol., Polish Acad. Sci., Poland) Results showed that when compound stimuli were used sylvian syn might not be indispensable for solving a task. Differentiation was not impaired by sylvian ablation. J.E.Hobbs

2158. EFFECTS OF STIMULUS VARIATION ON SEXUAL SATIATION IN THE MALE RAT. A.E.Fisher: *J. comp. Physiol. Psychol.*, 1962, 55, 614-620 (Univ. Pittsburgh, Pa., U.S.A.) The effect of ? stimulus change J*? sexual satiation in the d rat has been studied. During j^aticm tests in which ? were systematically changed, f^ats doubled or tripled capacity measures obtained with an^le * • T*¹⁶ data are Pertinent to theories of sexual n^ arousal-adaption neural mechanisms and to the valid assessment of sexual capacity in normative and physiol. intervention studies. LS.Scholes

2159. DISTRIBUTION AND SPECIFICITY OF GAMMA MOTONEURON CONDITIONED RESPONSES. LS.Buch-WaW, D.Beatty and E.Eldred: *Exp. Neurol.*, 1962, 6, 24-537 (Dept. Anat., Sch. Med., Univ. California, Los Angeles, Calif., U.S.A.) The activity of y ^cent units in the lumbar ventral roots was investigated in cats during conditioning procedures in which the conditioned stimulus was compared with an unconditioned stimulus. Conditioned discharges of the y motoneurons be unaccompanied by discharge of the a motoneurons. It was found that the V fibres to muscles in the Jpn. it was found that the one trained took part in the condition^ other than the one trained took part in the conditioned response. These followed a definite pattern and were not part of a known sp. activation of Y activity. P.W.Nathan

2160. SELF MAINTAINED SENSORY INPUT AND SENSORY DEPRIVATION IN MONKEYS. S.S.Fox: *J. comp. physiol. Psychol.*, 1962, 55, 438-444 (Univ. Michigan, Ann Arbor, Mich., U.S.A.) A series of 2 expt. are reported designed to quantify behaviour leading to the maintenance of stimulus input levels, and investigate the effect of sensory deprivation on such behaviour. J.Scholes

EXPERIMENTAL PSYCHOLOGY

2161. REACTIVE INHIBITION IN THE PARAMECIUM. S.J.Lachman and J.M.Havlena: *J. comp. physiol. Psychol.*, 1962, 55, 972-973 (Wayne State Univ., Detroit, Mich., U.S.A.) 1000 *Paramecium caudatum* were studied in mazes etched in glass-mounted paraffin plates and having from 1 to 9 right turns preceding a T choice point. In most cases the distribution of right and left turns approximated to chance expectancy, which does not support the concept of reactive inhibn. J.R.Broome

2162. ATTEMPT AT CLASSICAL CONDITIONING IN THE PLANARIAN. E.S.Halas, R.L.James and CS.Knutson: *J. comp. physiol. Psychol.*, 1962, 55, 969-971 (Univ. N. Dakota, Grand Forks, N. Dak., U.S.A.) Expt. with planaria (*Dugesia tigrina*) using light as a conditioned stimulus and electric shock as an unconditioned stimulus, gave results similar to those obtained by Thompson and McConnell, which indicated that classical "conditioning could be established in planaria. An interpretation in terms of reflex sensitisation is suggested. J.R.Broome

2163. VISUAL DISCRIMINATION OF SHAPE BY OCTOPUS: SQUARES AND CROSSES. N.S.Sutherland: *J. comp. physiol. Psychol.*, 1962, 55, 939-943 (Oxford Univ., U.S.A.) Octopuses, *Octopus vulgaris* Lamark, were trained to discriminate between a square and a cross and then given transfer tests with 27 other shapes. The results indicated that one of the main ways in which octopuses analyse shapes is by counting the total length of thin segments present, weighting horizontally oriented segments most heavily and oblique segments least heavily. J.R.Broome

2164. DISCRIMINATION AND GENERALISATION ON A DIMENSION OF STIMULUS DIFFERENCE. W.K.Honig and R.W.Day: *Science*, 1962, 138, 29-31 (Dept.Psychol. Denison Univ., Granville, Ohio, U.S.A.) Four pigeons were trained to peck at one key when 2 identical monochromatic stimuli were displayed, and at another key when the stimuli were displayed with a wavelength difference of 40 m/i. With stimulus combinations ranging from 0 to 70 mu in a generalization test, key preference was a function of the degree of difference between the stimuli. G.M.Lewis

2165. THE OCCURRENCE OF CORRECTING BEHAVIOUR IN VARIOUS INSECTS. H.Dingle: *Ecology*, 1962, 43, 727-728 (Dept. Zool., Univ. Michigan, Ann Arbor, Mich., U.S.A.) Insects were tested on a causeway with a compulsory 90° turn, and a second, optional, correcting turn. Six spp. showed correcting behaviour, whilst 3 others, including 2 ant. spp., did not. Correcting behaviour may be an adaptation to a sp. habitat. J.R.Cockbain

ANIMAL BEHAVIOUR

appear to be systematically related to goal responding during extinction. J.R.Broome

2192. RELATIVE EFFECTS OF FORCED REWARD AND FORCED NON-REWARD DURING WIDELY SPACED SUCCESSIVE DISCRIMINATION REVERSAL. K.N. Clayton: *J. comp. physiol. Psychol.*, 1962, 55, 992-997 (Vanderbilt Univ., Tenn., U.S.A.) Rats forced at different stages of practice in a T-maze to make incorrect responses were compared with others forced to make correct responses or given free trials. No intraproblem improvement of main effects due to the forcing variable were found on any comparison. J.R.Broome

2193. PARTIAL-REINFORCEMENT EXTINCTION EFFECT FOLLOWING DIFFERENT AMOUNTS OF TRADnHGIL W.E.Bacon: *J. comp. physiol. Psychol.*, 1962, 55, 998-1003 (Johns Hopkins Univ., Baltimore, Md., U.S.A.) Extinction running speeds in an alleyway were obtained from rats which were given different no. of acquisition trials and different % of reinforcement. When resistance to extinction is defined as mean extinction running speed, the results supported Grant and Schipper's hypothesis that reinforcement and discrimination operate in a partial-reinforcement situation. If resistance is defined as the rate of decrease in running speed during extinction the results do not appear to support this theory. J.R.Broome

2194. EXTINCTION AS A FUNCTION OF PARTIAL REINFORCEMENT AND OVERTRENING. C.McCain, P.Lee and N.Powell: *J. comp. physiol. Psychol.*, 1962, 55, 1004-1006. Rats were trained in a straight alley maze using 50% random partial reinforcement. The animals given 200 acquisition trials prior to extinction extinguished more rapidly than those given 60 acquisition trials. J.R.Broome

2195. EFFECT OF EARLY EXPOSURE TO PHOTIC STIMULATION ON BRIGHTNESS DISCRIMINATION AND EXPLORATORY BEHAVIOUR. M.R. D'Amato and H. Jagoda: *J. genet. Psychol.*, 1962, 101, 267-271 (Dept. Psychol., 1962, 101, 267-271 (Dept. Psychol., New York Univ., N.Y., U.S.A.) Albino and pigmented rats were raised in breeding cages with either very dim illumination or with relatively bright illumination. The results of a modified open field test and a brightness discrimination test in a Y-maze showed that early experience with moderate illumination levels can reduce the neg. phototropism of young adult albino and pigmented rats. J.R.Broome

2196. CAT'S ABILITY TO DISCRIMINATE OBLIQUE RECTANGLES. N.S.Sutherland: *Science*, 1963, 139, 209-210 (Inst. Expt. Psychol., Oxford Univ., England) Cats being trained to discriminate between 2 oblique rectangles, one at 45° die other at 135° to the horizontal, performed as well as those being trained with horizontal and vertical rectangles. The ability of a tp. to discriminate rectangles in different orientations may depend on the relative no. of cells in the visual system having receptive fields in each orientation. G.M.Lewis

2197. CONCURRENT CONDITIONING OF BAR PRESS AND SALIVATION RESPONSES. W.Kintsch and R.S. White: *J. comp. physiol. Psychol.*, 1962, 55, 963-968 (Univ. Missouri, Mo., U.S.A.) Expt. on surgically prep, dogs using fixed-interval, fixed-ratio and purely 'temporal' reinforcement schedules showed

parallelism in general between bar-pressing and salivation. Under certain conditions, however, no such parallelism occurs. J.R.Broome

2198. FORM GENERALISATION IN THE INFANT MONKEY. R.R.Zimmermann: *J. comp. physiol. Psychol.*, 1962, 55, 918-923 (Univ. Wisconsin, Madison, Wis., U.S.A.) Infant rhesus monkeys learned a single torn" discrimination problem and were then tested for generalisation on a large variety of visual stimuli. Significant and consistent responses were shown to new pairs of form stimuli which maintained physical resemblance to the original stimulus pair. J.R.Broome

2199. EFFECTS OF SOCIAL RESTRICTION ON THE BEHAVIOUR OF RHESUS MONKEYS. IE. DOMINANCE TESTS. W.A.Mason: *J. comp. physiol. Psychol.*, 1961, 54, 694-699 (Yerkes Lab. Primate Biol., Orange Park, Fla., U.S.A.) Pairs from a group of 6 wild caught monkeys showed stable dominance relationships before the introduction of food competition tests [FCT]. These changed little during testing, and fighting, which was infrequent, was only initiated by dominant monkeys. In a group of 6 laboratory-reared monkeys, dominance relationships during FCT were unstable. Fighting occurred frequently during the tests, and both dominant and subordinate monkeys fought. C.D.Putnam

2200. EFFECT OF FRUSTRATION ON THENON-NUTRITIVE SUCKING [NNS] OF THE INFANT RHESUS MONKEY. L.S.Benjamin: *J. comp. physiol. Psychol.*, 1961, 54, 700-703 (Psychol. Dept., Univ. Wisconsin, Madison, Wis., U.S.A.) Infant rhesus monkeys 'frustrated' by having to wait for 250 sec. before a transparent partition between them and food was raised showed more NNS (i.e. of various parts of the bow than controls. C.D.Putnam

2201. EFFECTS OF AGE AND PREVIOUS TRAINING ON PATTERNED-STRINGS [P-S] PERFORMANCE OF RHESUS MONKEYS. W.A.Mason and H.F.Harlow: *J. comp. physiol. Psychol.*, 1961, 54, 704-709 (Psychol. Dept., Univ. Wisconsin, Madison, Wis., U.S.A.) The efficiency with which 81 rhesus monkeys solved P^k problems improved with advancing age and practice, all younger monkeys showing a consistent tendency to choose the wrong string if the strings were crossed. In general the results indicate that the perceptual capabilities of these monkeys are not fully developed at 1 yr. of age, and probably not evdn at puberty. C.D.Putnam**

2202. EARLY BEHAVIOUR PATTERNS IN RHESUS MONKEYS. J.B.Mowbray and T.E.Cadell: *J. comp. physiol. Psychol.*, 1962, 55, 350-357 (Univ. Wisconsin, Madison, Wis., U.S.A.) Fifteen rhesus monkeys were tested from birth to the 25th day of age as to consistency, and mean time of appearance and disappearance of 10 behaviour patterns related to nursing and maintenance of contact with the mother. J.Scholes

2203. SEX AND RADIATION AS FACTORS IN LEARNINg PERFORMANCE BY RHESUS MONKEYS ON A SERI^o OF DOT DISCRIMINATION PROBLEMS. A.A.McDowell and W.Lynn Brown: *J. genet. Psychol.*, 1962, 101, 273-278 (Dept. Psychol., Univ. Texas, Austin, Tex., U.S.A.) Male and female rhesus monkeys which had previously been exposed to varying dosages nuclear radiation were tested on 5 dot-discriminatio^o problems. Errors increased as the diam. of the black o

ANIMAL BEHAVIOUR

205

decreased. On the 2 most difficult only, the increase in errors was greater in *d* than *y*, and also, with increasing relative radiation dosage there were fewer errors as the *<Ham.* of the black dot decreased. J.R.Broome

2204. EFFECTS OF AGE AND STIMULUS CONDITIONS ON THE EMOTIONAL RESPONSES OF RHESUS MONKEYS: RESPONSES TO COMPLEX STIMULI. S.Bernstein and W.A.Mason: *J. genet. Psychol.*, 1962, 101, 279-298 (Dept. Psychol., Univ. Wisconsin, Madison, Wis., U.S.A.) Immature rhesus monkeys were given stimulus objects comprising complex, intermediate and simple stimuli. The total emotion score always increased from the simple to the complex stimulus conditions. Development of emotional responsiveness in the Moratory-reared rhesus monkey is described. J.R.Broome

2205. EFFECTS OF STIMULUS-RESPONSE ISOLATION ON PRIMATE-PATTERN DISCRIMINATION LEARNING. M.J.Otteson, C.L.Sheridan and D.R.Meyer: *J. comp. Physiol. Psychol.*, 1962, 55, 935-938 (Ohio State Univ., Columbus, Ohio, U.S.A.) Monkeys trained to discriminate between visual patterns under conditions of substantial separation of the stimuli and responses, *performed* better when there was an opaque panel present in front of the manipulanda from the corresponding stimuli. J.R.Broome

2206. INTERSENSORY FACILITATION OF LEARNING SETS IN NORMAL AND BRAIN-OPERATED MONKEYS. M.Wilson and W.A.Wilson, jun.: *J. comp. physiol. psychol.*, 1962, 55, 931-934 (Bryn Mawr Coll., Bryn Mawr, Pa., U.S.A.) Eight cynomolgus monkeys, 4 with post, parietal lesions, were given 75 visual and 75 tactual object discriminations. Previous tactual experience facilitated learning-set formation in the normal animals, but with visual learning-set formation and showed no facilitation in prior tactual experience. J.R.Broome

2207. TEMPORAL FACTORS IN PATTERN DISCRIMINATION BY MONKEYS. A.J.Riopelle and R.G.Addison: *J. comp. physiol. Psychol.*, 1962, 55, 935-942 (Dept. Primatol., Orange Park, Fla., U.S.A.) The performance of rhesus monkeys in discrimination learning differed only in form improved as the stimulus duration increased to approx. 1 sec. Patterns differing in form and colour were more discriminative than those differing only in form. A 2-sec. interval between stimuli was effective as a 1-sec. interval, but a 4-sec. interval produced a decrease in performance. J.R.Broome

2208. FORMATION OF LEARNING SETS IN YOUNG GORILLA. G.J.Fischer: *J. comp. physiol. Psychol.*, 1962, 55, 943-955 (Univ. Oklahoma, Norman, Okla., U.S.A.) Two gorillas, aged and a ? approx. 18 months old, given discrimination problems, appeared to be more advanced than rhesus macaques at a comparable developmental level in learning-set formation. J.R.Broome

2209. CORNELL INDEX AND SOCIAL DEPENDENCY. J.U. Gladfelter, H.W.Martin, R.X.Leon and S.B.May: *J. Rep. Col. Med.*, 1963, 21, 12-15. Results of the Cornell Index and interview indicated that well over half of the white carried by who are dependent upon community resources for economic support, had an emotional disturbance adding to their incapacity for vocational which operated against their vocational and social rehabilitation by present modes.

AJ.Martin

2210. LOGICAL ANALYSIS OF ANIMAL COMMUNICATION. P.Marler: *J. theoret. Biol.*, 1961, 1, 295-317 (Univ. California, Dept. Zool., Berkeley, Calif., U.S.A.) This analysis based upon classifications of human communication by Cherry and Morris, emphasises that a direct comparison between man and animals is misleading. The types of signals and the responses to them are examined. This analytical approach may help to clarify the effects of natural selection upon the evolution of signals. J.A.Dawson

2211. LEARNING AND ELECTRICAL SELF-STIMULATION *OF RABBITS* *P. A. Deutsch:* *J. theoret. Biol.*, 1963, 4, 1-14 (Stanford Univ., Palo Alto, Calif., U.S.A.) A theory of learning is applied to the phenomena of electrical self-stimn. of the brain. Expt. in rats found to verify this theory are also described. G.F.Blane

SPECIES STUDIES

2212. DIPTERA SWARMING HIGH ABOVE THE FOREST SIKS.?" GANDA. WITH SPECIAL REFERENCE TO TABANIDAE. P.S.Corbet and A.J.Iaddow: *Trans. roy. Ent. Soc. Lond.*, 1962, 114, 267-284 (Entebbe, Uganda) Several mosquito spp. swarmed at sunset and the behaviour of *Mansonia auritis* is described. At dawn, cf of 4 Tabanid spp. appeared. *Tabanus thoracicus*, *Chrysops centurionis*, *Hinea jacoti* and *T. insignis*, in that order; their swarming and hovering behaviour is described. All spp. swarmed at a well-defined time probably in response to low light intensity. D.M.S.Perki

2213. OBSERVATIONS ON THE DEVELOPMENTAL AND PREDATORY HABIT OF TWO REDUVIID HETEROPTERA, RHINOCORIS CARMEUTA STAL AND PIATYMERIS RHADAMANTHUS GERST. J.S.Edwards: *Proc. roy. ent. Soc. Lond. A*, 1962, 37, 89-98 (Biol. Lab., Western Res. Univ., Cleveland, Ohio, U.S.A.) Methods for the culture of both spp. (*R. carmelita* Stal and *P. rhadamanthus* Gerst) are given and observations on their life cycle described. Arousal is often by visual stimuli but sometimes by air movements. The behaviour from arousal to the catching of prey and injn. of saliva described. Factors affecting penetration of stylets into the prey are discussed. D.M.S.Perki

2214. COMPARISON OF THE RESPONSE TO AGGRESSIVE BEHAVIOUR IN TWO SPECIES OF ANT, FORMICA FUSCA AND FORMICA SANGUINEA. D. W. S. S. Anim. Behav., 1963, 11, 164-171 (Dept. Physiol. Marischal Coll., Aberdeen, Scotland) Differences between the spp. (*F. fusca* and *F. sanguinea*) with respect to escape activity, responses and aggression described in relation to their adaptive significance.

2215. HIGH ENERGY SOUND ASSOCIATION IN THE DOLPHIN. M.C.Caldwell, R.M.J.S. 23f D.K.Caldwell: *Science*, 1962, 138, 907-908 (U.S.A.) A loud, sharp, cracking sound is produced by *Dolphins* *the basis*

G.M.Lewis

ANIMAL BEHAVIOUR

- 2216. DISPLAY PATTERNS OF TROPICAL AMERICAN 'NINE PRIMARIED' SONGBIRDS. I. CHLOROSPINGUS.** M.Moynihan: *Ibis*, 1963, 105A, 131; *Auk*, 1962, 79, 310-344. The first of a series on the behaviour of tropical American finches, tanageis and honeycreepers, dealing with the bush-tanageis *C. ophthalmicus* and *C. pileatus*. Illustrated by the author's characteristic sketches with a diagram showing the probable relative strengths of attack and escape tendencies in typical performances of hostile displays by *C. ophthalmicus*. *Ibis*
- 2217. BEHAVIOUR OF HOUSE MARTINS DELICHON U. URBICA (L.), TO THEIR PREDATORS.** E.A.Lind: *Ibis*, 1963, 105A, 131; *Ann. Zool. Soc., 'Vanamo'*, 1962, 23, 1-38. The behaviour of breeding Finnish House Martins *Delichon urbica* to various predators is described. Alarm-calling to test models was more frequent in small than in large colonies. Expt. with models of the Great Grey Shrike *Lanius excubitor* showed strong reactions to supernormally large models; the models were recognised by their black parts. (German) *Ibis*
- 2218. AGONISTIC BEHAVIOUR IN THE HOUSE FINCH. I. ANNUAL CYCLE AND DISPLAY PATTERNS.** W.L. Thompson: *Ibis*, 1963, 105A, 131; *Condor*, 1960, 62, 245-271. The agonistic behaviour of *Carpodacus mexicanus* is described with an emphasis on aggression and dominance relations. Birds reach their peak of aggressiveness in early spring when they are pairing. Common forms of hostile behaviour are the head-forward display and the supplanting attack, which may lead to combat, but this appears to be rare. *Ibis*
- 2219. ON THE BREEDING BEHAVIOUR OF THE COCK-OF-THE-ROCK(AVES, RUPICOLA RUPICOLA).** E.T. Gilliard: *Ibis*, 1963, 105A, 279; *Bull. Amer. Mus. Nat. Hist.*, 1962, 124, 35-68. Observations on <S Cock-of-the-rock behaviour were made at several display arenas in British Guiana. It is suggested that arena behaviour is at least in part related to nest-building. The Cock-of-the-rock is regarded as being related to the cotingas rather than the manakins. *Ibis*
- 2220. QUANTITATIVE STUDY OF PARENTAL BEHAVIOUR IN THE BENGALI FINCH.** E.Eisner: Behaviour, 1963, 20, 134-206 (Dept. Zool. and Comp. Anat., Oxford, England) A detailed account is given of the parental behaviour while the young are in the nest. On a quantitative basis the behaviour is very variable, both between individuals and between the same individual with different broods, and affects the survival of chicks. These variations are analysed and possible causes are suggested. J.R.Cockbain
- 2221. AGONISTIC BEHAVIOUR IN THE HOUSE FINCH. II. FACTORS IN AGGRESSIVENESS AND SOCIALITY.** W.L.Thompson: *Ibis*, 1963, 105A, 131; *Condor*, 1960, 62, 378-402. Peaks of aggressive behaviour in *Carpodacus mexicanus* occur in the early spring, in mid-summer and in the late autumn. The increase in total aggressiveness of groups of birds during the breeding season is due to an increase in the aggressiveness of a few individuals (*d'*) rather than of the groups as a whole. The rise of *d* aggressiveness is related to the defence of the mate and the territory. *Ibis*
- 2222. SONG DEVELOPMENT IN HAND-RAISED OREGON JUNCOS.** P.Marler, M.J.Creith and M.Tamura: *Ibis*, 1963, 105A, 131; *Auk*, 1962, 79, 12-30. Eight hand-raised *Junco oreganus* were hand-reared in varying

degrees of acoustic isolation each developing several <*s*-types. Their songs were somewhat longer than those of wild birds, with fewer, longer syllables, and more variable. However, there was appreciable overlap, so that each tamed* had at least one 'wild-type*' song. Some abnormal songs developed from imitations of other spp. The birds raised in a rich auditory environment had more song types and a more elaborate syllable structure, derived not from imitations but from unspecific stimulation to improvise. Vocal inventiveness is established as a significant factor in the development of song in this species

Ibis

- 2223. SUMMER CREPUSCULAR FLIGHTS OF AMERICA'S WOODCOCKS IN CENTRAL MASSACHUSETTS.** W_c Sheldon: *Ibis*, 1963, 105A, 131; *Wilson Bull.*, 19_c 73, 126-139. Study of the summer behaviour of *Philohela minor* based on the capture of 746 in mist net. Factors prompting evening flights are suggested, with evidence pointing to food as the most important. *Ibis*

- 2224. INTERSPECIFIC PREENING INVITATION DISPLAY OF PARASITIC COWBIRDS.** R.K.Selander and C.J.* Rue: *Ibis*, 1963, 105, 131; *Auk*, 1961, 78, 473-5 Detailed observations on the display which solicits heterospecific preening from a variety of spp., in the Brown-headed Cowbird *Molothrus ater*. A similar preening invitation display was seen in captive Red-eyed Cowbirds *Tanganyius aengeli*. Avian appeasement displays are discussed, and it is suggested that the interspecific display of parasitic cowbirds is an adaptation for parasitism, functioning to decrease the probability of attack by individuals of host spp. by decreasing their aggressive tendencies.

Ibis

- 2225. BREEDING BEHAVIOUR OF YELLOW-BELLIED SAPSUCKERS.** L.Kilham: *Ibis*, 1963, 105A, 127; *Auk*, 1962, 79, 31-43. Observations on wild and captive *Phryiacus varius* dealt with under the headings: m[^] communication, early breeding behaviour, incubation⁰¹ and the rearing of the young, family life after leaving¹ nest, migration, arrival on the breeding grounds, observations² on captive sapsuckers and comparisons with other woodpeckers. ibis

- 2226. THE GEOGRAPHICAL VARIATION OF BEHAVIOUR PATTERNS.** E. Curio: *Ibis*, 1963, 105A, 129; *Vogelwelt*, 1961, 82, 33-48. The two races of Pied Flycatcher *Ficedula h. hypoleuca* and *F. h. iberiae* differ from each other in many behaviour patterns, with one exception these differences cannot be interpreted as adaptations to the environment. They are comparable to the differences found between species of *Ficedula*. The author gives other examples of racial differences of behaviour in reptiles and batrachians. He concludes that genes have a pleiotropic effect on both structure and behaviour and that behaviour differences will be found between taxonomic units of every level even when environments do not differ. (German) *Ibis*

- 2227. PECKING OF LAUGHING GULL CHICKS AT MODELS OF THE PARENTAL HEAD.** J.P.Hailman: *Ibis*, 1963, 105A, 130; *Auk*, 1962, 79, 89-98. Another study on the pecking responses of young Laysan Gulls, in which flat cardboard models were presented to chicks of various ages. From these preliminary expts., it appears that the parental bill, not the food itself, is the most important visual stimulus eliciting the chick's pecking. The long, narrow proportions and the pointed tip of the bill enhance its value as a stimulus, and the presence of the head improves the

stimulus value of the bill.' Comparison is made with other studies and 'it is suggested that the best comparative study would involve comparisons of the ontogenetic development of pecking behaviour'. Ibis

2228. THE BEHAVIOUR OF LOVEBIRDS. W.C.Dilger: Ibis, 1963, 105A, 129; Sci. American, 1962, 206, A 89-98. A further, attractively presented account of the important work in progress on the behaviour of Agapornis at Cornell University. The paper deals largely with the evolution of certain patterns in this group, e.g., itch-sidling, squeak-twittering, displacement scratches, courtship-feeding, pre-copulatory behaviour of the Sj. display fighting, cavity defence, mobbing and nest-building. A final section describes the nest-material gathering of hybrid *A. roseicollis* x *A. fischeri*, the parent forms of which respectively carry material in the contour feathers (mainly) and the bill. The hybrids inherited both patterns and at first acted in a confused manner, but, after a learning period came to carry material largely in the tanner of *A. fischeri*, 'the number of irrelevant and appropriate activities' decreasing. Ibis

2229. BOBOLINK MIGRATORY PATHWAYS AND THEIR EXPERIMENTAL ANALYSIS UNDER NIGHT SKIES. W.J. Hamilton: Ibis, 1963, 105A, 132; Auk, 1962, 29, 208-233. An expt. analysis of the orientation of Dolichonyx oryzivorus, a transequatorial, night migrant of the New World. It is suggested that the sp. can determine direction by some feature of the clear night sky, probably stars, with the aid of an 'internal dock'. Ibis

2230. THE DEVELOPMENT OF VISUAL DISCRIMINATION PATTERNS IN THE CROUCHING REACTIONS OF NESTING GRACKLES. G.B.Schaller and J.T.Emlen: Ibis, 1963, 105A, 280; Auk, 1961, 78, 125-137. Nestlings of *Quiscalus versicolor* responded by crouching to visual stimuli before the maturation of pattern vision. They did not crouch to visual stimuli until two or three days after pattern vision had been acquired. Expt. withdrawal of nestlings from nests for one or two days produced a parable delay of the acquisition of crouching to mechanical stimuli, but when extended into the visual lamination period it did postpone the onset of crouching. Models. Temporary blindf bidding of nestlings did not affect the maturation of crouching to mechanical stimuli. Given extended into the visual discrimination period it did not evoke any environmental factor, but is of biological, behaviouristic nature. Ibis

-ri OBSERVATIONS ON COLLECTIVE NIGHT SONGS OF PASSER DOMESTICUS L. R.Graczyk: in 1963, 105A, 279; Pr. Zool., 1961, 5, 241-245. The author's own observations on the mass-roosting of the English House Sparrow (*P. domesticus*) he concluded that collective lodging at night is not evoked by any environmental factor, but is of biological, behaviouristic nature. (Polish) Ibis

2232. NOTES ON THE BEHAVIOUR OF THREE COTINGIDAE. B.K.Snow: Ibis, 1963, 105A, 280; Auk, 1961, 78, 160-161. Field notes on the calls and behaviour of the White Bellbird *Procnias albida*, the Greenheart Bird *Guarulus cineraceus*, and the Canbird *Perissocephalus tricolor*. Figures show various postures of all three spp. Ibis

2233. ONTOGENY OF BEHAVIOUR IN THE GREY STARLING. N.Kuroda: Ibis, 1963, 105A, 279; Misc. Rept. Yamashina's Inst. Ornith. Zool., 1961, 3, 83-112.

Based on observations of a hand-reared Grey Starling *Sturnus cineraceus* chick, the development of more than 60 Amerent activities under 7 major categories, feeding behaviour, locomotor behaviour, vocalisation, etc. are described. The observed facts are interpreted according to Kortland's theory of ontogenetic integration of instinctive behaviour.

2234. LEARNING IN FLATWORMS AND ANNELIDS. A.L. Jacobson: Ftychol. Bull., 1963, 60, 74-94 (Univ. Michigan, Ann Arbor, Mich., U.S.A.) Review. 74 ref.

J.R.Broome

2235. THREAT DISTANCE IN OVIGEROUS CRAYFISH.

F.D.Klopfer: J. comp. physiol. Psychol., 1961, 54, 710-712 (Psychol. Dept., Washington State Univ., Seattle, Wash., U.S.A.)

When ovigerous crayfish were confronted with 5 stimulus crayfish of varying size moving towards them, the distance at which they showed threat behaviour was directly related to the size of the other crayfish. Under red illumination this did not occur, showing that this relationship is visually mediated. There seemed to be an inverse relation between the size of the? and the distance at which they threatened.

C.D.Putnam

2236. TERRITORIAL BEHAVIOUR IN THE CICADA KILLER WASP SPHECIUS SPECIOSUS (DRURY) (HYMENOPTERA: SPICIDAE). LN.Lin: Behaviour, 1963, 20, 115-133 (255, East 7th St., Brooklyn 18, N.Y., U.S.A.)

Male wasps (*S. speciosus*) set up territories, mainly where emergence hole density is high, and defend them against intrusion by other d* and other insects. The territorial 'perch' is usually an emergence hole although a d" does not necessarily use his own. The wasps react by pursuing, overtaking, butting or grappling with intruders, depending on their behaviour. J.R.Cockbain

2237. ON THE BEHAVIOUR OF ALATE BEAN APHIDS

(*APHIS FABAE* SCOP.) AFTER LANDING IN HOST PLANTS AND NON-HOSTS. H.J.Miller: Ent. exp. Appl., 1962, 5, 189-210 (Inst. Pflanzenforschung Innsbruck, Deutscher Akad. Landwirtschaftswissen zu Berlin, Germany)

Host selection by bean aphids occurs only after alighting on young plants of beet, field beans, poppies, potatoes and white mustard. Behaviour after landing consisted of slow or fast walking, changes in walking and in probing, and nearly always flight recommended in a few min. 75% left non-host plants, mustard and potatoes, in 1/2 min., but on potential host plants 1/2 remained 4 min. on poppy and field beans and over 5 min. on beet.

(German, English summary) H.W.Spencer

2238. GENERAL OBSERVATIONS ON THE IMAGINAL ECDYSIS OF BLOWFLIES. C.B.Cottrell: Trans. Roy. Soc. Lond., 1962, 114, 317-333 (Univ. Coll. Rhodesia and Nyasaland, Salisbury, S. Rhodesia)

The relationships between the hardened areas of cuticle and the mechanical and sensory requirements for emergence and subsequent expansion are discussed. Ecdysis is described, including emergence from the puparium, and the behaviour during expansion. D.M.S.Perkins

ANIMAL BEHAVIOUR

2239. INFLUENCE OF SOME ENVIRONMENTAL FACTORS ON LEARNING AND AGGREGATION IN LOCUST HOPPERS. P.E.Ellis: *Anim. Behav.* 1963, 11, 142-151 (Anti-Locust Res. Centre, Princes' Gate, London, England) Hoppers of *Locusta migratoria migratoria* (R. and F.) and *Schistocerca gregaria* Forsk7 were used in a study of reactions to decoys in a physical environment with either even heating and lighting or with the decoy on a warmed spot on the floor. The importance of the results to field conditions is discussed.

Y.Spencer-Booth

2240. ASPECTS OF THE BEHAVIOUR OF THE MAGPIE GOOSE ANSERANAS SEMIPALMATA. S.Davies: *Ibis*, 1963, 105, 76-98 (Emmanuel Coll., Cambridge, England) Postures, action patterns and flock behaviour of *A. semiplanata* are described and illustrated.

Y.Spencer-Booth

2241. ANTIPHONAL SINGING IN BIRDS AS EVIDENCE FOR AVIAN AUDITORY REACTION TIME. W.H. Thorpe: *Nature*, Lond., 1963, 197, 774-776 (Sub. Dept. Anim. Behav., Madingley, Cambridge, England) The antiphonal singing of "d" and "Y" of some tropical birds is described; vocal elements in courtship serve for mutual recognition in dense undergrowth. A very short reaction time, 144 msec., was observed when one bird answered the first.

G.M.Lewis

2242. MIGRATION ACROSS THE SOUTHERN NORTH SEA STUDIED BY RADAR. IV. AUTUMN. D.Lack: *Ibis*, 1963, 105, 1-54 (Edward Grey Inst., Oxford, England) The results of a survey from August to November are described in detail and discussed.

Y.Spencer-Booth

2243. ORIENTATION TENDENCIES OF GULLS (*LARUS RIDIBUNDUS L.*) TRANSPORTED FROM THE BREEDING PLACE WHEN LAND- AND SKY-MARKS ARE EXCLUDED. K.Gerdes: *Ibis*, 1963, 105A, 132; Z. Wiss. Zool., 1962, 166, 352-410. Black-headed gulls caught on the nest were displaced up to 140 miles and put into a cylindrical cage either surrounded by a canvas palisade, which only allowed the bird to see the sky but not the sun, or in a few expt., in a room. The directions of the escape-reactions of the bird were observed and quantified in 2 different ways. About 40% of the escape reactions were in the 60° sector directed homewards, the expected % of random escapes being 17%. Escape in the 60° sector away from home (25%) was also significantly above random. No explanation is given for this phenomenon. The orientation was independent of distance. Large water surfaces not further away than 2 miles apparently had an attracting affect. Other local deviations remain unexplained. The efficiency of the orientation seems to be correlated to the changes in the altitude of equal-pressure surfaces in the higher atmosphere (as in the homing of pigeons, according to Wallraff).

(German)

2244. RESULTS OF BIRD-SONG ANALYSIS. G.Thielcke: *Ibis*, 1963, 105A, 131; J. Orn., 1961, 192, 285-300. A review of what has been achieved in studying, analysing and comprehending the vocalisations of birds. All the important discoveries - such as Nicolai's findings on song learning in the Bullfinch - are discussed and there is a full list of references to the works of others on this subject.

Ibis

2245. AGGRESSIVE NEGLECT AS A FACTOR IN INTER-SPECIFIC COMPETITION IN BIRDS. S.D.Ripley: *Ibis*, 1963, 105A, 280; *Auk*, 1961, 78, 366-371.

Field observations in the Moluccan Islands of E.Indonesia indicate that interspecific competition may involve a phenomenon in which the dominant, more aggressive

species maintains a reduced numerical ratio to a partiall competing species with which it is sympatric by its very aggression and consequent reduction in brood size or nest' ing success. Other possible examples are sought, and it is suggested that this phenomenon could occur in cases of interspecific territorialism under constricted conditions. Possible cases among aggressive species of waterfowl are considered.

Ibis

2246. TESTS OF THE POSSIBLE SOCIAL SIGNIFICANCE OF 'NONSENSE¹ ORIENTATION. G.V.T.Matthews:

Ibis, 1963, 105A, 281; Wildfowl Trust 13th Ann. Rep., 1962, 47-52. When released, groups of Mallard showed less deviation from a N.W. heading than single birds but groups tended to break up. Single birds released close to their roosting site still headed N.W. Flock re-assemble is not of significance in explaining *n* sense' orientation.

2247. RADAR EVIDENCE ON MIGRATORY ORIENTATIO^{*1}

D.Lack: *Ibis*, 1963, 105A, 132; *Brit. Birds*, 1962, 55, 139-158. Review of expt. on orientation and the role radar can play in studying migration. Various aspects of migration are discussed including drift, disorientation, the conditions when birds set out on migratory flip¹? reactions of diurnal migrants to coastlines, reversed mtt?² movements and redetermined movements. There is no evident that migrants flying high enough to be detected by radar allow for lat. drift.

2248. HOME RANGE AND HOMING EXPERIMENTS WITH THE ST. KILDA FIELD MOUSE. J.Morton Boyd: & <
zool. Soc. Lond., 1963, 140, 1-14 (12. Hope Tee., Edinburgh, Scotland) The ffeldmice (*Apodemus*, *sylvaticus sylvaticus* and *A. s. hirtensis*) of St. Olda cou home either uphill or downhill over distances of 1600 fc in probably less than 3 hr. Over greater distances fewer returned home, ? having a slightly stronger homing tnd encyan

D.N.Wheatley

2249. RADAR FILMS OF MIGRATION OVER EASTERN ENGLAND. E.Lack and E.Eastwood: *Ibis*, 1963, 105A, 281; *Brit. Birds*, 1962, 55, 388-414. The techn of filming a radar display are described. These films are important in showing the main types and directions of migration in eastern England. These as well as reversed migration, hard weather and disorientated movements are discussed in detail. Some reasons, such as the effect o* coastline, are given for birds changing direction in the middle of a migratory flight.

2250. CRITICAL PERIODS IN BEHAVIOURAL DEVELOPMENT. J.P.Scott: *Science*, 1962, 138, 949-958

(Jackson Mem. Lab., Bar Harbor, Maine, U.S.A.; Examination of data on the development of many sp¹gests that the period of life in which each new social, l²ationship is initiated is a critical one for the deterring t³ation of that relationship. The critical-period effects a⁴ more common in early life; the period for primary s⁵o⁶sation is also critical for other effects.

2251. VARYING EFFECTIVENESS OF DISTANT INTERMITTENT STIMULI FOR THE APPROACH RESPONSE IN THE DOMESTIC CHICK. F.V.Smith and M.W.Bird: *Anim. Behav.*, 1963, 11, 57-61 (Dept. Psychol., Univ., Durham, England) A rotating sector/disc and a flickering patch of light, when presented initially, tended to be approached about equally, but with repeated Presentation there was a marked decrement in response to *e light. The disc may be an intrinsically more attractive stimulus.

Y.Spencer-Booth

2252. ORIGIN AND EVOLUTION OF CALLS AND FACIAL EXPRESSIONS OF PRIMATES. R.J.Andrew: *Behaviour* 1963, 20, 1-109 (Dept. Zool., Yale Univ., New Haven, Conn., U.S.A.) Calls and expressions are dependent on contrasting stimuli, greater contrasts producing more intense calls. Vocalisation seems to have originated from the protective group of reflexes, namely, from the closure of the glottis, interacting with expiration. A systematic account is given of the calls and expression of the insectivore-primate stock. The evolution of the human language is considered. J.R.Cockbain

CYTOLOGY

CELL STRUCTURE AND CYTOCHEMISTRY

- 2253. E.M. OF EHRLICH ASCITIC CARCINOMA CELLS.** VJvI.Mitiushin: *Tsitologija*, 1962, 4, 506-510.

E.M. of the Ehrlich ascitic carcinoma cells showed that in spite of the loss, due to carcinomatous reproduction, of the original characteristics of the mouse mammary gland cell, the neoplastic cell remained a fairly compactly organised structure with a typical system of organelles. Nevertheless, it was not possible to reveal any systems or cell components which could be considered sp. for cancer cells. (Russian) BJ.Cooper

- 2254. EHRLICH ASCITES CELL NUCLEI. IV. DETERMINATION OF NAD PYROPHOSPHORYLASE ACTIVITY IN NUCLEI ISOLATED BY AN IMPROVED TECHNIQUE.** E.D.Hudack, D.E.Eros and D.O.Brummond:

Ex p. *Cell Res.*, 1963, 29, 343-348 (Sunny Acres Hosp., Cleveland, Ohio, U.S.A.) An improved isolation method increased the yield of Ehrlich ascites cell nuclei to 77%, and cytoplasmic contamination remained at the low level of 5%. The amount of the enzyme NAD pyrophosphorylase recovered in the nuclear fraction was 80% of that present in whole cells. The results are interpreted to indicate that this enzyme is situated for the most part, if not entirely, in the nucleus of the Ehrlich ascites cell. K Jones

- 2255. NUCLEOLUS OF THE CANCER CELL.** H.Busch, P.Byvoet and K.Smetana: *Cancer Res.*, 1963, 23, 313-339 (Dept. Pharmacol., Baylor Univ. Coll. Med., Houston, Tex., U.S.A.) Review. 425 ref.

B.M.Stevens

- 2256. ULTRASTRUCTURE OF NUCLEOLI AND CHROMOSOMES DURING THE EARLY STAGES OF LIVER REGENERATION AND CHANGES PRODUCED IN THESE STRUCTURES BY X-IRRADIATION.** J.M.G.Davis: *Phil. Trans. B.*, 1963, 246, 291-303 (Dept. Radiotherap. Univ., Cambridge, England) Rats were partially hepatectomised, and in one series X-irradiated at varying periods after the operation. Nucleoli found in regenerating liver cells are larger than those in normal cells; they contain fibrous elements, the nucleolonema fibres, surrounded by less-organised areas, the pars amorpha. Only nucleolonema fibres are found at 18 hr. after operation, the period when a-cytomembranes are being produced. The pars amorpha were later reformed. Mitotic stages in chr. have been recognised in E.M. studies. These appeared as strands about 1000 Å in diam. made up of thin fibres about 100 Å in diam. in early prophase. Later prophase chr. showed structures reminiscent of coiling, but this evidence later disappeared. Metaphase chr. were double. X-irradiation at small dose levels (450 r) caused no structural alterations in chr. at division, but nucleolar changes were seen. Larger doses (2000 r) caused fragmentation, and in telophase the nuclear membrane may reform around 2 partially separated chr. masses. M.S. Lave rack

- 2257. EFFECT OF PLASMOLYSIS AND DEPLASMOLYSIS ON NUCLEAR STRUCTURE.** V.Soran: *Tsitologija*, 1962, 4, 511-518. Low concn. of plasmolytics used in vivo on epidermis of *Calanthus nivalis* caused the nuclei to become granular and then reticular; high concn. caused the disappearance of nuclear structure, with homogenisation of the nucleus. Gradual deplasmolysis produced restoration of nuclear structure, but sudden

deplasmolysis usually caused nuclear homogenisation and subsequent cell destruction. Homogenisation appeared to be related to changes in the nucleoproteins and to nucleolar soln. The chem. characteristics of the plasmolytics, as well as their concn., seemed to be of importance. (Russian) BJ.Cooper

- 2258. CHROMOSOME FIBRES FROM AN INTERPHASE NUCLEUS.** J. Gall: *Science*, 1963, 139, 120-121 (Dept. Zool., Univ. Minnesota, Minneapolis, Minn., U.S.A.) R.b.c. of the newt, *Triturus*, were spread

on a water surface and picked up with carbon-coated grids for examination in the E.M. The identifiable nuclear material consists entirely of long fibres having a diam. of approx. 400-600 Å. Similar fibres have been seen in human and grasshopper chr. prep, in the same manner. G.M.Lewis

- 2259. RELATIONSHIP BETWEEN RNA SYNTHESIS AND LOOP STRUCTURE IN LAMPBRUSH CHROMOSOMES.**

M.Izawa, V.CAllfrey and A.E.Miisky: *Proc. nat. Acad. Sci. Wash.*, 1963, 49, 544-551 (Rockefeller Inst., New York, U.S.A.) RNA synthesis in lampbrush chr. of *Triturus viridescens* is DNA-dependent as judged by its sensitivity to actinomycin D. Chr. structure is intimately related to the capacity to synthesise RNA as evidenced by changes in loop morphology induced by different actinomycins and other agents (e.g. histones) which inhibit nuclear RNA synthesis. J.R.Sargent

- 2260. STUDIES ON THE MACRONUCLEUS Of PARAMECIUM AURELIA. I. (WITH A NOTE ON ULTRA-VIOLET MICROGRAPHY).** AJurand, CH.Bealean-M.R.Young: *J. Protozool.*, 1962, 9, 122-131 (Inst. Anim. Genet., Univ. Edinburgh, Scotland) E.M.

prep, of the macronucleus of *P. aurelia*, using both starve and growing organisms, the latter at timed stages following fission were studied. The effects of treatment with RNase, DNase and the silver-Feulgen reaction are described. The macronucleus contained a large no. of structures of 0-5 fi diam., consisting of an outer RNA-containing region and central elements containing DNA. It is suggested that these structures may be the sub-nuclei which have been postulated from genetic work. RJ.Walker

- 2261. PYRONINOPHIL GRANULES OF ISOLATED NUCLEI**

R.J.Salganik, I.I.Kiknadze, T.M.Morozova, LS.Gubenko and V.F.Drevich: *Tsitologija*, 1962, 4, 499-505. As a result of the effect of DNase on fractions of calf thymus nuclei isolated in isotonic saccharose, peculiar structures appeared, which were called pyroninophil granules. Under the conditions of the expt. the granules could only have come from the nuclei. They were 1*5-2-0 /i in diam., approx. half to one-third of the nuclear diam. Other characteristics are described. (Russian) BJ.Cooper

- 2262. INTRANUCLEAR AND INTRACYTOPLASMIC STRUCTURES OF RHODOTORULA GLUTINK AS REVEALED BY ELECTRON MICROGRAPHS OF SERIAL SECTIONS.** S.F.Ccaiti, T.R.Thyagarajan and HBN[#]Jlor: *Exp. Cell Res.*, 1963, 29, 235-241 (Dept. Mic[#]biol., Dartmouth Med. Sch., Hanover, N.H., U.S.A.)

The nucleus contained a prominent membrane-bounded structure which was tentatively identified as the nucleoplasm. The cytoplasm contained lipidal inclusions, mitochondria and intracytoplasmic membranes. Apparent connections between the mitochondria, plasma membrane, and nuclear membrane were observed. KJOn⁵

- 2263. STRUCTURE OF MITOCHONDRIAL MEMBRANES.** V.F.Mashanskii: *Tsitologija*, 1962, 4, 555-558. 771

foe basis of data in the literature and his own observations in the micro-organisation of various multi- and unicellular organisms the author concludes that the nature and dimensions of paired mitochondrial membranes are not & accord with SjOstrand's findings concerning the presence of a bilipid layer in the space between them. Each of the membranes which form the mitochondrial structure is formed of 2 osmophilic layers 20 Å thick, divided by a light space about 25 Å across. These membranes are compared with the lipoprotein complexes described in cytoplasmic membranes. (Russian) B.J.Cooper

2264. OBSERVATIONS ON MITOCHONDRIAL STRUCTURE. ANGULAR CONFIGURATIONS OF CRISTAE.

I.P.Revel, D.W.Fawcett and C.WJPhilpott: J. cell. 8tol., 1963, 16, 187-195 (Dept. Anat., Harvard Med. Sch., Boston, Mass., U.S.A.) Micrographs of lead-stained sections from tissues of several spp. fixed in OsO₄ PH 7-0-7-4, embedded in Epon were studied. The 2 membranes constituting a crista are frequently not parallel. Ridges occur on the membrane which in cross-section appear as sharp angulations. This is thought to be normal variation of the basic structural organisation of the mitochondrion which may reflect a periodic discontinuity in the membrane which in this respect differs from other cell membranes. P.Banow

2265. E.M. OF THE CORTEX OF THE EGG OF BARNEA CANDIDA (MOLLUSC BIVALVE), ITS EVOLUTION AT THE MOMENT OF FERTILISATION, MATURATION AND SEGMENTATION. JJ.Pasteels and E. de Harven: Arch. Biol., Liège, 1962, 73, 465-490 (Fac. Med., Univ. Brussels, Belgium) The unfertilised egg consists of microvilli regularly arranged in alternate rows, the distal 4/5 of these extensions are enclosed in a 2-layered chorion. Between the inner surface of the chorion and the egg's surface is a thin, 0.2-1 μ perivitelline layer. No morphol. changes occur at fertilisation. The localisation of the cortex expansion when the furrows appear can be determined due to the microvillar structures. These zones are small, a girdle of 1 μ width for the first Polar body and 3-5 μ wide for the first cleavage. From these zones, no cortical invagination has been found. (French) R.J.Walker

X/« E.M. - OP THE SPERMATOZOA OF A BIVALVE MOLLUSC, BARNEA CANDIDA. JJ.Pasteels and E. de Jjarven: Arch. Biol., Liège, 1962, 73, 445-463 (WW. Anat., Univ. Brussels, Belgium) The middle JS of the sperm contains 4 spherical mitochondrial whif disposed around 2 typical centrioles. The acro has a complex structure; a central fibrous tubule bounded by a thick reticulated envelope, but there is a rosomal body. It is suggested that this structure is associated with the role of the acrosome at fertilization. (French) R.J.Walker

2266. ULTRASTRUCTURE AND CYTOPLASMIC INTERRELATIONSHIPS OF AN AMNION CELL LINE (FERNANDES). J.J.Herdon, jun. and J.A.Whitaker: Tex. Rep. Kol. Med., 1963, 21, 43-56 (Univ. Texas S.W. Med., S.K Dallas, Tex., U.S.A.) The micro-morphology of amnion cells (strain Fernandes) in tissue culture was examined. These cells are unusual in having large cytoplasmic multivesicular bodies and a membrane-bound structure with concentric internal membranes. Relationships among these structures and their functional significance was explored. Predominance of RNP particles free in the cytoplasm was interpreted to mark this cell's adaption to free living existence. A.J.Martin

2268. FINE STRUCTURE OF COUNCILMAN BODIES IN LIVER OF ALUATTA SENICULUS SENICULUS L INFECTED WITH YELLOW FEVER VIRUS. E.Baruch, L. Carbonell and J.Weibel: Exp. CeU Res., 1963, 29, 50-53 (Dept. Virol. y Pathol., Inst. Venezolano de Invest. Cient., Caracas, Venezuela) Councilman bodies in hepatic cells of *A. s. seniculus*, naturally infected with yellow fever virus, showed no limiting membrane or internal vacuole membrane, as studied by E.M.

The bodies contained no lipid droplets or membranous components, and no yellow fever virus particles were found in them. It is concluded that their formation is not a direct consequence of the presence of viral particles. K.Jones

2269. CONTRAST BETWEEN OSMIUM-FIXED AND PERMANGANATE-FIXED TOAD SPINAL GANGLIA.

J.Rosenbluth: J. cell Biol., 1963, 16, 143-157 (Dept. Anat., Harvard Med. Sch., Boston, Mass., U.S.A.) Lumbar spinal ganglia removed from pithed living *Bufo marinus* were fixed in cold OsO₄ and KMnO₄ for 2 hr. OsO₄-fixed sections were stained with lead salts and the vesicles occurring in the satellite cells of peripheral nerve ganglia and at the surface of the dorsal root ganglion cells compared in micrographs obtained by the 2 methods. Small disconnected cytoplasmic globules occur in the sheaths of KMnO₄ fixed ganglia. Chains of vesicles appear near the plasma membrane of both the nervous and satellite cells in OsO₄ fixed material. This suggests that the plasma membrane invagination may disintegrate during OsO₄ fixation and cell cytoplasm break down in KMnO₄. The mechanism of these membrane reorganisations is discussed. P.Barrow

2270. SOME OBSERVATIONS ON FINE STRUCTURE OF SYMPATHETIC GANGLION OF BULLFROG. T.Yamamoto: J. cell Biol., 1963, 16, 159-170 (Dept. Anat., Hirosaki Univ., Sch. Med., Japan) Ganglia in the abdominal sympathetic trunk of *Rana catesbeiana* fixed in OsO₄ and KMnO₄ for 2 and 3 hr. were embedded in Epon or methacrylate. Thick sections were stained with PASchiff and toluidine and thin sections with uranyl acetate or lead soln. Sp. areas of cytoplasm in the superficial zone of the perikaryon are devoid of granulated endoplasmic reticulum but contain lead-staining granules of 200-400 Å diam. similar to glycogen granules. Cytoplasmic projections extending from the satellite cells around the root portions of the nerve process are described.

P.Barrow
2271. GOLGI ELEMENTS OF MOUSE HEPATIC CELLS EXAMINED REFRACTOMETRICALLY BY PHASE CONTRAST ILLUMINATION. S.Grzycki: Cytologia, 1961, 26, 294-300 (Dept. Histol. and Embryol. Med. Anat., Lublin, Poland) Thin unstained sections of albino mouse liver fixed in Helly's and Schaffer's fluids were examined in various media of known n under the phase contrast microscope. A composite picture was built up by examining cells mounted in media of successively higher n. The golgi elements varied in size, shape and location. They were usually near the nucleus, and consisted of vacuoles and smooth or crenated canaliculari. In binucleate cells the golgi material is not preferentially associated with one nucleus. The various appearances of the golgi material are thought to indicate its metabolic and structural changeability. C.A.Stace

2272. FINE STRUCTURE OF MYCOTA. IV. OCCURRENCE OF GOLGI DICTYOSOME IN FUNGUS NEOBULGARIA PURA (FT.) PETRAK. R.T.Moore and J.H.McAlear: J. cell Biol., 1963, 16, 131-141 (E.M. Lab., Univ.

CYTOLOGY

California, Berkeley, Calif., U.S.A.) The apothecia were prefixed in unbuffered 1% KMnO₄ for 9 min. followed by 2% OSO₄ and embedded in methacrylate. The Golgi organelle occurs in a fungus cell type of a supporting pseudo-tissue in which the nuclear membrane is discontinuous and appears to break down during cell division in a manner comparable to mitosis. Evidence indicates that the dictyosome originates from the outer membrane of the nuclei.

P.Barlow

2273. STRUCTURE OF PLANT CELLS WITH SPECIAL REFERENCE TO LOWER PLANTS. VI. STRUCTURE OF CHLOROPLASTS IN ALGAE. K.Ueda: *Cytologia*, 1961, 26, 344-358 (Bot. Inst., Nara Women's Univ., Nara, Japan) 25 spp. representing 9 major divisions of algae were examined with the E.M. Chloroplasts as such are absent in the Glauco phyta and Cyanophyta, although paired lamellae are present in the cells. Chloroplasts are present in the other groups, the lamellae being in groups of 2 (Rhodophyta), 4 (Euglenophyta, Phaeophyta, Pyrrhophyta and Chrysophyta) or arranged in grana (Charophyta, Chlorophyta). Pyrenoids, where present, could be classified into 5 types according to the relative positions of the assimilation products and lamellae to the pyrenoids.

C.A.Stace

2274. MECHANISM FOR PLANT CELLULAR MORPHOGENESIS. P.B.Green: *Science*, 1962, 138, 1404-1405 (Div. Biol., Univ. Pennsylvania, Philadelphia, Pa., U.S.A.) Polarised light studies with growing cells of *Nitella* and *Bryopsis* indicate that control of cell form resides in cytoplasmic elements near the growing side wall which have a long axis and form cellulose microfibrils at right angles to their length; these tend to become bonded laterally into a parallel array which can be disorganised by colchicine. These cytoplasmic elements therefore have several of the prop. of spindle fibres involved in cross wall formation.

G.M.Lewis

2275. E.M. OBSERVATIONS ON SACCHAROMYCES CEREVISIAE. J.K.Koehler, W.Bimbaum jun. and T.L. Hayes: *Cytologia*, 1961, 26, 301-308 (Radiation Lab., Univ. California, Berkeley, Calif., U.S.A.) Yeast was grown on various appropriate media and stained in KMnO₄ and uranyl acetate. In budding cells the nuclei were seen to be connected by a narrow bridge. Starved cells showed the fine structure more clearly and a nuclear membrane with pores, a plasma membrane with invaginations, and mitochondria with cristae were seen. Chr.-like bodies were found in the nucleus.

C.A.Stace

2276. E.M. OF TRICHOMONAS CRICETI. J.Chakraborty, N.N.D.Gupta and H.N.Jtey: *Cytologia*, 1961, 26, 320-326 (Biophys. Div., Saha Inst. Nuclear Phys., Calcutta, India) The flagellates, obtained from hamster caecum, were fixed in OSO₄. Various structural components were examined in some detail, notably the flagella and associated structures, the ant. flagellum having 9 peripheral and one central filaments. The nucleus and mitochondria are also described.

C.A.Stace

2277. SYNTHESIS AND MIGRATION OF PROTEINS IN CELLS OF EXOCRINE PANCREAS AS REVEALED BY SPECIFIC ACTIVITY DETERMINATION FROM RADIO-AUTOGRAPHS. H.Warshawsky, C.P.Leblond and B. Droz: *J. cell Biol.*, 1963, 16, 1-27 (Dept. Anat., McGill Univ., Montreal, Canada) Jtets were inj. i.p. with 2*5 jic/gm. body wt. DL-[4-5³H]leucine of sp. activity 29*1 mc/mM. The pancreas was removed 10 min.-30 days after injn. and fixed in Bouin's so In. Rela-

tive protein concn. was determined spectrophotometrically on Millon-treated sections and the radioactive concn. measured by the no. of silver grains per unit area on the autoradiographs. Proteins synthesised in the ergastoplasm accumulated in the Golgi zone, spread to the zymogen region and finally entered the excretory ducts. Turnover rates of 62*5 hr. and 4-7 min. demonstrated the existen of 2 classes of protein.

P.Barlow

2278. COMPARATIVE STUDY OF STAINING AND HTS". CHEMICAL REACTIONS OF COMPONENTS OF GOLG COMPLEX OF FIBROBLASTS AND ASCITES TUMOUR CELLS. S.Takagi, J.-ichi Kitada, H.Masuda and M. Tagawa: *Cytologia*, 1961, 26, 448-459 (Dept. Biol Univ. Osaka Prefecture, Sakai, Japan) The Golgi complex of fibroblasts consists of filaments and wider canalliculi which stain similarly and are thus thought to be different conditions of similar structures. In the turn cells only the undiluted filaments are found. In both ca the Golgi complex stains more similarly to mitochondri than to endoplasmic reticulum, as shown by a n.d. of dil ferent dyes. The Golgi components are always more slender than the mitochondria, and show some staining differences, as does the Golgi complex of the 2 types o cells. The Golgi complex is always close to the nucleu whilst the mitochondria are peripheral.

C.A.Stace

2279. CYTOCHEMICAL STUDY OF NUCLEIC ACIDS » PLANT CELLS. V. NUCLEIC ACIDS OF FEULGEN NEGATIVE PLANTS. M.R.Ishida: *Cytologia*, 1961, 26, 359-371 (Bot. Inst., Univ. Kyoto, Japan) Nud of Oscillatoria, Spirogyra and Marchantia vegetative ce were Feulgen-neg. when fresh or fixed, but appropriate treatment in all cases enabled DNA to be extracted and typified in vitro by its u.v. absorption curve and Dische and Feulgen reactions. The DNA and RNA cell content was quant. measured for the 3 organisms by means of P. deoxypentose, pentose and base determination separate*. Results from the different methods did not always agree. but average values in the 2 algae were comparable to * known DNA contents of several 'normal' organisms.

2280. CELLULAR ALTERATIONS IN THE MCH LINE Of CHINESE HAMSTER CELLS FOLLOWING INFECTION WITH HERPES SIMPLEX VIRUS. B.Hampar and S.A. Ellison: *Proc. nat. Acad. Sci. Wash.*, 1963, 49, 47⁴ 480 (Dept. Microbiol., Coll. Physn. and Surgn., Columbia Univ., N.Y., U.S.A.) The MCH system shows arrested mitosis when killing occurs following «K⁺ ment of cells with virus. Killing is manifested by mu⁰ pie chr. aberrations in colchicine-blocked metaphase cells. Permanent chr. alterations occur in cells cloned after infection but not when cells are seeded in large fl⁺ following infection.

J.R.Sargeff

NUCLEO-CYTOPLASMIC RELATIONS

2281. INTERRELATIONS BETWEEN MACRONUCLEUS CYTOPLASM IN THE GYMNSTOME CILIATE CHLAMYDODON PEDARIUS. M.Kaneda: *Cytolog*, 1961, 26, 408-418 (Biol. Inst., Coll. Gen. Educa Univ., Hiroshima, Japan) The macronucleus w^{id} vesicular and chromatic ends respectively, both w^{id} nucteoli, and the left and right sides also appear sone-

what different. It is speculated that the small vesicles or their precursors found just outside the nuclear membrane in old cells have passed from the nucleoplasm, which is connected to the cytoplasm through nuclear pores, and may be mitochondrial precursors. Also, collapsing nucleoli are seen connected to the nuclear membrane by a strand, and seem to produce material which aggregates in the cytoplasm as clusters of granules which are attacked by filaments to the nuclear membrane. The significance of this is discussed.

C.A.Stace

2282. INTERCELLULAR NUCLEAR TRANSFER IN MIXED CELL CULTURES IN VITRO. G.Barski and J.Belenradek, jun.: *Exp. Cell Res.*, 1963, 29, 102-111 (Lab. de Cult. de Tissus, Cillejuif (Seine), France)

Two cases of intercellular nuclear transfer were observed to cultures of mouse normal embryonic tissue and cells from a highly malignant mouse cell strain. In the first case, an interphasic nucleus penetrated into the cytoplasm of another cell which appeared to be in a blocked early metaphase stage. In the second case, the nuclear transfer occurred between 2 interphase cells. From the analysis of the movements of the involved cells and their organelles, it is concluded that the nucleus can participate in intercellular exchange which may visibly occur between cells of different histol. origin and between normal and malignant cells.

2285. STRUCTURE OF CYTOPLASMIC BRIDGES IN DIVIDING SPERMATOCYTES OF ROOSTER. T.Nag-

k^lik^ci^mae mUStli? c?oplasm of the bridge at sp. stages of meiosis. The formation and significance of these cisternae are discussed.

F.Beck

2286. ROLE OF CYTOPLASM IN CYTOKINESIS. T.Ota: *Cytologia*, 1961, 26, 428-447 (Sugiyama Women's Coll. Nagoya, Japan) ££ ebud* of Tradescantia reflexa were centrifuged at 2000 rev/min. for 15 min. and the staminal + t n + H/* examined. Within 60 min. the displaced cytoplasm + spindle had returned to their original positions, centrifugation in prophase allowed the spindle to reorientate before cell-plate formation, but centrifugation in anaphase caused the cell-plate to form in the spindle equator *** **» ^d re-oriented. TM e ^ell-plate margins outside the spindle were bent towards the cell equator, fixing to this only when the spindle was re-

orientated. Spindle position is thought to be governed by an elaborate cytoplasmic system connected to the spindle envelope.

C.A.Stace

2287. ATPASE ACTIVITY OF MITOTIC APPARATUS OF SEA URCHIN EGGS. T.Miki: *Exp. Cell Res.* 1963, 29, 92-101 (Inst. Mol. Biol., Univ., Nagoya, Japan) The ATPase activity of mitotic apparatus, isolated from ethanol-treated sea urchin eggs, was 3 times as high as that of the cytoplasm on the N-base. The enzymic natures of ATPase are reported, and the high ATPase activity was localised histochem. in mitotic apparatus.

K.Jones

2288. TIME OF NUCLEAR DIVISION IN REGENERATING CELLS OF RIELLA HELICOPHYLLA AFTER A PERIOD OF DARKNESS. I.Karsten: *Naturwissenschaften*, 1963, 50, 50-51 (Inst. Develop. Physiol., Univ., KÖln, Germany) Nuclear division in tissue fragments was more frequent and occurred earlier after a long period of darkness than in those previously having a normal diurnal cycle.

(German) AJ.Wansbrough

2289. MITOTIC DYNAMICS OF FIRST CLEAVAGE DIVISIONS IN EGGS OF STURGEON (AT VARIOUS TEMPERATURES) AND OF TROUT. T.A.Dettlaff: *Exp. Cell Res.*, 1963, 29, 490-503 (Inst. Anim. Moiphol. Acad. Sci., Moscow, U.S.S.R.) Expt. data are presented on the dynamics of different mitotic phases at the second cleavage division in the eggs of Acipenser gildenstadtii colchicus V. Marti and of Salmo trutta morpha lacustris L. at different temp. The movement of sister chr. sets in cleavage varied at different mitotic phases, and the elongation of the spindle at anaphase proceeded in parallel to the movement of chr. and continued up to the beginning of telophase. Each mitotic phase was characterised by definite dimensions of the mitotic figure, anaphase and telophase showing a definite distance between sister chr. The significance of these and other findings is discussed in detail.

K.Jones

2290. RNA AND METAPHASE CHROMOSOME. LJF.La-Cour: *Exp. Cell Res.*, 1963, 29, 112-118 (Dept. Cell Biol., John Innes Inst., Bayfordbury, Herts., England) Metaphase chr. of die root meristem cells of Trillium cernuum contained RNA, as studied using p₃₂adenosine as a precursor. In Vicia faba, the nucleoli incorporated the labelled precursor during prophase and the labelled material aggregated on the chr. in the vicinity of the nucleolus when this disappeared in later stages of prophase.

K.Jones

2291. MITOTIC CYCLE OF ASCITES TUMOUR CELLS. R.Baserga: *Arch. Path.*, Chicago, 1963, 75, 156-161 (Dept. Pathol., N.W. Univ. Med. Sch., 111, U.S.A.)

The mitotic cycle of Ehrlich ascites tumour cells growing in the peritoneal cavity of 3 to 5 month old mice was studied by [3H]thymidine autoradiography. The cycle length was approx. 18 hr., 11 hr. of which is spent synthesizing DNA, 2 hr. in a rest phase, 4 hr. prophase and 1 hr. from metaphase to telophase. The % of dividing tumour cells decreased progressively with time after a single injn. of pHthymidine.

R.Mitchell

2292. AUTORADIOGRAPHIC STUDY OF CHROMATID DISTRIBUTION OF LABELLED DNA IN TWO TYPES OF MAMMALIAN CELLS IN VITRO. D.M.Prescott and M.A.Bender: *Exp. Cell Res.*, 1963, 29, 430-442 (Biol. Div., Oak Ridge Nat. Lab., Oak Ridge, Tenn., U.S.A.) The average generation time and the length

CYTOLOGY

of the G_1 , S and G_2 periods were determined for a line of Chinese hamster cells in vitro. The labelled DNA segregated according to a semi-conservative pattern, the freq. of sister chromatid exchanges being low. The same pattern of semiconservative segregation of DNA was found in human leucocytes in vitro. The results are discussed in reference to the current theories of chromatid segregation of DNA. K.Jones

2293. RENEWAL OF DIFFERENTIATED CELLS. S.R.Pelc: *Exp. Cell Res.*, 1963, 29, 194-198 (M.R.C., Biophys. Unit., King's Coll., London, England) [^3H].

Thymidine appeared to be incorporated into the DNA of cells of differentiated organs, especially the seminal vesicles of mice, at a rate equal to that found in dividing tissues or at a considerably lower rate. Comparison of labelling indices and mitotic indices showed that in many organs fewer cells divide than was expected from the no. of labelled cells. It is suggested that either all of the DNA or some part of the genetic material can be renewed without subsequent cell division. K. Jones

2294. ASYNCHRONY OF DNA SYNTHESIS IN CHROMOSOMES OF HUMAN DIPLOID CELLS. P.S.Mcorhead and V.Defendi: *J. cell Biol.*, 1963, 16, 202-209 (Wistar Inst. Anat. and Biol., Philadelphia, Pa., U.S.A.) Chr. replication of human diploid cells of fibroblastic type in long term cultivation was studied by exposure to PHlthydine of concn. 0.3-0.5 $\mu\text{g}/\text{ml}$. for 20 min. A cell generation of 18 hr. with a 7.7 hr. period of DNA synthesis and 3-6 hr. pre-mitotic rest period was recorded and it is concluded that the period of synthesis for any sp. site is only some fraction of this 7.7 hr. period. P.Barlow

2295. MOLECULAR SYNCHRONY AND SEQUENTIAL REPLICATION OF DNA IN E. COLI. T.Nagata: *Proc. nat. Acad. Sci. Wash.*, 1963, 49, 551-559 (Dept. ZooL, Columbia Univ., New York, U.S.A.) Chr. replication was studied in lysogenic strains of *E. coli* K-12 HFr and F'. One replication cycle of DNA corresponded to a synchronised cell generation. Kinetic studies of prophage duplication over one replication cycle of DNA showed that (a) the pattern of kinetics is strain sp. and that this is due to synchronisation, (b) sp. temp. of prophage duplication, expressed in terms of % increase of DNA, can be directly correlated with the known genetic linkage map. It is concluded that replication of chr. in *E. coli* K-12 is synchronised and sequential. J.R.Sargent

EFFECTS OF RADIATION AND CHEMICAL AGENTS

2296. CYTOLOGICAL ANALYSIS OF COLONIES DEVELOPED FROM MAMMALIAN CELLS IRRADIATED IN VITRO WITH X-RAYS. G.Colombo and G.Marin: *Exp. Cell Res.*, 1963, 29, 268-277 (Inst. Comp. Anat., Univ. Perugia, Italy) The relationship between X-ray induced reproductive death and blockage of cell division leading to giant cell formation was studied on a strain of mammalian cells grown in vitro. From the expt. results, it is concluded that giant cell formation and reproductive death could be ascribed to die same hereditabale damage, although some minor lethality appeared to be related to a different mechanism. K. Jones

2297. EFFECTS OF ULTRAVIOLET MICROBEAM IRRADIATIONS ON MITOSIS STUDIED IN TRADESCANTIA CELLS IN VIVO. B.Wada and K.Izutsu: *Cytologia*, 1961, 26, 480-491 (Biol. Inst., Univ. Shizuoka, Japan) U.v. irradiation with a microbeam 2 μ wide caused a no. of mitotic abnormalities in *Tradescantia* staminal hairs, notably spindle suppression and chr. stickiness. Irradiation of a very young polar cap completely suppressed spindle formation, but after irradiation at a later stage a half-spindle formed at the non-irradiated pole. In the latter case the chr. split but remained in a clump which was pushed to the irradiated pole by the developing phragmoplast. Two cells, one enucleate, were formed. Treatment at successively later stages produced a series of effects of varying degrees from the normal. C.A.Stace

2298. THE NARCOTIC SODIUM PENTOBARBITAL: A RAPID MITOSIS -DISTURBING EFFECT IN THE MOUSE. K.Setaia, B.Iindroos and A.Hujanen: *Natur wissenschaften*, 1963, 50, 45-46 (Path.-Anat. Inst., Univ. Helsinki, Finland) Effects of a single Na pentobarbital injn. of 2.5 mg. on chr. and mitotic aberration and nuclear degeneration in epidermal cells were assessed after 24 hr. in comparison with the effects of shaving, detergent application and carcinogen application. The no. of pathol. mitoses per 500 observed were in each case 15.9, 0, 10.5 and 41.7 from a total of 47000 mitotic analyses covering 5000 mice in each case. The significance for narcotic toxicity is discussed.

(German) A. J.Wansbrough

2299. SELECTIVE EFFECTS OF ACTINOMYCIN D ON INTRACELLULAR DISTRIBUTION OF RNA SYNTHESIS IN TISSUE CULTURE CELLS. R.P.Perry: *Exp. Cell Res.*, 1963, 29, 400-406 (Inst. Cancer Res., Philadelphia, Pa., U.S.A.) In tissue culture cells treated with low concn. of actinomycin D, the incorporation of [^3H]cytidine and pHliridine into nucleolar and cytoplasmic RNA was irreversibly suppressed, whereas the initial incorporation into the RNA of the extra-nucleolar (chromatin) portion of the nucleus was unaffected. The results were consistent with the hypothesis that the stable elements of ribosomal RNA are derived from the nucleolar region of the nucleus. K. Jones

2300. MITOSIS AND DIFFERENTIATION IN ROOTS TREATED WITH ACTINOMYCIN. A.K.Bal and P.R. Gross: *Science*, 1963, 139, 584-586 (Dept. Biol., Brown Univ., Providence, R.I., U.S.A.) Mitosis in root meristem of *Allium cepa* ceases after a delay of 36 hr. when exposed to $10 \mu\text{g}/\text{ml}$. actinomycin D. The block is reversible and occurs at interphase. Differentiation of provascular tissue is suppressed. Autoradiografl* of roots treated with pHliracil show that synthesis of RNA is blocked after mitosis fails. G.M.Lewis

CYTOGENETICS

2301. KARYOTYPIC ANALYSIS OF 83 CASES OF DOWNJ*: SYNDROME IN HARRIS COUNTY, TEXAS. T.Hayas[†]: *Tex. Rep. Biol. Med.*, 1963, 21, 28-36 (Univ. Texas M.D. Anderson Hosp., Houston, Tex., U.S.A.) 74 cases were identified as 21-trisomy, 3 had a D/G trans* location, 2 were 46/47 chr. mosaics, and 4 had norm*¹ karyopre. Those with normal karyotype, upon critic*¹ examination, proved to be not mongols. AJ.Martin

2302. MONGOLOID TWINS WITH TRBOMY OF CHROMOSOME NO. 21. M.Mikkelsen and J.C.Melchior: Acta Genet., Basel, 1962, 12, 164-171 (Aerobiol. Inst., 14 Tagensoej, Copenhagen, Denmark) A chr. study in a pair of apparently monozygotic ? twins. Cells were obtained from skin cultures and both twins had a model no. of 47 chr. with probable trisomy of No.21. D.B.Roberts
2303. TRANSLOCATION BETWEEN ACROCENTRIC CHROMOSOMES IN A 46-CHROMOSOME MONGOLOID AND HIS 45-CHROMOSOME MOTHER. JJ.Biesele, W.Schmid, Chi Hao Lee and P.M.Smith: Amer. J. hum. Genet., 1962, 14, 125-134 (Genet. Fdn., Univ. Texas, Austin, Tex., U.S.A.) An extra sub-*etacentric chr. in the complement of the 15 yr. old boy fc concluded to be a translocation chr. bearing most of the long arms of the missing long acrocentric 15 and the short acrocentric 21. The patient's mother, who was phenotypically normal had one 15 and one 21 chr. but in addition she had the 15/21 translocation chr. D.A.Jones
2304. TRISOMY OF CHROMOSOMES 13-15 AND 17-18: ITS ASSOCIATION WITH INFANTILE ARTERIOSCLEROSIS. R.L.Rosenfield, S.Breitbart, H.Isaacs, jun., H.D.Klevit and W.J.Mellman: Amer. J. med. Sci., 1962, 244, 763-779 (Children's Hosp., Philadelphia, Pa., U.S.A.) A description of two cases and review of the literature. 56 ref. E.E.Hobbiger
2305. ENLARGED SATELLITES AS FAMILIAL CHROMOSOME MARKER. H.L.Cooper and K.Hirschhorn: Amer. J. hum. Genet., 1962, 14, 107-124 (Nat. Inst. Dent. Res., Bethesda, Md., U.S.A.) Structural chr. variants involving enlarged satellites on chr. 13 and 22 were described for 2 human families. These variants are compatible with normal development and are inherited in an Mendelian manner. Linkage studies, using the enlarged satellites and various blood groups and serum factors could be a useful way of mapping human chr. D.A.Jones
2306. CHANGE OF HUMAN CHROMOSOME COUNT DISTRIBUTIONS WITH AGE: EVIDENCE FOR A SEX DIFFERENCE. P.A.Jacobs, M.Bunting, W.M.C.Brown, R.Phillips and H.Goldstein: Nature, Lond., 1963, 197, 1080-1081 (Western Gen. Hosp., Edinburgh, Scotland) Increases with age in the proportion of human aneuploid cells was due to mainly to loss of an Si chr. and in loss of an M chr., probably through divisional errors Solving the Y chr. in men and the X in women. G.M. Lewis
2307. CHROMOSOMES IN TOE HUMAN CANCER CELL TISSUE CULTURE LINE HUMAN EWDERMOID 2. C.Norrvyd and A.Fjelde: Cancer Res., 1963, 23, 197-200 (Inst. - Genet., Lund, Sweden) The line, which was en to continuous tissue culture since isolation in 1952-1953 to calf serum media, for the last 9 yr. as a monolayer trypsinised culture, had a hypertriploid stem-line and a variation of chr. no. between 69 and 81. & far 131-156 chr. and higher no. were also seen. 60 cells counted 3-9% were in the double stemline 6&K. 6 karyotypes were analysed. 3 marker chr. Ci 101 served, 1 8 subterminal seen in all cells and 2 chr. approx. half the size of No. 21 and 22. B.M.Stevens
- *³ ttV⁴ SUBLINE OF EHRLICH ASCITES TUMOUR: ERTRIPLOID. H.Tsukada, S.-C.J.Fu, R-Kato and Yerganian: Cytologia, 1961, 26, 419-422 (Cancer Inst. Med. Sch., Sapporo, Japan) Cytol., biol., and biochem. characteristics of the first triploid or near-

triploid subline of this tumour are given, and the karyotype morphology of hyperdiploid, hypertriploid and hypo-tetraploid sublines compared. The model chr. no. of these three are 45, 65 and 73. The hypertriploid is the most malignant of all Ehrlich ascites tumours. C.A.Stace

2309. NATURAL TRIPLODY IN SALAMANDERS RELATED TO AMBYSTOMA JEFFERSONIANUM. T.M.Uzzell, jun.: Science, 1963, 139, 113-115 (Museum Zool., Univ. Michigan, Ann Arbor, Mich., U.S.A.) Dimorphism in cell size, the inheritance of sex and the larval chr. counts indicate that there are distinct, continuing populations of triploid ? associated with certain populations of the 2 diploid spp. *A.jeffersonianum* and *A.laterale*. G.M.Lewis

2310. STUDIES ON CHROMOSOMES OF FIVE SPECIES OF COCCINELLIDAE (COLEOPTERA). U.Agarwal: Cytologia, 1961, 26, 285-293 (Div. Microbiol., Central Drug Res. Inst., Lucknow, India) Five spp. in the genera *Coccinella* ($2n = 20$), *Menochilus* ($2n = 20$) and *Epilachna* ($2n = 18$) were examined by suitably treated gonadal sections. The chr. no. 20 is modal for the Coleoptera, and lower no. are supposed to be derived from it by fusion or by loss of the minute Y chr. The spp. with $2n = 18$ have a large Y chr. and methods are discussed by which these (neo-XY) types might have evolved from those with $2n = 20$ and a minute Y (primitive-XY). CA.Stace

2311. NUCLEAR STRUCTURES IN THE ARANEINA. n. SEX CHROMOSOMES. I.I-Sokolov: Tsitologiya, 1962, 4, 617-625. Sex chr. were studied in approx. 20 spp. of Araneina. The predominant types of sex determination was $X1X2O$ (d^1). The sex. chr. of all the spp. studied were telocentric. At all stages of the spermatogenic cycle they consisted of 2 chromatids. There was total heterochromasia from the preleptotene period until the end of spermatogenesis. (Russian) BJ.Cooper

2312. A NEW CHROMOSOME NUMBER AND KARYOTYPE IN LYCORIS RADIIATA. S.Bose: Nature, Lond., 1963, 197, 1229-1230 (Blandy Expt. Farm, Univ. Virginia, Boyce, Va., U.S.A.) G.M.Lewis

2313. ANEUPLOIDS IN OAT VARIETAL POPULATIONS. J.B.Jiacker and R.Riley: Nature, Lond., 1963, 197, 924-925 (Plant Breeding Inst., Cambridge, England) Examination of the chr. constitutions of 3 populations of *Avena sativa* var. Sun II showed 1^*4 , 1^*9 and 1^*2^*0 aneuploidy. It is suggested that a complete series of monosomics could be assembled by screening varietal populations. CM.Lewis

2314. CYTOLOGY OF SOME MEMBERS OF THE FAMILY IRIDACEAE. A.K.Sharma and A.Sharma: Cytologia, 1961, 26, 274-284 (Bot. Dept., Calcutta Univ., India) The chr. morphology of 7 taxa in 4 genera was compared. Of several pretreatment chemicals used aesculin gave the best results. Aneuploidy and polyploidy were found to be frequent. On the basis of karyotype homologies it is suggested that the taxa examined belonging to *Babiana* ($2n=14$), to *Tigridia* ($2n=26$) and to *Tritonia* and *Moraea* ($2n=20, 40, 60$) form 3 distinct evolutionary lines, although one source of *Tritonia crocata* ($2n=22$) possessed an aberrant karyotype suggestive of the genus *Crocosmia*. CA.Stace

2315. STERILITY OF AN INDUCED AUTOTETRAPLOID OF CROTALARIA GOREENSIS. J.Bouharmont: Cytologia, 1961, 26, 253-267 (Inst. Camoy, Louvain, Belgium) Autotetraploids ($4n = 32$) were obtained by

CYTOLOGY

colchicine treatment, and were characterised by larger pollen grains, flowers and stomata. They were very largely sterile, and microsporogenesis, pollen tube growth, fertilisation and seed development was followed. In microsporogenesis quadrivalents were not numerous; univalents were frequent and became laggards which formed micronuclei in many cases. These meiotic irregularities accounted for abnormal pollen tube growth and embryo-sac development, and hence to the high degree of sterility. (French) CA.Stace

2316. INTERGENERIC HYBRIDS IN THE BOTHRIECHLOA ININAE. n. BOTHRIECHLOA AND CAPILLIPEDUM. J.M.J. de Wet, D.S.Borgaonkar and H.R.Chheda: Cytologia, 1961, 26, 268-273 (Dept. Bot. and Plant Pathol., Oklahoma State Univ., Stillwater, Okla., U.S.A.) Three strains of *B. intermedia* were used as \$ parents in crosses with *C.parviflorum* and *C.spicigerum*. All parents have $2n=40$ and are suggested to be segmental allotetraploids since some univalents may be found during microsporogenesis. Hybrids from all but one cross showed $2n=40$, and in most (but not all) cases the no. of bivalents was similar to that in the parent spp. Pairing may be autosynthetic, but close homology between the chr. of the 2 genera is suggested. One hybrid showed $2n=47$, with up to 21 bivalents: the extra chr. could have come from either parent. C.A.Stace

2317. CHROMOSOME ATLAS OF THE GENUS DACTYLIS. K.Jones, C.Carroll and M.Bonill: Cytologia, 1961, 26, 333-343 (Welsh Plant Breeding Stn., Aberystwyth, Wales) The distributions of plants with the three known levels of ploidy (diploids, tetraploids and hexaploids, $x=7$) are given, with a discussion of the evolutionary significance of the diploids. Some triploids are found where diploids and tetraploids occur together and these presumably produced the hexaploids, which are very rare. The chr. no. of 210 populations are given. Up to four B chr. may be present, mostly in diploids. C.A.Stace

2318. CYTOLOGY OF COCOS NUCIFERA AND ARECA CATECHU. A.Abraham, P.M.Mathew and CA.Ninan: Cytologia, 1961, 26, 327-332 (Univ. Kerala, Trivandrum, India) Male flowers were fixed in Camoy's fluid and the anthers stained in acetocarmine. Meiosis was followed in both spp. and found to be essentially the same ($n=16$). The known chr. no. of the tribes Coccoineae and Areceae are surveyed. CA.Stace

2319. KARYOTYPES IN FOUR DIPLOID SPECIES OF CHRYSANTHEMUM. R.Tanaka and N.Shimotomai: Cytologia, 1961, 26, 309-319 (Bot. Inst., Hiroshima Univ., Japan) Sixty clones of 4 spp. and one variety were found to have $2n=18$ in root-tips and pollen mother cells, but the 4 spp. were distinguishable on chr. size and morphology. Since the chr. of *C.Uneare* are larger than those of the other spp. and differ in that none are acrocentric this sp. is thought to be the most primitive. The smaller the chr. the fewer the pairs of satellited chr.: *C.Uneare* and *C.vulgare* have 3 pairs; *Crapestre* 2; and *Cnippionicum* one. CA.Stace

2320. NEW CYTOLOGICAL RESEARCHES ON THE MELASTOMATACEAE. CFavarger: Ber. sghweiz. bot. Ges., 1962, 72, 290-305 (Inst. Bot., Neuchatel, Switzerland) The chr. no. of 100 spp. collected in E.Africa and of 5 spp. from other sources is given. (French) M.Blandin

2321. TYPES OF POLYPLOIDISATION AND CHROMOSOME SET REDUCTION. V.K.Shcherbakov: Tsitologija, 1962, 4, 477-489. Study of a wide range of literature on the subject showed that polyploidisation of chr. sets can occur in 4 ways, which are described. Reduction of sets normally occurs in meiosis and sometimes takes place in somatic tissues by meiosis and by union of genomes. (Russian) BJ.Cooper

2322. STUDIES ON CYTOLOGY OF TWO SPECIES OF PHYMATODES. S.and N. Pal: Cytologia, 1961, 26, 460-467 (Dept. Bot., M.B.B. Coll., Agartala Tripura, India) Somatic nuclei were studied from root-tip squashes and meiotic chr. from young sporangia smears. $2n=72$, with 36 bivalents, in both *P.scholoperidila* and *P.nigrescens*. Tetrad formation was studied in both, and the chr. classed according to length and centromere position, when the 2 spp. could be distinguished. In *P.nigrescens* tetrad nuclei sometimes fused to give tetraploid nuclei which underwent 'secondary meiosis', this often being very irregular. C.A.Stace

TECHNIQUES

2323. TECHNIQUE FOR CHROMOSOME STUDY OF HUMAN BONE MARROW FIBROBLAST-LIKE CELLS. P.Fames, B.E.Barker and H.Fanger: Exp. Cell Res., 1963, 29, 86-91 (Dept. Pathol., Rhode Island Hosp., Providence, R.I., U.S.A.) KJones

2324. THE USE OF LACTO-PROPIONIC ORCEIN IN RAPID SQUASH METHODS FOR CHROMOSOME PREPARATIONS. A.F.Dyer: Stain Technol., 1963, 38, 85-9° - (Royal Bot. Garden, Edinburgh, Scotland) In general lacto-propionic orcein produces less cytoplasmic staining has a more rapid penetration and gives more uniform results than acetic orcein. It may be used on a wide range of materials. M J.Bell

2325. USE OF AGAR FOR OBTAINING CHROMOSOME PREPARATIONS. V.V.Teiskikh: Tsitologija, 1962, 4, 702. Description of a method involving a protective layer of agar on glass for making cells adhere to the glass during treatment with hypotonic soln. in the production of chr. prep. With this method there is marked swelling of the cells. After fixation the agar can be removed extremely easily. The method is suitable for work with aw cells in tissue culture. (Russian) B J.Cooper

2326. NUCLEOLAR PREPARATIONS FROM AMPHIBIAN EPITHELIAL CELLS. M.I.Betina: Tsitologija, 1962, 4, 703-704. Description of 7-stage method of exposing nucleoli in the epithelial cells of amphibian larvae. On the prep. so obtained it was easy to count the nucleoli in the nucleus. The method was used on the axolotl and a sp. of frog. Repeated total prep. of the fin were obtained, with differential staining of the chromatin in the interphase nuclei and nucleoli of the epithelial cells. (Russian) B J.Cooper

2327. ERRORS IN CYTOPHOTOMETRY. L.S.AgroSkin-Tsitologija, 1962, 4, 585-595. The single- and double-wave and scanning methods of photometry are compared. (Russian) BJ.Cooper

GENERAL

2328. SEARCH FOR THE ESSENTIAL FACTORS OF CARCINOGENESIS. R.Wakonig-Varrtaja: Ann. N.Y.Acad. Sci., N.Y., 1963, 105, 1-24 (Dept. Obstet. and Gynecol., Queen Elizabeth Hosp., Woodville, S.Australia) A review in which attention is drawn to the evidence that neoplasia is basically an irreversible change inherited from cell to cell. In particular a mouse lymphoma with cells exhibiting an identifiable abnormal marker is described. A hypothesis of carcinogenesis is discussed assuming that a mutation, in the widest meaning eluding virus infections or activation, is the original neoplastic change. This mutation is assumed to impair permanently the function of one of the genes that regulate the mechanisms controlling growth of a cell.

P.N.Campbell

2329. NON-ADDITIONAL COMBINING ABILITIES. N.Gilbert: Genet. Res., 1963, 4, 65-73 (Biophys. Dept., Univ., Edinburgh, Scotland) A model based on the simultaneous estimation of 2 constants, additive and multiplicative, for each parents' contribution is found to describe Hel cross data!

J.Sneath

2330. FACTORIAL NOTATION OF A FIGURATE SERIES. H.-G.Hadley: Acta genet. Basel, 1962, 12, 178-190 (Hedley Mem. Clin., 1252 6th St., S.W., Washington, D.C., U.S.A.)

D.B.Roberts

MICRO-ORGANISMS

2331. "J₁" GENE CONTROLLED RADIATION SENSITIVITY P. C. LI. A. ORSCH, A. EDELMAN AND J. A. COHEN: Biophys. Acta, 1963, 68, 263-270 (Med. Inst., Berlin, FRG) The position of the determinant syn, which confers sensitivity to u.v. light, was shown by conjugation to be between the markers controlling xylose fermentation and streptomycin resistance in *J₁ coli* B. The fertility factor of an *E. coli* K 12 strain was transferred to an auxotroph of a radiation sensitive mutant of *E. coli* B (syn⁻). The resulting mutant was conjugated with *E. coli* C and the syn⁻ marker was thus transferred to that strain. syn⁻ strains differed from the wild type in their decreased ability to propagate u.v. inactivated bacteriophages T₁, T₃, T₇ and X! B.M.Stevens

2332. GENETIC AND BIOCHEMICAL ANALYSIS OF SECOND SITE REVERSION. D.R.Helinski and C.Yanofsky: J. biol. Chem., 1963, 238, 1043-1048 (Dept. Biol. Sci., Stanford Univ., Calif., U.S.A.) Genetic analysis of a partial revertant from an A-protein mutant strain, A46, of *E. coli* shows that reversion results from mutation at a site distinct from the A46 site. The A⁺ protein produced by this partial revertant differs from the wild-type protein in 2 amino acids. One of the amino acid changes, replacement of glycine by glutamic acid, is the same as the change characteristic of the A46 mutation. The other amino acid change, replacement of a tyrosine by a cysteine residue, results from the reversion, strain A46 carries only the second mutational change is indicated by appropriate crosses. This strain produces an

enzymically inactive A-protein which has the tyrosine to cysteine change, but not the glycine to glutamic acid change. J.N.Ashley

2333. SEQUENTIAL REPLICATION OF BACILLUS SUBTILIS CHROMOSOME. I. COMPARISON OF MARKER FREQUENCIES IN EXPONENTIAL AND STATIONARY GROWTH PHASES. H.Yoshikawa and N.Sueoka: Proc. nat. Acad. Sci. Wash., 1963, 49, 559-566 (Dept. Biol., Princeton Univ., N.J., U.S.A.) Relative frequency of genetic markers in the DNA of *B. subtilis* in exponential and stationary growth phases were compared using a transformation system. If the chromosome replication has polarity the freq. of each marker in the exponential phase should be a function of its location on the chr. Results indicate that such polarity exists in *B. subtilis*. A genetic map was constructed in which an adenine marker is located near the point of origin from which the chr. starts replicating and in which methionine and isoleucine markers are near the terminus. Chr. in stationary phase of growth are in completed form. J.R.Sargent

2334. ON THE NATURE OF COLICINOGENIC FACTORS: A REVIEW. P.Fredericq: J. theoret. Biol., 1963, 4, 159-165 (Univ. Liège, Rue des Bonnes-Villes, Belgium) Factors responsible for the production by certain bacteria of highly sp. antibiotic colicins are independent of the chromosomal material and bear a closer resemblance to phage and the F fertility agent. Colicinogenic factors are considered to be defective virulent phages which, although no longer capable of lysing the cell, retain the gene for lethal protein synthesis. CF.Blane

2335. INTERSPECIFIC RECOMBINATION IN STREPTOMYCES. M.Alacević: Nature, Lond., 1963, 197, 1323 (Dept. Microbiol., Univ. Zagreb, Yugoslavia) Recombination expt. have been carried out with nutritional mutants of *S. rimosus*, *S. eurofaciens* and *S. coelicolor*. Recombination rates ranged from 10⁶ to 10⁷ and were obtained in all the inter-sp. crosses examined. CM.Lewis

2336. MUTATIONS OF THE A MATING TYPE FACTOR IN COPRINUS LAGOPUS. P.R.Day: Genet. Res., 1963, 4, 55-64 (J. Innes Inst., Bayfordbury, Hertford, Herts., England) 10 A factor mutants and an unlinked A suppressor mutant, were isolated from fruit bodies formed by common A heterokaryons of *Coprinus lagopus*. The suppressor was recessive since stocks carrying it retained their A or B specificities when mated with wild-type testers. False clamps were formed. Fruit bodies formed by monokaryons carrying the suppressor mutant had pale gills bearing varying proportions of abnormal tetrads with less than 4 spores. The 10 A factor mutants lacked A mating-type specificity and formed false clamps, functional non-mutant sub-units were present in four and two A6 mutants which were recovered in tests for intra-factor recombinations in matings between mutants and wild-type using the pair of markers paba-1 and ad-8 in repulsion. No 8-sub-units were detected. The mutations involve one or both sub-units or are very close to them. J.Sneath

2337. A RELATIONSHIP BETWEEN ERGOSTEROL AND RESPIRATORY COMPETENCY IN YEAST. L.W.Parks and P.R.Starr: J. cell. comp. Physiol., 1962, 61, 61-65 (Dept. Microbiol., Oregon State Univ., Corvallis, Ore., U.S.A.) Conditions (metabolic inhibitors, metal ions, heat) which induce formation of respiratory mutants (petite) in *S. cerevisiae* also reduce sterol formation. Addition of ergosterol could reduce the formation

GENETICS

of these mutants. A discussion of the various cytoh, enzymic and genetic reports on loss of respiration in yeast is made in die light of these findings. CM.Lewis

2338. METHYLENE BLUE AND TOLUIDINE BLUE INTERFERING WITH PRODUCTION OF RESPIRATION-DEFICIENT MUTANTS IN YEAST BY ACRIFLAVINE. S.Nagai: *Exp. Cell Res.*, 1963, 29, 82-85 (Fac. Sci., Nat. Women's Univ., Nara, Japan) Methylene Blue and Toluidine Blue, which were ineffective to produce respiration-deficient mutants of yeast, counteracted the effect of acriflavine in producing the mutants, while Magdala Red and Rhodamine B did not counteract acriflavine. K.Jones

2339. HETEROKARYON-INCOMPATIBILITY FACTOR INTERACTION IN TESTS BETWEEN NEUROSPORA MUTANTS. F.J.de Serres: *Science*, 1962, 138, 1342-1343 (Biol. Div., Oak Ridge Nat. Lab., Oak Ridge, Tenn., U.S.A.) Studies on presumably isogenic ad⁺; 3A and jid-3B mutants of *N.crassa* derived from die same wild-type strain have revealed that the neg. heterokaryon tests shown by certain pair-wise combinations can be attributed to interaction of incompatibility factor mutations. G.M.Lewis

2340. ON THE MECHANISM OF COMPLEMENTATION AT THE LEU 2 LOCUS OF NEUROSPORA. S.R.Gross: *Proc. nat. Acad. Sci. Wash.*, 1962, 48, 922-930 (Dept. Microbiol., Duke Univ., N.C., U.S.A.) The complementation map derived is linear, overlapping and continuous. Evidence presented indicates that the polypeptide determined by the leu-1 gene is one of at least two different peptide structural units of an enzyme which catalyses the isomerisation of 3 carboxy-j3-hydroxyisocaproate and (X-hydroxy-j3-carboxyisocaproate. The complementation behaviour of a group of leu-2 in combination with a leu-2 leu-3 double mutant is consistent with the notion that the isomerase is a mixed polymer consisting of at least two a and two g-chains. J.R.Sargent

2341. POLARISED NEGATIVE INTERFERENCE IN THE PABA 1 REGION OF ASPERGILLUS NIDULANS. O.H. Siddiqi and A.Putrament: *Genet. Res.*, 1963, 4, 12-20 (Dept. Genet., Univ. Glasgow, Scotland) 28 crosses involving 14 allelic paba mutants, in different combinations, showed that when the distance between the mutants is large, the additional exchanges on the distal side (relative to the contromere) greatly exceed those on the proximal side. As the interval between the mutants decreases this difference disappears. This may be due to a process which imposes a time sequence on recombination events; alternative explanations are discussed. J.Sneath

2342. GENETIC ANALYSIS OF CARBOHYDRATE UTILISATION IN ASPERGILLUS NIDULANS. C.F.Roberts: *J. gen. Microbiol.*, 1963, 31, 45-58 (Dept. Genet., Univ. Glasgow, Scotland) A new class of *A.nidulans* mutants, detected by their inability to utilise sp. carbohydrates as sole C source for growth, were isolated. All the mutants are recessive. Analysis of 27 mutants resulted in the description of 10 new loci concerned with carbohydrate utilisation which were allocated to linkage groups, and 6 were mapped meiotically. Two loci controlling lactose utilisation are not linked and neither are 5 loci controlling galactose utilisation. K.Brew

2343. NEW RESULTS ON THE MATING TYPES IN PARAMECIUM BURSARIA. R.W.Siegel: *Genet. Res.*, 1963, 4, 132-142 (Dept. Zool., Univ. California, Los Angeles, Calif., U.S.A.) Mating types I, II, m and IV are determined by sp. combination of dominant and recessive alleles at 2 unlinked loci. Genotypes A A BBL AABb, AaBB, AaBb form type I: aaBB and aaBb form type II • aabb"T5rms type m and AAbb and Aabb forms type IV. Exception to these rules occur in low freq. (2-3%) and can be explained by mutation of B to b or loss of the B locus. There is no evidence for autogamy in this sp. — J.Sneath

2344. MATING TYPE SUBSTANCES IN PARAMECIUM BURSARIA. L.W.Cohen and R.W.Siegel: *Genet. Res.*, 1963, 4, 143-150 (Dept. Zool., Univ. California, Los Angeles, Calif., U.S.A.) Conclusive evidence for the existence of 2 pairs of mating-type substances in *P.bursaria* first postulated by Metz (1954) is presented. Tp detached cilia from sexually reactive cells will agglutinate with cilia from intact Paramecia of the complementary mating type. Other particles do not adhere and the cilia carrying die sp. mating-type substances are found only on the ventro-lat. surface. Heat inactivation of substances A and a, B and b showed the former pair to be more heat labile. The substances appear to be present in the combinations AB, ab, Ab and ab. J.Sneath

2345. ACTION OF RIBONUCLEASE AND 8-AZAGUANINE ON MATE-KILLER PARAMECIUM. I.Gibson and G. Beale: *Genet. Res.*, 1963, 4, 42-54 (Inst. Animal Genet., Edinburgh, Scotland) Both RNase and 8-azaguanine affect the particles: RNase destroys or irreversibly inactivates the metagons but these are not affected by 8-azaguanine (although this substance possibly inhibits synthesis of new ones). RNase treatment and subsequent fission produced cells with no metagons, but resynthesis occurred between the 2nd and 3rd fissions # the dominant gene M2 was present. 8-Azaguanine destroyed mu particles immediately but not metagons already present. The separate existence of metagons & mu particles is confirmed and the fact that RNA is an essential constituent of metagons makes it more likely that these are normal intermediary products of gene action rather than gene relics*. J.Sneath

2346. MATE-KILLER (MU) PARTICLES IN PARAMECIUM AURELIA: FURTHER MATHEMATICAL MODELS FOR METAGON DISTRIBUTION. E.C.R.Reeve and G.I.S. Ross: *Genet. Res.*, 1963, 4, 158-161 (Inst. Animal Genet., Edinburgh, Scotland) Short note. ISneath

2347. NUCLEAR-CYTOPLASMIC INTERACTIONS IN RESPONSES OF AMOEBA PROTEUS AND AMOEBA DISCOIDES TO STREPTOMYCIN. R.J.Cole and J.F.Danielli: *Exp. Cell Res.*, 1963, 29, 199-206 (Dept. Biochem., Univ. Glasgow, Scotland) The growth rates of clones of various strains of *A.proteus* and of a single strain of *A.discoides*, in growth-limiting concn. of streptomycin, were measured. It is suggested that the mechanisms conferring higher levels of resistance on some strains of *A.discoides* are transmitted by either nuclear factors or cytoplasmic factors independently. On the other hand, the higher resistance of *A.discoides* is due to be determined by independent nuclear and cytoplasmic factors, the cytoplasmic system self-replicating. K.Jon

PLANT

2348. STUDIES ON THE USE OF MUTAGENIC AGENTS IN PLANT BREEDING. I. THE EFFECT OF SEED MOISTURE CONTENT ON SENSITIVITY TO X-RAYS IN *LUPINUS ANGUSTIFOLIUS*. C.M.Francis and J.S.Gladstones: Aust. J. agric. Res., 1963, 14, 12-19 (Inst. Agric, Univ. Australia, Nedlands, Australia)

Seeds were subjected to four X-ray doses at each of 12 moisture contents. Reduction of height, delay in flowering and reaction in mean seed yield per plant were measured as damage in *Xi* plants and were found to be highly correlated. Treatments used did not significantly affect survival. Sensitivity to X-rays increased with decreasing moisture content below 11-6ft seeds with $6\cdot1\cdot7\cdot6\cdot^*$ being 4 to 5 times as sensitive as those with $11\cdot6\cdot16\cdot^*$. Sensitivity again increased between $16\cdot0$ and $18\cdot1\cdot^*$.

R.L.Weston

2349. RESEARCH ON USE OF RADITION-INDUCED MUTATIONS IN CROP BREEDING IN JAPAN. T.Matsu-
suo and H.Yamaguchi: Euphytica, 1962, 11, 245-255
(Fac. Agric* Univ. Tokyo, Japan) $\text{tev}^{**}\text{f} \text{ jjj}^{\wedge} \text{ t}^*$

2350. MUTATION RESEARCH IN CANARY GRASS [*PHAL-ARIS CANARENSE* L.]. D.E.Bremer-Reinders: Euphyt-
ica, 1962, 11, 293-310 (Inst. Plant Breeding, Wag-
ingen, Netherlands) Irradiation of dry seeds with X-
rays (5000-20000 r) and neutrons suppressed both germina-
tion^b? and survival of seedlings according to dose. Degree
^fertility in the *Mi* generation decreased with X-ray.
*?e. but the influence was weaker in the *M₂* generation.
Chlorophyll and major morphol. mutants were plated
in the *M₂* generation. R.D.Butler

2351. PROGRESS OF INBREEDING IN A *IMREE-BWID*
POPULATION OF BARLEY. S.K.Jain and K.B.I.Jain:
Euphytica, 1962, 11, 229-232 (Div. Bot., Indian Agnc.
, Inst., New Delhi, India) Individual plant pro-
genies from *F₄*, *F₅* and *F₆* generations of intervanetal
crosses and 3 of their parents were used for comparing.
*f within-family variances. For plant height the van-
ence was not significantly higher than one in the
 F_1 , whereas in spike length there was an excess of
family variance in the *F₆* over the parent; This
excess^w attributed to a differential survival of hetero-
zygous progenies under selection despite some selection
against heterozygosity to marked

R \wedge X

2352. RESULTS OF ONE CYCLE OF RECURRENT SELECTION IN RYE. F.P.Ferwerda: Euphytica, 1962, 11, 221-
228 (Inst. Agric. Plant Breed., Wageningen, Nether-
lands) $\text{W} \text{ a } \text{ g } \text{ e } \text{ h } \text{ m } \text{ s }$
D.Burk

2353. BREEDING EXPERIMENTS ON SOUTH AFRICAN
PLANTS. IV. SELECTION FOR QUANTITATIVE CHAR-
ACTERS IN *SPARAXIS KER.* AND *BULBINELLA KUNTH.*
W.H.C. Z. Pflanzenz., 1962, 48, 360-371 (Fruit and
Techn. Res. Inst. Abt. Pflanzenz., Stellenbosch
Africa) Flower characters were investigated. Most
variation was found to be genetic, and selection
of arable characters should therefore be possible.

2354. AN INTERSPECIFIC CROSS IN *CUCURBITA*:
C.JUNDELLIANA BAILEY \times *C.MAXIMA DUCHESNE*.
H.Öpik (German, English summary)

- T.W.Whitaker: Euphytica, 1962, 11, 273-281 (Crops
Res. Div., Agric. Res. Serv., La Jolla, Calif., U.S.A.)
Mean pollen fertility for the *F₁*, *F₂* and the backcross to

C.Jundelliana was 17*6, 28*4 and 5*2% respectively; the
backcross to *C.maxima* being 65*9%. *C.Jundelliana* seems
to be dominant for most characters. R.D.Butler

2355. SPECIES HYBRIDISATION IN *TRIFOLIUM H.* IN-
VESTIGATING THE PREFERTILKATION BARRIERS TO
COMPATIBILITY. A.M.Evans: Euphytica, 1962, 11,
256-262 (Welsh Plant Breeding Str., Plas Gogerddan,
Aberystwyth, Wales) Pollen tube growth was slower
in intersp. than in intrasp. crosses although no failure of
pollen germination was observed. A parallel could be
drawn between the success of the pollen and the success
of vegetative grafting of the genotypes. R.D.Butler

2356. CONTRIBUTIONS ON THE GENETICS AND BREED-
ING OF TETRAPLOID SUPERBISSIMA PETUNIAS
(*PETUNIA* \times *HYDRIA VILON.* SUPERBISSIMA GROUP).
H.Seidel: ZJPflanzenz., 1962, 48, 327-359 (Inst.
Angewandte Genet., Tech. Hochschule, Hanover,
Germany) With colchicine treatment, homozygous
tetraploid large-flowered Petunias were produced artifi-
cially for the first time, and the inheritance of the large-
flowered character was analysed in detail. The inheritance
is of monofactorial dominant type. The gene *G* for large
flowers has a weakening effect on the plant, and *GG*
pollen is non-functional.

(German, English summary) H.Öpik

2357. MULTIPLE ALLELIC CONTROL OF CHLOROPHYLL
b LEVEL IN *ARABIDOPSIS THALIANA*. Y.Hirono and
"B.P.Redei: Nature, Lond., 1963, 197, 1324-1325
(Curtis Hall, Dept. Field Crops, Univ. Missouri, Col-
umbia, Mo., U.S.A.) In X-irradiation expt. a few
yellow-green mutants were obtained with reduced chloro-
phyll b; these comprised a series of alleles with fairly
normal fertility and mendelian inheritance. Chlorophyll
a was also reduced in these mutants. The chlorophyll b
"does not appear to play any role in starch synthesis but
may be involved in photo-oxidation. CM.Lewis

2358. SOMATIC INSTABILITY CAUSED BY A CYSTEINE-
SENSITIVE GENE IN *ARABIDOPSIS*. G.P.Redei: Science,
1963, 139, 767-769 (Dept. Field Crops, Univ. Missouri,
Columbia, Mo., U.S.A.) A recessive gene, immut-
ants, is responsible for abnormal chloroplast development,
which results in variegation. Somatic mutability is stim.,
though only functional disorder is involved. Cysteine and
low temp, favour normal function, while homocysteine
interferes with chloroplast development without adversely
affecting growth of the mutant. CM.Lewis

2359. HERITABILITY OF VARIATIONS IN OIL CONTENT
OF INDIVIDUAL CORN KERNELS. L.F.Bauman, T.F.
Conway and S.A.Watson: Science, 1963, 139, 498-
499 (Dept. Bot., Purdue Univ., Lafayette, Ind., U.S.A.)
Individual corn kernels from a selfed single-cross ear
ranged from 2-7 to 54% oil as determined by nuclear
magnetic resonance spectroscopy; this was significantly
correlated with the oil content of their progeny ears and
indicates that differences in oil content are heritable.

G.M.Lewis

2360. GENETIC AND ENVIRONMENTAL VARIATION:
EFFECTS ON PIGMENTS OF SELECTED MAIZE MU-
TANTS. L.B.J.Richardson, D.S.J.Tobertson and I.C.Ander-
son: Science, 1962, 138, 1333-1334 (Genet. Dept.,
Iowa State Univ., Ames, Iowa, U.S.A.) Three pastel
mutants of maize which were sensitive to temp, and the
offspring of 2 of these with allelic albino mutants were
studied under conditions of controlled light and temp. The
mutations do not affect the pigment levels equally and the
effects vary with the locus and the allelic combination.

G.M.Lewis

GENETICS

2361. DIFFERENCES BETWEEN SMOOTH AND THREE TYPES OF WRINKLED PEAS. E.Kooistra: *Euphytica*, 1962, 11, 357-373 (List. Hort. Plant Breeding, Wageningen, Netherlands) Two new types of wrinkled peas are described. One resembles the old-established wrinkled pea in seed surface and the smooth pea in the appearance of the starch grains. Crosses between this and the old-established wrinkled pea results in the third type. All 4 peas differ in chem. composition. It is suggested that the factors *Ra* and *Rfc*, having different effects on starch synthesis, are responsible for the observed differences.
R.D.Butler

2362. HERITABLE NECROSIS OF RED STORAGE CABBAGE. M.Nieuwhof and D.Wiering: *Euphytica*, 1962, 11, 240-244 (Inst. Hort. Plant Breeding, Wageningen, Netherlands) Susceptibility depends on an incompletely recessive factor, *n*.
R.D.Butler

2363. EVOLUTION AND VARIATION IN TRILLIUM. VI. MIGRATION AMONG NATURAL POPULATIONS OF T.KAMTSCHATICUM ACROSS THE ISHIKARI DEPRESSIONS. T'rikuda V.YiHiraizumi, T.Narise and M.Kurabayashi. **VII. MIGRATION BETWEEN NORTHERN AND EASTERN POPULATION GROUPS OF T. KAMTSCHATICUM.** Y.Kozuka and M.Kurabayashi: *Evolution*, 1960, 14, 224-231, 232-237 (Biol. Sect. Women's Christian Coll., Tokyo, Japan) VI. Migrations were examined by comparative analysis of chr. composition in natural populations. Populations in the north were large in size and revealed interpopulation homogeneity. In the south, populations were small and high in intrapopulational homogeneity. The results of comparative examinations elucidated various modes of interactions between selection and random genetic drift in the course of migrations.

VII. Migrations between northern and eastern population groups of the spp. were examined by making analyses of chr. composition among populations distributed in north-eastern regions of Hokkaido. A fine cline was demonstrated along the coastline of the sea of Okhotsk. The cline is supposed to be maintained by a balance between selection and migration pressure in each of the populations, arranged in a row, from north-west to south-east along the coastline.
T.Pritchard

2364. THE BREEDING GROUP AND SEED STORAGE: A STUDY IN POPULATION DYNAMICS. C.Epling, H. Lewis and F.M.Ball: *Evolution*, 1960, 14, 238-255 (Univ. California, Los Angeles, Calif., U.S.J.V.)

The yearly freq. since 1941 of die blue and white flowered plants of *lithanus parrage*, a conspicuous annual of the Mojave desert, is reported. The data presented give no evidence of selection or of genetic drift, contrary to what was expected from the assumed differences in size of the breeding groups, after 17 yearly cycles during signal changes in the environment and drastic expansions and contractions of the population. This static is ascribed to protracted dormancy of seeds in the soil and their inherently different requirements for germination.
T.Pritchard

ANIMAL

2365. LACK OF EVIDENCE FOR CO-ADAPTATION IN CROSSES BETWEEN GEOGRAPHICAL RACES OF DROSOPHILA SUBOBSCURA COLL. A.M.McFarquhar and

F.W.Robertson: *Genet. Res.*, 1963, 4, 104-131 (Inst. Anim. Genet., Edinburgh* Scotland) The mean and variance of body size, development time and survival were recorded to the parent populations and the *i* and *H* of various crosses of flies collected at a no. of sites, some in Scotland, others from England, Denmark, Switzerland and Israel. They showed an initial difference in body size, those from the North were larger but *F1* and *F2* & & generations showed mid-parent values and no evidence of gene-environment interaction with respect to diet or temp. Between family variance of abdominal bristle no. of intra- and inter-population matings of the most widely separated populations showed no increase in the inter-population series. Lack of evidence for co-adaptation is discussed with respect to sp. showing co-adaptation.

J.Sneath

2366. ECOLOGICAL GENETICS OF GROWTH IN DROSOPHILA. VI. THE GENETIC CORRELATION BETWEEN THE DURATION OF THE LARVAL PERIOD AND BODY SIZE IN RELATION TO LARVAL DIET. F.W. Robertson: *Genet. Res.*, 1963, 4, 74-92 (List. Anim. Genet., Edinburgh, Scotland) There is a striking correlation between body size and larval period duration, when the diet is deficient in RNA (but when RNA is adequate there is very little). The critical changes in larval growth occur in the early 3rd instar and a 2nd stage thereafter. Lines selected for fast development on low RNA diet are especially sensitive to slight changes in nutrition. The pattern of larval development suggests a flexible system which is adapted to varying ecological conditions.
J.Sneath

2367. ORIGIN OF REPEATS IN DROSOPHILA CHROMOSOMES. H.Sлизинска: *Genet. Res.*, 1963, 4, 154-157 (Inst. Anim. Genet., Edinburgh, Scotland) *Sh<P* note.
J.Sneath

2368. SEX CHROMATIN AND GENE ACTION IN THE MAMMALIAN X-CHROMOSOME. M.F.Lyon: Amer. J. hum. Genet., 1962, 14, 135-148 (M.R.C. Radiobiol. Res., Unit, Harwell, Berks., England) All the sex-linked colour genes of the mouse, and all the autosomal colour genes translocated to the X-chr. that have been studied show a mottling effect in heterozygous. From these observations the hypothesis of inactivation of one of the X-chr. in ♀ mammals was suggested. Either of tot two X-chr. may be inactivated in different cells of the same animal, possibly forming the sex chromatin, early in development and this leads to mosaicism. The hypothesis could explain the viability of XXXXY individuals, assuming that only one X-chr. is active in each cell.

D.J. Jones

2369. ATTEMPTS TO TEST THE INACTIVE-X THEORY OF DOSAGE COMPENSATION IN MAMMALS. M.J. Lyon: *Genet. Res.*, 1963, 4, 93-103 (M.R.C. Radio-biol. Res. Unit., Harwell, Berks., England) Predictions on this theory concerning the phenotype of ♀ heterozygous for 2 non-allelic X-linked genes acting through the same cells were tested using the mutants dappled (*Mdp*) and flecked (*fd*), and chinchilla (*c^{ch}*) together and tabby (*tit*) and smoky (*Sm*). The prediction that only one of the Tx chr. is active in the somatic cells of ♀ mammals is confirmed. In *Str* +/+ Ta ?, tabby only in non-S_{tt} patches, while tit_{Str} Ta/F₁ Tit acted eq. in the Str ones.
J.Sneath

2370. STRIATED, A NEW SEX-LINKED GENE IN THE HOUSE MOUSE. R.J.S. Phillips: *Genet. Res.*, 1963, 4, 151-153 (M.R.C. Radiobiol. Res. Unit., Harwell, Berks., England) Short note.
J.Sneath

2371. GENETICS OF DEGENERATIVE JOINT DISEASE IN MICE. L.Sokoloff, L.B.Crittenden, R[^].Yamamoto and G.E.Jay, jun.: *Arthritis and Rheumatism*, 1962, 5, 531-546 (Nat. Inst. Arthr. and Metabol. Dis., Bethesda, Md., U.S.A.) D.G.Scott

2372. STUDIES IN TUBERCULOSIS USING GENETICALLY KNOWN MOUSE MATERIAL. THE SURVIVAL TIME OF TWO HOMOZYGOUS MOUSE STRAINS AND OF THEIR F₁-HYBRID. IV. Von A.Grumbach and H. Beer: *Acta Genet.*, Basel, 1962, 12, 103-116 (Inst. Med. Mikrobiol., Univ. Zurich, Glorastrasse 32, Zurich, Switzerland) Two homozygous groups of mice (Stark and Grinder) and the F₁-hybrid were infected with 2 strains of tuberculosis (H₃₇Rv and Vallée) and the time* of death recorded. There was no difference between Bte tuberculosis strains but the difference between the J^{sp} homozygous mouse strains was significant. The hybrids showed the resistance or susceptibility of the ♀ Parent and were unaffected by the ♂ parent. In the homozygous lines there was no significant sex difference.

(German, English summary) D.B.Roberts

2373. GENETIC STUDY OF INDUCED LUNG TUMOURS IN MICE. D.S.Falconer and J.L.Bloom: *Brit. J. Cancer*, 1962, 16, 665-685 (Inst. Anim. Genet., Edinburgh, Scotland) A statistical analysis was made of lung tumour yields produced in various strains of mice and their cross-bred deriv. by injn. of an aq. soln. of Jtethane. There was no sex-difference in tumour incidence in 2 random bred strains studied in detail and instance was equal from ♂ and ♀ parents. Environmental variance was estimated by a study of susceptibility in 6 inbred strains. Using this estimate it was concluded that the degree of genetic determination in the 2 random-bred strains was 82% and 88%. i.e. genetic differences among the individuals were responsible for 80-90% of the variation in susceptibility. DJ.lamer

2374. A SEARCH FOR HETOCOMPATIBILITY DIFFERENCES BETWEEN IRRADIATED SUBLINES OF INBRED MICE. J.Godfrey and A.G.Searle: *Genet. Res.*, 1963, 4, 21-29 (M.R.C. Radiobiol. Res. Unit, Harwell, Berks., England) 13 sublines of C3H inbred mice, **Pt in a 1 r/night γ radiation field for 12 generations and separated from each other by approx. 34 generations were tested for histocompatibility differences by the tail-graft technique. No homograft rejections occurred and there is no evidence for mutation at the histocompatibility loci. J.Sneath

2375. HAEMOGLOBIN INHERITANCE IN INBRED MOUSE STRAINS. II. GENETIC STUDIES. J.J.Hutton, J. Bishop, R[^]chweet and E.S.Russell: *Proc. nat. Acad. Sci. Wash.*, 1962, 48, 1718-1724 (Univ. Kentucky Coll. Med., Lexington, Ky., U.S.A.) Genetic studies using a tryptophan-containing peptide as marker for the α chain of C57BL Hb showed that this chain was linked to the albino locus and that the 2 g-chains of AKR(FL) re-8-H²ei¹⁰-ether and segregated as a unit from the C57BL chain. Using a histidine-containing peptide as marker for the β chain of FL Hb α- and β chains were found to segregate independently. The aberrant α-chain of FL is responsible for foetal anaemia found in mice of the FL strain. J.R.Sargent

2376. THE SPECIAL STATUS OF THE J BLOOD GROUP SYSTEM OF CATTLE. D.O.Schmid: *Z. Immun.-fiziol.* 1962, 124, 1W-114 (Inst. f. Blutgruppenforsch. Tierzuchtforschung. e.V. Munchen, Germany) Review. 44ref. (German) D.P.Winsunley

2377. TIME OF APPEARANCE OF ANTIGENIC FACTORS ON CATTLE ERYTHROCYTES. D.H.Shaw and W.H. Stone: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111, 104-111 (Dept. Gen., Univ. Wisconsin, Madison, Wis., U.S.A.) Blood typing of cattle embryos of various

ages indicated that the different Ag factors that comprise a phenogroup of the B locus do not develop simult. in ontogeny and a particular factor develops at different ages depending upon the phenogroup in which it occurs.

M.M.Shapland

2378. HEREDITY OF RABBIT GAMMA GLOBULIN ISO-ANTIGENS. S.Dubiski, J.Rapacz and A.Dubiska: *Acta Genet.*, Basel, 1962, 12, 136-155 (Inst. Hematol., Waisaw ul Chocimska, Poland) Sera from a no. of rabbits were tested immunol. for six V-globulin iso-Ag, all 6 iso-Ag were found to be inherited. Analyses of the pedigrees showed at least 2 genetic systems for the iso-Ag AF and BDE. C appears to be independent of BDE and the possibility of its being correlated or even allelic to AF was discussed, as well as the possibility of B, D and E being allelic. In Polish White rabbits E was found to be correlated with sex; the possibility of sex linkage was discussed. J**iSev>><^/~~**. D.B.Roberts

2379. INHERITANCE OF SERUM TRANSFERRINS IN RHESUS MONKEYS. M.Goodman and R.C.Wolf: *Nature*, Lond., 1963, 197, 1128 (Wayne State Univ. Coll. Med., Detroit, Mich., U.S.A.) Study of the inheritance of transferrin phenotypes in a breeding colony of rhesus monkeys supported the hypothesis that an allelic series of genes at a single locus controls the variation of transferrin types, each gene being responsible for 4. particular transferrin and none having dominance over another. G.M.Lewis

2380. SERUM TRANSFERRIN POLYMORPHISM IN HORSES. D.O.Schmid: *Z. Immun.-Forsch.*, 1962, 124, 219-223 (Inst. Blutgruppenforsch., Tierzuchfoisch. e.V., Munchen, Germany) Starch gel electrophoresis has shown that there are 6 transferrin phenotypes in horses: AA, BB, CC and AB, AC, BC. The 3 alleles are named JJ^A, 2^B and H^C. 150 horses were examined.

(German) D.P.Winstanley

2381. MOLECULAR GENETICS OF AVIAN PROTEINS. II. CENTRAL AND STRUCTURAL GENES FOR EMBRYONIC AND ADULT HAEMOGLOBINS. C.Manwell, C.M.A.Baker, J.D.Roslansky and M.Foght: *Proc. nat. Acad. Sci. Wash.*, 1963, 49, 496-503 (Dept. Physics and Biophys., Univ. Illinois, Chicago, m., U.S.A.) Early embryo Hb differs electrophoretically, structurally and functionally from late embryo and adult Hb. Embryonic Hb synthesis ceases after 5 days in White Leghorn, New Hampshire and Columbia chick and after 6 days in other chick breeds. Adult Hb appears in turkeys after 8 days. In blackbird, adult and embryonic Hb are synthesised together from the start of erythropoiesis. The existence of genes which control when, or whether, adult and embryonic Hb are produced is postulated. J.R.Sargent

2382. THE FAMILIAL OCCURRENCE OF HYPERGAMMAGLOBULINAEMIA IN MINK. J.B.Jienson, J.R.Gorham and R.W.Leader: *Tex. Rep. Biol. Med.*, 1963, 21, 37-42 (Washington State Univ., Pullman, Wash., U.S.A.) 31 families of mink from a ranch on which Aleutian disease was enzootic were examined for hypergammaglobulinaemia. 45% of the offspring from affected dams had hypergammaglobulinaemia while 19*2% of the offspring from non-affected were diseased. Comparisons were made between the familiar occurrence, father-child

GENETICS

relationships and possible pathogenic mechanisms reported for systemic L.E. and hypergammaglobulinaemia in mink.

A.J.Martin

2383. GENETIC CONTROL OF HAEMERYTHRIN SPECIFICITY IN A MARINE WORM. C.Manwell: Science, 1963, 139, 755-758 (Mol. Kol. Lab., Illinois Marine Biol. Assocn., Univ. Illinois, Urbana, Ill., U.S.A.)

A biochem. polymorphism of coelomic haemerythrin has been found in Golfingia gouldii; the electrophoretically different coelomic haemerythrins differ in their O₂ equilibria and by a single peptide in tryptic and chymotryptic 'fingerprints'. All individuals have the same vascular haemerythrin, electrophoretically different from the coelomic ones. In another sipunculid, Dendrostomum cymodoceae, the haemeiythrins have quite different 'fingerprints'. Thus the tissue-sp. haemerythrins appear to have a distinct genetic basis.

G.M.Lewis

2384. A REPORT ON THE CROSSES BETWEEN GASTEROSTEUS ACULEATUS L. WITH VARIOUS NUMBER OF DORSAL SPINES. T.Penczak: Naturwissenschaften, 1963, 50, 49 (Dept. Taxon.Zool., Univ., Lodz, Poland)

Four-spined sticklebacks were shown to be recessive phenotypes of the three-spined sp., and not a separate sp.

A.J.Wansbrough

2385. SELECTION IN NATURAL POPULATIONS: MERYCHIPPUS PRIMUS, A FOSSIL HORSE. L.van Valen: Nature, Lond., 1963, 197, 1181-1183 (Dept. Zool., University Coll., London, England).

HUMAN

2386. INHIBITING EFFECT OF ABO INCOMPATIBILITY ON Rh IMMUNISATION IN PREGNANCY: STATISTICAL ANALYSIS OF 1742 FAMILIES. J.Reepmaker, L.E. Nijenhuis and J.J.Van Loghem: Amer. J. hum. Genet., 1962, 14, 185-198 (Central Lab. Netherlands, Red Cross Blood Transf. Serv., Amsterdam, Netherlands)

Evidence supporting the hypothesis that A or B Rh. pos. cells which pass through the placenta are eliminated by the anti-Aoranti-BisoAb of anO, Rh neg. mother, hence losing their capacity to stimulate Rh Ab formation was obtained.

D.A.Jones

2387. ABO BLOOD-GROUPS IN PAROTID AND SUB-MAXILLARY GLAND TUMOURS. R.H.Osborne and F.U. De George: Amer. J. hum. Genet., 1962, 14, 199 (Div. Prevent. Med., Sloan -Kettering Inst., Cancer Res., New York, U.S.A.) The relative freq. of ABO

blood-groups in different types of salivary gland tumours was analysed. It would seem that only mucinous tumours are associated with the ABO blood-group system. It was suggested that the association relates a genetic difference in the susceptibility of individuals of different blood groups to neoplastic changes involving the mucous-secreting elements of the glandular epithelium. An excess of salivary tumours occurred in group A people.

D.A.Jones

2388. QUANTITATIVE STUDIES ON HAPTOGLOBIN OF APPARENTLY HEALTHY ADULT MALE TWINS. P.S. Bayani-Sioson, J.Louch, H.E.Sutton, J.U.Nell, S.L. Home and H.Geishowitz: Amer. J. hum. Genet., 1962, 14, 210-219 (Dept. Human Genet., Univ. Michigan, Ann Arbor, Mich., U.S.A.) The ability of the 3 types

of haptoglobin (Hp 1-1, 2-1 and 2-2) to combine with HL has been estimated as $94 \pm 4^{\circ}4$ mg. Hb/100 ml. of serum containing haptoglobin for Hp 1-1, $86 \pm 2^{\circ}5$ mg./100 ml. for Hp 2-1 and $69 \pm 3^{\circ}0$ mg./100 ml. for Hp 2-2. Because there was a smaller variance of the mean difference between identical as opposed to fraternal twins a genetical component of the variation was concluded. The precise nature of the genetic control could not be determined from the data.

D.A.Jones

2389. HYPOHAPTOGLOBINAEMIA IN AN AMERICAN NEGRO FAMILY. A.J.Gottlieb, J.Ross, M.Greenberg and N.Wisch: Nature, Lond., 1963, 197, 1214-1215 (Dept. Haematol., Mount Sinai Hosp., New York, U.S.A.)

An American negro family is described in which hypohaptoglobinemia unrelated to haemolysis existed throughout an entire generation of offspring. The data indicate that genetically determined haptoglobin depression is not invariably associated with the Hp2m-1 phenotype.

G.M.Lewis

2390. CHRISTMAS FACTOR: DOSAGE COMPENSATION AND TOE PRODUCTION OF BLOOD COAGULATION FACTOR IX. O.Frota-Pessoa, E.L.Gomes and T.R. Calicchio: Science: 1963, 139, 348-349 (Lab. Hum. Genet., Univ. São Paulo, Brazil) The amount of factor DC (Christmas factor) for different genotypic class^C was determined by means of a variant of the thrombo-plastin generation test. The mean value for ? heterozygous for the Christmas gene was about half the mean value for normal d and homozygous ?, which were about equal, suggesting that one X chr. is inactive in ?.

C.M.Xe^h

2391. THE ANTIGEN C^w PRODUCED BY THE GENE COMPLEX C^wD-. P.Tippett, J.Gavin and R.Sanger: Vox-Sang., Basel, 1962, 7, 249-250 (Lister Inst., London, England) Most anti-C^w sera give weaker results wj C^wD- cells than with C^wDe. This may be qual. as well as quant, since some sera do not make the distinction*

R.MacAndrew

2392. SPORADIC CASES OF HAEMOPHILIA AND THE QUESTION OF A POSSIBLE SEX DIFFERENCE IN MUTATION RATES. K.Kosower, R.Christiansen and N.E. Morton: Amer. J. hum. Genet., 1962, 14, 159-166 (Dept. Med. Genet., Univ. Wisconsin, Madison, Wis., U.S.A.) Re-appraisal of the available data on the heritance and origin of haemophilia does not support the hypothesis that studies of sex-linked mutants in man reveal a deficiency of sporadic cases which could be due to a higher mutation rate in sperm than in eggs. The evidence suggests that the postgonial stages in man are extremely suitable and much of the spontaneous mutation occurs at this time.

D.A.Jofl^h

2393. URINARY g-AMINOISOBUTYRIC ACID [BAIB] # CREATION IN DOWN'S SYNDROME [MONGOLISM]* L.G.Lundin and K.-H.Gustavson: Acta genet. Baselt, 1962, 12, 156-163 (Inst. Med. Genet., V. Agstan Uppsala, Sweden) An increased urinary excretion of BAIB by individuals with Down's syndrome as compared with normal individuals. This increase is statistically significant. Possible explanations for this increased excretion are put forward.

D.B.Roberts

2394. GENETIC ASPECTS OF MENTAL RETARDATION. H.Zellweger: Arch. intern. Med., 1963, 111, 165-171 (Dept. Pediat., Univ. Hosp., Iowa City, Iowa, U.S.A.) Review. 77 ref.

E.E.Hobbiger

^{2395.} HUMAN CANCER: MENDELIAN INHERITANCE OR VERTICAL TRANSMISSION? P.R.J.Burch: *Nature*, Lond., 1963, 197, 1042-1045 (Dept. Med. Phys., Univ. Leeds, England) Consideration of statistics of human cancer mortality, particularly from the leukaemias, suggests that no oncogenic viral agent is transmitted from Parent to offspring. It is, however, considered that among the many aetiological factors in human carcinogenesis, there exists a genetic basis. 37 ref. G.M.Lewis

^{2396.} LATENT PORPHYRIA IN MEMBERS OF THE IMMEDIATE FAMILY OF A PATIENT WITH ACUTE INTERMITTENT PORPHYRIA. A.M.Taylor: *Cleveland clin. Quart.*, 1963, 30, 17-20 (Dept. Int. Med., Cleveland Clin., Ohio, U.S.A.) 11 members of the immediate family of a woman with acute intermittent porphyria were tested for 12-hr. urinary excretion of 6-aminolaevulinic acid, porphobilinogen and total porphyrins. The patients' mother and 3 brothers had elevated 6-aminolaevulinic acid. Although asymptomatic; it is thought that this indicates latent porphyria. G.M.Lewis

^{2397.} DEFECTIVE DEIODINATION OF L-[¹³¹I]DIODO-TYROSINE IN PATIENTS WITH SIMPLE GOITRE. T.Kusakabe and T.Miyake: *J. clin. Endocr.*, 1963, 73, 132-139 (Dept. Inter. Med., Univ. Med. Sch., Kyoto, Japan) The results of a study on the deiodination in patients suggested that a defect in deiodination of iodotyrosines in the periphery or throughout the body would be expected to produce simple goitre, and this defect is genetically determined. K.Jones

^{2398.} GENETICS OF SPHEROCYTOSIS. N.E.Morton, A.A. Mackinney, N.Kosower, R.F.Schilling and M.P.Gray: *Amer. J. hum. Genet.*, 1962, 14, 170-184 (Univ. Wisconsin Med. Sch., Madison, Wis., U.S.A.) Spherocytosis is a typical example of a rare dominant gene in man in that phenocopies, incomplete penetrance and incomplete ascertainment are all present and the trait may be ethnically heterogeneous. It has been possible to distinguish among some of these and to estimate prevalence (200 per million), mutation rate ($2\cdot2 \times 10^{-5}$) and proportion of sporadic cases ($0\cdot261 \pm 0\cdot099$). D.A.Jones

^{2399.} A REVISION OF THE PRINCIPLE IN STUTZ' AND ZIMMERMAN'S METHOD FOR THE CALCULATION OF THE PROBABILITY OF PATERNITY. M.Okajima: *Acta Genet.*, Basel, 1962, 12, 172-177 (Dept. Forensic Med., Juntendo Univ., Hongo, Tokyo, Japan). D.B.Roberts

^{2400.} ASSORTATIVE MATING AND FERTILITY. L.Beckman and R.Elston: *Acta. Genet.*, Basel, 1962, 12, 117-122 (Inst. Med. Genet., V.Agetan 24, Uppsala, Sweden) Assortative mating according to sibship size was studied in a sample of 477 married couples, from Uppsala. A highly significant correlation between mates was observed in the total sample but when correction for heterogeneity of age was made, the correlation was shown to be insignificant. It is doubtful whether assortative mating for fertility exists in European populations. D.B.Roberts

^{2401.} THEOREM ON THE GENETICS OF SOME CONGENITAL MALFORMATIONS. P.DeBellefeuille: *Acta Genet.*, Basel, 1962, 12, 123-135 (Dept. Paed., Univ. Ottawa, Canada) Considering a no. of congenital malformations a general theorem was devised in which the genetic portion, neomutational portion, dominance and penetrance was interrelated. Some of these congenital abnormalities were attributed to new mutations. Ionising radiation was cited as an example of mutagenic risk and an estimate of this risk was suggested. D.B.Roberts

^{2402.} EFFECT OF THE MUTATIONAL LOAD ON THE MORTALITY RATE IN MAN. H.Krieger and NJFreire-Maia: *Acta Genet.*, Basel, 1962, 12, 97-102 (Lab. Genet., Human Fac. Filosofia, Univ. Paraná, Curitiba Pr., Brazil) Three formulae are presented for the calculation of deaths in human populations due to the detrimental mutations revealed by increasing studies. They have been applied to data from Brazilian whites and negroes. The latter show a higher freq. of deaths due to this group of detrimental genes than the former. D.B.Roberts

EXPERIMENTAL BOTANY

WATER RELATIONS

2403. RAPID CHANGES IN TRANSPERSION IN PLANTS.

H.Rufelt: *Nature*, Lond., 1963, 197, 985-986 (Inst. Plant Physiol., Univ. Uppsala, Sweden) Expt. on transpiration rates of excised tree leaves and of whole wheat plants indicate that hydroactive control of stomatal width is mediated by the water content of the cell walls rather than that of the whole leaf. G.M.Lewis

2404. MEASUREMENT OF MOISTURE BOUNDARY

LAYERS AND LEAF TRANSPERSION WITH A MICROWAVE REFRACTOMETER. D.M.Gates, M.J.Vetter and M.C.Thompson, jun.: *Nature*, Lond., 1963, 197, 1070-1072 (Nat. Bureau of Standards, Boulder Lab., Boulder, Colo., U.S.A.) A microwave refractometer provides a sensitive and responsive device for detecting the moisture concn. within a boundary layer near a moist surface. Changes in moisture concn. amounting to a variation of as little as 0.1% R.H. at 2^{ff} can be detected. Use of this device is exemplified by study of leaf transpiration. J.R.Sargent

2405. SOME EFFECTS OF TEMPERATURE ON TRANSPERSION. H.Rufelt, P.G.Jaivis and M.S.Jarvis: *Physiol. Plant*, 1963, 16, 177-185 (Inst. Physiol. Bot., Uppsala, Sweden) Transpiration and leaf temp. were measured simult. at varying light intensities. With open stomata transpiration was dependent on leaf temp. With closed or no stomata, the epidermis protected the leaf from temp-induced changes in transpiration. I.D.J.Phillips

2406.. WATER ABSORPTION BY THE AERIAL ORGANS OF PLANTS. Y.Vaadia and Y.Waisel: *Physiol. Plant*, 1963, 16, 44-51 (Negev Inst. Arid Zone Res., Beer-sheba, Israel) Tritiated water entered turgid sunflower and pine leaves faster than it entered water-stressed leaves. Entry was faster from a liquid than from sat. vapour, but in all cases was slower than predicted by the diffusion equation. Entry was slower into pine than into sunflower leaves. Transport out of the leaves was extremely slow. I.D.J.Phillips

2407. THE WATER RELATIONS OF TREE SEEDLINGS.

I. GROWTH AND WATER USE IN RELATION TO SOIL WATER POTENTIAL. II. TRANSPERSION IN RELATION TO SOIL WATER POTENTIAL. P.G.Jarvis and M.S.Jarvis: *Physiol. Plant*, 1963, 16, 215-235, 236-253 (Inst. Physiol. Bot., Uppsala, Sweden) I. The responses of aspen, birch, pine and spruce seedlings to increasing soil moisture-stress was compared. The criteria used were measurements of net assimilation rate, leaf area ratio, relative growth rate and root-shoot dry wt. ratio.

n. Transpiration rates of pine, spruce, birch and aspen seedlings growing in soil, were measured under various environmental conditions. Max. transpiration occurred in the first few hr. of illumination, followed by a fall to a relatively const. rate. Increased soil moisture stress reduced both max. and mean daily transpiration rates for all spp. tested. Pine was most sensitive in response to increasing soil moisture-stress, spruce least and birch and aspen intermediate. Previous growth under soil moisture-stress condition* caused reduced transpiration on transfer to soil of low moisture-stress. I.D.J.Phillips

2408. ON ELUCIDATION OF THE SPECIFIC WATER STATUS IN THE PROTOPLASM AND IN THE CELL WALL OF THE HIGHER PLANT, AND ITS MEASURE-

MENT. H.Walter: *Ber. dtsch. bot. Ges.*, 1963, 76, 40-71. A critical discussion of different concepts and methods of determination of the state of hydration of plant cells is presented. It is concluded that the best criterion is the hydrature, equivalent to the relative vapour pressure of water in the cells. This is conveniently calc. from the cryoscopically determined value of the osmotic pressure of expressed sap. (German) H.Optik

PERMEABILITY AND SOLUTE UPTAKE

2409. PERMEABILITY STUDIES ON CHLOROPLASTS FROM NITELLA. P^Altman, J.C.Forte and G.M.Forte: *Exp. Cell Res.*, 1963, 29, 504-514 (Dept. Biochem., Univ. South California, Los Angeles, Calif., U.S.A.) There was no apparent concn. gradient of Na and K between the cytoplasm and vacuole of *N. opaca*. The chloroplasts, however, excluded Na although K was present, and were not in equilibrium with the cytoplasm. The existence of a permselective membrane surrounding the chloroplasts was confirmed, which could be disrupted by freeze-thaw or sonication. A descriptive model for ion transport in *Nitella* is proposed. K Jones

2410. ON TOE UPTAKE OF STRONTIUM BY HIGHER PLANTS. A.L.Suchli: *Ber. schweiz. bot. Ges.*, 1962, 72, 147-197 (Bot. Inst., Univ. Basel, Switzerland)

Growth of *Zea mays* and *Pisum sativum* in culture soln* containing varying Sr concn. was studied. Sr proved toxic at around 1000 $\mu\text{g}/\text{ml}$. and 2000 $\mu\text{g}/\text{ml}$. to maize and peas, respectively. Sr uptake was most marked up to the 4th leaf stage and between flower and fruit formation. Seeds appeared capable of excluding Sr. In proportion to dry wt. of the plant, there was 3 times more Sr in maize than in peas. Ca and K affected Sr uptake. The mechanism of the Sr uptake is not yet clear.

(German) M.Blandif

2411. THE DISTRIBUTION OF CALCIUM IN CELLS OF THE ROOTS OF CARROT (DAUCUS CAROTA L.). D.N. Maynard and A.C.Gentile: *Physiol. Plant*, 1963, 15, 40-43 (Dept. Hort. and Bot., Univ. Massachusetts, Amherst, Mass., U.S.A.)

Distribution of Ca among sol. and paniculate fractions of carrot root cells was not influenced by the Ca concn. of culture medium, nor by treatment of tissue slices or homogenates with EDTA.

LDJPh

2412. FACTORS AFFECTING GROWTH OF MOLINIA CAERULEA ON CALCAREOUS SOIL. D.B.James: *J. Ecol.*, 1962, 50, 521-527 (Agric. Bot. Dept., Aberystwyth, Wales)

Pot expt. were carried out to investigate the inability of *Molinia* to grow on calcareous s&f. Normal growth occurred with added CaSO₄ but not with CaCO₃; with added CaCO₃ there was a low uptake by the plant, but this could be counteracted and normal growth produced by the addition of superphosphate. Neither high pH nor high Ca is therefore restrictive on *Molinia* soils, but the unavailability of P.

LH.Tallis

2413. AN EXPERIMENTAL APPROACH TO PART OF CALCICOLE PROBLEM. R.^Clymo: *J. Ecol.*, 1962, 50, 707-731 (Westfield Coll., London, England)

Field and water culture expt. on *Carex lepidocarpa* (calcicole) and *Cdemissa calcifuge* are described.

EXPERIMENTAL BOTANY

225

found to be toxic to Clepidocarpa, and less so to Cdeggssia: C. lepidocarpa in addition required high CS/F. The natural habitats of the two spp. could be separated by a concn. of 1 p.p.m. $A1^3+$ and 30 p.p.m. Ca^{2+} . Apparently acted by preventing root division.

J.H.Tallis

2414. GROWTH OF SCHOENUS NIGRICANS ON BLANKET BOG PEATS. I. RESPONSE TO pH AND LEVEL OF POTASSIUM AND MAGNESIUM. D.J.Boatman: J. Ecol., 1962, 50, 823-832 (Bot. Dept., Hull, England)

Schoenus was grown in pots of Eriophorum peat at varying pH , Mg and pH . There was a marked response in Weld and in root development to pH between 3.8 and 4.5, and also when K was raised to the level of W.Irish peats where Schoenus occurs naturally ($0.5-0.6$ m.eq./100 g. dry Peat):

J M .Tallis

2415. A NITROGEN INDUCED CHLOROSIS IN LUPINS DUE TO IRON DEFICIENCY. S.J.P.K.Bezuidenhout and W.A.Roach: S.Afr. J. agric. Sci., 1962, 5, 669-670 (Coll. Agric., Univ. Stellenbosch, S.Africa). I.A.B.S.

2416. FURTHER STUDIES ON INDUCED APOGAMY IN PERNS. D.P.Whittier and T.A.Steeves: Canad. J. Bot., 1962, 40, 1525-1531 (Dept. Biol., Univ. Saskatchewan, Saskatoon, Sask., Canada) Apogamous sporophyte formation has been induced in 14 strains of 7 spp. of northern fern gametophytes. The gametophytes were supplied with suitable concn. of sugar in culture medium for certain lengths of time which resulted in the formation of apogamous sporophytes. Sucrose is more effective in inducing apogamy than glucose.

A. Meany

2417. PHYSIOLOGICAL STUDIES ON CALVATIA SPECIES. I. VITAMIN REQUIREMENTS. II. CARBON UTILISATION. M.Sedlmayr, E.S.Beneke and J. A. Stevens: Mycologia, 1961, 53, 98-108, 558-565 (Dept. Bot. Plant Path., Michigan State Univ., Mich., U.S.A.) Three strains of Calvatia gigantea and one of C. fragilis were found to be totally heterotrophic with respect to fine and autotrophic with respect to biotin, pyridoxine and inositol. A partial deficiency for an unidentified factor (n factors) in Bacto-peptone and Bacto-yeast extract was established.

III. Three strains of C. gigantea differed in their ability to utilise various carbohydrates as C sources. The C utilisation pattern for C. fragilis differed from that of C. gigantea.

J.G.Brown

PHOTOSYNTHESIS AND PHOTOSYNTHETIC PIGMENTS

2418. ROLE OF CHLOROPLAST FERREDOXIN IN THE ENERGY CONVERSION PROCESS OF PHOTOSYNTHESIS. K.Tagawa, H.Y.Tsujimoto and D.I.Arnon: Proc. nat. Acad. Sci. Wash., 1963, 49, 567-572 (Dept. Cell Physiol., Univ. California, Berkeley, Calif., U.S.A.) Ferredoxin was shown to stimulate an endogenous type of cyclic photophosphorylation in chloroplasts which proceeds anaerobically without added cofactors. The significance of this finding to present concepts of photosynthesis is discussed.

J.R.Saigent

2419. EFFECT OF PHOTOSYNTHESIS INHIBITORS ON OXYGEN EVOLUTION AND FLUORESCENCE OF ILLUMINATED CHLORELLA. G.Zweig, I.Tamis and E. Greenberg: Biochim. biophys. Acta, 1963, 66, 196-205 (Pesticide Res. Lab., Univ. California, Davis, Calif., U.S.A.) Inhibitors such as symmetrical triazines, substituted ureas and anilides stopped O₂ evolution and stim. fluorescence. Partial inhibn. expt. indicated that the 2 phenomena were inter-related. Cyanide inhibited O₂ evolution without affecting fluorescence intensity.

B.M.Stevens

2420. CONCENTRATION OF CARBON DIOXIDE INSIDE LEAVES. D.N.Moss and S.L.Rawlins: Nature, Lond., 1963, 197, 1320-1321 (Connecticut Agile. Expt. Sta., New Haven, Conn., U.S.A.) The intercellular concn. of CO₂ was measured in com plants during active photosynthesis using an i.r. gas analyser coupled with a potentiometer. The CO₂ concn. in the leaves depended on the concn. difference with the atm. and was affected by stomatal resistance.

G.M.Lewis

2421. POSSIBLE RELATIONSHIP BETWEEN PHOTOSYNTHESIS AND THE RISE IN RESPIRATION IN DISEASED LEAVES. K.J.Scott and R.M.Smillie: Nature, Lond., 1963, 197, 1319-1320 (Biol. Dept., Brookhaven Nat. Lab., Upton, N.Y., U.S.A.) In barley leaves infected with Erysiphe graminis var. hordei, photosynthesis decreases, chlorophyll content is reduced and aldolase and NADPH-diaphorase activities are diminished. The respiratory rate is about 3 times higher than normal, and activities of glucose 6-phosphate dehydrogenase and 6-phosphogluconate dehydrogenase are increased, although enolase, isocitrate dehydrogenase and NADH-cytochrome c reductase are not changed. In infected etiolated leaves, there is no increase in respiration or in the enzymes of the hexose monophosphate shunt. It is suggested that the increased respiration in infected green leaves is related to a loss in capacity to photoreduce NADP.

G.M.Lewis

2422. CHANGES IN TRANSPERSION AND PHOTOSYNTHETIC RATES OF VARIOUS LEAVES DURING TREATMENT WITH OZONATED HEXENE OR OZONE GAS. G.W.Todd and B.Prppst: Physiol. Plant, 1963, 16, 57-65 (Dept. Plant Biochem., Univ. California Citrus Expt. Sm., Riverside, Calif., U.S.A.) Both fumigants caused marked decreases in photosynthesis in bean, tomato and Coleus. Ozone fumigation reduced transpiration, but not to such an extent as that observed in photosynthetic rate measurements. Ozonated hexene reduced transpiration in bean only. Non-green parts of Coleus leaves showed increased respiration and decreased transpiration with ozonated hexene, but only the respiration effect was seen on ozone treatment.

I.D.J.Phillips

2423. THE ADAPTATION OF THE CARBON-14 METHOD FOR THE MEASUREMENT OF COCCOLITH PRODUCTION IN COCCOLITHUS HUXLEYI. E.Paasche: Physiol. Plant, 1963, 16, 186-200 (Dept. Bot., Westfield Coll., Univ. London, England) Several techniques were used to investigate the applicability of the ¹⁴C method in measurements of photosynthesis and coccolith production. It was found that the rate of coccolith production is closely related to that of photosynthesis.

I.D.J.Phillips

2424. CONVERSION OF PROTOCHLOROPHYLL IN ROOTS. L.O.Bjom: Physiol. Plant, 1963, 16, 142-150 (Dept. Plant Physiol., Lund, Sweden) Protochlorophyll of com roots was less light-sensitive than protochlorophyll

EXPERIMENTAL BOTANY

of leaves. The time course of conversion deviates from the second order rate law, and the rate is not proportional to light intensity.

I.D.J.Phillips

RESPIRATION

2425. CO₂ PRODUCTION IN EARLY ANAEROBIOESIS.

E.W.Simon: J. exp. Bot., 1963, 14, 82-94 (Dept. Bot., Univ. Manchester, England) Slices of swede tissue placed under N₂ produced CO₂ and ethyl alcohol in equal amounts after an initial phase of about 1^{1/2} hr. During the initial phase some 2 μmol/g. fr. wt. of extra CO₂ is produced, which effect was not influenced by iodoacetate, fluoride, nor by concn. of DNP or aisenite which affect glycolysis. Slices incubated in air, but the presence of cyanide, also produced extra CO₂. A second burst of CO₂ was induced by treatment with Methylene Blue, NAD or NADP, or as a result of a short air exposure. Evidence from expt. with labelled sugars suggest that the extra CO₂ is ultimately derived from carbohydrate, via the oxidative decarboxylation of either pyruvate or 6-phosphogluconate.

I.D. J.Phillips

2426. UPID FORMATION IN CRYPTOCOCCUS TERRICOLUS. VI. EFFECT OF MALONATE ON RESPIRATION.

T.A.Pedersen: Physiol. Plant, 1963, 16, 167-176 (Dept. Microbiol., Agr. Coll., Norway, Vollebekk, Norway) O₂-uptake and CO₂-output were both sttoci by addition of 0.01 M malonate, together with a change of R.Q. from 0.73 to 1.54. The presence of a malonate decarboxylase was demonstrated, the activity of which was inhibited by DNP.

LDJ.Phillips

METABOISM

2427. PATHWAYS OF UTILISATION OF [¹⁴C]GLUCOSE AND [6-¹⁴C]GLUCOSE IN SLICES OF PEAS.

H.G. Wager: J. exp. Bot., 1963, 14, 63-81 (Low. Temp. Res. Stn., Cambridge, England) Slices of ripening seeds of pea (*Pisum sativum*) were supplied with the labelled glucose, and the sp. activities of the respired CO₂, pyruvate, and tricarboxylic acid cycle acids were determined, as well as that of individual C atoms of citrate and malate. An explanation for the distribution of label that was found is presented.

LDJ.Phillips

2428. INFLUENCE OF SOME CULTURAL CONDITIONS ON FUNGAL CELLULOSE PRODUCTION.

B.Norkrans: Physiol. Plant, 1963, 16, 11-19 (Dept. Microbiol., Royal Phann.Inst., Stockholm, Sweden) The activity of *Trichoderma viride* ex Fr. and various strains of *Collybia velutipes* (Curt ex Fr.) as cellulose producers were investigated in shake- and stationary-cultures, as well as in cultures of different vol. Data are given on mycelial production, extra-cellular protein release and cellulase activity, as disclosed in a turbimetric test.

I.D.J.Phillips

2429. FIXATION OF CO₂ BY CUSCUTA EPITHYMUM.

O.Ciferri and G.Poma: Life Sci., 1963, No.3, 158-162

(Iinst. Bot., Univ. Pavia, Italy) Expt. results are presented to show that ribulose-1,5-diphosphate carboxylase has little, if any, significance in the fixation of CO₂ by the tested sp. of *Cuscuta*.

K. Jones

2430. INCORPORATION OF P¹⁴CIPROLINE INTO TOE PROTEINS OF GROWING CELLS. I. EVIDENCE OF SYNTHESIS IN DIFFERENT PROTEINS AND CELLULAR COMPONENTS. R.J.Lyndon and F.C.Steward: J. exp. Bot., 1963, 14, 42-55 (Dept. Bot., Cornell Univ., Ithaca, N.Y., U.S.A.) [14C]Proline was supplied to aerated potato discs, in which cell division was occurring* and also to rapidly-growing potato and carrot explants. It was absorbed and incorporated into all the subcellular protein fractions examined including the electrophoretically distinguishable fractions of the sol. protein of the potato discs and explants. The ability of the different protein fractions to incorporate and convert the [¹⁴C]-proline was studied, and considered in terms of growth, cell division, and cell wall formation in rapidly growing tissue cultures.

I.D.J.Phillips

TRANSLOCATION

2431. TRANSLOCATION AND DISTRIBUTION OF MARKED ASSIMILATES. VI. THE DISTRIBUTION OF ¹⁴C ASSIMILATES IN LONG-TERM EXPERIMENTS.

R.Bachofen, and H.Wanner: VH. THE PART PLAYED BY FRUITS^ THE DISTRIBUTION OF SUBSTANCES IN THE PLANT^ R.Bachofen: Ber. schweiz. bot. Ges., 1962, 72, 272-279, 280-285 (Iinst. A Augemeine Bot., Univ. Zürich, Switzerland) *Phaseolus vulgaris* var. *nana* was used in leaf nutrition studies. Young leaves lost more assimilate in a shorter time than older leaves, but the remaining assimilates remained fixed whereas in older leaves more assimilates were finally lost, but over a greater time interval. 15 different plant spp. were studied. Leaf and fruit were fed with radioactive CO₂ and the distribution of the radioactivity examined 24 hr. later. Generally 20-55% had left the leaves, there was marked translocation from the fruits also, radioactive compounds moved largely to other fruits. (German)

M.Blandin

2432. SUGAR IN INTERCELLULAR SPACES OF WHITE MUSTARD ROOTS.

R.G.H.Cormack and P.Lemay*: exp. Bot., 1963, 14, 232-236 (Dept. Bot., Univ. Alberta, Canada) A method is described to test directly for translocated radioactive sugar in the apical stem of white mustard roots. Radioactivity was found in intercellular spaces and to a lesser degree in the intervening cell walls.

LDJPW

2433. TRANSLOCATION OF ¹⁴C-LABELLED PHOTOSYNTHATE IN THE SOYBEAN.

J.Moorby, M.Eberl, K. N.T.S.Evans: J. exp. Bot., 1963, 14, 210-220 (A.R. Radiol. Lab., Letcombe Regis, Wantage, Berks., England) The rate of accumulation of ¹⁴C and fructose const. illumination quickly became const. and remained so for several hr. The effects of stopping photosynthesis, of removing H₂, and of different light treatments were investigated.

LDJ-W

2434. MODEL FOR TRANSLOCATION OF PHOTOSYNTHATE IN SOYBEAN.

N.T.S.Evans, M.Ebert and

LMoorby: J. exp. Bot., 1963, 14, 221-231 (M.R.C. Expt. Radiopath. Res. Unit., Hammersmith Hosp., London, England) A theoretical consideration of transport of photosynthetically incorporated carbon in the soybean stem. Estimated translocation velocity was 60 cm./hr. and leakage of material from sieve tubes was $\approx 8\%/\text{cm.}$ of stem traversed. The effects of velocity distributions and delays in the translocation system are considered.

GROWTH AND DEVELOPMENT

(GENERAL)

2435. OSMOTIC EQUILIBRATION AND GROWTH OF SCENEDESMUS OBLIQUUS IN SALINE MEDIA. D.F. Wetherell: Physiol. Plant., 1963, 16, 82-91 (Dept. Bot., Univ. Connecticut, Storrs, Conn., U.S.A.) j * relative importance of ionic and osmotic stresses used by saline media were evaluated. Growth min. and carbohydrate accumulation in saline media greatly exceeded the effects of non-saline soln. of eqi! anicmc pressure.

LDJ.PhiUips

2436. ***** LIGHT INTENSITY - A USEFUL CONCEPT IN CORRELATING GROWTH RATES OF DENSE CULTURES OF MICRO ALGAE. Rabe and Benoit: Biotech. Bioeng., 1962, 4, 377-390 (Res. and Develop., General Dynamics/Electric Boats, Groton, Conn., U.S.A.) The concept of a mean effective light intensity, E , is introduced and procedures are developed for computing E for any culture vessel geometry and light intensity distribution.

R.H.Kimberlin

*⁷ EFFECT OF LIGHT INTENSITY ON STEM AND BUD GROWTH IN BROAD BEAN SEEDLINGS. R.D. Ur: J-exp. Bot., 1963, 14, 142-152 (Dept. Bot., Univ. Manchester, England) Final mean size, cell size of the 3 lower internodes, and of a leaflet of the 3 lower true leaves, were determined from seedlings grown in darkness or in light intensities of 0-1, 1, 10° or 1000 f.c.

I.D.J.Philips

2437. IMPPOSITION OF WET-HEATH VEGETATION IN SOTTEN TO AERATION OF GROUND-WATER AND SOIL. I. FIELD STUDIES OF GROUND-WATER AND SOIL AERATION IN SEVERAL COMMUNITIES. II. RESPONSE OF MOLINIA CAERULEA TO CONTROLLED CONDITIONS OF SOIL AERATION AND GROUND-WATER MOVEMENT. J.R.Webster: J. Ecol., 1962, 50, 618-639 (County Tech. Coll., King's Lynn, Norfolk, England) I. The distributions of Molinia caerulea, Myrica gale, Calluna vulgaris and Erica tetralix sites was found to be governed by the concn. of CO_2 and H_2S in the ground-water.

II. Molinia plants were grown in jars through which varying concn. of H_2S and $0-3\%$ CO_2 .

1% H_2S produced a significant decrease in growth. JJt-Tallis

2439. THE EFFECTS OF TEMPERATURE ON THE EARLY VEGETATIVE GROWTH OF PHALARIS CANARIENSIS L. AND P.TUBEROSA L. C.Surfield: Aust. J. agric. Res., 1963, 14, 165-179 (Div. Forest Products, C.S.I.R.O., S.Melbourne, Australia) P. canariensis and P.tuberosa were grown in pots outdoors and in greenhouses. Optimum temp. regime for dry wt. production did not correspond with that for tiller initiation. Tiller no. were highest when night temp. exceeded day temp. or approached optimum day temp. or where fluctuations between day and night temp. were large. P. canariensis outyielded P.tuberosa under optimum conditions. Temp. influenced leaf size and shape. Data are given for growth comparisons between the Australian commercial P. tuberosa and Algerian and Israeli strains under 6 temp. regimes. Controlled root temp. was found to influence leaf size, dry wt. production and tiller initiation in P.canariensis.

R.L.Weston

2440. STEM ELONGATION IN THE HOP. R.H.J.Roboign: Nature, Lond., 1963, 198, 102-103 (Hop. Res. Stn., Riwaka, Nelson, New Zealand) Expt. on the effect of temp. and light on stem elongation in the hop (Humulus lupulus) showed that providing the light intensity during a 14°5 hr. day was adequate, assimilates produced allowed the stem to elongate for the whole of the diurnal cycle at a rate determined by air temp. only; at too low light intensity, stem elongation slows down during the following night.

G.M.Lewis

2441. DISTRIBUTION OF PHOSPHATASES IN LEAF, STEM AND ROOT OF WHEAT PLANT DURING THE REPRODUCTIVE PERIOD. Y.Promekanon, G.K.Barat and N.B.Das: Indian J. exp. Biol., 1963, 1, 95-97 (Div. Soil Sci. and Agric. Chem., Indian Agric. R.s. Inst., New Delhi, India) The activities of glycerophosphatases in leaf, stem and root of the wheat have been determined. A continuous increase in 3' glycerophosphatase activity has been observed in the leaf and stem during the whole reproductive period; the activity of the enzyme is highest in the leaf and least in the root. Acid pyrophosphatase activity is highest in the stem during the pre-flowering stage. In the root, the activity of all the 3 phosphatases increases during the flowering stage and thereafter it decreases. A comparative study of the effect of foliar and soil applications of phosphatic fertiliser shows that the former method of application induces larger accumulation of phosphatases, particularly of 3'-glycerophosphatase, in the leaf. *

2442. FACTORS CONTROLLING EMBRYO GROWTH AND DEVELOPMENT IN BARLEY (HORDEUM VULGARE L.). J.J.La Croix, J.Naylor and E.N.Larter: Canad. J. Bot., 1962, 40, 1515-1523 (Crop Sci. Dept., Univ. Saskatchewan, Sask., Canada) Normal growth and development of barley proembryos occurred in excised intact florets, but not in ovaries from which lemmas and paleas were removed. In the absence of hulls, cells of proembryos markedly increased in size and DNA content but mitotic figures were rarely found. Sucrose did not promote cell division in such embryos. The promotive effect of lemma and palea on embryo growth was shown to depend on the intact vascular connection with the ovary. A.Meany

2443. ON IN VITRO CULTURE OF ZEA MAYS ROOTS. P.-E.Pilet and J.Bonhote: Ber. schweiz. bot. Ges., 1962, 72, 5-17 (Lab. Physiol. végét., Univ. Lausanne, Switzerland) Various techniques were employed in the culture of maize roots under sterile conditions. Prelim. growth studies are reported for isolated roots cultured in a

EXPERIMENTAL BOTANY

liquid medium, roots formed at the expense of the coleoptile in solid and liquid media and roots formed from mesocotyls in a liquid medium. (French) M.Blandin

2444. CELL GROWTH AND STRUCTURE AND MECHANICAL PROPERTIES OF WALL IN INTERNODAL CELLS OF NITELLA OPACA. m. SPIRAL GROWTH AND CELL WALL STRUCTURE. M.C.Probine: J. exp. Bot., 1963, 14, 101-113 (Bot. Dept., Univ., Leeds, England)

The moduli necessary to describe the elastic behaviour of a material possessing the structure found earlier in *Nitella* internodal cells, are considered. It is pointed out that if the cell is regarded as a thin-walled cylinder built of a material possessing orthorhombic elastic symmetry, then there can be a coupling between shear and extension which will produce a torsional twist as the cylinder is pressurised. Expt. evidence is presented which suggests that this is the basic mechanism of spiral cell growth.

I.D.J.Fhillips

2445. CHEMICAL AND MECHANICAL STATE OF CELL WALL OF PEA ROOT TIPS. II. EFFECTS OF SOME METABOLIC CHANGES. A.P.Brown: J. exp. Bot.. 1963, 14, 114-131 (Dept. Bot., Univ. Edinburgh, Scotland)

The area covered by a tissue-squash prepared by a standard procedure following an acid treatment, was taken as a quant, inverse measure of the intercellular cohesion. Auxin and sucrose treatments resulted in a weakening of the acid-resistant cohesion, and thioglycollate impeded the increase in acid-resistant cohesion induced by anaerobiosis.

I.D. J.Phillips

2446. GROWTH IN VITRO OF ROOTS OF ACER RUBRUM L. AND EUCALYPTUS CAMALDULENSIS DEHN. E.P. B&chelard and B.B.Stowe: Physiol. Plant, 1963, 16, 20-30 (Forests Commission of Victoria, Australia)

Bonner's culture medium successfully supported growth of the main axes of *A. rubrum* roots by subculture through 8 passages over 31 weeks. Subculture of lat. root tips and segment cultures failed. The effects of sucrose concn., pH, glycine, indolebutyric acid and kinetin were noted. Supplementation with coconut milk was necessary for culture of *E. camaldulensis* roots, and yeast extract inhib. the beneficial effect of coconut milk.

I.D. J.Phillips

2447. GEOTROPIC STIMULATION: EFFECTS ON WOUND VESSEL DIFFERENTIATION. L.W.Roberts and D.E.Fosket: Science, 1962, 138, 1264-1265 (Dept. Biol. Sci., Univ. Idaho, Moscow, Idaho, U.S.A.)

Wounded excised shoots of *Coleus blumeni* (Benth.) were geotropically stim. by rotation on a klinostat at 3 rev./min. at right angles to the horizontal axis and placed alternately in inverted and upright positions at 24 hr. intervals. These treatments resulted in the differentiation of significantly greater no. of wound vessel members. The pattern of wound vessel formation was altered by rotation on the klinostat but remained unaffected by 24 hr. inversion.

G.M.Lewis

of the basipetal translocation of auxin were made from individual segments from the 2nd internode of *Coleus*, plants. It was confirmed that the endogenous concn. of IAA is controlled by a limitation of transport over the physiol. range of concn.

CM Lewis

2449. SOME EXPERIMENTS PERFORMED WITH ¹⁴C-EAA ON AUXIN TRANSPORT IN RELATION TO THE ROLE OF SODIUM GLYCOCHOLATE [Na-G]. Y.Vardar and RJDenizci: Ber. schweiz. bot. Ges., 1962, 72, 132-138 (Dept. Bot., Univ. Bomova, Izmir, Turkey)

T* validity of the conclusion drawn by Champignat and Pigeret (1957) concerning the blocking effect, by Na-G, on auxin transport was tested by using ¹⁴CIAA on *Ipomea* and *Helianthus* hypocotyls. Autoradiographic re* suits and quant, radioactivity measurements indicated that Na-G had no effect on auxin transport.

M.Blandin*

2450. THE EFFECTS OF FLAVONOID COMPOUNDS ON OXIDATIVE PHOSPHORYLATION AND ON THE ENZYMIC DESTRUCTION OF INDOLE ACETIC ACID. CStenlid: Physiol. Plant, 1963, 16, 110-120 (Inst. Plant Physiol., Royal Agr. Coll., Uppsala, Sweden)

Various flavonoids were found to effect the activity of pea-root IAA-oxidase. Depending on the structure and composition of the flavonoid, either promotion or inhibition of IAA-oxidase and effect on root elongation. Oxidative phosphorylation in cucumber hypocotyl mitochondria was inhib. by various types of flavonoid. An uncoupling en* was observed in the concn. range 1×10^{-5} - 3×10^{-4} M-

IJJJJWgf

2451. COMPARATIVE EFFECT OF 2,4-DICHLOROPHENXYACETIC ACID AND 0-INDOLYL ACETIC ACID ON THE GROWTH OF ROOT FRAGMENTS. P.E.Hjf.* M.Gaschen: Ber. schweiz. bot. Ges., 1962, 72, 1³y 146 (Lab. Physiol. veget., Univ. Lausanne, Switzerland)

IAA and 2,4-D inhib. the elongation of *culinaris* root tip fragments, 2,4-D being more active than IAA at equivalent molar concn. When both substances were tested together, the effects varied; there was antagonism when 2,4-D was present at low concn! whatever the IAA concn., but at higher 2,4-D concn^- effects tended to be additive. (French)

²«5. INCREASE OF THE RESISTANCE ~~FRUIT~~ BY THE SEED TREATMENT WITH 2-CHLOROETHANOL IN SPINACH SEEDLINGS. T.Miyamoto: Naturwissenschaften, 1963, 50, 24 (Inst. Pflanzenbaukunst, Univ.essen, Germany). AJ.Wansbrough

²⁴⁵⁶ ACTIVITY OF GIBBERELLIN D^f ON TOE GERMINATION OF PHOTOSENSITIVE LETTUCE SEEDS. T.Ikuma and K.V.Thimann: Nature, Lond., 1963, 200, 1313-1314 (Biol. Lab., Harvard Univ., Cambridge, Mass., U.S.A.) Tests on the germination of lettuce seeds in the dark¹¹⁰ showed that the activity of gibberellin GA₃ + GA₇ was 10 times as ^{as} that of GA₃ and in ^{GA} 4. It was indicated some synergistic reaction between the two compounds. The action of gibberellin D^f was not re-initiated by far-red light, and it was concluded that it must be the primary one of the chem. reactions which result from the primary light reaction. CM.Lewis

? LEAVES OF POTATO (SOLANUM TUBerosum). A.W.Wheeler and E.C.Humphries: J. exp. Bot., 1963^

an an *w total gibberellin content, —u—- ^ detected in untreated plants. Following treatment with GA₃, the GA₃-nLi⁺ of plant decreased after 2 weeks and none was detectable after 5 weeks. Evidence is produced suggesting that GA_a was converted to another gibberellin by the treated tissues. GA₃ increased chlorophyll leaf, but increased leaf area more than proportional. I.D.J.Phillips

^{2458.} KINETIN-INDUCED FORMATION OF METO-PURPURES IN DARK CULTURES OF FERATODON PURPUREUS. A.Szwejkowska: J. exp. Bot., 1963, 14, 137-141 (Dep. Gen.-BOU Univ., Poznan, Poland) The effects of various concn. of kinetin on development of gametophytes⁹¹ were studied in light and dark. Under light, the embryos were induced to form by Wneun, the effect being slightly more marked in the light in darkness. I.D.J.Phillips

^{2459.} BIOLOGICAL EFFECTS OF KINETIN. EFFECTS KINETIN ON THE EWNGAHON. WATER UPTAKE AND OXYGEN UPTAKE OF ETIOLATED PEAS STEM SECTIONS. M.Katsumi: Physiol. Wanⁿ. V^{to}ka, 5? (Biol. Dept., International Christian Univ., Tokyo, Japan) Kinetin in presence or absence; of IAA inhibited elongation growth after 9 hr, whereas fresh wt. continued to increase. Pretreatment with kinetin or IAA followed by transfer to IAA or kinetin soln., respectively, gave a similar result to continuous IAA + kinetin treatment. Kinetin showed no antagonism with IAA nor with 1,4-dihydronaphthalic acid-1 in elongation tests. Kinetin inhibited O₂-uptake. The inhibitory effect of kinetin on elongation was not reversed by several substances tested. I.D.J.Phillips

2460. STIMULATION OF IN VITRO GROWTH OF HEUANTHUS TUBEROSUS L. BY EXTRACTS OF SKIMMIA JAPONICA THUNB. R.Garestler and LCChenieux: C.R. Soc. Biol., Paris, 1962, 156, 1477-1482 (Fac. Méd. Pharm., Tours, France) Explains of *H. tuberosus* were cultivated in the presence of an extract of leaves of *S. japonica*. Histol. sections of the tissue showed the presence of small areas of cellular proliferation. The cells undergoing mitosis were smaller than the normal parenchyma cells. (French) M.A.Price

2461. ACTION OF FRUITS OF AEGLA MARMELOS C. ON IN VITRO GROWTH OF TUBERS FROM HELIANTHUS TUBEROSUS L. R.Garestier, D.Pasty and J.Provansal: C.R. Soc. Biol., Paris, 1962, 156, 1482-1487 (Fac. Méd. Pharm., Tours, France) Aq. or methanolic extracts of the peel of *A. marmelos* fruits contained compounds which stim. active cellular proliferation of fragments of tuber of *H. tuberosus*, cultivated, in vitro. Histol. sections showed the presence of new areas of vascular and parenchymatous tissue which contained cells of small size. (French) M.A. Price

DEVELOPMENTAL EFFECTS OF LIGHT AND TEMPERATURE

2462. FLOWER FORMATION IN KALANCHOE BLOSSFELDIANA BY VERY SHORT PHOTOPERIODS UNDER LIGHT OF DIFFERENT QUALITY. H.Fredericq: Nature, Lond., 1963, 198, 101-102 (Lab. Plant Physiol., Univ. Ghent, Belgium) The relative effectiveness of different light sources in inducing floral initiation in *Kalanchoe* during very brief photoperiods was studied. A stimulating effect of red light and an inhibitory effect of far-red light are reported. G.M.Lewis

2463. ENVIRONMENTAL CONTROL OF FLOWERING IN DACTYLISGLomerata. D.M.Calder: Nature, Lond., 1963, 197, 882-883 (Welsh Plant Breeding Stn., Aberystwyth, Wales) It is suggested that *D. glomerata* passes through 3 developmental stages from germination; in the 1st, it is insensitive to environmental conditions which later induce flowering, in the 2nd, darkness is an essential factor for flower induction, and in the last period, it behaves as a typical long-day plant. G.M.Lewis

2464. IN VITRO CONTROL OF FLOWERING IN WOLFFIA MICROSCOPICA. S.CMaheshwad and O.S.Chauhan: Nature, Lond., 1963, 198, 99-100 (Dept. Bot., Univ. Delhi, India) 10⁻⁴ M EDTA induced flowering in cultures of *W. microscopica* regardless of the photoperiod. G.M.Lewis

2465. EFFECT OF TEMPERATURE AND DAY-LENGTH ON FLOWER INITIATION OF BRINFELSIA CALYCINA (HOOK)BENTH. O.M.Heide: Physiol. Plant., 1963, 16, 104-109 (Dept. Floriculture and Greenhouse Crops, Agr. Coll. Norway, Vollebekk, Norway) Optimal treatment for flowering was found to consist of 6 weeks of low temp. (9-12?) which also induced chlorosis of the leaves. I.D.J.Phillips

EXPERIMENTAL BOTANY

2466. INTERACTIONS OF PHOTOPERIOD AND TEMPERATURE IN GROWTH AND DEVELOPMENT OF YOUNG TOMATO PLANTS. T.J.Ciistofferse: *Physiol. Plant. (Suppl.)*, 1963, 16, 1-98 (Earhart Plant Res. Lab., California Inst. Technol., Pasadena, Calif., U.S.A.)

A detailed study was made of the effects of various combinations of photoperiod, temp, and humidity on the growth and development of young tomato plants. Measurements were made of stem-elongation rate and the rate of increase in fresh and dry wt. Special attention was paid to the effects of environmental conditions upon flowering and the development of chlorotic leaves.

LDJ.Phillips

2467. POSSIBLE ROLE OF POLYSACCHARIDES IN FLORAL INDUCTION. J.Nitsan: *Nature, Lond.*, 1963, 198, 100-101 (Nat. and Univ. Inst. Agric., Rehovoth, Israel)

Vernalised rye seedlings contain larger amounts of polysaccharide than unvernalised seedlings. A macromol. polysaccharide material is synthesised in cocklebur leaves during the long day (non-inductive) conditions. It is proposed that plant polysaccharides may be associated with flowering in a way analogous to that between antigenic polysaccharides and morphogenesis.

G.M.Lewis

2468. INFLUENCE OF WATER CONTENT IN COURSE OF VERNALISATION OF RESPIRATION INTENSITY OF SEEDS AND FURTHER GENERATIVE DEVELOPMENT OF WINTER WHEAT. A.Markowski and K.Korlakowska: *Bull. Acad. pol. Sci.*, 1963, 11, 95-98 (Dept. Plant Physiol., Coll. Agric., Cracow, Poland) Only by complete satn. of seeds with water in course of vernalisation did plants grow. Vernalisation was weak in seeds with low water content owing to their diminished metabolism. Respiration intensity of spring and winter wheat is different.

J.E.Hobbs

2469. PARASITISM OF OLPIDIOPSIS INCRASSATA ON MEMBERS OF SAPROLEGNIACEAE. I. HOST RANGE AND EFFECTS OF LIGHT, TEMPERATURE AND STAGE OF HOST ON INFECTIVITY. M.K.Sliwinski: *Mycologia*, 1961, 53, 183-193 (Dept. Bot., Univ. N. Carolina, Chapel Hill, N.C., U.S.A.) Presence or absence of light does not affect the growth of host or parasite. At 6° growth of *O. incrassata* and the no. of resting bodies was very reduced. Infection of the host at 30° takes place only with difficulty. *O.incrassata* grown at 3(f will not infect a host, whilst degeneration of the infected host does not take place at this temp. Once zoosporangia or oogonia have been initiated *O. incrassata* seems unable to infect any Saprolegniaceous host.

J.G.Brown

ities did not inhibit growth, although lack of P or N did. Gemma-cup production was little affected by light intensity but there was a large temp. effect. LD J.PM1UI*

2471. CXIDATIVE PHOSPHORYLATION IN GERMINATE* LETTUCE SEEDS. S.Ulitzur and AJPoljakoff-Mayber: *J. exp. Bot.*, 1963, 14, 95-100 (Dept. Bot., Hebrew Univ., Jerusalem, Israel) Both thiourea and coumarin during in vitro expt. inhib. oxidative phosphorylation, but in vivo coumarin inhib. whereas thiourea under certain circumstances stim. Coumarin also decreased the P/O ratio.

I.D.J.Phillips*

2472. CHANGES IN THE ACTIVITIES OF CERTAIN OXIDISING ENZYMES DURING GERMINATION AND SEEDLING DEVELOPMENT OF PHASEOLUS MUNGO AND SORGHUM VULGARE. N.C.Gopalachari: *Indian J. expt. Biol.*, 1963, 1, 98-100 (Dept. Bot., Sri Venkateswara Univ. Coll., Tirupati, India) Quant. variations in² iron-porphyrin enzymes and 2 copper-containing enzym^ have been studied during the germination process and seedling development of *S. vulgare* and *P. mungo*. Peroxidase activity shows a regular, steep increase in all parts of *S. vulgare* and in roots and cotyledons of *P. mungo*. Polyphenol oxidase is low or absent initially, but increases rapidly to a nearly constant level by the 4th day of germination. Catalase activity exhibits a somewhat reciprocal relationship to that of polyphenol oxidase and peroxidase*. Ascorbic acid oxidase is absent in all parts of *S. vulgare* and in the cotyledons of *P. mungo*. It is, however, nle& initially in the embryos of *P. mungo* on the 2nd day of germination and drops sharply to a low level subsequently; The probable causes for these variations are discussed.

2473. METABOLISM OF FRUCTOSE POLYMERS IN PLANTS. II. EFFECT OF TEMPERATURE ON CARBOHYDRATE CHANGES AND MORPHOLOGY OF STORED TUBERS OF HELIANTHUS TUBEROSUS L. T.G.Jeffrey** and J.Edelman: *J. exp. Bot.*, 1963, 14, 56-62 (Dept. Plant Physiol., Imperial Coll. Sci. and Technol., London, England) Polarimetric studies showed a c& version of fructosan to oligosaccharides of a lower mol.* and associated increase in combined glucose content, ing emergence from dormancy. Low temp, accelerated and magnified this process, while storage at 20° depress^ it. Dormant buds apparently played no part in the prcx^ Storage at 20° caused sprouting of daughter tubers, but new plants did not develop, even after several months. Normal sprouting was induced by keeping the dormant, tubers at 2° for 7 weeks.

²476. INFLUENCE OF CROP RESIDUE DECOMPOSITION PRODUCTS ON THE GERMINATION OF FUSARIUM SOLANI F. PHASEOLI CHLAMYDOSPORES IN SOIL. T.A.Tousson, Z.A.Patrick and W.C.Snyder: Nature, Lond., 1963, 197, 1314-1316 (Dept. Plant. Pathol., Univ. California, Berkeley, Calif., U.S.A.) Cold-water extracts from plant residues stim. germination of *F. solani* chlamydospores, some causing extensive growth of germ-tube hyphae, some producing lysis of the *VPhae* after initial stimn., and some having no obvious effect. G.M.Lewis

²477. STRUCTURE, GERMINATION AND PHYSIOLOGY OF MICROSCLEROTIA OF VERTICILLIUM ALBO-ATRUM. R.S.Gordee and C.L.Porter: Mycologia, 1961, 53, 171-182 (Lockheed-California Co., Burbank, Calif., U.S.A.) pH and the type of buffer used affected germination of microsclerotia. Germination % was highest in Sorensen's buffer and lowest in acetic acid-j^state buffer. Cadmium at 100 and 500 p.p.m. completely inhibited germination. Microsclerotia were found sciuweise. An R-0# of P_o, 54* Analys of cytoplasm of micro-DiWS followed Protein const.; whilst carbohydrate was dominant and was converted into lipid with advancing age. J.G.Brown

²478; STUDIES ON CALVATIA GIGANTEA. I. GERMINATION OF BASIDIOSPORES. G.S.Bulmer and E.S.Beneke: Mycologia, 1961, 53, 123-136 (Univ. Oklahoma Med. Sch., Oklahoma City, Okla., U.S.A.) Basidiospores of *C. gigantea* have been germinated in 6 different broth ^ia, and in malt extract agar inoc. with *Rhodotorula* *Siiiginosa* var. *sanguinea*. Riboflavin, thiamine, ino- Pyridoxine and biotin could not replace the effect of *R. sanguinea*. Germination % is very low and in ores from some sporophores nil. J.G.Brown

RADIATION EFFECTS

⁴⁷⁹L INFLUENCE OF WAVELENGTH ON THE LIGHT SPONSE OF EXCISED WHEAT ROOTS. L.O.Bjorn, Suzuki and J.Nilsson: Physiol. Plant, 1963, 16, 132-141 (Dept. Plant Physiol., Lund, Sweden) Light int.: * > * cell elongation and multiplication in excised thin roots - htbm. of multiplication occurred with light at 400 and df elongation with light at 430 and 650 nm. Chlorophyll formation was lower in red than in blue light. LDJ.Phillips

⁴⁸⁰& INTERACTION OF ULTRAVIOLET AND VISIBLE RADIATIONS ON THE GROWTH OF CELL AGGREGATES OF GINKGO POLLEN TISSUE. R.M.Klein: Physiol. Plant, 1963, 16, 73-81 (N.Y. Bot. Garden, N.Y.58, U.S.A.) Growth suppression by u.v. light was reversed by blue light and, to a lesser extent, by red light, Segregates were protected against the effects of u.v. exposure to blue or red light. I.DJ.Phillips

KINETIC REGULATION AND CONTROL OF GROWTH IN LIPIDS BY POLARISED LIGHT AND PARTIAL ILLUMINATION. H.Etzold and LJaffe: Exp. Cell Res.,

1963, 29, 188-193 (Bot. Inst., Erlangen, Germany) Spores of *E. arvense* which are known to germinate away from unilat. blue light, germinated parallel to the vibration place of polarised blue light, and, if partially illuminated, out of the shaded part of the cell. The intensity effect curves for both reactions were similar. It is suggested that both the orientation of growth by unilat. unpolarised light and the control of growth by the plane of polarised light are mediated by the same pigment mol. orientated parallel to the cell wall.

(German, English summary) K.Jones

^{2482.} VARIETY, DEVELOPMENTAL STAGE AND DOSE RATE IN IRRADIATION OF THE POTATO. P.B.Mathur: Nature, Lond., 1963, 198, 99 (Biol. Div., Atomic Energy Estab., Trombay, Bombay, India) The dose of y-rays and condition of irradiation for the prevention of sprouting of 2 varieties of potato were studied. G.M.Lewis

^{2483.} RECOVERY OF Y-IRRADIATED RHIZOPUS STOLONIFER SPORANGIOSPORES DURING AUTO-INHIBITION OF GERMINATION. N.F.Sommer, M.Creasy, RJ.Roman and E.C.Maxie: J. cell. comp. Physiol., 1963, 61, 93-98 (Dept. Pomology, Univ. California, Davis, Calif., U.S.A.) Many sporangiospores of *R.stolonifer* recovered from a normally lethal dose (500 kilorad) of Y-radiation if kept under conditions in which germination was inhib. for 2 or more days. Auto-inhibn. of germination was achieved by shaking a dense suspension (15-5 x 10⁶ spores/ml.) on a rotary shaker. G.M.Lewis

^{2484.} CHANGES IN CELLULAR PERMEABILITY OF DIFFERENT COATS OF ALLIUM CEPA L AFTER X-RAY IRRADIATION. V.Srb and B.Hluchovsky: Exp. Cell Res., 1963, 29, 261-267 (Dept. Biol., Charles Univ. Fac. Med., Hradec Kralove, Czechoslovakia) Ionising X-irradiation (1000 +44 r) affected the permeability of epidermal cells of all the 4 coats of onion, as studied by the plasmolytic method using 0.5 M KNO₃. Changes in the permeability of the individual coats in the course of 42 days following irradiation were irregular. It is suggested that the basic reaction of coats on electrolytic plasmolytic agents is the same, i.e. the onset of complete plasmolysis is always delayed as compared with the controls. K Jones

^{2485.} THE 'DIRECT' AND 'INDIRECT' EFFECTS OF IONISING RADIATION ON THE ALGA ZYGNEMA. J.Petrová: Folia biol., Praha, 1963, 9, 51-59 (Dept. Plant Physiol., Charles Univ., Prague, Czechoslovakia) Filaments of the alga *Zygnema* were irradiated evenly with β , X and γ rays. Type one reaction to such treatment was slow in onset, with temporary arrest of division and formation of permanent modifications. These changes were due to influencing the nucleus of the cells since irradiation of the cytoplasm during interphase had no effects. When non-irradiated cells were cultured on pre-irradiated agar a second action was seen. This was a rapid reaction, with considerable morphol. changes, and the death of lethally affected cells within 24 hr. These 2 distinct effects are termed 'direct*' and 'indirect'. M.S.Laverack

PLANT CONSTITUENTS

^{2486.} ON THE QUANTITATIVE MEASUREMENT OF PHOSPHATASE ACTIVITY IN NECTARIES. T.Cotti: Ber.

EXPERIMENTAL BOTANY

schweiz. bot. Ges., 1962, 72, 306-331. Both nectaries and nectar were studied, using homogenates and intact tissue of Abutilon stria turn and Euphorbia pulcherrima in particular. Only the nectar of Impatiens holsti was TiF active. (German) MTBlandin

2490. STUDIES ON FUSARIUM WILT OF BANANAS.

Vfl. DIFFERENTIATION OF CLONES BY CULTURAL INTERACTION AND VOLATILE SUBSTANCES. R.H. Stover: Canad. J. Bot., 1962, 40, 1467-1471 (Plant Pathol. Dept., Vining C. Dunlop Labs., Tropical Res. Dept. Tela Railroad Co., La Lima, Honduras) Cultural interaction between paired clones A and C and Foxysporum f. cubense on peptone dextrose agar was a reliable tool for identification of these clones. 'Odoratum*' and 'Inoderatum' clones (readily separated by smell on steamed rice) were subjected to gas chromatography. The 'Odoratum' cultivar was characterised by the production of volatile substances that differed from the 'Inoderatum' group both quant. and qual. A.Meany

MISCELLANEOUS

2491. EFFECT OF GRAFTING ON THE INCOMPATIBILITY RESPONSE OF OENOTHERA ORGANENSIS. A.Kivilaan and C.W.Chang: Nature, Lond., 1963, 197, 1130-1131 (Dept. Bot., Michigan State Univ., East Lansing, Mich., U.S.A.) A partial tolerance to normally incompatible pollen was temporally established in O. organensis by grafting. It is concluded that the incompatibility response involves both stylar and pollen factors since heterologous grafting of either parent diminishes the response. Since seed is not set following self-pollination of heterologously grafted plants (although pollen tubes grow to the carpel) a second barrier to self-fertilisation must exist.

M.Lewis

2492. SPONTANEOUS ELECTRICAL ACTIVITY OF DIENAEA MUSCIPULA. N.M.Balotin and J.R.DiPalma: Science, 1962, 138, 1338-1339 (Dept. Pharmacol., Hahnemann Med. Coll., Philadelphia, Pa., U.S.A.)

Instillation of 4-6 drops of 5% saline in the leaf trap of D.muscipula Ellis causes the appearance of a series of spontaneous action potentials. Mechanical stimn. of the sensitive leaf hair elicits only a single response. The 2^{rh} saline or other salts in equiv. osmotic amounts cause a loss in wt. of the leaf. G.M.Lewis

2493. DECAY AND RECOVERY OF LUMINESCENT ABILITY IN GONYAULAX MONILATA. G.J.Plain and K.E.

•Plain: Nature, Lond., 1963, 197, 1124-1125 (Res. Dept., U.S.Naval Ordnance Test Stn., China Lake, Calif., U.S.A.) A mathematical model is proposed to describe the luminescent response of G. monilata to mechanical stimuli of 0-5 sec. duration at regular intervals. Good agreement with observed measurements was obtained.

2494. INCREASED ACTIVITY OF GLUCOSE 6-P-DIHYDROGENASE IN TOBACCO LEAVES AFFECTED BY PSEUDOMONAS TABACI. G.L.Farkas, L.Lovrekovich and Z.Klement: Naturwissenschaften, 1963, 50, 22-23 (Res. Inst., Plant Protection, Budapest, Hungary).

A.J.Wansbrough-Jones

2495. THE PHYSIOLOGY OF HOST-PARASITE RELATIONSHIPS. I. A CYTOPHOTOMETRIC STUDY OF THE DISTRIBUTION OF DNA AND RNA IN RUST-INFECTED LEAVES. H.S.Whitney, M. Shaw and J.M. Nay lor: Canad. J. Bot., 1962, 40, 1533-1544 (Dept. Biol., Saskatchewan, Saskatoon, Sask., Canada) Rust infection caused a decrease in the size of chloroplasts, increase in size followed by a collapse of the nuclei and an increase in the size of nucleoli in the mesophyll cells of wheat. These effects were more pronounced in the tissue below uredia. Cytophotometry of nuclei by the '2-wavelength' method after staining with Feulgen reagent showed that there was no increase in DNA of enlarged nuclei but there was a 60% decrease of the DNA origin present in the collapsed nuclei. Nucleolar enlargement was accompanied by a significant increase in RNA. T^ results are discussed.

A.Meany

2496. SIMPLE TECHNIQUE FOR INVESTIGATING STOMATAL FORMATION IN SCLEROTINIACEAE. C.Novelli and R.P.Korf: Mycologia, 1961, 53, 237-243 (Dept. Plant Path., Cornell Univ., Ithaca, N.Y., U.S.A.)

Cotton discs slightly less than 9 cm. in diam. and 7 mm. thick were placed in petri dishes and autoclaved for 30 min. at 15 lb. pressure. 50 ml. of sterile potato-dextrobroth was added to the sterile petri dish. The cotton was inoc. with a mycelial disc. Under these conditions typical stromata developed at temp. between 15 and 25°C.

J.G.Brown

2497. LABORATORY PROCEDURE FOR THE CULTIVATION AND FRUCTIFICATION OF SPECIES OF HERICIUM. J.A.Yurchenco and CH.Warren: Mycologia, 1961, 53, 566-574 (Wyeth Lab. Inc.; Radnor, Pa., U.S.A.) Partially decayed and intact dead limbs of maple trees 3-3.5 in. in diam. and 6 in. long, with the bark removed, were used. A well 4 in. deep and 2.5 in. in diam. was made in the wood, which was then immersed in a solid medium in a dessicator jar brought to a suitable $\text{H}_2\text{O}^{\text{TA}}$ content (100%) under partial vacuum. The well was packed with moist-enriched sawdust and the wood cylinder placed on supports inside a battery jar containing a little water and covered with a glass lid. Each unit was autoclaved and then inoculated. Diffused light and air circulation were provided. Using this method 4 out of 11 spp. of Hericium produced sporophores on partially decayed wood.

2498. BLUESTAIN IN BALSAM FIR. R.Pomerleau and D.E.Etheridge: *Mycologia*, 1961, 53, 155-170 (Forest Res. Lab., P.O. Box 35 (Sillery), Quebec, P.Q., Canada) Bluestain in balsam fir is ascribed to *J. Or. Igteiniella thujina* (Peck.) Optimum temp. for growth of *tungus* was found to be approx. 28°, being considerably reduced at 2'S⁸ and 32° and ceasing at 36°. Minimal moisture content for growth of *K. thujina* in wood is 5%. J.G.Brown

2499. STUDIES ON FUSARIUM WILT OF BANANAS. R. COMPETITIVE SAPROPHYTIC ABILITY OF F.OXYSPORUM F.CUBENSE. R.H.Stover: *Canad. J. Bot.*, 1962, 40, 1473-1481 (Plant Pathol. Dept., Vining C. DunlopLab., Tela Railroad Co., La Lima, Honduras) ~~added~~ populations of *F. oxysporum* f. *cubense* clone C colored a small proportion of banana leaf and root pieces in banana soil but was a weak competitor for these substrates? comparison with much lower indigenous populations of *F. gggkni* and *F. roseum*. Clone C was recovered from a 2% grass roots colonised in situ and was a predominant coloniser of portions of the decaying main roots of diseased banana plants. The results show that *F. oxysporum* f. *cubense* can take advantage of favourable micro-environments to successfully invade a small % of colonisable sites on roots and other substrates. A.Meany

2500. SELECTIVE ACTION OF FUNGUS-INHIBITORY PROPERTIES OF BALSAM FIR HEARTWOOD. D.E. Etheridge: *Canad. J. Bot.*, 1962, 40, 1459-1462 (Forest Res. Lab., P.O. Box 35, Sillery, Que., Canada) Heartwood of balsam fir has been found highly selective for *greumsanguinolentum* and other primary invaders of firs! This substrate possessed antifungal prop, hitherto suspected on the basis of tests with heat sterilised sapwood, was more active in heartwood, was substantially reduced by wet storage (1 hr. at 10(f), and is unaffected by dry storage (3 months at room temp.). The selective action did not depend upon the microbiol. condition of the wood. A.Meany

TECHNIQUES

2501. PREPARATION OF FREEZE-DRIED POWDERS OF PLANT TISSUES. AJ.Keys, F.S.Smith and F.V.Martin: *J. exp. Bot.*, 1963, 14, 10-13 (A.R.C. Unit Plant Physiol., Imperial Coll. Sci. and Technol., London, England) Apparatus is described for the prep. of freeze-dried powders from plant tissues. Tissue samples were ground in a high-speed mixer under liquid N₂. The resulting frozen powder was dried at -25° using anhydrous CaCl₂ at -25° as desiccant. I.D.J.Phillips

2502. GAMETOCIDAL ACTION OF DICHLOROACETIC ACID. Y.O.Kho and J.W.De Bruyn: *Euphytica*, 1962, 11, 287-292 (Inst. Hort. Plant Breeding, Wageningen, Netherlands) Temporary d sterility in *Antirrhinum majus nanum* L was induced by spraying with a 0.5% aq. soln. of sodium dichloroacetate on the appearance of the first flower buds. R.D.Butler

2503. METHACRYLATE AS AN EMBEDDING MEDIUM FOR WOODY TISSUES. G.P.Berlyn: *Stain Technol.*, 1963, 38, 23-28 (Sch. Forestry, Yale Univ., New Haven, Conn., U.S.A.) With this method infiltration is more rapid than with celloidin and thinner sections (6-30 v) can be cut. M J.Bell

2504. THE ROLE OF TANNINS IN NEUTRAL RED STAINING OF PINE LEAF VACUOLES. M.G.Boyer: *Stain Technol.*, 1963, 38, 117-120 (Forest Pathol. Lab., Maple, Ont., Canada) Examining various techniques for preserving and staining the vacuolar structure of leaf cells the author obtained highly satisfactory results using the vital stain, Neutral Red, on living material and on material fixed in Bouin's fluid or 10% buffered formalin. Further investigations indicated that water-sol. tannins were responsible for absorption of Neutral Red after treatment with formaldehyde and that ferric ions and phenols were essential to the reaction. M J.Bell

EXPERIMENTAL ZOOLOGY

CYTOLOGY

2505. FINE STRUCTURE OF THE ORAL APPARATUS OF THE GYMNOSTOME CILIATE CHLAMYDODON PEDARIUS. M.Kaneda: J. Protozool., 1962, 9, 188-195 (Biol. Inst., Coll. Gen. Eduen., Univ. Hiroshima, Japan) An E.M. study was made of the oral apparatus of *C. pedarius*. It is composed of a membranous system, a pharyngeal basket and pharyngeal tube. The membranous system consists of a membrane combining the pellicular and sub-pellicular membranes. Just beneath it is a layer of randomly intertwining filaments about 20 m/j in diam. The pharyngeal basket is composed of 11-13 triangular and long trichites, connected by filaments. Each of the long trichites consists of a bundle of about 700 filaments arranged in an almost hexagonal pattern, each filament being about 20 mjj in diam. The pharyngeal tube is composed of about 100 lamellae. The lamellae are about 40 m/j apart and have a diam. of about 30 m/j. It is suggested that each of the long trichites of the pharyngeal basket may originate from about 80 kinetosomes, and the lamellae of the pharyngeal tube and the membranous system from the sub-pellicular membrane.

R.J.Walker

2506. FINE STRUCTURE OF THE INTERPSEUDOTRACHEAL PAPILLAE OF THE BLOWFLY. J.R.Larsen: Science, 1963, 139, 347 (Plant Sci. Div., Univ. Wyoming, Laramie, Wyo., U.S.A.) E.M. studies of the inter-pseudotracheal papillae of *Phormia regina* revealed that each contains 4 nerve fibres encased in a cuticular sheath located in the lumen of the papilla inside the vacuole of trichogen cell.

G.M.Lewis

2507. ISOLATED POSTERIOR HALF OF ELECTROPLATE OF ELECTROPHORUS ELECTRICUS (L). D.F. De Almeida, G. De O. Castro, M.Miranda and C.Chagas: Exp. Cell Res., 1963, 29, 42-49 (Inst. Biofis., Univ. Brasil, Rio de Janeiro, Brazil) The post., or innervated, face of the electroplate of *E. electricus* was made up of small and large papillae, the latter being fewer and themselves constituted of small ones. Each small papilla had one nerve ending, but no particular zone or group of papillae on the post. surface could be identified as a functional unit. The distribution of AChase and succinate dehydrogenase was studied histochem. K Jones

2508. FINE STRUCTURE OF URINARY BLADDER OF TOAD, BUFO MARINUS. J.K.Choi: J. cell Biol., 1963, 16, 53-72 (Dept. Anat., Univ. Washington, Seattle, Wash., U.S.A.) The bladders were fixed in situ by injn. of the lumen with 2% OSO₄ in 0.1 collidine buffer at pH 7.5. Lead acetate and uranyl acetate stained sections of the ventral wall were studied in the E.M. and PA-Schiff stained sections in the light microscope. Four cell types were recognised in the epithelium including granular cells, mitochondria-rich cells, mucous and basal cells. The cell membranes, cell junctions and intracellular components are described and the structure of the sub-mucosa and the serosa. The transport of Na and H₂O across the bladder wall is discussed. P.Barrow

2509. FINE STRUCTURE OF 'FEATHER EPITHELIUM' IN DOVE, COLUMBA DOMESTICA. C.R.Leeson: Anat. Rec., 1961, 140, 359-366 (Dept. Anat., Dalhousie Univ., Halifax, N.S., Canada) The fine structure of the feather epithelium* of the nictitating membrane is described. Non-motile extensions of apical cells possess numerous irregular micro-villi, which themselves show

fibrillar borders. The findings are discussed in relation to previous histol. descriptions of the epithelium and it is concluded that the function is probably one of maintaining the surface of the cornea free of dust. F.Beck

METABOLISM

2510. STEROID REQUIREMENTS OF TRICHOMONADS. P.G.Lund and M.S.Shorb: J. Protozool., 1963, 9, 151-154 (Dept. Poultry Husbandry, Univ. Maryland, College Park, Md., U.S.A.) The steroid requirement of a Trypticase-requiring strain, SLT, of *Trichomonas gallinae* reared on a synthetic medium was cholesterol, 7-deS⁺ cholesterol, cholestanol, and to a lesser degree ergosterol, 3^oSitosterol and zymosterol acetate. Best growth was obtained with cholesterol. The purity of the steroid was checked by gas chromatography. Several compound^{*} were found to be inactive, including diethylstilboestrol¹, oestrone, dehydroepiandrosterone, progesterone, cords^{**} acetate and cholic acid. Precursors in cholesterol synthesis, acetate, mevalonic acid, mevalonic acid plus a liver extract and squalene were inactive in replacing cholesterol. Ciyst. fat sol. vitamins, carotene, vit. D₂, vit. D₃, vit. K₁ and vit. E acetate were inactive in replacing cholesterol. A *Trichomonas* sp. from the pig's nose utilises cholesterol, 7-dehydrocholesterol and impure g-sitosterol.

R.J.Walker

2511. UBIQUINONE IN FOUR GENERA OF PROTOZOA. C.Vakirtzi-Lemonias, G.W.Kidder and V.C.Dewey: Comp. Biochem. Physiol., 1963, 8, 331-334 (Biology Labs., Amherst Coll., Amherst, Mass., U.S.A.) Enzyme Q, ubiquinone [UQ₁] was isolated from several protozoan spp. *Tetrahymena pyriformis* possesses UQ₂ (8 isoprene units) at 0.65 μmole/g. dry wt. Flagellates *Crithidia fasciculata*, *Strigomemas oncophelti* and *Astasia klebsii* contain 0.23, 0.40 and 0.14 μmole/g. dry wt. of UQ₂ respectively. *Euglena gracilis* had previously been shown to contain UQ₈ (Fuller et al.), but *Astasia* contains UQ₉ so no taxonomic significance can be postulated on the occurrence of these compounds. M.S.Laverack

2512. A COMPARATIVE STUDY OF REDUCTIVE ACTIVITY OF W.B.C. OF RODENT AND HUMAN BLOOD. A.A. Yakaitis: Anat. Rec., 1961, 140, 367-373 (Dept. Anat., Univ. Michigan, Ann Arbor, Mich., U.S.A.) A comparative study was made of the reductase activity of w.b.c. of mice, guinea-pigs, rabbits and human blood following incubation at room temp. in a pipette with tetrazole I.N.T. The amount of activity was observed to vary between different spp. between w.b.c. and between different human donors. F.Beck

2513. PHYSIOLOGICO-CHEMICAL CHARACTERISTICS OF SPECIES FROM THE GENUS PAPIO. E.Bamann, ** Gebler and H.Forster: Hoppe-Seylers Z. physiol., 1963, 331, 64-66 (Inst. Pharm., Food Chem., Univ. Munich 2, Germany) Evidence is presented for classifying the genus *Papio* into subgenera. (German)

EMBRYOLOGY

2514. INDUCED AMOEBOID MOVEMENT IN EGGS OF SURF-CLAM *SPISULA SOUDISSIONA*. L.I.Rebhun: *Exp. Cell Res.*, 1963, 29, 593-602 (Dept. Biol., Princeton Univ., Princeton, NJ., U.S.A.) Amoeboid Movement induced in fertilised eggs of *Spisula*, was composed of 6 sp. types of motion; internal cyclosis, monopodial movement, multi-pseudopodial movement, rolling lobopod motions, twitches and shallow moving furrow formation. These phenomena appeared to arise from either contractile type processes in the external cell Jyeis or processes arising within the moving cytoplasm. It is speculated that these motions result from a dissociation of normally coordinated internal cycloic and surface contractile processes. K.Jones

2515. ACTION OF ALKYLATED AGENTS ON SEA URCHIN GAMETES. B.W.Jax, M.Pardington and H. Jackson: *Exp. Cell Res.*, 1963, 29, 137-143 (Dept. Expt. Chemotherapy, Christie Hosp., Manchester, England) The treatment of either sperm or eggs with *B*-ethyl methane sulphonate, reduced the rate of cleavage of eggs after fertilisation. Treatment of sperm or ova with isopropyl methane sulphonate did not produce any Cleavage delays. Tretamine acted on ova at low concn. Produce a marked increase of abnormalities which were probably due to polyspermic fertilisation. K.Jones

2516. CELLULAR BASIS OF MORPHOGENESIS IN SEA URCHIN EMBRYO: FORMATION OF COELOM, MOUTH AND PRIMARY PORE-CANAL. T.Gustafeon and L.Wolpert: *Exp. Cell Res.*, 1963, 29, 561-582 (Wenner-Gren Inst., Univ. Stockholm, Sweden) The cellular basis of the morphogenesis of the coelom, mouth and the Primary pore-canal in *Psammechinus miliaris* was studied by time-lapse cinematography. Be findings are described, and the relation between the cellular activities concerned and the postulated morphogenetic gradients discussed. It is concluded that a complex set of structures may arise from a succession of a few basic cellular events organised in a rather simple manner. K.Jones

2517. AGGREGATION OF CELLS ISOLATED FROM VEGETALBED AND ANIMALISED SEA URCHIN EMBRYOS. G.Giudice: *Experientia*, Basel, 1963, 19, 83-84 (Inst. Comp. Anat., Univ. Palermo, Italy) The altered pattern of differentiation is retained in the process of aggregation in chem. vegetalised or animated embryos. The possibility of changing the pattern of differentiation is very limited. R.S.Tonks

2518. ENERGY EXPENDITURE DURING EMBRYONIC DEVELOPMENT UNDER CONSTANT VERSUS VARIABLE TEMPERATURES (ONCOPELTUS FASCIATUS (DALLAS)). F.G.Richards and S.Suanfaksa: *Ent. exp. Appl.*, 1962, 5, 167-178 (Dept. Entom. and Econ. Zool., Univ. Minnesota, St. Paul, Minn., U.S.A.) Embryonic O₂ consumption rates measured in microrespirometers increased steadily regularly at 15, 17.5 and 25°. 0.009-0.018-0.095 and 0.031-0.215 μ O₂/egg/hr. i.e. $\frac{d}{dt} \ln \frac{O_2}{O_2}$ taken from 15° to 25° show a transitory overshoot in O₂ consumption rate which then descends to a const. temp. An unexpected large development delay around minimal temp. is improved even if kept at a short daily favourable temp. Consequently O₂ consumption rate and wt. loss (calc. from previous expt.) are less than at corresponding const. temp. H.W.Spencer

2519. OBSERVATIONS ON RATE OF GROWTH AND DISRUPTION OF MOULTING IN LARVAE AND PUPAE OF *TRIBOLIUM CASTANEUM* (HERBST) (COLEOPTERA, TENEBRIONIDAE) AT SUB-THRESHOLD TEMPERATURE. R.W.Howe: *Ent. exp. Appl.*, 1962, 5, 211-222 (Pest Infest. Lab., Slough, Bucks, England) The survival period of larvae and pupae just below development threshold and at some lower temp. was determined. Freshly-hatched larvae were kept individually in tubes in a desiccator at 10° RH. and at prescribed ages were transferred from 30 to 20, 17*, 15, 10 or 5*. Death where it occurred was mostly due to faulty moulting. Pupae from larvae at 20° reached adult stage then failed to cast pupal skins. The critical age for larvae at 20° was 8 days at 3(f). Early instar larvae and prepupal stages were most susceptible. The lowest successful temp. for development completion was just above 20°. H.W. Spencer

2520. TORSION OF TOE POST-ABDOMEN IN MALE *DIP* TERA. Md. Zaka-ur-Rab: *Naturwissenschaften* 1963, 50, 24-25 (Dept. Zool., Aligarh Muslim Univ., Aligarh, India). AJ.Wansbrough

2521. A STUDY ON THE MECHANISM OF CLEAVAGE IN THE AMPHIBIAN EGG. K.Dan and M.Kuno-Kojima: *J. exp. Biol.*, 1963, 40, 7-14 (Dept. BLol., Tokyo Metropolitan Univ., Tokyo, Japan) A cut made more than 1 mm. ahead of the tip of the cleavage furrow prevents its advancement in *Triturus pyrrhogaster* eggs. If the cut is less than 1 mm. ahead, the furrow is formed on the other side of the cut and it continues to advance. An excised piece of cortex can form a furrow and divide, as long as a furrow tip or its adjoining area is included in the piece. A.J. Martin

2522. THE ROLE OF THE ENTOBLAST IN TOE FORMATION OF TOE URODELE HEART. H.Amano and J. Fautrez: *Arch. Biol.*, Liège, 1962, 73, 193-204 (Lab. Human and Comp. Anat., Univ. Gand, Belgium) Following the removal of the entoblast from *Triturus pyrrhogaster* eggs at the neural stage, the heart fails to form. It is suggested that this failure is due to an inhibitory action of the dorsal chordomesoblast rather than to the suppression of an active influence from the entoblast. (French) R.J.Walker

2523. ANALYSIS OF TOE DEVELOPMENT OF TOE LIMBS OF AN EMBRYO URODELE AFTER PARTIAL EXOGASTRULATION. H.Amano: *Arch. Biol.*, Liège, 1962, 73, 205-223 (Lab. Human and Comp. Anat., Univ. Gand, Belgium) Caudal implantation and reduplication of the limb-buds of embryos of *Pleurodeles waltii*, *Triturus taeniatus* and *T. pyrrhogaster*, after partial exogastrulation was investigated using the colour-mark technique and by transplantation and explanation expt. From the results, it is concluded that the limb anlage must be pre-adapted before invagination at the late gastrula stage. (French) R.J.Walker

2524. DEVELOPMENT OF FEATHER KERATIN DURING EMBRYOGENESIS OF CHICK. E.Bell and Y.T.Thathachari: *J. cell Biol.*, 1963, 16, 215-223 (Dept. Biol., M.I.T., Cambridge, Mass., U.S.A.) The relationship of the synthesis and macromolecular organisation of feather keratin to cell differentiation was studied in feathers cut from the mid-dorsal region of White Leghorn embryos of 9-17 days. X-ray diffraction patterns of 14-day feathers are similar to the adult pattern and the development between 9-14 days incubation is described. Sections stained for -S-S groups and for keratin showed extensive -S-S bond

EXPERIMENTAL ZOOLOGY

formation occurring between the 13th-14th day. The results suggest that keratin develops on a lipid framework and becomes stabilised after the formation of H bonds and disulphide cross-links.

P.Barrow

effect may be due to a balance between a tendency toward continuation of development, and a tendency toward dedifferentiation, regression and reorganisation. The factors affecting this balance may include the extent of re-innervation or re-vascularisation of the transplant. The action of the 'apical organisation centre' under the conditions of transplantation are briefly discussed.

R.J.Walker

REGENERATION

2525. LIMITS OF TRANSPLANTATION TOLERANCE IN LARGE AMOEBAE. I. MICROFUSION STUDIES USING AMOEBA PROTEUS, PELOMYXA ILLINOISENSIS, AND THREE STRAINS OF PELOMYXA CAROLINENSIS.

E.W.Daniels: *J. Protozool.*, 1962, 9, 183-187 (Div. Biol. and Med. Res., Argonne Nat. Lab., Argonne, 111, U.S.A.) Protoplasm transferred to a multinucleate amoeba is tolerated if the donor and recipient portions are from the same animal, from different amoebae of a single clone, from different amoebae of the same sp. found in a given location, or different amoebae of the same sp. found in separate geographic areas. Interspecific or intergeneric transplantation of protoplasm is not tolerated and death follows. X-radiation increased the mean survival time of heterologous transplants in the case of supralethally X-irradiated recipient *A.Uinoisensis* and non-irradiated donor *P.narolinensis*. It is suggested that this indicates a limited therapeutic effect of non-irradiated protoplasm on supralethally irradiated recipients.

R.J.Walker

2526. REGENERATION IN SEVERED SPINAL CORD OF CHORDATE LARVAE OF PETROMYZON MARINUS.

E.Hibbard: *Exp. Neurol.*, 1963, 7, 175-185 (Lab. Perinatal Physiol., Nat. Inst. Hlth., Bethesda, Md., U.S.A.) Regeneration of nerve processes in the severed spinal cord of the chordate larval lamprey occurs with speed and perfection sometimes resulting in recovery of function in less than 20 days. No dense fibrous scar tissue is formed. Excessive proliferation of ependymal cells sometimes hinders the regenerative process.

P.W.Nathan

2527. ADDITIONAL EXPERIMENTS ON THE SELF-DIFFERENTIATION OF TRANSPLANTED WHOLE AND HALF FORE LIMB REGENERATES OF AMBYSTOMA MEXICANUM. JJaber: *Arch. Biol.*, Liège, 1962, 73, 369-378 (Hubrecht Lab., Intern. Embryol. Inst., Utrecht, Netherlands)

Transplantation expt. in axolotl larvae involving whole and half paddle-shaped fore-limb regenerates were used. The latter were obtained by removing the distal half of a 3 day regenerate. Several of the transplanted whole regenerates formed distinctly hypermorphic autopodia. In several expt. where the distal part of the transplant was removed, the transplants approached a qual. normal limb.

R.J.Walker

2528. A THRESHOLD EFFECT IN THE MORPHOGENETIC REALISATION OF TRANSPLANTED LIMB REGENERATES OF AMBYSTOMA MEXICANUM. J.Faber: *Arch. Biol.*, Liège, 1962, 73, 379-403 (Hubrecht Lab., Intern. Embryol. Inst., Utrecht, Netherlands)

In this paper results of expt. involving transplants of blastemata and regenerates from preceding papers were analysed using a semi-quant. method, with special reference to the development of the autopodium. The marked preference for low and high levels of morphogenetic realisation is explained in terms of a threshold effect. This threshold

2529. REGENERATION OF THE LIVER IN TRITURUS VIRIDESCENS. R.A.MacDonald, T.Guiney and R.Tank:

Proc. Soc. exp. Biol., N.Y., 1962, 111, 277-280 (Mallory Inst. Path., Boston City Hosp., Boston, Mass*, U.S.A.)

[³H]Thymidine and autoradiographs were used to quantitate DNA synthesis in detailed liver cell regeneration studies after partial hepatectomy. DNA synthesis began after 5 days, reached a peak at 10 days, fell by 20 days and rose to a 2nd peak at 105 days. Restoration of normal liver wt. was attained after 4 weeks.

M.M.Shapland.

OSMOREGULATION AND EXCRETION

2530. AMOEBA PROTEUS: STUDYING THE CONTRACTILE VACUOLE BY MICROPUNCTURE. B.Schmidf

Nielsen and C.R.Schrauger: *Science*, 1963, 139, 6°^b 607 (Dept. Zool., Duke Univ., Durham, N.C., U.S.A)

Direct measurements of freezing point depression of protoplasm and the fluid from the contractile vacuole showed that the former had an osmolarity ranging from 73-116 and the latter from 24 to 38. Explanations for the hypoosmolarity of the vacuole in relation to the protoplasm are discussed.

G.M.Lewis

2531. MECHANISMS OF SODIUM AND POTASSIUM REGULATION IN TETRAHYMENA PYRIFORMIS STRAIN

W. W. deW. Andms and A.C.Giese: *J. cell. comp.**¹ *Physiol.*, 1963, 61, 17-30 (Dept. Zool., Pomona Of

Stanford, Calif., U.S.A.) In *T. pyriformis*, 30°^f the intracellular K appears to be bound; exposure to *^w O₂ tension or treatment with iodoacetic acid, DNP or azide causes its loss. The remaining motile K is ^{probab} coupled with Na extrusion through a cyclic carrier mech- anism, which is unaffected by ouabain but related to temp.

G.M.Lewis

2532. BEGINNING OF THE ACCUMULATION OF VANADIUM DURING THE EARLY DEVELOPMENT OF THE ASCIDIAN PHALLUSIA MAMILLATA CUVIER. H.-J.

Bielig, K.Pfleger, W.Rummel and M. de Vincenti¹: *Nature*, Lond., 1963, 197, 1223-1224 (Max-Plane¹

Inst., Heidelberg, Germany) Uptake of vanadium by *P.mamillata* commences at the time of hatching *^j

rises at the appearance of swimming larvae. Uptake w decreased as the tail became absorbed.

FEEDING AND DIGESTION

2533. NUCLEIC ACID DIGESTION AND MACRONUCLEUS FORM IN CANNIBAL BLEPHARISMA, NEW YORK

EXPERIMENTAL ZOOLOGY

237

VERSITY STRAIN. N.Tulchin and H.J.Iishfieldr J. Protozool., 1963, 9, 200-203 (Dept. Kol., Grad. Sch. Am and Sci. New York Univ., New York, N.Y., U.S.A.) **Cannibal giant Blepharisma undulans** (E.£.£.annus), grown in mass culture, showed increased no. of macronuclear lobes and greater variability in their size compared to bacteria-fed specimens. During the first 3-6 hr. of digestion, macronucleus and DNA disappeared from the food vacuoles, while during the last 1-2 hr. of digestion the food vacuole RNA content disappears. It is concluded that both DNA and RNA are digested and absorbed. R.J.Walker

2534. RHYTHMIC MOVEMENTS ON CORDYLOPHERA. J.Fulton: J. cell. comp. Physiol., 1963, 61, 39-51 (Rockefeller Inst. New York, U.S.A.) Time-lapse photography of colonies of the hydroid *Cordylophora canaliculata* shows peristaltic waves circulating nutrients which better the state of each hydranth and occur at intervals varying from 8-20 min. according to the nutritional state of the colony. A further series of rhythmic movements occur during the regeneration of hydranths in stem segments and tissue fragments. CM.Lewis

2535. DIGESTION OF STARCH IN TOE GUT OF OXYGENUS HYALINIPENNIS (COSTA) (HETEROPTERA: ARGAEIDAE). P.L.Bhamagar: Naturwissenschaften, 1963, 50, 24 (Dept. Zool., Univ. Delhi, India).

2536. THE SUGAR-FEEDING CYCLE IN A CAGE-PULATION OF MOSQUITOES. J.D.Gillet, AJ.Hadaway and P.S.Corbett: Ent. exp. Appl., 1962, 5, 223-232 (Ent. Res. Inst., Entebbe, Uganda, Africa) *Aedes aegypti* (L.) mosquitoes at $23 \pm 1^\circ$ and 70% R.H. were kept in cages in a room with a continuously lit 15W red lamp and normal equatorial day and night changes in light. Both sexes show 2 daily peaks of sugar-feeding comparable with field observations on nectar and dew-feeding in other spp. of mosquitoes. H.W.Spencer

2537. A DIFFERENTIAL GROWTH RESPONSE OF THE SINKING ELEMENTS OF THE FEMALE RICE MOTH TO ANTIBIOTIC SUPPLEMENTATION. D.Kianu: Nature, Lond., 1963, 197, 106-107 (Dept. Zooll. Univ. Jodhpur, India) Male rice moths (*Deuteracrona*) on 10% P-P²⁰² Penicillin feed supplements grew 10% heavier than their controls, & 6% heavier. Supplementation of the diet with terramycin caused 8% increase in wt. in cf and 3% in tf. Oleandomycin did not enhance growth of either sex. G.M.Lewis

2538. THE FOOD AND FEEDING HABITS OF TEAL ANAS CRECCA CRECCA L. PJ.Olney: Proc. zool. Soc. a., 1963, 140, 169-210 (Wildfowl Trust, Slimbridge, England). D.N.MILLER

NERVOUS SYSTEM

2539. MOVEMENT RECEPTORS IN BUCCINUM UNDULATUM. M.S.Laverack and D.F.Bailey: Comp.Biochem. Physiol., 1963, 8, 289-298 (Gatty Marine Lab., St Andrews, Fife, Scotland) Electrophysiol. investigation has been carried out on the mechanoreceptors in the body wall of the common whelk *Buccinum undatum*. The first 68 studied were those supplying the left antenna and siphonal regions. Tactile responses were obtained upon stimm. of very small discrete areas of the epidermis of the animal. Three types of mechanoreceptors have been seen. First a unit type that responded to active stretching occurred; second units that

were active upon both stretch and relaxation; and third a normally discharging unit that increased in freq. during stretch, followed by slow adaptation. Reflex nervous activity originating in the central nervous ganglia with a latency of 60-80 msec, after stimm. has also been described. M.S.Laverack

2540. A PULSATIN GANGLION IN THE OCTOPODA. J.S.Alexandrowicz: Proc. Roy. Soc. B., 1963, 157, 562-573 (Marine Biol. Assocn. Lab., Plymouth, England) Observations made on *Eledone cirrhosa* and *Octopus vulgaris* revealed the presence of a ganglion on one of the visceral nerves which contracts rhythmically with the same freq. as the blood circulation, due to contractions of a spherical body occupying nearly half its vol. This body may have neurosecretory prop.

G.M.Lewis

2541. THE NUMBER AND SIZES OF NERVE CELLS IN OCTOPUS. J.Z.Young: Proc. zool. Soc. Lond., 1963, 140, 229-254 (Dept. Anat. Univ. Coll., London, England) It has been calc. that there are some 500 million neurones in the ganglia and brain of the octopus. About 300 million of these are in the brachial ganglia. Large neurones are found in the main motor centres of the brain. Somewhat smaller cells are found in the supra-oesophageal basal lobes. The smallest neurones are found in the optic lobes and in the vertical and sub-frontal lobes. The optic lobes contain about 130 million neurones, the vertical lobe system about 30 million very small neurones which may have inhibitory actions. The tactile centres contain 6 million cells these being a great no. of the small cells found in the subfrontal lobes.

SENSE ORGANS

2542. LIGHT AND DARK-ADAPTATION IN TOE EYES OF SOME CEPHALOPODS. J.Z.Young: Proc. zool. Soc. Lond., 1963, 140, 255-272 (Dept. Anat., Univ. Coll., London, England) Dark-adapted retinae have the pigment cone, in the bases of the rhabdomes. In light-adapted retinae the pigment moves out distally but most slowly accumulates in the central region. In dark-adaptation the pigment is withdrawn from the central region most quickly. The rhabdomes in *Loligo*, *Octopus* and *Sepia* shortened under illumination and elongated in the dark. D.N.Wheatley

2543. RESPONSES OF MAXILLARY CHEMORECEPTORS IN THE LARVA OF THE SILKWORM, BOMBYX MORI TO STIMULATION BY CARBOHYDRATES. S.Ishikawa: J. cell. comp. Physiol., 1963, 61, 99-107 (Sericult. Expt. Sm., Suginami-ku, Tokyo, Japan) In newly moulted, unfed, 5th instar larvae of *B. mori*, one of the sensilla stylonica on the maxilla was identified as the chemosensor organ for carbohydrates. Four kinds of receptors were present, responding to different sugars and to salts. G.M.Lewis

2544. RECORDING CIRCADIAN RHYTHMS OF COCK ROACH WITH CAPACITY-SENSING DEVICE. M.S. Schechter, S.R.Dutky and W.N.Sullivan: J. econ. Entomol., 1963, 56, 76-79 (Entom. Res. Div., Agric. Res. Serv., U.S.D.A., U.S.A.) A Madeira cockroach was reared in a light-dark culture and tested in the device at room temp, in light and dark, all dark and all light periods. The insect was kept in a 1 l. cylinder with a

EXPERIMENTAL ZOOLOGY

circular plastic barrier 6 in. above the base. Aluminium foil outside this part of the cylinder was attached to the sensing device including a milliammeter and readings were recorded automatically using a 50 mV recorder. Thus no attachments to the animal are used in this method.

H.W.Spencer

2545. FINE STRUCTURE OF ECCENTRIC RETINULA CELL IN INSECT COMPOUND EYE (BOMBYX MORI). E. Eguchi: J. ultrastructure Res., 1962, 7, 328-338 (Anat. Dept., Med. Fac. Kyushu Univ. Fukuoka, Japan)

It has been shown that the compound eye of the silkworm modi contains a special type of cell resembling the eccentric cell found previously only in the horseshoe crab. This eccentrically placed cell resembles a bipolar neuron in form and is larger than the retinula cell. Characteristically the cell forms rhabdomeres on both its cell body and dendrite. Many mitochondria are present in the cytoplasm which is less dense than that of the retinula cell.

H.B.Waynforth

2546. A PHOTORECEPTOR-LIKE STRUCTURE IN VENTRAL NERVE CORD OF CRAYFISH CAMBARUS VIRILIS. K.Jiama: Anat. Rec., 1961, 140, 329-336 (Sch. Med., Univ. Hiroshima, Japan)

In the abdominal ganglia of the crayfish are compound bodies which consist of a pile of lamellae, multivesicular bodies, free vesicles and dense granules, located in the innermost sheath cell of the giant fibre. The structural resemblance between these bodies and known types of photoreceptors strongly suggests that the structures may be responsible for the light response of the ventral nerve cord of the crayfish.

F.Beck

2547. ELECTRICAL RESPONSES IN DECAPOD CRUSTACEAN VISUAL SYSTEMS. T.H.Waterman and C.A.G. Wiesma: J. cell. comp. Physiol., 1963, 61, 1-16 (Dept. Biol., Yale Univ., New Haven, Conn., U.S.A.)

Electrical activity of the compound eyes and eyestalks of the crustaceans Panulirus, Grapsus and Goniopsis has been studied in response to light intensity changes and target movement. Using both wick and needle electrodes visual units of 3 types were recorded; sustaining units with relatively little adaptation, on-off fibres, and movement elements, some of which showed such strong adaptation as to be essentially novelty units. The fields of view were mediated by many ommatidia, and normal function depended on an intact blood supply. There was no evidence of sensitivity to polarized light.

CM.Lewis

2548. PRELIMINARY OBSERVATIONS ON THE ORIENTATION OF TALITRUS SALTATOR IN FRESH AND SEA WATER. E.T.Debenedetti: Naturwissenschaften, 1963, 50, 25-26 (Inst. Zool., Univ., Torino, Italy) Phototactic orientation also affected movement towards land or sea, which appeared to be generally governed by humidity and salinity.

2550. HYPERSEXUAL ACTIVITY INDUCED IN FEMALES OF THE COCKROACH NAUPOETA CINEREA. L.M. Roth: Science, 1962, 138, 1267-1269 (Div. Engineering, Harvard Univ., Cambridge, Mass., U.S.A.)

Expt. in which oothecae were removed from ♀ N.cinerea⁸ to stimulate their corpora allata showed that the hormone⁸ from this gland controlled mating by inducing feeding on the tergum of a displaying ♂. Mating induces an inhibitory nervous mechanism, the seat of which is post, to the last abdominal ganglion, which suppresses feeding behaviour. After parturition, ♀ become receptive again. TransectiLon of the nerve cord before or just after mating causes excessive sexual behaviour.

G.M.Lewis

2551. THE HISTOLOGY AND HISTOCHEMISTRY OF &¹⁰ DEVELOPMENT AND RESORPTION IN THE TERMINAL OOCYTES OF THE DESERT LOCUST, SCHISTOCERCA GREGARIA. O.Lusis: Quart. J. micr. Sci., 1963, 104, 57-68 (Dept. Zool., Univ. Sheffield, England)

%V
icular cells play an active part during vitellogenesis, fr yolk synthesis. The term 'corpus luteum' as applied to the ovary of the locust is invalid and 'white' and 'yellow'^{*} follicle are terms introduced to describe the normal and pathol. post-ovulatory follicle. The protein yolk is a protein-carbohydrate compound. Lipid bodies present are dissolved in p-carotene and are (1) phospholipid, (2) combined phospholipid and triglyceride and (3) triglyceride. Concn. or absorption of the lipids causes cystin. of caio* tene and formation of the pigment body. During resorp' ion follicular cells act as lecitholytic cells - breaking down protein, then lipid yolk and finally degenerating themselves. It is suggested that oocytes have an inhered potential for resorption dependant on factors within the body.

- 2559. THE ALFALFA PLANT BUG, ADELPHOCORIS LINEOLATUS (GOEZE) IN N. SASKATCHEWAN.** C.H. Craig: Canad. Ent., 1963, 95, 6-13 (Entom. Sect., Canada Agric. Res. Stn., Saskatoon, Sask., Canada) IWs pest, the lucerne leaf-bug in Europe and W. Asia, spread westward across Canada at 30-40 miles/yr. from 1947 to 1959, Economic infestations often appear 2-4 yr. after the insect's initial appearance. The migratory behaviour seems to be an inherent characteristic and is necessary for max. reproduction. Because of migration local control measures may have to be taken annually. Seasonal development is described, most of the eggs entering diapause throughout the winter*. Eggs were laid only in stems and stem branches of alfalfa plants. The insect also attacks red clover. Some nymphs were parasitised by braconid larvae. H.W.Spencer

2560. FIRST N. AMERICAN RECORD OF BUFOLUCIU A SBLVARUM (MEIGEN) (DIPTERA:CALLDPHORIDAE) PARASITISING BUFO TERRESTRIS AMERICANUS HOL-BROOK J-S.Bleakney: Canad. Ent., 1963, 95, 107 (Nova Scotia Mus. Sci., Halifax, N.S., Canada) The head of a live adult \$ frog was infested with the larvae of this fly. H.W.Spencer

2561. LONGEVITY, PALATABILITY AND NATURAL SELECTION IN 5 SPECIES OF NEW WORLD SATURNIID MOTH A.D.Blest: Nature, Lond., 1963, 197, 1183-1186 (Dept. Zool., University Coll., London, England) The effects of natural selection are considered among spp. of moths subject to predation, some cryptic and palatable, some aposematic and distasteful. G.M.Lewis

2562. EFFECTS OF γ -RADIATION ON VARIOUS STAGES OF 3 FRUIT FLY SPECIES. J.W.Balock, A.K.Burditt and L.D.Christensen: J. econ. Entomol., 1963, 56, 42-46 (Entom. Res. Div., Agric. Res. Serv*, U.S.D.A., U.S.A.) Material was treated in Al cannisters, the average dosages being 1250-1620 r/min. using ^{80}Co . Oriental and Mediterranean fruit fly eggs were laid on artificial lemon moulds and melon fly eggs in hollowed-out passion fruit shells. Larvae were reared in fortified carrot medium. Water drops containing 600-700 eggs were irradiated on moist blotting paper discs or in rearing medium. Only increasing dosages with age prevented hatching but 1/3 developed eggs were more sensitive than younger ones. 160000 r prevented 95% larval pupation. With mature pupae 100000 r prevented adult emergence but 10000 r caused sterile adult emergence. Environmental differences affect the treatment's success. H.W.Spencer

2563. INFLUENCE OF TEMPERATURE AND HUMIDITY ON RESISTANCE IN ALFALFA TO SPOTTED ALFALFA APHID AND PEA APHID. A.Isaak, E.L.Sorensen and E.J.S.Ortman: J. econ. Entomol., 1963, 56, 52-57 (Dept. Entom., Kansas Agric. Expt. Stn., Crops Res. Div., U.S.D.A., Manhattan, Kans., U.S.A.) Temp. is very important in defining aphid resistance. In 7 day tests, resistance of 3 alfalfa clones to both aphid spp. was indistinguishable at 54°F while the clones represented 2 resistance classes at 70° and 3 resistance classes at 85°F. Humidity had less effect than temp. on survival and reproduction, though at high temp. 25% and 95% R.H. levels provided different resistance classes of clones. Adult condition probably also influences reproduction and nymph survival. H.W.Spencer

EXPERIMENTAL ZOOLOGY

2564. MEASUREMENT OF INCUBATION PERIOD OF CORN EARWORM EGGS. W.H.Luckmann: J. econ. Entomol., 1963, 56, 60-62 (Illinois Nat. Hist. Survey, Urbana, 111., U.S.A.) FTom 1960 and 1961 records, the incubation period of 1157 eggs of *Heliothis zea* was noted. A regression line was fitted to the data of eggs incubated in the laboratory at 60, 66, 75, 85 and 90°F. From base temp. of 54°F the average incubation period was 1824° hr. in the laboratory and 1844° hr. in the field, [1 degree hr.^oi (max. temp. + min. temp.) - (base temp.) x 1 hr.].
H.W.Spencer
2565. BIOLOGY OF HARLEQUIN BUG, MURGANTIA HKTRIONICA. F.A.Streams and Djimentel: J. econ. Entomol., 1963, 56, 108 (Dept. Entom., Cornell Univ., Ithaca, N.Y., U.S.A.) Reared on cabbage plants at 72.5 ±3-GTF and 58.5 ± 9-O^R.H., 79.2% of the eggs hatched and were incubated in 7-1 days. The duration of 4 nymphal stages averaged 4*4, 9*5, 7*6 and 9*9 days for both sexes. The 5th and lastcf nymphal stage required 14-0 days while that of the \$ needed 15-6 days.
H.W.Spencer

2566. FOOD PREFERENCE STUDIES WITH TROGODERMA INCLUSUM, PEST OF DRY MILK INDUSTRY. F.O.Marzki: J. econ. Entomol., 1963, 56, 109 (Dairy Prod. Insects Lab., Madison, Wis., U.S.A.) Of dry milks, caseins and sugars, adults and larvae preferred sweetened casein. Roller-type was more attractive than spray or low heat dry milks. Adults preferred fine topilre or coarse sugars and larvae preferred pure sugars.
H.W.Spencer

2567. TOE EFFECTS OF LOW TEMPERATURES ON SOME PREDACIOUS PHYTOSEIID MITES AND ON THE BROWN MITE, BRYOBIA ARBOREA M. AND A. A.W. Macphee: Canad. Ent., 1963, 95, 444 (Res. Stn., Canada Dept. Agric, Kentville, N.S., Canada) Low temp, exposure times were determined by keeping samples of 30 adult d mites between -5 and -19°F. Each sample for 0-5, 1, 2, 4, 8, 16 or 32 hr. at each temp, was allowed to warm to room temp. The mean freezing point of *Typhlodromus pyri* adults was -2ft*F, *T.finlandicus* -22°F and *T.rhenanus* 24*5°F. Between 0-5 and 8 °Tthe mortality of these spp. increased 12-15% whenever exposure duration was doubled. The mean freezing point of *B. arborea* eggs was -26°F and between 0-25 and 16 hr. the mortality increased 8-10% whenever exposure time was doubled at -24* F or below. H.W .Spencer

2568. INTESTINAL PARASITES OF MAN IN BRITISH NORTH BORNEO. R.E.Kuntz and W.H.Wells: Amer. J. Trop. Med. Hyg., 1962, 11, 773-780 (U.S. Naval Med. Res. Unit No.2, Taipei, Taiwan) The incidence of intestinal protozoa and helminths in a total of 1089 persons was determined from stool specimens. Overall prevalences for the protozoa were much less than expected in an area where conditions would appear to favour parasitisation.

2570. DISPERSAL OF NYMPHS OF GRASSHOPPER, CAMNULA PELLUCIDA (SCUDD.). L.G.Putnam: Canad. Ent., 1963, 95, 76-80 (Res. Stn., Canada Dept. Agric Saskatoon, Sask., Canada) Nymphs hatching from an egg-bed originally about 800 sq. yd. had occupied about 160 acres by the immature adult stage. For 17 days the average daily advance rate was 6 yd. and the direction was mostly according to topography. Then the dispersal seemed more random at about 20 yd. daily, independently of most topographical features. The whole dispersal between May and July was probably not related to wind movement.
H.W. Spencer

2571. COMPETITION BETWEEN TWO SPECIES OF MITES* H. FACTORS INFLUENCING INTENSITY. W.H.Foott: Canad. Ent., 1963, 95, 45-57 (Res. Stn., Res. Br. Canada Dept. Agric., Harrow, Ont., Canada) *Tetranychus telarius* (T) forms much sheet webbing, *Panonychus ulmi* (P) almost none. In a greenhouse and insectary but not in an orchard, *Panonychus* attack on peach foliage is suppressed because *Tetranychus* produced bing, is more fecund and has a faster development rate. The proportion of *Tetranychus* to *Panonychus* increases with the severity of leaf damage. Competition intensity increases because each tends to occupy different levels of a plant and *Panonychus* tends to utilise upper leaf surfaces more than *Tetranychus*. At low temp, and when leaves are moved by a fan, adult *Panonychus* ? move from upper to lower leaf surfaces.

2572. EFFECT OF CARP FRY AS PREDATORS ON SOME ROTIFER (ROTATORIA) SPECIES. A.Hillbright-Ilkovska: Bull. Acad. pol. Sci., 1963, 11, 87-89 (Inst. Ecol., Pol. Acad. Sci., Poland) Data shows no clearly neg. effect of fish intensity on abundance and time of occurrence of rotifers.
J.E.Hobbs

2573. EGG SIZE AND SHAPE IN THE KITTIWAKE (RISSA TRIDACTyla) AND THEIR USE IN ESTIMATING AGE COMPOSITION OF POPULATIONS. J.C.Coulson: Proc. zool. Soc. Lond., 1963, 140, 211-227 (Dept. Zool., Durham Coll., Univ., Durham, England) The size of the first eggs each yr. of kittiwakes are found to alter as the laying hen gets older. The eggs laid in the later years are shorter but broader and there is an increase in vol. The changes are not so marked in the oldest laying hens. It has been found that the 3rd egg of any clutch differs from the 2 previously laid and that the difference is more exaggerated with increase in age of the hen. N° difference is found between the eggs of a 2-egg clutch. These features of eggs have been used to determine the age composition of several colonies of kittiwakes in North Shields.

²⁵77. ACH AND CHOLINESTERASE IN TUNICATES.
E.Florey: Comp. Biochem. Physiol., 1963, 8, 327-330
(Dept. Zool., Univ. Washington, Seattle, Wash.,
U.S.A.) The neural gland and ganglion of Ciona
fateinalis were removed and then dissected free from
one another. The ganglion ACh activity was then determined
by its pharmacol. action on lamellibranch hearts.
ACh to the extent of 20-120 fig./g. wet wt. was found.
Destruction of ACh occurs when extracts are allowed to stand for some time, but addition of eserine inhibits this destruction; indicating that a cholinesterase enzyme is probably present initially. Bound ACh within the ganglion is released upon boiling. The muscles of the body wall* of C. intestinalis respond to ACh by contracting. A cholinergic nervous system is indicated. M.S.Laverack

²⁵78. HAEMOGLOBIN IN A FLATWORM. D.W.T.Crompton and M.H.Smith: Nature, Lond., 1963, 197, 1118-1119 (Molteno Inst., Univ. Cambridge, England)
The rhabdoecol Phaenocora unipunctata contains a Hb concentrated mainly round the muscular pharynx; it has * relatively high O₂ affinity, low iso-electric point and low mol. wt. CM.Lewis

²⁵79. GIANT MUSCLE FBRES IN A BARNACLE, BALANUS NUBILIS DARWIN. G.Hoyle and T.Smyth jun.: Science, 1963, 139, 49-51 (Biol. Dept., Univ. Oregon, Eugene, Ore., U.S.A.) Cross-striated muscle fibres of very large size (between 1 and 2 mm. 5*ck) are described in the scutal-tergal adductor and depressor muscles of B. nubilis. Adductor muscle fibres are innervated by separate nerves, each supplying one J*d with terminals, while the depressor fibres receive S^terminal innervation along their entire length, they may shorten to as little as 1/6th resting length. G.M.Lewis

²⁵80. SONAR SIGNALS OF THE SEA LION. T.C.Poulter: Science, 1963, 139, 753-755 (Stanford Res. Inst., Menlo Park, Calif., U.S.A.) Sea lions approaching pieces of fish thrown into the water emit trains of sound signals like those of the bat and porpoise; they meet criteria of a pulse-modulated sonar system with remarkable echo-ranging prop. CM.Lewis

²⁵81. ALKALINE EARTH ELEMENTS AND THE AVOIDANCE REACTION IN PARAMECIUM MULTIMICRONUCLEATUM. J.D.Yarbrough and J.C.O' Kelley: J. Protozool., 1962, 9, 132-135 (Biol. Dept., Univ. Alabama, Ala., U.S.A.) The normal swimming behaviour of P. multimicronucleatum in an essential mineral soln. containing 0.001M Ca changed to avoid reactions following the replacement of the Cabylimolar Sr. Equimolar barium produced a less pronounced effect. P. mnltimicronucleatum inoc. into auto-inoculated ⁴⁵Sr-containing cultures of Protosiphonia hotenyi multiplied to the same extent while they aere in ⁴⁵Sr. Acceleration avoidance reactions were observed, up to 32 days following inoc. R.J.WaiKer

²⁵/RELATIONSHIPS BETWEEN PIGMENTATION OF HELI. AND OF MANTLE IN THE SNAIL CEPaea NEMORALIS (L.) AND CEPaea HORTENSIA (MULL.). L.R.B.Emberton: Proc. zool. Soc. Lond., 1963, 140, 275-280 (Dept. Physiol., Karolinska Inst., Stockholm, Sweden) Expt. data are presented to show that the essential functional prop. of the intact eye are at least

ley

2583. NEW PROOF OF SELF FERTILISATION FOLLOWING SELF-INSEMINATION DURING COPULATION IN THE WORM, EISENIA FOETIDA SAV. F.André: C.R. Soc. Biol., Paris, 1962, 156, 1384-1386 (Lab. Zool., Fac. Sci., Bordeaux, France) Crossing the 2 varieties of E. foetida, typica and unicolor, resulted in a sterile hybrid with intermediate colouring. This occurred very rarely. Other first generation offspring were fertile and identical with one of the parents. Second generation individuals were similar to their parents. It is suggested that fertile first generation individuals resulted from self fertilisation. (French) M.A.Price

2584. A NOTE ON THE HEAD KIDNEY AND KIDNEY OF THE PERCH PERCA FLUVIATILIS (LINNAEUS), WITH SPECIAL REFERENCE TO THE BLOOD VASCULAR SYSTEM. A.H.Wetherley: Proc. zool. Soc. Lond., 1963, 140, 161-167 (Dept. Zool., Sch. Gen. Studies, Australian Nat. Univ., Canberra, Australia) The relationships of blood vessels to the head kidney and the kidney of the Perch are described. *

2585. FEATHER REPLACEMENT IN BIRDS. G.E.Watson: Science, 1963, 139, 50-51 (Div. Birds, Smithsonian Inst., Washington 25, D.C., U.S.A.) During natural moult in many birds, feathers of the old generation are passively pushed out of the follicles attached to the tips of the sheaths of incoming feathers. G.M.Lewis

2586. SENSITIVITY OF SPATHIDIUM SPATHULA TO LOW DOSES OF X-IRRADIATION. D.B.Williams: J. Protozool., 1962, 119-122 (Biol. Div., Oak Ridge Nat. Lab., Oak Ridge, Tenn., U.S.A.) A dose of 1Jcr was sufficient to increase the time of the first generation from 5 to 5⁵ hr. in S. spathula; while a dose of 4 kr doubled the generation time. Animals irradiated as dry cysts required 10 kr to double their generation time. 24 hr. after exposure, irradiated lines have a reduced growth rate. 48 to 72 hr. later, some lines recover while others remain retarded. Within 24 hr. of radiation, some animals exhibit structural abnormalities and their size is enlarged. The reason for the high sensitivity of S.spathula to X-irradiation is not known. R.J.Walker

2587. NEW APPARATUSES AND REARING TECHNIQUES FOR STUDY OF WIREWORMS (COLEOPTERA, ELATERIDAE) IN ORGANIC SOILS OF S.W. QUEBEC. J.Lafrenière: Canad. Ent., 1963, 95, 1-6 (Res. Sm., Res. Br., Canada Dept. Agric., St. Jean, Quebec, Canada) An insect-sorting box, a flight-trap and an outdoor life cycle rearing cage are described for use in the study of wireworm biology. Each apparatus has been tested and found to be satisfactory. H.W.Spencer

2588. A SIMPLE PARABIOTIC CHAMBER FOR CELL CULTURE STUDIES. J.E.Prier: Amer. J. clin. Path., 1963, 39, 175-176 (Sch. Vet. Med., Univ. Pennsylvania, Philadelphia, Pa., U.S.A.) A simple apparatus is described consisting of 2 tubes with open flanged ends which can be sealed together or separated by a filter. Different cell cultures can then be grown in the 2 compartments allowing free exchange of subcellular sized particles. B.A.Woodger

2589. GLOW, SENSITIVITY CHANGES AND PIGMENT MIGRATION IN COMPOUND EYE OF NOCTURNAL LEPIDOPTERA. CHOGLUND: Life Sci., 1963, No.4, 275-280 (Dept. Physiol., Karolinska Inst., Stockholm, Sweden) Expt. data are presented to show that the essential functional prop. of the intact eye are at least

EXPERIMENTAL ZOOLOGY

temporarily retained after the abolition of the ganglion activity and that the injn. of substances such as nicotine bitartrate and adrenaline can cause the pigment to move towards the dark position even when the eye is illuminated.

KJones

2590. SCLERAL CONTACT FILTERS FOR DOMESTIC BIRDS. CM.Winget, C.A.Mepham, D.HPatde and A.M.Walker: Proc. soc. exp. Biol., N.Y., 1963, 112, 412-416 (Dept. Poultry Sci. and Eng. Sci., Ontario

Agric. Coll., Guelph, Ont., Canada) Details are given of the measurements and prep* of scleral contact filters for the eyes of Domestic fowl. They are made from cellulose acetate of thickness 0*0075 in. by moulding with a brass template at 300°F. When the filters are fitted without scratching the comea and when they fitted snugly, they were found to remain in position as long as 6 months. These filters may provide a means of regulating the wave length and intensiyy of light seen by birds is photopenod expt. D.N.Wheatley

REVIEWS, SYMPOSIA AND SOCIETY PROCEEDINGS

INTERNATIONAL ABSTRACTS OF BIOLOGICAL SCIENCES

Volume 31 Number 2 November 1963

* Denotes an Author's abstract edited primarily by the journal of origin.

ANATOMY OTOLOGY AND HISTOCHEMISTRY

- 28 " ^ STRUCTURE AND ORIENTATION OF CELLS AND FIBRES IN THE NERVOUS SYSTEM OF VERTEBRATES, J.D.Fortyn: Nature, Lond., 1963, 198, 398-399 (Dept. Neurol., St. Univ. Groningen, Netherlands) Spatial organisation of neurones in the lat. geniculate body of the rabbit is revealed by examination of sections cut at a variety of angles. Variation of plane of section of the T-porellated with a systematic variation of die shape of the we neurones. G.M.Lewis

- 2802 " ^ ATTEMPT AT CLASSIFYING NERVE CELLS P * THE BASIS OF THEIR DENDRITIC PATTERNS. ^ Ramon-Moliner: J. comp. Neurol., 1962, 119, 211-227 (Univ. Maryland Sch. Med., Baltimore, Md., U.S.A.) Brains of cats, mice, rats and monkeys were stained by a method which impregnated the dendrites of most of the CILS. A classification of dendrites is proposed which suggests the existence of a certain correlation between morphol. and function. G.M.Lewis

2803. " ^ A NOTE ON MYELOARCHITECTONICS. B. Jakenberg: J. comp. Neural., 1962, 118, 141-156 (Istituto di Cibernetica, Scuola di Perfezionamento in C.S. Teorica e Pratica, Univ. Naples, Italy) A densitometric procedure applied to serial sections of the human cerebral hemisphere was used as an objective method of appraising myeloarchitectonic differences. The histological elements (afferents, efferents, intracortical fibres and horizontal collaterals) contained in the SJP * are intracortical fibre population making up the Wtectonic patterns are assessed. G.M.Lewis

2804. " ^ SUBCORTICAL PROJECTIONS IN THE RHESUS MONKEY. H.G.J.M.Kuypers. ^ f m m and J.W.Parijns: J. comp. Neurol., 1962, 118, 107-

137 (Univ. Maryland Med. Sch., Dept. Anat., Baltimore, Md., U.S.A.) Descending subcortico-spinal projections have been studied in the Rhesus monkey. These fibres were interrupted at low medullary levels and the descending degeneration charted. Long descending fibres distributed primarily to propriospinal cells and were grouped into lat. and ventromedial fibre systems. Short fibres were located in the spinal trigeminal complex, nuclei cuneatus and gracilis and the lat. reticular area. G.M.Lewis

2605. AREA 3, A CRITICAL EVALUATION OF CYTO-ARCHITECTONIC STUDIES. G.Clark: J. comp. Neurol., 1962, 119, 21-24 (U.S. Army Res. Inst. Environmental Med., Natick, Mass., U.S.A.) Studies of sections of Macaca mulatta brain indicate that 'area 3' is not an anatomical entity. G.M.Lewis

2606. COMMISSURAL CONNECTIONS BETWEEN OCCIPITAL LOBES OF THE MONKEY. fcE.Myers: J. comp. Neurol., 1962, 118, 1-16 (Johns Hopkins Sch. Med., Baltimore, Md., U.S.A.) The left occipital pole of a monkey was completely amputated including areas, 17, 18 and 19. The contralat. right hemisphere was subsequently sectioned serially in its DOSL half and stained for fibre degeneration. The findings indicated that the terminal distribution of callosal afferents to the occipital lobe is restricted to Brodmann's area 18. G.M.Lewis

2607. MYELOARCHITECTONICS OF THE CINGULAR CORTEX IN DOG. J.Kreinen J. comp. Neurol., 1962, 119, 225-267 (Dept. Comp. Neuroanatomy, Jagellonian Univ., Krakow, Poland) Myeloarchitectonic analysis of the limbic region of die dog's brain (including gyrus genualis, gyrus cinguli ant. and post, and gyrus subcallosus) indicates the presence of 15 areas in this region. Rich connections of all areas of the limbic region with cingulum were observed.

G.M.Lewis

ANATOMY

2308. SIMILARITIES BETWEEN OLIGODENDROCYTE AND CEREBELLAR GRANULE CELL NUCLEI IN MAMMALIA AND AVES. J.Cemmermeyer: Amer. J. Anat., 1963, 112, 111-139 (Lab. Neuropath., N.I.H., Bethesda, Md., U.S.A.) After taking into account factors such as fixation, regional peculiarities and ageing, it was concluded that the nuclei of the 2 cell types were similar in 19 different spp., and that the cells were concerned with the control of intrinsic blood flow. R.M.H.McMinn
2609. VISUAL RADIATIONS IN MAMMALS WITH PUPE-CONE RETINAE. P.R.Vaidya: J. comp. Neurol., 1962, 119, 201-209 (Dept. Anat., Wayne State Univ., Coll. Med., Detroit, Mich., U.S.A.) By using the method of chromatolysis, the cortical projections of the lat. geniculate body were studied in the ground squirrel, *Citellus tridecemlineatus tridecemlineatus*. The structure of the visual cortex in this sp. with pure cone retina was investigated and compared with that of the guinea-pig which has a pure rod retina. Cone dependent vision seemed to require a simpler structural organisation of the visual cortex. G.M.Lewis
2610. SOME FIBRE PROJECTIONS TO THE SUPERIOR COLICULUS IN THE CAT. J.Altman: J. comp. Neurol., 1962, 119, 77-98 (Psychophysiol. Lab., M.I.T., Cambridge, Mass., U.S.A.) Using the Nauta-Gygax staining technique, the projections of the superior colliculus in the cat from the retina, lat. geniculate nucleus, pulvinar, and visual cortex were examined, and projection from these structures to other mesencephalic and diencephalic nuclei investigated. G.M.Lewis
2611. MEDIAL GENICULATE BODY OF THE DOG. B.Sychowa: J. comp. Neurol., 1962, 118, 355-371 (Neuroanatomical Lab. of the Nencki Inst. Expt. Biol., Polish Akad. ScL, Krakow, Poland) Myeloarchitectonic studies on the medial geniculate body of the dog yield results in accord with data obtained previously in physiol. expt. using microelectrode techniques. G.M.Lewis
2612. FASTIGIORETICULAR FIBRES IN THE CAT. AN EXPERIMENTAL STUDY WITH SILVER METHODS. F.Walberg, O.Pompeiano, L.E.Weström and E.Hauglie-Hanssen: I. comp. Neurol., 1962, 119, 187-199 (Anat. Inst., Univ. Oslo, Norway) Following total or partial lesions of the fastigial nucleus in cats, the degeneration in the medullary and pontine reticular formation has been studied in silver impregnated sections. The origin, course and termination of the fastigioreticular fibres are described. No orderly arrangement has been found in the fastigioreticular connection. G.M.Lewis
2613. THE FASTIGIOVESTIBULAR PROJECTION IN THE CAT. AN EXPERIMENTAL STUDY WITH SILVER IMPREGNATION METHODS. F.Walberg, O.Pompeiano, A.Brodal and J.Jansen: J. comp. Neurol., 1962, 118, 49-75 (Anat. Inst., Univ. Oslo, Norway) Following lesions of the fastigial nucleus in the cat, the ensuing degeneration within the vestibular nuclei has been studied by silver impregnation methods. The findings, in conjunction with other anat. and physiol. data, explain the localised effect of stimulating the ant. lobe. Some functional implications are discussed. G.M.Lewis
2614. RETICULAR FORMATION OF THE ALBINO RAT^f S BRAIN STEM; CYTOARCHITECTURE AND CORTICO-FUGAL CONNECTIONS. F.Valverde: J. comp. Neurol.,

1962, 119, 25-54 (Dept. de Biofis., Centro de Invest Biol., C.S.I.C., Madrid, Spain) The cytoarchitecture of the brain stem reticular formation of the rat has been studied in transverse Nissl-stained sections. In embryos and young rats, details of the collaterals of the pyramidal tract to the reticular formation have been observed by Golgi technique and terminal degeneration observed in Nauta stained sections after lesions made in the cerebral cortex. Three different patterns of cortical projection were disclosed. It was concluded that between the cerebral cortex and neurones of any 1 of the motor nuclei of the cranial nerves there is at least 1 intercalated reticular cell, located in the lat. areas.

G.M.Lev*

2615. LOCALISATION OF THE CELL BODIES OF THE VENTRAL SPINOCEREBELLAR TRACT IN LUMBAR SEGMENTS OF THE CAT. J.L.Hubbard and O.Oscarsson: J. comp. Neurol., 1962, 118, 199-204 (Dept. Physiol., Australian Nat. Univ., Canberra, Australia) The cells of origin of the ventral spinocerebellar tract have been recorded intracellularly and their position assessed in the lumbar segments of the cat. The cells are found in the lat. part of the intermediate zone and the lat. part of the base and neck of the dorsal horn; a few cells were also found in adjacent parts of the ventral horn and head of the dorsal horn.

G.M.Lewis

2616. HUMAN HYPOGLOSSAL NUCLEUS (A QUANTITATIVE STUDY). J.Tomasch and A.A.Etemadi: J. comp. Neurol., 1962, 119, 105-112 (Dept. Anat., Univ. Shiraz, Iran) A complete section series of the human brain stem was studied by photography and microscopical examination. Quant. measurements were made of the distribution of cell size, size of nuclei and nucleoli and nuclear vol. in the hypoglossal nuclei.

G.M.Lev/JJ

2617. NEURONE AND SYNAPSE POPULATIONS IN TH^{*} SPINAL CORD: INDICATION OF ROLE IN TOTAL INTEGRATION. S.Gelfan: Nature, Lond., 1963, I^{*}, 162-163 (Neurophysiol. Lab., New York Med. Coll.* New York, U.S.A.) Evidence as to the neuronal structure of the dog spinal cord is reviewed and discussed in relation to that of other spp. including man. The great no. of inter-neurones, the synaptic richness, the dense intercommunicating network within the intrinsic system of the spinal cord, the neuronal interdependency all indicate integrative activities comparable to those of the brain; difference between total activities of brain and spinal cord may reflect principally a difference in no. of units involved.

G.M.Lewis

2618. POSTNATAL GROWTH AND CHANGE OF DENSITY OF THE NERVE FIBRES OF THE CERVICAL SPINAL CORD OF THE ALBINO MOUSE. F.B.Sakl*: J. comp. Neurol., 1962, 119, 97-104 (Anat. Dept., Abbassia Med. Fac, Ein Shams Univ., Cairo, Egypt) The postnatal growth of nerve fibres in the white matter of the cervical spinal cord of the albino mouse was studied. The change in packing density during growth correlated with the process of myelination occurring at the same time.

G.M.Lewis

2619. MYELINATED NERVE FIBRES IN COMMUNICA^{ICA}^{II} RAMI ATTACHED TO CAUDAL LUMBAR NERVES... R.H.Webber, G.H.Wilson, J.W.Chung, R.J.McCard*, and J.H.Wiley: J. comp. Neurol., 1962, 119, H^{**} (Dept. Anat., Creighton Univ. Sch. Med., Oman, Neb., U.S.A.) Degeneration studies of nerves in the cat were made in an attempt to investigate the nature

ANATOMY

fte small myelinated nerve fibres which traverse commissating rami at caudal lumbar levels. Few, if any, nerve cells in the lumbar portion of the sympathetic trunk had myelinated processes. The location was established for the cell bodies of some of the myelinated nerve fibres.

G.M.Lewis

2620. THE HISTOLOGY OF THE CONUS MEDULLARIS AND THE FILUM TERMINALE. I. Schubert: Anat.

Anz. 1963, 112, 211-220 (Anat. Inst., Karl-Marx Univ., Leipzig, Germany) The histol. of the lowermost part of the spinal cord is examined; the medullary cone showed a similar picture as the higher segments of Record; the central canal is still visible; neuroglia present around the canal; grey and white matter alternating in the internal filum; the external filum terminale consists of collagen bundles.

(German) J.E.Linder

2621. CILIATED SCHWANN CELLS IN AUTONOMIC NERVOUS SYSTEM OF ADULT RAT. M.A.Gnollo and S.L.Palay: J. cell Biol., 1963, 16, 430-436 (Dept. Anat., Western Reserve Univ. Sch. Med., Cleveland, Ohio, U.S.A.)

The ultrastructure of modified cilia attached to the surface of Schwann cells is described in t.M. of OsO₄-fixed tissue of the superior cervical, pnenopalatine ganglia, cervical vagus nerve and gastro-intestinal tract. The internal structure differs from other vertebrate and invertebrate cilia and the significance of this is discussed.

P.Barrow

2622. INVERSE ENZYMIC CHANGES IN NEURONS AND GLIA DURING INCREASED FUNCTION AND HYPO-OXIA. A.Hamberger and H.Hyden: J. cell Biol., 1963, 16, 521-525 (Inst. Neurobiol., Med.

Univ. Goteborg, Sweden) Rabbits were exposed to intermittent physiol. stimm. of the vestibular nerve for 7 days. Deiter's nerve cells and the surrounding glia were dissected and assayed for cytochrome oxidase activity, anaerobic glycolysis and RNA content. Anaerobic glycolysis in the nerve cells decreased by 25-40% but increased in the glia which also showed decreased respiratory enzyme activity. Hypo-oxia produced by exposure to 8% O₂ caused an increased O₂ consumption and production in nerve cells, but no change in the J₂. The neurons and glia appear to be linked in a coupled energetic system and the evidence for a regulatory metabolic mechanism between the 2 is discussed.

P.Barro

2623. HISTOCHEMISTRY OF HUMAN CHOROID PLEXUS.

*Issidorides, W.M.Ehanklin and N.A.Azzam: Anat. *c. 1961, 141, 21-29 (Dept. Histol., Sch. Med., American Univ., Beirut, Lebanon) Vacuoles in J²ti Plexus epithelium contain a substance stainable with diamine impregnation, PA-Schiff, Neutral Red, Methyl Green. After oxidation with aldehyde fuchsin and silver diamine reveal a surface layer and unstained central core of the 1²D. The oxidation also blocks vacuole staining J²A-Schlff, Neutral Red, Nile Blue, and Methyl C²J. The distribution of RNP in epithelial cells is VS? to the vacuoles, suggesting production of the ²vacular contents by RNA protein.

2624. LIGHT AND ELECTRON MICROSCOPIC EXAMINATION OF THE PARS INTERMEDIA AND NEUROHYPOPHYSIS OF THE RAT. CONCERNING THE RELATIONSHIP BETWEEN PARS INTERMEDIA AND POSTERIOR LOBE OF THE HYPOPHYSIS.

B.Ziegler: ? - z^{11f}; 1963, 59, 486-506 (Anat. Inst., Univ. Kiel, Germany)

The pituitaries of 6 coloured and 6 albino rats were examined histol.; 3 albino rats were given a 2Pf₀ soln. of NaCl instead of drinking water for 15 days; the result of the histol. examination confirms the presence of 2 different types of epithelial cells in the pars intermedia² light and dark cells which are both PA-Schiff pos.; the dark cells increase in no. when NaCl is given. Neurosecretory nerve fibres penetrate into the pars intermedia from the post. lobe; the amount of neurosecretory substance diminishes when NaCl is administered.

(German) J.E.Linder

2625. ELECTRON MICROSCOPIC STUDY OF HUMAN THYROID CELLS IN VITRO. W.J.Irvine and A.R.Muir: Exp. Cell Res., 1963, 29, 73-81 (Dept. Therap. Anat., Univ. Edinburgh, Scotland)

Trypsinised human thyroid cells studied by E.M. are suggested to be derived from thyroid secretory epithelium and not from any other cell type. A prelim. E.M. study of the cytotoxic effect of C¹-fixing thyroid Ab on these human thyroid cells in vitro, and the morphol. changes are compared.

K.Jones

2626. ULTRASTRUCTURE OF THE FREEZE-DRIED MOUSE THYROID GLAND.

R.Ekholm, H.F.Helander and T.Zelander: Z. Zellforsch., 1963, 59, 467-478 (Dept. Anat., Univ. Gothenburg, Sweden)

The ultrastructure of freeze-dried mouse thyroid embedded in Vestopal or Epon is compared with thyroid glands fixed in the usual manner by immersion into OsO₄ soln. Results were essentially similar to those observed after the usual method of fixation by immersion, although slight differences were observed: plasma membranes of lat. cell surfaces appeared to be asymmetrical, mitochondria had an undulating contour.

J.E.Linder

2627. CYTOLOGY OF NORMAL PARATHYROID GLANDS

OF MAN AND VIRGINIA DEER. LIGHT AND ELECTRON MICROSCOPIC STUDY WITH MORPHOLOGIC EVIDENCE OF SECRETORY ACTIVITY.

B.L.Munger and S.I.Roth: J. cell Biol., 1963, 16, 379-400 (Dept. Anat., Washington Univ. Sch. Med., St. Louis, Mo., U.S.A.)

Human parathyroids contained chief cells in active and inactive phases and oxyphil cells. Chief cells of deer are uniform and contain electron opaque bodies of 100-400 mji, presumed to be secretory granules. Active human chief cells are distinguished by a large Golgi apparatus and numerous secretory granules. These hematoxylin pos. argyrophilic bodies are found in the capillary endothelial cells and surrounding connective tissue and have been followed from their formation in the Golgi. E.M. of 6 human biopsy specimens and the 2 glands at the upper pole of each lobe of the thyroid of 1 deer are described.

P.Barrow

2628. THE THYMUS IN MICE OF STRAIN 129/J

STUDIED WITH THE E.M. S.L.Clark, jun.: Amer. J. Anat., 1963, 112, 1-33 (Dept. Anat., Washington Univ. Sch. Med., St. Louis, Mo., U.S.A.)

The thymus was a solid epithelial organ infiltrated with lymphoid cells and perforated by delicate reticular fibres and blood vessels. There were no Hassal's corpuscles but a few epithelial cells were arranged in acini and possessed cilia. A peculiar type of venule with thick endothelium seemed to be the site of migration of lymphocytes between lymphoid tissue and the blood stream.

R.M.H.McMinn

2629. THE MORPHOLOGY OF THE EPITHELIAL THYMUS

OBSERVATIONS ON LYMPHOCYTE-DEPLETED AND FOETAL THYMUS.

K.J.Shier: Lab. Invest., 1963, 12,

ANATOMY

316-326 (Pathol. DepL. Wayne State Univ., Coll. Med., Detroit, Mich., U.S.A.) Human thymuses from foetuses and children and adults dying from debilitating diseases were studied histol. Attention is drawn to the prominent epithelial lined tubules of early foetal thymuses which become distorted and engulfed by enlarging parenchymal tabulations infiltrated with lymphocytes and appear as corpuscles in sections. Lymphocyte depletion leaves the epithelial portion unaltered and tubular structures may reappear.

A.M.Mackay

2630. ELECTRON MICROSCOPIC STUDIES OF THE EPITHELIAL RETICULAR CELLS OF THE MOUSE THYMUS. T.Hoshino: Z. Zellforsch., 1963, 59, 513-529 (Dept. Anat., Hokkaido Univ. Med. Sch., Sapporo, Japan) Epithelial reticular cells of the thymus of mice ranging in age from 5 to 8 weeks were examined; the epithelial cells are generally interconnected with one another by means of long cytoplasmic processes. Epithelial cells of the cortex are characterised by long processes and the presence of large round vesicles. Two types of epithelial cells are found in the medulla, reticular cells and hypertrophic. Degenerating hypertrophic cells are concentrically surrounded by a few hypertrophic and reticular cells, thus forming Hassall's corpuscles.

J.E.Linder

2631. ACTIVITY MANIFESTATIONS OF HASSALL'S CORPUSCLES IN VITRO AS REVEALED BY CINEMATOGRAPHY. E.G.Flaum: Z. Zellforsch., 1963, 59, 479-485 (Dept. Anat., Univ. Southern California Med. Sch., Los Angeles, Calif., U.S.A.) Tissue cultures of thymic explants, obtained from newborn albino rats, were examined using phase-contrast and timelapse cinematography; several corpuscles exhibited rotatory movement and increased in size with the addition of neighbouring free cells; some of the individual cells of the culture showed pulsatile activity.

J.E.Linder

2632. HISTOLOGICAL STUDY OF THE ZONA GLOMERULOSA OF THE ADRENALS, PINEAL GLAND, DIENCEPHALIC NEUROSECRETION AND THE GLOMERULA REGION OF THE KIDNEY IN WHITE RATS RECEIVING THIOACETYLATED SPIROLACTONE. G.Bugnon, N.Moreau and R^Lenys: C.R. Soc. Biol., Paris, 1962, 156, 1658-1662 (Lab. d'Histologie, Ecole Nat. Med., Besancon, France) Male white rats received 25 mg./day Aldactone for 10 days. There was a decrease in lipid content of the zona glomerulosa with hyperplasia and parenchymatous hypertrophy. There was a decrease in Gomori-pos. neurosecretory material of the supraoptic nuclei with hypertrophy of the cells and nuclei. There was no modification of the glomerula zone of the kidney or of the pineal gland.

(French) M. A. Price

2633. RADIOAUTOGRAPHIC STUDIES WITH TRITIATED THYMIDINE OF CELL MIGRATION IN MOUSE ADRENAL AFTER CARBON TETRACHLORIDE STRESS. R.M.Brenner: Amer. J. Anat., 1963, 112, 81-95 (Dept. Biol., Brown Univ., Providence, R.I., U.S.A.) The upper zona fasciculata was judged to be a region of max. cell turnover from which cells migrated centripetally; migration of cells from the glomerulosa seemed to be minimal.

R.M.H.McMinn

2634. E.M. DESCRIPTION OF A THIRD CELL TYPE IN ISLETS OF RAT PANCREAS. F.Caramia: Amer. J. Anat., 1963, 112, 53-64 (Inst. Path., Univ. Perugia, Italy) Apart from clear and dark types of a cells.

and 3 cells, a third type is described in both young and mature animals that probably corresponds to die D type originally noted by Bloom in the human pancreas.

R.M.H.McMinn

2635. ULTRASTRUCTURE AND ENZYME HISTOCHEMISTRY OF THE PANCREATIC ISLETS IN THE HORSE. N.BjBrkman, C.HellerstrOm, B.Hellman and U.Rothman: Z. Zellforsch., 1963, 59, 535-554 (Dept. Anat. Hist., Royal Vet. Coll., Stockholm, Sweden)

The central parts of the pancreatic islets of die horse contain A2 cells alone, while the Ai and B cells are intermingled at the periphery. It was seen that the A2 cells contain dense spherical granules; light and dark A2 cells can be differentiated; the B cells possess numerous secretory granules whilst Ai cells contain very large no. of mitochondria and ribosomes as well as tiny granules. Alk. and acid phosphatase reactions were neg. throughout the islet tissue; a strong glucose 6-phosphatase activity was found in the peripheral cells. Diphospho- and triphospho-nicotinamide nucleotide diaphorase activity was high in the peripheral cells and considerably weaker in the A2 cells; a low succinic dehydrogenase activity in the islet tissue was observed with a weaker reaction in the A2 cells than in the peripheral ones.

J.E.Linder

2636. ULTRASTRUCTURE OF THE CILIATED EPITHELIUM OF THE NASAL SEPTUM OF THE RAT.

L.Stockinger: Z. Zellforsch., 1963, 59, 443-466 (Hist.-Embryol. Inst., Univ. Vienna, Austria)

The epithelium is high-columnar and contains 4 types of cells: ciliated, indifferent, goblet and replacement cell*. Structure of the cilia, apart from minor details, is simile to previous descriptions; there are numerous centrioles present in the apical cytoplasm and the superficial border zones of the cells. On die surface of the cells there are very long cytoplasmic processes present for which the author proposes the term 'cytofilia' * to differentiate them from the much shorter microvilli.

(German) J.E.Linder

2637. ULTRASTRUCTURE OF THE HUMAN SUB-MAXILLARY GLAND. B.Tandler: Amer. J. Anat., 1962, 111, 287-307 (Dept. Anat., New York Univ. Sch. Med., New York, U.S.A.) The basal plasma membrane is thrown into radiating foot processes that interdigitate with those of adjacent cells. Tubular secretory capillaries, containing large no. of microvilli* are formed by adjacent cells. Finer secretory capillaries, are separated from the basal folds by only 1 or 2 termini bars, a distance as small as 0-4 fi.

R.M.H.McMinn

2638. MORPHOLOGICAL AND HISTOCHEMICAL STUDIES OF EXPERIMENTALLY ENLARGED AND ATROPHIED SALIVARY GLANDS OF RATS.

C.S.Handelman and H.Wells: Amer. J. Anat., 1963, 112, 65-79 (Forsyth Dental Inf., Boston, Mass., U.S.A.)

Repeated amputation of the lower incisor teeth leads to hypertrophy of acinar cells without signif. significantly affecting the size of tubules and ducts. Dibenzamine causes acinar atrophy, with some decrease in width of the granular tubules. The succinic dehydrogen* activity of the tubules is not altered during hypertrophy or atrophy of the glands. RNA accumulates in hypertrophic cells and almost disappears in atrophy, while PA-Schiff and Alcian Blue-pos. material is unchanged.

R.M.H.McMinn

2639. STRUCTURAL DIFFERENCES BETWEEN PAROTID AND SUBMANDIBULAR DUCTS. P.Rother: Anat. ^{ADM}, 1963, 112, 172-190 (Anat. Inst., Karl-Mann Univ., Leipzig, Germany) HistoL of material o ^{ADM} tw

31 Parotid and 20 submandibular ducts is compared; the *all of the parotid duct is made up of columnar epithelium covered by a thin layer of collagen and loose connective tissue; epithelium of submandibular duct may be either cuboidal or stratified, and wall contains numerous elastic but only a few connective tissue fibres.

(German) J.E.Linder

2640. FINE STRUCTURE OF GASTRIC MUCOSA IN RAT. S.Ito and R.J.Winchester: *J. cell. Biol.*, 1963, 16.

541-577 (Dept. Anat., Harvard Med. Sch., Boston, Mass., U.S.A.) The stomach of adult *Myotis lucifugus* was fixed *in situ* with OsO₄ for E.M. and formalin-fixed sections prep. for light microscopy. The fine structure of the different cell types is similar to that of other mammals but the distribution and no. of cells differ.

Retails of surface mucous cells, mucous neck cells, junctional cells, chief cells and argentaffin cells are discussed.

P.Barrow

2641. A TECHNIQUE FOR SEPARATION OF THE CELLS OF THE GASTRIC MUCOSA. A.L.Walder and J.B.

Lunseth: *Proc. Soc. exp. Biol.*, N.Y., 1963, 112.

494-496 (Dept. Surg., Univ. Hosp., Univ. Minnesota,

Minneapolis, Minn., U.S.A.) A technique is described for the separation of gastric mucosal cells from 2* *bit which involved collagenase digestion for 2 hr. V. - Cell types are separated by differential centrifugation in a gradient of sucrose polymer soln.

D.N.Wheatley

2642. INTRINSIC NERVE FIBRES IN LIVER PAREN-

CHYMA. Y.Mikhail and A.L.Saleh: *Anat. Rec.*, 1961, 141, 317-323 (Fac. Med., Ein Shams Univ., Cairo, Egypt) The parenchyma of the liver of rat, guinea-pig, rabbit and dog was found to be

supplied with nerve fibres. Terminal parasympathetic ganglia varying in size, shape and no. of contacts were found. The neurones, rounded or spherular in shape, were usually multipolar. Dendrites from postganglionic fibres together formed a terminal plexus in the liver parenchyma.

F.Beck

***2. NATURE OF THE VILLI IN THE SMALL INTESTINE OF THE RAT.** S.J.Baker, V.L.Mathan and

J.Cherian: *Lancet*, 1963, i, 860 (Wellcome Res.

Jtst, Christian Med. Coll. Hosp., Vellore, South India) About 10 days after birth the finger-like villi are replaced by ridges.

G.H.Bell

3. INFLUENCE OF NORMAL FLORA ON MUCOSAL MORPHOLOGY AND CELLULAR RENEWAL IN THE

S_gM. A COMPARISON OF GERM-FREE AND CONVENTIONAL MICE.

C.D.Abrams, H.Bauer and

g*rtin Lab. Invest., 1963, 12, 355-364 (Dept. JPL, Walter Reed Army Inst. Res.,

Washington, D.C., U.S.A.) Many of the morphological features of 'normal' ileal mucosa develop only in

*. th² of a bacterial flora. [3H]Thymidine was given

to autoradiographs of ileum prep. at various times.

It is shown that lamina propria small cellular renewal

is lower in germ-free mice.

A.M.Mackay

4. THE PRESENCE AND DISTRIBUTION OF MAST CELLS IN THE GASTROINTESTINAL TRACT AT

AUTOPSY. H.T.Norris, N.Zamcheck and L.S.Gottlieb:

Gastroenterology, 1963, 44, 448-455 (Gastrointestinal Res. Lab. Mallory Inst. Path., Boston City Hosp., Boston, Mass., U.S.A.) Post-mortem studies of

human gastrointestinal tract by histol. sectioning and staining of these with Bismarck Brown was used to discover

what changes occurred in the mast cell population of the mucosa, submucosa, muscularis mucosa and serosa after death. It was found that there was no significant change in no. in each region along the gut between 4 and 9 hr. after death. The ileum was richest in mast cells whilst the gall-bladder was least well populated. The distribution of the mast cells in the various layers is described.

D.N.Wheatley

2646. PERITONEAL MAST CELL AS A CONTRIBUTOR TOHEMOCONIA. J.P.Adams and G.H.Paff: *Anat. Rec.*, 1962, 144, 19-23 (Dept. Anat., Univ. Miami Sch. Med., Coral Gables, Fla., U.S.A.) Thoracic

duct lymph of the rat contains granules which stain metachromatically with watery Toluidine Blue. Following rupture of the peritoneal mast cells by i.p. injn. of protamine sulphate, showers of granules appear in the lymph. It is suggested that peritoneal mast cells by total rupture or clasmatisos contribute granules to the peritoneal fluid which pass into the lymphatics and eventually into the blood stream as one of the components of hemoconia.

F.Beck

2647. THE PERIOSTEAL SPREAD TECHNIQUE FOR STUDY OF MAST CELLS. H.Seyle, G.Gabbiani and K.Nielsen: *Proc. Soc. exp. Biol.*, N.Y., 1963, 112,

460-463 (Inst. Méd. et Chir. Expt., Univ. Montreal, Canada) A technique is described for the production of good specimen fixation of periosteal membranes from the cranial flat bones of the rat so that mast cells are preserved in undisrupted integrity. Fixation was performed in formal:alcohol (1:4) using 10% formaldehyde soln. Mast cells appear in 2 rows either side of blood vessels and may be quite varied in their form. Similar expt. with mouse and hamster have proved equally successful.

D.N.Wheatley

2648. TISSUE EOSINOPHIL CELLS. G.Jimbo: *Bull.*

Yamaguchi med. Sch., 1962, 9, 39-44 (Dept. Anat., Yamaguchi Med. Sch., Ube, Japan) The eosinophil cell levels and their infiltration into other organs were

studied in mice under various conditions. Under the influence of various chem. and physical stimn.. the cells in the lamina propria mucosae increased daily, reaching the max. on the 3rd day, and returned to normal level on the 7th day.

K.Jones

2649. ELECTRON MICROSCOPIC STUDY OF ADIPOSE TISSUE (FAT ORGANS) WITH SPECIAL REFERENCE TO THE TRANSPORT OF LIPIDS BETWEEN BLOOD AND FAT CELLS. F.Wassermann and T.F.McDonald:

Z. Zellforsch., 1963, 59, 326-357 (Div. Biol. Med. Res*, Argonne Nat. Lab., Argonne, Ill., U.S.A.)

Circulation of lipids, their removal from blood, uptake and release by the cells of fat depots of the body were studied. Inguinal fat bodies of newborn mice and epididymal fat pads of young adult rats were examined; material derived from over 150 animals was used in this study.

J.E.Linder

2650. ISOLATED FLAGELLA IN HUMAN SKIN.

R.B.Wilson and C.A.McWhorter: *Lab. Invest.*, 1963, 12, 242-249 (Pathol. Dept., Nebraska Univ. Wed. Coll., Omaha, Neb., U.S.A.) Flagella were noted in E.M. prep. of normal and neoplastic epidermal basal cells, dermal fibroblasts and 1 squamous cell carcinoma. A possible relationship to cellular mitotic activity is suggested.

A.M.Mackay

2651. NEW OBSERVATIONS ON THE STRUCTURE OF THE PACINIAN CORPUSCLE AND ITS RELATION TO THE PERINEURAL EPITHELIUM OF PERIPHERAL

ANATOMY

NERVES. T.R.Shanhaveerappa and G.H.Bourne: Amer. J. Anat., 1963, 112, 97-109 (Dept. Anat., Emory Univ., Atlanta, Ga., U.S.A.) The lamellar sheets consist of flat squamous epithelial cells. The superficial layers are an extension of the perineural epithelium which is in turn the continuation of the pia-arachnoid membrane as previously described by the authors. The Pacinian corpuscle appears to be a localised enlargement at the end of the nerve fibre of the perineural epithelium.

R.M.H.McMinn
2652. THE SENSORY INNERVATION OF THE COMMON NORTH AMERICAN RACCOON (PROCYON LOTOR). P.E.Zollman and R.K.Winkelmann: J. comp. Neurol., 1962, 119, 149-157 (Section of Vet. Med., Mayo Clinic, Rochester, Minn., U.S.A.) The skin of the raccoon, (*P. lotor*), which has remarkable manual dexterity and tactile sensitivity, contains the usual mammalian end-organ with nonsp. cholinesterase; the end organ was found much more frequently in the forepaws than the hindpaws. Dermal nerve networks, hair follicle nerve networks, tactile hair discs and Vater-Pacini corpuscles were also observed. G.M.Lewis

2653. STRUCTURAL CONTINUITIES OF TRANSVERSE TUBULAR SYSTEM OF RABBIT AND HUMAN MYOCARDIAL CELLS. D.A.Nelson and S.E.Benson: J. cell Biol., 1963, 16, 297-313 (Dept. Lab. Med., Univ. Minnesota Med. Sch., Minneapolis, Minn., U.S.A.) E.M. of ventricular muscle fixed in OsO₄ embedded in Vestopal W indicate that the transverse tubular system of the sarcoplasmic reticulum is a direct extension of the extracellular fluid space. The results are discussed with ref to diffusion kinetics and excitation and activation of the muscle. P.Barrow

2654. ULTRASTRUCTURE AND DISPOSITION OF VESICULAR NERVE PROCESSES IN SMOOTH MUSCLE. J.C.Thaemert: J. cell Biol., 1963, 16, 361-377 (Dept. Anat., Univ. Colorado Sch. Med., Denver, Colo., U.S.A.) Micrographs of methacrylate-embedded sections prep, from OsO₄-fixed tissue of the descending colon, stomach wall, small intestine and urinary bladder of 2-month-old female albino rats were studied. Bundles of unmyelinated nerve fibre were observed in the intercellular spaces of smooth muscle. Vesiculated nerve processes touching the surface of the smooth muscle cells are assumed to constitute neuromuscular junctions. P.Barrow

2655. HISTOPHYSIOLOGICAL STUDY OF THE RAT DIAPHRAGM. J.C.George and A.K.Susheela: Biol. Bull. Woods Hole, 1961, 121, 471-480 (Div. Animal Physiol. Histochem., Dept. Zool., M.S. Univ. Baroda, India) The nature and distribution of 2 types of fibres in the dorsal, lat. and ventral regions of the rat diaphragm were investigated. The fat and glycogen content and enzymic activity in each region were also determined. It was concluded that the narrow red fibres were adapted for aerobic metabolism, the broad white fibres for anaerobic metabolism. G.J.Peakin

2656. THE HISTOLOGICAL STRUCTURE OF THE FOSSA OVALIS CORDIS. Karl-Heinz Voigt: Anat. Anz., 1963, 112, 135-139 (Anat. Inst., Karl-Marx Univ., Leipzig, Germany) A muscular system consisting of several main layers is described; small regions of connective tissue and fat cells are found between the muscle fibres; 9 specimens of fossa ovalis were serialised and a further 25 specimens were examined as whole mounts after clearing. (German) J.E.Linder

2657. INNERVATION OF THE EXTRINSIC MUSCLES OF THE EYES OF BIRDS. D.W.Burnaschewa: Anat. Anz. 1963, 112, 230-242 (Dept. Hist., Med. Inst., Kasan, U.S.S.R.) The innervation of the extrinsic muscles of the eyes of *Columba livia*, *Bubo bubo* and *Gallus domesticus* was studied, using the silver impregnation techniques of Bielschowsky-Gross and of Jabonero. Numerous bundles of myelinated as well as amyelinated nerve fibres were seen; the most frequently occurring type of motor nerve endings are endplates. Most of the sensory organs are found at the muscle-tendon junctions; large no. of free ending receptor organs were seen.

(German) J.E.Linder

2658. FIBRILLOGENESIS IN REGENERATING TENDON. N.V.P.Fernando and H.Z.Movat: Lab. Invest., 1963, 12, 214-229 (Pathol. Dept., Banting Inst., Toronto Univ., Canada) Changes in regenerating rabbit Achilles tendon were studied by light and E.M. At first ground substance is abundant and cells and fibrils lie haphazardly. Although precursors probably form within fibroblasts, fibrils form extracellularly. Later bundles of collagen fibrils are orientated in the long axis of the tendon. A.M.Mack*

2659. MULTIPLE NATURE OF ALKALINE PHOSPHATASE IN THE MAMMALIAN KIDNEY. R.P.Finegan: Nature Lond., 1963, 198, 193-194 (Histol. Dept., Med. # Gen. Hosp., Alberta, Canada) Alk. phosphatase visualised by both a Ca pptn. method and a coupling & dye method in kidney tissue. In human kidney biopsies from diabetes mellitus or essential hypertension, the former technique revealed very low phosphatase activ^{ity} while the latter showed a normal reaction. The suggestion that this is due to the presence of 2 phosphatases with different substrate specificities (only one being depleted in the disease states) is supported by observations on the staining reactions of kidneys of *Antilocapra americana* and *Scapanus latimanus* by these methods.

GMLCWJ

2660. CHOLINESTERASE ACTIVITY IN THE KIDNEY VARANUS NILOTICUS L. L.Arvy: C.R. Soc. Biol. Paris, 1962, 156, 1560-1563 (Lab. Physiol., Jouy-en-Josas, S-et-O., France) In a histochem. study of the kidney of *V. niloticus* the glomeruli appeared to contain strong cholinesterase activity. Both acetyl and butyryl choline were hydrolysed. The collecting ducts were in cholinesterases and some cholinesterase activity was found in the epithelium. (French) M.A.P.*

M.A.P.*

2661. CYCLE OF SEMINIFEROUS EPITHELIUM IN MAN. Y.Clermont: Amer. J. Anat., 1963, 112, 35-51 (Dept. Anat., McGill Univ., Montreal, Canada) The various generations of germ cells - spermatogonia, spermatocytes and spermatids - have an obvious tendency to form cellular associations of constant composition. Six of these associations referred to as stages of the cycle are described and succeed each other in time in a fixed sequence which goes on repeating itself. In man certain irregularities tend to obscure this general pattern which is nevertheless similar to that in other mammals.

RMHMCMI

2662. DEVELOPMENT AND CHEMODIFFERENTIATION OF THE SEMINAL VESICLE AND COAGULATING GLANDS OF THE RAT UNDER NORMAL AND EXPERIMENTAL CONDITION. B.Henningsen: Z. Zellforsch., 1962, 59, 405-442 (Anat. Inst., Univ. Kiel, Germany) Development and histochem. differentiation of seminal vesicles and coagulating glands of 146 Wistar rats, ranging in age from 1 day to 81 days, were studied; the morphol-

and cyt. development of seminal vesicle and of the coagulating gland are almost completed on the 20th day after birth. NAD-diaphorase can be detected in the seminal vesicle from the 6th day and carbonic anhydrase after 14 days. NAD-diaphorase and carbonic anhydrase can be demonstrated in the coagulating gland for the first time on the 18th day. Testoviron injn. will speed up the development and differentiation of the seminal vesicle but has scarcely any effect upon the coagulating gland.

(German) J.E.Linder

2663. HISTOCHEMICAL AND ULTRASTRUCTURAL OBSERVATIONS ON PROSTATIC EPITHELIUM OF OLDER RATS. D.Brandes: Lab. Invest., 1963, 12, 290-305 (Pathol. Dept., Johns Hopkins Univ. Med. Sch., Baltimore, Md., U.S.A.)

The deposition of electron-dense bodies in the supranuclear region of prostatic acinar epithelium increase with age. Their M. appearance and histochem. reactions are characteristic of lysosomes. They are also related to lipofuscin. Cytoplasmic basophilia is related to the presence of ribosomes in ergastoplasm. A.M.Mackay

2664. USE OF FORMALIN FIXATION IN CYTOCHEMICAL DEMONSTRATION OF SUCCINIC AND NAD AND NADP-DEPENDENT DE HYDROGENASES IN MITOCHONDRIA. D.G.Walker and A.M.Seligman: J. cell Biol., 1963, 16, 455-469 (Dept. Surgery, Sinai Hosp., Baltimore, Md., U.S.A.) A procedure for the cytochem. demonstration of the dehydrogenases which preserves the mitochondria of rat liver is reported. Finely dried tissue blocks were fixed by immersion for 2-4 min. in balanced salt soln. containing 0.7-2% formaldehyde and frozen at -70°. Succinic and D-P-hydroxybutyric lactic malic and isocitric dehydrogenases were demonstrated exclusively in the mitochondria of hepatic acinar cells using the appropriate substrates and tetra-nitro-BT. P. Barrow

2665. USE OF TETRANITRO-BLUE TETRAZOLIUM FOR CYTOCHEMICAL LOCALISATION OF SUCCINIC DEHYDROGENASE. CYTOCHEMICAL AND CYTOLOGICAL STUDIES OF SARCOMA 37 ASCITES TUMOUR CELLS. C.G.Rosa and K.-C.Tsou: J. cell Biol., 1963, 16, 445-454 (Daniel Baugh Inst. Anat., Jefferson Med. Coll., Philadelphia, Pa., U.S.A.) Demonstration of succinic dehydrogenases in the mitochondria of smear prep. of ascites cells using tetrantro-blue tetrazolium [TNBT] and nitro-blue tetrazolium [NBT] were compared. TNBT is a more suitable electron acceptor than NBT as a reagent in oxidation dehydrogenase enzyme localisation. P. Barrow

2666. USE OF GLYCOL-METHACRYLATE IN HISTOLOGY & HISTOCHEMISTRY. J.Lesko, M.Rosenberg and K.Sykora: & L Morfol., 1963, 11, 188-191 (Virov. u. Lek. Conv., Bratislava. Mlynska dolina 1. Czechoslovakia). K.Jones

2667. PLASTIC Embedding of ANATOMICAL PREPARATIONS. J.Lindberg and K.-A.Norberg: Acta Histol. Scand., 1963, 112, 227-229 (Hist. Dept., Karolinska Hiffrif. Stockholm, Sweden) A method for the embedding of museum specimens in celodal, a urea-formaldehyde polymer is described; celodal has good optical prop, and becomes water insol. after semin. J.E.L. er

2668. PRINCIPLES AND METHODS FOR THE MORPHOMETRIC STUDY OF THE L E.R.Weibel: Lab. Invest.,

pulmonary Lab., First Med. Div., Bellevue Hosp., New York, U.S.A.) Preparative techniques, sampling methods, microscopic quantitation and statistical analysis of data obtained in the study of human lung sections are described and evaluated in detail. A.M.Mackay

TISSUE CULTURE

2669. RELATIONSHIP BETWEEN CHROMOSOME NUMBER AND RADIOSensitivity OF TUMOUR CELLS. L.Revesz, U.Glas and G.Hilding: Nature, Lond., 1963, 198, 260-261 (Dept. Tumour Biol., Karolinska Inst. Med. Sén., Stockholm, Sweden)

A series of tumour cell clones derived by serial irradiation of ELD ascites tumour were tested for their radiosensitivity; this could not be consistently related to the chr. no. of different clones. G.M.Lewis

2670. FURTHER OBSERVATIONS OF AORTIC CELL CULTURES FROM UNTREATED AND CHOLESTEROL-FED RABBITS. R.Koide, O.J.Pollak and D.A.Burns: J. Atheroscler. Res., 1963, 3, 32-43 (Dover Med. Res. Center, Inc., Dover, Dela., U.S.A.) Two distinct cell lines were obtained in vitro from aortae of untreated and cholesterol-fed rabbits. They were round endothelial cells and spindle-shaped, fibroblastic or fibrocytic cells, and there was no transition between the different cell lines. Their characteristics are described. KJqnes

2671. UNFRACTIONATED PREPARATIONS OF HISTONES FROM NORMAL MAMMALIAN TISSUES AS AGENTS INHIBITING GROWTH OF TRANSPLANTING TUMOURS. V.L.Vorob'yev and V.M.Bresler: Nature, Lond., 1963, 198, 545-547 (Inst. Cytol., Acad. ScL U.S.S.R., Leningrad, U.S.S.R.) Incubation of cells of mucous liver cancer with normal rat liver histone led to a marked inhibn. of tumour growth. Tryptic or chymotryptic hydrolysates of histone prep. did not inhibit tumour growth. Growth of mucous liver cancer cells was also inhib. by incubation in the presence of rat thymus and calf thymus histones. J.R. Sargent

2672. CYTOTOXICITY OF STEROIDS TO MAMMALIAN CELLS IN TISSUE CULTURE. D.Perlman, N.A.Giuffre, S.A.Brindle and S.C.Pan: Proc. Soc. exp. Biol., N.Y., 1962, 111, 623-625 (Squibb Inst. for Med. Res., New Brunswick, N.J., U.S.A.) Cultured Grey's adrenal cells (3G29) were found to be much more tolerant to fluorinated steroids than Earle's L cells and Ehrlich's ascites cells. Adrenal cells also metabolised steroids more extensively. Progesterone deriv. proved to be more toxic than corticosteroids to all types of cell lines. M.M.Shapland

2673. OESTRADIOL-CELLULAR INTERACTION IN TISSUE CULTURE. R.J.Kuchler, N.J.Arnold and R.C. Grauer: Proc. Soc. exp. Biol., N.Y., 1962, 111, 798-804 (Dept. Microbiol., W.H.Singer Mem. Res. Lab., Allegheny Gen. Hosp., Pittsburgh, Pa., U.S.A.) L-strain mouse fibre-blasts adsorb steroid mol. from tissue culture medium within a few min. the amount of adsorption being directly related to concn. of steroid in the medium. Further accumulation of oestradiol does not occur even after hr. of contact. The interaction is extremely labile, 50% of steroid being removed by diln.

ANATOMY

of cells with equal vol. of medium or by washing once. This indicates that the steroid is bound at the cell membrane and little, if any, permeates the cell. Adsorption was impaired by addition of horse serum to cultures, competition for steroid being between cell surface sites and protein rather than protein and steroid for free sites.

M.M.Shapland

2674. LETHAL EFFECT OF INDOLYL-3-ACETIC ACID ETHYL ESTER AND PROTECTIVE EFFECT ON INDOLYL-3-ACETIC ACID ON FREE CELLS OF THE EHRLICH ASCITES CARCINOMA. R.D.Schultz and D.Norman: *Nature, Load., 1963, 198, 553-554* (North American Aviation, Inc., Downey, Calif., U.S.A.) Incubation of free Ehrlich ascites cells in the presence of suspensions of indolyl-3-acetic acid ethyl ester led to a marked increase in cell mortality, while incubation in the presence of indolyl-3-acetic acid resulted in a mortality rate lower than that of controls.

J.R.Sargent

2675. EFFECT OF MITOMYCIN C ON THE GROWTH AND DEOXYRIBONUCLEIC ACID CONTENT OF NORMAL FIBROBLASTS, CULTIVATED IN VITRO. H.Slotwinska-Oledzka, R.Bassleer and S.Chevremont-Comhaire: *C.R. Soc. Biol., Paris, 1962, 156, 1714-1717.* 0*5-1 pg./ml. mitomycin C inhib. growth and mitotic activity of embryonic chick fibroblasts. In many cells preprophasic synthesis of DNA was normal but no mitoses occurred. These nuclei fragmented and produced small accessory nuclei. In cases where mitoses occurred abnormalities appeared: metaphase block, fragmentation of ch., absence of pycnoses. (French) M.A.Price

2676.. MODIFICATION OF THE CYTOTOXIC EFFECT OF QUARTZ IN MOUSE - FIBROBLASTS (STRAIN L) BY POLYVINYL PYRIDINE-N-OXIDE (P 204). E.G.Beck, J.Bruch and A.Brockhaus: *Z. Zellforsch., 1963, 59, 568-576* (Inst. Hygiene und Microbiol., Med. Acad. Düsseldorf, Germany) A 0*1% quartz dust suspension was applied to a mouse fibroblast culture which had been incubated with polyvinyl pyridine-N-oxide (P204) at various concn. Examination of cultures reveals that mouse fibroblasts are protected by the polyvinyl pyridine-N-oxide against the toxic effect of quartz dust; it is assumed that the polymer, which is being stored in the cell, may increase the cellular resistance or modify the biochem. cellular reaction. (German) J.E.Linder

2677. CYTOLOGIC AND VIROLOGIC STUDIES OF CULTURES DERIVED FROM NEOPLASTIC AND NON-NEOPLASTIC TISSUES OF CHILDREN. R.M.McAuister, M.Mikenas, R.M.Straw and B.H.Landing: *Lab. Invest., 1963, 12, 343-354* (Paediat. Dept., Univ. California Med. Sch., Los Angeles, Calif., U.S.A.) Biopsies of normal, abnormal non-neoplastic, and neoplastic tissues were cultured for varying times. No permanent cell lines were established. No differences in survival times of metabolism was noted. Adenoviruses were recovered from 6 of 13 tonsils. Polykaryocytes were observed in some of the cultures from all sources but were not able to be transmitted. Their significance is discussed. A.M.Mackay

2678. CHEMICAL AND MORPHOLOGICAL STUDIES ON IN VITRO CALCIFICATION OF AORTA. G.R.Martin. E.Schiffmann, H.A.Bladen and M.Nylen: *J. cell Biol., 1963, 16, 243-252* (Nat. Inst. Dent. Res., N.I.H., Bethesda, Md., U.S.A.) Rat aortas were incubated in rat serum containing ⁴⁵CaCl₂ at 37° for 1-72 hr. and then transferred to 0.12M HC1 which was assayed for Ca, PO₄ and 45ca uptake. The tissue was examined by X-ray

diffraction, microautoradiography, electron diffraction and E.M. Ca and PO₄ crystals accumulated after 24 hr. as hydroxyapatite localised in the elastin which is necessary for mineralisation. The collagen fibres remained unchanged. The changes necessary in serum to produce calcification are discussed. P.Barlow

2679. A DISPOSABLE, CONSTRICTED TISSUE CULTURE TUBE. C.Wallis and J.L.Melnick: *Proc. Soc. exp. Biol., N.Y., 1963, 112, 344-346* (Dept. Virol.

Epidemiol., Baylor Univ. Coll. Med., Houston, Tex.

U.S.A.) A new culture vessel is described which has several advantages over present ones. It is disposable; has optically flat culture region surfaces, and can be incubated on the level, thus diminishing cell sloughing. Smaller inocula can be used in subculturing and monolayering of the cells is more rapid and homogeneous.

D.N.Wheatley

EMBRYOLOGY

2680. NOTES ON THE STRUCTURE OF MEMBRANES AND SHELL IN THE HEN'S EGG. AN ELECTRON MICROSCOPICAL STUDY. P.C.M.Simons and G.Wiertz: *Z. Zellforsch., 1963, 59, 555-567* (Lab. of Animal Physiol., Agricultr. Univ., Wageningen, Netherlands) Pieces of shell removed at the equator of 4 hen *'s eggs were examined after decalcification in EDTA; the fibres of the calcified shell are anchored within the basal zone of the mammillae; the remainder of the calcified shell does not possess any fibres. The density of the org. matrix of the spongy layer may be related to the mechanical strength of the shell.

J.E.Linder

2681. HISTOLOGY AND HISTOCHEMISTRY OF PLACENTA AND FOETAL MEMBRANES IN THE BAT TADARIDA BRASILIENSIS CYNOCEPHALA, WITH NOTES ON MAINTAINING PREGNANT BATS IN CAPTIVITY. R.J.Stephens: *Amer. J. Anat., 1962, 111, 259-285* (Dept. ZOO, Cornell Univ., Ithaca, N.Y., U.S.A.) The cervix and corpus uteri are lined by thin stratified squamous epithelium. Implant** is central and superficial, the embryonic disc is oriented antimesometrially, and the discoidal placenta » established mesometrially. Details are given of the placenta and the distribution of alk. and acid phosphatases⁵¹ lipids, glycogen and iron. R.M.H.McMinn

2682. INCIDENCE OF EXPERIMENTALLY PRODUCED ABDOMINAL IMR-ANTATIONS IN RAT. W.P.Jollis*: *Anat. Rec., 1961, 141, 159-167* (Dept. Anat., Queen's Univ., Kingston, Ontario, Canada) Primary abdominal implantations were induced either by flushing tubal ova on to selected peritoneal sites, or by severing tubo-uterine junctions and ligating the cranial ends of uteri. In certain instances 0.5 mg. histamine dihydrochloride was applied either at the region of the cut tubes or at a selected site. By combining optimal techniques! Le. severing the tubo-uterine junctions and adding histamine, an incidence of 9*4Pfo of abdominal implantations was obtained. F. Boe*

2683. POTENTIALITIES OF THE UNINCUBATED BLASTODERM OF BIRDS [DUCK]. H.Lutz, M.Departout, J.Hubert and C.Pieau: *Develop. Biol., 1963, 6, 23-44*

(Lab. Biol. animale. Fac. Sci.. Clermont-Ferrand, France) A high % of normal embryos developed from ant., post, and lat. halves, and from smaller segments of the unincubated duck blastoderm.

(French) J.W.S.Harris

2684. DIFFERENTIATION OF THE HUMAN SUBNUCLEUS INTERPOLARIS AND SUBNUCLEUS ROSTRALIS OF THE NUCLEUS OF THE SPINAL TRACT OF THE TRIGEMINAL NERVE. J.W.Brown: *J. comp. Neurol.*, 1962, 119, 55-76 (Dept. Anat. Univ. Missouri Sen. Med., Columbia, Mo., U.S.A.) The development of the nucleus of the spinal tract of V, with special attention given to subnucleus interpolaris and subnucleus rostralis, was studied in the brain stems of 15 human foetuses ranging from 32-84.5 mm. C-R length (9 to 13 weeks Jj menstrual age). A cervicorostral sequence of development of the entire spinal trigeminal nuclear complex and the role played by the 3 subnuclei (caudalis, interpolaris and rostralis) in the development of reflex patterns is discussed. G.M.Lewis

2685. THE SKELETON OF THE EYE. I. CONJUNCTIVAL FAPILLAE AND SCLERAL OSSICLES. A.J.Coulombe. U.Coulombe and H.Mehta: *Develop. Biol.*, 1962, 5, 382-401 (Lab. Neuroanat. Sci., N.L.H., Bethesda, Md., U.S.A.) In the chick, papilliform thickening of conjunctival epithelium which appear on the 8th day of incubation, correspond in no. and location to the 1 ossicle; which develop on the 12th day. Six cases in the histogenesis of the papillae are described together with results of an expt. study of the role of the papillae in the differentiation of the ossicles.

J.W. 5. Harris

2686. EVIDENCE OF EARLY PITUITARY FUNCTION IN WHITE LEGHORN CHICK. J.Phillips: *Anal. Rec.*, 1962, 144, 69-75 (Zool. Dept., Drew Univ., Madison, WI USAO) Cytochem. studies of the pituitary gland of mucoprotein were located by w. and PA-Schiff staining techniques. It is suggested that this material represents stored TSH. At the early stages of development Rathke's pouch after the lumina of the caudal and cephalic lobes act as reservoirs for the AF and PA-Schiff positive material secreted into it by the cells bordering the cavities. Around the 12uV13th days when the 1st ventricle disappeared, the cysts took over pituitary function. F.BecK

2687. OBSERVATIONS ON LIVING MYOCARDIAL CELLS FROM CULTURED 48-HOUR CHICK HEARTS. K&Rumery, R.J.Blandan and P.W.Hagey: *Anat. Rec.*, 1961, 141, 253-261 (Dept. Anat. Univ. Washington Med., Seattle, Wash., U.S.A.) As cardiac myoblasts matured the mitochondria increased in no. and became predominantly long and filamentous, arranging themselves in linear formation 48 hr. after culturing from 2-day chick embryo hearts, contractions started 24 hr. later. When seen in young cells, the myofibrils were visible in areas of greatest tension. Although non-contracting myofibrils were visible in these cells only those with bands were contracting. As more myofibrils differentiated within the cell, myofibrils in the same plane aligned themselves and gradually fused with their several bands in perfect order. F.BecK

2688. CAPACITY FOR LENS REGENERATION IN CHICK EMBRYO. M.S.McKeehan: *Anat. Rec.*, 1961, 141, 227-230 (Dept. Anat. Sch. Med., Univ. Virginia, Charlottesville, Va., U.S.A.) Embryos 3 to 5 days

of age were allowed to develop in ovo from 1 to 4 days following removal of the right lens. Thorough microscopic examination revealed no evidence of lens regeneration,

F.Beck

2689. EFFECTS OF EYE REMOVAL AT BIRTH ON HISTOGENESIS OF THE MOUSE SUPERIOR COLICULUS: AN AUTORADIOGRAPHIC ANALYSIS WITH [3H]-THYMIDINE.

G.R.DeLong and R.L.Sidmaru: *J. comp. Neurol.*, 1962, 118, 205-223 (Lab. Cell. Neuropathol., Harvard Med. Sch., Boston, Mass., U.S.A.) Mice were inj. with [3H]thymidine to label forming cells at various embryonic and postnatal stages, and one eye removed at birth. It was found that most neurons of the superior colliculus formed on embryonic days 11-13; 40% of these were lost after enucleation. Most neuroglial cells arose after birth. After deafferentation, many failed to form and others degenerated. A proliferation of neuroglial cells occurred between the 2nd postnatal week and adulthood.

G.M.Lewis

2690. INDUCED CHOROID PLEXUS DEVELOPMENT IN THE CHICK METENCEPHALON. W.J.Birge: *J. comp. Neurol.*, 1962, 118, 89-95 (Dept. Zool., Univ. Illinois, Urbana, Ill., U.S.A.) Following ablation by micro-electrocoagulation of the right presumptive metencephalic alar plate in chick embryos at 33-38 hr. development, a simple epithelium regenerates to close the lesion area. When vascularised leptomeningeal tissue appears adjacent to the regenerated epithelium, the latter differentiates into choroid plexus tissue.

G.M.Lewis

2691. GROWTH AND DIFFERENTIATION OF FOZTAT, KIDNEY FOLLOWING BILATERAL NEPHRECTOMY OF PREGNANT RAT AT 18½ DAYS OF GESTATION.

H.D.Rollason: *Anat. Rec.*, 1961, 141, 183-193 (Dept. Zool., Univ. Massachusetts, Amherst, Mass., U.S.A.) On each of the 3 days following maternal nephrectomy body wt. and kidney wt. of controls were significantly heavier than those of expt. foetuses. There were significantly greater no. of mitoses, when compared with controls, in the nephrogenic zone of kidneys of foetuses removed one day (but not later) after maternal nephrectomy. Kidney differentiation appeared to be more rapid in expt. foetuses than in controls. F.Beck

2692. INTERACTION OF INSULIN AND CHLORPROMAZINE IN TERATOGENESIS. W.Landauer and E.M. Clark: *Nature*, 1963, 198, 215-216 (Dept. Animal Genetics, Univ. Connecticut, Storrs, Conn., U.S.A.) 2.5 mg. chlorpromazine inj. into White Leghorn eggs at 120 hr. incubation had little toxicity and no teratogenic effects, but when combined with 4 units of insulin, the incidence of micromelia and beak defects were doubled. Chlorpromazine did not affect the incidence of runglessness produced by insulin when inj. after 24 hr. incubation. The results are consistent with the view that chlorpromazine aggravates the disturbances of phosphorylation produced by insulin.

G.M.Lewis

2693. ROLE OF THE TONGUE IN PRODUCING CLEFT PALATE IN MICE WITH SPONTANEOUS CLEFT LIP.

D.G.Trasler and F.C.Fraser: *Develop. Biol.*, 1963, 6, 45-60 (Genetics Dept., McGill Univ., Montreal, Canada) The presence of an enlarged median process in embryos with spontaneous cleft lip is considered to impede the normal antero-ventral displacement of the tongue. This delays movement of the palatine shelves to such an extent, that if they do eventually become

ANATOMY

horizontal, they are too far apart to fuse together in the mid-line of the mouth. J.W.S.Harris

2694. ABNORMAL DEVELOPMENT INDUCED BY MATERNAL ADMINISTRATION OF 32PHOSPHORUS AFTER 14 OR 17 DAYS OF GESTATION IN THE RAT. L SKELETAL DEFECTS. M.R.Sikov and J.E.Lofstrom: Amer. J. Anat., 1962, 111, 309-317 (Dept. Radiol., Wayne State Univ. Coll. Med., Detroit, Mich., U.S.A.) There was a dose-dependent decrease in the overall size of the foetuses. Defects such as retarded ossification of cranial bones and digits, rib angulation and decreased prominence of the greater trochanter of the femur were more pronounced after injn. at 14 days than at 17 days. R.M.H.McMinn

2695. TIME OF TERATOGENIC ACTION OF TRY PAN BLUE IN GUINEA-PIGS. R.M.Hoar and AJ.Salem: Anat. Rec., 1961, 141, 173-181 (Dept. Anat., Coll. Med., Univ. Cincinnati, Ohio, U.S.A.) Guinea-pigs received an injn. of Trypan Blue on days 6-13 of gestation. Embryos were removed at 30 days or females were allowed to deliver. Response to the injn. took the form of an elevated resorption rate, retardation of growth and gross abnormalities. Max. response in abnormalities was displayed following injn. on day 11. F.Beck

2696. USE OF THE LIVING CHICK EMBRYO AS A BIOLOGICAL INDICATOR OF THE EFFECTIVENESS OF CHELATING AGENTS. H.Smith and LV.Chapman: Nature, Lond., 1963, 198, 32-33 (Production Group, U.K.Atomic Energy Authority, Chapelcross, Annan, Dumfriesshire, Scotland) Effects of tetracycline on chick' embryos can be used as an index of the toxicity of this chelating agent. Marked anat. changes occurred in embryos exposed to tetracycline in amounts greater than 4 mg. Tetracycline was deposited extensively in the skeleton of the embryos and did not inhibit deposition of 89sr in bone. JR. Sargent

MISCELLANEOUS

2697. TOPOGRAPHICAL ORGANISATION OF THE LATERAL SEGMENT OF THE BASIS PEDUNCULI IN MAN. O.S.M.Marin, J.B.Angevine, jun. and S.Locke: J. comp. Neural., 1962, 118, 165-183 (Dept. Neurol., Harvard Med. Sch., Boston, Mass., U.S.A.) A study of the origin and topographical organisation of the fibres in the lat. segment of the basis pedunculi in man based on examination of 8 human brains with old vascular and surgical lesions. G.M.Lewis

2698. COMPARATIVE NOTES ON THE CEREBELLUM OF THE MONOTREMES. I. CONTRIBUTION TOWARD A PHYLOGENY OF THE MAMMALIAN BRAIN. L.S.Dillon: J. comp. Neurol., 1962, 118, 343-353 (A. and M. Coll. Texas, College Station, Tex., U.S.A.)

The principal lobules of the cerebellum of platypus (*Ornithorhynchus anatinus*) and echidna (*Tachyglossus aculeatus*) are described and compared with those in a marsupial and placental mammal brain. A possible explanation of the phylogenetic changes noted is offered. G.M.Lewis

2699. PRIMARY OPTIC CENTRES OF THE RAT IN RELATION TO THE TERMINAL DISTRIBUTION OF THE CROSSED AND UNCROSSED OPTIC NERVE FIBRES. W.R.Hayhow, A.Sefton and C.Webb: J. comp. NeuroL 1962, 118, 295-321 (Brain Res. Unit, Dept. Physiol. Univ., Sydney, Australia) The terminal distribution of fibres of retinal origin in the principal subcortical optic centres has been studied in the rat for 5-7 days following section of 1 optic nerve and projection fields of the crossed and uncrossed optic nerve fibres precisely delineated. G.M.Lewis

2700. ANATOMY OF THE HYPOTHALAMUS OF THE FERRET. W.J.A.Westwood: J. comp. Neurol., 1962, 118, 323-341 (Dept. Anat., Univ. Birmingham, England) The main features of the hypothalamus of the ferret are described and compared with the hypothalamus of dog and cat. G.M.Lewis

2701. EXPERIMENTAL STUDIES ON THE MYENTERIC PLEXUS IN MAMMALS. G.C.Schofield: J. comp. Neurol., 1962, 119, 159-185 (Dept. Human Anat., Univ. Oxford, England) The myenteric plexus in each of the major subdivisions of the gut has been examined in a variety of mammals, rat, mouse, guinea* pig, rabbit, cat, monkey, baboon and man. The origin and distribution in the myenteric plexus of nerve fibres reaching the git have been studied by the use of selective denervation expt. The preganglionic nerve supply of the gut is more extensive in its origin than is commonly supposed. G. M. Lewis

2702. ARTERIAL SUPPLY OF THE DIENCEPHALON AND SOME ASSOCIATED AREAS OF THE RABBIT BRAIN. DJ.Prolo and D.L.Stilwell, jun.: J. comp. Neurol., 1962, 119, 229-254 (Dept. Anat., Sch. Med., Univ. Stanford, Calif., U.S.A.) The arteries in the rabbit diencephalon are studied with regard to gross origins, fine distribution, patterns of supply, arterial anastomoses and overlap of terminal distribution, and special areas of vascularity. G.M.Lewis

2703. BRANCHING OF LEFT PULMONARY ARTERY OF CATS STUDIED ON CORROSION SPECIMENS. V.Munka, A.Gregor and M.Knazovicky: Csl. MorfoL# 1963, 11, 117-123 (Inst. Normal Anat., Fac. Med., P.J.Safarik's Univ., Kosice, Czechoslovakia). Kjones

2704. RELATION OF TYPES OF DIETARY FAT TO HEPATIC LIPOSIS AND MYOCARDIAL DAMAGE IN MICE. W.L.Williams and R.I.Oliver: Anat. Rec., 1961, 141, 97-107 (Dept. Anat., Univ. Mississippi Sch. Med., Jackson, Miss., U.S.A.) On the basis of the expt. results it is concluded that a broad range (with ref. to satn. and chain length) of dietary lipids is essenti?: for production of the massive hepatic liposis and of ceroid pigment characteristic of choline deficiency. The abseil of unsat. compound from the diet seems to afford considerable protection (from liposis) to the liver but renders the myocardium susceptible to extensive damage. F.Beck

2705. POLYPLOIDISATION OF RAT LIVER FOLLOWING SEX HORMONE ADMINISTRATION TO CASTRATE INTACT RATS. F.J.Swartz and B.F.Sams: Anat. Rec., 1961, 141, 219-225 (Dept. Anat., Sch. Med., Univ. Louisville, Ky., U.S.A.) Excessive oestrogen administration to castrate ? was able to effect the accelerate^ liver growth rate and diminished octaploid nuclear popu*: lation associated with castration. Relative liver wt.

ANATOMY

257

Presumable due to induction of octaploid cells, was high.
^ ne failure of & castrates to respond similarly is considered from the standpoint of the amount of hormone 8Wen. Large amounts of oestrogens and testosterone given to intact newborn rats did not affect liver growth Patterns or polyploid distribution. F.Beck

2706. OVARIAN ANDROGEN IN PARABIOTIC MICE. J.C.Desclin, jun.: Anat. Rec. 1961, 141, 305-313 (pept. Histology, Fac. Med., Univ., Brussels, Belgium) The site of production of c? hormone *^{T₄} in the ovary is discussed in the light of expt. on ? J'ice both with normally located ovaries and ovaries Jjansplanted to the submandibular glands. The animals T're united in parabiosis with a spayed or castrated *ⁿimal and ovarian androgen production was evaluated on nistol. of the submandibular glands. F.Beck

2707. TETRACYCLINE LOCALISATION IN THE EARLY STAGES OF ISOGENOUS BONE GRAFT. J.Deleu: Nature, Lond., 1963, 198, 194-195 (Dept. Orthopaedic Surg., Nuffield Orthopaedic Centre, Oxford, England) Daily injn. of chlortetracycline were given to young rats bearing implants of cancellous autogenous bone in the ant. chamber of the eye. Tetracycline selectively localised in dead bone; a high degree of resorption was observed at the edges. G.M.Lewis

2708. CORTICAL RATIO AS AN ESTIMATE OF THE MINERAL CONTENT OF THE HUMAN FEMUR. P.Virtama, P.Kajanoja and A.Telkka: Ann. Med., 1963, 41, 60-64 (Dept. Anat., Univ. Helsinki, Finland)

Cortical ratio, which is the planimetrically measured ratio of the cortex to the rest of the bone, was determined on 43 radiographs of human femur. A highly significant correlation was found between the cortical ratio and mineral content of the bones. The cortical ratio is a better estimate of bone density than is the cortical index measured at one level only and it can apparently be used in large scale or follow-up studies of bone density. G.Faulkner

2709. NAILFOLD CAPILLARIES IN FAMILIAL SCHIZOPHRENICS. H.R.Maricq: Circulation, 1963, 27, 406-413. (V.A. Hosp., Lyons, N.J., U.S.A.) Nailfold capillaries in the sub-papillary plexus were thought to be unduly visible by microscopy in familial schizophrenics compared with non-familial schizophrenics.

R.S.Duff
2710. ANATOMY OF POLYDACTYLISM IN CATS WITH OBSERVATIONS ON GENETIC CONTROL.

V. ^ h n a c P 7, a n and F. N. Zeimer: Anat. Rec. 1961, 141, 205-217 (Dept. Zool., Univ., Denver, Colo., U.S.A.) A study of polydactyly in cats was made to provide precise anatomical information and to correlate this with hereditary mechanisms. F. Beck

Indian Botanic ^ * J.U. Calcutta, West Bengal, India

ODONTOLOGY

- 2711. DENTAL DEVELOPMENT IN DOG. I. CALCIFICATION OF CROWN AND ROOT OF DECIDUOUS DENTITIONS.** L.Arnall: *J. small anim. Pract.*, 1961, 1, 169-173 (Sch. Vet. Sci. Univ., Liverpool, England) The times and rates of calcification of the deciduous and permanent teeth were studied radiographically in a small no. of pure-bred litter-mate puppies from birth to 7 months. Data from other breeds supported and extended the findings. *
- 2712. SKULL SUTURES OF THE RHESUS MONKEY BY COMPARISON OF TOPOGRAPHIC SAMPLING TECHNIQUE, AUTORADIOGRAPHY AND VITAL STAINING.** P.K.-J.Yen and J.H.Shaw: *Arch. oral Biol.*, 1963, 8, 349-362 (Harvard Sch. Dent. Med., Boston, Mass., U.S.A.) Three young and 1 old ♂ rhesus monkeys received ^{45}Ca i.v. After 168 hr. the ^{45}Ca uptake in the skull sutures, synchondroses, adjacent bones and surfaces of discrete areas was studied quant, by the selective grinding method with autoradiography and vital staining with Alizarin Red S. The uptake was different at various locations along the same suture and was also different on both sides of certain sutures suggesting that one side may be growing more rapidly. The mandibular condyle had the highest uptake, which was greater in the post, non-articular portion than the ant. articular portion. High uptake in the post, border of the ramus denoted active growth. In the old monkey the ^{45}Ca uptake was more uniform and much less. *
- 2713. SHORT VERSUS LONG STUDIES WITH RADI-CALCIUM AT VARIOUS SITES OF THE SKULL OF YOUNG AND OLD RHESUS MONKEYS.** P.K.-J.Yen and I.H.Shaw: *Arch. oral Biol.*, 1963, 8, 363-375 (Harvard Sch. Dent. Med., Boston, Mass., U.S.A.) ^{45}Ca uptake was determined in 2 young monkeys sacrificed 15 min. after ^{45}Ca injn., in 1 old monkey sacrificed after 15 min. and another old monkey after 168 hr. In the young monkeys, the ^{45}Ca uptake was higher in sutures and synchondroses than in the adjacent bones. The small differences in uptake in the various areas of the same suture and in the various areas of the same bone were probably still indicative of different rates of bone formation, proliferation and calcification. In old monkeys where there was no apparent growth, the sp. activity ratios were uniform in all sutures and bones and this probably could be attributed almost exclusively to exchange. The difference in uptake between the 2 old monkeys represents the difference in degree of exchange over the time interval from 15 min. to 168 hr. *
- 2714. INCISIVE MUSCLE IN RAT.** L.Sciaky. *Arch. oral Biol.*, 1963, 8, 465-466 (Dept. Oral Diagnosis, Hebrew Univ.-Hadassah Sch. Dent., Jerusalem, Israel) A previously undescribed muscle inserted just behind the lower incisor by muscle-insertion exostoses in lathyritic animals is described. A.E.W.Miles
- 2715. NERVE PLEXUSES IN ORAL MUCOSA.** A.D.Dixon: *Arch. oral Biol.*, 1963, 8, 435-447 (Dept. AnaL. Univ., Manchester, England) The mucosa of the tongue, hard palate, cheek and gingiva of rabbits, cats and monkeys was studied using whole thickness Methylene Blue prep., frozen sections of tissue impregnated with silver, and photographic reconstructions. Coarse submucous plexuses and a much finer subepithelial network associated with sensory nerve terminations were identified. Plexus formations were most dense in the dorsum of the tongue, hard palate and gingiva, particularly in the ant.

part of the mouth. Myelinated somatic fibres predomin* ated in the plexuses but, from a consideration of nerve fibre diam., it was concluded that autonomic fibres con* tribute to the formation of oral nerve networks. The findings support the view that sensory discrimination largely depends on a complex pattern of nerve impulses reaching higher centres. *

- 2716. LIGHT AND ELECTRON MICROSCOPE STUDY OF RAT MOLAR ENAMEL ORGAN.** J.D.Decken Arch, oral Biol., 1963, 8, 301-310 (Dept. Anat., Univ. Washington Sch. Med., Seattle, Wash., U.S.A.) At the embryonic age of 20-20½ days no deposition of mineral had occurred in M1 and M2. The cells of the enamel organ contained large no. of free RNP particles. A cell surface specialisation termed a hemi-desmosome has been observed at the junction of the outer dental epithelium with its basement membrane. Paniculate deposits of glycogen and amorphous lipid droplets were present in the outer dental epithelium. *

- 2717. AUTORADIOGRAPHIC STUDY OF MOUSE INCISOR USING [^3H]HISTIDINE.** W.S.S.Hwang, E.A. Tonna and E.P.Cronkite: *Arch. oral Biol.*, 1963, 8, 377-385 (Brookhaven Nat. Lab., Upton, Long Island, N.Y., U.S.A.) An autoradiographic study with grain counts in 16-day-old mice was made up to 14 d^{ap} after [^3H]histidine administration. Histidine turnover w* more rapid in ameloblasts than odontoblasts and a high concn. of histidine existed in the enamel matrix. *

- 2718. MITOTIC RATES IN ORAL AND GINGIVAL EPI-THELIUM OF RAT.** J.R.Trott and S.L.Gorenstein: *Arch. oral Biol.*, 1963, 8, 425-434 (Dept. Periodont" Fac. Dent., Univ. Manitoba, Winnipeg, Canada) 0*1 mg./100 g. body wt. of colchicine was given to adult rats over a 24 hr. period. The hard palate, cheek and crestal or marginal gingiva had comparable mitotic rat* and tissue renewal times. The attached gingiva had a relatively low mitotic rate, suggesting that it was not as much under the influence of function as the other areas mentioned. The epithelial attachment showed a much higher mitotic rate than the crevicular epithelium, suggesting that this was an active and functioning tissue and not degenerating, and that being non-keratinised there was need for rapid cell renewal. *

- 2719. HISTOCHEMICAL STUDY ON EXPERIMENTAL DENTINE FORMATION IN DOG PULP.** M.Hirata: *Shikwa Gakuho*, 1963, 63, 24-41 (Dent. Coll., Tokyo, Japan) Ca(OH)₂ and MgO were applied to exposed pulp and acid and alk. phosphatase, esterase and succinic dehydrogenase were studied after 1-25 d^{ap}* Alk. phosphatase was present under the necrotic layer a* in the upper layers of the pulp and increased as repair proceeded. Succinic dehydrogenase was found in regenerated odontoblasts.

(Japanese, English summary) C.P.WaU*

- 2720. EVALUATION OF METHOD OF MEASURING FORCES EXERTED BY TONGUE ON TEETH.** M.S.E.Gould and D.C.A.Picton: *Brit. dent. J.*, 1 ** 114, 175-180 (Univ. Coll. Hosp. Dent. Sch., LOB** England) A disc, 7 mm.² in area, was substitute^{**} for the lingual surface of a missing cheek tooth or inc.^{*} The pressure exerted by the tongue at rest, and the increased pressures on swallowing or on saying 'M' or 'C' / were measured with a strain gauge in 7 humans. A.R.

2721. EFFECT ON NORMAL VERTICAL TOOTH

MOBILITY OF RATE OF THRUST AND TIME INTERVAL BETWEEN THRUSTS. D.C.A.Picton: Arch, oral Biol., 1963, 8, 291-299 (Univ. Coll Hosp. Dent. Sch., London, England) The axial mobility of 10 upper central incisors was studied in 5 subjects. The direction and point of application of the thrust was constant for each tooth; force was applied manually via a dynamometer. Using a thrust of 0.2 kg. variation in the rate of thrust, in the range 0.5-25 sec. rise-time, produced no consistent effect on the load/mobility curves. Variation in the time interval between thrusts of standard 1 sec. caused progressive reduction in mobility with 5 sec. intervals. 2 min. intervals caused a less increase in mobility. To ensure repeatable load/mobility curves an interval of 1.1-5 min. was needed, individual variation being present.

2722. MODIFIED GROWTH IN INFERIOR DENTAL NERVE OF CAT.

A.Mohiuddin and F.N. h. J. comp. Neurol., 1962, 118, 157-163 (Dept. Anat. Fac. Med., Singapore) Tooth germs, from the canine backwards, were excised in newborn kittens on one side of the mandible. Studies of the trunk of the inferior dental nerve from both sides of each animal at 3, 6 and 24 months showed that postnatal growth and maturation of myelinated sensory fibres up to the age of 6 months resulted in normal development of the nerve and its branches.

2723. EFFECT OF VITAMIN D ON BONES OF YOUNG RATS RECEIVING DIETS LOW IN CALCIUM OR PHOSPHORUS. H.W.Ferguson and R-L.Hartley: Arch. Oral Biol., 1963, 8, 407-418 (Sch. Dent Surg., Univ. of Verulam, England) Weanling rats were maintained on diets adequate in P(0.42%) but low in Ca (0.08%) for 10 weeks. When vit D was included in the diet a condition showing certain similarities to osteoporosis was observed in the femur. In the absence of vit D the condition of the bones became increasingly osteomalacic and less porotic. Frank rickets was not produced in either case. Results are discussed in relation to the citrate content of the bone and the relative mobility of the total Ca in the expt conditions.

2724. AMINO ACID COMPOSITION OF PROTEINS FROM THE ORAL TISSUES I COMPARISON OF HUMAN ORAL EPITHELIUM, EPIDERMIS AND NAIL PROTEINS. J.E.Eastoe: Arch, oral Biol., 1963, 8, 449-458 (Dept. Dent. Sci., Royal Coll. Surg., London, England) Human oral epithelium, separated from attached collagen by treatment with hot water, was analysed for amino acids by ion-exchange chromatography. Values in close agreement were obtained after hydrolysis for 48 hr. and 72 hr. respectively. The results were compared with those from analyses made for human epidermis and nail. Oral epithelium is a keratin of low cystine content, with high contents of valine, leucine and B0. There is a molar ratio of histidine, lysine and arginine of approximately 1:4:4. While all these epithelial proteins contain a recognisable amino acid pattern, variations are found for other groups of proteins.

2725. EFFECT OF CARBONATE ON SOLUBILITY OF HYDROXYLAPATITE. P.Grin, M.Spinelli, O.Trautz and F.Brudevold: Arch, oral Biol., 1963, 8, 251-263 (Forsyth Dent. Infirmary, Boston, Mass., U.S.A.)

The solubility of hydroxyapatite increased with increasing concn. of HCO_3^- in the soln. Soln. CO_2 exchanged with solid P on a mole for mole basis. About 1/4 of the CO_2 in the carbonate-exposed hydroxyapatite was lost upon heating to 300°, suggesting the presence of appreciable amounts of CO_2 in the form of HCO_3^- . Increase of CO_2 in solid did not change the solubility of hydroxyapatite. Ppt. formed from metastable soln. of Ca and phosphate contained CO_3^{2-} in proportion to the concn. of CO_3^{2-} in the soln. The solubility of the ppt. increased with increase in the CO_3^{2-} content. Heating expt. suggested that the CO_2 in the ppt. was present in the form of CO_3^{2-} . X-ray diffraction studies showed that the ppt. were hydroxyapatite and that the presence of CO_3^{2-} disturbed crystn.

2726. INCORPORATION OF 14C-LABELLED AMINO ACIDS INTO DENTINAL PROTEINS. R.S.Pihl and N.Karahanju: Ann. Med., 1963, 41, 64-73 (Inst. Physiol., Univ. Helsinki, Finland)

Three long-term expts. were conducted on healthy rats to study the incorporation of 14C-labelled amino acids into the dentinal proteins of incisors and molars and their subsequent elimination. This was compared with incorporation into other tissues. Amino acids were incorporated into incisor proteins at a greater rate than into molar proteins. At 1, 6 and 12 days the sp. activity of the dentinal protein in the molars were on an average, 67, 61 and 65% of the corresponding values of the incisors. G.Faulkner

2727. PRELIMINARY INVESTIGATION INTO THE EFFECTS OF AMINOACETONITRILE ON DENTINE COLLAGEN IN THE RAT. S.A.Boswell: Arch, oral Biol., 1963, 8, 461-464 (Res. Lab., J.Sainsbury Ltd., Stamford House, Blackfriars, London, England)

Short comm. *

2728. CONTENT OF ARSENIC IN NORMAL TEETH AND DURING CARIES AND PERIODONTAL DISEASE.

N.A.Vikhm: Stomatologiya, Mosk., 1963, 42, 23-25 (Med. Stomat. Inst., Moscow, U.S.S.R.) The As content of sound teeth was 0.1 jig./g. No significant change occurred with age, caries or periodontal disease.

(Russian) C.P.Wallis

2729. IN VIVO TECHNIQUE FOR DETERMINING EFFECT OF AGENTS ON ENAMEL SOLUBILITY IN HUMAN SUBJECTS. E.Eigen, A.R.Volpe, F.M.Lapeyrolerie, S.Weiss and W.J.King: Arch, oral Biol., 1963, 8, 459-460 (Colgate-Palmolive Res. Center, New Brunswick, N.J., U.S.A.) Short comm. *

2730. APPARATUS FOR PRODUCTION OF DENTAL CAVITIES IN VITRO. S.L.Rowles, D.A.Sidaway, A.B. MacGregor and E.A.Marsland: Arch, oral Biol., 1963, 8, 311-318 (Dept. Dent. Path., Univ., Birmingham, England) The advantages of the so-called 'artificial mouth' in investigations into expt. lesions similar to caries are defined. A glass apparatus suitable for multiple operation is described. Continuous and intermittent flow feed systems and a siphon for supplying Seitz filtered saliva have been evolved. The methods used for mounting and sterilising the expt. teeth are described. By salivary inoculation, a bacterial plaque was produced on a sterile tooth surface. *

2731. PARABIOSIS, TOLERANCE AND CARIES IN RATS. H.D.Hall: Arch, oral Biol., 1963, 8, 387-396 (Univ. Alabama Sch. Dent., Birmingham, Ala., U.S.A.)

Parabiosis was produced between animals of caries-

ODONTOLOGY

susceptible and caries-resistant strains. The caries experience was not modified by a long-existing common circulation or by living under conditions which would permit cross-infection of oral flora or by a chimaeric state. It is concluded that genetically determined blood-borne factors either do not differ between the 2 strains or do not affect caries. *

2732. ROLE OF STRESS IN DEVELOPMENT OF CARIOS. A.E.Sharpenak, V. R. Bobyleva and L.A.Gorozhankina: Stomatologija. Mosk., 1963. 42, 7-10 (Med. Stomat. Inst., Moscow, U.S.S.R.) Rats were subjected twice a week for 6 months to sound from a loud bell sufficient to cause unconsciousness in some animals. With a weakly cariogenic (corn) diet, there was a marked increase in caries; with a more cariogenic diet the effect was slight. The animals which failed to react to auditory stress showed little increase in caries and a delayed rise in urinary pyruvate. (Russian) C.P.Wallis

2733. PROGRESS WITH FLUORIDE TOOTHPASTES. H.FLMuhlemann: Schweiz. Mschr. Zahnheilk., 1963. 73, 383-390 (ZahnSrztliches Institut, Univ., ZUrich, Switzerland) Toothpastes containing SnF₂, NaF, or amine fluoride were applied daily for 2 weeks to the teeth of rats kept on a high sucrose diet. The amine fluoride gave the largest reduction in caries and in solubility of the molars. All the toothpastes reduced the solubility of human teeth in vitro. (German) C.P.Wallis

2734. STATISTICAL STUDY ON OCCURRENCE OF DENTAL CARIOS OF DOMESTIC ANIMALS. L HORSE. K.Honma, M.Yamakawa, S.Yamauchi and S.Hosoya: Jap. J. vet. Res., 1962. 10, 31-36 (Dept. Physiol.. Fac. Vet. Med., Hokkaido Univ., Sapporo, Japan) 97% of horses over 12 yr. showed evidence of caries after slaughtering. Data are presented for caries in each tooth for 4 age groups. The highest incidence was found in first molars, the lowest in canines. C.P.Wallis

2735. INCIDENCE OF SECONDARY DENTINE IN CARIOUS TEETH. M.E.Corbett: Brit. dent. J.. 1962. 114, 142-147 (Dept. Dent. Path., Univ. Birmingham, England) In 210 of 294 deciduous human teeth, and in only 84 of 185 permanent teeth was secondary dentine found beneath a carious cavity. 79% of deciduous, and 61% of permanent teeth with secondary dentine showed also inflammation of the dental pulp. A.R.Ness

2736. D M F SURFACE PERCENTAGE DENTAL CARIOS INDEX. C.L.de Jager: J. dent. Ass. S.Afr., 1963. 18. 96-101 (Fac. Dent., Univ. Pretoria, S. Africa) The new index attempts to take account of the variation in the no. of tooth surfaces at risk at various ages during the period of tooth eruption. A.E.W.Miles

2737. FOUR INVESTIGATIONS TO DETERMINE THE RELIABILITY OF CARIOS-RECORDING METHODS. G.N.Davies and P.B.Cadell: Arch. oral Biol., 1963. 8, 331-348 (Dept. of Preventive Dent., Univ. Otago Dent. Sch., Dunedin, New Zealand) The standardisation of diagnostic criteria and methods of examination did not reduce the variation between examiners unless the examiners underwent a period of pre-examination training or calibration. When these conditions were fulfilled the assessment of dental caries affecting teeth and tooth surfaces was reliable and reproducible. It is recommended that in epidemiological studies examining dentists should conduct duplicate examinations periodically so that the

reliability and consistency of their methods can be assessed. •

2738. BODY FLUID GLUCOSE LEVELS AS RELATED TO DENTAL CARIOS STATUS IN MAN. I.L.Shannon, W.A.Gibson, T.J.O'Leary and H.H.Chauncey: Arch. oral Biol., 1963. 8, 419-424 (Dent. Sci. Div., U.S.A.* Sch. Aerospace Med., Brooks AFB, Texas, U.S.A.) Parotid fluid samples were collected without exogenous stimn. from 507 systemically healthy young adult males. Blood was drawn from each participant and subjects were classified as to DMF surfaces. Parotid fluid flow rate was recorded, and serum and parotid fluid were analysed for glucose concn. by the glucose oxidase procedure. The presence of glucose in parotid fluid was confirmed. Neither parotid fluid flow rate, parotid fluid glucose level, nor serum glucose concn. was related to caries experience. For all participants, the mean for each of the 3 variables was 0.042(S.D. ± 0.036) ml./miru. 0.075 (S.D. ± 0.068) mg.%, and 84.8 (S.D. ± 1.16) mg.% respectively. •

2739. EFFECT OF TOOTHPASTE CONTAINING AMINE FLUORIDE ON CARIOS INCREMENT IN CHILDREN DURING THREE YEARS UNSUPERVISED USE. T.M.Marthalter: Schweiz. Mschr. Zahnheilk., 1963, 73, 390-409 (ZahnSrztliches Inst., Univ., Zflrich, Switzerland) There were 8.3 new DMF surfaces V&M child in 145 children of 10 yr. who had used amine fluori toothpaste since the age of 7 hr., and 11.7 new DMF surfaces in 124 children using the control toothpaste. For children age 15 yr. at the last examination, the corresponding figures were 12.7 and 16.8. The reduction in occlusal caries was negligible.

(German) C.P.Wall⁸

2740. SYNTHESIS OF INTRACELLULAR IODOPHILIC POLYSACCHARIDE BY STREPTOCOCCUS MITIS. RJ.Gibbons and B.Kapsimalis: Arch. oral Biol., 1963, 8, 319-329 (Forsyth Dent. Infirmary, Boston, Mass., U.S.A.) The polysaccharide is a polymer composed solely of glucose linked in part by (X-1, 4-glucosidic bonds. During exponential growth, the organism synthesised polysaccharide at a rate proportional to the biosynthesis of bacterial N. When cultures entered the stationary growth phase, synthesis of microbial N decreased whereas polysaccharide synthesis continued. This metabolic imbalance produced cells rich in intracellular polysaccharide. Comparable results were obtained when protein synthesis was inhibited with chloramphenicol. A glucose concn. of 0.1% permitted polysaccharide synthesis at max. rate. In the absence of exogenous carbohydrate, S. mitis catabolised polysaccharide. The lactic acid formed lowered the pH of packed cells of jjapitro below pH 6, for several hr. in the presence of continuous flowing buffer of pH 7. •

2741. MICROBIOTA OF GINGIVAL CREVICE AREA OF MAN. L TOTAL MICROSCOPIC AND VIABLE COUNTS AND COUNTS OF SPECIFIC ORGANISMS. S.S.Socransky, RJ. Gibbons, A.C.Dale, L.Bortnlc^{*,†}, E.Rosenthal and J.B.Macdonald. H. PREDOMINANT CULTIVABLE ORGANISMS. RJ.Gibbons, S.S.Socj^{*,†}, J.S.Sawyer, B.Kapsimalis and J.B.Macdonald: Arcn-Biol., 1963. 8, 275-280, 281-289 (Forsyth Dent. Infirmary, Boston, Mass., U.S.A.) L Total microscopic, total aerobic and anaerobic viable counts, and counts of aerobic and facultative streptococci, spirochaetes and Bacteroides melaninogenicus per f. WL of gingival debris were determined in normal and

Periodontally-involved individuals. The total microscopic counts approximated $1 \times 10^7 \times 10^{11}$ organisms per g., indicating that gingival debris is composed almost entirely of bacteria. Total aerobic viable counts averaged 1.6×10^{10} , while total anaerobic counts averaged 4×10^{10} . Suggesting that the majority of the bacteria is obligately anaerobic. All organisms which grew aerobic were facultative. Spirochaetes were the only group which increased significantly in periodontal disease.

H. No significant quant. or qual. differences were observed in the microbiota of normal and periodontally-involved individuals. The gingival crevice microbiota consisted of: 28.8% Gram pos. facultative cocci; 20.2% rod-shaped anaerobic rods; 16.1% Gram neg. anaerobic rods; 15.3% Gram pos. facultative rods; 10.7% Gram anaerobic cocci; 7.4% Gram pos. anaerobic cocci; 2.7% Gram neg. facultative rods; and 0.4% Gram neg. facultative cocci.

2242. ARGYROPHILIC FIBRES OF HUMAN GINGIVAL CONNECTIVE TISSUE. A.H.Melchen Arch, oral f°L, 1963, 8, 397-406 (Eastman Dent Hosp., London, England) Two types of argyrophilic fibres are found in areas of collagen destruction in chronic gingivitis. Fine branching reticulin fibres, part of a network which ramifies throughout the gingival connective tissue and includes the argyrophilic fibres at the connective tissue epidermal junction and also non-branching thinnish fibres which are often of much greater diam. Reticulin. These are young developing collagen fibres deposited in the healing response and may be situated directly on pre-existing collagen. Reticulin is more resistant to disaggregation in gingivitis than collagen or young developing connective tissue.

2743. RELATION OF EXCESS PYRIDOXINE TO ALVEOLAR ATROPHY AND MINERAL METABOLISM. V.&Okushko: Stomatologija, Mosk., 1963, 42, 19-23 (Med. Stomat. Inst., Moscow, U.S.S.R.)

Administration of 0.5 ml. 1% pyridoxine daily to rats increased the no. with alveolar resorption from 47% to 77%. The uptake of ^{45}Ca and ^{32}P into teeth and bone was determined 24 hr. after injn₄₅ following 1-36 days administration of vitamin. The ^{45}Ca uptake by molars and incisors was increased after 7 days vitamin administration but ^{32}P uptake was not significantly altered. After 14-36 days the uptake of both isotopes into molars was considerably reduced. Mandibular bone showed a similar decrease. (Russian) C.P.Wallis

2744. HISTOPATHOLOGY OF TEMPOROMANDIBULAR JOINT FOLLOWING BILATERAL EXTRACTION OF MOLARS IN RAT. G.Cimasoni: Oral Surg., 1963, 16, 613-621 (Inst. médecine dentaire, Geneva, Switzerland) The maxillary molar teeth of 14 Long Evans rats were extracted either at 200, 270 or 300 days prior to the animals being killed. Whereas the control animals, and those whose teeth had been extracted for only 200 days, showed normal histology of their temporomandibular joints, the 270 and 300 day groups showed perichondrocytal calcification and necrosis of the cartilage of the glenoid fossa, structural alterations of the meniscus, and pannus formation. D.S. Barker

2745. EXPERIMENTAL MORPHOGENESIS OF PERI-CEMENTITIS. V.V.Panikarovskii, A.A.Prokhorchukov and N.A.Zhizhina: Stomatologija, Mosk., 1963, 42, 17-19 (Med. Stomat. Inst., Moscow, U.S.S.R.)

Rats were maintained on a 55% sucrose diet for prolonged periods and periapical inflammatory changes were examined histol. Cyst formation was observed.

(Russian) C.P.Wallis

BIOCHEMISTRY

CARBOHYDRATES

2746. EFFECT OF INSULIN, DNP AND Na AZIDE ON GLYCOGEN SYNTHESIS AND GLUCOSE UTILISATION IN SKELETAL MUSCLE. M.K.Gould and E.Racken Bull. res. Counc. Israel, A, 1963, 11, 302-309 (Publ. Hlth. Res. Inst., City of New York, Inc., New York, U.S.A.) The rate-limiting factors of carbohydrate metabolism in rat soleus muscle were analysed by following the conversion of [14C]glucose to glycogen and lactate. Both were increased by the addition of 0.1 units of insulin/ml, incubation medium. Increase of external glucose concn. increased the rate of glycogen synthesis and the addition of insulin increased it further. The anaerobic conversion of glucose to lactate was inhib. by either Na azide or DNP, an inhib. which was completely released when both were added simult. This was explained as the stimm. of ATPase by DNP and its inhibn. by Na azide. With either alone the ADP-phosphate cycle became rate-limiting. L.G.Gillies

2747. IN VIVO OXIDATION OF L-RHAMNOSE AND L-GLUCOSE BY HIGHER PLANTS. G.A.Barber and W.Z.Hassid: Bull. res. Counc. Israel, A, 1963, 11, 249-252 (Dept. Biochem., Univ. California, Berkeley, Calif., U.S.A.) Alcoholic extracts of buckwheat seedlings (*Fagopyrum esculentum*) were examined for aldonic acids after the following monosaccharides had been administered to the plants: D-glucose, D-galactose, D-mannose, D-fructose, L-glucose, L-rhamnose, L-xylose, L-arabinose, D-xylose, D-ribose and D-lyxose. Only L-rhamnose and L-glucose caused a significant accumulation of the corresponding rhammonic and gluconic acids. The latter were identified by chromatography and electrophoresis of the free acids, their lactones and of the aldoses obtained on partial reduction of the lactones with NaBH₄. L.G.Gillies

2748. MONOSACCHARIDES OF BOVINE PLASMA ACID GLYCOPROTEINS. A.Bezkorovainy: Arch. Biochem., 1963, 101, 66-70 (Nat. Animal Disease Lab., Animal Disease and Parasite Res. Div., Agric. Res. Service, U.S. Dept. Agric., Ames, Iowa, U.S.A.) Both orosomucoid and the M-2 glycoprotein contained chromatographically identifiable N-glycolyl- and N-acetyl-neuraminic acids and an unidentified sialic acid which reacted strongly with Ehrlich's reagent and very weakly with the Warren reagent. Both also contained galactose and mannose in a molar ratio of approx. 1:0 and glucosamine. B.M.Stevens

2749. ON PARTIALLY ACETYLATED SUGARS AND SUGAR DERIVATIVES. Y.Z.Frohwein and J.Leibowitz: Bull. res. Counc. Israel, A, 1963, 11, 330-336 (Dept. Biol. Chem., Hebrew Univ., Jerusalem, Israel) Cold acetic KOH acting on an acetonic soln. of poly-acetyl carbohydrates preferentially set free secondary alcoholic groupings, giving carbohydrates esterified in the primary alcohol group(s) only. 6-O-acetyl glucopyranose, 6-O-acetyl methyl α- and β-glucopyranosides, 6,6'-di-O-acetyl sucrose and 6,1',6'-tri-O-acetyl sucrose were thus prep. By-products assumed to be monoacetyl maltose and monoacetyl sucrose were also obtained. The structures of most of these was proved. A new osazone of the first is described. L.G.Gillies

2750. FRUCTOSE 1,6-DIPHOSPHATE BREAKDOWN IN [WHOLE CELLS AND CELL FREE EXTRACTS OF]

E. COLL L.KlungsByr, I.Grundt and K.B.Helle: Biochim. biophys. Acta, 1963, 71, 451-453 (Dept. Pharmacol., Univ., Bergen, Norway). B.M.Steve*

2751. EFFECT OF OXAMATE ON OXIDATION OF SPECIALLY LABELLED GLUCOSE BY EHRLICH ASCITES CARCINOMA CELLS. E.Christensen and A.N.Wick: Proc. Soc. exp. Biol., N.Y., 1963, 112, 430-432 (Chem. Dept., San Diego State Coll., San Diego, Calif., U.S.A.) Sodium oxamate, which is related structurally to pyruvic acid, was incubated at 3 concn. (0.01M, 0.03M and 0.06M) with Ehrlich ascites cells and the utilisation of [14C]glucose substrates was followed. The higher the concn. of oxamate, the greater the expiration of 14CO₂ from [6-14C]glucose substrate but not from [1-14C]glucose. This inhibitor of lactic dehydrogenase shunts more pyruvate into the Krebs' cycle and decreases the need for glucose uptake as an energy suply. There is no lactic acid accumulation. D.N. Wheats

2752. NEW METHOD FOR MICROANALYSIS OF BLOOD GALACTOSE. D.Watson: Analyst. Biochem., 1963, 5, 260-262 (Dept. Pathol., Royal Women's Hosp., Carlton, Victoria, Australia) Blood galactose can be estimated using 6% (v/v) o-amino-toluene and 0.1% (w/v) thiourea in pure acid, after removal from the blood of protein and glucose. 1 pg./ml. can be estimated. A simple and sensitive method could be of use in confirming congenital galactosaemia in the newborn infant. A.D. McS

2753. GLUCOSE AND RIBOSE OXIDATION BY PSEUDOMONAS FRAGI. M.Leroux and H.L.A.Tarr: Canad. Biochem., 1963, 41, 1023-1034 (Fisheries Res. Board Canada, Technol. Station, B.C., Canada) The action of sol. and particulate fractions of sonically disrupted cells of *Pseudomonas fragi* on glucose and ribose was studied. Ribose was oxidised by the particulate fraction to ribono-γ-lactone but no further. Glucose appeared to be oxidised by a single dehydrogenase largely present in the particulate fraction; the sol. fraction possessed only 4% of the dehydrogenase activity of the particulate fraction. The sol. fraction had a 1:10 tonase enzyme which hydrolysed glucono-6-lactone but not glucono-γ-lactone; the washed particulate fraction had no such lactonase activity. J.B.Parish

2754. TRANSFORMATION OF 2-DEOXYHEXOSSES. J.Kocourek, M.Ticha, V.Jíračka, J.Koštff: Biochim. biophys. Acta, 1963, 71, 497-501 (Biochem. Inst. der Karls-Univ., Praha, Czechoslovakia) Ethanolic extracts of 2-3 month old tobacco plants and fully grown sunflowers and seedlings of peas, wheat, maize and sunflowers, which had been supplied with 2-deoxy-D-glucose and 2-deoxy-D-galactose, were examined by paper chromatography. Prelim. confirm. (German) B.M.Steve

2755. CHANGE FROM LIVER TYPE TO MUSCLE TYPE FRUCTOSE METABOLISM IN HEPATOMAS. J.Ashmore, M.J.Sweeney, H.P.Morris and G.Weber: Biochim. biophys. Acta, 1963, 71, 451-453 (Pharmacol., Indiana Univ. Sch. Med., Indiana, Ind., U.S.A.) Slow growing hepatomas showed normal liver type fructose metabolism, but with increasing tumour growth rate, fructose utilisation through fructokinase tended to decrease and the hexokinase route became predominant. B.M. Steve

2756. TOXIC EFFECTS OF OXYGEN AT HIGH PRESSURE ON THE METABOLISM OF D-GLUCOSE BY DISPERSED

OF RAT BRAIN. JJ.Thomas, jun., E.M.Neptune, jun. and H.C.Sudduth: Biochem. J., 1963, 88, 31-45 (Naval Med. Res. Inst., Nat. Naval Med. Center, Bethesda, Md., U.S.A.) Marked and rapid depressions in the catabolism of D-glucose by cell-free dispersions of rat brain were observed during exposure to 02 at high pressure. Less than 30 min. of incubation in oxygen at < atm. resulted in greatly decreased production of $^{14}\text{CO}_2$ from D-[U-14C]glucose, [1-14C]pyruvate, [2-14C]pyruvate, a-oxo[5-14C]glutarate and DL-[1-14C]glutamate. The oxidation of [1-14C]acetate was slightly inhibited, whereas that of [1,4-14C]succinate remained unimpaired during exposure to 02 at high pressure. Incubations at 5 atm. pO₂ resulted in large increases in the production of lactate from D-glucose. Striking decreases in the activities of pyruvate oxidase and d-oxoglutarate dehydrogenase were observed during brief incubations of rat brain mitochondria in 02 at 5 atm.

²²57. UDP-D-GLUCURONIC ACID 5-EPIMERASE AND UDP-N-ACETYLGLUCOSAMINE 4-EPIMERASE OF RABBIT SKIN. BJacobson and E.A.Davidson: Biochim. biophys. Acta, 1963, 73, 145-151 (Dept. Biochem., a Puke Univ. Med. Center, Durham, N.C., U.S.A.) Both enzymes from skin extracts fractionated similarly in X²* (NH₄)₂SO₄. required NAD and were inhibited by NADH or NADP was inactive with both; thiamonotinamide adenine nucleotide and acetylpyridine adenine dinucleotide were less active than NAD. It is suggested that the inhibition of each epimerase by the other's substrate and by UDP-glucose, uracil, uridine and UDP may be explained by a specific binding of the base and/or sugar moiety to the enzymes. B.M.Stevens

²²58. PREPARATION OF CRYSTALLINE 6-DEOXY-6-AMINO-D-GLUCOSE-HYDROCHLORIDE AND CONSTITUTION OF CERTAIN INTERMEDIATES. EHädergger, G.Zanetti and KSteiner: Helv chim. Acta, 1963, 46, 282-287 (Org. chem. Lab. der Eidg. Technischen Hochschule, Zurich, Switzerland) This compound is of interest as a constituent of the antibiotic Kanamycin. It can be produced in preparative quantities (100 g.) by crystallization from acetic acid rather than methanol, after hydrolysis of the 6-deoxy-6-amino-(X-methyl Glucoside. A no. of errors in previous work are corrected. (German) A.D.Smith

²²59. 6-DEOXY-METHYL-a-D-GLUCOSIDE-6-SULPHONIC ACID. B.Helferich and W.Ost: Hoppe-Seylers Z. physiol. Chem., 1963, 331, 114-117 (Chem. inst. Univ. Bonn, 53 Bonn, Germany). (German) LCornish

²²60. A METHOD FOR THE DETERMINATION OF α -LACTOSAMINE IN THE PRESENCE OF β -GLUCOSAMINE. C.Ctissi and F.Serafini-Cessi: Biomed. j., 1963, 88, 132-136 (Istituto di Patologia of ff** Bolo'gris July) The determination of α -lactosamine is carried out by condensation of the amine sugar with acetylacetone in methanol in the presence of triethylamine and pyridine. The product of condensation is transformed into 2-methylpyrrole by heating at 100°C. The reaction with p-dimethylaminobenzaldehyde. colour reaction is separable. The range is 10-50%. Some of the D-Glucosamin intermediates and the mechanism is discussed.

²²61. SYNTHESIS OF N-AMINOACYL-GLUCOSAMINES WHICH CONTAIN ASPARTYL OR GLUTAMYL RESIDUES. M.Liefländer and K.Thomas: Hoppe-Seylers Z. physiol. Chem., 1963, 331, 154-163 (Med. Res. Inst. Max-Planck-Soc., 34 GOTtingen, Germany). (German) LCornish

²²62. COMPETITIVE INHIBITION OF 3-KETOSUCROSE FORMATION BY D-GLUCOSE. S.Fukui and R.M. Hochster: Biochem. biophys. Res. Comm., 1963, 11, 50-54 (Microbiol. Res. Inst., Res. Branch, Canada Dept. Agric., Ottawa, Canada) D-glucose was shown to be a stereospecific inhibitor of the conversion of sucrose to 3-ketosucrose by Agrobacterium tumefaciens. This effect was observed only with intact cells, and not cell free prep. B.Ketterer

²²63. CONVERSION OF SUCROSE TO (X-D-RIBO-HEXY-PYRANOSYL-3-ULOSE-p-D-FRUCTOFURANOSIDE BY CULTURES OF AGROBACTERIUM TUMEFACIENS. S.Fukui and R.M.Hochster: Bull. res. Coun. Israel, A, 1963, 11, 262-268 (Microbiol. Res. Inst., Canada Dept. Agric., Ottawa, Ontario, Canada) A new crystalline disaccharide was isolated from culture media of A. tumefaciens growing on sucrose. The compound was characterised by a variety of physical, chem. and enzymic techniques and shown to be (X-D-ribo-hexopyranosyl-3-ulose-3-D-fructofuranoside. L.G.Gillies

²²64. SYNTHESIS OF D-CHALCOSE. N.K.Kochetkov and A.LUsov: Tetrahedron Letters, 1963, 8, 519-521 (Inst. Chem. of Natural Products, Acad. Sci., Moscow, U.S.S.R.) Chalcose, one of the antibiotic chalco-mycin acid degradation products, was synthesised from methyl 4,6-O-benzylidene-3-O-methyl-2-O-tosyl-a-D-glucopyranoside. Letter. R. H. Kimberlin

²²65. FURTHER INVESTIGATIONS ON THE CARBOHYDRATE MOIETY OF EGG ALBUMIN. A.P.Fletcher, R.D.Marshall and A.Neuberger: Biochim. biophys. Acta, 1963, 71, 505-508 (Dept. Chem. Pathol., St. Mary's Hosp. Med. Sch., London, England) Prelim. comm. B.M.Stevens

²²66. TREHALOSE IN HUMAN AND ANIMAL TISSUES. LS.Loucomskaya and G.LTarasova: Vop. Med. Him., 1963, 9, 214-218 (Acad. Med. Sci. of U.S.S.R., Moscow. U.S.S.R.) (Russian) J.R*Sargent

²²67. GAS CHROMATOGRAPHY OF SUGARS AND OTHER POLYHYDROXY COMPOUNDS. R.Bentley, C.CSweeley, M.Makita and W.W.Wells: Biochem. biophys. Res. Comm., 1963, 11, 14-18 (Dept. Biochem. and Nutr., Graduate Sch. Publ. Hlth. and Biochem. Dept., Sch. Med., Univ. Pittsburgh, Pa., U.S.A.) Sugars and other polyhydroxy compounds in the form of trimethyl silyl deriv. have been successfully separated by gas chromatography. B.Ketterer

²²68. PROPERTIES OF HIGH MOLECULAR WEIGHT GLYCOGEN FROM RAT LIVER. RXaskov and E.Margoliash: Bull. res. Coun. Israel, A, 1963, 11, 351-362 (Dept. Expt. Med., Hebrew Univ.-Hadassah Med. Sch., Jerusalem, Israel) A method is described for the prep. of rat liver glycogen by extraction with phenol and water. The product is highly polydisperse and differential centrifugation showed mol. wt. ranging from 20 x 10⁶ to 400 x 10⁶. The intrinsic viscosity, the frictional ratio and the % of outer branches are independent of the mol. wt. High mol. wt. glycogen is particularly

BIOCHEMISTRY

sensitive to degradation by acid and alkali at room temp, and by boiling at neutral pH. With repeated extractions the high mol. wt. glycogen was extracted first and later extracts contained the lower mol. wt. material.

L.G.Gillies

2769. BIOLOGICAL CONTROL OF GLYCOGEN METABOLISM IN AGROBACTERIUM TUMEFACIENS.

N.B.Madsen: Canad. J. Biochem.. 1963, 41, 561-571 (Microbiol. Res. Inst., Dept. Agric, Ottawa, Canada)

Glycogen and UDP glucose levels in cells of *A. tumefaciens* were determined at various stages of growth. The glycogen levels increased markedly during the lag phase, decreased during the exponential phase and increased again as growth ceased due to depletion of N from the medium. The UDP glucose concn. paralleled these changes. The addition of NH₄Cl to N-starved cells caused a prompt resumption of growth, a sharp decrease in UDP glucose concn. and a smaller decrease in glycogen concn.

J.B. Parish

2770. GLYCOGEN IN THE LENS OF BIRDS' EYES.

M.Rabaei. Nature, Lond., 1963, 198, 206-207 (Dept. Ophthalmol., Univ. Ghent, Belgium) Glycogen constitutes more than 10% of the dry wt. of the lens in most birds' eyes. It is absent from some birds that have no distinct flying habits. Its possible function is discussed.

G.M.Lewis

2771. GLYCOGEN FRACTIONS IN VARIOUS PARTS OF CHICK EMBRYO. Z.P.Zheludkova: Biokhimija, 1963, 28, 31-35. Glycogen fractions and free

glucose were assayed in the liver, muscles and yolk sac of the developing chick embryo. In the liver, bound glycogen was the predominating fraction up to the 12th day of incubation; after this, free glycogen became more important. In the muscle the bound fraction predominated, whereas the free fraction predominated in the yolk sac. Changes in the glucose concn. in all tissues tested corresponded to those in the bound glycogen fraction.

(Russian) B.J. Cooper

2772. DETERMINATION OF THE DEGREE OF POLYMERISATION OF OLIGOSACCHARIDES. L.Stewart and P.Nordin: Analyt. Biochem., 1963, 5, 175-178 (Dept. Biochem., Kansas State Univ., Manhattan, Kans., U.S.A.) The alk. Cu phosphate reagent for glucose determination described by Somogyi can be coupled with the anthrone method to provide a way of determining the degree of polymerisation of linear starch oligosaccharides. The degree of polymerisation is equal to the total glucose by the anthrone method divided by the glucose equiv. by the Somogyi method. A.D. Smith

2773. CHROMATOGRAPHY ON CELLULOSE PHOSPHATE OF POLYSACCHARIDE HYDROLASES FROM FUNGI. J.H.McClendon and J.H.Kreishen: Analyt. Biochem., 1963, 5, 295-312 (Dept. Agric. Biochem. and Food Technol., Univ. Delaware, Newark, Dela., U.S.A.)

The chromatographic behaviour at room temp, is described of 3 polygalacturonases (one exo and one end J), 2 xylanases (exo and endo), 2 cellulases and a no. of other enzymes on a column of cellulose phosphate in an almost linear pH gradient (2.2 to 7), produced by 0.05M each of citric acid, acetic acid and sodium chloride, and 0.05N NaOH in the reservoir.

A.D. Smith

2774. BIOSYNTHESIS OF CELLULOSE. VII. INTERACTION OF SOLUBLE CARBOXYMETHYLCELLULOSE WITH CELLULOSE FIBRES. L.Ohad: Bull. res. Counc. Israel, A, 1963, 11, 279-285 (Dept. Biol. Chem.,

Hebrew Univ., Jerusalem, Israel) Sol. CM-cellulose [14C-CMC] was incorporated into insol. cellulose fibre using *Acetobacter xylinum* cells. The incorporated material was not washed out by alkali or exchanged with external [12C]CMC. CMC was also incorporated by colloidal salt-precipitated hydrocellulose. The aggregation time of cells synthesising cellulose was delayed when CMC or several other polysaccharides were added to the system. Before onset of aggregation the cellulose synthesised in the presence of CMC would pass through filters which blocked the passage of cellulose fibres. The significance of this and its bearing on cellulose fibre formation in living plant cells was discussed.

L.G.Gillies

2775. METABOLISM OF FRUCTOSE POLYMERS IN PLANTS. m. ACTIVITY OF IF-FRUCTOSYLSUCROSE/SUCROSE TRANSFRUCTOSYLASE IN LIVING TISSUE OF HELIANTHUS TUBEROSUS L. J. Edelman, D.A.C. Recaldin and A.G.Dickerson: Bull. res. Counc. Israel, A, 1963, 11, 275-278 (Dept. Plant Physiol., Imperial Coll. Sci. Tech., London, England) [14C]Sucrose 0*

¹⁴CO₂ were used to label sol. carbohydrates in living tuber discs or in intact tubers attached to the plant. W this means exchange was demonstrated between free sucrose and the sucrosyl residues in IF-fructosyl sucrose. This process is caused by transfer of terminal fructose units from the trisaccharide to free sucrose. An identical reaction is known to be catalysed by an enzyme isolated from tuber tissue.

L.G.Gillies

2776. ISOLATION OF THREE POLYSACCHARIDES FROM THE HEMICELLULOSE B FRACTION OF CORN STALK. R.E.Grama and R.L.Whistler: Arch. Biochem., 1963, 101, 75-80 (Dept. Biochem., Purdue Univ., Lafayette, Ind., U.S.A.) A small amount of a glucan possesst heteroglycan of mol. wt. 23700 were obtained together with a neutral arabinoxylan of 16400 mol. wt. Compl hydrolysis of the last after full methylation produced 2-mono-O-methyl-D-xylopyranose, 2, S-di-O-methyl xylopyranose, 3,5-di-O-methyl-L-arabinofuranose, 2,3,4-tri-O-methyl-D-xylopyranose and 2,3,5-tri-O-methyl-L-arabinofuranose in a molar ratio of 3:6:2:3:1:2:0:2:0:1:0. These results and the physical character suggested a chain of (1-4)-D-xylopyranose units with short linear side chains terminating in L-arabinofuranose and D-xylopyranose unite.

2778. METABOLISM OF NEURAMINIC ACID IN ANIMALS. LV.Zvetkova: Vop. Med. Him., 1963, J 5c, 115-124 (Inst. Biol. and Med. Chem., Acad. M^{sc} of U.S.S.R., Moscow, U.S.S.R.) Review. 35 ref* (Russian)

2779. IDENTIFICATION OF A SULPHATED MUCOPOLYSACCHARIDE IN CHICK EMBRYOS, STAGES 11-23. S.Franco-Browder, J.De Rydt and A.Dorfman:

BIOCHEMISTRY

26?

Acad. ScL. Wash., 1963, 49, 643-647 (La Rabida Univ. Chicago Inst. and Dept. of Pediatrics and Biochem., Univ. Chicago, IL, U.S.A.) Papain-toeated chick embryo tissues from stages 11-12 to 23 contain a mucopolysaccharide with the same electro-Bboretic mobility as normally sulphated chondroitin ^Itfiae A. Hydrolysis with RNase, DNase, and hyal-Jfsonidase demonstrated that this material is sensitive to iatter. Marked incorporation of $^{35}\text{SO}_4$ was obtained *in vivo* by embryos stage 16-17 in this mucopolysaccharide. J Mck embryo stage 22-23 fractionation with cetyl-gtdinium chloride of the tissue extracts demonstrated Presence of mucopolysaccharides with different degrees of sulfiation judging by their electrophoretic mobility and salt solubility. J.R.Sargent

²⁷⁸ D. ACID MUCOPOLYSACCHARIDES OF HUMAN BRAIN: IDENTIFICATION BY MEANS OF INFRA-RED ANALYSIS. J.Clausen and A.Hansen: J. Neurochem., 1963, 10, 165-168 (Dept. Biochem., Univ. Copenhagen, Copenhagen, Denmark) A method is described for extracting acid mucopolysaccharide from human brain and its fractionation by ethanol pprn. Ir. spectrographs of these fractions demonstrated the presence of hyaluronic acid chondroitin sulfate and Sulfatase.

²⁷⁸ 1- SEPARATION OF TWO DISTINCT GALACTOSIDASES FROM THE SEED OF PLANT AGO OVATA. J.E.Courtois, F.Petek and T. Dong: Bull. Soc. Chim. France, Paris, 1963, 45, 95-100 (Lab. Chim. Biol. Pharm., Paris, France) Two distinct galactosidases were obtained by alumina column chromatography from seeds of *Plantago ovata*. These were shown to have different pH optima and Km values. Transfer of galactose from phenyl galactoside on to sucrose gave galactose in the first case and raffinose in the second. fFrench) j.C.Crawall

²⁷⁹ L GLYCOSYL TRANSFER BY LEVANSUCRASE AND QCTRANSUCRASE. F.Eisenberg, jun. and S-Hesmn. res. Counc Israel. A, 1963, 11, 269-274 (Nat. Inst. Arthritis and Metabolic Diseases, N.L.H., Bethesda, Md., U.S.A.) The nature of the carbohydrate moiety transferred by the polymerases, levan- α -dextranase and dextranase, was investigated. From the fact of incorporation of ^{18}O into sucrose synthesised by transferase from $[x\text{-}^{18}\text{O}]$ -glucose and raffinose the transfer was either fructosyl or fructosido. Sucrose was found to contain the theoretical amount of ^{18}O for fructosyl transfer and levan-sucrase is therefore a transfructosylase. The availability of the action of dextranase on sucrose to a growing chain of dextran. The dextran was found to be without excess ISO v. The indicated Blucosyl transfer. L.G.GUÜes

²⁷⁸³ CLEAVAGE OF FRUCTANS TO LEVANBIOSE-SPECIFIC HYDROLASE. G.Avigad and R.Zelikso.: Bull. Res. Counc. Israel, A, 1963, 11, 253-257 (Dept. Biol. Chem., Hebrew Univ., Jerusalem, Israel) A levan hydrolysing enzyme ($\beta_2,6$ -fructan- β -levanbiohydrolase) which cleaves the $\beta_2,6$ -fructofuranosidic linkage in various fructans is discussed. L.G.Gillies

²⁷⁸⁴ INSOLITUR-a-AMYLASE-DKTRIN COMPLEX. A.Levitzki and M.Schramm: Bull. Res. Counc. Israel, A, 1963, 11, 258-261 (Dept. Biol. C.W.I., Hebrew Univ., Jerusalem, Israel) Cryst. Pancreatica-amylase interacts with glycogen dextrins at 4° to form an msoi.

complex. Some prop. of this enzyme substrate complex are described. L.G.Gillies

²⁷⁸⁵ 0-GLUCURONIDASE ACTIVITY OF AORTA IN EARLY STAGES OF EXPERIMENTAL RABBIT ATHERO-SCLEROSIS. O.Mrhova, T.Zemplenyi and Z.Lojda: J. Atheroscler. Res., 1963, 3, 44-49 (Inst. Cardiovasc. Res., Prague-Krc, Czechoslovakia) There was a significant increase in the β -glucuronidase activity of rabbit aortae as early as 4 weeks, and 10 weeks after the beginning of daily cholesterol-fat feeding. These findings reflected early metabolic changes in the aortic connective tissue of cholesterol-fat fed rabbits. K.Jones

²⁷⁸⁶ THE MECHANISM OF CARBOHYDRASE ACTION. K. HYDROLYSIS OF SALEP MANNAN BY PREPARATIONS OF a-AMYLASE. P.Z.Allen and W.J.Whelan: Biochem. J., 1963, 88, 69-70 (Lister Inst., London, England) A report that the (X-amylases of *A. oryzae* and *B. subtilis*) attack salep mannan has been investigated. Crude prep. of the enzyme hydrolyse the polysaccharide but mannanase activity disappears when the enzymes are purified and crystallised. Several-times-cryst. specimens are virtually without action on the mannan. Cryst. a-amylases of human saliva and pig pancreas similarly have no appreciable action on the polysaccharide. *

²⁷⁸⁷ IMPROVED PROCEDURES FOR PREPARATION AND CHARACTERISATION OF MYROTHECIUM CELLULASE. I. PRODUCTION OF ENZYME. D.R.Whitaker and R.Thomas. H. PURIFICATION PROCEDURES. D.R.Whitaker, K.R.Hanson and P.K.Datta. III MOLECULAR WEIGHT, AMINO ACID COMPOSITION, TERMINAL RESIDUES AND OTHER PROPERTIES. P.K.Datta, K.R.Hanson and D.f.c.Whitaker. IV. CHARACTERISATION OF ACTIVITY TOWARD (3-METHYL GLYCOSIDES OF 1- \rightarrow 4-8-D-OLIGOGLUCOSIDES. E.G.Hanstein and D.R.Whitaker: Canad. J. Biochem., 1963, 41, 667-670, 671-696, 697-705, 707-718 (Div. Appl. Biol., Nat. Res. Council, Ottawa, Canada) I. An improved procedure for the production of cellulase by *Myrothecium verrucaria* is described. The mould was grown in 2 stages in the same culture vessel: firstly on a semisolid medium of ground cotton linters moistened with a soln. of inorg. salts, and then, by addition of further salt soln. in submerged culture. The first stage consisted of incubation at 30° in darkness for 7 days, supplied with air at approx. 0.5 l/min. The second stage in submerged culture was continued for 10 days, then the cellulase from the first batches of filtrate was purified.

II. Two methods for the purification of cellulase from *Myrothecium* culture filtrates are described. Method 1 consisted of (a) fractionation with $(\text{NH}_4)_2\text{SO}_4$, (b) elution through Sephadex G 25, (c) elution through Sephadex G75, (d) pptn. with polymethacrylic acid and (e) elution through Amberlite CG50 with citrate buffer containing a gradient of urea concn. Method 2 consisted of pptn. with sat. $(\text{NH}_4)_2\text{SO}_4$, (b) and (d) as above, elution through DEAE cellulose with phosphate buffer containing 7M urea, followed by (b) and (c) as above. The products of both methods were identical in sp. activity towards CMcellulose and the increase in sp. activity was 12-fold.

III. The mol. wt. of *Myrothecium* cellulase was estimated by the Archibald method to be approx. 49000. No N-terminal amino acid could be detected by the Edman degradation or with fluorodinitrobenzene. Hydrazinolysis gave glycine as the C-terminal amino acid. No free sulphydryl groups could be detected in the enzyme. The amino acid composition and the fingerprint pattern after

BIOCHEMISTRY

tryptic digestion were determined.

IV. Two methods for the preparation of β -methyl glycosides of 1->4-3-D-oligoglucosides are described. In method 1 the parent oligoglucoside was acetylated, acetobrominated, methylated, fractionated on Magnesol and deacetylated. In method 2 an acetolysate of cellulose was acetobrominated, methylated, deacetylated and fractionated on Darco G60 charcoal. The kinetics of the hydrolysis of 3-methyl cellobetaoside by purified M⁺rothecium cellulase at pH 5*0 and 28*6° were studied.

J.B. Parish

2783. RAT INTESTINAL SUCRASE. I. INTESTINAL DISTRIBUTION AND REACTION KINETICS.

D.G.R.Blair and J.Tuba. II. EFFECTS OF RAT AGE AND SEX AND OF DIET ON SUCRASE ACTIVITY.

D.G.R.Blair, W.Yakimets and J.Tuba: Canad. J.

Biochem., 1963, 41, 905-916, 917-929 (Dept. Biochem., Univ. Alberta, Edmonton, Alberta, Canada)

I. Sucrase activity was measured in aq. homogenates of 10 cm. sections of the intestine; the activity in normal adult male rats was associated mainly with the first half of the small intestine, a trace in the colon but none in any other tissues examined. The optimum pH was 6'25, optimum substrate concn. was 0'12M to 0-5M sucrose and Km was 0#0128M. At the sucrose concn. used (0'161M) for routine assay the enzyme action was zero order for 20 min. and sucrase action followed the Arrhenius equation between 5° and 37° and an activation energy of 10100 cal/mol. was calc.

II. The sucrase activity of rats of 23 days was approx. two-thirds that of adult rats but sex had no effect on enzyme activity. Sucrase activity fell rapidly during the first 2 to 4 days of fasting. When compared with a carbohydrate-free, high-casein control diet, diets containing IQPfo of sucrose, galactose, melitose, OL-methyl-D-glucoside, fructose or maltose produced increased sucrase activity in the intestine, but glucose, mannose, xylose and lactose did not increase sucrase activity. A 70% raffinose diet decreased sucrase activity. J.B.Parish

2789. SPECIFICITY OF YEAST GLUCOSE 6-PHOSPHATE DEHYDROGENASE FOR D-GLUCOSE.

S.P.Colowick and E.B.Goldberg: Bull. res. Counc. Israel, A, 1963, 11, 373-378 (Dept. Microbiol., Vanderbilt Univ., Nashville, Tenn., U.S.A.)

A glucose 6-phosphate dehydrogenase prep. from yeast acted on non-phosphorylated sugars when these were added in high concn. When a- and 3-D-glucose were compared, the 3-anomer was oxidised slowly until mutarotation occurred. Of the other sugars tested, L(-)-xylose, D(+)-xylose, D(-)-arabinose and L(-)-fucose were also acted upon. These, like (X-D)-glucose, all showed the same dependence on prior mutarotation for rapid oxidation. It is proposed that the physiol. substrate for the enzyme is the β -anomer of D-glucopyranose-6-phosphate. L.G. Gillies

2790. A COMPARATIVE MAPPING OF ENZYMES INVOLVED IN HEXOSE MONOPHOSPHATE SHUNT AND CITRIC ACID CYCLE IN THE BRAIN.

R.L.Friede, L.M.Fleming and M.Knollen: J. Neurochem., 1963,

10^263-277 (Mental Health Res. Inst., Univ. Michigan, Ann Arbor, Mich., U.S.A.) Cytochrome oxidase

(CO), succinic dehydrogenase (SDH), NAD-diaphorase, NADP-diaphorase, glucose-6-phosphate-, 6-phosphogluconic-, lactic- and malic-dehydrogenases were measured in various regions and 'nuclei*' of human and rhesus monkey brain by chem. and histochem. means. Within individual cells hexosemonophosphate [HMP] shunt and glycolytic enzyme were richer in the perikaryon

than in dendrites or neuropil. These enzymes were also richer in white matter oligodendroglia than nerve cells. 15 'nuclei' were found to be very low in GO and SDH activity but rich in HMP shunt enzymes and lactic dehydrogenase. The general distribution pattern of these enzymes is otherwise similar throughout the brain and between the 2 spp.

R. Woodman

2791. EFFECT OF GLYCOLYTIC ENZYMES ON THE METABOLISM OF TUMOUR CELLS. VII. VARIATION OF ACTIVITY OF FRUCTOSE 1,6-DIPHOSPHATE IN HEPATOMA AND ALLOXAN DIABETIC RATS.

E.HeisC C.Kleitke and M.Gflrich: Z. Naturforsch B, 1963, 18, 31-35 (Inst. Med. und Biol., Forschungsgemeinschaft, Deutschen Akad. der Wissenschaften, Berlin, Germany).

The increase of glucose 6-phosphatase and fructose 1,6* diphosphatase [FDPase] in the liver of alloxan diabetic rats and rabbits was proportional to the increase in blood sugar. The FDPase activity in liver was in the order diabetic > normal > hepatoma. The proteolytic activity of FDPase was greater in normal than in diabetic liver and was low in hepatoma liver.

(German) J.C.CrawhaU

2792. ENZYMES IN GLYCOLYSIS BY MICROSONES OF EHRLICH ASCITIC TUMOUR.

K.N.Sorokin: Biokhirkft

1963, 28, 18-21. A study was made of the enzymu^c reactions defining the rate of glycolysis in the microsomes of the Ehrlich ascitic tumour. It was shown that hexokinase played the role of such an enzyme. The uneven distribution of hexokinase accounted for its deficiency i^c the microsomes. The significance of the mitochondria i^c regulating glycolysis in the microsomes is discussed.

(Russian) B.J.Cooper

2793. TRANSGALACTOSYLASE ACTIVITY OF STREPT⁺ COCCUS LACTIS.

S.LNovikova: Biokhimia, 1963,

28, 13-17. Enzyme extracts of a strain of S. lactis acted on lactose to cause the appearance in the medium of free galactose and glucose, and also 3 oligosaccharid* consisting of galactose and glucose residues. In all these 3 the galactose content was much greater than that of glucose. Formation of these compounds appeared to be the result of transgalactosylation involving transfer of glucose to the respective acceptor.

(Russian) B.J.Coopet

2794. INTERACTION OF A RAT KIDNEY ENDOPLASM^C RETICULUM FRACTION WITH GLYCOLYTIC ENZYMES.

V.D.Jones, J.L.Norris and E.J.Landon:

Biochim. biophys. Acta, 1963, 71, 277-284 (Dept. Pharmacol., Vanderbilt Univ. Sch. Med., Nashville, Tenn., U.S.A.) The membrane prep. stimulated glycolytic activity by over 50%. The site of stimn. was shown to be the 3-phosphoglycerate kinase reaction, tW ATPase of the membrane prep. apparently interacting with ATP associated with the kinase. The membrane prep. also oxidised NADH2 generated by glycolysis.

B.M.Steve#

UPIDS AND STEROIDS

2795. MICRODETERMINATION, ISOLATION AND LIQUID CHROMATOGRAPHY OF 2-HYDROXY FA

ACIDS.

Y.Kishimoto and N.S.Radiru: J. lipid Res.

1963, 4, 130-138 (Mental Hlth. Res. Inst., Univ.

Michigan, Ann Arbor, Mich. U.S.A.) A method

described for the sp. isolation of 2-hydroxy fatty acids

Particularly from brain lipids. The procedure involves saponification of the lipids with KOH-propylene glycol, followed by purification with a small silica gel column, and pptn. as the Cu chelate. The total content of 2-hydroxy acids may be determined by direct colorimetric determination of the Cu in the ppt., or the acids may be derated and analysed by gas-liquid chromatography.

J.R. Sargent

^96. THE COLORIMETRIC MICRO-DETERMINATION OF LONG-CHAIN FATTY ACIDS. W.G.Duncombe: Biochem. J. 1963, 88, 7-10 (Wellcome Res. Lab., Beckenham, Kent, England) A colorimetric procedure is described for the determination of long-chain fatty acids in the range 0.05-0.5 μ mole in 5 ml. The method can be applied to C10-C12 sat. acids and to linoleic acid, oleic acid, linoleic and linolenic acid. Water-sol. soaps of the acids can also be determined, and there is no interference from cholesterol, sterol esters or triglycerides except in very high concn. For a single acid an accuracy of $\pm 2\%5\%$ (S.D.) mid-range can be obtained with 1 determination. For mixtures of acids there is some loss of accuracy.

^97. SOME OBSERVATIONS ON ESTIMATION OF NON-ESTERIFIED FATTY ACID [NEFA] CONCENTRATIONS IN COW AND SHEEP PLASMA. S.P.Patterson: Res. vet. Sci., 1963, 4, 230-237 (Cernt. Vet. Lab., Weybridge, England) A modification of Dole's method was used to estimate NEFA concn. in cow and sheep plasma as a measure of the rate of fat mobilisation. When paired samples were taken from starved sheep at approx. 13 min. intervals there was an increased concn. in the second sample, presumably due to nervous activity stim. by the first sampling. J.B-Derbyshire

^98. INHIBITION OF TUMOUR GLYCOLYSIS BY OZONE PEROXIDE FORMED FROM AUTOXIDATION OF UNSATURATED FATTY ACIDS. N. Baker and G.Wilson: Biochem. biophys. Res. Commun. 1963, 11, 854 (Radioisotope Serv., V.A. Center and Dept. Chem., Sch. Med., Univ. California, Los Angeles, Calif., U.S.A.) U.v.-irradiation of unsat. fatty acids produces water sol. material which inhibits enz. in Ehrlich ascites cells. This material has been identified as H_2O_2 . B.Ketterer

^99. STEREOISOMER FORMATION ON THE OZONISATION OF ESTERS OF MONOUNSATURATED FATTY ACIDS. O-S.Privett and E.C.Nickell: J. lipid Res., 1963, 4, 208-211 (Univ. Minnesota, Hormel Inst., Minn., U.S.A.) The formation of stereoisomers of ozonides on the ozonisation of methyl esters of unsat. fatty acids in pentane at 70° was demonstrated by thin layer chromatography, i.r. spectra and analyses. The cis- and trans-isomers of ozonides (t_i^2 and t_i^3 trans-methyl 9-octadenoates (methyl oleate and elaidate) were isolated and characterised.

J.R. Sargent
100. OCCURRENCE OF 2-HYDROXY FATTY ACIDS IN MAMMALIAN TISSUES. Y.Kishimoto and N.S.Radin: Res. Bull. Univ. Michigan, Ann Arbor, Mich., U.S.A.) Determination of 2-hydroxy fatty acids in rat spleen, sciatic nerve and skin, and in bovine liver were determined by a Cu pptn. method, and the various hydroxy acids were determined by gas-chromatography. Two groups of hydroxy

acids were observed, short chain (16 h:O as major component) and long chain (24 h:O as major component). The relative proportions of the 2 groups varied with the tissue. No 2-hydroxy acids could be found in liver or epididymal fat. The 2-hydroxy acids of brain occur only in amide linkage.

J.R. Sargent

2801. BIOSYNTHESIS OF FATTY ACIDS. IV. STUDIES WITH INHIBITORS. J.D.Robinson, R.O.Brady and R.M.Bradley: J. lipid Res., 1963, 4, 144-150 (Lab. Neurochem., Nat. Inst. Neurol., Dis. and Blindness, N.I.H., Bethesda, Md., U.S.A.)

Tetralyl-CoA and propiolyl-CoA have been shown to be strong noncompetitive inhibitors of fatty acid synthesis. A crylyl-CoA and isocrotonyl-CoA also inhibit but at higher concn. Palmityl-CoA and free CoA also inhibit fatty acid synthesis and also block the condensation of acetyl-CoA with malonyl-CoA and the reduction of crotonyl-CoA to butyrate. These materials did not inhibit the reduction of acetoacetyl-CoA to the P-hydroxy deriv. although the complete reduction to butyrate was prevented. Addition of flavin nucleotides also inhibits fatty acid synthesis catalysed by brain enzyme prep.

J.R. Sargent

2802. PARTICIPATION OF MALONYL COENZYME A IN BIOSYNTHESIS OF MEVALONIC ACID. J.D.Brodie, G.Wasson and J.W.Porter: J. biol. Chem., 1963, 238, 1294-1301 (Radioisotope Unit, V.A. Hosp., Madison, Wis., U.S.A.)

A new pathway for biosynthesis of mevalonic acid utilises acetyl- and malonyl-CoA as substrates; the intermediate reactions are catalysed by a purified pigeon liver enzyme system in presence of NADH₂ phosphate and a thiol. This same system also utilises acetyl- and malonyl-CoA for synthesis of fatty acids. Biol. active 3-hydroxy-0-methylglutaryl CoA is formed when NADH₂ phosphate is absent from the incubation mixture. This compound and acetoacetyl CoA are not obligatory intermediates in synthesis of mevalonic acid from acetyl- and malonyl-CoA. The significance of the results is discussed.

J.N.Ashley

2803. CONDENSATION REACTION OF FATTY ACID BIOSYNTHESIS. II. REQUIREMENT OF ENZYMES OF CONDENSATION REACTION FOR FATTY ACID SYNTHESIS. P.Goldman, A.W.Alberts and P.R. Vagelos: J. biol. Chem., 1963, 238, 1255-1261 (Enzyme Section, Lab. Cell. Physiol., Nat. Heart Inst., Bethesda, Md., U.S.A.) Sol. bacterial synthetase systems from *Clostridium kluyveri* and *E. coli* catalyse synthesis of long chain fatty acids from malonyl CoA, acetyl CoA, and NADPH₂. Sat. fatty acids only are produced in the system from *C. kluyveri* where FMN and an unidentified cofactor are present, but sat. and unsat. acids are produced in *E. coli*. The 2 synthetase systems are fractionated; over-all fatty acid synthesis depends on the same thermostable and thermolabile enzymes that catalyse the condensation reaction. But synthesis of butyrate in extracts of *C. kluyveri* does not need malonyl CoA nor the enzymes that catalyse the condensation reaction.

J.N.Ashley

2804. PHOSPHOGLYCERIC ACID KINASE ACTIVITY AND ITS ROLE IN ADIPOSE TISSUE. G.Rose and B.Shapiro: Bull. Res. Coun. Israel, A, 1963, 11, 384-386 (Dept. Biochem., Hebrew Univ.-Hadassah Med. Sch., Jerusalem, Israel)

The presence of a highly active 3-phosphoglyceric acid kinase in adipose tissue was demonstrated by means of hydroxamate formation as well as by coupling with glyceraldehyde-

BIOCHEMISTRY

phosphate dehydrogenase. Considerable activity of the latter enzyme was also found in the adipose tissue extract. Both enzymes were shown to be part of a chain of reactions which forms the glycerol moiety of fatty acid-glycerides from pyruvate.

L.G.Gillies

2805. MECHANISM OF ACTIVATION OF HOG PAN-CREATIC LIPASE BY SODIUM TAUROCHOLATE. P.J.Fritz and P.Melius: *Canad. J. Biochem.*, 1963, 41, 719-730 (Sch. Chem., Auburn Univ., Auburn, Ala., U.S.A.) A new stable prep. of hog pancreatic lipase is described. From a study of the composition of the reaction mixtures after enzymic hydrolysis with and without taurocholate, it appeared that the hydrolysis of triglyceride to diglyceride was facilitated and that of diglyceride to monoglyceride was depressed by the presence of taurocholate. From the rates of hydrolysis of triolein, monoolein, tributyrin and monobutyrin in the presence and absence of taurocholate it appeared that taurocholate acted by splitting the diglyceride-enzyme complex, thereby increasing the action of the enzyme on the triglyceride.

J. Parish

2806. PHOSPHOLIPASE D ACTIVITY IN A NON-HAEMOLYTIC CORYNEFORM BACTERIUM. K.Fossum and T.Hoyem: *Acta path. microbiol. scand.*, 1963, 57, 295-300 (Dept. Microbiol., Vet. Coll., Oslo, Norway) The ability to produce choline from lecithin has been demonstrated in strains of a non-haemolytic coryneform bacterium. Lecithinase D production is not necessarily associated with haemolytic activity. This may help to distinguish the non-haemolytic coryneform bacterium from *Corynebacterium pyogenes*. A paper chromatography method is described for the demonstration of choline.

LFriedmann

2807. DISTRIBUTION OF ALPHA GLYCERYL ETHERS IN ANIMAL TISSUES. S.Nakagawa and J.M.McKibbin: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111, 634-636 (Dept. Biochem., State Univ. New York, Coll Med., Syracuse, N.Y., U.S.A.) A method for determination of lipid CX-glyceryl ethers in animal tissue is described. These compounds were found in small quantities (0.2-1.35 fmoles/g. of dry lipid-free tissue) in all tissue examined except bone marrow.

M.M.Shapland

2808. CONSTITUENTS OF LIPIDS OF TUBERCLE BACILLI DC. N.Polgar and W.Smith: *J. chem. Soc.*, 1962, 4264-4265 (Dyson Perrins Lab., Univ. Oxford, England) Note.

L.G.Gillies

2809. IDENTIFICATION OF LIPIDS IN BLOOD THROMBOPLASTIN. H. P. Bentley, jun.: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111, 757-759 (Dept. Paed., Univ. Alabama Med. Cen., Birmingham, Ala., U.S.A.) Lipids from blood thromboplastin were identified by column and paper chromatography as inositol phosphatide, lecithin, sphingomyelin, phosphatidyl serine, phosphatidyl ethanolamine and cholesterol. Despite wide variations in thromboplastic activity in 70 samples of blood thromboplastin, there was no change in the presence of any of the lipids.

M.M.Shapland

2810. LIPID EXTRACTION AND DISTRIBUTION STUDIES OF EGG YOLK LIPOPROTEINS. W.G.Martin, N.H. Tattrie and W.H.Cook: *Canad. J. Biochem.*, 1963, 41, 657-666 (Div. Appl. Biol., Nat. Res. Council, Ottawa, Canada) The 3 lipoproteins of egg yolk have been isolated and their lipid compositions determined. The

a- and 6-lipovitellin comprised 22-26% lipid of which 61% was phospholipid, 35% triglyceride and 4% cholesterol and its esters. The low density fraction contained approx. 89% lipid of which 27% was phospholipid, 69% triglyceride and 4% cholesterol and its esters. In all fractions the phospholipids contained 74% lecithins, 18% cephalins and 8% minor phospholipids. Gentle extraction of the low density fraction with ethyl ether left a residue containing 52% lipid which sedimented into 5 component in the ultracentrifuge.

J.B. Parish

2811. CATALYSIS OF UNSATURATED LIPID OXIDATION BY IRON PROTOPORPHYRIN DERIVATIVES.

W.Duane Brown, L.S.Harris and H.S.Olcott: *Arch. Biochem.*, 1963, 101, 14-20 (Inst. Marine Resources Dept. Nutritional Sci., Univ. California, Berkeley, Calif., U.S.A.) MetHb, metmyoglobin, imidazole Hb hemichrome, imidazole myoglobin hemichrome, CO-Hb, oxyHb and NO-Hb were all active catalysts, although some of the Fe²⁺ forms showed induction periods. When catalysts were extracted and examined spectrophotometrically Fe²⁺ forms of haematin compounds were converted to Fe³⁺ on extraction. Denatured metHb and NO-Hb behaved similarly to the native proteins.

B.M. Stevens

2812. LIPIDS OF ASPOROGENIC YEAST-LIKE FUNGO^{OF} THE GENUS CANDIDA. N.P.Yelinov and N.A.

Zaikina: *Vop. Med. Him.*, 1963, 9, 177-180 (Inst. Chem. and Pharmacol., Leningrad, U.S.S.R.)

Stearic, palmitic, lauric, petrosolic and linoleic acids, were present in lipids from the fungoids. Linolenic acid, but not stearic acid, was present in lipids from the fung C. krusei.

J.R. Sargent

2813. APPARATUS FOR PRODUCTION OF CONCAVE GRADIENTS AND ITS APPLICATION TO CHROMATOGRAPHY OF LIPIDS. G.J.Nelson: *Analyst. Biochem.*, 1963, 5, 116-132 (Donner Lab. of Biophysics and Med. Physics, Univ. California, Berkeley, Calif. U.S.A.) An automatic method for the column

chromatographic separation of lipid mixtures, particu^{of} phospholipids, utilising concave gradient elution is described in detail. The gradient in this system is produced by an automatic pumping system using accurate controlled volume pumps and variable pumping rates. A discussion of the theoretical aspects of gradient elution, in relation to nonlinear absorption isotherms is include^d and several chromatographic runs using the system are presented.

A.D. Sin^{et al.}

2814. DAMAGE TO PROTEINS BY PEROXIDISED LIPIDS.

L.D.Desai and A.L.Tappel: *J. lipid Res.*, 1963, 4, 204-207 (Dept. Food Sci. and Technol., Univ. California, Davis, Calif., U.S.A.) Addition reac^{to} of peroxidising linolenic acid with cytochrome c was studied using [14C]linolenic acid. Considerable dan^{to} occurred to cytochrome c in the presence of peroxide^{to} linolenic acid as judged% decreased solubility of ^ protein. Amino acids which were labile to oxidation^{to}, not present in the linolenic-peoxy-cytochrome f P^{10,20}, 70% of the linolenic acid was bound to cytochrome g peroxy bonds the remainder being bound by ether or possibly carbon-carbon bonds.

J.R.S^{et al.}

2815. HIGHLY SENSITIVE METHOD FOR MEASUREMENT OF LIPID HYDROPEROXIDES BY IODIMETRY AND AMPEROMETRIC END POINT. K.Oette, M.L.T.^{et al.} and R.L.McAuley: *J. lipid Res.*, 1963, 4, 212-21*

(Rockefeller Inst., New York, U.S.A.) A simple, accurate and highly sensitive method is described for Measurement of lipid hydroperoxides, utilising standard iodometric reactions and an amperometric end point. Measurement of 10^{18} equiv. of hydroperoxides is feasible in samples of mg. size. Several parameters of the analysis have been defined. J.R.Sargent

²⁸16. PURIFICATION AND ANALYSIS OF PHYSIOLOGICALLY ACTIVE LIPIDS. J.N.Hawthorne: Biochem. Pharmacol., 1963, 12, 401-403 (Dept. Med. Biochem., Med. Sch., Univ., Birmingham, England) Modern methods for the isolation and identification of small quantities of physiol. active lipids are discussed. L.G.Gillies

²⁸17. INFLUENCE OF HAIR GROWTH CYCLE ON THE TRIGLYCERIDE FATTY ACID COMPOSITION OF MOUSE EPIDERMIS. C.Carruthers and A.Heining: Proc. Soc. exp. Biol., N.Y., 1963, 112, 278-280 (Dept. Biochem. Res., Roswell Park Mem. Inst., Buffalo, N.Y., U.S.A.) Mouse hairs were plucked and then the triglycerides of the epidermis were studied 8 to 22 days afterwards in ♂ and ♀ mice. Up to 4 days ^{♂♀} was no sex difference and the situation with regard to triglycerides had not altered up to the 22nd day, Pleic acid ZS% linoleic acid 35%, palmitic acid 18%), but at 12 and 22 days in ♀ there was far more oleic acid present and far less linoleic acid. D.N.Wheatley

²⁸18. LOCALISATION OF BLOCK IN LIPOGENESIS RESULTING FROM FEEDING FAT. W.Bortz, S.Abraham and LL.Chaikoff: J. biol. Chem., 1963, 238, 1266-1272 (Dept. Physiol., Univ. California, Berkeley, Calif., U.S.A.) There is decreased conversion of acetate-C into fatty acids as early as 2 hr. After administration of 2 ml. of maize oil to rats previously fed a fat-free, high carbohydrate diet. The decrease in fatty acid synthesis is most marked 4 hr. after feeding the fat. This decrease is more pronounced in liver slices than in the system composed of supernatant + action plus microsomes. This action of fat feeding is connected with an impaired ability of slices or homogenates to oxidise glucose. In presence of $\frac{14}{14}\text{C}$ IL¹⁴lumcoen. of ATP and CoA, synthesis of fatty acid from ¹⁴C-labeled ¹⁴lumcoen. of ATP and CoA, synthesis of fatty acid in the system of supernatant plus microsomes of livers of fat-fed rats is still decreased. Generation of ¹⁴NADPH₂ from NADP and citrate in the particle free system is not impaired by feeding of fat. Synthesis of fatty acid from acetyl CoA in fat-fed rats is blocked at acetyl CoA carboxylase step. J. N.Ashley

²⁸19. TECHNIQUE FOR THE DETERMINATION OF FEWJM GLYCERIDES. AJover: J. lipid Res., 1963, 24, 228-230 (Washingtonfosp. Centre, Washington, D.C., U.S.A.) Glycerides are hydrolysed to glycerol. Kinetics is an estimated colorimetrically by a periodic phenyl hydrazine procedure. J.R.Sargent

²⁸20. PHENETHYLBIGUANIDE [PEPG] AND TRIGLYCERIDE SYNTHESIS. C.Longcope and R.H. Williams: Soc. exp. Biol. N.Y., 1962, 111, 775-777 (Dept. Me¹⁴o¹⁴n. Univ. Washington Sch. Med., Seattle, Wash., U.S.A.) In vitro studies on triglyceride synthesis in rat epididymal fat pads showed that in intact ¹⁴VcL¹⁴PG interferes with conversion of di- to tri-glyceride and in homogelH¹⁴L¹⁴Tes increases the incorporation of ¹⁴Ued fatty acid into triglyceride. M.M.Shapland

2821. MOLECULAR INTERACTION BETWEEN PHOSPHOLIPIDS AND SALTS AT AIR AND LIQUID-LIQUID INTERFACES. H.L.Rosa no, H.Schiff and J.H.Schulman: J. phys. Chem., 1962, 66, 1928-1932 (Stanley-Thompson Lab., Henry Krumb Sch. Mines, Columbia Univ., New York, U.S.A.) The duplex film method has been used to investigate the interaction between polyvalent salts and cephalin at the water-oil interface. The interaction appears to be dependent on the valency of the salts and the penetration of n-hexadecane into the mixed alkyl-cephalin monlayer. G.C.Barr

2822. THIN LAYER CHROMATOGRAPHY OF PHOSPHOLIPIDS USING SILICA GEL WITHOUT CALCIUM SULPHATE BINDER. V.P.Skipski, R.F. Peterson, J.Sanders and M.Barclay: J. Lipid Res., 1963, 4, 227-228 (Div. Exp. Chemotherapy, Sloan-Kettering Inst. for Cancer Res., Rye, N.Y., U.S.A.) The use of silica gel without calcium sulphate for thin-layer chromatography gives better separation of some phospholipids, especially in the cephalin group. J.R.Sargent

2823. RAPID QUANTITATIVE SEPARATION OF PHOSPHATIDYL ETHANOLAMINE AND PHOSPHATIDYL SERINE BY COLUMN CHROMATOGRAPHY. H.L.Spitzer and J.A.Balint: Analyt. Biochem., 1963, 5, 143-148 (Dept. Med., Univ. Alabama Med. Center, Birmingham, Ala., U.S.A.) A rapid quant. separation of phosphatidyl ethanolamine from phosphatidyl serine on an ammonium silicate column is described. It is more convenient and less time consuming than earlier methods. Elution is with chloroform: methanol (4:1) followed by methanol. Complete separation is achieved.

A.D. Smith

2824. PHOSPHOINOSITIDES. V. THE INOSITOL LIPIDS OF OX BRAIN. R.B.Ellis, T.Galliard and J.N.Hawthorne: Biochem. J., 1963, 88, 125-131 (Dept. Med. Biochem. and Pharmacol., Med. Sch., Birmingham, England) The Folch 'diphosphoinositide' fraction of ox brain was prep. and hydrolysed under mild alk. conditions. The hydrolysis products were separated on Dowex 1 columns and characterised. It was concluded that ox brain contains 3 phosphoinositides: 1-phosphatidylinositol, diphosphoinositide [1-phosphatidyl(inositol 4-phosphate)] and triphosphoinositide [1-phosphatidyl(inositol 4,5-diphosphate)]. Triphosphoinositide was the major component. Evidence was obtained that free inositol diphosphate occurs in ox brain. *

2825. OCCURRENCE OF A LONG-CHAIN ETHER ANALOGUE OF PHOSPHATIDYLETHANOLAMINE IN BRAIN TISSUE. G.B.Ansell and S. Spanner: Biochem. J., 1963, 88, 56-64 (Dept. Expt. Neuropharmacol., Med. Sch., Birmingham, England) After fractionating total brain lipids on an alumina column the ethanolamine-containing phospholipids were further separated by selective hydrolysis, followed by chromatography on silicic acid and Florisil. About 3% of the phospholipids in the brain behaved after saponification like a glycerol-1-alkoxy-3-phosphorylethanolamine. Comparison with synthetic material was made and details of further hydrolysis of the brain lipid and synthetic phospholipid are given. •

2826. ASSAY OF THE RADIOACTIVITY OF THE ALDEHYDOGENIC MOIETY OF PLASMALOGENS. E.M.Neptune, jun. and R.S.Ide: J. lipid Res., 1963, 4, 226 (Naval Med. Res. Inst., Nat. Naval Med. Center, Bethesda, Md., U.S.A.) A method is

BIOCHEMISTRY

described for separation of palmitic acid and palmitaldehyde hydrazone using thin-layer chromatography. The hydrazone can be eluted for radioactivity assay, recovery being 92-95% of applied hydrazone. J.R.Sargent

2827. METABOLISM OF PLASMALOGEN. XL THE DETERMINATION OF ALKENYL ESTERS IN THE PRESENCE OF FREE ALDEHYDES. H.R. Warner and W.E.M.Lands: *J. lipid Res.* 1963, 4, 216-220 (Dept. Biol. Chem., Univ. Michigan, Ann Arbor, Mich., U.S.A.) A rapid and sensitive method for the analysis of alkenyl ethers (plasmalogens) in the presence of free aldehyde is proposed. The method is applicable over the range 0⁰02-0² jmoles of plasmalogen and is particularly useful for following the course of enzymic or chem. reactions in mixtures containing both free aldehydes and plasmalogens in aq. media. J.R.Sargent

2828. ERYTHROCYTE PHOSPHOLIPIDS IN THE NEW-BORN INFANT. H.P.Bentley, jun.: *Proc. Soc. exp. Biol.* N.Y., 1962, 111, 591-592 (Dept. Paed., Univ. Alabama Med. Cen., Birmingham, Ala., U.S.A.)

The total phospholipids from both the entire r.b.c. and the cell stroma of the newborn infant are equal to those of the adult. M.M.Shapland

2829. CHROMATOGRAPHIC SEPARATION, IDENTIFICATION AND ANALYSIS OF PHOSPHOLIPIDS OF THE INTESTINAL MUCOSA OF THE YOUNG RAT.

J.Clement and G.Di Costanzo: *Bull. Soc. Chim. biol.* Paris, 1963, 45, 127-136 (Lab. Physiol. Animale. Fac. Sci., Dijon, France) Phospholipids of the intestinal mucosa of young rats were separated on silicic acid columns. The various fractions were purified and characterised by thin layer chromatography on kieselguhr. The major constituents were lecithins (35%) and phosphatidic acids (20%). The phosphatidic acids of ethanolamine and serine, inositol cephalin, plasmalogen, lecithins, lysolecithins, sphingomyelin and a trace of lysocephalin were identified. (French) J.C.Crawhall

2830. CEREBROSIDE-SULPHATE-ESTER CLEAVING ENZYME FROM SWINE KIDNEY. E.Mehl and H.Jatzkewitz: *Hoppe-Seylers Z. physiol. Chem.*, 1963, 331, 292-294 (German Res. Inst. Psychiatry, Munich, Germany) The isolation of the enzyme with the aid of thin layer chromatography and radioactive labelling is described. Besides cerebrosides it also attacks chondroitin sulphate. (German) L.Cornish

2831. 0-METHYLCHOLINE-CONTAINING PHOSPHOLIPID DERIVED FROM CARNITINE. L.L.Bieber, V.H.Cheldelin and R.W.Newburgh: *J. biol. Chem.*, 1963, 238, 1262-1265 (Sci. Res. Inst., Oregon State Univ., Corvallis, Ore., U.S.A.) Blowfly (*Phormia regina*) larvae contain a new phospholipid in which choline is replaced by 0-methylcholine when dietary choline is replaced by 0-methylcholine or carnitine. This shows that the latter is decarboxylated by the larvae. J.N.Ashley

2832. LABELLING OF PHOSPHOLIPIDS FROM INORGANIC [32P]PHOSPHATE IN BRAIN PREPARATIONS: EFFECT OF ACETYLCHOLINE, CHLORPROMAZINE AND AZACYCLONOL. W.L.Magee, J.F.Berry, K.P.Strickland and R.J.Rossiter: *Biochem. J.* 1963, 88, 45-52 (Dept. Biochem., Univ. Western Ontario, London, Ontario, Canada) The addition of chlorpromazine (0⁰1 mM) or azacyclonol (1⁰0 mM) to slices of guinea-pig brain caused an increase in incorporation of inorg.

[32p]phosphate into phospholipids, which was not accompanied by any significant increase in respiration, aerobic glycolysis, concn. and sp. radioactivity of ATP or concn. of phosphocreatine. The increase in labelling of phospholipid was confined to phosphatidic acid, phosphatidyl-inositol and phosphatidylserine. No such increase in phospholipid labelling was observed with dispersions prep, from rat brain, and only a slight effect was observed with mitochondria. With all the brain prep, higher concn. of both chlorpromazine (1⁰0 mM) and azacyclonol (5⁰ mM) were inhibitory. •

2833. TRANSFER OF THE PHOSPHORIC ESTER OF N,N-DIETHYLAmino-ETHANOL FROM ITS CYTIDYL¹ DERIVATIVE INTO PHOSPHOLIPIDS OF RAT AND CHICKEN TISSUE HOMOGENATES. T.Czochnicki and T.Korzybski: *Acta biochim. pol.*, 1963, 10, 233-241 (Inst. Biophysics Biochem., Polish Acad. Sci., Warszawa, Poland) By treating CMP with N,N-diethylaminoethanol (DEAE) phosphate in the presence of dicyclohexylcarbodiimide, CDP-DEAE was obtained. For the biosynthesis of phospholipids in chicken liver homogenate CDP-DEAE was as effective as CDP-choline. In rat brain and liver homogenates it was 30-40% less effective than CDP-choline as phospholipids precursor. Satisfactory separation of the phospholipid formed from CDP-DEAE, from the normal tissue phospholipids was achieved by Al₂O₃ column chromatography. M.Korbecki

2834. INCORPORATION OF [32p]ORTHOPHOSPHATE INTO PHOSPHOLIPIDS OF FROG TISSUES DURING FEEDING AND STARVATION. P.W.Odawer and H.Dominas: *Acta biochim. pol.*, 1963, 10, 173-181 (Dept. Biochem., Nencki Inst. Exp. Biol., Warsaw, Poland) Olive oil feeding strongly stim. [32p]orthophosphate incorporation into intestinal, blood, liver and stomach phospholipids. The sp. activity of the phospholipids is about 5 times higher in the intestine and about 20 times higher in the blood of the oil-fed than of the starved frogs. Protein feeding has no effect on the formation of phospholipids. The small intestine appears to be the main site of phospholipid synthesis in the frog. M.Korbecki

2835. BIOSYNTHESIS OF SKIN STEROLS. II REDUCT¹ OF A24-UNSATURATED STEROLS OF RAT SKIN. J.L.Gaylon: *Arch. Biochem.*, 1963, 101, 108-115 (Grad. Sch. Nutr., Cornell Univ., Ithaca, N.Y., U.S.A.) Normal skin sterols were replaced by A24-sterols after triparanol administration and the concn. of some skin sterols increased. Skin from such rats incorporated more labelled acetate into sterols than normal skin. Most of the increased synthesis was associated with composite A²⁴ and A²⁴-sterols. Rat liver homogenates reduced lanosterol to 24,25-dihydrolanosterol; triparanol inhib. this reduction. B.M. Stevens

2836. SIMPLE METHOD FOR SEPARATING POLAR STEROIDS FROM THE LIQUID SCINTILLATION PHOSPHOR. R.S.Rivlin and H.Wilson: *Analyt. Biochem.*, 1963, 5, 267-269 (Endocrinol. Branch, Nat. Cancer Inst., N.I.H., Bethesda, Md., U.S.A.) Separation is achieved by thin layer chromatography on silica gel using ethyl acetate as the solvent. A.D.Smith

2837. STEREOCHEMISTRY OF THE HYDROGEN TRANSFER TO SQUALENE DURING ITS BIOSYNTHESIS FROM FARNESYL PYROPHOSPHATE. B.Samuelson and D.S. Goodman: *Biochem. biophys. Res. Comm.*, 1963, 125-128 (Dept. Chem., Karolinska Inst., Stockholm

Sweden) The stereochemistry of the H transfer occurring at C-1 in farnesyl pyrophosphate during its conversion to squalene was determined by bringing about the conversion of $\text{n}-3\text{Hg-2-14c1trans-trans-farnesyl pyrophosphate to cholesterol}$ in vitro. The cholesterol was then converted to bile acids by administration to a bile-fistula rat. It was found that the cholesterol and cholic and chenodeoxycholic acids derived from it all had the same ratio of 3H/14C. This indicates that 3H introduced during the biosynthesis of squalene and present in cholesterol at C-12 is in the B Position.

B.Ketterer

^{2838.} STEREOSPECIFIC INSERTION OF HYDROGEN ATOM INTO SQUALENE FROM REDUCED NICOTINAMIDE ADENINE DINUCLEOTIDES. J.W.Cornforth, R.H.Cornforth, C.Donninger, G.Popják, G.Ryback and G.J.Schroepfer, jun.: Biochem. biophys. Res. Comm., 1963, 11, 129-133 (Shell Res. Ltd., Chem. Enzymol. Lab., Sittingbourne, Kent, England) A termination of the stereochem. of the H transfer occurring at the C-1 of farnesyl pyrophosphate during its conversion to squalene was obtained by isolating squalene synthesised from [1-2H₂]farnesyl pyrophosphate and grading it to laevulinic and succinic acids by ozonolysis. An optically active trideuterio succinic acid was obtained, the abs. configuration of which was determined by comparison with a reference trideuterated succinic acid.

B.Ketterer

^{2839.} SOME OBSERVATIONS ON THE AI-DEHYDROGENATION OF STEROIDS BY BACILLUS SPHAERICUS. V-Stefanovic, M.Hayano and R.I.Dorfman: Biochim. biophys. Acta. 1963, 71, 429-437 (Worcester Found. Expt. Biol., Shrewsbury, Mass., U.S.A.) Dehydrogenation by intact cells and cell free prep. of B. sphaericus (ATCC 7055) had 2 phases, first a reversible rapid exchange of the C-10 and C-2 with the H²O medium and secondly the irreversible formation of the Al bond. ³H-steroids and [3H]water were used to examine the 2 phases. Various electron acceptors were tested with the cell free prep. and those with the quinone structure were shown to be highly effective.

B.M. Stevens

^{2840.} CHROMATOGRAPHY OF UNESTERIFIED STEROLS ON SILICIC ACID-SUPER-CEL. LD.Frantz, jun.: J. Lipid Res., 1963, 4, 176-178 (Dept. Med. and Physiol. Chem., Univ. Minnesota Med. Sch., Minneapolis, Minn., U.S.A.) A simple method is described for the separation of unesterified sterols using commercially available materials.

J.R.Sargent

^{2841.} QUANTITATIVE¹ ISOLATION OF STEROLS. W.M.Speery: J. lipid Res., 1963, 4, 2 H-B 5 (Dept. Biochem., New York Psychiatric Inst. and Coll. Phys. Surg., Columbia Univ., New York, U.S.A.) Procedures are described for the quant. gravimetric isolation of cholesterol and cholestan-3P-ol as the acetates and for the quant. recovery of these sterols (as digitonides in die range of 0⁰, 5⁰, 4⁰, 1⁰) J. R. Sargent

^{2842.} ESTERIFICATION OF CHOLESTEROL BY HOMOGENATES OF RAT ADRENAL TISSUE. CAoogope and R.H.Williams: Endocrinology. 1963, 72, 735-741 (Med. Dept., Washington Univ., Seattle, Wash., U.S.A.) Cholesterol esterification activity has been demonstrated in homogenates of rat adrenal cortex. Mg and reduced glutathione were needed for optimum activity. n-Etioyl-maleimide ^{^JJTM} Jones

^{2843.} CHOLESTEROL BIOSYNTHESIS. IV. REDUCTION OF LANOSTEROL TO 24,25-DIHYDROLANOSTEROL BY RAT LIVER HOMOGENATES. J.Avigan, DeW.S. Goodman and D.Steinberg. V. TIME COURSE AND PATHWAY OF LATER STAGES OF CHOLESTEROL BIOSYNTHESIS IN LIVERS OF INTACT RATS.

-- DeW.S.Goodman, J.Avigan and D.Steinberg: J. biol. Chem., 1963, 238, 1283-1286, 1287-1293 (Lab. Metabol., Nat. Heart Inst., Bethesda, Md., U.S.A.)

IV. Labelled lanosterol (biosynthetically prep, from [2-14c]mevalonic acid) is reduced to the dihydro deriv. in rat liver homogenates. Enzymic activity is associated with cell particles, mostly microsomes, that need NADPH₂. The enzyme is inhib. by thiol reagents, and does not need a divalent cation for activity. Triparanol and 2 other inhibitors of biosynthesis of cholesterol block reduction in vitro of lanosterol and desmosterol. A single enzyme is probably responsible for reduction of both sterols.

V. ¹⁴C rapidly appears in liver sterol after i.v. injn. of DL-[2-14C]mevalonic acid into rats. After 2 min. 1% of the injn. ¹⁴C is present in liver non-saponifiable material and 43% of this is in sterols and 57% is present as squalene. After 30 min. 11% of the ¹⁴C is present in non-saponifiable products and 89% of this is in sterols. Within the sterol fraction ¹⁴c is present mainly in lanosterol, an intermediate fraction, cholest-7-, and -8-enol, and cholesterol. The first 4 lie on the main biosynthetic route to cholesterol. After 2 min. 53% of the sterol ¹⁴c is in lanosterol and only 19% in cholesterol. After 30 min. 76% of the ¹⁴c is in cholesterol. In normal rats no significant ¹⁴c is present in cholesta-7, 24-dienol or in zymosterol, whereas appreciable ¹⁴c is present in one or both of these in triparanol-treated rats. Only traces of ¹⁴c are found in 24,25-dihydrolanosterol and in desmosterol; probably neither lies on the main route to cholesterol.

J.N.Ashley

^{2844.} METABOLISM OF CHOLESTA-4,7-DIEN-3-ONE AND CHOLESTA-4,6-DIEN-3-ONE BY MOUSE LIVER MICROSONES. A.A.Kandutsch: J. lipid Res., 1963, 4, 179-187 (Jackson Mem. Lab., Bar Harbor, Maine, U.S.A.) Incubation of cholesta-4,7-dien-3-one with mouse liver microsomes and NADP or NADPH₂ resulted in the production of 2 new metabolites. These were identified as cholesta-4,6-dien-3-one and cholest-4-en-3-one. Incubation of cholesta-4,6-dien-3-one with liver microsomes and NADPH₂ resulted in the production of cholest-4-en-3-one. The effects of >H, substrate concn. and other factors on the reactions were examined. Conversion of either cholesta-4,7-dien-3-one or cholesta-4,6-dien-3-one to the metabolic products described was inhib. by j.j-chloromercuribenzoate, by certain detergents, and by triparanol.

J.R.Sargent

^{2845.} NEW METHOD FOR THE DETERMINATION OF DIHYDROCHOLESTEROL IN TISSUES. E.H.Mosbach, J.Blum, E.Arroyo and S.Milch: Analyt. Biochem., 1963, 5, 158-169 (Div. Lab. Diagnosis, Pub. Hlth. Res. Inst. City of New York, Inc., N.Y., U.S.A.) The analysis of dihydrocholesterol in the sterol fraction of mammalian tissues and in gallstones can be performed by a new method based on the oxidation with performic acid of cholesterol contained in cholesterol-dihydrocholesterol mixtures to cholestan-33,5a,6@-triol, leaving the dihydrocholesterol unchanged. It has been shown that gallstones and atheroma often contain < 0⁵% dihydrocholesterol, which is at variance with previous concepts.

A.D. Smith

BIOCHEMISTRY

- 2846. TISSUE RESPIRATION RATES OF SOME ORGANS IN EXPERIMENTAL HYPERCHOLESTEROLAEMIA AND ATHEROSCLEROSIS.** L.V.Maylsheva: *Vop. Med. Him.*, 1963, 9, 142-146 (Dept. Biochem., Kubishevsky Med. Inst., Moscow, U.S.S.R.) Respiration rate of rat brain was increased by 25% by addition of cholesterol in vitro. Addition of cholesterol did not alter respiration rates of liver, kidney and spleen in vitro. During expt. hypercholesterolaemia a gradual decrease occurred in respiration rates in rabbit brain and liver. Expt. atherosclerosis caused the following decreases in respiration rates in rabbit organs: brain 21%, liver 37%, kidney 33% and heart muscle 38%. J.R. Sargent

AMINO ACIDS, PEPTIDES AND PROTEINS

- 2847. ACTIVE TRANSPORT OF AMINO ACID INTO CEREBRAL CORTEX SLICES.** Y.Tsukada, Y.Nugata, S.Hirano and T.Matsutani: *J. Neurochem.*, 1963, 10, 241-246 (Dept. Phys., Sch. Med., Toho Univ., Ohmori, Tokyo, Japan) Using guinea-pig brain slices, accumulation of D- and L-glutamate was linear for 60 min. and accompanied by swelling of tissue and K⁺ uptake. GABA and D-alanine did not cause tissue swelling. All 4 acids reached a max. tissue level independent of the original medium content from 5-20mM. Accumulation was prevented by metabolic inhibitors or cold or omission of medium K. GABA transport caused increased 32p turnover of cytoplasmic phospholipids but not L- or D-glutamate. Competitive transport with simult. addition of GABA and (D-alanine or D-glutamate and L-aspartate was observed but not between GABA and D-glutamate. A detergent and ouabain (10^{-5} M) destroyed the K gradient (whereby Na is largely expelled from the cell). R. Woodman

- 2848. POSTNATAL CHANGES IN AMINO ACID CONTENT OF KITTEN CEREBRAL CORTEX.** S.Berl and D.P.Purpura: *J. Neurochem.*, 1963, 10, 237-240 (New York State Psychiat. Inst., Coll. Phys. Surg., Columbia Univ., New York, U.S.A.) Levels of glutamic acid (1), aspartic acid (2), glutamine (3), GABA (4), and glutathione (5), as fmoles/g. fresh wt. of tissue were measured over the period 0-25-35 days and on the 210th day after birth. (1) rose from 4-1-11 • 2, (2) from 1-7-2-9, (3) from 5-2-5-6, (4) from 1-3-2-8, and (5) from 1-6-2-1 fmoles/g. Dry wt. rose from 11-77-15-5-0 on the 35th day to 20-6-2-0 on the 210th day. R. Woodman

- 2849. AN IMPROVED METHOD OF SEPARATING AMINO ACIDS AS N-2,4-DINITROPHENYL DERIVATIVES.** N.A.Matheson: *Biochem. J.*, 1963, 88, 146-151 (Rowett Res. Inst., Bucksburn, Aberdeen, Scotland) An improved method of separating ether-sol. DNP-amino acids by partition chromatography on 15-19 cm. kieselguhr columns is described. The DNP-amino acids are partitioned largely as ions, between aq. buffers and ethyl acetate, forming unusually narrow bands with a wide range of Rf values. The DNP-deriv. of almost any one of the common amino acids can be separated from a dinitrophenylated mixture within an hour or two.

- 2850. THE QUANTITATIVE ISOLATION OF VALINE FROM AMINO ACID MIXTURES AS ITS DINITROPHENYL DERIVATIVE.** N.A.Matheson: *Biochem. J.*, 1963, 88, 152-155 (Rowett Res. Inst*, Bucksburn, Aberdeen, Scotland) A method is described for the quant. determination of valine as its DNP deriv. It is simple, accurate and requires no special apparatus. Several determinations may be done in parallel and the range is 0-1-1-6 fmole of valine. Recoveries of valine were good and the valine content of purified insulin was close to the calc. value. The method should be applicable to many other amino acids. *

- 2851. SEPARATION OF SOME DL-AMINO ACIDS INTO THEIR OPTICAL ISOMERS BY PAPER ADSORPTION CHROMATOGRAPHY.** C.L.De Ligny, H.Nieboer, J.J.M.De Vlijlder and J.H.H.G.Van Willigen: *Rec. Trav. chim. Pays-Bas*, 1963, 82, 213-224 (Lab. Analytical Chem., State Univ., Utrecht, Netherlands) A systematic search has been carried out to determine the optimum conditions for the separation of optical isomers of amino acids on paper. A 90 vol. % methanol-water mixture at -15° was used and this was capable of separating the optical isomers of DL-cystine, a separation not hitherto achieved. G.C.Barr

- 2852. ISOPIESTIC COMPARISON METHOD FOR ACTIVITIES. ACTIVITIES OF L-SERINE AND L-ARGININE HYDROCHLORIDE.** J.O.Hutriens, K.M. Figlio and S.M.Granito: *J. biol. Chem.*, 1963, 238, 1419-1422 (Dept. Riysiol, Univ. Chicago, 111, U.S.A.) A modified method for determination of the activities of solutes is described. Sp. gravity gradef tubes are used for measurement of molalities; this allows small drops of ioln. to be placed and compared of a single block of silver and enclosed in a small gas spac* No shaking is needed. L-Arginine HCl is compared with KC1 and L-serine is compared with sucrose.

- J.N.Ashley
2853. ORNITHINE CARBAMOYLTRANSFERASE IN HIGHER PLANTS. J.Reifer, K.Kleczkowski, E.Klimowicz and K.Zielinska: *Acta biochim. pol.*, 1963, 10, 151-156 (Inst. Biochem. Biophys., Polish Acad. Sci., Centr. Coll. Agric, Warszawa, Poland)

The presence of ornithine carbamoyltransferase was established in 46 plants belonging to 19 botanical families. At the early stages of plant growth a distinct increase in the enzyme activity was observed, with additional peaks at the time of early flowering and of formation of the reproductive organs of the plant. It is suggested that the increases of enzyme activity are closely linked with physiol. changes in plant growth and development. Furthermore a close relation between ornithine carbamoyltransferase activity and the quantities of endogenous ureides present in the plant tissue was also observed.

- 2854. CHROMATOGRAPHIC SEPARATION OF ISOMERIC DNP DERIVATIVES OF ALPHA-EPSILON DIAMINOPIMELIC ACID.** Djilšić, C.Roy, AJ. Schocher and R.W.Watson: *Canad. J. Biochem.*, 1963, 41, 817-820 (Div. AppL Biol. Nat. Res. Council, Ottawa, Canada) The separation of isomeric DNP deriv. and di-DNP deriv. of diaminopimelic acid in tert. amyl alcohol-phthalate of pH 6-2 on paper is described after isolation of the isomers from mixtures resulting from dinitrophenylation of the amino acids released during hydrazinolysis of purified mucopeptide from *Aerobagig cloacae*.

J.B. Parish

2855. A COMPARATIVE STUDY OF e-LYSINE ACYLASE.

W.K.Paik: Comp. Biochem. Physiol., 1963, 9, 13-22 (Dept. Biochem., Ottawa Univ., Ontario, Canada) The enzyme e-lysine acylase is capable of hydrolysing ^N-N-acetyl-lysine included in the diet of expt. vertebrates. Enzymic activity was estimated by a manometric Method in rats, cats, cows, pigs, chicken, pigeon, turkey, canary, sparrow, frog, mushroom and yeast. In ⁷⁷C and other mammals the enzyme was found in the kidney, brain and sometimes in liver, heart, spleen and Pancreas. In birds it was often localised to a high degree in the kidney (e.g. chicken, turkey and pigeon), whilst in others (canary, sparrow) no enzymic activity at all was observed. Pig enzyme is sol. whilst that of chickens is bound to particulate material such as mitochondria, as shown by centrifugation. Optimal pH for action was pH 9.0 for chicken Drep., and pH 7.2 for rat material.

M.S.Laverack

2856. DETERMINATION OF HISTIDINE DECARBGX7LASE ACTIVITY BY LIQUID SCINTILLATION COUNTING OF ¹⁴C_O₂. Y.KDbayashi: Analyt. Biochem., 1963, 5, 284-290 (Worcester Found. Expt. Biol., Shrewsbury, Mass., U.S.A.) L-Histidine decarboxylase activity ⁵⁷Sn be determined using [U-14C]- or [CO₂H-14C]-histidine in a closed system. The ¹⁴C_O₂ produced by enzyme is trapped by aq. hyamine hydroxide spread P filter paper edged with paraffin wax. The radioactive farnine carbonate is assayed in a liquid scintillation counter. This method can detect the decarboxylation of ¹¹⁰01 tig. L-histidine.

2861. PROPERTIES OF A CARRIER SYSTEM TO TRANS-PORT L-dopa INTO BRAIN SLICES. Y.Yoshida, K-Kanjiike and J.Namba: Nature, Lond., 1963, 198, 191-192 (Dept. Pharmacol., Osaka Univ., Japan)

Expt. on the effect of concn. of various ions and a no. of metabolic inhibitors on the uptake of L-dopa into guinea-pig brain cortex slices support a hypothesis than an amino acid transport system consists of 2 parts, a sp. site to combine with L-dopa, phenylalanine and tyrosine, and an ouabain-sensitive site including Na, K activated ATPase as a component. Intracellular K concn. also appears to be an important regulator. G.M.Lewis

2862. DETERMINATION OF FREE PROLINE IN SERUM.

G.K.Summer and J.A.Hawes: Proc. Soc. exp. Biol., N.Y., 1963, 112, 402-404 (Dept. Pediatrics, Med. Sch., Univ. North Carolina, Chapel Hill, N.C., U.S.A.) Free proline from serum was recovered by (i) using 2-2% tungstic acid in 0.15M sulphuric acid, (ii) *lW/o* TCA and (iii) 95% acidic ethanol. The recovered proline was compared, after condensation with ninhydrin, by u.v. spectrometry. The result showed that there were 2 tautomers isolated, one with a max. at 515 mp (acid precipitant) and the other with a max. at 550 m*l* (neutral precipitant) but the rate of formation did not differ significantly as far as this extraction method is concerned.

2863. HYDROXYAMINO ACIDS, m. EFFECT ON GROWTH OF E. COLI 9637. T.T.Otani: Arch.

Biochem., 1963, 101, 131-138 (Lab. Biochem., Nat. Cancer Inst., Bethesda, Md., U.S.A.) ³-Hydroxy-aspartic acid and P-hydroxyleucine markedly inhib. growth; (X-hydroxymethyl)serine, (X-methylserine, a-ethylserine, 3-hydroxynorleucine and 3-(E^{"nitro"})phenylserine were ineffective. Some naturally occurring amino acids, mostly structurally similar to the inhibiting 0-hydroxyamino acids, completely reversed the inhib., others reversed partially. Inhib. appeared to be competitive.

B.M. Stevens

2864. LEUCINE BIOSYNTHESIS IN HIGHER PLANTS.

G.W.Butler and L.Shen: Biochim. biophys. Acta, 1963, 71, 456-458 (Dept. Biochem. Biophys., Univ. California, Davis, Calif., U.S.A.) Some evidence for the condensation of 2-ketoisovaleric acid and acetate to yield leucine was found in flax.

B.M. Stevens

2865. CYSTEINE BIOSYNTHESIS IN BEET DISCS.

R.J.Ellis: Phytochemistry, 1963, 2, 129-136 (A.R.C. Unit Plant Physiol., Imperial Coll, London, England) The incorporation of ^{[35]S}sulphate into cysteine by beet discs is markedly stim. by L-serine when the endogenous amino acid pool is low. Glycine does not have this effect, and D-sedne inhibits the incorporation. No ^{[35]S}cysteine sulphuric acid was detected. The discs also convert L-[14C]serine to [14C]cysteine.

B.H.Davies

2866. S-ALKYLCYSTEINASE: ENZYMIC CLEAVAGE OF S-METHYL-L-CYSTEINE AND ITS SULPHOXIDE.

J.Nomura, Y.Nishizuka and O.Hayaishi: J. biol. Chem., 1963, 238, 1441-1446 (Dept. Med. Chem., Kyoto Univ. Fac. Med., Japan) The enzyme is isolated, and purified approx. 30-fold, from S-methyl-L-cysteine adapted cells of *Pseudomonas cruciviae*. It catalyses the stoicheiometric conversion of S-methyl-L-cysteine sulphoxide into methyl methanethiol sulphinate, pyruvic acid, and NH₃. The optimum pH is 8.8 and pyridoxal phosphate is needed as coenzyme. Although methionine

BIOCHEMISTRY

and cysteine are inactive, other S-alkyl-L-cysteines, and their sulphoxides, and S-carboxyalkyl-L-cysteines serve as substrates.

J.N.Ashley

2867. SYNTHESIS AND CHARACTERISATION OF SODIUM CYSTEINE-S-SULPHATE MONOHYDRATE. LH.Segel and M.J.Johnson: *Analyt. Biochem.*, 1963, 5, 330-337 (Dept. Biochem., Univ. Wisconsin, Madison, Wis., U.S.A.) Cryst. Na cysteine-S-sulphate was prep, by aerating stoicheiometric amounts of cystine and sodium sulphate in aq. ammonia containing trace amounts of CuCl₂. Elemental analysis and equiv. wt. determinations were used to characterise the product. The equilibrium constant for the reaction of cysteine-S-sulphate with cysteine, yielding cystine and inorg. sulphite, was estimated.

A.D.Smith

2868. HALOGENATION OF TYROSINE DURING ACID HYDROLYSIS. F.Sanger and E.O.P.Thompson: *Biochim. biophys. Acta*, 1963, 71, 468-471 (M.R.C. Lab. Mol. Biol., Cambridge, England).

B.M.Stevens

2869. MICROBIAL DISSIMILATION OF D- AND L-TRYPTOPHAN IN THE PRESENCE OF ANALOGUES. N.N.Durham and J.R.Martin: *Biochim. biophys. Acta*, 1963, 71, 481-482 (Dept. Microbiol., Oklahoma State Univ., Stillwater, Okla., U.S.A.) In a resting cell suspension of a *Flavobacterium* sp. tryptazan and 5HTP inhib. both D- and L-tryptophan oxidation, IAA and 2-oxindolealanine, inhib. oxidation of the D- but not the L-isomer while tryptamine had no effect. Prelim, comm.

B.M.Stevens

2870. TRYPTOPHANASE-TRYPTOPHAN REACTION. XL CONCENTRATION OF INTRACELLULAR TRYPTOPHAN IN E. COLI. F.C.Happold and T.A.Scott: *Hoppe-Seylers Z. physiol. Chem.*, 1963, 331, 118-123 (Dept. Biochem. Univ. Leeds, England)

An enzymic method with an accuracy of ±9·5% was used for the determination of the concn. Excess Na in the medium was beneficial for intracellular tryptophan formation but K, phenylalanine and tyrosine were detrimental.

(German) LCornish

2871. FACTORS AFFECTING THE ACTIVITY IN VITRO OF THE TRYPTOPHAN AND PHENYLALANINE HYDROXYLATING SYSTEMS. R. A. Freedland: *Biochim. biophys. Acta*, 1963, 73, 71-75 (Dept. Physiol. Sci., Sch. Vet. Med., Univ. California, Davis, Calif., U.S.A.) 'Induction' or suppression of 1 hydroxylase in vivo produced an equal change in the same direction in the other hydroxylase. In vitro, ascorbic acid and/or Fe²⁺ increased, and EDTA decreased, tryptophan hydroxylase activity without affecting phenylalanine hydroxylation. Cu²⁺ inhib. both but the tryptophan reaction was more severely inhib. NADP could replace NAD in both reactions.

2872. CYCLOL FORMATION IN PEPTIDE SYSTEMS. in. REARRANGEMENT OF N-(S-HYDROXYPROPYONYL)-PIPERIDONE INTO A 10-MEMBERED CYCLODEPSIPEPTIDE. V.K.Antonov, A.M.Shkrob and M.M.Shemyakin: *Tetrahedron Letters*, 1963, 7, 439-443 (Inst. Chem. Natural Products, U.S.S.R. Acad. Sci., Moscow, U.S.S.R.) Letter.

R.H.Kimberlin

2873. ACTION OF IMIDAZOLE IN PEPTIDE SYNTHESIS WITH THIOPHENYL COMPOUNDS. T.Wieland, H.Determin and W.Kahle: *Angew. Chem.*, 1963, 2,

154 (Inst. für Org. Chem. UniversitSt, Frankfurt, Main, Germany) Imidazole facilitates the formation of peptides in good yields and without significant racemisation from thiophenyl compounds of acylated amino acids and free amino acids.

K.Brew

2874. GAS CHROMATOGRAPHIC INVESTIGATION OF RACEMISATION DURING PEPTIDE SYNTHESIS.

F.Weygand and A.Prox, L.Schmidhammer and W.Konig: *Angew. Chem.*, 1963, 2, 183-188 (Org.-Chem. Inst. der Technischen Hochschule, Munchen, Germany)

It is shown that the methyl esters of many diastereoisomer: N-trifluoroacetyl dipeptides can be separated by gas chromatography on Golay columns enabling accurate quan investigations of racemisation occurring during peptide synthesis to be carried out. The synthesis of the methyl ester of carbobenzoxy-L-valyl-L valine was used as an example in examining various methods of forming peptide The synthesis of the methyl esters of N-trifluoroacetyl L-valyl L-valine was investigated as a model for the linking of peptides. The influence of numerous factors on racemisation was determined and general conclusions drawn regarding peptide synthesis.

ICBrew

2875. EFFECT OF PRIOR INCUBATION WITH GLYCYL-L-ALANINE ON THE UPTAKE OF PEPTIDES BY LACTOBACILLUS CASEI. F.R.Leach and E.E.Snell: *Biochim. biophys. Acta*, 1963, 71, 454-456 (Dept. Biochem., Univ. California, Berkeley, Calif., U.S.A)

Exposure to unlabelled peptide increased the apparent rate of uptake of labelled peptide in subsequent expt.

B.M.Stevens

2876. GUINEA-PIG KALLIKREIN SYSTEM. G.E.Davies and J.S.Lowe: *Nature*, Lond., 1963, 198, 94-95 (Res. Dept., LC.LLTD., Pharmaceuticals Div., Alderley Park, Macclesfield, Cheshire, England)

Guinea-pig 7S γ-globulins purified by DEAE cellulose chromatography contains an enzyme which has all the prop, associated with kallikrein. The capillary permeability activity is related to the esterase activity (against tosylarginine methyl ester) and fully accounted for by the kallikrein content. An activator system present in guinea-pig serum resembles the activation scheme suggested for human kallikrein.

G.M.Lewis

2877. DIPEPTIDES WITH TRIFUNCTIONAL AMINO ACIDS. F.Weygand, A.Prox, E.C.Jorgensen, R.Axen and P.Kirchner: *Z. Naturforsch B*, 1963, 18, 93-1⁰⁴ (Organ.-Chem. Inst., Tech. Hochschule, Mflnchen, Germany) The gas chromatographic sequence analay of various dipeptides containing the trifunctional amino acids glutamic acid (α and γ peptides), α-methyl or β-trimethylsilyl deriv. of tyrosine dipeptides and the β-trimethylsilyl deriv. of serine or threonine dipeptides was described. Cysteine, cystine and methionine ¹⁴C-peptides were desulphurised with Raney nickel before analysis. The free amino group was protected by conversion to tri trifluoroacyl deriv. in each case.

(German) J.C.Crawhall

2878. REACTIVITY OF PEPTIDE IMIDAZOLE, AMINOJ AND PHENOLIC GROUPS TOWARDS D-NITROPHENYL ACETATE. W.L.Koltun, L.Ng and F.FcN.Gurd: *J. W⁺ Chem.*, 1963, 238, 1367-1372 (Dept. Biochem.. Cornell Univ. Med. Coll., New York, U.S.A.)

The rates of reaction of D-nitrophenyl acetate with e-aminocaproate, imidazole-4-acetate, N-acetyltyrosine, γ-guanidinobutyrate, glycyl-L-histidine, glycyl-L-tyrosine, L-valyl-L-alanine, glycylsarcosyl-glycine, and a copolymer of L-aspartic acid and

L-histidine are reported, and the values for the individual amino, imidazole, and phenolic groups in glycyl-L-histidine and glycyl-L-tyrosine are determined. Imidazole and amino groups are the classes of groups likely to contribute significantly to the over-all reactivity of a protein with β -nitrophenyl acetate. J.N.Ashley

2879. GLYCOPEPTIDES. IV. PERIODATE OXIDATION OF GLYCOPEPTIDES FROM HUMAN γ -GLOBULIN. J.A.Rothfus and E.L.Smith: *J. biol. Oiém.*, 1963. 238. 1402-1410 (Lab. for Study of Hered. Metabol. Disorders. Univ. Utah Coll. Med., Salt Lake City, Utah. U.S.A.) When the glycopeptides from papain digests of human γ -globulin are oxidised with HIO_4 and then reduced with $NaBH_4$, the amount of HIO_4 used and the composition of the product agree with destruction of 3 residues of glucosamine and 1 of mannose, and with complete oxidation of galactose and fucose. The utility of HIO_3-NaBH_4 treatment as a mild method for degradation of carbohydrate portions of glycoproteins is shown by degradation of γ -globulin glycopeptides to a smaller glycopeptide, glutamylaspartyl-(glucosamine)2, in which the bond between aspartic acid and one glucosamine residue is probably an amide. Five residues of glucosamine and 4 of mannose remain unaltered by treatment with HIO_4-NaBH_4 . These residues of glucosamine are probably 1,4- or 1,3-linked, whilst the mannose residues are either 1,3-linked or multiple bonded. In either case mannose appears to be flanked by sugars labile to HIO^+ . J.N.Ashley

2880. ELECTROPHORESIS OF HISTONES AND HISTONE FRACTIONS ON POLYACRYLAMIDE GELS. H.C.McAllister, jun., Y.C.Wan and J.L.Irviru: *Analyst Biochem.*, 1963, 5, 321-329 (Dept. Biochem., Univ. North Carolina Sch. Med., Chapel Hill, N.C. U.S.A.) Zone electrophoresis of histones on polyacrylamide gels was applied to a comparison of unfractionated calf thymus histones with various fractions obtained by other methods. The lysine-rich histone fraction yielded 1 mobile band in starch gel and 9 in polyacrylamide gel. A method is described for estimation of relative amounts of electrophoretically separated components by determination of bound dye. A.D.Smith

2881. AMINO ACID COMPOSITION OF HIRUDIN. IDENTIFICATION OF THE N-TERMINAL RESIDUE. P.de la Llosa, C.Tertrin and MJutisz: *Bull. Soc. Chim. biol.*, Paris, 1963, 45, 55-60 (Lab. Morphol. Exp. Endocrinol., Coll. de France, Paris, France) DNA-hirudin was prep, and the N-terminal residue was shown to be leucine or isoleucine. Its mol. wt. was 13000. The total amino acid content was determined by ion change column chromatography. It contained a high portion of dicarboxylic amino acids and was deficient in tryptophan and arginine. The amino acid composition differed identical with that of the previously reported hirudin. (French) J.C.Crawhall

2882. PURIFICATION OF HIRUDIN. MJutisz, A.Charbonnel-Bérault and G.Martinoli: *Bull. Soc. Chim. biol.*, Paris, 1963, 45, 61-73 (Lab. Morphol. ^AP. Endocrinol., Coll. de France, Paris, France) Acetone powder of the heads of leeches (4 kg.) was reacted with 0.3% NaCl. The ppt. obtained after alcohol addition in the presence of zinc acetate was dried ^{10°} in Amberlite IRC-50 at pH 5. The product was sain chromatographed on DEAE-cellulose and purified by ^y co-tercurrent distribution. Two active forms were

isolated. One of these a-hirudin, was homogeneous on paper electrophoresis. (French) J.C.Crawhall

2883. S-CARBOXYMETHYLKERATINS EXTRACTED FROM PEPSIN-TREATED WOOL. SEPARATION AND CHARACTERISATION OF PROTEINS EXTRACTED FROM MORPHOLOGICALLY DISTINCT FRACTIONS. Y.Moschetto and G.Biserte: *Bull. Soc. Chim. biol.*, Paris, 1963, 45, 75-93 (Lab. Chim. Biol., Fac. Méd. Pharm., Lille, France) The cortex cells obtained by peptic hydrolysis of virgin wool were treated with potassium thioglycollate. The reduced keratins extracted as S-carboxymethyl keratins were heterogeneous. Fractions were purified by chromatography on DEAE-cellulose and by isoelectric pptn. A relatively pure fraction was obtained with a low cystine content and a high proportion of N-terminal glycine. (French) J.C.Crawhall

2884. STUDIES OF COLLAGEN TISSUE AGEING: THERMAL SHRINKAGE OF METABOLITE-TREATED COLLAGENOUS TISSUES. R.A.Milch and R.A.Murray: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111, 551-554 (Div. Orth. Surg., Johns Hopkins Univ. Sch. Med., Baltimore, Md., U.S.A.) Of the various intermediary metabolites of the Embden-Meyerhof pathway studied, only glyceraldehyde was capable of acting as a cross-linking agent for collagen under pH, ionic strength and temp. conditions similar to the extracellular body fluids. M.M.Shapland

2885. APPEARANCE OF PROTEINS IN REGENERATING WOUND TISSUE. W.Guschlbauer and M.B.Williamson: *Canad. J. Biochem.*, 1963, 41, 820-823 (Dept. Biochem., Graduate Sch., Loyola Univ., Chicago, Ill., U.S.A.) From 5 to 18 days after wounding in the rat samples of regenerating wound tissue were collected and analysed for content of tyrosine, tryptophan, hydroxyproline, and nitrogen and from these data the amount of cellular proteins and collagen were calc.; collagen and hydroxyproline were present to a small extent in early regeneration whereas the amount of cellular protein did not change much during regeneration. J.B.Parish

2886. STARCH GEL ELECTROPHORESIS OF COBRA AND RATTLESNAKE VENOMS. J.M.Neelin: *Canad. J. Biochem.*, 1963, 41, 1073-1078 (Div. Appl. Biol., Nat. Res. Council, Ottawa, Canada) The effect of pH on gradient starch gel electrophoresis of the venoms of *Crotalus adamanteus* and *Naja flavia* showed that sodium acetate buffer, pH 4.1, ionic strength 0.020, was the most effective for resolution of the former venom, while acetate buffer, pH 4.1 or cacodylate buffer, pH 6.0, was the most effective for the latter venom. Two-dimensional starch gel electrophoresis resolved at least 20 zones from *Crotalus* venom and 11 from the *Naja* venom. Two zones of haemolytic activity were separated from each venom. J.B.Parish

2887. STUDIES OF PROTEIN METABOLISM OF CORNEA. I. DISTRIBUTION OF NITROGENOUS SOLIDS IN RABBIT CORNEAS. RX.French and Z.Duma: *Canad. J. Biochem.*, 1963, 41, 1005-1011 (Dept. Ophthalmol., Fac. Med., Univ. Toronto, Ontario, Canada) The normal rabbit cornea contained 77.3% moisture. On a dry wt. basis the cornea contained 14.7% N. and consisted of epithelium 10%, stroma 87%, and endothelium plus Descemet's membrane 3%. The solid and N content of the stroma was nearly identical with that of the whole cornea. Endothelium plus Descemet's membrane and epithelium layers were low in nitrogen (10 and 12% of dry wt. respectively), while the epithelium was high in solids (30%).

BIOCHEMISTRY

The partition of N as protein and non-protein, sol. or insol. was estimated for each corneal layer.

J.B.Parish

2888. ACTIVATION OF PURIFIED HUMAN PLASMINOGEN IN SOLUTIONS OF ETHYLENE GLYCOLS. P.S.Roberts: *Canad. J. Biochem.*, 1963, 41, 889-895 (Med. Coll. Virginia. Richmond, Va., U.S.A.)

The plasmin formed from purified human plasminogen when activated was measured using the substrate p-toluene-sulphonyl-L-arginine methyl ester. In 50% soln. of ethylene glycols at pH 7.6 and 30° plasmin accumulated faster in diethylene and triethylene glycols than in glycerol but in ethylene glycol no plasmin was formed. In 4%M soln. of the glycols only diethylene glycol showed a fast rate of accumulation of plasmin. No plasmin was found when plasminogen was incubated at pH 7.6 and 30° in 50% of propylene glycols, ethers of the ethylene glycols, polymers of glycols and dioxane.

J.B.Parish

2889. PURIFICATION AND SOME PROPERTIES OF AUTOPROTHROMBIN C. W.H.Seegers, E.RXole, CR-Harmison and E.Marciniak: *Canad. J. Biochem.*, 1963, 41, 1047-1063 (Dept. Physiol. Pharmacol., Wayne State Univ. Coll. Med., Detroit, Mich., U.S.A.) A mixture of thrombin and autoprothrombin

C was obtained from bovine prothrombin by activation in a reaction mixture containing thromboplastin and Ac-globulin. The autoprothrombin C was separated from thrombin by chromatography on a column of DEAE cellulose in phosphate buffer pH 7.0 and eluting at 0.4M phosphate buffer pH 8.2*. Autoprothrombin C was pptd. with (NH₄)₂SO₄ and subsequently with cold acetone. 0.35 fig. of this purified autoprothrombin C was sufficient to clot recalcified plasma in 15 sec. The mol. wt. of autoprothrombin C was 21500, all amino acids were found and it contained 7% carbohydrate and 3-8% hexosamine.

J.B.Parish

2890. PROTEINS (CONCHAGEN) AND CHITIN IN SUPPORTING TISSUE OF CUTTLE FISH [SEPIA]. H.Stegemann: *Hoppe-Seylers Z. physiol. Chem.*, 1963, 331, 269-279 (Med. Res. Inst., Max-Planck-Soc., 34 Göttingen, Germany) The conchagen from a no. of fishes was converted to sol. proteins separating the chitin. This was shown to consist of 2Pjo protein, containing some unidentified phenolic amino acids and amino sugars. The conchagen fraction was also investigated by the terminal DNP method and some amino acids identified. (German)

L.Cornish

2891. PHOSPHOPROTEIN ISOLATED FROM TROUT EGG. Y.Ito, T.Fujii and R.Yoshioka: *J. Biochem.*, Tokyo, 1963, 53, 242-243 (Dept. Biochem., Gifu Med. Sch., vGifu, Japan) The water sol. phosphoprotein is suggested to be of a new type. Prelim, comm.

B.M.Stevens

2892. PREPARATION OF LIVETIN FRACTION FROM THE YOLK OF HEN'S EGG. A.Oberdorfer: *Hoppe-Seylers Z. physiol. Chem.*, 1963, 331, 280-286 (Clin.-Chem. Inst. State Hosp., Munich, Germany) Extraction of lipids with butanol, soln. in phosphate buffer and pptn. with SO₄²⁻, followed by separation by electrophoresis, ultracentrifugation and chromatography, gave 2 pure livetin fractions. Quant, amino acid analyses of these are reported. (German)

L.Cornish

2893. REACTION OF RHODOSPIRILLUM RUBRUM CYTOCHROME C2 WITH PSEUDOMONAS CYTOCHROME OXIDASE AND COW CYTOCHROME C. T.Yamanaka,

K.Okumuki and T.Horio: *Biochim. biophys. Acta*, 1963, 73, 165-167 (Dept. BioL, Fac. Sci., Univ. Osaka, Nakanoshima, Osaka, Japan). B.M. Stevens

2894. TWO CYTOCHROMES ISOLATED FROM THE BACTERIAL GENUS BORDETELLA. LW.Sutherland: *Biochim. biophys. Acta*, 1963, 73, 162-164 (Bacterio! Dept., Univ. Edinburgh, Scotland) Some prop. of the cytochromes, which had a absorption max. of 553 mji and 550 mfi in the reduced form, are described.

B.M. Steven

2895. PURIFICATION AND SOME PROPERTIES OF CYTOCHROME C FROM THE TOAD, BUFO VULGARIS. T.Yamanaka, H.Mizushima and K.Okunuki: *Biochim. biophys. Acta*, 1963, 73, 167-169 (Dept. Biol., Fac. Sci., Univ. Osaka, Nakanoshima, Osaka, Japan) Reactivities with *Pseudomonas* cytochrome oxidase and with cow cytochrome ji were examined. B.M.Steven:

2896. SPECIFICITIES OF CHICKEN OVOMUCOID AND OVOINHIBITOR. R.E.Feeney, F.C.Stevens and D.T. Osuga: *J. biol. Chem.*, 1963, 238, 1415-1418 (Dept. Food Sci. and Tech., Univ. California, Davis, Calif., U.S.A.) The specificities of chicken ovomucoid and ovoinhibitor, and of turkey ovomucoid against trypsin, chymotrypsin, and fungal proteinase are very different. Chicken ovomucoid inhibits only trypsin; chicken ovo-inhibitor inhibits all 3 enzymes; whilst turkey ovomucoid inhibits trypsin and chymotrypsin. The reported weak inhibn. of chymotrypsin by chicken ovomucoid is due to contamination with ovoinhibitor.

J.N.Ashley

2897. THE DECREASE IN REDUCING POWER OF OVOMUCOID DURING PROTEOLYSIS. J.G.Beeley and F.R.Jevons: *Biochem. J.*, 1963, 88, 15-19 (Dept. Chem., Univ. Manchester, England) When incubated with proteolytic enzymes, the reducing power of ovomucoid and chymotrypsinogen towards an I_k. Cu reagent falls to about one-third of the original value. This reducing power is attributable largely to cystine, serine and tryptophan; a suggested explanation of the decrease is a decreased tendency to 3-elimination from cystine and serine residues. +

2898. ELECTROPHORETIC SEPARATION OF BIOLOGICALLY ACTIVE CONSTITUENTS OF SCORPION VENOMS. R.W.P.Master, S.Srinivasa Rao and P.D. Soman: *Biochim. biophys. Acta*, 1963, 71, 422-428 (Dept. Immunol., Haffkine Inst., Bombay, India)

Starch gel electrophoresis indicated the presence of protease in both *Buthus tamulus* and *Palamneus gravimanus* venoms. The former also possessed 5'-nucleotidase; the latter phosphodiesterase. Both had a guinea-pig ileum contracting factor. Neither contained phospholipase A, cholinesterase or L-amino acid oxidase.

B. tamulus venom contained 2 toxins, one of which produces increased breathing and die other stiffening of the hind portion of inj. mice. None of the *P. gravimanus* fractions were lethal to mice.

B.M.Stevens

2899. STARCH GEL ELECTROPHORESIS OF VENOMS OF INDIAN KRAIT AND SAW SCALED VIPER AND IDENTIFICATION OF ENZYMES AND TOXINS.

R.W.P.Master and S.Srinivasa Rao: *Biochim. biophys. Acta*, 1963, 71, 416-421 (Dept. Immunol. Haffkine Inst., Bombay, India) *Bugarus caeruleus* venom had 4 toxic components. *Echis carinatus* venom had only 1 toxin which was shown to be a proteolytic enzyme with * strong coagulant action.

B.M.Stevens

- 900. CORRELATION OF FRACTIONS OF CONTRACTILE PROTEINS IN MUSCLE.** T.P.Serebrenikova: Biokhimia, 1963, 28, 36-44. A study was made of striated, cardiac and smooth muscle in dogs and pigs by fractionated salting out. Similar curves were obtained respective of the salt used. A quant. assay was made of fractions of contractile proteins. Extraction was carried out with soln. of various acidity. In the smooth muscle extract, salting out of an actin-like protein, actomyosin and myosin was observed. The neutral extract of canine cardiac muscle contained 42% actomyosin and 17% myosin; for the neutral extracts of striated muscles the figures were 46% and 18% respectively. Marked tissue disintegration occurred in striated muscle triturated with and, and this distorted the salting out pattern.
 (Russian) B.J. Cooper

1901. MACROMOLECULAR AGEING IN VIVO. H.Walter: Nature, Lond., 1963, 198, 189-190 (Med. Res.)
 Programs, V.A. Hosp., Long Beach, Calif., U.S.A.) Evidence on the alteration in the prop. of Hb as it ages is reviewed and the concept of macromol. ageing extended to give a possible explanation of the observed electroforetic heterogeneity of a no. of cryst. enzymes.
 G.M.Lewis

1902. STUDIES OF COLLAGEN TISSUE AGEING: DEGRADATION OF GLYCERALDEHYDE-TREATED HIDE COLLAGEN. R.A.Milch, R.A.Murray and P.I. Kenmore: Proc. Soc. exp. Biol., N.Y., 1962, 111, 554-556 (Div. Orth. Surg., Johns Hopkins Univ. Sch. Med., Baltimore, Md., U.S.A.) Glyceraldehyde treatment of hide powder resulted in diminished swelling and lesser solubilisation relative to the untreated, indicating improved stability of collagen prep, after interaction with such metabolites. M.M.Shapland

1903. PREPARATION OF PURIFIED COLLAGENASE. S.Keller and I.Mandl: Arch. Biochem., 1963, 101, 81-87 (Columbia Univ., Coll. Phys. Surg., New York, U.S.A.) *Clostridium histolyticum* collagenase was drifted by gel filtration on Sephadex G-200 columns or by ion exchange chromatography on DEAE-Sephadex *-50. Ca containing buffers were necessary for good recovery in both cases. Yields of up to 94%, free of top. proteolytic activities, were consistently obtained. B.M.Stevens

1904. ISOLATION OF LOW DENSITY SERUM LIPOPROTEINS AFTER FLOCCULATION WITH SODIUM PHOSPHOTUNGSTATE AT NEUTRAL pH AND IN PRESENCE OF MgCl₂. M.Buistein: Nouv. Rev. franc. Hemat., 1963, 3, 139-148 (Centre National de Transfusion Sanguine, Paris, France) Selective reversible *tn. of the p-lipoproteins and chylomicrons is achieved by adding to serum sodium phosphotungstate and MgCl₂ at pH 7*8. Modifications using MgZnCl₂ and sucrose are described. Homogeneous lipid soln. of up to 100 g./L, coloured by carotene, are obtained. Paper, starch-gel and immuno-electrophoresis show only one component. (French) V.Eisen

1905. SELECTIVE PRECIPITATION OF LOW-DENSITY SERUM LIPOPROTEINS BY NEUTRAL SODIUM PHOSPHOTUNGSTATE IN THE PRESENCE OF A RAISED SALT CONCENTRATION. M.Burstein: J. Physiol., Paris, 1962, 54, 647-656 (Centre Nationale de Transfusion Sanguine, Paris, France) In the presence of a raised salt concn. and neutral pH, sodium phosphotungstate Ppt. the low-density group of human serum lipoproteins. This pptn. is reversible and under certain conditions selective, and allows pure lipoproteins to be isolated by chem. procedures alone. (French) A.Angel

2906. ALLEGED INTERACTION IN VITRO BETWEEN PLASMA 0-LIPOPROTEINS AND AORTIC MUCOPOLYSACCHARIDES. C.J.F.Bottcher, F.P.Woodford and F.B.Klynstra: J. Atheroscler. Res., 1963, 3, 24-31 (Dept. Phys. Chem., Univ. Leiden, Netherlands)
 No complex formation between arterial wall mucopolysaccharides [MPS] and plasma 0-lipoproteins could be detected by paper electrophoresis. It is concluded that the interaction between pure isolated MPS and intact plasma proteins does not occur during electrophoresis. K.Jones

2907. VARIATIONS IN THE ELECTROPHORETIC MOBILITY OF (X₁-GLOBULINS OF RAT SERUM IN DIFFERENT BUFFERS. M.J.Escribano: C.R. Acad. ScL, Paris, 1962, 255, 409-411 (Service de Chimie micro-biennne, Inst. Pasteur, Paris, France) The mobility of the C₁-globulins of normal rat serum during electrophoresis on agar decreases sufficiently as the ionic concn. and pH of the buffer increase to facilitate their separation from albumin. Optimal results were obtained at pH 9 and a molarity of 0*05 in the gel. Buffers tested were sodium veronal-hydrochloric acid, Michaelis and carbonate-sodium bicarbonate. Mean relative mobilities of albumin, (X₁-globulin, 82-globulin and y-globulin in these buffers are tabulated. During immunoelectrophoresis albumin moves alone, the 0Ci-globulin group stays together and the 4 di-globulins always have the same relative mobilities. (French) S.A.Thistlewood

2908. COMPARISON OF METHODS OF PREPARATION OF 02A-GLOBULINS OF HUMAN SERUM. R.Havez, P.Sautiere, M.Sautiere and G.Biserte: C.R. Soc. Biol., Paris, 1962, 156, 1641-1647 (Lab. Bioch., Fac. M&ed., Lille, France) Electrophoresis of 02A"globulins fraction prep, by ZnSO₄ and (NH₄)₂SO₄ pptn. according to Heremans showed the presence of (3-globulins, d-macro-globulins, siderophilin, haptoglobulins, y-globulins and serum albumin. Fractionation by (NH₄)₂SO₄ at constant pH and 20° resulted in the pptn. of 02A"globulins at 33% satn. Chromatography of the 02A"globulin fraction on DEAE-cellulose columns allowed the prep. of an immunoelectrophoretically pure sample of 02A"globulins. (French) M.A.Price

2909. ALLOTYPY IN RABBIT 19S PROTEIN. C.W.Todd: Biochem. biophys. Res. Comm., 1963, 11, 170-175 (Service d'Immunochimie Analytique, Inst. Pasteur, Paris, France) Evidence is presented that rabbit 19S protein and 19S y-globulin have 2 groups of allotypic "immunol. specificities in common. B.Ketterer

2910. MOLECULAR SUBSTRUCTURE OF FIBRINOGEN. R.H.Haschmeyer and R.E.Nadeau: Biochem. biophys. Res. Comm., 1963, 11, 217-223 (Dept. Biochem., Tufts Univ. Sch. Med., Boston, Mass., U.S.A.) Expl are described showing that fibrinogen dissociates into sub-units having a sedimentation coeff. of 3*5S when either heated at pH 10 or subjected to sulphitolytic in the presence of sodium dodecyl sulphate. B.Ketterer

2911. DEVELOPMENTAL CHANGES IN PLASMA PROTEIN PATTERN OF THE RAT. R.W.Wise, F.J.Ballard and E.Ezekiel: Comp. Biochem. Physiol., 1963, 9, 23-30 (Dept. Biochem., Univ. Western Australia, Nedlands, W. Australia) Plasma obtained from rats, adults and at various developmental stages, were subjected to paper, starch-gel and 2-way electrophoresis. Eighteen plasma protein bands have been observed though not all are present at the same time. Two post-albumins were the major components of early foetal plasma, but these disappear

BIOCHEMISTRY

shortly after birth. A transferrin and a slow ag-globulin also disappear after birth. Other proteins tend to increase in concn. during prenatal development, and a fast and slow (Xi-globulin occurring in adults can be just detected in 19-day embryos. M.S.Laverack

2912. Hb CONTENT OF THE BLOOD OF SIX SPECIES OF SCOMBROID FISHES. W.L.Klawe, LBarrett and B.M.H.Klawe: *Nature, Lond.*, 1963, 198, 96 (Inter-American Tropical Tuna Commission, Scripps Inst. Oceanography, La Jolla, Calif., U.S.A.) The Hb content of the blood of 6 spp. of scombroid fishes was determined by the pyridine haemochromogen method. The Hb concn. were higher than for other groups of fishes, especially in those spp. possessing a highly developed cutaneous vascular system. G.M.Lewis

2913. HYBRID MOLECULES FORMED BY REACTION BETWEEN Hb FROM DISTANTLY RELATED ANIMALS. H.E.Herner and A.Riggs: *Nature, Lond.*, 1963, 198, 35-36 (Zool. Dept., Univ. Texas, Austin, Tex.. U.S.A.) Formation of hybrid Hb mol. occurred with Hb from the following spp.: - tadpole with elephant, tadpole with mouse, mouse with donkey, mouse with elephant. No hybridisation occurred with Hb from adult and tadpole frogs. J.R.Sargent

2914. ALTERATION IN THE CHAIN OF HAEMOGLOBIN FERRARA. L Bianco, G.Modiano, E.Bottini and R-Lucci: *Nature, Lond.*, 1963, 198, 395-396 (Inst. d'Igiene dell* Univ. Roma, Centro di Studi della Microcitemia e delle Anemie Micocitemiche, Rome, Italy) Expt. of hybridisation of Hb LFerrara with human Hb S, A2 and F and canine Hb indicate that the structural alteration of Hb LFerrara is in the a chain. G.M.Lewis

2915. Hb. VH. N- AND C-TERMINAL FRAGMENTS DERIVED FROM BOVINE GLOBIN a AND 0 WITH N-BROMOSUCCINIMIDE [NBS] OXIDATION. S.Sasakawa. VIE. TRYPTIC PEPTIDES OF BOVINE GLOBIN a. K.Satake and S.Sasakawa: *J. Biochem.*, Tokyo, 1963, 53, 188-200, 201-203 (Dept. Chem., Fac. Sci., Metropolitan Univ., Tokyo, Japan) VII. Reaction at pH 3*5 cleaved only Cryptophanyl linkages whereas at pH 4*5 C-tyrosyl linkages were also cleaved. With a large excess of NBS and a limited reaction period, yields up to 65-75% were obtained, except for the Tyr.-Thr. of globin p which was only 20% cleaved. Cystine and methionine residues were oxidised to cysteic acid and methionine sulphoxide residues respectively but other side reactions were not observed. Comparing the N-terminal residues before and after NBS oxidation indicated the presence of Tyr.-Gly., Tyr.-Phe., Tyr.-Gly. and Tyr.-Arg. in the OL-chain and Tyr.-Gly., Tyr.-Thr., Tyr.-Glu. and Tyr.-His. in the 3-chain. Terminal structures for the a and 3 globin are suggested.

VIH Globin a obtained from type HbA/HbA was partially hydrolysed with trypsin and the sol. peptides were resolved on paper 2 dimensionally, first by electrophoresis and then by chromatography. Most of the 16 main spots showed good correspondence with the tryptic peptides from human globin a 14 spots were isolated in a homogeneous state and N-terminal amino acids and total composition were compared with those of the corresponding human peptides. Tryptic core was purified by partition chromatography and further hydrolysed with pepsin. The fragments were examined for amino acid composition and N-terminal residues. A partial structure for bovine globin a is suggested. B.M.Stevens

2916. PRIMARY STRUCTURE OF THE (X-CHAIN FROM HORSE Hb. G.Braunitzer and G.Matsuda: *J. Biochem.*, Tokyo, 1963, 53, 262-263 (Max-Planck-Inst. Biochem., Munchen, Germany). B.M.Stevens

2917. ABNORMALITY OF THE PRIMARY STRUCTURE OF HAEMOGLOBIN SHIMONOSEKI. M.Hanada and D.L.Rucknagel: *Biochem. biophys. Res. Comm.*, 1963, 11, 229-234 (Dept. Human Genetics, Univ. Michigan Med. Sch., Ann Arbor, Mich., U.S.A.)

Evidence is presented to show that glutamine normally present as the 54th residue in the CX-chain of Hb A is substituted by arginine in Hb Shimonoseki.

B.Ketterer

2918. ISOLATION OF ASCARIS Hb. M.H. Smith and M.Morrison: *Biochim. biophys. Acta*, 1963, 71, 364-370 (Molteno Inst., Univ., Cambridge, England) Neither of the 2 Hb were obtained free from contaminating protein except during ultracentrifugation. Isoelectric points were approx. 5*0 and 6*7. MoL wt. were approx. 14000 and 280000. General spectral characters resembled those of other Hb but even allowing for contamination the protein absorption appeared to be unusually high. Prop. differed from those of mammalian Hb in every respect examined. B.M.Stevens

2919. SOME ASPECTS OF THE COMBINATION OF ASCARIS Hb WITH OXYGEN AND CARBON MONOXIDE. M.H.Smith: *Biochim. biophys. Acta*, 1963, 71, 370-376 (Molteno Inst., Univ., Cambridge, England) Biochem. reducing systems were shown to produce the same effects as Na₂S₂O₄. The deoxygenation velocity of body wall Hb increased approx. 3-fold with a 10° rise in temp, and changed markedly with pH while that of perienteric fluid Hb increased approx. 5-fold with a 10° temp, rise but was little affected by pH. At 38° the reaction of the former Hb was approx. 17 times as fast as that of the latter. Both Hb had @ bands more intense than the a bands in the oxygenated form and the high affinity for O₂ which appears to be found in this case. The partition coeff. for both Hb were shown to be < 0*1 and probably nearer 0*01. B.M.Stevens

2920. U.V. ABSORPTION SPECTRA OF a, 3 AND y POLYPEPTIDE CHAINS FROM HUMAN Hb. G.Matsuda. T.Maekawa and LMuta: *Hoppe-Seylers Z. physiol. Chem.*, 1963, 331, 295-297 (Dept. Biochem. Sch. Med., Univ., Nagasaki, Japan) Tryptophan can be detected in human foetal Hb by its u.v. absorption. It is shown that this is due to the y polypeptide chain of the Hb mol. (German) LCornish

2921. STABILISATION OF POLYPEPTIDE HELICES BY HYDROPHOBIC INTERACTIONS. N.M.Green: *Arch. Biochem.*, 1963, 101, 186 (Dept. Chem. Pathol, St. Mary's Hosp. Med. Sch., London, England). B.M.Stevens

2922. BUOYANT BEHAVIOUR OF BOVINE SERUM MERCAPTALBUMIN IN SALT SOLUTIONS AT EQUILIBRIUM IN ULTRACENTRIFUGE. L PROTEIN CONCENTRATION DISTRIBUTION BY SCHLIEREN OPTICS AND NET HYDRATION IN CsCl SOLUTIONS. J.B.Ifft and J.Vinograd: *J. phys. Chem.*, 1962, 66, 1990-1998 (Gates and Crellin Lab. Chem., California Inst. Technol., Pasadena, Calif., U.S.A.) Bovine serum mercaptalbumin has been banded in CsCl soln. at sedimentation equilibrium. The distribution appeared gaussian indicating density and moL wt. homogeneity. The partial sp. vol. in CsCl wa* found to be 0*736 g./cm³

and from this and the measured buoyant density, it was calc. that the net hydration for the salt-free protein was $0.20 \text{ g.H}_2\text{O/g}$. A value for the mol. wt. was also obtained.

G.C.Barr

2923. HYDROGEN BONDING IN MONOMOLECULAR FILMS: STRENGTH OF KETO-IMINO HYDROGEN BOND IN AQUEOUS MEDIA. G.E.Hibberd and A.E. Alexander: *J. phys. Chem.*, 1962, 66, 1854-1858 (Phys. Chem. Dept., Univ. Sydney, N.S.W., Australia) The association between $> \text{C} \ll \text{O}$ and $\text{H}-\text{N} <$ groups in an aq. environment was examined by monolayer studies of octadecyl acetamide. This type of hydrogen bond is believed to be of major importance in the stability of protein configuration and the present studies indicate that the energy of die hydrogen bond in water has a value of 2 kcal./mole. The effect of several salts and of urea on this bond strength has been measured quant.

G.C.Barr

2924. MOLECULAR WEIGHT, LIMITING AREA AND FLEXIBILITY OF UNIMOLECULAR LAYERS OF SERUM ALBUMIN AND ITS DERIVATIVES. M.Muramatsu and H.Sobotka: *J. phys. Chem.*, 1962, 66, 1918-1923 (Chem. Dept., Mount Sinai Hosp., New York, U.S.A.) Physical prop. of bovine serum albumin and some of its deriv. was studied by a spreading technique. The influence of electrolytes on the limiting area per mol. was examined and values for the mol. wt. and flexibility calc. The effect on-the physical prop. of the unimolecular layer is described for the acetylation of amino groups and phenolic groups and for the coupling of the protein with diazo compounds.

G.C.Barr

2925. POLYMERISATION OF SILICIC ACID AND ITS SUBSEQUENT INTERACTION WITH PROTEINS AND OTHER HYDROGEN-BONDING AGENTS. L.Bergman and E.S.Nelson: *J. colloid Sci.*, 1962, 17, 823-827 (Safety in Mines Res. Estab., Ministry of Power, Sheffield, England) Polymerised silica sols show varying binding powers for different proteins. The ones studied were bovine serum globulin, bovine serum albumin and gelatin. The conditions of this binding are discussed and the large ability of silica surfaces to bind globulins is put forward as a possible explanation for the power of ^3U ica surfaces to kill cells and lead to fibrosis.

G.C.Barr

2926. REVERSIBLE DECOLOREATION OF CAERULO-PLASMIN UNDER ACID CONDITIONS. G.Curzon: *Biochim. biophys. Acta*, 1963, 71, 249-250 (Dept. Chem. Pathol., Inst. Neurol., Nat. Hosp. for Nervous Dis., London, England) Prelim. comm.

B.M.

Stevens

2927. SPECTROPHOTOMETRIC STUDIES ON THE TYROSYL AND TRYPTOPHANYL GROUPS OF CARBOXYPEPTIDASE A. H.Fujioka and K.Imahori: *J. Biochem.*, Tokyo, 1963, 53, 244-249 (Dept. Chem., Coll. Gen. Education, Univ. Tokyo, Japan) On titration in 1M NaCl soln. at 25° , 8 of the 16-17 tyrosyl groups in bovine pancreatic carboxypeptidase A ionised freely and reversibly at pH 8-10 $^{+5}$. The further ionisation of 8-9 groups at pH above 10 $^{+5}$ was time dependent. The groups were almost instantaneously ionised at pH 13. After exposure to pH 13 for 16 hr. all tyrosyl groups were normalised and reversibly titrated with an apparent pK of 9.9. The tyrosine content was spectrophotometrically determined to be 16 residues/ enzyme. The effect of 20% sucrose on the absorption spectrum was examined by difference spectra.

Results suggested approx. 3 moles of 'exposed' tryptophan were present.

B.M.Stevens

2928. CONCENTRATION DEPENDENCE OF THE SEDIMENTATION COEFFICIENT OF TRANSFERRED
A.Mahling; *Z. Naturforsch. B*, 1963, 18, 1-3
(Behringwerke A C, Marburg/Lahn, Germany) Two human transferrins were isolated from plasma and their sedimentation coeff. determined in the Spinco analytical centrifuge at various concn. The first did not contain neuraminic acid and had $\epsilon = 5.628$, the other contained neuraminic acid and had $S = 5.505$.

(German) J.C.Crawhall

2929. REACTION OF GLUTATHIONE WITH SERUM ALBUMIN, GLUTEN AND FLOUR PROTEINS. R.Frater and F.J.R.Hird: *Biochem. J.*, 1963, 88, 100-105 (Univ. Melbourne, Parkville, Victoria, Australia) The reaction of glutathione with the disulphide bonds of serum albumin and gluten has been followed by using the current-voltage wave to follow its disappearance. The reaction is slow and limited in extent at pH 5.0 and increases with increase in pH, being very fast and extensive at pH 9.0. Evidence is given that glutathione and oxidised glutathione react with the disulphide bonds and thiol groups respectively of the proteins in dough. Low-mol. wt. thiol(s) and disulphide(s) have been shown to be present in flour. The above observations are discussed in relation to the hypothesis that thiol-disulphide-exchange reactions are important in determining the rheological prop. of dough.

2930. SCHIFF PERIODIC ACID-FUCHSIN REACTION WITH OROSOMUCOID AND ITS HYDROLYSIS PRODUCTS. R.Paquin and F.Percheron: *Bull. Soc. Chim. biol.*, Paris, 1963, 45, 101-109 (Lab. Chim. Analytique, Fac. Pharmacie, Paris, France) The consumption of periodic acid by native orosomucoid was rapid in the first few min. The reaction was less rapid after gentle acid hydrolysis or after neuraminidase activity. The final total quantity of periodic acid consumed was the same in each case. The Schiff reaction showed the presence of 2 aldehyde groups after periodic acid oxidation of the native glycoprotein per mol. neuraminic acid.

(French) J.C.Crawhall

2931. ISOLATION AND AMINO ACID SEQUENCE OF ELEDOISIN, THE ACTIVE ENDECAPEPTIDE OF THE POSTERIOR SALIVARY GLANDS OF ELEDONE. A.Anastasi and V.Ersparmen: *Arch. Biochem.*, 1963, 101, 56-65 (Framitalia S.p.A. Res. Lab., Milan, Italy) Crude methanol extracts were chromatographed on alk. alumina or absorbed on serum albumin and then subjected to ion exchange chromatography and countercurrent distribution. Pure eledoisin thus obtained was subjected to total and partial acid hydrolysis, tryptic and chymotryptic digestions and end group determination expt. and was shown to have the structure pyroglutamyl-Pro.-Ser.-Lys.-Asp.-Ala.-Rie.-neu.-Gly.-Leu.-Met.-NH₂.

B.M.Stevens

2932. CONVENIENT APPARATUS FOR PROTEIN HYDROLYSIS AND GREASELESS FREEZE-DRYING. J.Bello: *Analyt. Biochem.*, 1963, 5, 366-367 (Biophysics Dept., Roswell Park Mem. Inst., Buffalo, New York, U.S.A.) The use of grease can be eliminated if O-ring spherical joints held together by a spherical joint clamp are used. No loss of liquid was observed at $U<$ during 20 hr. hydrolysis, and high vacuum is maintained in freeze drying.

A.D.Smith

BIOCHEMISTRY

2933. CONTRIBUTION TO THE STUDY OF THE DISULPHIDE BONDS IN HEN'S EGG WHITE LYSOZYME. J.Jolles, J.Jauregui-Adell and P.Jolles: Biochim. biophys. Acta. 1963, 71, 488-490 (Lab. Biol. Chem., Fac. Sci., Paris, France) The 4 cystine containing peptides were isolated after enzymic digestion, oxidised with performic acid and studied by the method of Spackman, Stein and Moore to determine which half-cystine residues were joined in the native enzyme. Prelim, comm. B.M. Stevens

2934. MECHANISM OF METMYOGLOBIN OXIDATION. N.Kelso King and M.E.Winfield: J. biol. Chem. 1963, 238, 1520-1528 (Div. Phys. Chem., Commonwealth Sci. and Ind. Res. Organisation, Melbourne, Australia) When horse heart metmyoglobin is oxidised by H_2O_2 at pH 6 and 0-1° most of it is in a free radical state a few sec. after addition of the H_2O_2 . The mol. that contains the free radical also contains Fe^{4+} . This first oxidation product, although it resembles in some ways the first oxidation product of a peroxidase by H_2O_2 , is different because an Fe and a C have been oxidised. Mechanisms are suggested for formation of the free radical and for its loss. The amount of O_2 evolved during oxidation of myoglobin in the ferric state is about 40% less than that expected from a catalytic decomposition of H_2O_2 ; this is due, amongst other things, to oxidation of amino acids. J. N. Ashley

2935. THE REACTION OF PROTEIN THIOL GROUPS WITH SOME DISULPHIDES. T.E.Islas and P.C.Jocelyn: Biochem. J., 1963, 88, 84-88 (Dept. Clin. Chem., Univ. Edinburgh, Scotland) The SH content of some purified blood proteins was determined by mixing the proteins with Na β -chloromercuribenzoate and determining the latter remaining in soln. when the proteins are pptd. Cystine reacts with these proteins, abolishing the SH content of human and bovine serum albumin and decreasing that of bovine Hb by 50%. There is no reaction between oxidised glutathione and the protein SH groups. Bovine serum albumin forms a mixed disulphide with cystine and 1 mol. of cystine is lost for the loss of 2 groups of protein SH. The reaction is second-order, and the rate decreases with decreasing pH but is uninfluenced by heavy-metal ions. The protein SH groups lost in the reaction are regenerated by adding either reduced glutathione or NaCN*

2936. N-TERMINAL RESIDUES IN ACETONE PRECIPITATED COMMERCIAL GELATIN. CHANGES IN THE APPARENT AVERAGE CHAIN WEIGHT. F.S.Steven and G.R-Tristram: Biochim. biophys. Acta, 1963, 71, 392-396 (Dept. Physiol. Biochem., St. Salvator's Coll., Univ. St. Andrews, Scotland) Physically associated nonprotein-N constituents were removed by serial acetone pptn. from dil. acetic acid soln. The average chain wt., measured by N-terminal analysis, increased from 55000 with each pptn. to a limiting value of 104000. B.M. Stevens

2937. TWO NEW STAINING PROCEDURES FOR QUANTITATIVE ESTIMATION OF PROTEINS ON ELECTROPHORETIC STRIPS. S.Fazekas de St.Groth, R.G. Webster and A.Datyner: Biochim. biophys. Acta, 1963, 71, 377-391 (Dept. Microbiol., Australian Nat. Univ., Canberra, Australia) Protein complexes of Procion Brilliant Blue RS and Coomassie Brilliant Blue R250 followed Beer's law up to 50 and 20 fig./cm. respectively. Lower limits of detection were 2 and 0.5 fig./cm. Within these limits the abs. amount of protein could

be estimated by direct photometry within a single test with an accuracy of approx. $\pm 10\%$. The major error arose from uneven sample application. Relative concn. within a protein mixture could be evaluated to an accuracy better than $\pm 2P\%$. Technical details are given in full. B.M. Stevens

2938. REACTION OF TRYPSIN WITH ϵ -NITROPHENYL ACETATE IN DIMETHYL SULPHOXIDE. F.A.Bettelheim and A.Lukton: Nature, Lond., 1963, 198, 357-359 (Chem. Dept., Adelphi Coll., Garden City, New York, U.S.A.) Reaction of trypsin with ϵ -nitrophenylacetate [PNPS] in dimethyl sulphoxide led to an initial rapid shift of the enzyme u.v.-absorption peak from 280 m μ to longer wavelengths. Following this shift a slower reaction occurred resulting in peaks at 320 and 432 m μ ; the latter were due to liberated p -nitrophenol. The intermediate complex which causes the initial rapid shift was unstable and was not acetylated trypsin. The shift is considered to be due to loose complexing of trypsin with PNPS which causes changes in protein conformation as a result of enhanced internal hydrophobic bonding. J.R. Sargent

2939. CLEAVAGE OF SPERM WHALE MYOGLOBIN WITH CYANOGEN BROMIDE. A.B.Edmundson: Nature, Lond., 1963, 198, 354-357 (M.R.X.Lab.Mol. Biol., Hills Rd., Cambridge, England) Cleavage of whale myoglobin at its methionine residues with cyanogen bromide led to the isolation of 3 peptides whose amino acid compositions were determined. Ratios of mol. wt. of the 3 peptides produced were 1:2:3. One peptide is derived from the C-terminal portion of myoglobin, another from the N-terminal portion and the 3rd from the interior portion of the polypeptide chain of myoglobin. The significance of these results in the amino acid sequence of myoglobin is considered. J.R. Sargent

2940. HYDROLYSIS OF DENATURED OVALBUMIN BY PEPSIN. M.P.Chernicov: Vop. Med. Him., 1963, 9, 125-127 (Inst. Nutrition, Acad. Med. Sci. of U.S.S.R. Moscow, U.S.S.R.) Pepsin caused rapid hydrolysis of ovalbumin at pH 1-2 though max. rates were obtained only in the presence of 6M urea. Heat denatured ovalbumin was hydrolysed at pH 1-2 at a decreased rate but this rate was again increased in the presence of 6M urea. Ovalbumin was hydrolysed by pepsin at pH 4-7 only in the presence of 6M urea. J.R. Sargent

2941. APPLICATIONS OF RADIOACTIVELY LABELLED MARKER PROTEINS IN DENSITY GRADIENT ULTRACENTRIFUGATION. P.A.Charlwood: Analyt. Biochem.* 1963, 5, 226-245 (Nat. Inst. Med. Res., The Ridgeway, Mill Hill, London, England) The advantages of internal reference substances, especially when radioactive to study rate of sedimentation are referred to. Iodination of readily available proteins, ranging in size from lysozyme to serum macroglobulin gives valid markers. Two different isotopes can be used to permit use of 2 markers. The principle can be applied in controlling prep. of macroglobulins, and studying the size of Ab and Ag. A.D. Smith

2942. MODIFICATION OF PROTEIN STRUCTURE BY MEANS OF AZLACTONES. T.Baranowski, M.Kochman, K.Nowak and L.Siemion: Bull. Acad. pol. ScL, 1963, 11, 107-111 (Dept. Physiol. Chem., Sch. Med., Wroclaw, Poland) The reaction of a protein (gelatin) with an azlactone (of ϵ -nitrobenzoyl-D,L-valine) was studied spectrophotometrically at different pH values and quant. relations between the azlactone and the protein.

From pH 3 to 10 the no. of free amino groups of the gelatin which reacted with the azlactone increased, and at pH 7*4 about half of the free amino groups were found. The practical application of these findings lies in the possibility of using azlactones for the modification of protein structures under physiol conditions.

E.Parkinson

2943. COMPARATIVE STUDY OF THE BIURET AND PHENOL REAGENT METHODS OF PROTEIN ESTIMATION. RESEARCHES IN ASPERGILLUS. R.Khanna, K.K.Tewari and P.S.Krishnan: Arch. Mikrobiol., 1963, 44, 352*355 (Div. Biochem., Lucknow Univ., Lucknow, U.P., India) Erroneously high results are obtained with the biuret method when applied to crude extracts of mycelial and other tissues, and the phenol reagent is to be preferred.

E.M.Ling

2944. IDENTIFICATION OF TYROSINE AT ACTIVE SITE OF ANTI-*p*-AZOBENZENEARSONIC ACID ANTIBODY. M.E.Koshland, F.M.Englberger and S.M. Gaddone: J. biol. Chem., 1963, 238, 1349-1352 (Biol. Dept., Brookhaven Nat. Lab., Upton, N.Y., U. S. A.) During iodination of anti-*p*-azobenzene-arsonic acid Ab the tyrosyl residues are most susceptible; histidyl residues are iodinated more slowly, and oxidation of methionyl and tryptophanyl residues does not occur until most of the available tyrosyl residues have reacted. Essentially all immunol. activity is lost when only tyrosyl and histidyl residues are iodinated. By combined use of photo-oxidation, which selectively alters histidyl residues, and iodination, which decreases significantly the binding capacity by the reaction of only tyrosyl groups, a tyrosyl residue is shown to be the I-reactive group at the active site of the Ab.

J.N.Ashley

2945. RATES OF REACTION OF NATIVE HUMAN GLOBIN WITH SOME HAEMS. Q.H.Gibson and E.Antonini: J. biol. Chem., 1963, 238, 1384-1388 (Dept. Biochem., Univ. Sheffield, England) The rate of reaction of native human globin with the CO compounds of various haems decreases in the order proto-, ¹eso-, deutero-, and haemato-haem. The dimethyl ester of deuterohaem disulphonate does not react. The results correlate well with the known structure of Hb in which the vinyl groups lie deeply in the hydrophobic interior of the mol. Spectrophotometric evidence is obtained of the formation of an intermediate complex in reaction between haem and globin. Spectrophotometric data are given for various haematin, haems, and CO-haems.

J.N.Ashley

2946. TRYPTIC CLEAVAGE AT CYSTEINYLY PEPTIDE BONDS. M.A.Rafferty and R-D.Cole: Biochem. biophys. Res. Comm., 1963, 10, 467-472 (Dept. Biochem., Univ. California, Berkeley, Calif., U.S.A.) After fraction with ethylenimine, cysteinyl peptide bonds score quant, converted to S-(*p*-aminoethyl) cysteinyl peptide bonds which are substrates for trypsin.

B.Ketterer

²⁹⁴⁷ **SIMPLE ESTIMATION OF CATHEPSIN C USING A NEW CHROMOGENIC SUBSTRATE.** R.J.Planta and M.Gruben Analyt. Biochem., 1963, 5, 360-362 (Biochem. Lab., Rijksuniversiteit Groningen, Nether-U.S.Jfnds) Gly-Phe-p-nitroanilide was synthesised and used as a substrate for cathepsin C estimation. The reaction was followed by determining absorbance in the range 410-415 nm. A degree of accuracy of $\pm 2\%$ was obtained.

A.D. Smith

2948. PSEUDOMONAS AEFUGINOSA PROTEINASE. I. PURIFICATION AND GENERAL PROPERTIES. K.Morihara, II MOLECULAR WEIGHT-AND MOLECULAR DIMENSION. H.Inoue, T.Nakagawa and K.Morihara: Biochim. biophys. Acta, 1963, 73, 113-124, 125-131 (Shionogi Res. Lab., Shionogi and Co., Ltd., Osaka, Japan) L Extracellular proteinase of *P. aeruginosa* IFO 3080, obtained as needle-like crystals and recryst. 3 times, appeared homogeneous on electrophoresis and ultracentrifugation; a small amount of impurity was detected by chromatography on DEAE-cellulose columns. The isoelectric point was slightly below pH 4*08. Max. absorption was at 280 m/i and min. at 250 m/j. The proteinase was fairly stable at pH 5-9 and 30° and up to 50° at pH 7. The optimum pH and temp. were 7-9 and 60°. Casein, gelatin, egg albumin and Hb were hydrolysed but not collagen, benzoyl-L-arginine amide, acetyl-L-tyrosine ethyl ester, carbobenzoxy-L-glutamyl-L-tyrosine, carbobenzoxyglycyl-L-phenylalanine or L-leucinamide. Oxidising agents, EDTA, o-phenanthroline, heavy metal ions and high urea concn* inhibited, but not reducing agents, SH reagents, DFP or soyabean and potato inhibitors.

II Boundary gradient curves obtained from sedimentation velocity expt. were analysed by Fujita's theory. S and the diffusion coeff. at infinite diln. were calc. to be 7.99×10^{-13} sec. and 7.4×10^{-7} sq.cm./sec. respectively. The mol. wt. was hence 48400. Assuming the mol. to be a rigid ellipsoid of revolution, hydrated to 307° the mol. dimensions were calc. to be 3*5 mjj for the a axis and 6*8 m/j for the b axis for an oblate ellipsoid and 8*6 mji for the a axis and 4*3 mfi for the b axis for a prolate ellipsoid.

B.M. Stevetis

2949. PROTEOLYTIC ENZYME IN HUMAN LENS.

A.Devi: Biochim. biophys. Acta, 1963, 73, 155-158 (Dept. Biochem., Fac. Med., Laval Univ., Quebec, Canada) Normal lens possessed an intracellular peptidase with a pH optimum of 7*2-7*4 and esterase activity, both of which disappeared in senile cataract.

B.M. Stevens

2950. THE DISTRIBUTION OF PEPTIDASES IN SUBCELLULAR FRACTIONS FROM THE MUCOSA OF THE SMALL INTESTINE OF THE RAT. G.B.Robinson: Biochem. J., 1963, 88, 162-168 (Dept. Biol. Chem., Univ., Illinois Coll. Med., Chicago, Ill., U.S.A.) The subcellular distribution of intestinal mucosal peptidases hydrolysing L-leucylglycine and glycylglycine was determined. Of the peptidase activity 80%-90% was located in the supernatant fraction. The remaining activity was found mainly in the microsomal fraction with some in the mitochondrial fraction. The subcellular fractions were characterised by E.M. and by determining the distributions of cytochrome oxidase and alk. phosphatase in the fractions. *

2951. LENS AMINOPEPTIDASE. I. PURIFICATION AND PROPERTIES. A.Spector: J. biol. Chem., 1963, 238, 1353-1357 (Howe Lab. Qriithalmol., Harvard Med. Sch., Boston, Mass., U.S.A.) The peptidase, which is purified approx. 680-fold, hydrolyses amino acid esters and amides as well as peptides. There is an abs. metal requirement, and Mn is most effective in stimulating activity. The pH optimum is 8*6, and the temp. optimum is 57°. Glutathione and cysteine decrease the activity.

J.N.Ashley

2952. PURIFICATION OF A BRAIN PROTEINASE.

A.V.Palladin, N.M.Polyakova and V.K.Lishkcx

BIOCHEMISTRY

- J. Neurochem., 1963, 10, 187-194 (Inst. Biochem. Acad. Sci. of Ukrainian SSR, Kiev. U.S.S.R.) Cathepsin was extracted from bovine brain acetone powder with distilled water. After removal of other proteins by lead acetate or $(\text{NH}_4)_2\text{SO}_4$ or acetone pptn., or adsorption on CMcellulose, greatest purification (2000 x activity of brain homogenate) was achieved by elution of cathepsin after adsorption on DEAEcellulose followed by electrophoresis on agar gel at pH 8*6. Mobility on agar gel is compared with phosphoglucomutase, aldolase, guanine and adenosine deaminase also from bovine brain. R.J. Woodman
2953. DETERMINATION OF D-AMINO ACID OXIDASE ACTIVITY IN INSECT TISSUES USING D-ALLO-HYDROXYPROLINE AS SUBSTRATE. J.J.Corrigan, D.Wellner and A.Meisten Biochim. biophys. Acta, 1963, 73, 50-56 (Dept. Biochem., Tufts Univ. Sch. Med., Boston, Mass., U.S.A.) The substrate was enzymically dehydrogenated to D-pyrroline-4-hydroxy-2-carboxylic acid which on acidification was converted to pyrrole-2-carboxylic acid. This last reacted very slowly, if at all, with β -dimethylaminobenzaldehyde but after decarboxylation to pyrrole a rapid reaction occurred yielding a red product. 10 mmoles of pyrrole could thus be detected. Activity was found in the fat body, midgut and Malpighian tubules of *Galleria mellonella*, *Calliphora erythrocephala*, *Oncopeltus fasciatus*, *Teriplaneta americana*, *Byssotria fumigata* and *Eurycotis floridana*. Muscle and testis of *Oncopeltus* and testis of *Byssotria* and *Periplaneta* also showed activity. No differences in activity were found between *Eurycotis* reared under sterile and non-sterile conditions. B.M.Stevens
2954. LOCALISATION AND PROPERTIES OF PHOSPHOPROTEIN PHOSPHATASE IN THE FROG EGG AND EMBRYO. S.Nass: Biol. Bull. Woods Hole, 1962, 122, 232-251 (Wenner-Gren Inst. Exp. Biol., Stockholm, Sweden) The highest phosphoprotein phosphatase activity was found in the pigment containing fraction of homogenates of frog ovaries and embryos. The enzyme activity of this fraction dropped sharply after fertilisation and then rose to reach a max. at the tail bud stage. G.J.Peakin
2955. PIG HEART GLUTAMIC ASPARTIC TRANSAMINASE MECHANISM OF TRANSAMINATION. A.E.Evangelopoulos and L.W.Sizen Proc. nat. Acad. Sci., Wash., 1963, 49, 638-643 (Dept. BioL, M.L.T., Mass., U.S.A.) Evidence is presented which indicates that the coenzyme of glutamic aspartic transaminase is only pyridoxal phosphate and not pyridoxamine phosphate. A new hypothesis of transamination is proposed in which the enzyme forms a ternary complex with both amino acid and keto acid prior to the exchange of amino and keto groups. J.R. Sargent
2956. PROTEIN MODIFICATIONS CATALYSED BY TRANSGLUTAMINASE. S.E.Komguth and H.Waelsch: Nature, Lond., 1963, 198, 188-189 (New York Psychiatric Inst., Columbia Univ., New York, U.S.A.) A no. of proteins were examined as amine-donating agents in the glutaminase reaction using carbobenzoxy-glutamyl [^{14}C]valine ethyl ester as acceptor peptide. β -lactoglobulin and globin were very effective replacement agents, a and γ -globulin less effective, and bovine serum albumin and lysozyme essentially neg. In an encephalitogenic extract, peak A was a more efficient replacing agent than peak 1. G.M.Lewis
2957. COMPARATIVE STUDIES ON GLYCOGEN PHOSPHORYLASE. V. AMINO ACID COMPOSITION OF RABBIT AND HUMAN SKELETAL MUSCLE PHOSPHORYLASE. M.M.Appleman, A.A.Yunis, E.G.Krebs and E.H.Fischer. J. biol. Chem., 1963, 238, 1358-1361 (Dept. Biochem., Sch. Med., Univ. Washington, Seattle, U.S.A.) Cryst. rabbit and human skeletal muscle phosphorylase b appear to be essentially identical in amino acid composition. Twenty-two residues of half-cystine per mol of rabbit enzyme are obtained by oxidation with performic acid compared with only 9 obtained by titration with $\text{J}(\text{J})$ -chloromercuribenzoate. No amino-terminal groups are present in native and denatured rabbit phosphorylase. No amino acids are released after attack by leucine aminopeptidase and carboxypeptidase A. The results are discussed in the light of chem., physical, and immunoL prop. of the phosphorylases of both spp. J.N.Ashley
2958. MECHANISM OF THE EFFECT OF TRYPSIN ON SPECIFIC HAEMAGGLUTINATION WITH INCOMPLETE Rh ANTISERA. M.D.Prager and M.A.Fletcher: Proc. Soc. exp. Biol., N.Y., 1962, 111, 722-725 (Wadley Res. Inst., Dallas, Tex., U.S.A.) Under conditions of trypsin treatment of r.b.c. which produce sp \gg aggl. by incomplete Rh antisera, the enzyme binds firmly to the cells. The enzymically inactive diisopropyl phosphoryl trypsin binds to a higher degree but fails to produce the seroL effect. M.M.Shapland
2959. ELECTROPHORETIC MAP OF CHEMICALLY DERIVED SUB-UNITS OF PAPAIN-DIGESTED γ -GLOBULIN. M.D.Poulikx Nature, Lond., 1963, 198, 752-753 (Child Res. Cen. Michigan, Detroit, Mich., U.S.A.) A method is described for 2-dimensional separation of γ -globulin sub-units on starch gels. Used in conjunction with immunoelectrophoresis die technique provides a system of 'immunological finger-printing'. It was shown that some of the sub-components of the F fragment (H-chain) of papain-digested γ -globulin, dissociated in urea-into 2 'micro sub-units', one of which is composed of 2 parts linked together by disulphide bonds. J.R.Sargent
2960. MODIFICATION OF AMINO ACID RESIDUES IN ANTI-p-AZOBENZENEARSONIC ACID ANTIBODY DURING EXTENSIVE IODINATION. M.E.Koshland, F.M.Englberger, M.J.Erwin and S.M.Gaddone: J. biol. Chem., 1963, 238, 1343-1348 (BioL Dept., Brookhaven Nat. Lab., Upton, N.Y., U.S.A.) A method is described for extensive iodination of proteins without causing formation of significant amounts of insoL product, and for determination of the residues modified by I. The methods are used to identify the available reactive residues in anti-jg-azobenzeneearsonic acid Ab, which contains an I-reactive group at its active site. I is present in 7 of die 16 histidyl and in 44 of the 59 tyrosyl residues. Also 10 of the 13 methionyl and 6 of the 18 tryptophanyl residues are oxidised and traces of cysteic acid are formed*. The I-reactive group is narrowed to 4 residues, and a tyrosyl or histidyl residue is implicated. J.N.Ashley
2961. SYNTHETIC POLYPEPTIDE ANTIGENS. K. ANTI-GENICITY OF NEW GROUP OF LINEAR SYNTHETIC POLYPEPTIDES. T.J.Gill, m and L.S.Mathews: J. biol. Chem., 1963, 238, 1373-1379 (Lab. Clin. Path., Dept. Path., Harvard Med. Sch., Boston, M**** U.S.A.) A new group of linear synthetic polypeptides containing L-glutamic acid, L-lysine, L-tyrosine, L-phenylalanine, and L-alanine in various combinations

and proportions causes Ab formation in rabbits. Copolymers that contain only glutamic acid or lysine and alanine or tyrosine cause less formation of Ab than those that contain both glutamic acid and lysine. Antisera to Polypeptides that contain both glutamic acid and lysine in approx. mol. ratio 3:2 cross-react well with poly-Peptides that contain both glutamic acid and lysine in the same ratio, and to a slight and variable extent with Polypeptides that contain only glutamic acid or lysine. Antisera to the latter polypeptides usually cross react poorly with copolymers containing both glutamic acid and lysine. Antisera that contain high concn. of Ab to synthetic polypeptides cross-react to a limited extent with various native proteins. Rabbit antibovine γ -globulin does not cross-react with several synthetic polypeptides.

J.N.Ashley

NUCLEIC ACIDS, NUCLEOPROTEINS AND NUCLEOTIDES

2962. INTERACTION OF MENADIONE WITH SOLUBLE PYRIDINE NUCLEOTIDE OXIDISING SYSTEMS FROM BRAIN. S.Englard and H.J.Strecken Bull. Res. Counc. Israel, A, 1963, 11, 319-329 (Dept. Biochem., Einstein Coll. Med., Yeshiva Univ., New York, U.S.A.) From a study of the reaction of NADH₂ with menadione catalysed by brain enzymes, it is suggested that under certain conditions the rate of re-oxidation of reduced menadione may become the limiting step in the overall oxidation of reduced pyridine nucleotides. Under these conditions added cytochrome c greatly accelerates the overall rate of oxidation of reduced pyridine nucleotides in a non-stoichiometric manner. This was attributed in part to the presence of autoxidisable components in cytochrome c prep, and in part to catalysis by trace metals. L.G.Gillies

2963. REACTION OF NAD AND RELATED PYRIDINIUM SALTS WITH ALKALI. R.M.Burton and N.O.Kaplan: Arch. Biochem., 1933, 101, 139-149 (McCollum-Pratt Inst., Johns Hopkins Univ., Baltimore, Md., U.S.A.) Spectra and difference spectra resulting from reaction of OH⁻ with NAD, nicotinamide mono-nucleotide, nicotinamide riboside and N¹-methylnicotinamide are presented. Temporal relationships between spectral changes, fluorescence and chem. and enzymic activity of NAD indicated that NAD and OH⁻ initially associated to form a charge transfer complex. Subsequently the OH⁻ was added to the pyridinium ring using an acid-labile dihydropyridine. B.M.Stevens

2964. REACTION OF REDUCED PYRIDINE NUCLEOTIDES WITH ACID. R.M.Burton and N.O.Kaplan: Arch. Biochem., 1963, 101, 150-159 (McCollum-Pratt Inst., Johns Hopkins Univ., Baltimore, Md., U.S.A.) Reduced pyridine nucleotides and related compounds reacted with acid to give a primary product absorbing at 260 m^μP*. Evidence is presented indicating that this was effected by opening the heterocyclic ring to yield an aldehyde. At pH 7, ³²P³²V chromophore was cleaved from the nucleotide giving ADP-ribose and a pyridine derivative. The acid product is discussed in relation to a postulated mechanism of oxidative phosphorylation at the pyridine nucleotide level. B.M. Stevens

2965. CONCENTRATION OF NAD IN CARRAGEENIN-INDUCED PROLIFERATION. M.Luscombe: Nature, Lond., 1963, 197, 691-692 (M.R.C. Rheumatism Res. Unit, Bath Area Central Lab., Manor Hosp., Bath, Wilts., England) Proliferation was stim. in rabbit synovia by injn. into the femorotibial joint of a soln. of carrageenin in saline, and the content of NAD estimated in terms of DNA-phosphorus. A fall in NAD concn. is associated with proliferation. In rats bearing granulomata induced by carrageenin, injn. of NAD reduced their rate of growth, suggesting that NAD has an inhibitory effect on cell division. G.M.Lewis

2966. STUDIES ON THE SEPARATION OF PYRIDINE NUCLEOTIDES BY THIN-LAYER CHROMATOGRAPHY. R.L.Scheig, R.Annunziata and L.A.Pesch: Analyst. Biochem., 1963, 5, 291-294 (Dept. Int. Med., Sch. Med., Yale Univ., New Haven, Conn., U.S.A.) One-dimensional ascending chromatography on silica gel G was used to separate NAD, NADH₂ and NADPH₂* Solvent systems used were isobutyric acid: 0*880 ammonia: water (66:1:33) and ethanokammonium acetate, pH 7*5 (70:30). A clear separation of mixtures of the compounds was obtained in a 5 hr. run. A.D. Smith

2967. EFFECT OF BUFFERS ON NICOTINAMIDE ADENINE DINUCLEOTIDE HYDROLYSIS. B.M.Anderson and C.D.Anderson: J. biol. Chem., 1963, 238, 1475-1478 (Dept. Biochem., Univ. Louisville Sch. Med., Ky., U.S.A.) The rate of hydrolysis of NAD to nicotinamide and adenosine diphosphoribose at 100° varies considerably with the buffer used to maintain a const. pH. The rate const, obtained at neutral pH in nitrogenous base buffers are essentially equal and are the lowest values observed under these conditions. Much higher rate const, are obtained under similar conditions but with buffers such as phosphate, p-glycerol phosphate, ASO₄³⁻, P2O₇²⁻, and AMP. There are no differences in the products formed in any of the buffers. The high rates of hydrolysis in phosphate and 0-glycerol phosphate buffers are reversed by Tris, imidazole and glycylglycine buffers. At neutral pH hydrolysis of NAD at 100° in phosphate and related buffers proceeds mainly through a hydroxyl ion attack. J.N.Ashley

2968. ENZYME HYDROLYSING FMN IN PLANTS. L PARTIAL PURIFICATION AND PROPERTIES OF THE ENZYME FROM PHASEOLUS RADIATUS. N.Appaji Rao, H.R.Cama, S.A.Kumar and C.S.Vaidyanathan, IL PHOSPHOTRANSFERASE ACTIVITY OF THE PARTIALLY PURIFIED ENZYME FROM PHASEOLUS RADIATUS. S.A.Kumar and C.S.Vaidyanathan: Biochim. biophys. Acta, 1963, 73, 87-97, 98-104 (Dept. Biochem., Indian Inst. Sci., Bangalore, India)

The enzyme was partially purified from seed extracts by pptn. of inert material with MnSO₄ and protamine sulphate, fractional pptn. with alcohol and chromatography on CMcellulose, to yield prep, with a sp. activity 200 times that of the crude extract. The prep, was comparatively sp. for FMN but 0-glycerophosphate, p-nitrophenyl phosphate and 5'-nucleotides were also hydrolysed to a much smaller extent. Differential effects of ions on FMN and p-glycerophosphate hydrolysing activities are discussed.

The prep, could transfer the phosphate cleaved from FMN to acceptors like thiamine, pyridoxal, pyridoxamine and nucleosides to give the corresponding phosphate esters and nucleotides. The prop. of the FMN hydrolysing enzyme and the phosphotransferase activity were compared. B.M.Stevens

BIOCHEMISTRY

2939. PURIFICATION OF NICOTINAMIDE ADENINE DINUCLEOTIDE AND KINETIC EFFECTS OF NUCLEOTIDE IMPURITIES. K.Dalziel J. biol. Chem., 1963, 238, 1538-1543 (Dep.: Biochem., Univ. Sheffield, England) The kinetic effects of an impurity in a coenzyme which acts as a competitive inhibitor are examined theoretically and by expt. with liver alcohol dehydrogenase and the competitive inhibitor ADP ribose. A competitive inhibitor is separated from several very pure commercial prep. of NAD. It causes large errors in determination of initial rate parameters for liver alcohol dehydrogenase. For valid kinetic studies of mechanism, and of the effects of pH on rates, the purity requirements for NAD and NADH₂ may be very exacting, and published kinetic data for other enzymes, and conclusions drawn from them, may need revision. J.N.Ashley
2940. STUDIES ON RESPIRATORY CHAIN-LINKED REDUCED NICOTINAMIDE ADENINE DINUCLEOTIDE DEHYDROGENASE. III. CATALYTIC PROPERTIES OF ENZYME FROM OX HEART. S.Minakami, T.Cremona, R.L.Ringler and T.P.Singer: J. biol. Chem., 1963, 238, 1529-1537 (Ford Inst. Med. Res., Henry Ford Hosp., Detroit, Mich., U.S.A.) Very pure prep. of NADH₂ dehydrogenase oxidise various NADH₂ analogues and catalyse transhydrogenation between NADH₂ and NAD analogues. K₃Fe(CN)₆ is the only satisfactory electron acceptor studied. The enzyme shows very little, or no reaction with cytochrome c, menadione, lipoic acid, or coenzyme Q10. The kinetics of the purified dehydrogenase are described. The enzyme is competitively inhib. by NAD and its analogues. It is rapidly inactivated at acid pH values, temp, above 30°, and in presence of org. solvents. Amytal interrupts electron transport on the O side, not on the substrate side, of the dehydrogenase. J. N. Ashley
2941. OXIDATION OF REDUCED NADP IN RAT LIVER MICROSOMES. A.Beloff-Chain, R.Cacanzeri and G.Serlupi-Crescenzi: Nature, Lond., 1963, 198, 351-354 (Internat. Centre Gen. Biochem., Inst. Superiore di Sanita, Rome, Italy) O₂ uptake measurements determined polarographically show that NADPH₂, but not NADH₂, is oxidised by rat liver microsomes. O₂ uptake in the presence of NADPH₂ is not inhib. by cyanide or antimycin A. ADP, UDP, GDP or CDP each stim. NADPH₂ oxidation. NADPH₂ oxidation in the presence of ADP was not dependent on phosphate concn. J.R. Sargent
2942. NON-ENZYMIC HYDROGEN EXCHANGE BETWEEN NICOTINAMIDE ADENINE DINUCLEOTIDES. J.Ludwerg and A.Levy: Biochem. biophys. Res. Comm., 1963, 11, 19-23 (Dept. Orthopaedic Surg. and Rheum. Dis. Grp., Dept. Med., Univ. California, San Francisco Med. Center, Calif., U.S.A.) It is shown that a direct and non-stereosp. H transfer without net oxidation or reduction is a general prop. of the nicotinamide adenine dinucleotides and analogue systems. B.Ketterer
2943. CARBONYL ADDITION REACTIONS OF NICOTINAMIDE ADENINE DINUCLEOTIDE IN FROZEN ALKALINE SOLUTION. M.L.Dolin and K.B.Jacobson: Biochem. biophys. Res. Comm., 1963, 11, 102-105 (Biol. Div., Oak Ridge Lab., Term., U.S.A.) Acetone present in many prep. of NAD undergoes an addition reaction with NAD frozen at -20° at pH 11-11.9. Similar carbonyl addition compounds have been shown to form with acetaldehyde, acetoin, fructose, ribose 5-phosphate and adenosine diphosphoribose. B.Ketterer

2944. COLOUR REACTION BETWEEN REDUCED PYRIDINE NUCLEOTIDES AND o-AMINOBENZALDEHYDE OF POTENTIAL ANALYTICAL USE. R.L.Larson and H.P.Broquist: Analyt. Biochem., 1963, 5, 255-258 (Lab. Biochem., Dept. Dairy Sci., Univ. Illinois, Urbana, Ill., U.S.A.) NADH₂ and NADPH₂ give an orange colour (480 m*λ*) in acid soln. in 1 hr. which can be used for quant. assay. The method is only about a third as sensitive as the direct spectrophotometric assay but requires only a colorimeter. A.D. Smith
2945. PATHWAYS OF REDUCED PYRIDINE NUCLEOTIDE OXIDATION IN RAT BRAIN HOMOGENATE DEMONSTRATED BY A TETRAZOLIUM METHOD. R.Hess and A.G.E.Pearse: Biochim. biophys. Acta, 1963, 71, 285-294 (Dept. Pathol., Postgrad. Med. Sch., London England) Comparable activities with both NADH₂ and NADPH₂ were obtained with mitochondrial and cytoplasmic fractions of sucrose homogenates using either O₂ or an N-thiazol substituted monotetrazole as final electron acceptor and menadione as an intermediary carrier. Tetrazolium reduction by enzymically formed hydroquinone was faster than its autoxidation at all pH. Irreversible removal of H by formazan formation kinetically activated menadione reduction. Reduction of mono-tetrazole and oxidation of reduced pyridine nucleotide showed an equimolar relationship. Apparent Km at the optimum pH indicated mitochondrial and extramitochondrial menadione reductases were closely related. Kinetic data indicated that mitochondrial NADH₂-NADP-tetrazolium reductase was not identical with menadione reductase. B.M. Stevens
2946. ENZYMIC BREAKDOWN OF DIPHOSPHOPYRIDINI NUCLEOTIDE. S.E.Severin, L.A.Tseitlin and T.N. Druzhimina: Biokhimiiia, 1963, 28, 145-151. Stud] of enzyme systems causing DPN breakdown in cardiac and skeletal muscle homogenates revealed a non-nucleosidic as well as a nucleosidase pathway, though the latter was the major pathway. The total activity of enzymes causing DPN breakdown was 4-6 times higher in the cardiac than in the skeletal homogenates. The optimum PH in both cases was in the range 6.0-7.0. The non-nucleosidase optimum was pH 7.5. (Russian) BJ.Cooper
2947. PHOTOCHEMICAL REDUCTION OF NADP BY CELL-FREE EXTRACTS OF BLUE-GREEN ALGAE. C.C.Black, C.A.Fewson and M.Gibbs: Nature, Lond., 1963, 198, 88 (Dept. Biochem., Cornell Univ., Ithaca, New York, U.S.A.) The activity of a photo-synthetic nicotinamide nucleotide reductase has been detected in cell free extracts of blue green algae, Anacystis, Anabaena, Nostoc and Tolyphothrix. The enzyme from Nostoc was purified by means of Dowex-Bentonite and had an absorption spectrum like that of similar enzymes from other sources. G.M.Lewis
2948. FEEDBACK INHIBITION OF THYMIDINE KINASE BY THYMIDINE TRIPHOSPHATE. D.H.Ives, P.A.Mo* jun. and V.R.Potter: J. biol. Chem., 1963, 238, 1467-1474 (McArdle Mem. Lab., Med. Sch., Univ. Wisconsin, Madison, Wis., U.S.A.) Thymidine kinase and thymidylate kinase, present in the high speed supernatant fraction of Novikoff hepatoma cells, have similar functions, but they differ in various prop. such as their affinities for substrates and metal cofactors, pH optima, and susceptibility to product inhib. Thymidine kinase, but not thymidylate kinase, is strongly inhib. by its distal product, thymidine triphosphate, at concn.

equal to that of the thymidine in the reaction mixture. The extent of inhibn. is independent of enzyme concn. but is markedly affected by concn. of substrate. Inhibn. tends to be reversed by high concn. of thymidine or ATP. Inhibn. of thymidine kinase is very sp. because neither the proximal product, thymidylate, nor various other nucleotides, inhibit it.

J.N.Ashley

2979. ADENOSINE TRIPHOSPHATE AND PHOSPHORUS METABOLISM IN FISH OVA. N.M.Abrosimova and R.L.Tatarskaia: *Biokhimiia*, 1963, 28, 128-136.

In addition to ATPase, certain other enzymes were demonstrated in ripe unfertilised fish ova: 5'-nucleotidase (only in the sturgeon), non-sp. acid phosphatase, inorg. pyrophosphatase, adenylate kinase and adenylate deaminase. Certain conclusions were drawn concerning P metabolism in fish ova, including the fact that their ATPase is bound to cellular structures.

(Russian) B.J.Cooper

2980. 'CATCH' (VISCOUS TONE) AND NUCLEOSIDE TRIPHOSPHATE. J.C.Rtlegg and E.Strassner:

Z. Naturforsch. B, 1963, 18, 133-138 (Inst. Physiol., Max-Planck-Inst. Med. Forsch., Heidelberg, Germany) ATP levels of the resting anterior byssal retractor muscle of *Mytilus edulis* did not alter during contraction or 'catch' and subsequent 5HT relaxation. The condition of 'catch' was thus a reversible rigor unlike that occurring in the vertebrate skeletal muscle.

(German) J.C.Crawhall

2981. SYNTHESIS OF OROTIDINE. W.V.Curran and R.B.Angier: *Tetrahedron Letters*, 1963, 8, 533-535 (Org. Chem. Res. Section, Lederle Labs., American Cyanamid Co., Pearl River, N.Y., U.S.A.) 14.5% yield was obtained by condensing the monomeric deriv. of n-butyl orotate with 2,3,5-tri-O-benzoyl-D-ribofuranosyl chloride. Letter. R.H.Kimberlin

2982. PYRIMIDINE NUCLEOSIDE HYDROLASE IN THERMOBACTERIUM ACIDOPHILUM. C.Janion and S.Ltfvtrup: *Acta biochim. pol.*, 1963, 10, 183-189 (Dept. Histol., Univ. Goteborg, Sweden) The presence of a pyrimidine nucleoside hydrolase in *T. acidophilum* was demonstrated. Among the substrates tested, the highest activity was shown toward cytidine, followed by thymidine and uridine. Optimum pH was close to 8. Incubation of extracts caused equal losses of activity with cytidine and uridine as substrates, suggesting that in both fractions 1 enzyme is involved. For growth of *T. acidophilum*, uracil could be replaced by uridine; this is turned to be due to pyrimidine nucleoside hydrolase activity. M.Korbecki

2983. FORMATION OF URACIL NUCLEOTIDES IN THERMOBACTERIUM ACIDOPHILUM. C.Janion and S.Ltfvtrup: *Acta biochim. pol.*, 1963, 10, 191-198 (Dept. Histol., Univ. Goteborg, Sweden) The pathways of utilisation of uracil by *T. acidophilum* were investigated. UMP:pyrophosphate phosphoribosyltransferase acting UMP was found in bacterial acetone powder which also possess ATP:nucleosidemonophosphate transferases leading to formation of UDP, which ATP:nucleosidediphosphate phosphotransferase acts. Thus small scale prep. of labelled UMP, UDP and UDP from labelled uracil is possible. Some prop. of these reactions were investigated. M.Korbecki

2984. PREPARATION OF POLY-5-FLUOROURIDYLIC ACID AND THE PROPERTIES OF HALOGENATED POLY-URIDYLIC ACIDS AND THEIR COMPLEXES

WITH POLY-ADENYLIC ACID. W.Szer and D.Shugar: *Acta biochim. pol.*, 1963, 10, 219-231 (Inst. Biochem. Biophys., Polish Acad. Sci., Warszawa, Poland)

Poly-fluorouridylic acid exists as a random coil at room temp, and exhibits some secondary structure only below 5°. Its twin-stranded complex with poly-A is less thermostable than that of poly-U with poly-A. Poly-bromo-uridylic acid and poly-chlorouridylic acid, on the other hand, exhibit secondary structure at room temp, and form complexes with poly-A more stable than those of poly-U and poly-A. Taken in conjunction with previous results for poly-ribothymidylic acid, it follows that the stability of polynucleotide helices must be due to factors other than, and perhaps additional to, hydrogen bonding. Some suggestions are made regarding additional expt. and theoretical work necessary for resolution of this problem.

M.Korbecki

2985. IN VITRO SYNTHESIS OF HISTAMINE ADENINE DINUCLEOTIDE BY MICROSOMAL NICOTINAMIDE ADENINE DINUCLEOTIDASE OF RAT SPLEEN. A.Devi and M.A.Mukundaw: *Arch. Biochem.*, 1963, 101, 186-188 (Dept. Biochem., Fac. Med., Laval Univ., Quebec, Canada) The enzyme degrading NAD at the nicotinamide linkage did not appear to be identical with the enzyme catalysing histamine adenine dinucleotide synthesis, the former being found in mitochondria and the latter in microsomes. Prelim, comm.

B.M.Stevens

2986. ISOLATION AND STRUCTURE OF URIDINE NUCLEOTIDE-PEPTIDES FROM AEROBACTER CLOACAE NRC 492. R.A.Anwar, C.Roy and R.W. Watson: *Canad. J. Biochem.*, 1963, 41, 1065-1072, (Div. Appl. Biol., Nat. Res. Coun., Ottawa, Canada)

Penicillin-treated cells of *A. cloacae* NRC 492 were extracted with boiling 60% ethanol and the extracts dialysed. These were fractionated on Dowex-1-Cl⁻ columns with aq. lithium chloride soln., and the nucleotide-peptides were ppts. with methanol-acetone. Further separation by paper chromatography and high voltage electrophoresis yielded 4 closely related uridine nucleotide-peptides which were partially characterised.

J.B.Parish

2987. SOME OBSERVATIONS ON THE ISOLATION AND ESTIMATION OF THE SOLUBLE NUCLEOTIDES OF WHEAT SEEDLINGS. A.J.Keys: *J. exp. Bot.*, 1963, 14, 14-28 (A.R.C. Unit Plant Physiol., Imperial Coll. Sci. and Technol., London, England) A new technique is described which separates nucleotides from other interfering substances in extracts of wheat seedlings. During germination, endosperm sol. nucleotides remained at a low level, but in the embryo there was a 30-fold increase in 2 days. Acid hydrolysis of the sol. nucleotides yielded guanine, adenine and uridylic acid.

L.D.J.Phillips

2988. FRACTIONATION AND PROPERTIES OF GUANYLIC ACID POLYMERS SYNTHESISED BY RNase T1. H.Hayashi and F.Egami: *J. Biochem.*, Tokyo, 1963, 53, 176-180 (Dept. Biophys. Biochem., Fac. Sci., Univ. Tokyo, Japan) Polymers containin i 2-12 guanylyl residues were synthesised from guanosine 2',3'-cyclic phosphate and fractionated by DEAEcellulose column chromatography. Extinction coeff. decreased as the no. of nucleotide units increased up to 4-5 units, thereafter the coeff. was unchanged. The 1 of max. absorption was displaced 2-3 mji towards longer X in larger polymers. The polymers were completely digested to mononucleotides by the same enzyme although chem. synthesised polyguanylic acid was only partly digested.

BIOCHEMISTRY

The behaviour of polyguanylic acid on gel filtration
was examined. B.M. Stevens

2989. ACID SOLUBLE NUCLEOTIDES OF MILK.
n. ISOLATION AND IDENTIFICATION OF TWO NOVEL URIDINE NUCLEOTIDE OLIGOSACCHARIDE CONJUGATES FROM HUMAN MILK AND COLOSTRUM. A.Kobata: J. Biochem., Tokyo, 1963, 53, 167-175 (Res. Lab., Takeda Chem. Ind., Ltd., Osaka, Japan) The compounds were shown to be uridine 5'- (4-O-p-D-galactopyranosyl-N-acetylglucosamine 1-dihydrogen pyrophosphate) and uridine 5'-(2 or 4-O-L-fucopyranosyl-4-O-3-D-galactopyranosyl-N-acetylglucosamine 1-dihydrogen pyrophosphate) respectively. B.M.Stevens

2990. FURTHER STUDIES ON ADENYLYL 2,3-DIPHOSPHOGLYCERIC ACID. T.Hashimoto and H.Yoshikawa: J. Biochem., Tokyo, 1963, 53, 219-226 (Dept. Physiol. Chem. Nutr., Fac. Med., Univ. Tokyo, Japan) Adenylyl 2,3-diphosphoglyceric acid isolated from blood had the same chem. prop, and was attacked by enzymes in the same way as the chem. synthesised compound. The formation and degradation of the nucleotide by haemolysate were examined. It is suggested that the nucleotide is synthesised by nucleotidyl transferase and hydrolysed by nucleotide pyrophosphatase in the r.b.c. B.M.Stevens

2991. NUCLEIC ACID METABOLISM OF GERMINATING CORN SEEDLINGS. E.Volkin and D.Schwartz: Bull. Res. Coun. Israel, A, 1963, 11, 387-388 (Biol. Div., Oak Ridge Nat. Lab., Oak Ridge, Tenn., U.S.A.)

Note. L.G.Gillies

2992. INFLUENCE OF AGE AND N, N'-DIETHYLENE-N'-PHENETHYLPHOSPHORAMIDE (PEDP) UPON NUCLEIC ACID AND RIBONUCLEASE ACTIVITY IN TUMOUR TISSUE. R.W.Wannamacher, jun., J.B. Allison, D.Chu and M.L.Crossley: Proc. Soc. exp. Biol., N.Y., 1962, 111, 708-710 (Bureau Biol. Res., Rutgers Univ., New Brunswick, N.J., U.S.A.) As the Walker 256 rat tumour increased in size and approached max. development, the RNase activity/g. of tumour or/ mg. of DNA-P also increased. The slower growing, larger tumour had a markedly decreased RNA-P and protein concn. Treating the tumour-bearing rat with PEDP resulted in increased RNase activity and decreased RNA-P. M.M.Shapland

2993. X-RAY DIFFRACTION AND MOLECULAR MODEL BUILDING STUDIES OF THE INTERACTION OF ACTINOMYCIN WITH NUCLEIC ACIDS. L.D.Hamilton, W.Fuller and E.Reich: Nature, Lond., 1963, 198, 538-540 (Sloan-Kettering Inst., New York, U.S.A.)

Oriental fibres were prep, from complexes of actinomycin Ci [AMC] and calf thymus DNA. The complexes contained a max. of about 1 mol. of AMC per 18 nucleotides of DNA. X-ray diffraction studies of the complexes showed that confirmation of DNA mol. and intermol. spacing of DNA mol. were little affected by AMC binding. A mol. model of the complex, consistent with these findings, was constructed in which guanine is linked to the AMC chromophore by 3 hydrogen bonds. Some features of the model are discussed. J.R. Sargent

2994. ENZYMIC METHYLATION OF RNA AND DNA. M.Gold, J.Hurwitz and M.Anders: Biochem. biophys. Res. Comm., 1963, 11, 107-112 (Dept. Microbiol., New York Univ. Sch. Med., N.Y., U.S.A.) It is reported that extracts of E. coli contain at least 5 RNA

methylating enzymes and in addition, DNA methylating activity. S-Adenosyl-methionine is indicated as the active methylating agent. B.Ketterer

2995. PRECIPITATION OF NUCLEIC ACIDS BY TANNIN. L.Baranowski, M.Kochman and A.Szewczuk: Bull. Acad. pol. ScL, 1963, 11, 113-118 (Dept. Biochem., Inst. Immunol. Exp. Therapy, Polish Acad. Sci., Wroclaw, Poland) The formation of insol. ppt. of nucleic acids and nucleoproteins with tannin is described. A quant. method for the determination of RNA, DNA and deoxyribonucleoprotein is worked out using the O.D. of the ppt. obtained with tannin. The presence of nucleic acids in the sample was found to influence in an unpredictable way the determination of proteins by the tannin method of Mejbaum. E.Parkinson

2996. NUCLEIC ACID ESTIMATES OF MAMMARY TISSUE AND NUCLEI. H.A.Tucker and R.P.Reece: Proc. Soc. exp. Biol., N.Y., 1962, 111, 639-642 (Dept. Dairy Sci., New Jersey Agric. Exp. Sta., New Brunswick, N.J., U.S.A.) A modified Schmidt and Thannhauser nucleic acid procedure was applied for extraction of nucleic acids from rat mammary tissue. DNA per mammary cell nucleus was found to be the same in glands from pregnant or lactating rats and so DNA content can be used as an index of development. M.M.Shapland

2997. NUCLEIC ACID CONTENT OF MAMMARY GLANDS OF PREGNANT RATS. H.A.Tucker and R.P. Reece: Proc. Soc. exp. Biol., N.Y., 1963, 112, 370-372 (Dept. Dairy Sci., N.J.Agric. Exp. Station, New Brunswick, N.J., U.S.A.) The DNA content per 100 g. body wt. of Norway rat mammary glands was found to increase during pregnancy by about 184%, the increase being a steady one. RNA content also rose in a similar fashion to a value of 261% increase over the original value. D.N.Wheatley

2998. NUCLEIC ACID CONTENT OF MAMMARY GLANDS OF LACTATING RATS. H.A.Tucker and R.P. Reece: Proc. Soc. exp. Biol., N.Y., 1963, 112, 409-412 (Dept. Dairy Sci., N.J.Agric. Exp. Station, New Brunswick, N.J., U.S.A.) DNA contents of mammary glands of Norway rats were calc. before and after parturition. There was a far greater increase in the DNA content per 100 g. body wt. within 3 days of parturition than at any other time. This reflects the hyperplasia of the mammae which takes place mostly during early lactation. Ovariectomy just after parturition did not affect this hyperplasia. The DNA content did not increase after 24 days of lactation. RNA content rose to a max. 21 days after the beginning of lactation then declined precipitously. D.N.Wheatley

2999. MICROCHEMICAL AND MICROSPECTROPHOTOMETRIC STUDIES ON INTRALAMINAR DISTRIBUTION OF NUCLEIC ACIDS IN BRAIN CORTEX UNDER VARIOUS EXPERIMENTAL CONDITIONS. M.N.Baranov and L.Z.Pevzner: J. Neurochem., 1963, 10, 279-283 (Lab. Functional Biochem. of Nerv. System, Pavlov Inst. Physiol. Acad. ScL U.S.S.R., Leningrad, U.S.S.R.) RNA and DNA analyses were performed in 4-6 mg. fresh wt. of rat brain or on single cells by ILV. microspectrophotometry and 6 successive layers up to a depth of 1*7 cm. from either motor or visual cortex surface were examined. Both RNA and DNA tended to be higher in the middle (4th and 5th) layers than the adjacent ones. Injn. of hexenal (100 mg./kg.), caffeine (500 mg./kg.) or

camphor (400 mg./k&0. 4 hr. before death or circulation hypo-oxia caused changes in nucleic acid content of the surface and deep layers but not so much the middle layer.

R.Woodman

3000. PREPARATION OF BACTERIAL DEOXYRIBONUCLEIC ACID.

H.KrSger, R.C.Warner and S.Ochoa: Bull. Res. Counc. Israel, A, 1963, 292-296 (Dept. Biochem., New York Univ. Sch. Med., N.Y.. U.S.A.)

A method is described for the recovery of DNA from $(\text{NH}_4)_2\text{SO}_4$ supernatant fractions of bacterial extracts at 70% satn. These supernatants contain 70-80% of the DNA and 2-4% of the RNA and protein of the extract. The Procedure yields DNA of low RNA content without the use of RNase or alkali. While the DNA is largely undenatured and biol. active, its degree of polymerisation is low with mol. wt. under 4×10^6 .

L.G.Gillies

3001. STUDIES ON THE DEOXYRIBONUCLEIC ACID OF SERRATIA MARCESCENS. A.S.Jones and R.T. Walker.

J. gen. Microbiol., 1963, 31, 187-194 (Chem. Dept., Birmingham Univ., England) A method based on Kirby's phenol extraction procedure is described for quant. isolation of pure highly polymerised DNA from *S⁺marcescens*. No statistically significant differences were detected in the base composition or sequence between the DNA of a wild and a mutant strain of the organism, and the DNA contained 6-methyl-aminopurine. The prop. of this base and its N-nitroso deriv. were compared with those of a synthetic sample.

K.Brew

3002. MATHEMATICAL ANALYSIS OF STATISTICAL DISTRIBUTION OF DNA CONTENT IN CELLULI^{j*} NUCLEI. Z.Lodin, E.Navratil and M.Podlaha: Csl. Morfol., 1963, 11, 135-144 (Physiol. Inst., Czechosl.

Acad. Sci., Prague, Czechoslovakia) The min. no. of measurements, n, necessary for constituting the histograms, suitable for analytical evaluation was estimated to be $n > 1700$. A formula is proposed which shows the relation between the statistical distribution of the DNA content and statistical distributions of DNA concn. and of the vol.

K.Jones

3003. STATISTICAL DISTRIBUTION OF VOLUMES OF CELLULAR NUCLEI AND ITS RELATION TO STATISTICAL DISTRIBUTION OF THEIR PRO[^]CTION AREAS.

Z.Lodin, E.Navratil and M.Podlaha: Csl. Morfol., 1963, 11, 145-151 (Physiol. Inst., Czechosl. Acad. Sci., Fac. Tech. Nuclear Physics, Prague, Czechoslovakia) The errors committed in determining the values of the amount of DNA in individual cellular nuclei are the product of the measured extinctions and areas pointed out. Transformation formulae are derived which are suitable for finding the statistical distribution of Vol. of cellular nuclei in the given tissue from the statistical distribution of the measured areas of cellular nuclei in the prep.

K.Jones

3004. MOLECULAR STATE OF DEOXYRIBONUCLEIC ACID IN sd PHAGE CORPUSCLE. T.I.Tikhonenko, N.G.Pichugina and I.Koudelka: Biokhimia, 1963, 28, 101-H2. The results are given of a complex study concerning the chromatography, sedimentation and viscosity of DNA in the corpuscle of the sd phage of *E.coli* SK and of the T2 phage. (Russian)

B.J.Cooper

3005. COHESION OF DNA MOLECULES ISOLATED FROM PHAGE LAMBDA. A.D.Hershey, E.Burgi and J.Ingraham: Proc. nat. Acad. Sci., Wash., 1963, 49, 48-755 (Genet. Res. Urit, Carnegie Inst. Washington,

Cold Spring Harbor, Long Island, N.Y., U.S.A.)

The DNA of phage X undergoes reversible transitions from linear to characteristically folded mol., and from linear monomers to open polymers. Some conditions favouring one state or another have been defined. It may be surmised that each mol. carries 2 specifically interacting cohesive sites.

J.R.Sargent

3006. PHOTOCOCONDUCTIVITY OF SODIUM DNA IN THE DRY STATE.

C.Y.Liang and E.G.Scalco: Nature, Lond., 1963, 198, 86-87 (Exploratory Res. Lab., American Viscose Corp., Marcus Hook, Pa., U.S.A.)

The dark and photoconductivities of Na-DNA from salmon sperm in the dry state were determined at various temp, and applied voltages. The activation energy for photoconduction was 0.89 e.v.

G.M.Lewis

3007. DECREASE IN FREQUENCY OF BIRTH IN MICE TREATED WITH ENZYMIC DIGESTS OF DNA.

C.G.Heden, T.Lindahl and W.Braaru: Acta path. microbiol. scand., 1963, 57, 257-260 (Dept. Bact., Karolinska Inst. Stockholm, Sweden)

Treatment of mice during pregnancy with enzyme-digested DNA may reduce fertility. The effect of the digested DNA varies with different DNA prep.

L.Friedmann

3008. SEPARATION AND CHARACTERISATION OF CARP EGG RIBONUCLEIC ACIDS. C.Y.Lu and F.J.Finamore:

Comp. Biochem. Physiol., 1963, 9, 41-49 (Isotope Metab. Res. Lab., S. Illinois Univ., Carbondale, Ill., U.S.A.)

Mature ovarian eggs obtained from *Cyprinus carpio* differ in their RNA composition from liver of the same sp. Extraction was carried out in 0.17M and 1M NaCl and different characteristics were obtained for each extract. In 0.17M NaCl there is 30% acid-sol. RNA, but in 1M NaCl only 10% is acid-sol. Separation on chromatographic columns (Ecteola) indicates 4 fractions present in each extract type.

M.S. Lave rack

3009. STEPWISE SYNTHESIS OF DEOXYRIBO-OLIGO-NUCLEOTIDES. G.Scheuerbrandt, A.M.Duffield and A.L.Nussbaum: Biochem. biophys. Res. Comm., 1963, 11, 152-155 (Dept. Biochem., Stanford Univ. Med. Center, Palo Alto, Calif., U.S.A.)

The synthesis of the trinucleotide pTpCpC is described and used to test the specificity of *E. coli* phosphodiesterase. The enzyme was found to degrade from the 3'-OH end only.

B.Ketterer

3010. INTERACTION OF POLYAMINES WITH TURNIP YELLOW MOSAIC VIRUS RNA. S.Mitra and P.Kaesberg:

Biochem. biophys. Res. Comm., 1963, 11, 146-151 (Dept. Biochem., Univ. Wisconsin, Madison, Wis., U.S.A.)

Absorbancy, sedimentation and viscosity studies show that bis(3-amino propyl)amine and spermine are remarkably efficient in preventing unfolding of turnip yellow mosaic virus RNA.

B.Ketterer

3011. CHEMICAL METHOD FOR STUDYING THE DETAILED SECONDARY STRUCTURE OF RNA.

G.Zubay and R.Marcielo: Biochem. biophys. Res. Comm., 1963, 11, 79-82 (Biol. Dept., Brookhaven Nat. Lab., Upton, N.Y., U.S.A.)

It was found that soL RNA, ribosomal RNA and F2 bacteriophage RNA were only slightly reactive to formaldehyde at 10^5 in the presence of 0.01M MgCl₂. A considerably greater rate of reaction is achieved if Mg is absent.

B.Ketterer

3012. DYNAMIC BIREFRINGENCE AND MOLECULAR STRUCTURE OF RIBONUCLEIC ACID. E.V.Frisman,

BIOCHEMISTRY

V.I.Vorob'ev, N.K.Ianovskiaia and L.V.Shchaginai
Biokhimiia, 1963, 28, 137-144. Dynamic birefringence was applied to the study of the RNA mol. obtained from various sources. The value for the geometrical asymmetry of the mol. agreed with E.M. data. The value of intrinsic anisotropy was in accordance with Spirin's RNA model. (Russian) BJ.Cooper

3013. RIBONUCLEIC ACID IN PLANT MATERIAL.

H.-G.Fritz and B.R.Otter: *Z. Naturforsch. B*, 1963, 18, 124-132 (Max-Planck-Inst. Virusforschung, TQbingen, Germany) An extract containing the nucleic acid fractions of fresh green tobacco leaves was submitted to alk. hydrolysis (KOH at 37° for 22 hr.). Mononucleotide fractions containing cytidylic, adenylic, guanylic and uridylic acids were separated on Dowex I columns by formate-ammonium formate elution techniques. (German) J.C.Crawhall

3014. ACID HYDROLYSIS OF DEOXYRIBOSIDE AND RIBOSIDE. A.Wacker and L.TrSger: *Z. Naturforsch. B*, 1963, 18, 13-16 (Inst. Therapeut. Biochem., Univ. Frankfurt am Main, Germany) The acid hydrolysis of various ribosides and deoxyribosides was studied using TCA and HCl respectively. Hydrolysis of 5-halogenuracildeoxyribosides by 5% TCA at 60° was 3-4 times faster than that of thyminedeoxyriboside or uracildeoxyriboside but 16 times slower than that of cytosinedeoxyriboside. Purineribosides were hydrolysed 14 times as fast as pyrimidineribosides by HCl.

(German) J.C.Crawhall

3015. RESISTANCE OF s-RNA TO RIBONUCLEASES IN THE PRESENCE OF MAGNESIUM ION. S.Nichimura and G.D.Novelli: *Biochem. biophys. Res. Comm.*, 1963, 11, 161-165 (Biol. Div., Oak Ridge Nat. Lab., Oak Ridge, Tenn., U.S.A.) Enzymic digestion of s-RNA from *E. coli* by bovine pancreatic and *B. subtilis* RNases was inhib. in the presence of 0.01M Mg. It is suggested that Mg causes the s-RNA to assume a more rigid structure which is more resistant to enzymic attack. B.Ketterer

3016. MOLECULAR STRUCTURE OF HELICAL POLY-CYTIDYLIC ACID. R.Langridge and A.Rich: *Nature*, Lond., 1963, 198, 725-728 (Dept. Biol., M.I.T., Cambridge, Mass., U.S.A.) Polycytidyllic acid (poly-C) exists in a helical form in which the apparent pitch is 18.65A and there appear to be 6 residues per helical turn. Poly-C in the ordered helical form is a 2-stranded mol. in which both strands are parallel to each other and are related by a 2-fold rotation axis. The asymmetric unit of cytidylic acid is related to its nearest neighbour on the polymer chain by a translation of 3*11A and a rotation of 30°. H-bonding between cytosine residues in the twin helix is achieved by an arrangement in which 3 hydrogen bonds are formed by addition of 1 protein for every 2 cytosine residues. J.R.Sargent

3017. INHIBITION OF THE FORMATION OF POLY-ADENYLIC-POLYURIDYLIC ACID DOUBLE HELIX COMPLEXES. F.Cramer and H.Seidel: *Z. Naturforsch. B*, 1963, 18, 162-163 (Inst. Org. Chem., Tech. Hochschule, Darmstadt, Germany) Note. (German) J.C.Crawhall

3018. THE INTERACTIONS OF POLY-C AND GUANINE TRINUCLEOTIDE. M.N.Lipsett: *Biochem. biophys. Res. Comm.*, 1963, 11, 224-228 (N.L.H., Bethesda, Md., U.S.A.) Evidence is presented which suggests that the helical C + G structure can bond a 2nd strand of G and that the 2nd strand of G can be melted off without disrupting the C + G core of the structure. B.Ketterer

3019. BLOOD PLASMA ADENOSINE DEAMINASE IN RATS WITH FIBROSARCOMA. G.G.Villela, L.A.Abreu and R.R.Abreu: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111 737-739 (Biochem. Lab., Inst. Oswaldo Cruz, Rio de Janeiro, Brazil, S. America) Increased levels of plasma adenosine deaminase were found in rats with transplantable fibrosarcoma when compared with normal animals. M.M.Shapland

3020. ROLE OF TRANSHYDROGENASE IN ENERGY-LINKED REDUCTION OF NADP. F.Hommes and R.W. Estabrook: *Biochem. biophys. Res. Comm.*, 1963, 11, 1-6 (Dept. Biophys. and Phys. Biochem., Johnson Fndn., Univ. Pennsylvania, Philadelphia, Pa., U.S.A.) Some prop. of the transhydrogenase reaction of submitochondrial particles mediating the energy linked reduction of NADP are described. B.Ketterer

3021. PHOSPHODIESTERASE ACTIVITY OF RIBOSOME PREPARATION FROM GOAT BRAIN. R.K.Datta and J.J.Ghosh: *J. Neurochem.*, 1963, 10, 285-286 (Dept. Biochem., Univ. Coll. Sci. Technol., Calcutta, India) The enzyme activity was studied using p-nitrophenyl-phosphate as substrate; has a broad alk. pH optimum around 8.9 and temp. optimum of 35-40°; is thermostable above 80°; is slightly inhib. by 1-10 mM divalent cations and 64% inhib. in the presence of 5mM EDTA. PO₄ is inhibitory (38% at 10mM) but not arsenate which differentiates it from phosphomonoesterase activity in ribosomes. * R. Woodman

3022. ISOLATION OF RIBONUCLEASE B, A GLYCOPROTEIN, FROM BOVINE PANCREATIC JUICE. T.H.Plummer, jun. and C.H.W.Hirs: *J. biol. Chem.*, 1963, 238, 1396-1401 (Biol. Dept., Brookhaven Nat. Lab., Upton, Long Island, N.Y., U.S.A.) RNase B is isolated by chromatography of the juice on IRC-50. Each g. of pancreatic protein gives approx. 1*25 mg. of RNase B which has the same amino acid composition, sp. activity, and u.v. spectrum as those of RNase A. The mol. wt. of RNase B is 14700 ± 300. There are 5 residues of mannose and 2 of glucosamine bound to each mole of protein. A glycoprotein identical chromatographically with RNase B is isolated from a commercial prep, obtained by fractionation of cryst. RNase; it contains 1 residue of glucosamine and 3 of hexose. Hence cryst. RNase may contain RNase B and modified forms derived by partial removal of carbohydrate. J.N.Ashley

3023. ISOLATION AND CHARACTERISATION OF SPLEEN ACID DEOXYRIBONUCLEASE. G.Bernardi, M.Griffé and E.Appella: *Nature*, Lond., 1963, 198, 186-187 (Centre de Recherches sur les Macromol., Strasbourg, France) Acid RNase was purified from hog spleen by extraction with Na d, pptn. with ammonium sulphate and chromatography on DEAE cellulose, hydroxyapatite and Amberlite resin. The final product behaved as a single component on ultracentrifugation and electrophoresis. Neutral and acidic amino acids predominated in the material and the amount of ammonia present was consistent with most of the acidic amino acids being present as amides. G.M.Lewis

3024. INFLUENCE OF COPRECIPITATION ON QUANTITATIVE ESTIMATIONS OF RIBONUCLEASE ACTIVITIES BY PRECIPITATION METHODS. L.Lepoutre, J.Stockx and L.Vandendriessche: *Analyt. Biochem.*, 1963, 5, 149-157 (Laboratorium voor Fysiologische Scheikunde, Rijksuniversiteit/ Ghent, Belgium)

The coprecipitation of nonprecipitable degradation Products with RNA was investigated at varying concn. of degradation products and RNA. It was shown that co-Precipitation causes interference with the assay which must be taken into account. A.D.Smith

A.D.Smith

**3025. ULTRACENTRIFUGAL AND VISCOMETRIC
STUDIES OF REVERSIBLE THERMAL DENATURATION
OF RIBONUCLEASE. D.N.Holcomb and K.E.Van Holde:
J. phys. Chem., 1962, 66, 1999-2006 (Dept. Chem.
and Chem. Engng., Univ. Illinois, Urbana, Ill.).**

U.S.A.) Sedimentation velocity and intrinsic viscosity measurements have been used to study the reversible thermal denaturation of RNase-A at pH 2⁸. The results indicate that denaturation is more complex than an equilibrium between native ribonuclease and a single denatured form. The data are not consistent with the hypothesis that denaturation corresponds to a gradual unfolding with increasing temp. G.C.Barr

G.C.Barr

3026. ACQUISITION OF THYMIDINE KINASE ACTIVITY BY HERPES SIMPLEX INFECTED MOUSE FIBROBLAST CELLS. S.Kit and D.R.Dubbs: Biochem.

biophys. Res. Comm., 1963, 11, 55-59 (Div. Biochem. Virol., Baylor Coll. Med., Houston, Tex., U.S.A.) It is demonstrated that herpes simplex, which contains only 4.5×10^{-6} mol. wt. equiv. of DNA/particle is capable of inducing thymidine kinase in infected cells.

B.Ketterer

³>>27. NUCLEUSES AND THEIR INHIBITORS IN THE CELLULAR COMPONENTS OF HUMAN BLOOD.

S.Gupta and R.M.Herriott: Arch. Biochem., 1963,
101, 88-95 (Dept. Biochem., Johns Hopkins Univ.
Sch. Hyg. Public Hlth., Baltimore, Md., U.S.A.)

W.b.c. contained a DNase inhibitor which was released on incubation. Sonically disrupted w.b.c. possessed RNase activity equiv. to that of whole blood. Lysed r.b.c. confined appreciable quantities of DNase inhibitor and comparatively little RNase inhibitor. On incubation of serum Jbe high DNase activity disappeared, apparently owing J£ the development of an inhibitor which also reduced ^e activity of added pancreatic DNase. O'OM Mg ^ccelerated the appearance of this inhibitor.

B.M.Stevens

³⁰28. EFFECT OF SNAKE VENOM UPON MEMBRANE ATPase OF HUMAN ERYTHROCYTE. M.Tatibana:

I. Biochem., Tokyo, 1963, 53, 260-261 (Dept.
t, Physiol. Chem., Fac. Med., Univ. Tokyo, Japan)
*The activity of the Na-K dependent, ouabain sensitive
ATPase appeared to be closely related to the integrity of
r.b.c. membrane structure. B.M.Stevens

B.M.Stevens

³29. CONTROL OF ENDOGENOUS ADENOSINE TRIPHOSPHATASE ACTIVITY OF PIGEON HEART MITOCHONDRIA BY ENERGY-LINKED REDUCTION OF NICOTINAMIDE ADENINE NUCLEOTIDE. I. GENERAL PROPERTIES OF REACTION B.Chance and T.Ito.

H- STOICHEIOMETRY BETWEEN ADENOSINE TRIPHOSPHATE AND REDUCED NICOTINAMIDE ADENINE NUCLEOTIDE. B.Chance, T.Ito, P.K.Maitra and K.Oshino: J. biol. Chem., 1963, 238, 1509-1515, 1516-1519 (Johnson Res. Found., Univ. Pennsylvania).

4-Tu-hiladelphia, Pa., U.S.A.) L The endogenous
~~6%^a~~ specifically inhib. by low concn. of succinate;
~~re~~^b conditions are qual. identical with those that lead to
 reduction of succinate-linked NAD. Control of endo-
 genous ATPase by succinate is inhib. by malonate.

$\text{cGJ}^{1\text{e}}$ and glutamate, in presence of malonate, do not
Qu^rol endogenous ATPase reactivity, whereas this occurs

with succinate and glutamate. In the interval before reduction of NAD in the energy-linked pathway there is rapid breakdown of ATP. This control of ATPase activity may be due to competition between a 'hydrolysis' of an essential intermediate in ATPase activity and the binding of a component of this intermediate by NADH₂ formed in the energy-linked reduction. The mode of action of antimycin A in activation of ATPase and in inhibn. of energy-linked reduction of NAD is discussed; these 2 types of activity in intact mitochondria are due to interaction with a respiratory carrier (cytochrome b).

IL Determination of H⁺ formation that accompanies utilisation of ATP in the succinate-linked reduction of NAD in pigeon heart mitochondria shows a total change of approx. 32 μ mol. of H⁺ per mg. of protein. Correction of this for H⁺ change caused by reduction of NAD and conversion to change of concn. of ATP gives 28 nmol. of ATP per mg. of protein. This gives a stoichiometry of 2:8 ATP per NAD reduced. Comparison of the results of chem. determination of ADP formation from ATP breakdown with those of direct determination of ADP by spectroscopic response of the respiratory carriers gives 3 ADP formed per mol. of NAD reduced. J.N.Ashley

3030. CYTOCHEMICAL DEMONSTRATION OF ATPase
IN STYLONYCHIA PUSTULATA. N.W.Hunter: J. cell,
comp. Physiol., 1963, 61, 209-213 (Dept. Biol.,
Morgan St. Coll., Baltimore, Md., U.S.A.) The
ATPase of the hyoothrichous ciliate S. pustulata was
localised in the mitochondria and most active at pH 7*6
at 30°. It was stim. by Ca, Mg and Fe and by glutathione,
but depressed by Zn, Co and cysteine HCl. G.M.Lewis

3031. ENZYMIC ACTIVITY OF POLYALANYL RIBONUCLEASE. D.Wellner, H.I.Silman and M.Sela: J. biol. Chem., 1963, 238, 1324-1331 (Dept.

Biophys., Weizmann Inst. Sci., Rehovoth, Israel)
 With RNA as substrate, poly-DL-alanyl RNase enriched with 94 alanine residues per mol. of enzyme [PAR 4D] and poly-DL-alanylRNase enriched with 130 alanine residues per mol. of enzyme [PAR 4E] are more active than RNase at pH 5 and low ionic strength, but at their optimum pH, RNase is about 8 times more active than PAR 4D, and at pH 8 PAR 4D is less than 2% as active as RNase. With nucleoside 2'³-cyclic phosphates as substrates the activities of PAR 4D and PAR 4E are of the same order of magnitude as that of RNase in the range pH 5-8. At pH 8 both are more active towards cytidine 2'³f-diphosphate, whilst at this pH PAR 4E is less active towards uridine 2' 3-diphosphate. 6M urea increases the apparent activity of RNase towards RNA and decreases that of PAR 4E.

BIOSYNTHESIS OF PROTEINS AND NUCLEIC ACIDS

3032. SEQUENTIAL INDUCTION OF MALTOSE-PERMEASE AND MALTASE SYSTEMS IN SACCHAROMYCES CEREVISIAE. G.Harris and D.J.Millin:

Biochem. J., 1963, 88, 89-95 (Brewing Ind. Res. Found., Nutfield, Redhill, Surrey, England) The induction of maltose-permease and maltase systems was studied in stationary cells of S. cerevisiae. In one strain the induction of the maltase system was dependent on

BIOCHEMISTRY

preinduction of the transport system and additionally on the presence of exogenous N. However, maltose permease induction was independent of an external N source, thus enabling separate induction of the transport and hydrolysing systems in this strain. This phenomenon is discussed in relation to protein synthesis and turnover. Two other strains possessed the ability to transfer radioactivity from [^{14}C]maltose to [^{14}C]trehalose at external pH values where yeast maltases are not usually active. This suggests the possibility of pathways of maltose metabolism not involving maltase in these strains. *

3033. REPLACEMENT OF PROLINE BY AZETIDINE-2-CARBOXYLIC ACID DURING BIOSYNTHESIS OF PROTEIN [IN BACTERIA AND HIGHER PLANTS]. L.Fowden and M.H.Richmond: *Biochim. biophys. Acta*, 1963, 71, 459-461 (Dept. Bot., Univ. Coll., London, England). B.M.Stevens

3034. REPRESSION AND DEREPRESSION OF CYTOCHROME c BIOSYNTHESIS IN E. COLI [K12 AND E. AUREUS CFSNS ATCC 12814]. J.W.T.Wimpenny, M.Ranlett and C.T.Gray: *Biochim. biophys. Acta*, 1963, 73, 170-172 (Dept. Microbiol., Dartmouth Med. Sch., Hanover, N.H., U.S.A.) The cytochrome was formed anaerobically in the manner of an induced enzyme; biosynthesis was inhib. by aerobic conditions. Prelim, comm. B.M.Stevens

3035. THE RELEASE OF PROTEIN FROM RETICULOCYTE RIBOSOMES. A.J.Morris: *Biochem. biophys. Res. Comm.*, 1963, 11, 201-207 (Dept. Biochem., Nat. Inst. Med. Res., Mill Hill, London, England) Evidence is presented that the release of completed protein mol. from ribosomes *in vitro* specifically requires GTP and has the characteristics of an enzyme catalysed reaction. B.Ketterer

3036. INCORPORATION OF ^{14}C -LABELLED AMINO ACIDS INTO THE PROTEINS OF THE LIVER. R.S.Piha, A.J.Uusitalo and S.S.Oja: *Ann. Med.*, 1963, 41, 73-88 (Inst. Physiol., Univ. Helsinki, Finland) The rate of incorporation of ^{14}C -labelled amino acids into the proteins of the supernatant and the precipitate fractions separated from liver homogenates at 4000 £ for 30 min. and their subsequent turnover were studied in healthy untreated rats and rats inj. with chlorpromazine, meprobamate and LSD. In control group at 24 hr. after ^{14}C injn. sp. activities of proteins in liver supernatant and precipitate fractions were 48*0 and 55*5% of the isotope content of total plasma proteins. Chlorpromazine lengthened the time for liver proteins to reach max. activity, dec. max. sp. activity in both fractions. LSD lowered rate of ^{14}C incorporation and caused rapid initial elimination in precipitate fraction, followed by normal rate of protein elimination. It increased slightly the elimination of supernatant proteins. Meprobamate had no effect on incorporation of amino acids into liver proteins in 24 hr. expt. Mechanism of protein synthesis in liver and inhibitory effect of chlorpromazine on liver function are discussed. Relationship between liver and plasma protein metabolism is dealt with. G.Faulkner

3037. MECHANISM OF PROTEIN BIOSYNTHESIS IN RAT LIVER AND TRANSPLANTABLE TUMOUR MICROSOMES in. S.Ya.Davidova and G.A.Drozdova: *Vop. Med. Him.*, 1963, 9, 161-167 (Lab. Biochem., Inst. Expt. and Clinical Oncol., Acad. Med. Sci., Moscow, U.S.S.R.) No differences between normal and neo-

plastic tissue were detected in respect of binding of amino acids to transfer RNA or transfer of amino acids to microsomes. Rate of incorporation of [^{14}C]glycine into microsome protein was greater in tumours than in normal tissues during the first few min. of incubation; this ratio was later reversed. The results suggest a higher turnover rate of protein in tumours than in normal tissues.

J.R.Sargent

3038. CHEMICAL COMMUNICATION SYSTEMS IN THE CELL. H.Quastlen: *Trans. N.Y. Acad. Sci.*, 1963, 25, 382-395 (Biol. Dept., Brookhaven Nat. Lab., Upton, N.Y., U.S.A.) Genotype-phenotype interactions are discussed in terms of encoding and decoding between proteins and nucleic acids. A model for repression-de-repression mechanism is proposed which does not demand a very high enzyme specificity and which suggests that structurally related genes can produce functionally related enzymes which react with the same substrates and inhibitors, e.g. at the same time that a structural gene specifies an enzyme which reacts with a substrate A, the corresponding regulator gene specifies a repressor enzyme which mediates the interaction between A and the regulator gene. R. H. Kimberlin

3039. ANALYSIS OF THE LIFE CYCLE IN MAMMALIAN CELLS. V.Defendi and L.A.Manson: *Nature*, Lond., 1963, 198, 359-361 (Wistar Inst., Philadelphia, Pa., U.S.A.) The time required for synthesis of DNA was determined by incorporation of [^{3}H]thymidine and found to be similar in diverse types of mammalian cell lines of both normal and tumour origin. Differences in generation time are caused by variation in the length of the phase preceding DNA synthesis. Six hr. appears to be the min* time required for duplication of DNA. G.M.Lewis

3040. LABELLING WITH ^{14}C -AMINO ACIDS OF ALBUMIN-LIKE PROTEIN BY RAT LIVER RIBONUCLEOPROTEIN PARTICLES. A.von der Decken: *J. cell Biol.*, 1963, 16, 471-481 (Wenner-Gren Inst. for Expt. Biol., Univ. Stockholm, Sweden) RNP particle were separated from rat liver microsomes using detergents and KCl. When incubated for 2/ hr. in the presence of cell sap and ATP + GTP the particles incorporate [^{14}C]leucine and [^{14}C]valine. Immunoelectrophoretic studies of the sol. albumin obtained revealed the existence of 2 immunol. reactive albumins differing from rat serum albumin in their electrophoretic mobility. P.Barlow

3041. BIOSYNTHESIS OF PROTEIN IN CYTOPLASMIC GRANULES. L.Toliushis: *Biokhimiiia*, 1963, 28, 161-171. The total fraction of large cytoplasmic granules from the rat liver activated tyrosine, resulting in aminoacyladenylate formation. The activity of the granules did not decrease with additional washing, and on destruction of the granules it passed into the soln. An extract of the granules attached labelled tyrosine to RNA. On incubation of the granules with s-RNA labelled with [^{14}C]tyrosine, the latter was transferred from the s-RNA to the proteins of the granules. This ability was destroyed on destruction of the granules. (Russian) B.J.Cooper

3042. INCORPORATION OF AMINO ACIDS IN INSULIN* B.S.Sakhareva: *Biokhimiiia*, 1963, 28, 45-51. It was found that on incubation of insulin with labelled glycine, tyrosine, leucine, phenylalanine, alanine and methionine, these amino acids were incorporated into the insulin by means of firm bonds. No selective bondage occurred at the C- and N-ends of the protein mol. The share of total protein radioactivity of N-terminal insulin

residues did not exceed 1% and that of O-terminal residues 13%. Neither blockage of amino and carboxyl groups nor amide groups splitting from the insulin and albumin mol appreciably affected incorporation of amino acids. Amino acids incorporated into the insulin mol. were uniformly distributed in its A- and B-chains. The isolated B-chain incorporated labelled alanine, tyrosine and methionine. (Russian) B.J.Cooper

3043. STUDIES ON THE ISOLATED ISLET TISSUE OF FISH. IV. IN VITRO INCORPORATION OF CARBON-14 AND TRITIUM LABELLED AMINO ACIDS INTO GOOSEFISH ISLET TISSUE PROTEINS. G.E.Bauer and A.Lazarow: Biol. Bull. Woods Hole, 1961, 121, 425-437 (Dept. Anat., Univ. Minnesota, Minneapolis, Minn., U.S.A.)

The radioactivity of the purified alcohol-sol. fraction of goosefish (*Lophius piscatorius*) islet tissue, which was assumed to contain the insulin synthesized in vitro, was 3 times greater than the TCA ptd. protein residue. The rate of labelled amino acid incorporation into the alcohol sol. fraction increased with increased time of incubation but decreased in the absence of O₂ and in the presence of glucose.

G.J.Peakin

3044. BIOCHEMISTRY OF AMPHIBIAN DEVELOPMENT. I. RIBOSOME AND PROTEIN SYNTHESIS IN EARLY DEVELOPMENT OF RANA PIPiens. H. HIGH MOLECULAR WEIGHT RNA. JJL IDENTIFICATION OF FERRITIN IN-THE EGG AND EARLY EMBRYOS OF RANA PIPiens. D.D.Brown and J.D.Caston: Develop. Biol., 1962, 5, 412-434, 435-444, 445-451 (Carnegie Inst. Washington, Dept. Embryol., Baltimore Md., U.S.A.)

I. Because of ribosomal binding an isotope dil. technique was used to measure the true endogenous population of egg and embryo ribosomes. Synthesis of few ribosomes was negligible until Shumway stage 18 when there was a rapid increase in cytoplasmic ribosomes with a simultaneous increase in sol. protein content, and embryos began to concentrate Mg from the medium. New ribosomes appeared in the cytoplasm as 80-100 S articles which were absent in Mg-deficient embryos.

II. Unfertilised eggs contain high mol. wt. RNA with pse ratio characteristics of adult ribosomes. In 32p-labelled mature eggs and embryos, no synthesis of this occurred before Shumway stage 16, and it was most active after formation of cytoplasmic ribosomes mentioned.

All Fe in the egg (0.4-1.0 µg./egg) and early embryo is present in a form bound to ferritin. The protein moiety is indistinguishable chem. from purified horse-pleen ferritin and cross reacts immunol. with anti-horse-teen ferritin. Ferritin iron content is constant until Shumway stage 20, but at stage 25 no detectable iron remains in the ferritin fraction. J.W.S. Harris

3045. INDEPENDENCE OF AMOUNTS OF INCORPORATION OF AMINO ACIDS INTO HISTONES ON THE AMINO ACID COMPOSITION OF THESE PROTEINS. A.S.Konikova, A.V.Pogosova, E.A.Rapoport, T.D. Guljamov and M.G.Kritzman: Nature, Lond., 1963, 198, 167-169 (A.V.Vishnevsky's Inst. Surg., Acad. Med. Sci., Moscow, U.S.S.R.) Topically labelled amino acids were inj. i.p. into rats. The amount of radioactivity appearing from any given amino acid in & nine-rich and lysine-rich histone fractions from liver was not correlated with the amount of that amino acid present in the histones on a molar basis. J.R.Sargent

3046. MITOCHONDRIAL PHOSPHOPROTEIN METABOLISM. K.Ahmed and J.D.Judah: Biochim. biophys. Acta, 1963, 71, 295-304 (Wistar Inst. Anat. and Biol., Philadelphia, Pa., U.S.A.) Rat liver mitochondria incubated at 20° with KCl, tris, EDTA and 32p rapidly incorporated 32p into ATP and phosphoproteins but not into phospholipids. Inhibitors of electron transport and oxidative phosphorylation reduced the rate of phosphoprotein labelling, control levels of radioactivity never being achieved at any time. ATP turnover was also reduced but the same isotopic equilibrium was reached in a few min. Oligomycin did not inhibit phosphoprotein turnover at concn. which greatly reduced ATP labelling. B.M. Stevens

3047. RIBOSOMAL AGGREGATES ENGAGED IN PROTEIN SYNTHESIS: ERGOSOME BREAKDOWN AND MESSENGER RNA TRANSPORT. H.Noll, T.Staehelin and F.O.Wettstein: Nature, Lond., 1963, 198, 632-638 (Dept. Microbiol., Sch. Med., Univ. Pittsburgh, Pa., U.S.A.) Evidence is presented which demonstrates that breakdown of rat liver polyribosome aggregates (ergosomes) and protein synthesis by these aggregates proceed synchronously and result in the stepwise release of single 73 S ribosomes containing nascent protein. A scheme is presented in which messenger RNA is considered to move relative to ribosome sites at which messenger RNA interacts with transfer RNA providing amino acids to a growing polypeptide chain. Roles for GTP and transfer factors I and II are suggested in the scheme.

J.R.Sargent
3048. A RIBOSOME BOUND INTERMEDIATE IN POLYPEPTIDE SYNTHESIS. R.Arlinghaus, G.Favelukes and R.Schweet: Biochem. biophys. Res. Comm., 1963, 11, 92-95 (Dept. Biochem., Univ. Kentucky Med. Center, Lexington, Ky., U.S.A.) The transfer of [14C]phenylalanine from [14C]phenylalanyl-RNA to polyphenylalanine is shown to involve 2 steps catalysed by different enzyme fractions and the formation of a labile ribosome-bound [14C]phenylalanine intermediate.

B.Ketterer
3049. POLYRIBOSOMES IN NORMAL AND POLIOVIRUS-INFECTED HeLa CELLS AND THEIR RELATIONSHIP TO MESSENGER-RNA. S.Penman, K.Scherrer, Y.Becker and J.E.Darnell: Proc. nat. Acad. Sci., Wash., 1963, 49, 654-661 (Dept. Biol., M.L.T., Cambridge, Mass., U.S.A.) The cytoplasm of HeLa cells was shown to contain polyribosomes of various sizes which contain a fraction of RNA with characteristics of messenger RNA. In poliovirus-infected cells polyribosomes of very large size are assembled. J.R.Sargent

3050. AMINO ACID-ESTER LINKAGE IN AMINO ACYL RNA. W.Frank and H.G.Zachau: Hoppe-Seylers Z. physiol. Chem., 1963, 331, 258-268 (Inst. Genet. Univ., 5 Kolin-Lindenthal, Germany) A quant. ester estimation of aminoacyl-adenosine is described.

(German) L.Cornish
3051. AMINOACYL TRANSFER FROM SOLUBLE RIBONUCLEIC ACID TO RIBOSOMES. RESOLUTION OF TWO SOLUBLE TRANSFERRING ACTIVITIES. J.M.Fessenden and K.Moldave: J. biol. Chem., 1963, 238, 1479-1484 (Dept. Biochem., Tufts Univ. Sch. Med., Boston, Mass., U.S.A.) Transfer of labelled amino acids from aminoacyl sol. RNA to purified rat liver ribonucleoprotein particles needs presence of 2 distinct sol. aminoacyl transferases (or polymerases). The 2 activities are separated by salt fractionation methods. Neither factor is active alone. Transferase I is obtained very pure;

BIOCHEMISTRY

transferase II, which is also present in deoxycholate extracts of microsomes, is partially purified. Aminoacyl transfer occurs with 0[#]1 jmol. or less of GTP per mL_f and exhibits a requirement for glutathione or another thiol.

J.N.Ashley

3052. PARTICIPATION OF LOW POLYMER RNA IN NUCLEAR PROTEIN SYNTHESIS. V.A.Gvozdev and M.A.Ponomareva-Stepnaia: Biokhimiia, 1963, 28, 152-160. Incubation of isolated nuclei with labelled aminoacyl-RNA (low polymer) resulted in transfer of amino acids from the low polymer (s-)RNA to nuclear proteins. On incubation of the nuclei with s-RNA carrying labelled amino acids, radioactivity was shown not only in the proteins of the nuclear sap but also in the chr. proteins. Histones were an exception to this.

(Russian) B.J.Cooper

3053. THE FUNCTION OF TRANSFER-RNA AS AMINO ACID ADAPTOR IN THE SYNTHESIS OF HAEMOGLOBIN. G.von Ehrenstein, B.Weisblum and S.Benzon: Proc. nat. Acad. Sci., Wash., 1963, 49, 669-675 (Johns Hopkins Univ., Baltimore, Md., U.S.A.)

'Rabbit' Hb was prep. in a cell-free system using rabbit reticulocyte ribosomes and [14c]alanine attached to the *E.coli* transfer RNA that normally carries cysteine. Alanine was incorporated into a peptide of the a-chain that normally contains cysteine but not alanine. Thus, in confirmation of the result previously obtained with a synthetic polynucleotide, the transfer-RNA mol. acts as a sp. adaptor in true protein synthesis. J.R. Sargent

3054. SYNTHESIS OF TRANSFER-RNA BY ISOLATED NUCLEI. M.L.H.Chipchase and M.L.Birnstiel: Proc. nat. Acad. Sci., Wash., 1963, 49, 692-699 (Div. Biol., California Inst. Technol., Calif., U.S.A.)

It is shown that isolated pea nuclei contain an active transfer RNA which will accept amino acids from both cytoplasmic and nuclear amino acid activating enzymes. Isolated pea nuclei synthesise in vitro a small mol. RNA of the physical characteristics of amino acid transfer RNA. This synthesis is DNA-dependent. It was shown that this RNA is in fact transfer RNA and that the in vitro synthesised mol. are capable of accepting amino acids.

J.R.Sargent

3055. MOLECULAR FACETS OF MITOTIC REGULATION. I. SYNTHESIS OF THYMIDINE KINASE. Y.Hotta and H.Stern: Proc. nat. Acad. Sci., Wash., 1963, 49, 648-654 (Bot. Dept., Univ. Illinois, Urbana, Ill., U.S.A.) Brief appearance of thymidine kinase activity prior to DNA synthesis in microspores of *Lilium* is due to de novo synthesis of protein. The chain of events leading to such synthesis begins with the formation of RNA; any of the steps in the sequence may be blocked by an appropriate inhibitor.

J.FLSargent

3056. A POSSIBLE CHEMICAL TERM FOR THE OPERATOR-GENE. M.Bartalos: Nature, Lond., 1963, 198, 109 (Dept. Pathol., Johns Hopkins Univ., Sch. Med., Baltimore, Md., U.S.A.) It is suggested that 'operator genes' are in fact histones which can stop the production of the DNA-dependent RNA synthesis by combining directly with the responsible structural gene.

G.M.Lewis

3057. INVOLVEMENT OF SYNTHESIS OF RNA IN THYMINELESS DEATH. P.C.Hanawalt: Nature, Lond., 1963, 198, 286 (Biophysics Lab., Univ., Stanford, Calif., U.S.A.) A new polyauxotroph, *E.coli* 15T- (TAU-bar) which requires arginine, methionine, proline and tryptophan, showed a slow loss in viability when an exponentially growing culture was deprived of

thymine and uracil. Removal of one or all of the required amino acids as well resulted in an increased killing rate. The evidence is taken to suggest that messenger RNA synthesis is involved in the killing process in thymine-less bacteria.

G.M.Lewis

3058. METABOLIC HETEROGENEITY OF INFORMATIONAL RNA ISOLATED FROM EHRLICH CARCINOMA CELLS. G.P.Georgiev and M.L.Lerman: Vop. Med. Him., 1963, 9, 218-220 (Inst. Biol. and Med. Chem., Acad. Med. Sci., Moscow, U.S.S.R.)

(Russian) J. R. Sargent

3059. ACTINOMYCIN D-RESISTANT RNA SYNTHESIS IN ANIMAL CELLS. J.Paul and M.G.Struthers: Biochem. biophys. Res. Comm., 1963, 11, 135-139 (Dept. Biochem., Univ. Glasgow, Scotland) Evidence is given that in animal cell nuclei, there is in addition to Actinomycin D-sensitive RNA synthesis a system which is Actinomycin D-resistant which may be a precursor of a ribosomal component.

B.Ketterer

3060. CONTRIBUTION TO THE CODING PROBLEM.

L.K.Blumenthal: J. theoret. Biol., 1962, 2, 72-73 (Bact. Lab., Cornell Univ., Ithaca, N.Y., U.S.A.)

Examination of the work of Lanni indicates that his explanation of the clustering of the values of (cytosine + guanine):(total DNA bases) must be discarded.

J.A.Dawson

3061. NUCLEIC ACID METABOLISM DURING SYNCHRONOUS DEVELOPMENT OF AZOTOBACTER VINE-LANDII. G.N.Zaitseva, Ngo ke Syong and A.N. Belozerskii: Biokhimiia, 1963, 28, 172-186.

A study was made of the metabolism of various nucleic acids and nucleotides (DNA, ribosomal and sol. RNA) associated with respiration and oxidative phosphorylation in a synchronously developing culture of *A. vinelandii*. It seemed possible that free nucleotides of the metabolic pool performed the role of regulators of nucleic acid synthesis. The problem of the participation of some nucleotide-peptides in the synthesis of cell wall protein is discussed.

(Russian) B.J.Cooper

3062. SEPARATION OF THE RNA MESSAGE TRANSCRIBED IN RESPONSE TO A SPECIFIC INDUCER.

M.Hayashi, S.Spiegelman, N.C.Franklin and S.E.Luria: Proc. nat. Acad. Sci., Wash., 1963, 49, 729-736 (Dept. Microbiol., Univ. Illinois, Urbana, Ill., U.S.A.)

Hybridisation of RNA with DNA from a transducing phage carrying the *lac* genetic region and chromatographic fractionation of RNA were employed to detect the sp. *lac* message RNA in *E.coli*. Increased amounts of RNA messages complementary to the *lac* region were observed in induced cells. This RNA can be identified chromatographically and distinguished from other *E.coli* messages which possess homology for some portions of the phage genome.

J. R. Sargent

3063. SYNTHESIS OF MESSENGER RNA WITHOUT PROTEIN SYNTHESIS IN NORMAL AND PHAGE-INFECTED THYMINELESS STRAINS OF E. COLI

S.S.Cohen, M.Sekiguchi, J.L.Stern and H.D.Barnen: Proc. nat. Acad. Sci., Wash., 1963, 49, 699-707 (Dept. Biochem., Univ. Pennsylvania Sch. Med., Philadelphia, Pa., U.S.A.)

E.coli lacking ability to synthesise thymine, uracil and an amino acid, synthesise a small fraction of normal RNA from uracil in the absence of thymine and the amino acid. Synthesis of this RNA is markedly inhib. by concomitant DNA synthesis. The RNA made appears on the ribosomes and when made

r, the presence of an inducer of (3-galactosidase allows synthesis of this enzyme to proceed, T_{br+}-infected cells made characteristic phage-induced RNA in the absence of protein synthesis. This RNA stimulates rapid synthesis of deoxycytidine hydroxymethylase, an early enzyme, but not lysozyme, a late enzyme. Results support the concept that sequential production of phage proteins may be determined by sequential transcription of phage genome, i.e. sequential production of phage-induced messenger RNA.

J.R.Sargent

1064. STUDIES OF BIOCHEMISTRY AND PHYSIOLOGY OF NORMAL AND TUMOUR STRAIN CELLS. I. SYNTHESIS OF RNA, DNA AND NUCLEAR PROTEIN IN NORMAL AND TUMOUR STRAIN CELLS. II. GROWTH CONTROL MECHANISMS IN NORMAL AND TUMOUR STRAIN CELLS. J.Seed: Nature, Lond., 1963, 198, 147-153 (Dept. Radiotherap., Univ. Cambridge, Cambridge, England) I. In rapidly dividing monkey kidney cells, the time synthesis curve for the majority of RNA is similar to that for DNA and the bulk of RNA synthesis in the chromatin does not start until DNA and nuclear protein synthesis begin. In HeLa cells, dry mass values for nuclei increase early in interphase and continue to rise throughout this period while DNA synthesis occurs only after a lag period. A large part of nuclear RNA synthesis in HeLa cells is continuous in pattern and not particularly associated with DNA synthesis.

II. The sequence of synthetic events in normal cell nuclei is considered to be (a) dissociation of double-handed DNA from protein, (b) unwinding of double stranded DNA into single chains, (c) synthesis of RNA, (d) synthesis of protein. In tumour strain cells the Association of nuclear protein and RNA synthesis from RNA synthesis is suggested to be due to DNA functioning in the synthetic sequence in a double stranded form.

J.R. Sargent

1065. RAPIDLY LABELLED RNA IN THE CELL NUCLEUS. H.Harris: Nature, Lond., 1963, 198, 184-195 (Dept. Cell Biol., John Innes Inst., Bayfordbury, Herts., England) HeLa cells were exposed to [8-14C]adenine and then transferred to a non-radioactive medium containing adenosine, guanosine and actinomycin D. It was found that very little of the rapidly labelled nuclear RNA transferred to the cytoplasm in stable form. The relationship of nuclear and cytoplasmic RNA is discussed.

G.M.Lewis

1066. RELATIONSHIP BETWEEN NUCLEAR AND CYTOPLASMIC RNA. I. U.N.Singh and R.Koppelman. II. H.Harris: Nature, Lond., 1963, 198, 181-183, 183-184 (Dept. Biochem., Univ. Chicago, 111., U.S.A.) Results published by Harris and Watts are re-examined on more rigorous quant. basis and found to be compatible with a precursor-product relationship between the nuclear & cytoplasmic RNA in logarithmically growing HeLa cells.

II- The conclusions of Singh and Koppelman (above) are contradicted and the hypothesis that cytoplasmic RNA is synthesised in the cytoplasm from acid-sol. precursors is restated.

G.M.Lewis

1067. NICOTINAMIDE MONONUCLEOTIDE [NMN] ACTIVATION OF A NEW DNA-DEPENDENT POLYADENYLIC ACID SYNTHESISING NUCLEAR ENZYME. P-Chambon, J.D.Weill and P.Mandel: Biochem. Phys. Res. Comm., 1963, 11, 39-43 (Inst. de Chimie Bid., Fac. Med., Strasbourg, France) ^{14C}NMN-³²P polymerase from hen liver nuclei, stim. by other prop. distinct from those of RNA polymerase is described.

B.Ketterer

3068. INTIPACELLULAR TRANSFER OF NUCLEIC ACIDS. I. FATE OF NUCLEIC ACIDS IN RAT LIVER CELLS.

T.Kusakari, M.Yano, M.Mitsuhashi, LNagata, S.Ohmura and Y.Miura: J. Biochem., Tokyo, 1963, 53, 250-255 (Dept. Physiol. Chem., Chiba Univ. Sch. Med., Chiba, Japan)

Nuclear and cytoplasmic RNP of weanling livers were fractionated on DEAEcellulose columns 1, 4, 8 and 24 hr. after i.p. injn. of [14C]4-amino-5-imidazole-carboxamide [AICA]. Cytoplasmic RNP was divided into 4 fractions. The supernatant fraction was of nuclear origin and was most metabolically active. The sp. activity of the post-microsomal fraction became higher than that of the supernatant fraction after 4 hr. Radioactivity appeared in sol. RNA and ribosomes in the later stages. Only part of the DNA became labelled; such DNA was isolated by ECTEOLA-cellulose column chromatography. Administration of purine and pyrimidine precursors with the AICA increased the radioactivity of the supernatant fraction.

B.M.Stevens

3069. INTERPRETATION OF THE KINETICS OF HELIX FORMATION. N.R.Kallenbach, D.M.Crothers and

R.G.Mortimen: Biochem. biophys. Res. Comm., 1963, II, 213-216 (Univ. California, San Diego, Calif., U.S.A.)

A kinetic model for the formation of the double stranded poly (A + U) helical complex is described which treats the reaction as a multistage "zipping" process in which all steps but the first have identical rate constants in both the forward and the backward direction.

B.Ketterer

3070. ADP-I-N-OXIDE SYNTHESIS AND ITS INCORPORATION INTO POLYADENYLIC ACID. F.Cramer, K.Randerath and E.A.SchSfen: Z. Naturforsch. B, 1963, 18, 162 (Inst. Organ. Chem., Tech. Hochschule, Darmstadt, Germany) Note.

(German) J.C.Crawhall

3071. PURIFICATION AND PROPERTIES OF THE 3CL-HYDROXY STEROID-DEPENDENT NAD TRANSHYDROGENASE OF RAT LIVER. D.N.Baron, M.B.R. Gore, R-Pietruszko and D.C.Williams: Biochem. J., 1963, 88, 19-25 (Royal Free Hosp., London, England)

The 3d-hydroxy steroid-dependent NAD transhydrogenating system present in the sol. fraction of rat-liver homogenate was partially purified by (NH₄)₂SO₄ fractionation and DEAE-cellulose column chromatography. The enzyme is activated by certain anions. The effect of SO₄²⁻ ions (the most potent activating anion) on the pH, androsterone and NADP optima, and on the reversibility of the reaction in a coupled transhydrogenating system, was studied. NAD- and NADP-linked steroid dehydrogenases in the rat-liver prep. were also tested for SO₄²⁻ ion activation.

3072. BIOSYNTHESIS OF NUCLEIC ACIDS IN BACILLUS MEGATERIUM. I. THE ISOLATION OF A NUCLEAR MATERIAL. J.A.V.Butler and G.N.Godsor: Biochem. J., 1963, 88, 176-182 (Chester Beatty Res. Inst., London, England)

Methods are described for cleanly fractionating protoplasts of *B. megaterium* into (a) a nuclear fraction, containing 90-95% of the total DNA, some RNA and protein, (b) a cytoplasmic fraction containing over 90% of the total RNA and nearly all of the cellular ribosomes, and (c) a membrane fraction made up of clean cytoplasmic membranes. Basic proteins cannot be extracted from the nuclear material by dilute acids.

3073. SEPARATION OF CLOSTRIDIUM PERFRINGENS POLYNUCLEOTIDE PHOSPHORYLASE INTO TWO COMPONENTS. E.Knight, jun., P.S.Fitt and M.Grunberg-

BIOCHEMISTRY

Manago: Biochem. biophys. Res. Comm., 1963, 10, 488-491 (Inst. Biol. Physico-chim., Paris, France) An account is given of the separation of the polynucleotide phosphorylase of C. perfringens into 2 enzymes with somewhat different activities by means of Ca phosphate gel adsorption. B.Ketterer

3074. ENZYMIC SYNTHESIS OF TRANSFORMING DNA. R.M.Litman and W.Szybalski: Biochem. biophys. Res. Comm., 1963, 10, 473-481 (Dept. Biophys., Florence R.Sabin Lab., Univ. Colorado Med. Center, Denver, Colo., U.S.A.) Evidence is presented to show that new, primer free, active transforming mol. of DNA have been synthesised in vitro by the catalytic action of E. coli polymerase with denatured transforming primers, B.Ketterer

MINERAL METABOLISM

3075. TRANSPORT OF INORGANIC IONS AND PAH IN ISOLATED CELLS OF THE RENAL CORTEX OF THE RABBIT. J.BosaEková: Biochim. biophys. Acta, 1963, 71, 345-354 (Lab. Cell. Metab. Inst. Microbiol., Czechoslovak Acad. Sci., Prague, Czechoslovakia) On aerobic incubation at 25° with 10mM acetate, Na was actively extruded and K accumulated in a manner linearly dependent on the K concn. of the medium. Anaerobic incubation inhibited Na extrusion and K accumulation and the cells swelled. On reintroduction of O₂, Na was extruded, K accumulated and the cell vol. decreased. 10-4M DNP produced similar effects to anaerobiosis. PAH was actively accumulated especially by those cells whose K content was maintained closest to that of fresh tissue during prep. When high K concn. in the medium increased the cell K content above normal, PAH accumulation decreased. 7*5mM Ca in the medium decreased PAH accumulation. 20 equiv. Li/equiv. PAH inhib. PAH accumulation; the inhibn. was reduced by increasing Ca concn. in the medium which changed the Li distribution between cells and medium. B.M.Stevens

3076. INFLUENCE OF CATIONS ON THE REACTIVITY OF THE SULPHYDRYL GROUPS OF ACTIN. A.M.Katz: Biochim. biophys. Acta. 1963, 71, 397-407 (Los Angeles County Heart Ass. Cardiovascular Res. Lab., Univ. California, Los Angeles, Calif., U.S.A.) Low CaCl₂ concn. inhib. the reactivity of at least 2 of the 4 slowly reacting SH of G-actin with β -chloromercuribenzoate. Mg²⁺ stim. SH reactivity slightly and partially reversed the inhibn. by Ca. ZnCl₂, CoCl₂ and NiCl₂ stim. while MnCl₂ inhib. LiCl, NaCl, KCl and RbCl in concn. normally inducing actin polymerisation and CdCl₂ had no effect on SH reactivity. ATP inhib. reactivity slightly but greatly increased the inhibn. by Ca. ATP reduced the stimulating effect of Mg. Ca is suggested to favour a 'closed' actin configuration while Mg produces an 'open' configuration. No effects on the SH reactivity of the actin monomer were observed. B.M.Stevens

3077. CHEMICAL FACTORS CONTROLLING THE MOVEMENT OF IONS DURING NERVOUS ACTIVITY. D.Nachmansohn: Bull. Soc. Chim. biol., Paris, 1963, 45, 29-54 (Dept. Biochem. and Neurol., Coll. Phys. Surg., Columbia Univ., New York, U.S.A.) Review. 44 ref. (French) J.C.Crawhall

3078. DIFFUSION OF SALTS THROUGH A LIPOPROTEIN INTERFACE. L.Saunders: J. Pharm., Lond., 1963, 15, 348 (Sch. Pharm., Brunswick Sq., London, England) A letter. Diffusion in soln. was studied by noting the changes of conductivity with time. J.M.Whitmarsh

3079. SODIUM- AND POTASSIUM-DEPENDENT ATPase ACTIVITY IN A RAT KIDNEY ENDOPLASMIC RETICULUM FRACTION. E.J.Landon and J.L.Norris: Biochim. biophys. Acta, 1963, 71, 266-276 (Dept. Pharmacol., Vanderbilt Univ. Sch. Med., Nashville, Tenn., U.S.A.) Dialysed prep. possessed an Mg dependent ATPase which was activated by Na and K added together. Na and K appeared to be bound at separate sites. Ouabain, org. mercurial diuretics and Ca inhib., the first inhibiting cation uptake rather than ATPase activity. H effects on ATPase activity were examined. B.M.Stevens

3080. SIGNIFICANCE OF VARIOUS FACTORS INCLUDING LACTIC DEHYDROGENASE ON THE ACTIVE TRANSPORT OF SODIUM IONS IN SKELETAL MUSCLE. E.J.Conway: Nature, Lond., 1963, 198, 760-763 (Dept. Biochem., Univ. Coll., Dublin, Ireland) Results suggest that the active secretion of Na from Na-loaded frog sartorius muscle is mediated by an electron transport pathway and not by energy rich phosphates. Under conditions of Na secretion a certain amount of lactate is continuously formed, even anaerobically, which results in secretion of Na⁺. Lactate so formed diffuses to other regions of the fibre membrane where it is oxidised to pyruvate resulting in a further secretion of Na. Oxidation of lactate is considered to be linked to the cytochrome system. J.R. Sargent

3081. SODIUM-POTASSIUM ACTIVATED ATPase. V. CORRELATION OF ENZYME ACTIVITY WITH CATION FLUX IN SIX TISSUES. S.L.Bonting and L.L. Caravaggio. VI. ITS ROLE IN CATION TRANSPORT IN THE LENS OF CAT, CALF AND RABBIT. S.L.Bonting, L.L.Caravaggio and N.M.Hawkins: Arch. Biochem., 1963, 101, 37-46, 47-55 (Section Cell Biol., Ophthalmol. Branch, Nat. Inst. Neurol. Dis. and Blindness, Bethesda, Md., U.S.A.) V. Na-K activated ATPase activity, expressed as moles/sq. cm./sec., was correlated with previously reported active cation fluxes in human r.b.c., frog toe muscle, squid giant axon# frog skin, toad bladder and the noninnervated membrane of electric eel Sachs organ over a 25000-fold range. Temp, coeff. for the enzymes were measured for all tissues except r.b.c. and enzyme activities were corrected for the temp, at which flux values were obtained. Average ratio of equiv. cation transported/mole ATP hydrolysed was 2.56 ± 0.19. Total ATPase was not correlated with flux values.

VI. Lens epithelium showed relatively high activity but ant. and post. capsule, cortex and nucleus showed no activity. The transport system was also located in the epithelium. Both enzyme and transport system were inhibited by ouabain, half max. inhibn. concn. for the 2 systems agreeing well in both calf and rabbit lens when determined in media of the same K level. In both enzyme and transport systems Rb replaced K. In rabbit lens the enzyme pH optimum was 7.3 while the pH optimum for Rb uptake was 7.5. Temp, coeff. for the 2 systems were 2.4 and 2 respectively. Equiv. cation transported/mole ATP hydrolysed by the Na-K ATPase ranged from 2.51 to 4.15 for the 3 cations actively transported in calf and rabbit lens. B.M. Stevens

3082. 2-AZADENOSE TRIPHOSPHATE AS A SUBSTITUTE FOR ATP IN ACTIVE TRANSPORT OF POTASSIUM ACROSS THE ERYTHROCYTE MEMBRANE. M.Tatibana, T.Hashimoto and H.Yoshikawa: Biochim. biophys. Acta. 1963, 71, 464-465 (Dept. Physiol. Chem. Nutr. Fac. Med. Univ., Tokyo, Japan). B.M.Stevens

3083. ATPase ACTIVITY RELATING TO ACTIVE TRANSPORT IN THE CORTEX OF SEA URCHIN EGGS. T.Ohnishi: J. Biochem., Tokyo, 1963, 53, 238-241 (Dept. Physiol. Sch. Med., Univ., Nagoya, Japan) An ATPase related to the active transport of Na and K was detected. Activity was max. at the pH and ionic strength of sea water. Both Na and K were required for activity. Ouabain, metabolic inhibitors and detergent inhib. B.M.Stevens

3084. EXCHANGE OF [G]-ACTIN BOUND CALCIUM WITH VARIOUS BIVALENT CATIONS. W.Drabikowski and H.Strzelecka-GqZaszecka: Biochim. biophys. Acta, 1963, 71, 486-487 (Dept. Biochem., Nencki Inst. Expt. Biol., Warsaw, Poland) Prelim. comm. B.M.Stevens

3085. VITAMIN D3 INHIBITION OF RADIOCALCIUM BINDING BY CHICK INTESTINAL HOMOGENATES. R-H.Wasserman and A.N.Taylor: Nature, Lond., 1963, 198, 30-32 (Dept. Phys. Biol., New York St. Vet. Coll., Cornell Univ., New York, U.S.A.) Ca was used to study the uptake of Ca by the particulate fraction of duodenal homogenates from rachitic chicks and from rachitic chicks supplied with vit. D3 2⁴⁸ hr. before killing. The presence of vit. D3 causes appreciable decreases in binding of Ca by the particulate "action of the duodenum. This decrease was largely unaffected by pH and the presence of citrate. J.R.Sargent

3086. VARIATIONS IN CALCAEMIA OF NORMAL DOGS AFTER INGESTION OF CHOLESTEROL, CRYSTALLISED INETHANOLORHEXANE. CMarnay: C.R. Soc. Biol., Paris, 1962, 156, 1573-1577 (Lab. Physiol. Fac. Pharmacie, Paris, France) Ingestion of 50 mg. cholesterol, recryst. in ethanol, produced a progressive increase in calcaemia in dog, with a max. level after 24 hr. 50 mg. cholesterol, recryst. from hexane, administered under the same conditions, produced a comparable decrease in calcaemia. (French) M.A.Price

3087. RESPIRATION-DEPENDENT ACCUMULATION OF INORGANIC PHOSPHATE AND Ca²⁺ BY RAT LIVER MITOCHONDRIA. A.L.Lehninger, C.S.Rossi and J.W. Greenawalt: Biochem. biophys. Res. Comm., 1963, 10, 444-448 (Dept. Physiol. Chem., Johns Hopkins Univ. Sch. Med., Baltimore, Md., U.S.A.) It is shown that the inorg. phosphate [Pj] of the medium is the sp. and major anion accompanying the active uptake of Ca²⁺ by rat liver mitochondria and that Ca and Pj enter in a molar ratio of 1:8. B.Ketterer

RELATIONSHIP BETWEEN CALCIUM IN SWEAT. CALCIUM BALANCE, AND CALCIUM REQUIREMENTS. F.Consolazio, L.O.Matoush, R.A.Nelson, L.R.Hackler and E.E.Preston: J. Nutr., 1962, 78, 78-88 (U.S. Army Med. Res. and Nutr. Lab., Fitzsimons Gen. Hosp., Denver, Colo., U.S.A.) Up to 20 mg. Ca per hr. may be lost by the human male during heavy sweating. When living at 100°F up to 22% of the total Ca excretion may take place in the sweat. The significance of these observations in relation to Ca balance studies was investigated and discussed. A.Fleck

3089. STUDIES IN THE ROLE OF MANGANESE IN BONE FORMATION. I. EFFECT UPON THE MUCOPOLYSACCHARIDE CONTENT OF CHICK BONE. R.M.Leach, jun. and A.Muensten: J. Nutr., 1962, 78, 51-56 (U.S. Plant, Soil and Nutr. Lab., U.S. Dept. Agric., Ithaca, N.Y., U.S.A.) Dietary Mn deficiency in <? white Plymouth Rock chicks results in reduction in the galactosamine containing mucopolysaccharide content of cartilage and bone. A.Fleck

3090. COLORIMETRIC DETERMINATION WITH MUREXIDE OF MICROGRAM AMOUNTS OF CALCIUM IN TISSUES. E.S.Reynolds and R.E.Linde: Analyst. Biochem., 1963, 5, 246-254 (Armed Forces Inst. Path., Washington, D.C., U.S.A.) A simple, direct colorimetric method employing murexide has been developed for determination of Ca in tissues. This method, which requires ashing of the samples and pptn. of PO₄, is insensitive to Mg and is capable of detecting 0.05 µg. Ca. Other metals, in concn. normally found in tissue samples, do not interfere. The means and their standard deviations for Ca content of fresh rat liver and mouse skeletal muscle with this method are 21.8 ± 3.3 and 99.4 ± 10.4 µg. Ca per g. of tissue, respectively. A.D. Smith

3091. BEHAVIOUR OF STRONTIUM-85 IN A NORMAL MAN FOLLOWING A SINGLE INGESTION-ABSORPTION AND EXCRETION. M.Fujita, A.Yabe, K.Ueno, M.Oshino and N.Okuyama: Health Physics, 1963, 9, 407-415 (Health Physics, Japan Atomic Energy Res. Inst., Tokai, Ibaraki, Japan) A normal man was given 4.96 µg ⁸⁵SrCl₂ orally. Considerable amounts of the ingested labelled material were removed in the faeces (86%) and urine (3.6%) in the first 2 days and a total of 13.6% was absorbed. After this period more label is removed via the urine than the faeces. Chronic retention of a small fraction of the material occurs for up to 162 days. The clearance of 85Sr is closely parallel to the clearance of Ca, and the plasma concn. of &Sr. M.S.Laverack

3092. RADIUM-226 IN BONE AND SOFT TISSUES OF MAN. J.B.Hursh and A.Lovaas: Nature, Lond., 1963, 198, 265-268 (Univ. Rochester Sch. Med. and Dent., Rochester, N.Y., U.S.A.) Analysis of 226Ra in autopsy material indicates that 80% of the body burden of Ra is contained in the skeleton. Soft-tissue levels range from 1% (liver and intestine) to 1.5% (muscle) of that found in the clavicle. G.M.Lewis

3093. COMPETITION BETWEEN MAGNESIUM AND GUANIDINE FOR MITOCHONDRIAL BINDING SITES. B.C.Pressman and J.K.Park: Biochem. biophys. Res. Comm., 1963, 11, 182-186 (Johnson Res. Fndn., Univ. Pennsylvania, Philadelphia, Pa., U.S.A.) It is shown that the binding of guanidine to mitochondria shows a common pattern with that of Mg in its response to various inhibitors and that guanidine and Mg are mutually competitive for mitochondrial binding sites. B.Ketterer

3094. FLUORESCENCE OF MAGNESIUM-, CALCIUM-, AND ZINC-8-QUINOLINOL COMPLEXES. S.Watanabe, W.Frantz and D.Trottier: Analyst. Biochem., 1963, 5, 345-359 (Cardiovascular Res. Inst., Univ. California Med. Center, San Francisco, Calif., U.S.A.) The fluorescence of 8-quinolinol with Mg, Ca and Zn was studied in aq. soln. of triethanolamine and tris. The molar fluorescence and the apparent binding constant of these metal complexes and 8-quinolinol were estimated and agreed well with those found by other methods. The

BIOCHEMISTRY

sensitivity and specificity of the method for Mg determination is discussed.

A.D. Smith

3095. MEASUREMENT OF NATURAL CONTENTS OF

RaD (LEAD-210) AND RaF (POLONIUM-210) IN HUMAN BONE - ESTIMATES OF WHOLE BODY

BUPDENS. R.B.Holtzman: *Health Physics*, 1963, 9, 385-400 (Radiol. Physics Divn., Argonne Nat. Lab., Argonne, Ill., U.S.A.) Bone samples obtained from unexposed individuals were analysed for their natural RaD (210pb) content, by measurement of the RaF (^{210}Po) which is the decay product after α emission to RaE (210Bi) and further β emission to RaF. The RaD is uniformly distributed in the skeleton, and shows an average concn. of 0.146 pc/g. ash. compared with average 226Ra concn. of 0.037 pc/g. ash. Men had more RaD than women, 0.161 pc/g. ash against 0.119 pc/g. ash. Calcn. shows that the majority of RaD in the body comes from the food and air. M.S. Laverack

3096. BIOSYNTHESIS OF SELENO-COMPOUNDS FROM

INORGANIC SELENIUM BY SHEEP. I.Rosenfeld: *Proc. Soc. exp. Biol. N.Y.* 1962, 111, 670-673 (Div. Agric. Biochem., Univ. Wyoming, Laramie, Wyo., U.S.A.) Following per os administration of [^{75}Se]-H₂SeO₃, [^{75}Se]selenocystine and selenomethionine were demonstrated in the hydrolysate of sheep wool.

M.M.Shapland

3097. EFFECT OF CHELATING AGENTS ON THE COPPER-PROTEIN BOND IN LIVER. S.Freyer and J.M.Walshe: *Nature, Lond.* 1963, 198, 189 (Columbia Univ. Med. Sch., New York, U.S.A.)

In extracts of fresh human liver, addition of penicillamine did not significantly increase the concn. of copper recovered in an ultra-filtrate through collodion membranes. 64Cu inj. into rabbits was rapidly taken up by the liver and bound by protein in insol. form. Neither penicillamine or BAL (dimercaptopropanol), both -SH chelating agents, released Cu from its bound form.

G.M.Lewis

3098. INTERACTION OF CUPRIC AND ZINC IONS WITH SPERM WHALE METMYOGLOBIN. E.Breslow and F.R.N.Gurd: *J. biol. Chem.*, 1963, 238, 1332-1342 (Dept. Biochem., Cornell Univ. Med. Coll., New York, U.S.A.)

Zn and Cu compete for the same set of binding sites that show the highest affinity for metal ions. The decrease in pH that occurs after binding of Cu is greater than that predicted for simple binding to a set of independent imidazole groups. At least one H is at or above pH 5 for each Cu bound. At higher pH values each Cu can displace as many as 3H. Imidazole groups probably take part in metal ion binding as members of chelate sites, and binding leads to equilibration of normally masked with normally reactive imidazole groups.

J.N.Ashley

3099. INFLUENCE OF PREGNANCY ON BLOOD, PLASMA AND CAERULOPLASMIN COPPER LEVELS OF SHEEP.

E.J.Butler: *Comp. Biochem. Physiol.*, 1963, 9, 1-12 (Biochem. Dept., Moredun Inst., Edinburgh, Scotland) Sheep kept on a maintained standard diet showed a fall in Cu levels of blood, plasma, r.b.c. and caeruloplasmin during pregnancy. These falls in Cu were reversed after parturition, and a month after this event normal levels are again found. Reduction in Cu levels was most marked in animals with a diet deficient in this metal. These changes are opposite to those found in women. During the first part of pregnancy Cu appeared to pass from plasma into r.b.c., and there was an increase in proportion

of non-caeruloplasmin Cu. These changes were reversed in later pregnancy. Pregnancy did not affect Ca, Mg and PO₄ levels.

M.S.Laverack

3100. SOME PROPERTIES OF PSEUDOMONAS BLUE

PROTEIN AND ITS APO-PROTEIN. T.Yamanaka,

S.Kijimoto and K.Okunuki: *J. Biochem., Tokyo*,

1963, 53, 256-259 (Dept. Biol., Fac Sci., Univ.

Osaka, Japan) The protein readily lost its Cu on dialysis against aq. K cyanide. The apo-protein thus obtained recombined stoichiometrically with Cu²⁺ but not with other metal ions tested. The reconstructed blue protein had the same prop, as the native protein. The u.v. absorption spectrum underwent significant changes on oxidation and reduction of the Cu. B.M.Stevens

OTHER BODY CONSTITUENTS

3101. ACETO-COENZYME A KINASE AND THE CONDENSING ENZYME IN THE 2-SPOTTED SPIDER MITE.

K.N.Mehrotra: *Nature, Lond.* 1963, 198, 287-288 (Dept. EntomoL, Cornell Univ., Ithaca, New York, U.S.A.)

Acetone powder extracts of *Tetranychus telarius* synthesise citrate from acetate, oxaloacetate, ATP and CoA and from acetyl-CoA and oxaloacetate, indicating the presence of both aceto-CoA-kinase and condensing enzyme.

G.M.^ewis

3102. METABOLISM OF PROPIONATE IN THE ISOLATED COW'S UDDER. M.W.Raafat, R.Verbeke and G.Peeters: *Biochem. J.*, 1963, 88, 155-159 (Physiol. Dept. Vet. Coll., Univ. Ghent, Belgium)

Excised cows' udders were perfused with blood containing [1-14C]propionate, [1-14C]hexanoate or [3-¹⁴C]butyrate. The 14c from [1-14C]propionate and [1-14C]hexanoate was incorporated to a large extent into the Krebs cycle acids and to a smaller extent into pyruvic acid. The 14c of succinic acid from the [14C]propionate and [14C]butyrate expt. was localised in the carboxyl groups. Almost all the 14c of glutamic acid from the [14C]propionate expt. was localised in the (X-carboxyl group). In glutamic acid from the [14C]hexanoate expt. the a- and y-carboxyl groups contained one-third and two-thirds respectively \approx the total 14C. The results are consistent with propionate metabolism proceeding by the succinate pathway.

3103. STRUCTURE OF BILIRUBIN. J.Fog and E.Jellum: *Nature, Lond.* 1963, 198, 88-89 (Inst. Med. Bioche¹, Univ. Oslo, Norway)

Two possible structures for bilirubin are proposed. Data obtained from the i.r. spectr² of bilirubin, mesobilirubin and its dimethyl ester indicate the presence of intramol. H bonds in bilirubin.

G.M.Lewis

3104. FLUORESCENT MATERIALS FROM EPHESTIA KUHNIELLA ZELLER. IV. SYNTHESIS OF ERYTHRO^{*} PTERIN, EKAPTERIN AND LEPIDOPTERIN.

M.Viscontini and H.Stierlin: *Helv. chim. Acta*, 1 & *' 46, 51-56 (Org.-chem. Inst. Univ. Zurich, Switzerland)

The synthesis of erythropterin from xanthopterin and pyruvic acid is described. Erythropterin $\xrightarrow{\text{Na borohydride}}$ ekapterin on reduction with Na borohydride and subsequent oxidation in air and lepidopterin on treatment with NH₃. (German)

A.D.Smith

U05. ENZYMIC DECOMPOSITION OF UROCANIC ACID. V. FORMATION OF 4-OXOGLUTAMIC ACID. A NON-ENZYMIC OXIDATION PRODUCT OF 4(5)-IMIDAZOLONE-5(4)-PROPIONIC ACID. H.Hassall and D.M.Greenberg: J. biol. Chem., 1963, 238, 1423-1431 (Dept. Biochem., Univ. California Sch. Med., San Francisco, Calif., U.S.A.) 4-Oxoglutaric acid is isolated as the primary product of the reduction of a H acceptor such as 2,6-dichlorophenol-indophenol that occurs in soln. containing urocanate and urocanase. It is formed by non-enzymic oxidation of H5-imidazolone-5(4)-propionic acid, the immediate product of the enzymic reaction. 4-Oxoglutaric acid is not on the direct oxidative pathway of metabolism of Urocanic acid, but is a decomposition product of an intermediate on the main hydrolytic pathway. J.N.Ashley

***106. EXTRACTION OF ACh IN SMALL SAMPLES OF CEREBRAL TISSUE.** L.Beani and C.Bianchi: J. Pharm., Lond., 1963, 15, 281-282 (Univ. Florence, Italy) A method is described. Letter. J.M.Whitmarsh

3107. LACK OF EFFECT OF ACh ON PHOSPHOPROTEIN METABOLISM IN THE SALT GLAND OF THE SEA GULL. L.E.Hokin and M.R.Hokin: Biochim. biophys. Acta, 1963, 71, 462-463 (Dept. Physiol. Chem., Univ. Wisconsin, Madison, Wis., U.S.A.) B.M.Stevens

***108. IDENTITY WITH AUTHENTIC ACh OF ACh-LIKE ACTIVITY IN EXTRACTS OF RAT BRAIN.** G.Pepeu. K.F.Schmidt and N.J.Giarman: Biochem. Pharmacol., 1963, 12, 385-388 (Dept. Pharmacol., Yale Univ. Sch. Med., New Haven, Conn., U.S.A.) Short c'orrm. L.G.Gulies

3109. FORMATION OF LIPID SOLUBLE SALTS OF ACh WITH Na AND Ca SALTS OF PHOSPHATIDIC ACID AS RECEPTOR MODELS. W.Vogt: Hoppe-Seylers Z. Physiol. Chem., 1963, 331, 239-244 (Pharm. Div. Med. Res. Inst., Max-Planck Soc, Gfltingen, Germany) The ability of ACh to form a salt with phosphatidic acid has been used for its extraction from an aq. soln. The solvent system was isobutanol/benzene 1:1. Na may be present, but Ca and atropine have to be absent due to their high affinity for phosphatidic acid. The effect of phosphatidic acid on smooth muscle is also discussed. (German) LCornish

ENZYMES

II. SENSORY DEPRIVATION AND AUGMENTATION IN THE EXAMINATION OF ENZYME ADAPTATION. T.G.Scott: Nature, Lond., 1963, 197, 498-499 (Dept. Neuropathol., Nat. Hosp. for Nervous Dis., Queen Sq., London, England) The hypothesis is presented that the activity of any given enzyme in a cell or tissue is dependent, inter alia, on the overall activity of all other enzymes in the cell. This hypothesis may be tested by examining changes in the nervous system after sensory deprivation or re-introduction of sensory stimulation. G.M.Lewis

3111. SERUM ENZYME STUDIES OF A HYDROCEPHALIC FETUS OF NEWBORN HALVES. M.B.Rhodes, H.R. Lunnan, C.L.Marsh and O.D.Grace: Proc. Soc. exp.

Biol., N.Y., 1962, 111, 735-737 (Dept. Vet. Sci., Coll. Agric, Univ. Nebraska, Lincoln, Neb., U.S.A.) The levels of GOT and GPT, lactic and malic dehydrogenases and aldolase in the sera from 4 hydrocephalic calves were found to be 30 times the levels in sera from normal calves of the same age. The elevated serum enzyme levels are thought to be due to the extensive muscular dystrophy observed in these calves.

M.M.Shapland

3112. PROPORTIONALLY CONSTANT GROUPS IN RESPECT TO THE DIFFERENTIATION OF THE ENZYMIC ACTIVITY PATTERN FROM SKELETON MUSCLES OF RABBITS. D.Pette and TruBttchen Hoppe-Seylers Z. physiol. Chem., 1963, 331, 180-195 (Physiol. Chem. Inst., Univ., Marburg/Lahn, Germany) There is a different level of enzyme activity in white and red muscles. In red muscle the cytochrome f and glycerol diphosphate dehydrogenase are in an equimol. proportion; corresponding rat muscles show smaller differences in the cytochrome content. A compensation phenomenon between glycolysis/respiratory chain ratio and the Meyerhoff-Green enzyme/respiratory chain ratio is functionally significant. Creatine kinase is functionally assigned to the contractile apparatus.

(German) LCornish

3113. ENZYMIC ACTIVITY OF THE RETINA OF CATTLE. P.Bastide, M.T.Meunier and G.Dastigue: C.R. Soc. Biol., Paris, 1962, 156, 1627-1630 (Lab. Chimie biol., Fac. Méd., Clermont-Ferrand, France) The GOT activity of the retina of cattle was high. The GPT activity was 88% lower. The level of creatine phosphatase activity was similar to that of GOT. The enzyme activity did not vary significantly with the age of the animal.

(French) M.A.Price

3114. BIOCHEMISTRY OF DYSTROPHIC MUSCLE. II. SOME ENZYME CHANGES IN DYSTROPHIC MOUSE MUSCLE. R.J.Pennington: Biochem. JI, 1963, 88, 64-68 (Dept. Clin. Chem., King's Coll., Newcastle upon Tyne, England) The activity of a no. of enzymes in homogenates of muscle from mice with hereditary muscular dystrophy (Bar Harbor strain) was compared with those of normal mice of the same strain. In young mice (3-4 weeks) AMP deaminase was about 60% of normal; cathepsin (pH 4), 140%; cathepsin (pH 8*6), 165%; glucose 6-phosphate dehydrogenase, 300%. In older mice (12-20 weeks) AMP deaminase was about 25% of normal; cathepsin (pH 4), 330%; cathepsin (pH 8*6), 220%; glucose 6-phosphate dehydrogenase, 500%; acid phosphatase, 145%; adenylate kinase, 195%. Cathepsin activity at pH 8*6 relative to that at pH 4 was greater in older mice. *

3115. CARBONIC ANHYDRASE KINETICS AND INHIBITION AT 37°: AN APPROACH TO REACTION RATES IN VIVO. T.H.Maren: J. Pharmacol. exp. Ther., 1963, 139, 129-139 (Coll. Med., Univ. Florida, Gainesville, Fla., U.S.A.) From studies in vitro and of renal FT⁺ excretion in man and dogfish and of pancreatic HCO₃⁻ excretion in the dog, it is concluded that for the kidney and pancreas it is unlikely that carbonic anhydrase could be a limiting factor in acid or base secretion.

J.M.Whitmarsh

3116. EVALUATION OF RATES OF BIOLOGICAL PROCESSES FROM TRACER KINETIC DATA. I. INFLUENCE OF LABILE METABOLIC POOLS. A.L.Koch: J. theoret. Biol., 1962, 3, 283-303 (Depts. Biochem. and Microbiol., Univ. Florida, Gainesville, Fla., U.S.A.) Mathematical consideration is given to the

BIOCHEMISTRY

effects of small* metabolically labile, intermediate 'pools' linking a variety of metabolic systems, on the assessment of biochem. processes by tracer isotope studies. The influence of growth on tracer kinetics is also discussed.

G.F.Blane •

3117. NEW GENERAL ELECTROCHEMICAL METHOD OF DETERMINING ENZYME KINETICS. KINETICS OF THE ENZYMIC HYDROLYSIS OF THIOCHOLINE IODIDE ESTERS. G.G.Guilbault, D.N.Knamer and P.L.Cannor, jun.: *Analyt. Biochem.*, 1963, 5, 208-216 (Protective Develop. Div., Chem. Res. and Develop. Lab., Army Chem. Center, Md., U.S.A.)

A const. current of 25 pamp. is applied across 2 platinum thimble electrodes. AE/At allows the calcn. of relative rates of hydrolysis. Hydrolysis of thiocoline, iodide esters by cholinesterases was followed and agreed well with results obtained by other methods. The method is generally applicable.

A. D. Smith

3118. MECHANISM OF ACTION OF DEHYDROGENASES. ROLE OF THE ADP RESIDUE IN NAD. G.Pfleiderer, E.Sann and F.Ortanderl: *Biochim. biophys. A* eta, 1963, 73, 39-49 (Inst. Biochem. Inst. Org. Chem., J.W.Goethe-Univ., Frankfurt/Main, Germany)

The pure adenine-free deriv. of NAD, 3-acetylpyridine adenine dinucleotide, 3-acetylpyridine mononucleotide and nicotinamide cytosine dinucleotide were prep. and characterised. Comparison of absorption spectra of dihydro deriv. and of cyanide and SO₂ addition compounds indicated that interaction took place between both heterocyclic bases. The adenine-free compounds were reduced by cryst. yeast and liver alcohol dehydrogenases, rabbit skeletal muscle and pig heart lactic dehydrogenases, horse heart mitochondrial malic dehydrogenase, ox liver glutamic dehydrogenase and rabbit skeletal muscle glyceraldehyde 3-phosphate dehydrogenase but at greatly differing rates. Km were determined. Pyrophosphate and adenine parts appeared to be important in binding as well as activation.

(German) B.M. Stevens

3119. DETERMINATION OF INITIAL RATES IN ENZYMIC NON-LINEAR PROGRESS REACTIONS. LD.Algranati: *Biochim. biophys. Acta*, 1963, 73, 152-155 (Inst. Invest. Bioquím. 'Fundación Campomar', Buenos Aires, Argentina) A simple analytical method, consisting of the calcn. of an equation fitting the expt. results using the Gregory-Newton interpolation method, is described.

B.M.Stevens

3120. NOMENCLATURE FOR THE QUATERNARY STRUCTURE OF AN ENZYME MOLECULE. H.F.Fisher: *Nature*, Lond., 1963, 198, 665-667 (E.Ford Inst. Med. Res., H.Ford Hosp., Detroit, Mich., U.S.A.) Reaction rates for the following systems have been studied in terms of pH changes over a range of time scale from fractions of a sec. to several min.: hydrolysis of a peptide by trypsin, ATPase activity of mitochondria after addition of DNP or succinate, the hexokinase reaction. The significance of kinetic data obtained in this way is discussed.

J.R.Sargent

3121. RECORD OF pH CHANGES DURING ENZYME REACTIONS AND KINETIC STUDIES WITH YEAST HEXOKINASE. H.Gutfreund and B.R.Hammond: *Nature*, Lond., 1963, 198, 667-670 (N.I.R.D.. Shinfield, Nr. Reading, Berks., England) A nomenclature is suggested for enzyme sub-units e.g. sub-units of glutamic dehydrogenase. The proposed nomenclature is based on 3 principles: (1) protein units of the same approx.

mol. wt. are designated by a lower case Greek letter, (2) such letters are assigned alphabetically in order of increasing degrees of subdivision, (3) units of the same mol. wt. which differ in conformation are designated by numerical subscripts.

J. R. Sargent

3122. CHEMICAL NATURE OF THE CATALYTIC SITES IN GLYCERALDEHYDE 3-PHOSPHATE DEHYDROGENASE [GPD]. L.Harris, B.P.Meriwether and J.H.Park: *Nature*, Lond., 1963, 198, 154-157 (M.R.C. Lab. Mol. Biol, Hills Rd., Cambridge, England) Each mol. of GPD contains at least 3 structurally equiv. catalytic sites. The amino acid sequence around the catalytic sites has been determined. Each site contains a reactive -SH group which participates in the formation of a covalent bond with substrates as well as with die inhibitors iodoacetate and β -nitrophenyl acetate. It is suggested that GPD consists of at least 3 identical polypeptide chains each with mol. wt. about 40000.

J.R.Sargent

3123. EFFECT OF TEMPERATURE ON THE ACTIVITY OF SUCCINIC DEHYDROGENASE FROM THE LIVERS OF RATS AND FROGS. H.E.Vroman and J.R.C.Brown: *J. cell. comp. Physiol.*, 1963, 61, 129-131 (Dept. Zool., Univ. Maryland, College Park, Md., U.S.A.)

The activity of liver mitochondrial succinic dehydrogenase from rat and frog was studied at temp. ranging from 7 to 37°. Arrhenius plots were made of the reaction rates and energies of activation calc. It was clear that the enzyme in the frog, whose body temp. changes with that of the environment, changed little in activity with varying temp. and had a low energy of activation. The energy of activation for the rat enzyme was 3 times higher and changes in temp. had a much greater effect on reaction velocity.

G.M.Lewis

3124. PURIFICATION AND PROPERTIES OF HUMAN ERYTHROCYTE MALIC DEHYDROGENASE. E.Shrago and A.B.Falcone: *Biochim. biophys. Acta*, 1963, 73, 7-16 (Metabolic Res. Lab., V.A.Hosp., Madison, Wis-U.S.A.) The enzyme was purified 3000-fold from mature r.b.c. Effects of pH on activity and Km for substrates and cofactors corresponded closely to those reported by previous workers for malic dehydrogenase from other sources.

B.M. Stevens

3125. ALKALI-INACTIVATION OF THE SUCCINOXIDASE SYSTEM AND ITS REACTIVATION ('RECONSTITUTION'). T.Kimura, J.Hauber and T.P.Singer: *Nature*, Lond., 1963, 198, 362-366 (Ford Inst. Med. Res., Henry Ford Hosp., Detroit, Mich., U.S.A.) Following treatment of succinoxidase prep. with alkali, succinoxidase** and succinic dehydrogenase activities were destroyed. Succinic dehydrogenase activity was not present in the supernatant fractions after alkali treatment. Alkali treatment did not greatly change the content of bound flavin & succinoxidase prep. Addition *jpf* sol. succinic dehydrogenase to alkali-inactivated prep. resulted in an uptake of succinic dehydrogenase activity and restoration of succinoxidase activity. From these and other considerations it inferred that the process studied is one of reactivation *an*V hot reconstitution.

J. R. Sargent

3126. IS THE RECONSTITUTION OF RESPIRATORY SJCCINATE OXIDASE REALLY A PROCESS OF RE-ACTIVATION? T.E.King: *Nature*, Lond., 1963, I⁹, 366-368 (Lab. Respiratory EnzymoL. Oregon St. Univ-> Corvallis, Ore., U.S.A.) Evidence is presented mat restoration of activity to alkali-inactivated succinoxidase prep. by addition of sol. succinic dehydrogenase is more

Ukely to be due to^{*} reconstitution rather than reactivation of the system. Evidence for and against reconstitution and reactivation is discussed. J.R. Sargent

3127. REVERSIBILITY OF ACTIVATION OF SUCCINATE DEHYDROGENASE. T.Kimura, J.Hauber and J.P.

Singer: Biochem. biophys. Res. Comm., 1963, 11, 83-87 (Ford Inst. Med. Res., Henry Ford Hosp., Detroit, Mich., U.S.A.) Both the activation and the spectral change associated with succinate treated bound and sol. succinate dehydrogenase were extensively reversed by passage through Sephadex G 25 columns. In the case of malonate-treated prep, deactivation was partial and there was no reversal of spectral change.

B.Ketterer

3128. AUTOTROPHIC ENZYME SYSTEMS. I. ELECTRON TRANSPORT SYSTEMS CONCERNED WITH HYDROXYLAMINE OXIDATION IN NITROSOMONAS. M.LH.Aleem and H.Lees: Canad. J. Biochem., 1963, 41, 763-778

(Microbiol. Dept., Univ. Manitoba, Winnipeg, Canada) Fotot cells or cell-free extracts of N. europaea catalysed the rapid and stoichiometric conversion of nitrohydroxylamine to nitrite at rates comparable to the oxidation of NH₄⁺ or hydroxylamine to nitrite. Cell-free extracts assessed a powerful hydroxylamine-cytochrome f reductase which activated hydroxylamine to donate electrons to the cytochrome systems comprising h₂, f and a type components. The partially purified enzyme complex is sensitive to low concn. of cyanide and inhibitors of the flavoproteins. J.B. Parish

3129. OXIDASE FUNCTION OF PLANT PEROXIDASE.

B.Rubin and T.M.Ivanova: Life Sci., 1963, No. 4, 281-289 (Bach Inst. Biochem., Acad. Sci., Moscow, U.S.S.R.) K.Jones

3130. EXTRACTION AND PROPERTIES OF ALCOHOL DEHYDROGENASE FROM PSEUDOMONAS AERUGINOSA.

E-Azoulay and M.T.Heydeman: Biochim. biophys. Acta, 1963, 73, 1-6 (Centre Nat. de la Rech. Sci., Lab.: £^c etliTM, Bactérienne, Marseille, France) A partially purified, NAD sp. heptanol dehydrogenase was obtained from extracts of P. aeruginosa strain Sol 20 grown on heptanol. Activity was higher with higher alcohols than with ethanol. The enzyme was 55% in extracts of cells grown under a variety of conditions but whole cells consumed O₂ in the presence of alcohols only if they had been grown on hydrocarbons or other alcohols. B.M.Stevens

3131. INHIBITION OF LACTIC DEHYDROGENASE ISO-

ENZYMES. F.G.Warburton, D.Smith and G.S.Laing: Nature, Lond., 1963, 198, 386-387 (Dept. Pathol., M.P.E Hosp., Salford, Lancs., England) Oxalic acid, citric acid, pyridine-3-sulphonate, iodine and zinc sulphate inhibit human lactic dehydrogenases of different types to the same extent. CHCl₃ however, although far less affecting the activity of heart lactic dehydrogenase, inhibits the other types in varying degree, the enzyme being the most susceptible. G.M.Lewis

3132. ONTOGENY OF ISOZYME PATTERNS OF LACTATE DEHYDROGENASE IN THE MOUSE. C.L.Market and H.Ursprung: Develop. Biol., 1962, 5, 363-381 (J.Pt. Biol., Johns Hopkins Univ., Baltimore, Md., U.S.A.) Fine electrophoretically distinct mol. variants of lactate dehydrogenase [LDH] were demonstrated in every tissue or organ of adult mice, in proportions that were sp. for the tissue. Initially embryonic tissue had

principally LDH-5, the other isozymes appearing in later stages of development. LDH isozymes differed in kinetic prop., LDH-5 was more abundant in tissues subject to relative anaerobiosis, while those at the opposite end of the spectrum were more abundant in highly oxygenated tissue.

J.W.S.Harris

3133. PAPER ELECTROPHORESIS OF XANTHINE DE-

HYDROGENASE FROM DROSOPHILA. E.C.Keller, jun.. P.Saverance and E.Glassman: Nature, Lond., 1963, 198, 286-287 (Dept. Biochem., Med. Sch., Univ.

North Carolina, Chapel Hill., N.C., U.S.A.) Xanthine dehydrogenase in homogenates of D. melanogaster can be detected after paper strip electrophoresis by spraying with the substrates and separating the fluorescent product by paper chromatography. The enzyme produced 1, 2 or sometimes 3 spots. It migrated faster than the xanthine dehydrogenase of rat and rabbit liver.

G.M.Lewis

3134. FACTORS INFLUENCING REACTIVATION OF REDUCED EGG WHITE LYSOZYME. C.J.Epstein and R.F.Goldberger: J. biol. Chem., 1963, 238, 1380-1383 (Lab. Cell. Physiol., Nat. Heart Inst., Bethesda, Md., U.S.A.)

The rate of reactivation is inversely proportional to protein concn. From pH 7.0 to 8.5 the rate increases with increase of pH, and reactivation is more rapid at 38° than at 24°. At both temp, presence of 6-mercaptopethanol in the medium increases the rate and extent of reactivation. The results agree with the suggestion that active configurations of the enzymes are determined by their amino acid sequences.

J.N.Ashley

3135. HYDROLASES OF DIGESTIVE JUICES. VIII. CHOLINESTERASE OF DOG PANCREATIC JUICE. H.Szafran and Z.Szafran: Acta biochim. pol., 1963, 10, 141-150 (Dept. Physiol. Chem., Med. Sch., Krakow, Poland)

The enzyme, partly purified by (NH₄)₂SO₄ fractionation and classified as butyrylcholinesterase, hydrolyses butyrylcholine, propionylcholine, ACh and benzoylcholine with decreasing rate, the relative activities being 100, 59, 40 and 28, respectively. Acetyl-0-methylcholine, tributyrin and β -nitrophenyl acetate are hydrolysed more slowly (respectively 0.2, 5 and 0.4%). The enzyme has optimum pH at 8.6 but is labile in alk. medium. Eserine and diisopropylfluorophosphate inhibit the enzyme in concn. 10⁻⁸ M, iodine, arsenite and p-chloromercuribenzoate in concn. 10⁻⁵ to 10⁻³ M. Cysteine protects the enzyme against inhibn. by thiol reagents.

M.Korbecki

3136. EFFECT OF n-BUTANOL ON ESTERASE ACTIVITY IN THE HOUSEFLY (MUSCA DOMESTICA L.). H.H.

Shatoury: J. insect Physiol., 1963, 9, 165-176 (Imp. Coll. Fd. Stn., Ashurst Lodge, Sunninghill, Berks., England) n-Butanol increased the hydrolytic activity of heads of M. domestica to phenylacetate and all choline esters tested except benzoylcholine. It inhibits the hydrolysis of aliphatic esters such as ethylbutyrate. The hydrolysis of triacetin and amyłacetate which are hydrolysed by cholinesterase was inhib. by n-butanol. It is suggested that n-butanol inhibits both cholinesterase and esterase by denaturation, and the activation effect may be due to the release of an enzyme which normally exists in an inactive form. This activated proenzyme system may include a cholinesterase and an arylesterase.

R.J.Walker

3137. AMINO ACID SEQUENCE OF A TETRADECA-PEPTIDE CONTAINING THE REACTIVE SERINE IN E. COLI ALKALINE PHOSPHATASE. J.H.Schwartz,

BIOCHEMISTRY

A.M.Chestfield and F.Lipmann: Proc. nat. Acad. Sci., Wash., 1963, 49, 722-729 (Rockefeller Inst., New York, N. Y., U.S.A.) The amino acid sequence of a tetra-decapeptide containing the reactive serine of phosphorylated alk. phosphates has been established as Thr-Gly-Lys-Pro-Asp-Tyr-Val-Thr-Asp-Ser(phosphate)-Ala-Ala-Ser-Ala. J.R. Sargent

3138. CYTOCHEMICAL LOCALISATION OF PHOSPHODIESTERASE BY THE AZO DYE SIMULTANEOUS COUPLING METHOD. H.Sierakowska and D.Shugar: Biochem. biophys. Res. Comm., 1963, 11, 70-74 (Inst. Biochem. and Biophys., Acad. Sci. and Dept. Biochem.. State Inst. Hyg., Warsaw, Poland) Kidney phosphodiesterase was localised cytochem. by the simult. azo dye coupling method using (X-naphthyl thymidine-5-phosphate as a substrate. B.Ketterer

3139. ACID PHOSPHATASE OF THE LYSOSOMAL AND SOLUBLE FRACTION OF RAT LIVER. S.Shibko and A.L.Tappel: Biochim. biophys. Acta. 1963, 73, 76-86 (Dept. Food Sci. and Technol., Univ. California, Davis, Calif., U.S.A.) Enzyme from the 2 sites showed no differences in K_m or pH effects. A difference in sensitivity to F⁻ and L-(+)-tartrate could only be demonstrated with f -nitrophenylphosphate as substrate. Similar patterns were obtained on starch electrophoresis and column chromatography although the latter showed some quant. differences between the various forms of phosphatase activity present in each fraction. The major portion of the sol. acid phosphatase is concluded to be similar to the lysosomal phosphatase. B.M.Stevens

3140. PURIFICATION AND PROPERTIES OF AN ARYL-SULPHATASE FROM HUMAN BRAIN. A.S.Balasubramanian and B.K.Bachawac: J. Neurochem., 1963, 10, 201-211 (Neurochem. Lab., Dept. Neurol. and Neurosurg., Christian Med. Coll. Hosp., Vellore, S. India) The enzyme was purified 320-fold by Zn acetate and (NH₄)₂SO₄ fractionation with 337° recovery. Using nitrocatechol sulphate as substrate, pH optimum was 4.5, activity falling with time along a hyperbolic curve. Relationship between activity and enzyme concn. was linear (0.5 fig. protein per 2.4 ml. reaction mixture for incubation periods 10 and 60 min. but not 150 min. Activity was completely inhib. by Hg, 90% by Au, 40% by Cu, 10% by Mg, Zn, Ca, Ni, Mn, Ba, Co, Cd. and 4% by EDTA (all materials at 10mM). HSO₄⁻ inhib. 58% at 5 mM and H₂PO₄⁻ 30% at 50 JMM. The inhib. being competitive. At 5mM SO₄²⁻ inhib. 33%. CN⁻ - 23% and 86%. At 5mM, cystein glutathione and BAL were slightly inhibitory. p-Chloromercuribenzoate at 0.1mM was 90% inhibitory and not reversed by cysteine. Activity doubles with 10° increase of temp, between 1° and 21°. Optimum was 35°-38°. The enzyme was not active towards adenosine 3-phosphate-5-phosphosulphate, p-nitrophenylsulphate or chondroitin sulphate. R.J. Woodman

3141. MONOAMINE OXIDASE, CHOLINE ESTERASE AND HISTAMINASE ACTIVITIES IN GASTRIC MUCOSA. L.N.Karpenko: Vop. Med. Him., 1963, 9, 133-136 (Chair of Normal Ffphysiol, State Med. Sch., Lvov, Poland) Highest cholinesterase activity in dog gastric mucosa occurred in the curvatura minor region, lowest activities occurred in the pylorus region. Significant individual variations in MAO activities in gastric mucosa were also encountered. Highest MAO activities were found in the curvatura minor and pylorus regions. Histaminase activity in gastric mucosa varied significantly. Highest

activity was found in the curvatura major legion.

J.R. Sargent

3142. NEW METHOD FOR THE ESTIMATION OF HISTAMINASE ACTIVITY. P. S.J. Spencer: J. Pharm., Lond., 1963, 15, 225-232 (Sch. Pharm., London, England) Rat ileum enzyme was used in the investigation. The time for destruction of one half of the histamine was inversely proportional to the enzyme content of the incubation mixture. This was the basis of the method described, which is accurate to 10%. J.M.Whitmarsh

3143. CRYSTALLIZATION AND SOME PROPERTIES OF METAPYROCATECHASE. M.Nozaki, H.Kagamiyama and O.Hayaishi: Biochem. biophys. Res. Comm., 1963, 11, 65-69 (Dept. Biochem., Osaka Univ. Sch. Med., Osaka, Japan) A cryst. prep. of metapyrocatechase from cells of Pseudomonas arvillae is described. It was protected from inactivation by air by low concn. of alcohol or acetone. It appeared to contain one atom of Fe per mol. of enzyme. B.Ketterer

3144. DISTRIBUTION OF CARBONIC ANHYDRASE IN HUMAN BRAIN. T.Nishimura, H.Tanimukai and K. Nishinuma: J. Neurochem., 1963, 10, 257-261 (Dept. Neuropsych., Osaka Med. Sch., Osaka, Japan) Using Phenol Red to observe pH changes in the presence of tissue homogenate, carbonate and CO₂ at 4°, carbonic anhydrase activity was measured in 32 regions of 6 normal brains (3-16 hr. post-mortem) and 9 regions of guinea-pig brain. In human tissue activity could be correlated with degree of respiratory activity but was also higher in subcortical white matter. This latter observation was not paralleled in guinea-pig. R. Woodman

NUTRITION

3145. ANTIMETABOLITES IN THE NUTRITION OF AEDES AEGYPTI L. LARVAE. NICOTINIC ACID ANALOGUES. S.Akov and K.Guggenheim: Biochem. J., 1963, 88, 182-187 (Israel Inst. Biol. Res., Ness-Ziona, Israel) The effect of 3-acetylpyridine, a-picolinic acid, iso-nicotinic acid hydrazide, pyridine-3-sulphonic acid and 6-aminonicotinamide on A. aegypti L. larvae, grown on a chem. defined diet, was studied. The quant. nicotinamide requirement was determined. Nicotinic acid and nicotinamide were equally effective. Tryptophan could not replace nicotinamide. Inhib. indices for each antagonist were calc. Nicotinamide could not reverse the effects of the antagonists. The ability of the analogues to replace the vitamin was tested. 3-Acetylpyridine could replace nicotinamide as a growth factor, but the others were inactive. The nicotinic acid metabolism of insects is discussed. •

3146. SUCCINIC CYTOCHROME c REDUCTASE ACTIVITY IN KIDNEY AND LIVER TISSUE FROM STARVED AND FED RABBIT. J.R.Allen and H.L.Rosenthal: Proc. Soc. exp. Biol., N.Y., 1962, 111, 556-559 (Dept. Physiol. Chem., Washington Univ. Sch. Dent., St-Louis Mo., U.S.A.) Enzyme activity of rabbit kidney and liver homogenates aged for 48 hr. at 4° is significantly greater than that of the fresh prep. Activity of homogenates from fed animals is greater than that from animals starved for 10 days, but the activity of aged prep. of both are approx. the same. M.M.Shapland

3147. YAMS AND LIVER NECROSIS. C.Gilbert and J.Gillman: *Nature, Lond.*, 1963, 198, 196 (Nat. Inst. of Hlth. and Med. Res., P.O. Box M.32, Accra, Ghana) 9°e sp. of yam (*Dioscorea rotundata*) causes massive liver necrosis when fed to weanling rats; none of the other yams tested promoted growth or survival beyond 100 days. In adults, wt. was maintained for 150 days, then lost steadily until death within 294 days; no liver necrosis was evident. G.M.Lewis

3148. HISTO-PHYSIOLOGICAL STUDIES ON CHICK PANCREAS AS INFLUENCED BY FEEDING RAW SOY-BEAN MEAL. H.C.Saxena, L^AJensen, J.McGinnis and JJC.Lauber: *Proc. Soc. exp. Biol., N.Y.*, 1963, 112, 390-393 (Dept. Poultry Sci., Washington State Univ., Pullman, Wash., U.S.A.) Chicks fed on raw soybean diet showed pancreatic hypertrophy. This was due to accumulation of zymogen rather than hyperplasia. Pilocarpine stimn. which releases zymogen from the pancreas in control chicks had no effect on those fed raw soybean. Pancreatic hypertrophy was not induced when chicks were fed heated soybean diet. D.N.Wheatley

3149. EFFECT OF DIET FED DURING THE POST-NATAL PERIOD ON DEVELOPING RAT MOLARS. P.O'Day and L.A.Bavetta: *J. Nutr.* 1962, 78, 37-43 (Dept. Biochem. Nutr., Sch. Dent., Univ. Southern California, Los Angeles, Calif., U.S.A.) The molars of Holtzman rats frd a purified high carbohydrate diet grew at a greater rate than those of rats fed a stock diet. AJleck

3150. EFFECTS OF UB1QUINONES AND PHYTYL-UBICHROMENOL UPON ENCEPHALOMALACIA AND MUSCULAR DYSTROPHY IN THE CHICK. E^Andergaard, M.L^Acott and H.Dam: *J. Nutr.* 1963, 78, 15-20 (Dept. Biochem., Polytechnic Inst., Copenhagen, Denmark) Supplementation of encephalomalacia-producing diets with 0⁹Q2⁹fo of phytol-ubichromenol presented encephalomalacia in New Hampshire x White Leghorn chicks to approx. the same extent as that observed when the diet was supplemented with 60% of *Torula* or Fleischmann's yeast, which was the amount of yeast required to supply 0.02% ubichromenol in the diet. The effect of ubichromenol in preventing muscular dystrophy in chicks is not as great as its effect in preventing encephalomalacia. A.Fleck

3151. CHANGES IN COMPOSITION OF SALIVA OF COWS ON GRAZING HEAVILY FERTILISED GRASS. A.Dobson: *Res. vet. Sci.*, 1963, 4, 238-246 (Rowett Res. Inst., Aberdeen, Scotland) The Na and K concn. w^as compared in parotid saliva and mixed saliva from a r. whose Na-status was altered by withdrawing its HCO₃ supplement, or by dosing with NaHCO₃. Changes in the composition of mixed saliva reflected changes in parotid saliva during the induction of Na⁺Cl⁻ m^any. When the diet of 6 lactating cows was changed from stall-feeding to grass fertilised with NH₄NO₃ and KC1, there was a rise in the K and a fall in the Na-concn. of mixed saliva. J.B.Derbyshire

3152. CHANGES IN COMPOSITION OF SALIVA OF SHEEP ON FEEDING HEAVILY FERTILISED GRASS. A.Dobson and LMcDonald: *Res. vet. Sci.*, 1963, 4, 247-257 (Rowett Res. Inst., Aberdeen, Scotland) K⁺ K concn. in mixed saliva of sheep increased when the diet was changed from hay and meal to grass utilised with KC1 and (NH₄)₂SO₄. The response was rapid and intense in grazing sheep, but there was

considerable individual variation. The response was not suppressed by dosing with NaCl. A rise in K concn. in parotid saliva was inferred from the results on mixed saliva, and this suggested a raised peripheral aldosterone concn. An increased K concn. in the rumen liquor sometimes preceded die increased salivary concn.

J.B.Derbyshire

3153. INCORPORATION OF 59Pe IN BLOOD CORPUSCLES, BONE MARROW AND OTHER TISSUES DURING EXPERIMENTAL PROTEIN DEFICIENCY. A.Aschkeissy: *C.R. Soc. Biol., Paris*, 1962, 156, 1786-1790 (Hop. de la Pitie, Paris, France) The incorporation of 59Pe by the r.b.c. of rats and the total reticulocytes decreased after 7 days of a protein-free diet. Fixation of 59Pe by the bone marrow increased after 2 days and remained at twice the normal level for 50 days. The ⁵⁹Fe fixation of the liver increased during the first week with return to the normal level within 2 weeks. (French) M.A.Price

3154. INVESTIGATION OF Ca, P AND VITAMIN D3 RELATIONSHIPS IN RATS BY MULTIPLE REGRESSION TECHNIQUES. P.T.Chandler and R.G.Cragle: *J. Nutr.*, 1962, 78, 28-36 (Univ. Tennessee - Atomic Energy Commission, Agric. Res. Lab., Oak Ridge, Tenn., U.S.A.) Max. growth of weanling cf rats was obtained when the diet contained C <27% Ca and 0.217< Pi or the ratio of Ca/P was 1-3. A.Fleck

3155. EFFECT OF CARBOHYDRATES ON UTILISATION OF PROTEIN AND LYSINE BY RATS. Vet-oy Chang: *J. Nutr.* 1962, 78, 21-27 (Div. Home Econ., Univ. Wyoming, Laramie, Wyo., U.S.A.) Male Sprague-Dawley rats fed 18% dietary protein as wheat gluten and various carbohydrates responded to the supplementation of the diet with 0.7% lysine by an increase in the availability of lysine and an increase in the protein efficiency ratio. A.Fleck

3156. EFFECT OF OVARIECTOMY ON BLOOD CONCENTRATION OF ORALLY ADMINISTERED [131I]TRIOLEIN IN BITCHES ON LOW AND MODERATE FAT INTAKE. F.N.Dost and W.M.Dickson: *Proc. Soc. exp. Biol., N.Y.*, 1962, 111, 674-676 (Coll. Vet. Med., Washington State Univ., Pullman, Wash., U.S.A.) Castrate ? beagles were found to have a greater max. % of administered [¹³¹I]triolein in the blood than intact bitches when both were fed on a moderate fat diet. Castrate and intact animals when fed on low fat diet presented only slightly different mean peak values. M.M.Shapland

3157. EFFECT OF DIFFERENT DIETARY FATS ON BLOOD COAGULATION, PLATELET ECONOMY AND BLOOD LIPIDS. J.F.Mustard and E.A.Murphy: *Brit. med. J.*, 1962, i, 1651-1655 (Dept. Med., Univ. Toronto, Canada) Studies on "white Canadian veterans aged 56-65 yr. showed that in vitro blood coagulability was most active and platelet survival shortest on diets rich in dairy fats and eggs. When the diet contained little fat converse results were obtained. A diet rich in vegetable fat gave intermediate results. Serum cholesterol and phospholipids were highest with dairy fat and eggs, but correlation between these levels and results of coagulation tests was poor. M.E.Nutt

3158. EFFECTS OF SATURATED FAT IN RATS FED RAPE-SEED OIL. J.L.Beare, J.A.Campbell, C.G.Youngs and B.M.Craig: *Canad. J. Biochem.*, 1963, 41, 605-612 (Food and Drug Lab., Dept. Nat. Hlth. and Welfare, Ottawa, Canada) - A mixture of palm oil and

BIOCHEMISTRY

Swedish rapeseed oil fed for 4 weeks as 20% of a purified diet to rats promoted wt. gains which exceeded those obtained with Polish rapeseed oil of a similar erucic acid content and altered the proportion of sat. fatty acids in the tissues to reflect that in the diet. When methyl esters of sat. fatty acids were added to Swedish rapeseed oil wt. gain was not observed but these were shown to be of less nutritional value than the original glycerides.

J.B.Parish

3159. FATTY ACID COMPOSITION OF LIPIDS OF SERUM AND AORTA IN CHICKEN ON DIFFERENT DIETS. P.Björntorp, A.Liljemark and L.Angervall: J. Atheroscler. Res., 1963, 3, 72-79 (1st Med. Service, Sahlgren's Hosp., Univ. Götteborg, Sweden). K.Jones

3160. SERUM AND AORTA LIPIDS IN DIETARY CHICKEN ATHEROSCLEROSIS. L.Angervall, P.Björntorp and A.Liljemark: J. Atheroscler. Res., 1963, 3, 63-71 (2nd Dept. Pathol., Sahlgren's Hosp., Univ. Göteborg, Sweden) Total serum and aorta cholesterol was higher in chickens fed cholesterol + hydrogenated coconut oil than in the control and cholesterol-fed ones. The contents of serum triglycerides were low in the control group and the cholesterol-fed group, but high in the group fed a high amount of hydrogenated coconut oil + cholesterol. The last group also showed the highest atherosclerotic gradings and total fat contents. K.Jones

3161. EFFECT OF PROLONGED DIETARY TREATMENT ON ATHEROSCLEROSIS IN MATURE FOWL. H.Fisher, H.S.Weiss and P.Griminger: J. Atheroscler. Res., 1963, 3, 57-62 (Dept. Poultry Sci. Rutgers, State Univ., New Brunswick, N.J., U.S.A.) Leghorn chickens, given an egg-enriched, balanced poultry ration, or the control ration supplemented with dicoumarol, showed an increase in the severity of abdominal aortic atherosclerosis. It is suggested that the relatively high pectin and peanut oil content of the ration may be implicated. K.Jones

3162. PHOSPHOMONOESTERASE AND ADENYL PYROPHOSPHATASE ACTIVITIES OF AORTA IN EARLY STAGES OF EXPERIMENTAL RABBIT ATHEROSCLEROSIS. T.Zemplenyi, O.Mrhova and Z.Lojda: J. Atheroscler. Res., 1963, 3, 50-56 (Inst. Cardiovasc. Res., Prague-Kre, Czechoslovakia) The activity of phosphomonoesterase I was increased as early as 4 weeks, and 10 weeks after the beginning of cholesterol feeding. The activity of phosphomonoesterase II revealed an increase of borderline significance, while activities of adenylpyrophosphatase and 5'-nucleotidase showed no change after daily administration of cholesterol-fat. K.Jones

3163. FATTY LIVER OF PORTAL TYPE. SEQUENTIAL DETERMINATION OF TOTAL LIVER LIPIDS, PHOSPHOLIPIDS, PLASMALOGENS. CHOLESTEROL AND ESTERIFIED FATTY ACIDS. G.P.Vennart: Lab. Invest., 1963, 12, 327-333 (Pathol. Dept., Univ. N. Carolina Med. Sch., Chapel Hill, N.C., U.S.A.) Weanling rats fed on a corn and vegetable oil diet develop fatty livers. Liver phospholipids and plasmalogens are depressed first. Stainable fat appears before the accumulation of total lipid which is largely esterified fatty acids and cholesterol. Animals vary widely in their susceptibility to the deficient diet. A.M.Mackay

3164. EFFECT ON LIPID METABOLISM OF CERTAIN DERIVATIVES OF BENZHYDROL WITH PSYCHOLEPTIC PROPERTIES. B.Drevon and G.Montavon: C.R. Soc.

BioL, Paris, 1962, ^156, 1876-1880 (Lab. de Pharmacochimie, Fac. Med., Lyon, France) The diphenylhydroxyacetate of diethylaminoethanol (Benactyzine) decreased the total serum lipids, phospholipids and 0-lipoproteins in dogs previously receiving a high cholesterol diet. (French) M.A.Price

3165. TOLERANCE TO INTRAVENOUS ADMINISTRATION OF A SOLUTION OF VEGETABLE FAT. M.Lemarche, G.Grignon and R.Royer: C.R. Soc. Biol., Paris, 1962, 156, 1666-1668. Administration of 10ty suspension of vegetable fat i.v. for a short period to mice and rabbits, increased the lipid content of the hepatic cells and Kupffer cells. Prolonged treatment with lower doses of vegetable fat decreased the lipid content of hepatic cells and increased the Sudan pos. inclusions of the Kupffer cells and connective cells of the liver and lungs. (French) M.A.Price

3166. LIPID AND LIPOSOLUBLE VITAMIN CONTENT OF THE HEPATOPANCREAS AND STRIATED MUSCLE OF SCORPENA PORCUS AFTER A NORMAL DIET AND AFTER FASTING. J.Jouanneteau, G.Peres and G.Zwingelstein: C.R. Soc. Biol., Paris, 1962, 156, 1848-1850 (Lab. Physiol., Fac. Sci., Lyon, France) The hepatopancreas of *S. porcus* on a normal diet contained 11*2% lipid, 3*5 mg. vit. A/100 g., 25 mg. vit. E/100 g. and 1080 mg. total sterols/100 g. The muscle contained 0*84% lipids, 3*1 mg. vit. E/100 g. and 58-6 mg. total sterols/100 g. After 1 month fasting there was an increase in the lipid content of muscle and hepatopancreas, a decrease in the vit. A content of the hepatopancreas and an increase in the vit. E content with a decrease in muscle. (French) M.A.Price

3167. EFFECT OF DOSE LEVEL OF ESSENTIAL FATTY ACIDS UPON FATTY ACID COMPOSITION OF THE RAT LIVER. H.Mohrhauer and R.T.Holman: J. lipid Res., 1963, 4, 151-159 (Univ. Minnesota, Hormel Inst., Austin, Minn., U.S.A.) The influence of carefully measured doses of highly purified essential fatty acids, ethyl linoleate, ethyl arachidonate, and ethyl linolenate upon the composition of the liver lipid fatty acids in rats is described. The relationships between dietary essential fatty acids and wt. and dermal symptoms in fat deficiency have been related to sp. biochem. changes in tissue fatty acids. These relationships can be used to estimate more precisely the essential fatty acid requirement of the rat and to calculate dietary essential fatty acid intake from tissue analysis. J.R.Sargent

3168. EFFECTS OF ETHIONINE AND METHIONINE ON SERUM LIPIDS AND LIPOPROTEINS. J.C.Seidel and A.E.Harpen Proc. Soc. exp. Biol., N.Y., 1962, 111, 579-582 (Dept. Biochem., Univ. Wisconsin, Madison, Wis., U.S.A.) Prolonged feeding of ethionine to rats receiving a diet of cholesterol cholic acid and hydrogenated coconut oil causes approx. a 1-fold increase in serum triglyceride concn. and reduces serum cholesterol concn. This increase is prevented by the inclusion of an equal amount of methionine in the diet but the cholesterol level is reduced further. Methionine alone, reduces serum triglyceride level only slightly but substantially lowers serum cholesterol. M.M.Shapland

3169. FATTY ACID COMPOSITION OF VARIOUS PHOSPHOLIPIDS OF THE INTESTINAL MUCOSA OF THE YOUNG RAT FASTING AND AFTER FEEDING. G.Di Costanzo and J.Clement: Bull. Soc. Chim. biol-t Paris, 1963, 45, 137-144 (Lab. Physiol. Animale, Fac. Sci., Dijon, France) The phospholipids of the

intestinal mucosa of the young rats fasting and after a meal containing 10% lard were separated by silicic acid column chromatography and thin layer chromatography. The major phospholipid constituents were not altered by feeding. Phosphatide fatty acids were from C12 to C22. Principally palmitic and stearic acids. The main constituents from fasting animals were unsat. phosphatidic acids. The sat. acids increased during absorption.

(French) J.C.Crawhall

3170. ALIMENTARY LIPAEMIA AND PLASMA FIBRINO LYtic ACTIVITY. D.Ogston and H.W.Fullerton:

Brit. med. J., 1962, ii, 1288-1290 (Dept. Med.. Univ. Aberdeen, Scotland) Diurnal increase in Plasma fibrinolytic activity, found in a 31 hr. period after a low fat breakfast, was not significantly altered by alimentary lipaemia produced by meals containing 85 g. animal or vegetable fat, or by low fat and 50 g. butter fat breakfasts on alternate days. Anxiety at time of initial venepuncture was associated with high fibrinolytic activity. Allayed anxiety on subsequent occasions may lead to the mistaken conclusion that decreased fibrinolysis is due to the test meal. M.E.Nutt

3171. LIPID CHANGES IN PLASMA, (X-LIPOPROTEINS, LIVER AND AORTA OF CHICKS FED DIFFERENT FATS.

G.A.Leveille and H.E.Sauberlich: Proc. Soc. exp. Biol., N.Y., 1963, 112, 300-303 (U.S. Army Med. Res. and Nutr. Lab., Fitzsimons Gen. Hosp., Denver, Colo., U.S.A.) Chicks were fed on a basal diet either supplemented with oils (coconut, olive or corn oils) or not, and also with or without added cholesterol. The plasma level of cholesterol was highest in the group of animals not fed added cholesterol but given oils, when cholesterol was fed to chicks, coconut oil was most effective in inducing a high plasma cholesterol level although all fats induced higher levels. The situation was different with regard to liver cholesterol content, evidence is put forward to show that increased cholesterol *level is found bound in the g-lipoproteins of the plasma and not in the (X-lipoproteins. D.N.Wheatley

3172. EFFECT OF RAW SOYBEAN MEAL ON FAT ABSORPTION IN YOUNG CHICKS. M.CNesheim,

J.D.Garlich and D.T.Hopkins: J. Nutr., 1962, 78, 89-94 (Dept. Poultry Husbandry, Cornell Univ., Ithaca, N.Y., U.S.A.) Raw soybean meal in the diet of white Plymouth Rock or Rhode Island Red x Barred Plymouth Rock chicks depressed fat absorption at 2 weeks old but not at 4 weeks. A.Fleck

3173. PLASMA PROTEIN SYNTHESIS IN NUTRITIONAL MUSCULAR DYSTROPHY. J.F.Diehl: Z. Naturforsch.

B., 1963, 18, 167-168 (Dept. Biochem., Univ. Arkansas Med. Center, Little Rock, Ark., U.S.A.) No. te. J.C.Crawhall

3174. METHOD OF STUDYING THE FACTORS AFFECTING NITROGEN REQUIREMENTS. M.D.Mezincenco and A.Popescu-Stefanescu: Arch. Sci. physiol.,

I^A2, 16, 245-254 (Lab. Chim. biol., Fac. Med., Bucharest, Roumania) Previous expt. indicating an increase in N requirement (as determined by wt. increase in rats fed protein and carbohydrate at different times of day rather than simult. were repeated and confirmed. After xanthine oxidase activity also varied with N requirement could give a more consistent and more sensitive cation of its magnitude. (French) S.A.Thistlewood

'UNESSENTIAL' NITROGEN: A LIMITING FACTOR FOR HUMAN GROWTH. S.E.Snyderman, L.E.Holt, jun., J.Dancis, E.Roitman, A.Boyer and M.E.Balis: J. Nutr., 1962, 78, 57-72 (Dept. Paediatrics, New York Univ. Sch. Med., New York, U.S.A.) In a study of 4 normal human infants it was found that unessential N (that is, dietary N apart from that of the essential amino acids) is the limiting factor in protein and amino acid deficiency. A.Fleck

3176. BIOLOGICAL ASSAY OF MILK AND WHEY PROTEIN COMPOSITIONS FOR INFANT FEEDING.

R.M.Tomarelli and F.W.Bernhart: J. Nutr., 1962, 78, 44-50 (Wyeth Inst. Med. Res., Radnor, Pa., U.S.A.) Whey protein and mixtures of whey and milk protein were superior to milk protein alone in several rat assay procedures. A.Fleck

3177. EFFECT OF NONESSENTIAL N SUPPLEMENTS ON

GROWTH AND ON THE AMINO ACID CONTENT IN PLASMA AND MUSCLE OF WEANLING RATS FED A LOW-PROTEIN DIET. M.E.Swendseid, J.B.Hickson and B.W.Friedrich: J. Nutr., 1962, 78, 115-119 (Sch. Public Health, Sch. Med., Univ. California, Los Angeles, Calif., U.S.A.) Nonessential N supplements to diets containing 8*0% casein and 0*3% methionine retarded the growth of young Sprague-Dawley rats. This effect was prevented by the addition of tryptophan and threonine to the diet. A.Fleck

3178. NEW EFFECTS OF MAILLARD'S REACTION ON NUTRITION. J.Adrian, L.Petit and B.Godon:

C.R. Acad. Sci., Paris, 1962, 255, 391-393 (Centre de Recherches sur la Nutrition du C.N.R.S., Bellevue, Seine-et-Oise, France) Equimol. mixtures of glycine and glucose in water (12*75 g. in 2*5 ml. water) were heated to 90% for 1, 4 or 6 hr. The % of amino N in the mixture decreased. Addition of the soln. in low doses to a balanced, 12% casein diet fed to rats increased the animals' growth rate and wt. gain/g. protein intake. Higher doses decreased the growth rate, wt. gain/g. protein intake and the proportion of the N intake retained. (French) S. A.Thistlewood

3179. FACTORS INFLUENCING NUTRITIONAL VALUE OF FISH FLOUR. II. AVAILABILITY OF LYSINE AND SULPHUR AMINO ACIDS. A.B.Morrison and Z.I.Sabry:

Canad. J. Biochem., 1963, 41, 649-655 (Food and Drug Lab., Dept. Nat. Health and Welfare, Ottawa, Canada) Measurements of net protein ratio and protein efficiency ratio in 8 samples of fish flour indicated marked variability in nutritional value of the protein. The availability of lysine was examined by in vitro digestion studies, gross protein value determinations and the dinitrofluorobenzene procedure and one sample was found to have no available lysine. The available methionine was studied by the ability of the flour to supplement a methionine-deficient diet and by the release of methionine during in vitro digestion with proteolytic enzymes; the same sample had no available methionine. J.B.Parish

3180. SULPHUR METABOLISM. X. NON-EQUIVALENCE

OF CYSTINE AND CYSTEINE AS RELATED TO THE SULPHUR REQUIREMENTS OF THE RAT. G.Wellers: J. Physiol., Paris, 1962, 54, 677-685 (Lab. Physiol., Fac. Med., Paris, France) Rats fed on a diet containing either cystine or cysteine as the sole source of S showed a more neg. balance on cystine (10-11*4 mg./kg./day) than on cysteine (3-4*5 mg./kg./day). In the adult

BIOCHEMISTRY

rat cystine can provide about 60% and cysteine about 85% of the sp. endogenous S requirement. Of the min. methionine-S requirement, cystine can provide about 66% and cysteine about 87%. The difference in the neg. S balance is due to a higher production of neutral S and of free urinary sulphates by the animals fed on cystine.

(French) A. Angel

3181. DIFFERENTIAL UTILISATION OF AMINO ACIDS BY MYZUS PERSICAE (SULZER) FED ON ARTIFICIAL DIETS. J.C.Bragdon and T.E.Mittlen: *Nature*, Lond., 1963, 198, 209-210 (Dept. Entomol., Univ.

California, Berkeley, Calif., U.S.A.) The excretion of amino acids in honeydew droplets by *M. persicae* fed on sucrose soln. containing threonine, valine, methionine, lysine, leucine and asparagine did not occur in the same proportions as they occurred in the diet, indicating some differential absorption. G.M.Lewis

3182. NITROGEN BALANCES OF YOUNG WOMEN FED THE FAO REFERENCE PATTERN OF AMINO ACIDS AND THE OAT PATTERN. R.M.Leverton and D. Steel: *J. Nutr.*, 1962, 78, 10-14 (Oklahoma Agric. Exp. Station, Stillwater, Okla., U.S.A.)

Six young women were fed semi-purified diets with the essential amino acids proportioned as in the FAO reference pattern and based on levels of tryptophan of 160, 200, and 240 mg. of tryptophan daily. For N balance, 240 mg. daily of tryptophan were required. When the FAO and the oat pattern of amino acids were supplied by purified amino acids and fed at the same tryptophan level there were no significant differences among the N balances of the subjects. A.Fleck

3183. EFFECT OF THREONINE-INDUCED AMINO ACID IMBALANCE ON THE EXCRETION OF TRYPTOPHAN METABOLITES BY THE RAT. R.L.Florentino and W.N.Pearson: *J. Nutr.*, 1962, 78, 101-108 (Div. Nutr., Dept. Biochem., Vanderbilt Univ. Sch. Med., Nashville, Tenn., U.S.A.)

The results of feeding weanling Sprague-Dawley rats a niacin-free diet with 0'09% DL-tryptophan and 0'4% DL-threonine supported the hypothesis that in amino acid imbalance there is excretion of surplus amino acids and a wasting of the limiting amino acid due to catabolism and excretion. A.Fleck

3184. ABILITY OF THE CHICK TO UTILISE D- AND EXCESS L-INDISPENSABLE AMINO NITROGEN IN THE SYNTHESIS OF DISPENSABLE AMINO ACIDS.

W.R.Featherston, H.R.Bird and A.E.Harper: *J. Nutr.*, 1962, 78, 95-100 (Dept. Poultry Sci. and Biochem., Univ. Wisconsin, Madison, Wis., U.S.A.) Cornish x White Rock chicks fed N from D- and excess L- indispensable amino acids was used for the synthesis of dispensable amino acids. The N of the 2 sources was used equally well. A.Fleck

VITAMINS

3185. POTENCY OF VITAMIN A ACID IN THE VAGINAL SMEAR ASSAY. T.K.Murray: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111, 609-611 (Food and Drug. Lab., Dept Nat. Hlth. and Welfare, Ottawa, Ont., Canada) The biol. potency of vit. A acid as measured by a modified vaginal smear assay was found to be &fo that of vit. A. M.M.Shapland

3186. EFFECT OF NITRATE AND NITRITE* ON VITAMIN A STORAGE IN THE RAT. R.J.Emerick and O-E.Olson: *J. Nutr.*, 1962, 78, 73-77 (Station Biochem. Dept., S. Dakota Agric. Expt. Stat., Brookings, S. Dak., U.S.A.) Both nitrate and nitrite significantly lowered the liver storage of vit. A of \$ Sprague-Dawley rats. Nitrite in the diet exhibited the greater effect.

A.Fleck

3187. VITAMIN A AND CAROTENE UTILISATION IN PROTEIN-DEPRIVED RATS. J.Mathews and G.H.Beaton: *Canad. J. Biochem.*, 1963, 41, 543-549 (Dept. Nutr., Sch. Hyg., Univ., Toronto, Ont., Canada) Maintenance of rats on a protein-free, but not a 4% casein diet produced a lowering of serum vit. A. This effect was seen in rats deprived of vit. A or given 90 pg. twice weekly. Weanling rats were depleted of vit. A by feeding for 5 weeks on an unsupplemented diet of 4Pfo or 20% casein and were then given daily additions of 6 fig. or 12 fig. of vit. A or 24 fig. carotene. The blood vit. A response to administered vit. A was not affected by the level of dietary protein but its response to administered carotene was halved on the lower level of protein intake.

J.B.Parish

3188. THIAMINE-SPARING ACTION OF MUSTARD AND ROLE OF COPROPHAGY. S.K.Meghal and M.C.Nath: *Nature*, Lond., 1963, 198, 89 (Dept. Biochem., Univ. Nagpur, India) In weanling rats fed a thiamine deficient diet containing aq. extract of mustard, thiamine deficiency symptoms occurred if coprophagy was prevented while animals allowed to eat their own faeces showed a high thiamine content in liver, heart and intestine. G.M.Lewis

3189. SEPARATION AND DETERMINATION OF THIAMINE AND PYRITHIAMINE IN BIOLOGICAL MATERIALS BY CHROMATOGRAPHY ON POLY-ETHYLENE POWDER. G.Rindi and V.Perri: *Analyt. Biochem.*, 1963, 5, 179-186 (Inst. Human Physiol., Univ. Pavia, Italy) Pyrithiamine and thiamine contained in the same sample (pure soln., liver, urine) can be determined separately after oxidation and separation of the oxidation products on columns of polyethylene powder by stepwise elution with 5, 8 and 50% methanol in 0'1N NaOH, and fluorometric determination of the effluent fractions. 62% of inj. pyrithiamine appeared in the urine after 24 hr. A.D. Smith

3190. THIAMINE SUPPLY AND SEDOHEPTULOSE 7-PHOSPHATE FORMATION. Iu.M.Ostrovskik Biokhimia, 1963, 28, 22-30. It was shown that thiamine in the diet of pigeons promoted the formation of sedoheptulose 7-PO₄. This was studied by examination of various homogenates from pigeons which had been on diets with a certain thiamine content.

(Russian) B.J.Cooper

3191. 54Mn STUDIES IN PYRIDOXINE DEFICIENT RATS. J.M.Hsu and B.Kawin: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111, 679-682 (Biochem. Res. Lab., V.A. Hosp., Baltimore, Md., U.S.A.) Pyridoxine deficiency is associated with increased uptake by brain and testes and decreased uptake by liver and heart of i.v. inj. 54Mn^{d2}. No difference in 54Mn concn. were observed in other tissues examined. The gastrointestinal tract and faeces of deficient rats are significantly higher in 54Mn content than those of controls, however urinary excretion of 54Mn is reduced. M.M.Sfoapland

3192. DIFFERENT INFLUENCES ON TRYPTOPHAN METABOLISM IN RATS DEFICIENT IN-VITAMIN B6-

F.Weber and O.Wiss: Hoppe-Seylers Z. physiol. Chem., 1963, 331, 124-131 (Hoffmann-La Roche A.G., Basle, Switzerland) Increased excretion of xanthurenic acid is attributed to the greater effect of vit. B₆ deficiency on kynureninase than kynurenine:2-oxoglutarate transaminase. Hydroxytryptophan decarboxylase in the liver is reduced, but not in brain. On administration of thiosemicarbazide, the enzyme is considerably diminished in both organs. (German) L.Cornish

3193. BINDING OF PYRIDOXAL 5-PHOSPHATE TO ASPARTATE AMINOTRANSFERASE OF PIG HEART. V.Scaldi, P.Scotto, M.Iaccarino and E.Scarano: Biochem. J., 1963, 88, 172-175 (Lab. Chim. Fermentazioni, 1st. Chim. Org., Univ., Napoli, Italy) Conditions are described under which aspartate aminotransferase can be dissociated into coenzyme and apoenzyme. Only the pyridoxamine form of the enzyme can be resolved. The resolution can be performed by incubation with several anions, of which phosphate is the most effective. The conditions under which phosphate is effective in resolving aspartate aminotransferase suggest that this phenomenon has physiol. significance.

3194. GLUTAMIC OXALOACETIC TRANSAMINASE ACTIVITY IN OVARY OF HYPOTHYROID AND VITAMIN B₆ DEFICIENT RATS. B.Eckstein: Endocrinology, 1963, 72, 777-781 (Zool. Dept., Hebrew Univ., Jerusalem, Israel) In vit. B₆ deficient rats, in which the reactivity of the ovary to gonadotrophin stimn. is low, large doses of serum gonadotrophin did not stimulate ovarian and uterine GOT activity. Thiouracil fed rats w th high ovarian reactivity to gonadotrophin showed stim. GOT activity with serum gonadotrophin. |

H.C.Jones
3195. EFFECT OF NICOTINAMIDE ON THE METABOLISM OF NUCLEAR RNA IN RAT KIDNEY. P.Mandel, M.Revel and S.Dreyfus: C.R. Acad. Sci., Paris, 1962, 255, 406-408 (Inst. Chim. Biol., Fac. Med. Centre Rech. nucleaires, Strasbourg, France) The incorporation of [8-14C]adenine into nuclear RNA from rat kidney was studied in animals given 65 mg. nicotinamide/100 mg. body wt. 13 hr. before death and in controls. After incubation, extraction, and fractionation by centrifugation in sucrose soln, fractions with sedimentation coeff. of 5S, 8S, J3S, 18S, 20.5, 22S, 27S and 30S were obtained. Only ~~radioactive~~ at 8S and 13S were diminished by nicotinamide. They were also the most radioactive. Labile RNA passed out of the nuclei during incubation.

(French) S.A.Thistlewood
4196. TAKING UP OF [14C]NICOTINIC ACID AND [14C]-NICOTINAMIDE BY ASCITES CELLS IN VITRO. L.S.Dietrich and J.N.Ahuja: J. biol. Chem., 1963, 238, 1544-1547 (Dept. Biochem., Univ. Miami Sch. Med., Fla., U.S.A.) [14C]Nicotinamide readily penetrates various ascites cells at 4° and 30°, and the free ^{14C}nicotinamide and extracellular levels of the vitamin are ¹⁻⁵⁰%, but ¹⁻⁵⁰% cells can concentrate the acid at 30°. This ability to concentrate the acid depends on pH; very little, Jcid is taken up at neutral pH. Decrease of pH markedly increases the uptake. Fragmented cells do not concentrate nicotinic acid. J.N.Ashley

3197. ADRENOCORTICAL ALTERATIONS INDUCED BY DEFICIENCY AND EXCESS OF PANTOTHENIC ACID. T.Wirtschafter and J.R.Walsh: Endocrinology, 1963, 72, 725-734 (Res. Lab., V.A. Hosp., Portland, Ore., U.S.A.) A group of animals receiving excess of

pantethenic acid showed adrenocortical haemorrhage in a few hr. Pantethenic acid deficient animals showed adrenocortical haemorrhage after 6 weeks. H.C.Jones

3198. VITAMIN-COENZYMES AND AGEING IN RATS. S.Oeriuu Biokhimiia, 1963, 28, 3-8. Investigation of the biochemistry of ageing in rats showed that disturbances in the equilibrium of thio-amino and amino acids affected general metabolism, and in particular biocatalysts. Ageing was accompanied by a decrease in the content of vitamin-coenzymes PP, B₁, B₂, B₆ and pantethenic acid and by disturbances in the activity of some enzymes: a decrease in the activity of NAD, cocarboxylase, FAD and transacetylase, and an increase in that of GOT and GPT. Treatment with cysteine, vit. B₆, B₁₂ and folic acid restored the equilibrium of some of these vitamins and enzymes in ageing animals.

(Russian) B.J.Cooper

3199. FOLIC ACID-ACTIVE COMPOUND STRONGLY BOUND BY DEAE-CELLULOSE. D.G.Johns, I-H.Plenzleith and B.A.Coopen: Biochem. Pharmacol., 1963, 12, 388-391 (McGill Univ. Med. Clinic, Montreal Gen. Hosp., Montreal, Canada) Short comm.

L.G.Gillies
3200. ENZYMIC DEAMINATION AND AMIDE CLEAVAGE OF FOLIC ACID. W.S.McNutD: Arch. Biochem., 1963, 101, 1-6 (Dept. Pharmacol., Tufts Univ. Sch. Med., Boston, Mass., U.S.A.) A crude enzyme prep. from Alcaligenes faecalis cultured with xanthopterin catalysed the deamination and amide cleavage. 'Deaminated folic acid', pteroic acid and 'deaminated pteroic acid' were characterised as products. The prep. deaminated pteroic acid but not rhizopterin. B.M. Stevens

3201. CHROMATOGRAPHIC SEPARATION OF DIESTEREOISOMERS OF dl,L-5,10-METHYLENETETRAHYDROFOLATE. B.T.Kaufman, K.O.Donaldson and J.C. Keresztesy: J. biol. Chem., 1963, 238, 1498-1500 (Nat. Inst. Arthritis and Metabol. Dis., Bethesda, Md., U.S.A.) The 2 diastereoisomers of the chem. prep. compound are separated on di- or triethylaminoethyl cellulose ion exchange columns. The 1,L-isomer has almost 100% microbiol. activity and is fully active as a substrate for methylenetetrahydrofolic dehydrogenase and reductase. The d,L-isomer is inactive microbiol. and enzymically. It L-5-Methyltetrahydrofolate, prep. by reduction of the 1,1-5,10-methylene deriv. with NaBH₄ is identical with that isolated from horse liver.

J.N.Ashley
3202. MECHANISM OF BINDING OF FOLATE ANALOGUES BY FOLATE REDUCTASE. S.F.Zakrzewski: J. biol. Chem., 1963, 238, 1485-1490 (Dept. Expt. Ther., Roswell Park Mem. Inst., New York State Dept. Hlth., Buffalo, N.Y., U.S.A.) The effect of various diamino- and aminohydroxy-pteridines, purines, and pyrimidines on folate reductase is determined. All diamino analogues are bound to the enzyme. Both amino groups in the pyrimidine ring are needed for this binding. The pyrazine ring does not take part in complex formation with the enzyme. Among amino-hydroxy deriv. only folate and 2-amino-4-hydroxy-6-formylpteridine are bound to the reductase. Dissociation of folate from the enzyme is associated with increase of entropy of the system, but dissociation of all 2,4-diamino compounds is associated with decrease of entropy. A mechanism of binding of aminopterin and folate to the reductase is suggested; it explains why aminopterin is bound 100000 times more tightly than is folate. J.N.Ashley

BIOCHEMISTRY

3203. ACTIVATION OF DIHYDROFOLIC REDUCTASE BY UREA AND FORMAMIDE. B.T.Kaufman: Biochem. biophys. Res. Comm., 1963, 10, 449-453 (Nat. Inst. Arthr. and Metabol. Dis., N.I.H., Bethesda, Md., U.S.A.) Dihydrofolic reductase from chicken liver is stim. in a qual. similar manner by salts, urea or formamide and possibly also by H⁺. B.Ketterer

3204. B12 VITAMINS AND METHIONINE IN THE METABOLISM OF PRYMNESIUM PARVUM (CHRYSMONADINA). M.Rahat and K.Reich: J. gen. Microbiol., 1963, 31, 203-209 (Dept. Zool., Hebrew Univ., Jerusalem, Israel) Methionine or ethionine may serve as sole N source for *P. parvum*, but cannot replace or spare the vit. B12 requirement for growth of the flagellate. Methionine will counteract inhibn. of growth by some B12 analogues substituted at the benzimidazole group in the presence of B12. Analogue Fin (0C(5-hydroxybenzimidazoly)-cobamide cyanide) replaced B12 in presence of methionine and to a lesser extent in presence of other methyl donors. It is concluded that for *P. parvum*, analogue Fin will replace B12 in all metabolic pathways other than methyl group synthesis. K.Brew

3205. VITAMIN B12 AND PURINE METABOLISM IN LACTOBACILLUS LEICHMANNII. [2-14C]GLYCINE INCORPORATION INTO RIBONUCLEIC AND DEOXYRIBONUCLEIC ACID. G.R.Craven and M.Downing: J. biol. Chem., 1963, 238, 1464-1466 (Dept. Chem., Univ. Colorado, Boulder, Colo., U.S.A.) Incorporation of purines synthesised de novo into RNA in *L. leichmannii* is not affected when deoxycytidine in the medium II replaced by vit. B12. The total amount of purine found in DNA is greater in cells grown in presence than in absence of the vitamin. With precursors labelled with 14c the substitution of vit. B12 causes a large increase in the sp. activity of the purines derived from DNA. There is also increased incorporation of purines synthesised de novo into DNA. [2-14C]Glycine is incorporated into all purine containing components of RNA and DNA in absence of vit. B12. Probably exogenous purine requirement in media devoid of vit. B12 is an indirect result of participation of the vitamin in reduction of ribonucleotide deriv. to deoxyribonucleotide deriv. rather than to involvement in purine synthesis de novo. J.N.Ashley

3206. BIOSYNTHESIS OF VITAMIN Bi2- DERIVATION OF CORRIN STRUCTURE FROM 6-AMINOLAEVULINIC ACID AND METHYL GROUP OF METHIONINE. R.C.Bray and D.Shemin: J. biol. Chem., 1963, 238, 1501-1508 (Dept. Biochem., Coll. Phys. Surg., Columbia Univ., New York, U.S.A.) [2,3-14C2]and [5-14c]-6-aminolaevulinic acid, and [methyl-14c]-methionine are studied for the synthesis of vit. B12 in growing actinomycete cultures. The pattern of utilisation of 6-aminolaevulinic acid shows that the basic corrin structure is synthesised from known porphyrin precursors. The 6 'extra' methyl groups are derived from the methyl group of methionine by C-alkylation. The methyl group in the a-position of ring A and the bridge C atoms are derived from the 6-C atom of 6-aminolaevulinic acid. These radioactive precursors labelled only the corrinst ructure. re. J. N. Ashley

3207. RELEASE OF INORGANIC TRIPOLYPHOSPHATE FROM ADENOSINE TRIPHOSPHATE DURING VITAMIN B12 COENZYME BIOSYNTHESIS. A.Peterkofsky and H.Weissbach: J. biol. Chem., 1963, 239, 1491-1497 (Lab. Biochem., Nat. Inst. of Dental Res., Bethesda,

Md., U.S.A.) The ATP-cobamide 5^{fl}-deoxyadenosyl transferase from *Clostridium tetanomorphum* is purified and is used to study the fate of ATP during the biosynthesis. Inorg. tripolyphosphate is the final phosphate product of the reaction. A rapid and sensitive assay for measurement of vit. B12 coenzyme synthesis is described. The similarities between this coenzyme synthesis and methionine activation are discussed. J.N.Ashley

3208. ACTION OF AN EXTRACT OF DIPHYLLOBOTRIUM LATUM ON COMBINED VITAMIN B12. W.Nyberg, R.Wolff and P.Nabet: C.R. Soc. Biol., Paris, 1962, 156, 1673-1675 (Dept. Med., Cental Hosp., Vasa, Finland) Purified aq. extract of *D. latum* increased the combination of [60Co]vit. B12 and gastric juice. This was accompanied by denaturation of the protein fraction which lost the ability to combine with vit. B12. The mixtures of extracts of *Diphyllobothrium* and free vit. B12 were ultrafiltrable and thermostable. The combination of vit. B12 and gastric juice was not ultrafiltrable or dialysable. (French) M.A.Price

3209. SERUM BINDING OF VITAMIN B12 ANALOGUES: IDENTIFICATION OF BINDING GROUPS IN THE B12 MOLECULE. L.M.Meyer, P.G.Reizenstein, E.P.Cronkite, L.F.Miller and C.W.Mulzac: Brit. J. Haemat., 1963, 9, 158-163 (South Nassau Communities Hosp., Oceanside, N.Y., U.S.A.) Protein-binding sites of the porphyrin moiety were studied by comparing the binding capacity of serum for radio-hydroxocobalamin with that for radio-cyanocobalamin. The effects of adding non-radioactive analogues, with substituted amide groups in the pyrrol ring sidechains, before testing the binding of radiocyanocobalamin showed that the amide groups appear to be involved. Two phases are present in cyanocobalamin binding. In phase I, the amide groups are probably involved. Differences between hydroxo- and cyanocobalamin binding and the effecting of NaCN on cyanocobalamin binding in phase II suggest that the Co-group is involved in phase n. J.Sneath

3210. EXCHANGE BETWEEN FREE AND GASTRIC JUICE-BOUND CYANOCOBALAMIN. R.M.Donaldson, jun. and J.H.Katz: J. clin. Invest., 1963, 42, 534-545 (Med. Radioisotope Services, Boston V.A. Hosp., Boston, Mass., U.S.A.) Exchange between free and gastric juice-bound [6^{Co}]cyanocobalamin was demonstrated in vitro, the exchange involving intrinsic factor, as studied with human and rat gastric juice. Exchange was also shown between the endogenous vit. B12 of rats and gastric juice-bound [60Co]cyanocobalamin. K.Jones

3211. EFFECT OF HIGHLY PURIFIED VITAMIN B12 BINDERS FROM HUMAN GASTRIC JUICE ON B12 ABSORPTION IN RATS. K.Okuda and R.Grasbeck: Proc. Soc. exp. Biol., N.Y., 1962, 111, 808-810 (Dept. Med., Yamaguchi Med. Coll., Ube, Japan) Two highly purified vit. Bi2-binding fractions prep., as their [60Co]Bi2 complexes from human gastric juice were tested in rats for intrinsic factor [IF] activity and biol. prop. The electrophoretically rapid binder showed no IF or inhibitory effect while the slow mobility fraction which has a higher B12 binding capacity exhibited IF activity upon [60Co]Bi2 which was bound to it. M.M.Shapland

3212. IMMUNOLOGIC IDENTIFICATION AND QUANTITATION OF HUMAN INTRINSIC FACTOR IN GASTRIC SECRETIONS. G.H.Jefferies and M.H.Sleisenger: J. clin. Invest., 1963, 42, 442-449 (Dept. Med., New

York Hosp. Cornell Med. Center, New York, U.S.A.) Intrinsic factor could be identified by in vivo vit. B12 test and by its sp. reaction in vitro with antihuman intrinsic factor y-globulin. Thus, an in vitro test for intrinsic factor and a method of measuring sp. intrinsic factor binding of vit. B12 were established. K.Jones

3213. EFFECT OF VITAMIN B32 DEFICIENCY ON CHOLESTEROL METABOLISM. E.E.Icayan and B.F. Chow: J. Nutr., 1962, 78, 109-114 (Johns Hopkins Univ., Sch. Hyg. and Public Health, Dept. Biochem., Baltimore, Md., U.S.A.) Vit. B12 deficiency in McCollum rats results in: low total cholesterol content of liver and serum in the c/ but not in the 9; an increase in the incorporation of [14C]acetate into the cholesterol of liver which is reversed by the administration of vit. B12*, and a higher sp. activity of liver cholesterol after administration of [14C]acetate. In the deficient state the oxidation of acetate is not impaired. A.Fleck

3214. ENERGY-REQUIRING REDUCTION OF NICOTINAMIDE NUCLEOTIDE BY ASCORBATE IN PRESENCE OF COENZYME Q OR MENADIONE. D.R.Sanadi: J. biol. Chem., 1963, 238, PC 482 (GetontoL Branch, Nat. Heart Inst., Bethesda, Md., U.S.A.) Mitochondrial fragments from ox heart catalyse reduction of NAD by ascorbic acid in presence of coenzyme Qi or J^enadione. The reduction is almost completely inhib. ^ DNP, dicoumarol and oligomycin. The activity of J^te system is markedly reduced by washing the fragments, but is restored when the sol. protein fraction is added. J.N.Ashley

3215. ACTIVE TRANSPORT OF ASCORBIC ACID IN ADRENAL CORTEX AND BRAIN CORTEX IN VITRO AND EFFECTS OF ACTH AND STEROIDS. S.K.Sharma, R.M.Johnstone and J.H.Quastel: Canad. J. Biochem., 1963, 41, 597-604 (McGill-Montreal Gen. Hosp. Res. Inst., 3619 Univ. St., Montreal, Que., Canada) The uptake of [1-14C]ascorbic acid by rat brain cortex slices and by guinea-pig adrenal cortex slices was studied in Warburg manometric apparatus. Ratios of tissue [¹⁴C]ascorbic acid to medium [1-14C]ascorbic acid greater than 4 were obtained with both tissues. The uptake of [1-¹⁴C]ascorbic acid was inhib. by ouabain and ACTH in brain cortex slices. ACTH inhib. the uptake of [1-14C]ascorbic acid in adrenal cortex slices but not in brain cortex slices; the presence of glucose was necessary for the inhibn. The uptake was inhib. also by small concn. of several steroids. J.B.Parish

3216. DEGRADATION OF DNA BY ASCORBIC ACID: INTERMEDIATE FORMATION OF OH RADICALS. K.Bernies: Helv. chim. Acta, 1963, 46, 57-60 (Chemische Forschungsabteilung der F.Hoffmann-La Roche and Co, AG, Basel, Switzerland) Ascorbic acid in soln. in titr. Presence of mol. O₂ causes a degradation of DNA. This degradation can be completely suppressed by the addition of catalase or of H₂O₂. It is concluded that the degradation of the DNA is due to the formation of H₂O₂ during the autoxidation of ascorbic acid. H₂O₂ itself is not very potent in degrading DNA, but it is reduced by ascorbic acid to OH radicals which degrade the DNA. A.D.Smith

3217. PROTECTION OF CHICKS AGAINST VITAMIN B DEFICIENCY BY ASCORBIC ACID AND SORBITOL. J.Calet and T.Terroine: Arch. Sci. physiol., 1962, 273-304 (Stat. Rech. Avicoles du C.N.R.Z.. Jouy-en-Josas, (S.-et-O.), France) Male chicks 10 days

to 3 weeks old (Rhode-Wyandotte crosses) were given diets deficient in riboflavin or all B vitamins and/or supplemented with 0'5, 1, 3 or 4% ascorbic acid or 4% sorbitol for 2-5 weeks. 1% ascorbic acid prevented or cured the drop in growth rate and appetite and increase in mortality due to riboflavin deficiency by maintaining normal hepatic concn. of riboflavin. 0-5-4% ascorbic acid and 4% sorbitol maintained normal growth and appetite despite a deficiency of all B vitamins. When added to a complete diet 0-5-4% ascorbic acid tended to decrease growth rate and appetite.

(French) S. A. Thistlewood
3218. BOUND ASCORBIC ACID IN LIVER. M.CMalakan

Nature, Lond., 1963, 198, 185 (Dept. Appl. Chem., Univ. Coll. Sci. and Technol., Calcutta, India) In fresh goat liver, the total and free ascorbic acid content were determined in ethanol extracts by paper chromatographic techniques. Bound ascorbic acid was released by hydrolysis with metaphosphoric acid. G.M.Lewis

3219. TRACER STUDIES ON ASCORBIC ACID FORMATION IN PLANTS. F.A.Loewus: Phytochemistry, 1963, 2, 109-128 (West. Reg. Res. Lab., Albany, Calif., U.S.A.) Tracer studies on detached ripening strawberries and detached parsley leaves have revealed 2 processes of L-ascorbic acid formation in higher plants.

In one process, D-glucose and related sugars are utilised as their hexose phosphates, C-1 of the sugar being oxidised to form the carboxyl carbon at C-1 of the ascorbic acid. Epimerisation occurs at C-5. Except for a partial equilibration of the hexose phosphate with triose and pentose phosphates, the C₆ chain is utilised without cleavage. In the second process, L-ascorbate is formed from exogenously supplied D-glucuronolactone or D-galacturonate methyl ester. Here the carboxyl C-6 becomes C-1 of L-ascorbate. There is no cleavage of the carbon chain in the conversion. D-glucuronic acid is not utilised for L-ascorbate synthesis. B.H.Davies

3220. PREPARATION OF 'KETONE 250' DERIVED FROM VITAMIN D OF LIVERS OF TUNNY FISH. Y.Raoul and M.le Boulch: Bull. Soc. Chim. biol., Paris, 1963, 45, 145-155 (Lab. Physiol., Fac. Pharm., 4, Paris, France) Note. (French) J.C.Crawhall

3221. IN VITRO STUDIES ON THE FATE OF 0C-TOCOPHEROL IN RAT LIVER HOMOGENATES. C.R.Seward and L.M.Corwin: Arch. Biochem., 1963, 101, 71-74 (Div. Biochem., Walter Reed Army Inst. Res., Walter Reed Army Med. Center, Washington, D.C., U.S.A.) Incubation under conditions shown to prevent a metabolic oxidative lesion did not lead to formation of new active vitamin metabolites. The tocopherol appeared to be bound to the protein during incubation. B.M.Stevens

3222. SYNTHESIS OF NAPHTHOTOCOPHEROL. L.H.Chen and R.D.Dallam: Nature, Lond., 1963, 198, 386 (Dept. Biochem., Univ. Louisville Sch. Med., Louisville, Ky., U.S.A.) A method is described for the synthesis of naphthotocopherol using p-dioxane as the reaction medium. This avoids ester formation and yields a product free of contamination by the acetate. G.M.Lewis

3223. CHEMISTRY OF VITAMIN E. I. INVERSION OF CONFIGURATION ON CARBON-2 OF NATURAL (2R,⁴R,⁸R)-a-TOCOPHEROL. P.Schudel, H.Mayer, J.Metzger, R.Ruegg and O.Islen: Helv. chim. Acta, 1963, 46, 333-343 (Chem. Forsch. F.Hoffmann-La Roche and Co. A.C., Basel, Switzerland)

BIOCHEMISTRY

(2S,4^fR,8^fR)-a-Tocopherol with unnatural configuration at C-2 is prep, by oxidation of natural, so called (+)-(X-tocopherol, which has the (2R,4^fR, 8^fR)Reconfiguration, to Otocopherylquinone, followed by recyclisation of the corresponding Ot-tocopherylhydroquinone. The configuration of C-2 of natural CC-tocopherol is retained during the FeCl₃ oxidation and is predominantly inverted by Zn&2 cyclisation of CC-tocopherylhydroquinone.

(German) A.D. Smith

3224. TISSUE CONCENTRATIONS OF COENZYME Q, UBICHROMENOL AND TOCOPHEROL IN RELATION TO PROTEIN STATUS IN THE RAT. V.C.Joshi, J.Jayaraman and T.Ramasarma: Biochem. J., 1963, 88, 25-31 (Dept. Biochem., Indian Inst. Sci., Bangalore, India) Protein deprivation in the diet of adult and weanling rats resulted in lowering the amounts of coenzyme Q and ubichromenol in liver and heart. The amounts of coenzyme Q and ubichromenol in liver and heart of weanling rats increased with the increase in the % of protein in the diet. The coenzyme Q concn. in kidney, spleen and brain were little affected. Addition of phenylalanine or coenzyme Q to the diet with 6% of casein increased the coenzyme Q in the liver. The liver-succinoxidase activity markedly decreased as the protein concn. in the diet decreased. Addition of coenzyme Q or phenylalanine to the diet with 6% of casein did not increase the liver-succinoxidase activity.

3225. ISOLATION AND IDENTIFICATION OF A NAPHTHOQUINONE FROM ELECTRON TRANSPORT PARTICLES OF MYCOBACTERIUM PHLEI. M.M.Weber, G.Rosso and H.Noll: Biochim. biophys. Acta, 1963, 71, 355-363 (Dept. Microbiol., St. Louis Univ. Sch. Med., St. Louis, Mo., U.S.A.) The naphthoquinone was identified by chromatography as a vit. K(45) and by i.r. spectroscopy as a vit. K₂(45). The compound restored NADH₂ oxidase activity to isoctane extracted particles and reactivated the NADH₂ oxidase of a crude extract which had been exposed to 360 m/i light. NADH₂ oxidase activity was not restored to light exposed particles.

B.M. Stevens

HORMONES

3226. EFFECT OF HORMONES ON LIPOLYSIS AND ESTERIFICATION OF FREE FATTY ACIDS DURING INCUBATION OF ADIPOSE TISSUE IN VITRO. M.Vaughan and D.Steinberg: J. lipid Res., 1963, 4, 193-199 (Lab. Metabolism, N.H.I. N.I.Hlth., Bethesda, Md., U.S.A.) Glycerol release, taken as a measure of the rate of lipolysis, was stim. by adrenaline, noradrenaline, glucagon, ACTH, TSH, and growth hormone. Esterification was accelerated by adrenaline and other lipolytic hormones. 10-2M NaF which did not interfere with glycerol release in the absence of hormone, markedly diminished glycerol release in the presence of adrenaline, ACTH or growth hormone.

J.R.Sargent

3227. RELEASE OF FREE FATTY ACIDS BY ADIPOSE TISSUE FROM RATS TREATED WITH TRIIODOTHYROIDINE OR PROPYLTHIOURACIL. D.Deykin and M.Vaughan: J. lipid Res., 1963, 4, 200-203 (Section on Metabolism, N.H.I. N.I.Hlth., Bethesda, Md., U.S.A.) Adipose tissue from propylthiouracil-treated rats released less free fatty acids [FFA] into the medium

and had lower concn. of FFA than tissue from euthyroid animals. Elevation of concn. of tissue FFA and enhancement of FFA release induced in normal tissues by addition of adrenaline to the medium was not observed in tissues from propylthiouracil-treated animals. Rate of lipolysis and rate of esterification of FFA in adipose tissue was increased in rats treated with triiodothyronine.

J.R. Sargent

3228. CHEMISTRY AND BIOCHEMISTRY OF INSECT HORMONES. P.Karlsorc Angew. Chem., 1963, 2, 175-182 (Physiologisch-chemisches Inst. Univ. MQnchen, Germany) Review. 73 ref. K.Brew

3229. BIOGENESIS OF ECDYSONE [INSECT MOULTING HORMONE]. I. TRANSFORMATION OF CHOLESTEROL INTO ECDYSONE. P.Karlson and H.Hoffmeisten Hoppe-Seylers Z. physiol. Chem., 1963, 331, 298-300 (Physiol.-Chem. Inst. Univ., Munich, Germany) By injecting [³H]cholesterol into *Calliphora* larvae it was shown that cholesterol is a precursor of ecdysone.

(German) L.Cornish

3230. PROTEIN NATURE OF THE BRAIN HORMONE OF INSECTS. M.Ichikawa and H.Ishizaki: Nature, Lond. 1963, 198, 308-309 (Zool. Inst., Coll. Sci., Univ.

Kyoto, Japan) The insect brain hormone extracted from *Bombyx* brains is non-dialysable, pptd. by acetone, (NH₄)₂SO₄ and TCA, inactivated by heat at pH more acidic or alk. than 6.0 and by 2 bacterial proteinases, although pepsin and trypsin were ineffective. It is assumed that the brain hormone is a protein: G.M.Lewis

3231. IMMUNOASSAY OF INSULIN WITH INSULIN-ANTIBODY PRECIPITATE. C.N.Hales and P.J.Randle: Biochem. J., 1963, 88, 137-146 (Dept. Biochem., Univ. Cambridge, England) Three new methods of immunoassay of insulin with anti-(human insulin) serum, ¹³¹I-labelled ox insulin and rabbit anti-(guinea-pig y-globulin) serum are described. With ¹²⁵I-labelled insulin of sp. activity 5-20 mc/mg., 6 x 10⁻⁶ I.U. (6 microunits) of human insulin/ml, can be detected with these methods. The plasma insulin concn. in 5 normal people was (in microunits/ml): after starvation, 16; and 30, 60 and 150 min. after the oral administration of glucose (50 or 100 g. respectively), 64 and 158, 65 and 49, and 22 and 21 respectively. *

3232. RATIOS OF TOTAL OXIDISED TO TOTAL REDUCED DIPHOSPHOPYRIDINE NUCLEOTIDES IN LIVERS OF NORMAL AND DIABETIC RATS. M.A.Spi and S.W.Milsteire Endocrinology, 1963, 72, 829-830 (Pharmacol. Dept., Hahnemann Med. Coll., Philadelphia, Pa., U.S.A.) When NAD and NADH₂ were extracted from rat livers at pH 7.4 the ratio NAD/NADH₂ was the same for normal and alloxan-diabetic rats. Total nucleotide content was slightly higher for diabetic animals.

H.C.Jones

3233. CHROMATOGRAPHIC SEPARATION OF GLUCAG^{0*} AND INSULIN FROM SERUM BY RESIN-EXCHANGE PAPER. L.L.Wiesel, V.Positano, Y.Kologlu and G.E. Anderson: Proc. Soc. exp. Biol., N.Y., 1963, 112, 515-518 (Dept. Med., Brooklyn Hosp., New York, U.S. A.) Resin exchange paper impregnated with 3jin Amberlite IRC was used to separate glucagon and insulin from mixtures with non-sp. serum and y-globulin. Relatively large amounts of the hormones were used and improvements in the technique are needed in order to demonstrate the hormones at normal serum concn.

D.N.Wheatley

BIOCHEMISTRY

309

- 323** THE TM A A O N A L PECTS IN VITRO ON AMINO ACID INCORPORATION INTO RAT ADRENAL PROTEIN: ACTH AND GROWTH HORMONE. E.D.Bransome, jun. and W.J.Reddy: Arch. Biochem., 1963, 101, 21-30 (Dept. Biol. Chem., Harvard Med. Sch., Boston, Mass., U.S.A.) Either hormone separately increased uniformly labelled [^{14}C]glycine or [^{14}C]lysine incorporation but the 2 together inhib. A dose response relationship was obtained with both hormones. Either hormone ~~but neither~~ ^{the SIV ie in} $\text{K}^+ \text{-Wnger HCO}_3^-$ or phosphate buffer out 10mM glucose inhib. Significant amino acid incorporation occurred in 15 min. incubation; incorporation increased with time for 1 hr. Increasing the glycine concn. 20-fold did not decrease incorporation.

B.M.Steve

323 DISCUSSION OF OBSERVATIONS ON BLOCKAGE OF PITUITARYTM PRODUCTION OF ACTH AS INDICATED BY ADRENAL ASCORBIC ACID DEPLETION. M.C.Cann and nd Stephenson's Canada - J. Biochem., 1963, 41, 1084-1087 (Food and Drug Lab., Dept. of Nat. Health and Welfare, Tunney's Pasture, Ottawa, Ont., conf ^ a da ^) Blockage of the adrenal-pituitary axis could be achieved with prednisolone, dexamethasone, α -methylprednisolone acetate, 9CX-fluoroprednisolone acetate and triamcinolone. The log-dose of ACTH and the adrenal ascorbic acid depletion were related linearly in untreated rats, prednisolone-blocked rats and those given pentobarbital Na. Prelim, comm. J.B.Parish

323 ACTION OF ACTH ON CORTICOID SYNTHESIS IN VITRO. P.Jouaik C.R. Soc. Biol., Paris, 1962, 156, 1567-1569 (Lab. Chimie biol., Fac. Méd., Vitry, France) The corticosteroids, synthesised in fragments of rat adrenal, were identified chromatographically as steroid XI, X₂, aldosterone, steroid X3, of A¹sterone and 11-dehydrocorticosterone. Addition of ACTH to the incubation medium did not modify corticosteroid synthesis. No activation of aldosterone formation occurred. There was slight decrease in formation of steroid *2 and X3, aldosterone and corticosterone II, a slight increase in 11-dehydrocorticosterone.

324 EFFECT OF TRICHLORACETIC ACID ON B¹⁰-S³⁵ CORTICOTROPHIN CONTENT OF HUMAN PITUITARY GLANDS: EXTRACTION OF LOW MUSCULAR WEIGHT CORTICOTROPHIN. A.Currie (Padi, Davie K, Div. of Imperial Cancer Res. Fund., Lincoln's Inn Field, St London, England) 2-5% TCA causes loss of $\text{P}^{35}\text{A}-\text{C}^{10}\text{H}_2$ staining of basophil granules of the pituitary and some extraction of ACTH into the TCA. This forms a complex with ACTH, which is about 30% of the total. The content of the glands is a single component with a molecular weight at least 3200. The characterisation and column extraction was by ultrafiltration and Sephadex G-100. This method of extraction recovers 68% of the original activity in the TCA extract.

325 XYDANTIN TEST FOR OVARIAN ASCORBIC ACID DEPLETION TEST FOR LUTEINISING HORMONE. H.B.Waynfirth, E.Safiz, R-Gulllemin: Endocrinology, 1963, 72, 804-812 (Lab. Monol. exp. Endocrinol, Coll. de Pletz, Paris, France) The ovarian ascorbic acid assay is good for measuring LH activity was satisfactory but modifications are described using Wistar rats. H.C.Jones

326 XXTTM PITUITARY LACTOGENIC HORMONE. A.A. ANALYSIS OF STATE OF AGGREGATION OF OVINE HORMONE BY ULTRACENTRIFUGATION AND EXCLUSION CHROMATOGRAPHY. P. G. Squire. B.Starman and C.H.Li: J. biol. Chem., 1963, 238, 1389-1395 (Hormone Res. Lab., Univ. California, Berkeley, Calif., U.S.A.) Prep. of ovine prolactin obtained by sedimentation velocity from pH 1^{1/2} to 3^{1/2} and 7^{1/2} to 10-1 all contain appreciable amounts of high mol. wt. material. This consists of association products of the hormone that are not in equilibrium with monomer. Reversible association reactions of the monomer occur between pH 1^{1/2} and 8. Essentially pure monomer is obtained by ultracentrifugation and by exclusion chromatography on Sephadex. The mol. wt. of the monomer is 23300. J.N.Ashley

3240. EFFECT OF REPLACEMENT OF CARBONAMIDE GROUP BY HYDROGEN IN GLUTAMINE OR ASPARAGINE RESIDUE OF OXYTOCIN ON ITS BIOLOGICAL ACTIVITY. V.du Vigneaud, G.S.Denning, jun., S.Drabarek and W.Y.Chan: J. biol. Chem., 1963, 238, (Dept. Biochem., Cornell Univ. Med. Coll., New York, U.S.A.) 4- and 5-decarbonamido-oxytocin are synthesised. The latter compound is virtually inactive in the depressor, oxytocic, pressor, and antidiuretic tests, whilst the former analogue has some activity but it is considerably less active than oxytocin. The results show that the presence of the carbonamido group of the asparagine residue at position 5 of oxytocin is vital for activity of the hormone. J.N.Ashley

3241. IN VITRO RELEASE BY THE TOAD BLADDER OF AN INHIBITOR OF OXYTOCIN. A.Karlin: Biochem. biophys. Res. Comm., 1963, 11, 44-49 (Rockefeller Inst., New York, U.S.A.) Expt. are described showing the release of a non-dialysable inhibn. of oxytocin from the toad bladder in vitro. B.Ketterer

3242. SYNTHESIS AND BIOLOGICAL PROPERTIES OF 1-DESAMINO-8-LYSINE-VASOPRESSIN. R.D.Kimbrough, jun., W.D.Cash, L.A.Branda, W.Y. Chan and V.du Vigneaud: J. biol. Chem., 1963, 238, 1411-1414 (Dept. Biochem., Cornell Univ. Med. Coll., New York, U.S.A.) The synthesis of this peptide is described. This desamino analogue shows in a high degree the typical biol. effects of 8-lysine-vasopressin. The antidiuretic, avian depressor, and oxytocic activities are higher than those of 8-lysine-vasopressin. The milk-ejecting activity is approx. the same as that of the parent compound, whilst the pressor activity is approx. half that of the parent compound. Thus the free (X-amino group on the terminal half cysteine residue of 8-lysine-vasopressin is not essential for production of the biol. effects of this polypeptide hormone studied so far. J.N.Ashley

3243. COMPARISON OF SYNTHETIC AND NATURAL ARGinine-VASOPRESSIN. R.O.Studen Helv. chim. Acta, 1963, 46, 421-425 (Chem. Forsch. F.Hoffmann-La Roche and Co. AG., Basel, Switzerland) Synthetic arginine-vasopressin, obtained using the tosyl group for protection of the guanidino group of the arginine residue, proved to be identical with the freshly isolated natural hormone by physico-chem. and biol. methods. (German) A.D. Smith

3244. THYROID FUNCTION IN CHICKENS AND RATS. EQUILIBRATION OF INJECTED IODIDE WITH EXISTING THYROIDAL IODINE IN WHITE LEGHORN COCKERELS. L.L.Rosenberg, G.Laroche and M.K.Dimick: Endocrinology, 1963, 72, 759-763 (Anat. Dent., California)

BIOCHEMISTRY

Univ., Berkeley, Calif., U.S.A.) 48 hr. after the injn. of 1311 into cockerels the relative distribution in the thyroidal iodo-amino acids was identical with 1271.

H.C.Jones

3245. IODOPROTEIN IN THE THYROID LYMPH OF PRIMATES. P.M.Daniel, M.M.Gale, L.G.Plaskett and O.E.Pratt: Nature, Lond., 1963, 198, 392-393 (Dept. Neuropathol., Inst. Psychiatry, Maudsley Hosp., Denmark Hill, London, England) Baboons were inj. with 50-100 (¹³¹I and the lymph draining the thyroid gland examined for radioactive compounds. The major component was an iodoprotein, which on hydrolysis yielded an amino acid pattern corresponding closely with that of thyroglobulin.

G.M.Lewis

3246. DIALYSABLE IODOCOMPOUNDS OF RAT THYROID GLAND. J.F.B.Haney and S.Lissitzky: Gen. comp. Endocr., 1963, 3, 139-148 (Biochim. Méd., Fac. Méd. Pharm., Blvd d'Alès, Marseilles, France)

The distribution of the free iodo compounds of the thyroid as a function of time after the injn. of a single dose of ¹³¹I was investigated by dialysis and chromato-electrophoresis. Analysis of the free iodo-org. fraction and bound iodotyrosines showed that the ¹³¹I was first incorporated into free iodopeptide, then free 3-iodotyrosine [IT], bound IT, free 3,5-diiodotyrosine [DIT], and bound DIT.

S. A.Carney

3247. COMPARATIVE METABOLISM OF RADIOISOTOPES IN MAMMALS. II. RETENTION OF IODINE-131 BY FOUR MAMMALIAN SPECIES. J.E.Furchner and CR-Richmonck: Health Physics, 1963, 9, 277-282 (Los Alamos Scientific Lab., Univ. California, Los Alamos, N.Mex., U.S.A.) Small doses (0.3 μ Ci for mice up to 4.0 μ Ci for monkeys) of ¹³¹I were given to mice, rats, dogs and monkeys, and whole body activities measured for 6-7 weeks. In rats and mice the retentions comprise 3 component equations, whilst in dogs and monkeys 2 component systems suffice. The majority of the body-load was equally distributed between the thyroid and the pelt. Much smaller amounts were found in the gut, muscle and bone. Certain small differences in retention and excretion were found in rats and mice after oral and I.p. administration.

M.S. Lave rack

3248. EFFECTS OF VARIOUS COMPOUNDS ON BINDING OF THYROXINE TO SERUM PROTEINS IN RAT.

J.M.Hershman: Endocrinology, 1963, 72, 799-803 (Med. Dept., Tufts Univ. Med. Sch., Boston, Mass., U.S.A.) Injns. of salicylate, DNP or oestradiol into rats inhib. the binding of L-thyroxine to serum proteins but diphenylhydantoin did not. When substances were added in vitro to pooled rat serum it was found that analogues of thyroxine containing a 3,5-diiodo-4-phenolate group and L-3,5,3'-triiodothyronine and 3,5,3'-triiodothyroacetic acid all inhib. thyroxine binding.

H.C.Jones

3249. FIXATION OF THYROID HORMONES BY NUCLEATED BLOOD CORPUSCLES FROM VARIOUS SOURCES. J.Roche, L.Covelli, V.Macchia and S.Aloj: CR. Soc. BioL, Paris, 1962, 156, 1746-1750 (Lab. Biochim. gen.. Coll. France, Paris, France)

Suspensions of nucleated blood corpuscles from Anas platyrhynchos, Scylloarinus canicula and Sipunpus nudus fixed the thyroid hormones, 3,5,3'-triiodo-L-thyronine and L-thyroxine. Uptake of triiodo-L-thyronine was more rapid than of L-thyroxine. No fixation of 3-monooiodo-L-tyrosine or 3,5-diiodo-L-tyrosine occurred. These compounds remained in the extracellular spaces of the blood corpuscle suspension.

3250. METABOLISM OF LABELLED 3,5,3'-TRIIDEO-THYRONINE BY MOUSE PITUITARY TUMOUR.

E.M.Volpert, J.Tierney and S.C.Werner: Endocrinology*, 1963, 72, 831-832 (Biochem. Dept., Columbia Univ. Coll. Phys. Surg., New York, U.S.A.) Inj. triiodothyronine collected and metabolised by mouse thyrotropic and adrenotropic tumours in the same way as by the normal tissues.

H.C.Jones

3251. OXIDATIVE PHOSPHORYLATION AND GLYCOLYSIS IN RAT HEART MUSCLE IN EXPERIMENTAL THYROTOXICOSIS. P.M.Samoylov: Vop. Med. Him., 1963, 9, 188-196 (Lab. Biochem., Inst. Pharmacol. and Chemotherapy, Acad. Med. Sci. of U.S.S.R., Moscow, U.S.S.R.) Oxidation of lactate occurred in

rat heart homogenates 3-7 months after administration of thyroid hormone but not in normal heart muscle homogenates. During oxidation of lactate NADH₂ was oxidised by mitochondria without coupled phosphorylation. Oxidation of other endogenous substrates was decreased in thyrotoxicosis, but phosphorylation was unaltered. In advanced thyrotoxicosis the total phosphorylating ability of mitochondria was slightly decreased.

J.R. Sargent

3252. ACTION OF THYROXINE ON OXIDATIVE PHOSPHORYLATION IN INSECT MITOCHONDRIA.

P.Karlson and A.Schulz-Enders: Gen. comp. Endocr., 1963, 3, 111-119 (Physiol.-chem. Inst. Univ. Munich** Germany) Uncoupling of oxidative phosphorylation occurred in mitochondria from the thoracic (flight) muscles of the desert locust, Schistocerca gregaria, and from rat liver both after injn. of thyroxine into intact animals and after incubation of mitochondria in 10~5M thyroxine soln. E.M. revealed no difference between normal and thyroxine-treated mitochondria.

(German) S.A.Carney

3253. ACTION OF L-THYROXINE AND OF CYANOGEN IODIDE ON MITOCHONDRIAL MORPHOLOGY AND OXIDATIVE PHOSPHORYLATIONS. J.Roche, R.Michel, J.E.Rall, O.Michel, M.Girard and S.Varrone: Biochim. gén. et comparée, Coll. de France, Paris, France)

Effects were studied after inhibn. of electron transport at various points in the respiratory chain and following restoration of oxidative phosphorylation by addition of appropriate electron acceptors or donors. Prelim, com^{pl} (French) B.M.Stevens

3254. THYROXINE STIMULATION OF AMINO ACID INCORPORATION INTO PROTEIN. LOCALISATION OR STIMULATED STEP. L.Sokoloff, S.Kaufman, P.L. Campbell, C.M.Francis and H.V.Gelboin: J. biol. Chem., 1963, 238, 1432-1437 (Lab. din. Sci. and Cell. Pharmacol., N.I.H., Bethesda, Md., U.S.A.)

Stimn. by L-thyroxine of incorporation of amino acid into protein in a cell-free rat liver system occurs at the stage that involves transfer of sol. RNA bound amino acid to microsomal protein. The effect on the transfer step is as great as or greater than that on the incorporation of & free amino acid. L-Thyroxine has no effect on incorporation of amino acid into amino-acyl-sol. RNA. The effect on the transfer step requires mitochondria and an oxidisable substrate. When these 2 components of the system are replaced by a creatine phosphate-ATP generating system, no thyroxine effects are observed. L-Thyroxine stimn. the transfer step occurs in presence of GTP, the only known essential nucleotide requirement for this step. Reduced glutathione stimulates the reaction markedly and only partially reduces the thyroxine effect.

J.N.Ashley

3255. ADIPOKINETIC ACTION OF POLYPEPTIDE AND AMINE HORMONES UPON THE ADIPOSE TISSUE OF VARIOUS ANIMAL SPECIES. D.Rudman: J. lipid Res., 1963, 4, 119-129 (Columbia Univ. Res. Service, Goldwater Mem. Hosp. and Dept. Med., Columbia Univ., Coll. of Surg., New York, U.S.A.) Review. J.R.Sargent
198 ref.

3256. INFLUENCE OF SUBSTANCE RELEASED BY ACTING MUSCLE ON METABOLISM OF MUSCLE AND OTHER ORGANS. E.Wertheimer and S.Becte Bull. Res. Counc. Israel, A, 1963, 11, 359-372 (Dept. Biochem., Hebrew Univ., Hadassah Med. Sch., Jerusalem, Israel) The factor released in muscular action increased the glucose transport in vitro not only into muscle but also into brain, lung and especially into adipose tissue. It also increased the O₂ consumption in vitro by diaphragm, brain, lung, adipose tissue, kidney and liver. The factor retained its activity under anaerobic conditions. It increased (X-aminoisobutyric acid transport into diaphragm and the incorporation of several amino acids into muscle protein. L.G.Gillies

3257. NEW METHOD FOR THE PREPARATION OF SKELETAL MUSCLE RELAXING FACTOR. C.J.Parker, jun. and J.Yun: Biochem. biophys. Res. Comm., 1963, 11, 88-91 (Dept. Physiol. Chem., Wayne State Univ., Coll. Med. Detroit, Mich., U.S.A.) Prep. of relaxing factor of high activity, free of the enzyme activity producing it, were obtained by treating the relaxing factor granules with org. mercurials. B.Ketterer

3258. ACTION OF NORADRENALINE ON TRANSPORT OF FATTY ACIDS AND TRIGLYCERIDES BY ISOLATED PERFUSED RAT LIVER. M.Heimberg and N.B. Eizette: Biochem. Pharmacol., 1963, 12, 392-394 (Dept. Pharmacol., Sch. Med., Vanderbilt Univ., Nashville, Tenn., U.S.A.) Short comm. L.G.Gillies

3259. DETECTION OF INTERMEDIATE OXIDATION STATES OF ADRENALINE AND NORADRENALINE BY FLUORESCENCE SPECTROMETRIC ANALYSIS. W.H.Harrison: Arch. Biochem., 1963, 101, 116-130 (Dept. NeuroL, Coll. Phys. Surg., Columbia Univ., New York, U.S.A.) Cu²⁺, Fe³⁺/MnO₂. tyrosinase affected the formation of fluorescent intermediate oxidation states at near physiol. pH and redox. Prop. of P-ducts indicated that they were states of different reversible redox systems from the containing previously known oxidation intermediates. Compounds were stable in the oxidation system which disappeared but fluorescence disappeared on treatment with cyanide. Ascorbic acid reversed this oxidation. Ferric cyanide was the initial oxidising agent the by a nonfluorescent but were rendered fluorescent by treatment. All the intermediates were cursors of the same 3,5,6-trihydroxyindole deriv. B.M.Stevens

3260. INTRACELLULAR DISTRIBUTION OF BRAIN NORADRENALINE AND DE ROBERTIS' NON-CHOLINERGIC NERVE ENDINGS. A.Inouye, K.Kataoka and Y.Shinagawa: Biochim. biophys. Acta, 1963, 71, 491-493 (Dept. Physiol., Kyoto Univ. Sch. Med., Kyoto, Japan) Prelim. communication. B.M. Stevens

3261. RELEASE OF ADRENALINE FROM RABBIT MEDULLA CHROMAFFIN GRANULES. J.P.X⁷NAL McLean and F.Cohen: Life Sci., 1963, No. 4, 265 (Dept. Chem., Parke, Davis and Co., Ann Arbor, Mich., U.S.A.) The spontaneous release of adrenaline from the chromaffin granules was more marked in saline than in sucrose, and increased with increasing temp. Reserpine prevented the loss of adrenaline, while ascorbic acid and isoascorbic acid increased the loss of adrenaline and ATP from the granules. The results demonstrated the ability of reserpine to influence amine transport in chromaffin granules. K.Jones

Arbor, Mich., U.S.A.) The spontaneous release of adrenaline from the chromaffin granules was more marked in saline than in sucrose, and increased with increasing temp. Reserpine prevented the loss of adrenaline, while ascorbic acid and isoascorbic acid increased the loss of adrenaline and ATP from the granules. The results demonstrated the ability of reserpine to influence amine transport in chromaffin granules. K.Jones

3262. EFFECT OF TRIAMCINOLOLONE AND OTHER STEROIDS ON OXIDATIVE PHOSPHORYLATION REACTION. A.Gomez-Puyou, A.Pena-Dias, J.Guzman-Garcia and J.Laguna: Biochem. Pharmacol., 1963, 12, 331-340 (Dept. Biochem., Fac. Med., Univ. Nacional, Mexico, D.F., Mexico) The effect of hydrocortisone, triamcinolone and fluoromethyl-prednisolone on mitochondrial respiration, oxidative phosphorylation ATPase activity and the [32P]ATP exchange reaction was studied. Fluoromethyl-prednisolone did not affect any of the reactions. Hydrocortisone inhibited mitochondrial respiration but did not affect the other reactions. Triamcinolone increased respiration, depressed oxidative phosphorylation and the [32P]ATP reaction and increased the latent ATPase activity of fresh mitochondria. It also inhib. mitochondrial osmotic swelling. L.G.Gillies

3263. INHIBITION OF 19-HYDROXYLASE ACTIVITY IN GOLDEN HAMSTER ADRENAL BY SU 4885. K.Griffiths: J. Endocr., 1963, 26, 445-446 (Dept. Biochem., Univ. Edinburgh, Scotland) The 110-hydroxylase antagonist SU-4885 ('Metopirone') prevented the conversion of DOC to 19-hydroxy-11-deoxycorticosterone by golden hamster adrenal homogenates. G.F.Blane

3264. HYDROXYLATION OF 11-DEOXYCORTICOSTERONE BY ADRENALS OF VARIOUS ANIMAL SPECIES. K.Griffiths: J. Endocr., 1963, 26, 437-444 (Dept. Biochem., Univ. Edinburgh, Scotland) A comparison was made between the 19-hydroxylating systems of the 'fatty' type of adrenal characteristic of man and non-ruminants and the 'non-fatty' type found in ruminants and the golden hamster. Homogenates of non-fatty glands, especially those from golden hamster adrenals were active in converting DOC to 19-hydroxy-11-deoxycorticosterone but homogenates from fatty glands, for example man, dog and pig, were relatively inactive. There was no relationship between the 11p-hydroxylating activity of homogenates and the cortisol/corticosterone ratio reported for the adrenal vein blood of a given sp. G.F.Blane

3265. 8 (3-HYDROXYLATION OF REICHSTEIN'S SUBSTANCES BY MICRO-ORGANISM [CERCOSPORA MELONIS]. K.Tori and E.Kondo: Tetrahedron Letters, 1963, 10, 645-650 (Shionogi Res. Lab., Shionogi and Co. Ltd., Fukushima-ku, Osaka, Japan) Letter. R.H.Kimberlin

3266. SEX-INFLUENCED ACTIVITY OF 30-HYDROXYSTEROID DEHYDROGENASE OF RAT LIVER. B.L.Rubin, H.J.Strecker and E.B.Koff: Endocrinology, 1963, 72, 764-770 (Dept. Obstet. Gynec., Einstein Coll. Med., Yeshiva Univ., Bronx, N.Y., U.S.A.) At low concn. of rat liver tissue the 3@-hydroxysteroid dehydrogenase activity was the same for a and ? animals, but at high tissue concn. the activity of tissue from ? was lower than that of cf ? treated with testosterone, or androstan-3, 17-dione gave activity similar to that of cf and castration of cf reduced the activity to that of f. H.C.Jones

BIOCHEMISTRY

3267. 20CL-HYDROXYSTEROID DEHYDROGENASE AND 30L-HYDROXYSTEROID DEHYDROGENASE IN HUMAN FOETAL LIVER. C.A.Villee and J.M.Loring: Endocrinology, 1963, 72, 824-828 (Biol. Chem. Dept., Harvard Med. Sch., Boston, Mass., U.S.A.) Human foetal liver homogenates were shown to have 2(XX)-hydroxysteroid dehydrogenase and 3 α -hydroxysteroid dehydrogenase activity by the 25th week. H.C.Jones

3268. STOICHEIOMETRY OF C-21 HYDROXYLATION OF STEROIDS BY ADRENOCORTICAL MICROSOMES. D.Y.Cooper, R.W.Estabrook and O.Rosenthal: J. biol. Chem., 1963, 238, 1320-1323 (Harrison Dept. Surg. Res., Sch. Med., Univ. Pennsylvania, Philadelphia, Pa., U.S.A.) The stoichiometry of C-21 hydroxylation of 17-hydroxyprogesterone by bovine adrenocortical microsomes is studied using an O₂ electrode to determine uptake of O₂ polarographically, whilst NADPH₂ is measured by a fluorimeter for use with turbid soln. The reaction causes increases in consumption of O₂ and oxidation of NADPH₂ that are equiv. to the amount of product formed. J.N.Ashley

3269. LOSS OF THE 4-3-HYDROGEN IN THE CONVERSION OF [4-p-3H]CHOLESTEROL TO CORTISOL BY THE GUINEA-PIG ADRENAL GLAND HOMOGENATE. H.Werbin and I.L.Chaikoff: Biochim. biophys. Acta, 1963, 71, 471-474 (Dept. Physiol., Univ. California, Berkeley, Calif., U.S.A.) B.M.Stevens

3270. GLUCOSE POLYMERISATION AND CORTISOL. H.Hilz, W.Tarnowski and P.Arend: Biochem. biophys. Res. Comm., 1963, 10, 492-497 (Physiol.-Chem. Ifost. der Univ. Hamburg, Germany) Injn. of cortisol acetate into adrenalectomised rats caused an increase in hepatic levels of glucose 6-PO₄ and glycogen synthetase. It is suggested that glucose 6-PO₄ is both an inducer and an activator of glycogen synthetase. B.Ketterer

3271. RELATION OF CORTISONE AND SYNTHESIS OF RIBONUCLEIC ACID TO INDUCED AND DEVELOPMENTAL ENZYME FORMATION. O.Greengard, M.A. Smith and G.Acs: J. biol. Chem., 1963, 238, 1548-1551 (Inst. Muscle Dis., Inc., New York, U.S.A.) Puromycin, an inhibitor of protein synthesis, inhibits the cortisone-induced increase of tryptophan pyrrolase and tyrosine-OC-oxoglutarate transaminase activity (as well as the substrate-induced increase of the latter) in livers of bilat. adrenalectomised rats. Actinomycin abolishes the cortisone induced rise in both enzymes but does not affect the tryptophan-induced increase in the pyrrolase. Development of liver tyrosine-a-oxoglutarate transaminase in newborn rats is inhib. by actinomycin. But neither the antibiotic nor adrenalectomy affects post-natal development of rat liver tryptophan pyrrolase. Probably accumulation of the pyrrolase, unlike that of the transaminase during early post-natal life, is not under the control of adrenal hormones and occurs in spite of marked inhibn. of synthesis of RNA. J.N.Ashley

3272. INFLUENCE OF SEX AND SEX HORMONES ON THE OXIDATION OF [26-14C]CHOLESTEROL BY RAT LIVER MITOCHONDRIA. D.Kritchevsky, S.A.Tepper, E.Staple and M.W.Whitehouse: J. lipid Res., 1963, 4, 188-192 (Wistar Inst. and Dept. Biochem., Univ. Pennsylvania Sch. Med., Philadelphia, Pa., U.S.A.) Mitochondria from 2 rats oxidised cholesterol more rapidly than mitochondria from d" rats. No sex difference occurred with oxidation of propionate. Surgical or chem. castration of

<S rats enhanced cholesterol oxidations while androgen treatment of ? rats depressed cholesterol oxidation. Ovariectomy was without effect in ? rats. Cholesterol oxidation by normal <? or ? rat liver mitochondria was inhib. in vitro by sex hormones. Results indicate that circulating androgen rather than oestrogen levels determine the efficiency of cholesterol oxidation.

J.R.Sargent

3273. IN VIVO METABOLISM OF STEROID HORMONES BY SOCKEYE SALMON. (A) IMPAIRED HORMONE CLEARANCE IN MATURE AND SPAWNED PACIFIC SALMON (ONCORHYNCHUS NERKA). (B) PRECURSORS OF 11-KETOTESTOSTERONE. D.R.Jdler and B.Truscott: Canad. J. Biochem., 1963, 41, 875-887 (Fish. Res. Board Canada, Technol. Stat., Halifax, N.S., Canada) Intra-arterially inj. [4-14C]cortisone and [4-14C]cortisol were cleared from the plasma of sexually mature and spawned sockeye salmon (*O. nerka*) at a much slower rate than from the plasma of immature sockeye salmon and spawned Atlantic salmon (*Salmo salar*). Testosterone and 17(X)-hydroxyprogesterone were precursors of 11-keto-testosterone, present in high concn. in the blood of mature sockeye salmon. Testosterone was formed in vivo from 17CL-hydroxyprogesterone and cortisol was converted to cortisone, but no conversion of the former to 11-keto-testosterone could be demonstrated. J.B.Parish

3274. EFFECT OF DEHYDROISOANDROSTERONE ON IN VIVO CONVERSION OF 17OL-HYDROXPREGNENOLONE TO URINARY II-DEOXY-17-KETOSTEROIDS. A.F.Clark and S.Solomon: J. clin. Endocr., 1963, 23, 481-488 (Dept. Expt. Med., McGill Univ., Montreal, Canada) The increase of circulating pool of dehydroisoandrosterone by oral administration had no significant effect on the total conversion of 17 α -[7 α -³H]hydroxy-pregnanolone to urinary dehydroisoandrosterone, andro* sterone and aetiocholanolone. The data supported the view that metastatic tissue in patients with adrenal carcinoma is responsible for the observed enhanced con* version. K.Jones

3275. VARIATIONS IN THE LEVELS OF ANDROGENS AND GONADOTROPHIC HORMONES IN THE BLOOD OF RATS DURING HEALING OF FRACTURES. A.H.Said. F.A.Soliman, M.S.Abdo and M.K.Soliman: Nature, Lond., 1963, 198, 294-295 (Dept. Surg., Fac. Vet. Med., Univ. Cairo, Egypt) In mature ♂ rats with expt. fractures of the tibia, the level of serum androgens (which have been shown to promote protein anabolism) rises during the 2nd and 3rd weeks post-fracture. Accompanying changes in the levels of luteinising and follicle-stimulating hormones were considered to be related to their function in stimulating the testis. G.M.Lewis

3276. MICROBIOLOGICAL CONVERSION OF 19-NORTES* TOSTERONE. I. 16-HYDROXYLATION. II. 10- AND 11-HYDROXYLATION. J.be Flines, W.F.Van Der Waall, W.J.Mijs and S.A.Szpilfogel. III. 12-HYDROXYLATIC[†] J.De Flines, W.F.Van Der Waard, W.J.Mijs, L.A.Van Dijck and S.A.Szpilfogel. IV. 15-a-HYDROXYLATI[†] J.De Flines, W.F.Van Der Waard, W.J.Mijs and S.A. Szpiifogel. V. 6 3- AND 140,-HYDROXYLATION. J.De Flines, W.F.Van Der Waard, W.J.Mijs, L.A.Van Dijck and S.A.Szpilfogel: Rec. Trav. chim. Pays-Bas, 1963, 82, 121-128, 129-138, 139-142, 143-148, 149-156 (Res. Lab., of Royal Netherlands Fermentation Industries, Delft, Netherlands) I. Using MycosEhSS[‡] ella latebrosa it has been possible to convert 19-nortestosterone to the 16p-hydroxy deriv. The 160C-hydroxy deriv.

was formed during fermentation by Hypomyces aurantius. The reaction was followed by separation of the products by Paper chromatography.

II. Fermentation of 19-nortestosterone with Cervularia iSuata or with Zotrytis paeonia yielded mainly the 10 α -hydroxy deriv. Aspergillus ochraceus produced the 11CX-hydroxy deriv. in good yield.

III. The microbial reaction of 19-nortestosterone with Qolletotrichum derridis yielded mainly 12 β -hydroxy-19 α -nortestosterone. Chem. and physical measurements were carried out to establish the identity of the product.

IV. During "fermentation with a Penicillium equal amount of 15 α -hydroxy-nortestosterone and 15 α -hydroxy-f9-nor-androst-4-one-3,17-dione were produced. The identification of these products is discussed.

V. Using Helminthosporium kusanoi 60-hydroxynortestosterone has been isolated as the main product. No appreciable amounts of products hydroxylated at other positions were detected. G.C.Barr

3277. INFLUENCE OF GONADOTROPINS IN VIVO

UPON THE BIOSYNTHESIS OF ANDROGENS BY HOMOGENATE OF RAT TESTIS. P.F.Hall and K.B.Eik-Nes: Biochim. biophys. Acta, 1963, 71, 438-447 (Dept. Biol. Chem., Univ. Utah Coll. Med., Salt Lake City, Utah, U.S.A.) Treatment of rabbits with gonadotrophins did not stimulate [4-14C]cholesterol conversion to $L^{14}C$ testosterone by testis homogenate. 24 hr., but after 1-12 hr., after treatment of hypophysectomised rats *TM human chorionic gonadotrophin or ICSH, conversion of cholesterol to androgens by testis homogenate was increased. B.M.Stevens

3278. 0-GLUCURONIDASE-RICH CYTOPLASMIC PARTICLES IN ANDROGEN-STIMULATED MOUSE KIDNEY. CYTOBIOCHEMICAL STUDY. A.G.Plaut and W.H.Fishman: J. cell Biol., 1963, 16, 253-258 (Dept. Pathology, Tufts Univ. Sch. Med., Boston, Mass., U.S.A.) Ajax (5 mice of 1-5-4 months received 2 i.p. injn. of 1-I.U. of Follutene. 0-Glucuronidase and acid and alk. phosphatase activity were assayed in the 5 distinct phases which appeared on centrifuging the homogenised kidney in sucrose + NaCl at 120000 fr. A 6-fold increase in total fr-glucuronidase was distributed in all the subcellular components but was greatest in the sedimentable particles. The sp. activity of S? ~ sedimentable p-glucuronidase is increased but that the Phosphatase is unchanged. The independence of response to the stimuli of the different enzymes is discussed. P.Barow

3279. PROSTAGLANDINS, GROUP OF HORMONAL COMPOUNDS OF WIDESPREAD OCCURRENCE.

¹Bergstrom: Biochem. Pharmacol., 1963, 12, 413-414 (Karolinska Inst., Stockholm, Sweden) The structure and potency was reported of 3 compounds from Drosophila Slandin extracts of sperm plasma of man and sheep of sheep ³⁰ the vesicular gland of sheep. A compound similar structure was isolated from normal lungs of sheep and pigs. L.G.Gillies

3280. ⁵CONVERSION IN VITRO OF [I7d-3H]ANDROSTEN-17 α -np,17 β -DIOL INTO [17 α -3H]TESTOSTERONE IN HUMAN ADRENAL AND PLACENTAL TISSUE. Ch-T^{Baileya} E.Wallace and S.Lieberman: J. biol. Chem., 1963, 238, 1316-1319 (Dept. Obstet. Gynec., Columbia Univ., New York, U.S.A.) Incubation of ⁵ys-⁸i of [17 α -3H]androst-5-ene-33,17p-diol with ^{17 α} of ³T^{nat}s ⁸ human placenta or adrenocortical carcinoma ^{WVc} « [17 α -3H]testosterone in 50% and 15% yield.

respectively. This is a possible biosynthetic route for testosterone that does not involve androst-4-enedione as precursor. J.N.Ashley

3281. GAS CHROMATOGRAPHIC IDENTIFICATION OF PROGESTERONE IN HUMAN PREGNANCY PLASMA.

W.Futterweit, N.L.McNiven and R.I.Dorfman²: Biochim. biophys. Acta, 1963, 71, 474-476 (Worcester Found, for Expt. Biol., Shrewsbury, Mass., U.S.A.)

B.M.Stevens

3282. CONVERSION OF PROGESTERONE INTO TESTOSTERONE BY MOUSE OVARY AND ITS RELATIONSHIP TO ADRENAL X ZONE DEGENERATION.

G.P.Vinson and L.Chester Jones: J. Endocr., 1963, 26, 407-414 (Zool. Dept., Univ. Sheffield, England)

Mouse ovaries incubated with progesterone were able to synthesise 16-oxoestrone, 17-epioestriol, 17(X)-hydroxyprogesterone, 20 α -hydroxyprogesterone, androstenedione and testosterone. Best yields of oestrogens were obtained from ovaries of mature virgin females and of testosterone from those of pregnant mice. It is concluded that this testosterone production by the gravid mouse ovary is responsible for the disappearance of the adrenal X-zone during the 1st pregnancy. G.F.Blane

3283. INFLUENCE OF PSEUDOPREGNANCY AND PROGESTERONE ON THE ACTIVITY OF 5-NUCLEOTIDASE IN THE UTERUS OF MICE.

F.B.Lammes and R.G.J. Willighagen: Nature, Lond., 1963, 198, 394-395 (Dept. Pathol., St. Univ. Leyden, Netherlands)

During pseudopregnancy and after progesterone administration to castrated mice resulting in deciduoma production, increased activity of 5-nucleotidase in the endometrial stromata is observed. G.M.Lewis

3284. INFLUENCE OF UTERINE SECRETIONS ON PHAGOCYTOSIS.

J.Killingbeck and G.E.Lamming: Nature, Lond., 1963, 198, 111-112 (Univ. Nottingham,

Sutton Bonington, Loughborough, England) The uptake of Amaranthus starch particles by rabbit w.b.c. was studied after their injn. into rabbit uterine horn under various hormonal conditions and also when cultured in vitro in the presence of flushings from the uterine horns. It was concluded that some factor in the uterine secretion, possibly a seromucoid, under the influence of progesterone inhibits the phagocytic activity of w.b.c. in vivo and in vitro. G.M.Lewis

3285. CORPUS LUTEUM AND STEROID HORMONE FORMATION. H. STUDIES ON HUMAN CORPUS LUTEUM IN VITRO.

W.Y.Huang and W.H.Pearlman: J. biol. Chem., 1963, 238, 1308-1315 (Dept. Biol. Chem., Harvard Med. Sch., Boston, Mass., U.S.A.)

Incubation of Na[3H]acetate with surviving slices of human corpus luteum of menstruation gives [3H]progesterone and other more polar metabolites. Similarly incubation with [7-3H]progesterone yields mainly [3H]-17 α -hydroxyprogesterone and some pregn-4-en-20CX-ol-3-one, whilst incubation with [7-3H]androst-4-ene-3,17-dione gives [3H]oestrone and 17 β -oestradiol. The results, and those of others, show that human corpus luteum of menstruation secretes oestrogen as well as progesterone. The apparent lack of oestrogen secreting function of luteal tissue in other mammals is discussed. J.N.Ashley

3286. METABOLISM OF [4-14C]PROGESTERONE AND [7<X-3H]PREGNENOLONE BY HUMAN ADRENAL TISSUE.

FORMATION OF [14C]16a-HYDROXYPROGESTERONE, [14C]CORTICOSTERONE, AND [14C, 3H]CORTISOL.

BIOCHEMISTRY

I.Weliky and L.L.Engel: *J. biol. Chem.*, 1963, 238, 1302-1307 (Johns Collins Warren Lab. of Huntington Mem. Hosp. of Harvard Univ., Boston, Mass., U.S.A.) Human hyperplastic adrenal cortical slices convert pregnenolone into cortisol, apparently via 17-hydroxypregnolone, 17-hydroxyprogesterone and deoxycortisol. Progesterone is converted into 16 α -hydroxyprogesterone, corticosterone and cortisol. But pregnenolone is not converted into progesterone, DOC, corticosterone, or 16 α -hydroxyprogesterone. J.N.Ashley

3287. OESTROGENS. V. RELATIONSHIP OF OESTROGENIC ACTIVITY AND MOLECULAR STRUCTURE. T.L.Patton and L.Dmochowski: *Arch. Biochem.*, 1963, 101, 181-185 (Univ. Texas M.D. Anderson Hosp., Houston, Tex., U.S.A.) Changes in oestrogenic activity caused by substituents at positions 2 and 4 of oestrone and 17 β -oestradiol indicated that both the position and structure of the substituent determined oestrogenic activity. Low oestrogenic activity was shown by compounds with substituents large enough to shield the phenolic OH and by those with substituents capable of forming a strong intramolecular H bond with the phenolic OH. B.M.Stevens

3288. CHARACTERISATION OF OESTROGENS. T.H.Simpson and R.S.Wright: *Analyt. Biochem.*, 1963, 5, 313-320 (Dept. Scientific Ind. Res., Torry Res. Station, Aberdeen, England) The use of 2,7-dichlorofluorescein as a nondestructive locating reagent for phenolic steroids on chromatograms is described. A procedure is developed for the adequate characterisation of oestrogens from natural sources. Starting with less than 5 fig. of steroid, this is chromatographed, esterified (formate or acetate), chromatographed again, and saponified. The freed steroid is then chromatographed in a second solvent system, converted to the azo compound derived from Fast Black Salt K, and eluted and the dye rechromatographed. Finally the azo dyes of oestradiol and oestrone are respectively oxidised by chromium trioxide in pyridine and reduced by aq. Na borohydride to the corresponding deriv. of oestrone and oestradiol-17 β . A.D.Smith

3289. ENZYMIC FORMATION OF OESTRONE 3-GLUCURONIDE BY RABBIT-LIVER MICROSOMES. E.R. Smith and H.Breuer: *Biochem. J.*, 1963, 88, 168-172 (Courtauld Inst. Biochem., Middlesex Hosp. Med. Sch., London, England) Oestrone 3-glucuronide was identified as the reaction product after incubation of oestrone with a rabbit-liver microsomal prep., UDP-glucuronic acid being used as the glucuronic acid donor. The reaction showed a max. at pH 8.0-8.2, and Km for oestrone was 97 JJM. The reaction was only slightly affected by the propylene glycol used as solvent for oestrone. Oestrone 3-glucuronide had Rf 0.53 on paper chromatograms (25°) in the system 2-methylpropan-2-ol-1,2-dichloroethane-acetic acid-water (5:15:6:14, by vol.). The results are discussed in relation to the general problem of the physiol. production of oestrogen glucuronides. • A.D.Smith

3290. IDENTIFICATION OF SEX HORMONES IN THE OVARIAN EXTRACTS OF TORPEDO MARMORATA AND BUFO VULGARIS. G.Chielli and C.Lupo: *Gen. comp. Endocr.*, 1963, 3, 149-152 (Inst. Istologia, Fac. Med. e Chir., Univ. Cattolica S. Cuore, Rome, Italy) Methods of chromatography, deriv. formation, and u.v. spectrography were used to identify oestradiol-17 β , oestriol, and progesterone in ovarian extracts of

T. marmorata, and oestradiol-17 β , oestrofet, oestriol, and progesterone in ovarian extracts of B. vulgaris. S.A.Carney

3291. ANALYSIS OF OESTROGENS WITH BROMINE-82. W.R.Slaunwhite, jun. and L.Neely: *Analyt. Biochem.*, 1962, 5, 133-142 (Dept. Med. C, Roswell Park Mem. Inst., Buffalo, N.Y., U.S.A.) A new method for analysis of phenolic steroids is reported. It consists of dibromination with ^{82}Br , a γ -emitter with a half-life of 36 hr. This method is very sensitive (1 mfifg.), reasonably accurate (> 80% recovery from urine, > 95% recovery from plasma at the 10-mifg. level), quite precise ($\pm 3\%$), and highly sp. Specificity is assured by gradient elution chromatography, followed by dil. with carrier and recrystallisation to const. sp. activity. A.D.Smith

3292. DETERMINATION OF URINARY PREGNANEDIOL BY GAS CHROMATOGRAPHY. D.A.Turner, G.E. Seegar Jones, I.J.Sarlos, A.C.Barnes and R.Cohen: *Analyt. Biochem.*, 1963, 5, 99-106 (Biochem. Res. Div., Sinai Hosp., Baltimore, Inc., M.D., U.S.A.) A gas-liquid chromatographic method for the identification and quantitation of urinary pregnanediol [I] is described. Recovery and sensitivity are satisfactory, as little as 0.25 mg. in a 24 hr. urine sample being quant. recovered. Results indicate that I, allopregnanediol and pregnanolone can be separated on a 2 fjo SE-30 column. A.D.Smith

3293. BIOSYNTHESIS AND METABOLISM OF OESTROGENS IN THE RAT. I. THE CONVERSION OF [4-14C]-TESTOSTERONE INTO [14C]OESTRADIOL-17 β BY THE RAT OVARY. S.R.Stitch, R.E.Oakey and S.S. Eccles: *Biochem. J.*, 1963, 88, 70-76 (M.R.C. Radio-biol. Res. Unit, Harwell, Didcot, Berks., England) Sliced ovaries from albino rats were incubated for 5 hr. with [4-14C]testosterone in phosphate buffer containing glucose and gonadotrophin. Oestrone, oestradiol-17 β and oestriol carriers were added and a phenolic fraction was separated. Partition chromatography revealed at least 5 radioactive phenols, including oestradiol. The oestradiol-17 β carrier was isolated and sp. activity followed through pptn. with digitonin, recrystallisation to const. sp. activity and subsequent partition chromatography, and through methylation and purification of the methyl ether followed by chromatography in 2 successive systems. The const. sp. activity obtained showed that [14C]oestradiol-17 β is produced from [4-14C]testosterone by rat ovaries in vitro. Biosynthesis of oestradiol-17CX was not demonstrated. *

3294. ISOLATION AND CHARACTERISATION OF OESTRIOL 16CX-GLUCOSIDURONIC ACID FROM HUMAN PREGNANCY URINE. Y.Hashimoto and M.Neemaa: *J. biol. Chem.*, 1963, 238, 1273-1282 (Steroid Chem. Section, Dept. Med. C, Roswell Park Mem. Inst., Buffalo, N.Y., U.S.A.) The cryst. acid is isolated from third trimester human pregnancy urine. JNA*ley

3295. RAPID METHOD FOR MEASURING 17-OHCS IN URINE. M.G.Metcalf: *J. Endocr.*, 1963, 26, 415-422 (Princess Margaret Hosp., Christchurch, New Zealand) A modification of the Norymberski method for the estimation of 17-OHCS having a keto or hydroxyl group in the 20 position is described. The original procedure is much simplified and it was possible to make 8 determinations in duplicate within 5 hr. " GFBLane

METABOLIC INHIBITORS AND CARCINOGENS

3296. ACTION OF VARIOUS INHIBITORS OF L-dopa DECARBOXYLASE ON WATER INTAKE, DIURESIS AND URINARY ELIMINATION OF SODIUM AND POTASSIUM IN RAT. N.Barre, J.Cahn and M.Herold: C.R. Soc. Biol., Paris, 1962, 156, 1807-1809 (HSpital de la Pitié, Paris, France) Injn. of 100 mg./J* 3,4-hydroxycinnamic acid to rats for 3 days increased diuresis while m-hydroxy-benzylxoyamine (25 mg./kg.) and CC-methyl¹⁴opa (1*25 mg./kg.) decreased diuresis. These inhibitors and jn-hydroxy-jf bromobenzylxoyamine (20 mg./kg.) reduced urinary elimination of K and increased Na elimination. (French) M.A.Price

3297. DETERMINATION OF THE BIMOLECULAR RATE CONSTANT FOR THE REACTION BETWEEN ORGANO-PHOSPHOROUS INHIBITORS AND ESTERASES IN THE PRESENCE OF SUBSTRATE. A.R.Main and W.C. Dauterman: Nature, Lond., 1963, 198, 551-553 (Pesticide Residues Lab., North Carolina State Coll., Raleigh, N.C., U.S.A.) The following equation was derived to determine the bimolecular rate const, of the reaction between enzymes and their inhibitors in the Presence of substrates-

$$k_1 = \frac{2.303}{(t_2 - t_1)(X_1 - X_2)} \log \frac{V_1}{V_2}$$

where k_1 = rate const.; V_1 = velocity after inhibn. at time t_1 ; V_2 = velocity after inhibn. for time t_2 ; X_1 = fraction of uninhib. enzyme present under steady state conditions. The validity of the equation was demonstrated by studying rate const, for the reaction of acetyl cholinesterase with di-isopropyl fluorophosphate in presence of substrate. J.R. Sargent

3298. INHIBITION OF SEVERAL TRICARBOXYLIC ACID CYCLE ENZYMES BY γ -HYDROXY-a-KETOGLUTARATE. B. Pa yes and G.G.Laties: Biochem. biophys. Acta-Comm., 1963, 10, 460-466 (Dept. Bot. and Plant Biochem., Univ. California, Los Angeles, Calif., U.S.A.) γ -Hydroxy-a-ketoglutarate is an inhibitor for aconitase, isocitric dehydrogenase and Hetogutaric dehydrogenase. B.Ketterer

3299. EFFECTS OF DFLUORO-GXALOACETATE AND OFLUOROMALATE ON MALATE DEHYDROGENASE AND GLUTAMATE-ASPARTATE AMINOTRANSFERASE. E.Kun, L.K.Gottwald, D.W.Fanshier and J.E. Syling: J. biol. Chem., 1963, 238, 1466-1463 (Dept. Pharmacol., Sch. Med., Univ. California, San Francisco, Calif., U.S.A.) Syntheses of difluoroxaloacetic and difluoromalic acids are described. The kinetic const, of malic dehydrogenases from rat liver extracts of cytoplasmic and mitochondrial origin show relatively small differences with respect to substrates and fluorinated substrate analogues. Difluoromalate is a relatively weak inhibitor of the enzyme, whereas difluoroxaloacetate is a potent inhibitor of the enzymic reduction of difluoroxaloacetate by NADH₂. NADP-linked malate dehydrogenase is only slightly inhibited by difluoroxaloacetate and difluoromalate; the latter is 3 times more potent than the former. Difluoroxaloacetate is a powerful inhibitor of glutamate-aspartate aminotransferase. J.N.Ashley

3300. INACTIVATION OF a-AMYLASES BY SYNTHETIC DETERGENTS. Y.Pomeranz: Biochim. biophys. Acta, 1963, 73, 105-112 (Crops Res. Div., Agric. Res. Service, U.S. Dept. Agric, Manhattan, Kans., U.S.A.) Cryst. fungal or pancreatic (X-amylases were inactivated by incubation with high mol. quaternary NH₄ salts, cationic dyes or Na lauryl sulphate. Inactivation was slightly pH dependent. Inactivation was most effective after several hr. at room temp. Cryst. bacterial (X-amylase was only partially inactivated under these conditions. Detergent concn. above 0*1% were required but inactivation depended on detergent/enzyme wt. ratio rather than abs. detergent concn. Mixtures of cationic detergent with Na lauryl sulphate or of the anionic detergent with CaCl₂ produced an inactivation proportional to the amount of free synthetic detergent. Inactivation by quaternary NH₄ salts was not reversed by Na lauryl sulphate but inactivation by the anionic detergent was partially reversed by Cad2*. B.M.Stevens

3301. CHYMOPAPAIN. m. INHIBITION OF CHYMOPAPAIN BY DFP. M.Ebata and K.T. Yasunobu: Biochim. biophys. Acta, 1963, 73, 132-144 (Dept. Biochem. and Biophys., Univ. Hawaii, Honolulu, Hawaii, U.S.A.) The enzyme was consistently inhib. by DFP. Variables affecting the inhibn. were examined. A stable diisopropylphosphoryl-chymopapain was cryst. and shown to contain 1 g. atom P/mole of enzyme. Some prop. of this complex are reported. B.M.Stevens

3302. XANTHINE OXIDASE. L ACTIVATION OF MILK XANTHINE OXIDASE BY HISTAMINE. II MECHANISM OF SUBSTRATE INHIBITION AND US REVERSAL BY HISTAMINE. S.Muraoka: Biochim. biophys. Acta, 1963, 73, 17-26, 27-38 (Dept. Pharmacol., Okayama Univ. Med. Sch., Okayama, Japan) I. Histamine counteracted the inhibitory action of excess hypoxanthine or xanthine but had no effect at low substrate concn. Effects were more definite at alk. pH, with decreasing enzyme concn. and with increasing duration of incubation. The type of buffer greatly influence enzyme activity; histamine showed most effect in dil. K phosphate buffer. The effect of histamine varied with the batch of enzyme but practically all samples prep. by Ball's method showed some response. Purification of the enzyme raised the rate of activation; trypsin treatment had no effect. L-histidine, K cyanide and EDTA and, to a lesser extent, imidazoleacetic acid, riboflavin, 5HT, L-arginine, L-lysine and glycine showed similar effects to L-histamine.

II Substrate inhibn. was prevented in a dithizone treated medium. Addition of $6*6 \times 10^{-7}$ M Cu²⁺, Pb, Zn, Ca or Mg produced an inhibn. resembling the substrate inhibn. Antagonism between histamine and hypoxanthine was noncompetitive. When enzyme, Cu²⁺, histamine and substrate were added in this order the enzyme was active but when the order was enzyme, Cu²⁺, substrate and histamine the enzyme was inactive. Histamine had no effect on the fluorescence of riboflavin or its quenching by hypoxanthine. Cu²⁺-also markedly quenched die fluorescence. A large quantity of xanthine accumulated during oxidation of hypoxanthine to uric acid unless the reaction mixture was metal-free.

B.M.Stevens
3303. INHIBITION OF PSEUDOMONAS HISTIDASE. EVIDENCE FOR A METAL COFACTOR. A.Peterkofsky and L.N.Mehlen: Biochim. biophys. Acta, 1963, 73, 159-162 (Lab. of Biochem., Nat. Inst. of Dental Res., Bethesda, Md., U.S.A.) B.M.Stevens

BIOCHEMISTRY

3304. INHIBITION OF KIDNEY MUTAROTASE ACTIVITY BY GLUCOSE, UREA AND GUANIDINE HCl. A.M.Chase, S.L.Lapedes and H.Cyon Meien J. cell, comp. Physiol., 1963, 61, 181-193 (Physiol. Lab., Princeton Univ., Princeton, N.J., U.S.A.) 0 \times 3M

Guanidine HCl caused 50% inhibn. of hog kidney, mutarotase activity using the α - and β -forms of D-glucose as substrates at pH 5 \times 3 in 0-04M acetate buffer. Urea produced a similar inhibn., about 4 mol. of either substance combining with each catalytic site. An inhibn. of the enzyme by glucose itself occurred through formation of an inactive complex involving 1 glucose mol. per enzyme mol. G.M.Lewis

3305. DOPA DECARBOXYLATION INHIBITORS IN VIVO BY USE OF 14C-CARBOXYL-LABELLED DOPA.

E.Hansson and W.G.Clark: Proc. Soc. exp. Biol., N.Y., 1962, 111, 793-798 (Dept. Pharm., Royal Vet. Coll., Stockholm, Sweden) Measurement of radioactivity in the respiratory CO₂ of mice after injn. of labelled dopa was used to study the inhibitory effects of certain compounds on decarboxylation. The most active inhibitors were DL-a-hydrazino-a-methyl,3,4-dihydroxyphenylbutyric acid and N(3-hydroxybenzyl)-N-methylhydrazine. Their inhibitory action is approx. 40 times higher than that of L-a-methyldopa. M.M.Shapland

3306. PROTEASE INHIBITOR FROM GROUNDNUT SKINS.

V.Cepelák, Z.Horáková and Z.Pádn: Nature, Lond., 1963, 198, 295 (Med. Clinic, Charles Univ., Plzen, Czechoslovakia) A thermostable protease inhibitor can be extracted with ethanol from defatted peanut (*Arachis hypogaea*) skins. It is partly sol. in water and not ptd. by acetone. It acts on the fibrinolytic system as an anti-plasmin. G.M.Lewis

3307. INHIBITORS OF IN VIVO ENZYMIC INACTIVATION OF BRADYKININ AND KALLIDIN. E.G.Erdfls and J.R.Wohlen: Life Sci., 1963, No. 4, 270-274

(Mellon Inst., Pittsburgh, Pa., U.S.A.) Compounds which inhibit the in vivo metabolism of bradykinin and kallidin in the guinea-pig increased the hypotensive effects of the peptides. K.Jones

3308. EFFECT OF OXIDATIVE PHOSPHORYLATION INHIBITORS ON SYNTHESIS OF LIVER MITOCHONDRIA PHOSPHOLIPIDS. J.N. Youngs and W.E.Cornatzer: Proc. Soc. exp. Biol., N.Y., 1963, 112, 308-311

(Guy and Bertha Ireland Res. Lab., Dept. Biochem., Univ. North Dakota Med. Sch., Grand Forks, N. Dak., U.S.A.) The synthesis of rat liver mitochondrial phospholipids was studied after Sprague-Dawley rats had received i.p. injn. of various oxidative phosphorylation inhibitors, arsenite, bilirubin, oligomycin and DNP. Synthesis was followed by pretreating animals 1 hr. before injn. of the inhibitor with [32P]NaH₂PO₄. Four hr. after the inhibitor had been administered the mitochondrial fraction of the liver was obtained and the incorporation of 32P into several of the phospholipids was studied. There was a significant decrease in synthesis of phosphatidyl inositol, sphingomyelin, lecithin, phosphatidyl-serine and ethanolamine with DNP; the 3 other inhibitors did likewise except they did not decrease incorporation of 32P into sphingomyelin or phosphatidyl inositol apart from oligomycin which could inhibit sphingomyelin synthesis and arsenite which could inhibit phosphatidyl inositol synthesis. D.N.Wheatley

3309. SPASMOlytic EFFECT OF PAPaverine AND INHIBITION OF OXIDATIVE PHOSPHORYLATION.

R.Santi, A.R.Contessa and M.Ferrari: Biochem., biophys. Res. Comm., 1963, 11, 156-159 (Pharmacol. Inst., Univ. Padova, Italy) Papaverine inhib. the oxidation of glutamate, but not succinate by isolated rat liver mitochondria. B.Ketterer

3310. INHIBITORY EFFECT OF THIOPHOSPHATE ON THE ATP-INORGANIC PHOSPHATE [Pi] EXCHANGE REACTION OF RAT LIVER MITOCHONDRIA. T.fcSato, J.F.Thomson and W.F.Danforth: Arch. Biochem., 1963, 101, 31-36 (Div. Biol. and Med. Res., Argonne Nat. Lab., Argonne, Ill., U.S.A.) With 0-005M thiophosphate and 0-005M initial Pi concn. the exchange rate declined from approx. 70% of control values in the first 20 min. to almost 0 in the next 40 min. 0*005-0-006M thiophosphate produced 50% inhibn.; 0*03M produced complete inhibn. The degree of inhibn. appeared to depend on thiophosphate, but not Pi concn. When 0-005M [32P] or [35S]thiophosphate was used no exchange with ATP was found and electrochromatograms showed no nucleotides other than ATP. B.M.Stevens

3311. EFFECTS OF ALIPHATIC ALCOHOLS ON METABOLISM OF GLUCOSE AND FRUCTOSE IN RAT LIVER SLICES. E.Majchrowicz and J.H.Quasteb: Canad. J. Biochem., 1963, 41, 793-803 (McGill-Montreal Gen. Hosp. Res. Inst., Montreal, Quebec, Canada)

Ethanol at 3mM had little inhibitory effect on the production of respiratory CO₂ by rat liver slices but suppressed the formation of 14CO₂ from labelled glucose by 57% in 1 hr.. the inhibn. being larger from [6-14C]glucose than from [1-14C]glucose. The inhibn. was probably due to isotopic diln. of the acetyl-CoA from glucose with that from the ethanol. The higher aliphatic alcohols had the same diminishing effect on 14CO₂ formation from [U-14C]glucose and [U-14C]fructose. The incorporation of 14C from the labelled sugars into liver protein and lipid was inhib. by ethanol and the higher alcohols to a similar extent. J.B.Parish

3312. EFFECT OF IMIPRAMINE AND DESMETHYLIMIPRAMINE ON LIPID BIOSYNTHESIS IN BRAIN AND LIVER. R.Fumagalli, E.Grossi and P.Paoletti: J. Neurochem., 1963, 10, 213-217 (Inst. Pharm., Univ. Milan, Italy) Rat brain and liver slices were incubated with [1-14C]acetate and (i) CO₂ production, (ii) incorporation of 14C into neutral fats and (iii) incorporation of 14C into cholesterol measured. The drugs at 10⁻³M stim. (ii) and decreased (i) and (iii). 32P incorporation into brain slice phospholipids was increased with 10⁻⁴M drug. In vivo the drugs (3-4 mg./kg.) stim. acetate incorporation into neutral fat and phospholipids.

R.J.Woodrⁿ

3313. [SYNTHESIS OF] 2'-DEQXYTHIOGUANOSINE AND ITS α -ANOMER. R.H.Iwamoto, E.M.Acton anf L.Goodman: Nature, Lond., 1963, 198, 285 (Life Sci-Stanford Res. Inst., Menlo Park, Calif., U.S.A.)

3314. ACTION SPECTRUM OF PEROXYACETYL NITRATE DAMAGE TO BEAN PLANTS. W.M.Dugger, jun., O.C. Taylor, W.H.Klein and W.Shropshire, jun.: Nature, Lond., 1963, 198, 75-76 (Air Pollution Res. Center, Univ. California, Riverside, Calif., U.S.A.) When the action spectrum was determined for the damage to *Phaseolus vulgaris* by peroxyacetyl nitrate, max. were found at wavelengths corresponding to the carotenoids, but not the chlorophyll pigments. It is suggested that peroxy-

acetyl nitrate prevents the normal function of carotenoids
JJ Protecting chlorophyll pigments from photo-oxidation,
 fous causing damage. G.M.Lewis

3315. STEROLS OF SKIN IN NORMAL AND TRIPARANOL-TREATED RAT. L.Horlick and J.Avigan: *J. lipid Res.*, 1963, 4, 160-165 (Lab. Metabolism, N.H.I., N.I.H., Bethesda, Md., U.S.A.) Treatment with triparanol suited in increased skin concn. of cholesterol, methosterol and dihydrolanosterol and decreased concn. of desmosterol, lanosterol, and possibly dehydromethosterol and A⁷-24-cholestadienol. Squalene was an intermediate in sterol synthesis in both normal and triparanol-treated animals. Triparanol-treated animals showed a decreased incorporation of acetate into the A⁷-sterol fraction and increased incorporation into lanosterol and A⁷-sterols.
 * Paranol inhibits the enzymic reduction of the 24,25-doubble bond in sterols of rat skin. J.R. Sargent

3316. SKIN STEROLS OF NORMAL AND TRIPARANOL-TREATED RATS. R.B.Clayton, A.N.Nelson and I.D.Frantz, jun.: *J. lipid Res.*, 1963, 4, 166-176 (Conant Chem. Lab., Harvard Univ., Cambridge, Mass., U.S.A.) Skin sterols of normal rats and of rats treated with the drug triparanol have been analysed by means of chromatography on silic acid followed by gas-liquid chromatography. The results indicate the presence at skin of several previously undetected compounds, all of which causes accumulation of the A24-analogues of the intermediates in cholesterol biosynthesis that formally occur in the 24,25-dehydro form and causes marked alterations in the proportions of A⁷- to A⁰-isomers of these intermediates. J.R.Sargent

3318. ^{Ax} 2-AZAADELINE AND 2,6-DIAMINOPURINE ANALOGUES OF ATP IN ACTIVE TRANSPORT OF POTASSIUM ACROSS THE HUMAN ERYTHROCYTE MEMBRANE. M.Tatibana, T.Hashimoto and ^Yoshikawa: *J. Biochem.*, Tokyo, 1963, 53, 214-218 i¹⁴P³² Physiol. Chem. and Nutr., Fac. Med., Univ. hum (Kyoto Jap) The analogues were accumulated in on in r.b.c. which had been preserved for 1 week, incubation with the appropriate base and inosine. Cells accumulating 2-azaadenosine triphosphate showed K influx and shape change; those accumulating 2,6-diaminopurine riboside triphosphate did not. 2-Aza-idi¹⁴P³² phosphate, but not 2,6-diaminopurine riboside, was attacked by the Na-K dependent, a sensitive ATPase of the r.b.c membrane. B.M.Stevens

3319. ACTION OF METHYL ORANGE ON THE OXYGEN CONSUMPTION OF VARIOUS RAT LIVER PREPARATIONS. P.Manchon, R.Lowy and S.Gradnauer: *R. Soc. Biol.*, Paris, 1962, 156, 1615-1619 (Lab. humaine, Ecole Pratique des Hautes Etudes, Paris, France) Methyl Orange inhib. by 31% the O₂ consumption of the supernatant of rat liver homogenate and inhib. O₂ uptake of homogenate by 11%. (X-O₂)¹⁴Orange decreased O₂ uptake in the presence of glutarate but increased the oxidation of succinate

by liver homogenate. These 2 effects increased with increased concn. of Methyl Orange. The oxidation of glucose 6-PO₄ and phenylalanine by homogenates and supernatant was inhib. by Methyl Orange.
 (French) M.A.Price

3320. INCREASE IN THE AZOREDUCTASE ACTIVITY OF THE SUPERNATANT OF LIVER HOMOGENATE OF RAT AFTER PROLONGED INGESTION OF METHYL ORANGE. P.Manchon and R.Lowy: *C.R. Soc. Biol.*, Paris, 1962, 156, 1619-1622 (Lab. de Nutrition humaine, Institut National d'Hygiène, Paris, France)

Liver homogenate supernatant from rats which had received Methyl Orange for 2-6 weeks showed increased azoreductase activity in the presence of Methyl Orange but not in the presence of Ethyl Orange. Addition of glucose 6-PO₄ dehydrogenase to the medium had less effect on the activity of liver from animals receiving Methyl Orange than normal rats.

(French) M.A.Price

3321. EFFECT OF SONIC DISRUPTION OF ERYTHROCYTE STROMATA ON THE GLUCOSE, PHLORIZIN AND PHLORETTIN INHIBITION OF THE STROMAL ATPase. A.C.Ewers, C.M.Haskell and R.A.Fineberg: *J. cell. comp. Physiol.*, 1963, 61, 195-199 (Dept. Biochem., Univ. California Med. Center, San Francisco, Calif., U.S.A.) The inhibn. of ATPase of rabbit r.b.c. stromata by glucose, phlorizin and phloretin was reduced by sonic fragmentation of the ghosts, indicating that the inhibn. is the result of a close topographical relation of the enzyme and inhibitor-binding sites which is disrupted by sonic fragmentation.

G.M.Lewis

3322. EFFECT OF MALEIC ACID ON THE KIDNEY. III. SUCCINATE AS HYDROGEN DONOR IN THE REDUCTIVE AMINATION IN RAT KIDNEY. IV. SYNTHESIS OF AMINO ACIDS IN THE KIDNEY OF MALEATE-TREATED RATS. J.Rogulski and S.Angielski: *Acta biochim. pol.*, 1963, 10, 125-132, 133-139 (Dept. Biochem. Med. Sch., Gdansk, Poland)

m. In kidney mitochondria the activation of ATP of amino acid synthesis from d-oxoglutarate and NH₃ is abolished by malonate. The effect of ATP is connected with the utilisation of H from succinate for the reductive amination. The main source of H for this amination in kidney is citrate, and in liver the second mol. of a-oxoglutarate. It was shown that maleate, instead of commonly used arsenite, can be employed to inhibit the oxidation of oxoglutarate in kidney mitochondria.

IV. Of 9 rat tissues tested only liver, kidney and brain synthesised considerable amounts of amino acids from a-oxoglutarate and NH₃. In the kidney of maleate-treated rats the oxidation of oxoglutarate is inhib. As urinary excretion of accumulating oxoglutarate is small, the reductive amination into glutamate is supposed to take place. Kidney homogenates of maleate-treated rats synthesised amino acids very efficiently, utilising for the reduction of oxoglutarate the H from isocitrate, succinate and in lesser degree, malate. It was calculated that the rat kidney during the first 24 hr. following intoxication may synthesise 1000-2000 (moles of amino acids more than normally. The excretion of this excess may be interpreted as the source of aminoaciduria observed in maleate-intoxication. M. Korbecki

3323. ROLE OF ADSORPTION IN CONTROLLING RATE OF REACTION OF CHLORAMBUCIL WITH PROTEIN. J.H.Linford: *Canad. J. Biochem.*, 1963, 41, 931-939 (Dept. Biochem., Univ. Manitoba, Winnipeg, Canada) The rates of alkylation of Hb and bovine serum albumin

BIOCHEMISTRY

by chlorambucil were studied in vitro at 37° and pH 8*4. Although the proteins were of nearly the same mol. wt. and had the same free carboxylic acid content the alkylation of Hb was 30 times faster. The adsorption of chlorambucil by albumin however was 20 times greater than that by Hb_v suggesting that adsorption protects the chlorambucil from activation in the solvent.

J.B.Parish

3324. IDENTIFICATION OF INHIBINE. THE ANTI-BACTERIAL FACTOR IN HONEY. AS HYDROGEN PEROXIDE AND ITS ORIGIN IN A HONEY GLUCOSE OXIDASE SYSTEM. J.W.White, jun.. M.H.Subers and A.L.Schepartz: *Biochim. biophys. Acta.* 1963. 73. 57-70 (Eastern Reg. Res. Lab., Philadelphia. Pa. U.S.A.) A glucose oxidase producing gluconic acid and H₂O₂ from glucose was demonstrated in honey.

Activity increased markedly on diln. of honey. Inhibine was shown to be H₂O₂, a direct relationship being shown between inhibine no. and H₂O₂ production. B.M.Stevens

3325. ACTINOMYCIN INHIBITION OF IN VITRO PROTEIN SYNTHESIS IN RAT LIVER. A.Korner and A.J.Munro: *Biochem. biophys. Res. Comm.* 1963. 11. 235-238 (Dept. Biochem., Univ. Cambridge. England)

The cell sap, ribosome and polysome fractions from liver cells of rats which have been treated with actinomycin each have a reduced efficacy in an in vitro system for protein synthesis. B.Ketterer

3326. SELECTIVE INHIBITION OF BIOSYNTHESIS OF RNA IN MAMMALIAN CELLS BY CHROMOMYCIN A3.

G.Wakisaka, H.Uchino, T.Nakamura, H.Sotobayashi, S.Shirakawa, A.Adachi and M.Sakurai: *Nature. Lond.* 1963. 198, 385-386 (Dept. Int. Med., Kyoto Univ. Japan) The incorporation of [14c]adenine into the RNA of rabbit bone marrow cells was significantly inhibited by 10 μ g./ml. chromomycin A3 while DNA synthesis was unaffected. Similar results were obtained with peripheral leukaemic human w.b.c. G.M.Lewis

3327. CYTOSTATIC EFFECTS OF NITROGEN CONTAINING PEROXIDES. G.Weitzel, F.Schneider.

H.Pfeil and K.Seynsche: *Hoppe-Seylers Z. physiol. Chem.* 1963. 331. 219-238 (Physiol. Chem. Inst. Univ., Tübingen, Germany) The prep. and reactivity (in vitro) of heterocyclic and urea substituted peroxides is described. Some symmetrically substituted peroxides inhibit mouse ascites carcinoma in vivo, with increase in survival time, and anaerobic glycolysis in vitro. In native ascites, the peroxides cause a decrease in the concn. of ATP and NAD but increase the nicotinamide concn. The behaviour of some carbohydrate phosphates is also discussed. (German) L.Cornish

3328. EFFECT OF 5-BIS-(2-CHLOROETHYL)-AMINO-URACIL ON METABOLISM OF AMINO ACIDS IN NORMAL AND PRECANCEROUS RAT LIVER.

W.T.Burke: *Proc. Soc. exp. Biol. N.Y.* 1962, 111. 811-813 (Dept. Biochem., West Virginia Univ. Med. Cen., Morgantown, W.Va., U.S.A.) Results suggest that 5-bis(2-chloroethyl)-aminouracil is capable of inhibiting acid-sol, liver protein synthesis in liver of normal rats or livers undergoing azo-dye carcinogenesis. M.M.Shapland

3329. EARLY TEST FOR POSSIBLE SKIN CARCINOGENS IN THE MOUSE: EFFECTS OF A BENZACRIDINE AND OF SOME TRICYCLO QUINAZOLINES. O.H.Iversen: *Nature. Lond.* 1963. 198. 400 (Inst. for gen. og ekspr. patol., Univ. i Oslo, Norway) The specificity of a

tetrazolium reduction method for the detection of compounds carcinogenic for mouse skin is confirmed by examination of 7,9-dimethyl-benz-(c)-acridine, tricyclo quinazolines and its 2-methyl and 3-methyl deriv.

G.M.Lewis

3330. AZO-DYE CARCINOGENESIS IN RAT LIVER: THE EFFECT OF 4-DIMETHYLAMINO-3'-METHYLAZO-BENZENE ON THE INCORPORATION OF [14C]LEUCINE INTO RAT-LIVER MICROSOMAL PROTEIN. A.O.Hawtr. V.Schirren and J.Dijkstra: *Biochem. J.* 1963. 88. 106 114 (Nat. Chem. Res. Lab., South African Council Sci and Ind. Res., Pretoria, S. Africa) The incorporation of [14c]leucine by a system consisting of washed microsomes plus pH 5 enzyme was studied after a single injn. of 4-dimethylamino-3'-methylazobenzene. Both the rate of incorporation by and the sp. activity of the microsomes increased after 20 hr., reaching a max. at 40 hr., and thereafter returning to normal. Incorporation into the microsomal protein of mitochondrial supernatants, on the other hand, showed considerable inhibn. of incorporation at 4 hr. with a return to normal after this time. The binding of the dye to microsomes, pH 5 enzyme and pH 5 supernatant was studied at different times after a single injn. of die carcinogen. Max. binding of all fractions occurred at 40 hr. An inhibitor of the incorporation of [14c]leucine was found in both the normal pH 5-supernatant and 'azo'-pH 5-supernatant fractions. *

CLINICAL BIOCHEMISTRY

3331. IMPROVED ISOLATION OF PURIFIED SIDERO-PHILIN FROM INDIVIDUAL SERA. A.L.Nagler.

S.Kochwa and L.R.Wasserman: *Proc. Soc. exp. Biol. N.Y.* 1962. 111. 746-749 (Dept. Haem., Mount Sinai Hosp., New York, U.S.A.) A method involving column chromatography on CM- and DEAE-cellulose is described for the isolation of over 95% of siderophilin from individual serum samples. The final product is contaminated with only small quantities of y-globulin. M.M.Shapland

3332. EVALUATION OF SERUM GLYCOPROTEINS IN THE DIFFERENTIAL DIAGNOSIS OF JAUNDICE.

R.Shields, R-A.McAlister and W.Burnett: *Scot. med. J.* 1963. 8. 185-196 (Univ. Dept. Surg., Western Infirmary, Glasgow, Scotland) The serum glycoprotein levels were estimated in 70 jaundiced patients and compared with blood donor controls. Total glycoprotein, seromucoid as a whole complex; seromucoid-bound carbohydrate; and seromucoid-bound tyrosine were all estimated. The last 2 are of most use in distinguishing hepatic and post-hepatic jaundice. A.M.Mackay

3333. STUDY OF HUMAN BLOOD LIPOPROTEINS BY AGAR-GEL ELECTROPHORESIS. L.LDelyamoure:

Vop. Med. Him. 1963. 9. 200-204 (Med. Service of Black Sea Fleet, Sebastopol, U.S.S.R.) Lipoprotein determination on agar-gel using pre-stained blood P_{Usm}* is described. Analysis of lipoprotein fractions of 300 case* revealed some individual variations possibly connected with the age of the donors. J.R.Sargent

3334. MEASUREMENT OF PLASMA-PROTEIN LOSS INT^o GASTROINTESTINAL TRACT USING 13H-LABELLED PROTEINS AND ORAL AMBERLITE RESIN. J.H.Jones

and D.B.Morgan: Lancet, 1963, i, 626-629 (Dept. JExp. Path., Univ. Birmingham, England) The salivary excretion of ^{131}I during observations on the turnover of [^{131}I]3-lipoprotein and albumin in normal subjects taking 'Amberlite' resin by mouth was sufficient to account for all the radioactivity measured in the faeces. The partition of ^{131}I excretion between stools and urine was the same after i.v. injn. of [^{131}T]p-lipoprotein, [^{131}I]albumin, and ^{131}I . The faecal excretion of ^{131}I in normal subjects tested in this way represents the dialysable radioactive products which are liberated during endogenous catabolism of the labelled protein and secreted in high concn. by the salivary glands, and probably by the stomach; normal exogenous catabolism is not measured.

G.H.Bell

³³35. DEMONSTRATION THAT R.B.C. SLOWING FACTOR FOUND IN CANCER SERUM BY MICROELECTROPHORESK IS AN (Xi) COMPONENT. A.Rottino, J_oAngers and A.Dool: Proc. Soc exp. Biol., N.Y., 1962, 111, 699-701 (Hodgkin's Dis. Res. Lab., St. Vincent's Hosp., New York, U.S.A.)

M.M.Shapland

³³36. METHOD FOR THE COLORIMETRIC DETERMINATION OF γ -GLUTAMYL TRANSPEPTIDASE IN HUMAN SERUM; ENZYMIC ACTIVITY IN HEALTH AND DISEASE. J.A.Goldberg, E.P.Pineda, E.E.Smith, O-M.Friedman and A.M.Rutenberg: Gastroenterology, 1963, 44, 127-133 (Surg. Res. Labs. of the Yamins Res. Lab., Beth Israel Hosp., Boston, Mass., U.S.A.) The reaction involved in the detection of γ -glutamyl transpeptidase is the liberation of aniline from the substrate (N -(DL- γ -glutamyl)aniline), then the subsequent diazotisation of the aniline. The product is estimated colorimetrically. γ -Glutamyl transpeptidase levels in various body fluids of diseased subjects were mostly in a similar range to that of the healthy subjects but in several cases the level was slightly higher. D.N.Wheatley

³³37. NON-SPECIFIC STREPTOLYSIN O INHIBITION IN DISEASES OF THE LIVER AND BILIARY SYSTEM. J-Ha Hen: Acta path. microbiol. scand., 1963, 57, 301-306 (Inst. Clin. Bact. Gen. Hosp. Malmo, Sweden) A non-sp. rise of titre is due mainly to higher concn. of the lipoproteins secondary to biliary stasis. L.Friedmann

³³38. FIBRINOLYSIN AND RELATED PLASMA ESTERASES IN PATIENTS WITH CIRRHOSIS. L.N.Pernokas and M.Brown: Gastroenterology, 1963, 44, 44-47 (Sears Surgical Labs., Boston City Hosp., Boston, Mass., U.S.A.) Fibrin, casein and esters of arginine and fibrin were used to study the esterases of plasma from patients. The plasma was activated by treating with streptokinase. It was found that there were lower levels of 'Pksmin' and plasminogen in these cases than in normal plasma. D.N.Wheatley

³³39. p- INHIBITION PHENOMENA IN FIBRIN FORMATION. Polf A'Syurin: Vop. Med. Him., 1963, 9, 167-172. After incubation of oxalated human plasma at 37° for 1 hr. there was an inhibition of fibrin formation after addition of fibrin or CaCl_2 was sometimes observed. Inhibition of fibrin formation may be due to spontaneous plasmin activation and antithrombin VI formation. Factors inhibiting fibrin formation may reflect to some degree state of protective anti-thrombotic mechanisms.

J.R.Sargent

³³40. CONVERSION OF LECITHIN TO LYSOLECITHIN AS A SOURCE OF FATTY ACIDS IN INCUBATED PLASMA OR SERUM. W.C.Vogel and L.Zieve: Proc. Soc. exp. Biol., N.Y., 1962, 111, 538-540 (Radioisotope Service, Minneapolis Veterans Hosp., Univ. Minnesota, Minneapolis, Minn., U.S.A.) Incubation of human serum or plasma at 38° for 4 hr. results in conversion of approx. 10% of lecithin to lysolecithin. No difference was found with serum from patients with acute pancreatitis or postheparin plasma. M.M.Shapland

³³41. THE EFFECT OF SERUM FROM PREGNANT AND NON-PREGNANT WOMEN ON UDP-GLUCURONIC ACID-TRANSFERASE AND ON THE α -AMINOPHENOL GLUCURONIDE FORMATION. M.Pulkkinen and L.Rauramo: Ann. Med., 1963, 41, 38-41 (Dept. Physiol., Univ. Turku, Finland) Female serum during menstrual cycle and pregnancy did not inhibit the guinea-pig liver enzyme or α -aminophenol glucuronide formation. G.Faulkner

³³42. RELATIONS BETWEEN SERUM ULTRAFILTRABLE CALCIUM, ACIDOSIS AND TETANIC SYMPTOMS IN URAEMIA. J.Harri, A.Kasanen and J.Pikk Arainen: Ann. Med., 1963, 41, 15-21 (Dept. Clin. Chem., Univ. Hospital, Turku, Finland) The relations between serum ultrafiltrable Ca [UFC], acid base balance and tetanic symptoms were studied in 14 patients with severe renal insufficiency and uraemia. 13 patients had metabolic acidosis and 7 had neurological symptoms. UFC was 2.75 mequiv./l. (range 1.95-3.15) and the % of total Ca which was ultrafiltrable Ca in [UF%] 69% (range 56-78%). The presence or absence of tetanic symptoms could not be related to increase UF% or uraemic acidosis. No definite correlation was found between UFC, tetanic symptoms and serum creatinine, K, P, and protein content. G.Faulkner

³³43. BIOLOGICAL HALF-LIFE OF VITAMIN B12 IN PLASMA. J.F.Adams: Nature. Lend., 1963, 198, 200 (Western Infirmary, Glasgow, Scotland) The biol. half-life in plasma of radioactive vit. B12 inj. into patients with pernicious anaemia was 5.14 days.

G.M.Lewis

³³44. IMPROVED TECHNIQUE OF α -AMINOBIPHENYL METHOD FOR DETERMINATION OF GLUCOSE IN SERUM. S.Shibata: Bull. Yamaguchi Med. Sch., 1962, 9, 13-17 (Dept. Clin. Pathol., Yamaguchi Med. Sch., Ube, Japan) In the improved method, a new colour reagent is used, which is a mixture of 880 ml. of 0.5 g. α -aminobiphenyl soln. and 120 ml. sat. aq. soln. of boric acid containing 360 mg. of NaF. 50 fil. blood serum is added to 5.0 ml. of the colour reagent, heated in a boiling water bath for 30 min., and the greenish colour thus developed in the soln. is compared in a photoelectric colorimeter. K.Jones

³³45. GLYCOLIPIDS OF HUMAN BLOOD SERUM. J.Polonovski and M.Petit: Bull. Soc. Chim. Biol., Paris, 1963, 45, 111-116 (Lab. Chim. Biol. Fac. de Med., Paris, France) Several glycolipids of plasma were separated by silicic acid column chromatography. Cerebromonosides represented 10-25% of total glycolipids. Some minor fractions containing galactolipids were obtained. The variations of glycolipids in Gaudier's, Tay Sachs and certain other diseases were determined.

(French) J.C.Crawhall

³³46. ESTIMATION OF CHOLESTEROL IN SFCVUM. H.H.Leffler and C.H.McDougald: Amer. J. Clin. Path., 1963, 39, 311-315 (1515U Street, N.W..)

BIOCHEMISTRY

Washington, D.C., U.S.A.) Serum proteins are pptd. and cholesterol extracted with isopropanol. Colour is developed with FeCl₃. Free cholesterol is similarly estimated after pptn. with digitonin and acetone.

B.A.Woodger

3347. IDENTIFICATION OF PHOSPHOLIPIDS IN HUMAN THROMBOCYTES AND ERYTHROCYTES. R. Bloomstrand, F.Nakayama and L.M.Nilsson: J. Lab. clin. Med., 1962, 59, 771-778 (Dept. Int. Med., Univ. Lund, Sweden) Using neutron activation paper chromatographic analysis of the phospholipids in human thrombocytes and r.b.c. and comparing them with those in human plasma and liver; lecithin, phosphatidyl-ethanolamine, phosphatidylserine, phosphoinositide choline plasmalogen, ethanolamine plasmalogen and sphingomyelin were found in human thrombocytes and with the exception of ethanolamine plasmalogen all these were found in r.b.c. Relatively more phosphatidyl serine was found in human r.b.c. than thrombocytes.

C.Toothill

3348. CONCENTRATION OF GALACTOSE BY LEUCOCYTES. N.Kalant and R.Schuchen: Canad. J. Biochem., 1963, 41, 849-858 (Res. Lab., Jewish Gen. Hosp., Montreal, Quebec, Canada)

The uptake of [14C]-galactose was studied by incubating human w.b.c. for 30 min. at 37° in plasma followed by separation of the cells by centrifugation, breaking up of the cells by freezing and thawing and measurement and identification of radioactive material by paper chromatography. W.b.c. took up galactose so that the concn. inside the cells was 3-6 times greater than that in the plasma. This accumulation of galactose was not impaired in diabetes nor affected by insulin, and was increased by iodoacetate. Conversion of galactose to galactose 1-PO₄, UDP-galactose and other compounds occurred on incubation.

J.B.Parish

3349. VARIATION OF THE CONCENTRATION OF -SH GROUPS IN HUMAN ERYTHROCYTES INCUBATED WITH GLUCOSE OR INOSINE. AND VARIATION WITH AGE AND SEX. A.Bertolini, F.Quarto di Palo and H.Spinnelli Atti. Acad. med., Lombarda, 1962, 17, 127-130 (1st. Patol. speciale med., Univ. Milano, Italy)

The amount of reduced glutathione present in r.b.c. after incubation in buffer at 37° for 24 hr. with and without added inosine or glucose, was tested in cells taken from 39 young people < 30 yr. old and 70 old people > 70 yr. old. In the r.b.c. from old people, there was a greater loss of reduced glutathione than in the cells from young people and this loss was only partially corrected by glucose and not modified at all by inosine. (Italian) G.N. Godson

3350. HEXOKINASE AND NADP-DEPENDENT DEHYDROGENASE OF LEUCOCYTES IN LEUKAEMIA AND OTHER HAEMATOLOGICAL DISORDERS. G.Ghiotto, G.Perona, G.De Sandre and S.Cortesi: Brit. J. Haemat., 1963, 9, 345-350 (Inst. di Patalogia Med. dell'Univ. di Padova, Italy)

Hexokinase, glucose 6-PO₄ dehydrogenase, 6-phosphogluconic dehydrogenase and isocitric dehydrogenase activities were measured in w.b.c. from 68 patients with haematol. disorders (leukaemia, Hodgkin's disease, osteosclerotic anaemia). Dehydrogenase activity was greater in granulocytes than w.b.c., and greater in mature than immature cells. When the w.b.c. composition was noticeably changed the activity was decreased markedly. These results show a great contrast with neoplastic tissue where NAD-dependent dehydrogenases are very active.

J.Sneath

3351. STRUCTURE AND OXIDATIVE METABOLISM OF THE GRANULAR FRACTION ISOLATED FROM HUMAN BLOOD PLATELETS. N.B.Chernyak and A.A.Shozkaya: Vop. Med. Him., 1963, 9, 146-154 (Lab. Biochem. and Cytol., Central Inst. Haematol. and Blood Transfusion, Ministry of Public Hlth. of U.S.S.R., Moscow. U.S.S.R.) Small quantities of mitochondria were present in the granular fraction from human platelets. These mitochondria were relatively small and contained 1-2 cristae. Addition of hexokinase increased O₂ uptake by these mitochondria in the presence of succinate or CX-oxoglutarate. Oxidative phosphorylation was not detected in the presence of succinate and a-oxoglutarate.

J.R.Sargent

3352. ROLE OF THE PENTOSE PHOSPHATE PATHWAY IN THE REGULATION OF METHAEMOGLOBINAEMIA. J.D.Harley and H.Robin: Nature, Lond., 1963, 198, 397-398 (Children's Med. Res. Found., Royal Alexandra Hosp. Children, Camperdown, Sydney, Australia)

Aromatic agents were found to vary widely in their ability to enhance the production and reduction of metHb; compounds such as phenylhydrazine act on a stoicheiometric basis, others like naphthoquinones exert a catalytic effect. MetHb reduction in glucose 6-PO₄ dehydrogenase-deficient r.b.c. is not stim. by aromatic compounds, indicating that it is the NADPH₂-dependent pathway which plays the major part in metHb reduction.

G.M.Lewis

3353. METABOLISM OF FOLIC ACID IN PERNICIOUS ANAEMIA [PA]. A.H.Waters and D.L.Mollin: Brit. J. Haemat., 1963, 9, 319-327 (Dept. Haemat., Postgrad Med. Sch., London, England)

90 normal subjects and 107 patients with PA were studied. Their serum level of folic-acid-like material were measured by growth of Lactobacillus casei and the B12 concn. assayed with Euglena gracilis strain z. PA patients showed an accumulation of folic-acid-like material in the serum which was reduced after injn. of vit. B12. The metabolic relationship between enzyme systems in the pathogenesis of megaloblastic haemopoiesis is discussed.

J.Sneath

3354. BLOOD FOLIC ACID AND VITAMIN B12 ACTIVITIES IN HEALTHY INFANTS WITH NUTRITIONAL ANAEMIAS. G.Kende, B.Ramot and N.Grossowicz: Brit. J. Haemat., 1963, 9, 328-335 (Dept. Haemat.* Tel-Hashomer Government Hosp., Jerusalem, Israel)

Lactobacillus casei assay of folic acid activity in 89 healthy infants was 86*8 ±39*6 mjng./ml. Megaloblastic anaemia of infancy showed lower levels (17*5 ±12*4 mfig./ml.) as did the macrocytic non-megaloblastic anaemia group who showed decreased serum Fe and often low serum B12 levels also. 'Healthy*' infants with low-income backgrounds showed a decreased activity (46*6 ±38 mjig./ml.). The clinical response to folic acid was dramatic although the haematol. response was slower and often incomplete. r^ee therapy was often needed too.

J.Sneath

3355. UROCANIC ACID AND FORMIMINO-GLUTAMIC ACID EXCRETION IN MEGALOBLASTIC ANAEMIA AND OTHER CONDITIONS: EFFECT OF SPECIFIC THERAPY. L.Chanarin: Brit. J. Haemat., 1963, 9, 141-157 (M.R.C. Expt. Haemat. Res. Unit, Wright-Fleming Inst. Microbiol., St. Mary's Hosp. Med. Sci-t London, England)

15 g. histidine was administered orally to 24 patients (11 with megaloblastic anaemia due to vit. B12 deficiency, 8 with megaloblastic anaemia requiring folic acid and in 5 the haemopoiesis was

normoblastic). Changes in urinary excretion of histidine deriv* were studied. The normal excretion of histidine deriv. was effectively restored in most patients with B12 deficiency by vit. B12 and folic acid. Methionine produced a sharp fall in the excretion of abnormal products but the effect was transient. One patient excreted large amounts of formimino-glutamic and urocanic acids despite large doses of vit. B12 and folic acid. Folic acid therapy in patients with normal B12 serum levels usually stopped the excretion of abnormal histidine deriv. but again a few patients were resistant to this therapy.

J.Sneath

3356. NORMAL FORMIMINOGLUTAMIC ACID [FGA] EXCRETION IN MEALOBLASTIC ANAEMIA IN PREGNANCY. STUDIES ON HISTIDINE METABOLISM IN PREGNANCY. L.Chanarin, D.Rothman and E.J. Watson-Williams: Lancet, 1963, i, 1068-1072 (St. Mary's Hosp. Med. Sch., London, England) The urinary excretion of FGA used as a test for folic-acid deficiency was within the normal range in 7 of 15 Patients with megaloblastic anaemia of pregnancy studied in London, and in 5 of 26 patients studied in India. Observations on the utilisation of histidine - the precursor substance of FGA - in pregnancy showed that the amino acid was absorbed more slowly from the gut and that an average of 20% of the oral dose of histidine was lost in the urine. It was suggested that failure to excrete abnormal amounts of FGA in the urine in megaloblastic anaemia of pregnancy was due to these alterations in histidine metabolism, as well as to increased utilisation of the amino acid for protein synthesis; and that the excretion of this metabolite was an unsatisfactory test for interference with folic acid function in pregnancy.

G.H.Bell

3357. FOLIC-ACID DEFICIENCY IN PATIENTS WITH SKIN DISEASE. J.P.Knowles, S.Shuster and G.C.Wells: Lancet, 1963, i, 1138-1139 (Univ. Coll. Hosp., London, England) About a third of a group of Patients with various dermatoses had an abnormally increased urinary excretion of formiminoglutamic acid after oral histidine load. This was corrected by satn. with IOUN acid. This deficiency of folic acid was not associated with intestinal malabsorption, and appears to have been due to the skin disease.

G.H.Bell

3358. STARCH GEL ELECTROPHORESIS OF CEREBRO-SPINAL FLUID IN THE DIAGNOSIS OF INTRACRANIAL TUMOURS. Y.Manuel and J.De Rougemont: C.R. Soc. Biol., Paris, 1962, 156, 1859-1862
aiJ^ttitut Pasteur, Lyon, France) Starch gel electrophoresis of 20 ml. c.s.f. from 190 subjects showed the presence of 0-lipoproteins in the fluid of 19 subjects. These possessed intracranial tumours when examined (French) M.A.Price

3359. PROTEINS, LIPO- AND GLYCOPROTEINS OF CEREBROSPINAL FLUID IN HYDROCEPHALUS. R.P-Ushakova and A.Yu.Makarov: Vop. Med. Him., 1963, 9, 172-177 (State Res. Inst. for Psychoneurology, Cerigrad, U.S.S.R.) Of 87 patients with hydrocephalus normal protein levels were found in ventricular fluid. In 49 Patients and in lumbar fluid in 57 patients. Protein levels occurred in ventricular fluid in 3 patients and in lumbar fluid in 5 Patients. The normal was protein levels in ventricular and lumbar fluid present in only 26% of patients studied. Certain patients had increased y-globulin and 6-lipoprotein. Protein in c.s.f. No changes were encountered in glycoprotein levels in c.s.f.

J.R.Sargent

3360. USE OF PERIODATE OXIDATION IN THE CLINICAL ANALYSIS OF URINE CORTICOIDS.

H. Wilson and M.B.Lipsett: Analyt. Biochem., 1963, 5, 217-225 (Endocrinol. Branch, Nat. Cancer Inst., Bethesda, Md., U.S.A.) Reduction of 17-hydroxysteroids with K borohydride is followed by oxidation with Na metaperiodate, extraction with ether and estimation by the Zimmerman reaction. The advantages of the method are greater specificity of the oxidant, avoidance of hot acid hydrolysis, technical simplicity and removal of interfering chromogens from the final Zimmerman colour.

A. D. Smith

3361. EXCRETION OF p-AMINOISOBUTYRIC ACID BY MAN.

M.D.Armstrong, K.Yates, Y.Kakimoto, K.Taniguchi and T.Kappe: J. biol. Chem., 1963, 238, 1447-1455 (Fels Res. Inst., Yellow Springs, Ohio, U.S.A.) The inability to metabolise further

3-aminoisobutyric acid [AIBA] is responsible for the greatly increased excretion of this amino acid by Orientals who have this characteristic as a genetically determined trait. The oriental excretor of AIBA normally excretes it by an active tubular process. This is an adaptive trait that non-excretors develop rapidly after they ingest AIBA. The unnatural or L(+) isomer is destroyed more rapidly, and by a different enzyme, than the natural D(-) isomer, which is an intermediate in thymine catabolism, and the L(+) isomer is treated by the kidney in a different manner from the natural isomer. Human beings have only a limited ability to destroy AIBA. Occurrence of this amino acid in the urine of genetic non-excretors who do not have excessive tissue destruction may be due to impairment of liver function.

J.N.Ashley

3362. APPEARANCE OF 6-HYDROYSKATOLE SULPHATE IN THE URINE OF PATIENTS WITH INTERNAL DISEASES.

M.Oka and V.V.E.Leppanen: Ann. Med. exp. Fenn., 1963, 41, 1-6 (Med. Dept., Central Hosp., Kuopio, Finland) Urines of 338 patients with various internal diseases and 29 normal controls were studied for presence of 6-hydroxyskatole sulphate. A compound with similar paper chromatographic and staining prop, to 6-hydroxyskatole sulphate was detected in 19*2% of cases with internal diseases and 24*1% controls. Based on the findings that about 1/5th of the non-psychotic persons excreted 6-hydroxyskatole sulphate in their urine it was concluded that this was neither pathogenic in schizophrenia nor has psychotogenic activity.

G.Faulkner

3363. ORGANIC PHOSPHATE CONSTITUENTS OF URINE.

M.CBoissy-Colas: C.R. Soc. Biol., Paris, 1962, 156, 1776-1778 (Lab. Chim. biol.. Fac.

Pharmacie, Paris, France) Chromatographic and electrophoretic separation of human urine showed the presence of glucose I-PO₄. Inositol was also present. The urine of a woman in pregnancy contained glucose 6-PO₄. No phosphate esters of pentose or fructose were found in urine.

(French) M.A.Price

3364. ABNORMAL EXCRETION OF URINARY STEROIDS BY WOMEN WITH EARLY BREAST CANCER.

R.D.Bulbrook, J.L.Hayward, C.C.Spicer and B.S.Thomas: Lancet, 1962, ii, 1238-1240 (Breast Clinic, Guy's Hosp., London, England) Over half the patients with early breast cancer excrete subnormal amounts of 11-deoxy 17-oxosteroids and have neg. discriminants, which is characteristic of patients with advanced disease who fail to respond to adrenalectomy or hypophysectomy. The other patients have normal levels of 11-deoxy 17-oxo-

BIOCHEMISTRY

steroids and pos. discriminants characteristic of patients with advanced disease who do not respond to endocrine ablation. This may mean that response to these operations is predictable at a very early stage in breast cancer. It is also suggested that these abnormalities may precede the clinical appearance of the disease. G.H.Bell

3365. DEHYDROGENASE ACTIVITY IN REACTIVE AND NEOPLASTIC ASTROCYTES. B.Smith: *Brain*, 1963, 86, 89-94 (Maida Vale Hosp. for Nervous Dis., London, England)

The activity of the diaphorases and some dehydrogenases was high in the human reactive astrocyte. In astrocytoma cells NAD diaphorase activity was much lower than has been found in somatic tumours, but except in the most malignant tumours, occasional cells had an unusually high activity different from the whole tumour. R-H.Kimberlin

3366. DETECTION OF N-ACETYL-DOPAMINE IN A CASE OF PHAEOCHROMOCYTOMA [TUMOUR OF ADRENAL MARROW]. C.E.Sekeris and P.Herrlich: *Hoppe-Seylers Z. physiol. Chem.*, 1963, 331, 289-291 (Physiol-Chem. Inst. Univ., Munich, Germany)

After a lengthy separation procedure of the patient's urine, noradrenaline, dopamine and N-acetyl-dopamine were isolated and identified. This appears to be the first report of an acetylated catecholamine metabolite in man. I.Cornish

3367. ANALYSIS OF LIPIDS FROM OVARIAN FLUID TUMOURS. K.Soiva and O.Castren: *Ann. Med. exp. Fenn.*, 1963, 41, 41-45 (Dept. Obstet. Gyne., Univ. Turku, Finland)

Lipids of 6 ovarian tumours were determined using thin layer chromatography and gas chromatography. Total lipid content varied from 44*5 to 100 mg./100 ml. except in dermoid cyst where the content was 80790 mg./100 ml. All the samples contained free cholesterol, triglycerides and sterol esters. Differences in fatty acid composition of the samples were qual. not very great, but quant. the variations in concn. were marked. These microanalytical methods may be used also for the analysis of steroid hormones in biol. materials. G.Faulkner

3368. EFFECTS OF LOW-CARBOHYDRATE DIET AND DIABETES MELLITUS ON PLASMA CONCENTRATIONS OF GLUCOSE, NON-ESTERIFIED FATTY ACID, AND INSULIN DURING ORAL GLUCOSE-TOLERANCE TESTS. C.N.Hales and P.J.Randle: *Lancet*, 1963, i, 790-794 (Dept. Biochem., Univ. Cambridge, England)

The effects of low carbohydrate diet and diabetes mellitus on the plasma concn. of glucose, non-esterified fatty acid, and insulin during oral glucose-tolerance tests have been studied. Normal people on a low-carbohydrate diet, and diabetics, show antagonism not only to the hypoglycaemic action of insulin but also to the important action of insulin in suppressing release of non-esterified fatty acids. The abnormalities of carbohydrate metabolism, (including insensitivity to insulin) which occur in these 2 conditions are considered to be due to release of more fatty acids for oxidation. G.H.Bell

3369. GLUCOSE FATTY-ACID CYCLE. ITS ROLE IN INSULIN SENSITIVITY AND THE METABOLIC DISTURBANCES OF DIABETES MELLITUS. P.J.Randle, P. B. Garland, C.N.Hales and E.A.Newsholme: *Lancet*, 1963, i, 785-789 (Dept. Biochem., Univ. Cambridge, England)

A higher rate of release of fatty acids and ketone bodies for oxidation is responsible for abnormalities

of carbohydrate metabolism in muscle to diabetes, starvation, and carbohydrate deprivation, and in animals treated with, or exhibiting hypersecretion of, growth hormone or corticosteroids. The interactions between glucose and fatty-acid metabolism in muscle and adipose tissue take the form of a cycle, the glucose fatty-acid cycle, which is fundamental to the control of blood-glucose and fatty* acid concn. and insulin sensitivity. G.H.Bell

3370. EFFECTS OF SIALIDASE ON PSEUDOCHOLIN-ESTERASE TYPES. D.J.Ecobichon and W.Kalow: *Canad. J. Biochem.*, 1963, 41, 969-974 (Dept. Pharmacol., Univ. Toronto, Ontario, Canada)

Sera from 11 persons were collected, 3 were characterised by high, 3 by intermediate and 3 by low dibucaine no. with corresponding fluoride no., and 2 sera of high dibucaine no. and low fluoride no., with respect to the % inhibn. of cholinesterase by dibucaine and fluoride. These enzymes were treated with sialidase and incubated at 37° for 48 hr. This did not affect the kinetic prop. of the enzymes but greatly affected their electrophoretic mobility on starch gel, the enzymes migrating towards the cathode instead of the anode. There were no differences in migration between the pseudocholinesterase types whether treated or not. J.B. Paris*

3371. RECESSIVE CONGENITAL METHAEMOGLOBIN-AEMIA. M.Lamy, J.Frezal, M-L.Jammet and N.Josso: *Nouv. Rev. franc. Hgmat.*, 1963, 3, 105-120 (ClinM de Génétique Médical, Hôpital des Enfants malades, Paris, France)

Three cases are described. MetHb h (max. absorption bands at 500 and 632 mp) levels ranged from 20-40% of the total Hb. Possible errors in the metabolic pathways of reducing metHb, which use either NADH₂ and diaphorase, or NADPH₂ and metHb-reducta* are discussed. Cases of the described type are due to a deficiency of diaphorase. The dissociation curve of oxyHb is normal. (French) V.Eisen

3372. BIOCHEMICAL IDENTIFICATION OF THE CARRIER STATE IN TAY-SACH'S DISEASE.

S.M.Aronson, G.Perle, A.Saifer and B.W.Volk: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111, 664-667 (Isaac Albert Res. Inst., Jewish Chron. Dis. Hosp., Brooklyn*, N.Y., U.S.A.)

The absence of fructose 1-PO₄ aldolase was observed in the sera of children with Tay-Sach's disease. The enzyme was absent from the sera of parents and some of the relatives. The incidence of this state diminished with the remoteness of relationship to the affected child in approx. accordance with Mendelian ratios. M.M.Shapland

3373. BIOCHEMICAL REACTIONS OF COPPER WITHIN NEURAL MITOCHONDRIA WITH CONSIDERATION & ROLE OF THE METAL IN THE PATHOGENESIS OF WILSON'S DISEASE. F.S.Vogel and L.Kemper: *Lab-Invest.*, 1963, 12, 171-179 (Pathol. Dept., Duke Univ., Med. Cent., Durham, N.C., U.S.A.)

^{Natural} mitochondrial respiration in manometric chambers is markedly accelerated by minute quantities of Cu. The metal shows a marked toxicity for the electron transit system and oxidative phosphorylation and is chelated w succinate. These reactions show considerable spp. differences. A.M.Mackay

3374. SCINTILLOGRAM OF THE HUMAN SPLEEN, USING RED CELLS MARKED WITH CHROMIUM-51.

F.Spinelli Ressi and G.Luzzatti: *Atti. Acad. med. Lombarda*, 1962, 17, 130-132 (Ist. Radiol., Ospedale

Maggiore di MUano, Italy) A method of locating the spleen in human subjects is described. Human r.b.c., sensitive to anti-Rh₀ Ab or heat treated by warming at 50° for 20-30 min. were labelled with ⁵¹Cr, and then ³H i.v. into the patient. After 1 hr. the radioactivity could be localised by scintillation scanning. This method could reveal splenomegaly caused by chronic myeloid leukaemia and other abnormal spleen conditions.

(Italian) G.N. Godson

3375. METHOD FOR LIPASE DETERMINATION IN PANCREATIC JUICE AND DUODENAL CONTENTS. G.K.Shygin, L.S.Formina and Z.M.Pavlova: Vop. Med. Him., 1963, 9, 197-200 (Lab. Physiol. of Digestion, Inst. Nutr., Acad. Med. Sci. of U.S.S.R., Moscow, U.S.S.R.) Lipase was determined with triolein as substrate in the presence of gelatin and borate buffer pH 8*5. The min. amount of lipase necessary to cause a shift in pH to 6*8 (Neutral Red) was determined by serial diln. J.R.Sargent

3376. SECRETION OF PROTEOLYTIC ENZYMES IN GASTRIC JUICE IN DIFFERENT DISEASES. A.A.Pokrovsky and L.M.Bogdanova: Vop. Med. Him., 1963, 9, 217-218 (Acad. Med. ScL, Moscow, U.S.S.R.) (Russian) J.R.Sargent

3377. HUMAN INTESTINAL DISACCHARIDASES AND HEREDITARY DISACCHARIDE INTOLERANCE. HYDROLYSIS OF SUCROSE, ISOMALTOSA, PALATINOSA (ISOMALTULOSE) AND 1,6-a-OLIGOSACCHARIDE (ISOMALTO-OLIGOSACCHARIDE) PREPARATION. A.Dahlqvist, S.Auricchio, G.Semenza and A.Prader: J; clin. Invest., 1963, 42, 556-562 (Dept. Physiol. Chem., Univ. Lund, Sweden) The isomaltase and lactose activities were independent of each other, as shown by heat inactivation and mixed-substrate incubation expt. Isomaltase was responsible for the hydrolysis of Palatinose and the 1,6-d-oligosaccharide prep. The variants with hereditary intolerance for sucrose and isomaltose are thought to lack 2 enzymes. K.Jones

3378. IN VITRO BIOSYNTHESIS OF 17e-[4-14C]-OESTRADIOL BY SURVIVING NORMAL AND STEIN-LEVENTHAL-TYPE OVARIAN SLICES. A.Chapdelaine, T-Sandor and A.Lanthier: Canad. J. Biochem., 1963, 41, 635-647 (Laboratoire d'Endocrinologie, Hôpital Sainte-Étienne, Montréal, Quebec, Canada) The biotransformation of [4-14C]androstenedione, [4-14C]testosterone and t4-14c]dehydroepiandrosterone by surviving normal and Stein-Leventhal-type ovarian slices was investigated by incubating the slices in a Krebs-Ringer-phosphate-glucose medium of pH 7*4 in O₂ at 37° for 6 and 24 hr. As a cofactor 1000 I.U. of HCG was added to each vessel. Both normal and polymicrocystic 17R-α slices transformed the precursors partially to 17R-β-oestradiol which was identified by isotopic diln. There was no difference in the aromatization capacity of the 2 kinds of tissue. J.B.Parish

3379. TERMINATION OF HISTIDINE CX-DEAMINASE IN STRATUM CORNEUM AND ITS ABSENCE IN HISTIDINAEMIA. V.G.Zannoni and B.N.La Du: R. Metab. Dis., 1963, 88, 160-162 (Nat. Inst. Arthritis and Urology, Md., U.S.A.) A sensitive spectrophotometric assay for histidine-a-deaminase activity in the normal stratum corneum of normal human skin is described. The stratum corneum lacks urocanase activity.

The skin of 2 sibs with histidinaemia does not contain any detectable histidine-a-deaminase activity of measurable urocanic acid. This lack of histidine-a-deaminase activity would appear to be the biochem. abnormality responsible for histidinaemia. *

3380. RELATIONSHIP OF FLUORIDE AND IODINE IN DRINKING WATER IN OCCURRENCE OF GOITRE.

I.Gedalia and N.Brand: Arch. int. Pharmacodyn., 1963, 142, 312-315 (Dept. Preventive Med., Hebrew Univ.-Hadassah Med. Sch., Jerusalem, Israel)

2685 girls were examined for goitre in areas where drinking water contained widely differing I and F" concn. Low I was associated with a high goitre incidence. Where I was adequate, high F" concn. had no effect on thyroid function.

T. Sullivan

3381. ESTIMATION OF OESTROGENS IN THE UTERINE MUCOSA. ROLE OF THE ENDOMETRIUM IN THE BIOSYNTHESIS OF OESTRIOL.

L.Cedard, A.Granjon and J.Varangot: C.R. Soc. Biol., Paris, 1962, 156, 1764-1766 (Maternité de Port-Royal, Paris, France)

The uterine mucosa of human subjects during the follicular phase contained 81*4 fig. oestrogens/100 g. and 260 fig./100 g. during the luteal phase. The % of oestriol was 61% in the follicular phase and 88% during the luteal phase. Oestriol was present in uterus of women after menopause.

(French) M. A. Price

3382. SIGNIFICANCE OF ALTERATIONS OF ENZYME ACTIVITY IN PATHOGENESIS.

K.A.Korovnikov: Vop. Med. Him., 1963, 9, 137-142 (Chair Pathophysiol., State Med* Sch., Kalinin, Russia)

Histamine levels in muscles during intensive work and/or moderate cooling decreased significantly. At the same time histamine level in blood was unchanged. Histamine activity in blood increased slightly. After more prolonged and intensive stresses histamine levels in muscle decreased even more noticeably. Blood histamine level increased without any adequate change in histamine activity.

J.R.Sargent

3383. RETICULIN CONTENT OF BONE MARROW IN HAEMATOLOGICAL DISORDERS.

J.Burston and J.L. Pinniger: Brit. J. Haemat., 1963, 9, 172-184 (Dept. Path. and Louis Jenner Lab., St. Thomas's Hosp., London* England)

The reticulin content in these disorders may be normal, subnormal or increased. In the last case the increased content may be of 2 kinds: either an increase in the normal pattern, usually correlated with bulk or activity of haemopoietic tissue, or else distinctly abnormal. Myelofibrosis was the syndrome usually associated with the abnormal pattern which was sometimes found in cases of chronic myeloid leukaemia and multiple myeloma. It was nearly always associated with increased fibroblastic-cell activity. No precipitating factors could be found in the production of the abnormal pattern.

J*Sneath

3384. DIET, SERUM CHOLESTEROL, PROTEIN, Hb AND GLYCOSURIA IN W. INDIAN COMMUNITY.

(St. Kitts, W.I.) K.L.Stuart, R-E.Schneekloth, L.A.Lewis, F.E.Moore and A.C.Corcoran: Brit. med. J., 1962, ii, 1285-1288 (Univ. Coll. W. Indies, Jamaica)

Diets of negro labourers and their families are low in cal., protein and fat. Serum cholesterol concn. is lower in men than in women of like age and there is no menopausal rise in serum cholesterol or serum lipoprotein. Total serum protein concn. is higher than in N. Americans due to high y-globulin concn. and Hb concn. is lower, possibly due to slightly inadequate dietary protein. Glycosuria is present

BIOCHEMISTRY

in 14/1000 at ages 20-49 yr. Ischaemic heart disease attributable to atherosclerosis or thrombosis occurred in 1% of men aged 40-49 and women aged 45-49 yr. Data confirm concurrence of low subsistence diets, largely vegetable, and of hard work, with low incidence of ischaemic heart disease.

M.E.Nutt

3385. VEGANISM: A CLINICAL SURVEY WITH OBSERVATIONS ON BI₁₂ METABOLISM. A.D.M.Smith: Brit. med. J., 1962, i, 1655-1658 (Middlesex Hosp. Med. Sch., London, England) A clinical investigation and study of vit. B₁₂ metabolism in 12 Vegans suggests that their comparative freedom from signs and symptoms of abnormality in the c.n.s. depends on most of the low serum B₁₂ being in the -OH form. Veganism and tobacco amblyopia are compared and discussed in relation to CN" metabolism and the intervention of endogenous and exogenous factors producing subsequent demyelination. E.g. suggest that this type of diet may produce occult damage to the c.n.s. in spite of clinical normality.

M.E.Nutt

3386. FAST-NEUTRON SOURCE FOR RADIOTHERAPY. P.D.Lomer and D.Greene: Nature, Lond., 1963, 198, 200-201 (Services Electronics Res. Lab., Baldock, Herts., England).

G.M.Lewis

BIOCHEMISTRY OF MICRO-ORGANISMS

(See also Microbiology)

3387. MODE OF ACTION OF COLICIN F. B.L.Reynolds and P.R.Reeves: Biochem. biophys. Res. Comm., 1963, 11, 140-145 (Dept. Microbiol., Univ. Adelaide, S. Australia) Expt. with the system colicin F and *E. coli* 58161 show that the lethal action of colicin on growing cells can be reversed if cells are exposed to trypsin within a few min. after contact with the colicin, that colicin is not lethal to cells in which metabolic activity has been inhib. for at least 2 hr. after its absorption and that colicin does not immediately inhibit protein synthesis.

B. Ketterer

3388. PHOSPHORUS METABOLISM IN VIRAL-INDUCED NEOPLASIA. I. STRAINS OF MICE SUSCEPTIBLE TO MAMMARY TUMOUR VIRUS. R.F.McGregor and W.E. Cornatzer: Canad. J. Biochem., 1963, 41, 985-991 (Dept. Biochem., Univ. N. Dakota Sch. Med., Grand Forks, N.Dak., U.S.A.) Two strains of ? mice, susceptible to mammary cancer produced by the mammary tumour virus, were studied i.e. strain A and strain BALB/c high and low cancer strains respectively. 32p was inj. i.p. at 24, 31, 64 days of age and 10 months and older when mammary tumours developed. Chem. and radioactivity measurements of labelled phospholipids, nucleic acids and phosphoproteins in liver, kidney, spleen and mammary tissue showed uniform patterns of P metabolism in non target organs.

J.B.Parish

3389. REGULATORY MECHANISM OF SYNTHESIS OF EARLY ENZYME INDUCED BY BACTERIOPHAGE T4. M.Kozaka, K.Matsubara and Y.Takagi: Biochem. biophys. Res. Comm., 1963, 11, 244-248 (Dept. Biochem., Med. Sch., Kanazawa Univ., Kanazawa, Ishikawa, Japan) Synthesis of deoxy-CTPase activity

normally stops 15 min. after infection frith phage T4, but continues with u.v. irradiated phage. When non-irradiate* and irradiated phage are introduced simult. the u.v. irradiated phage was dominant in this effect.

B. Ketterer

3390. INHIBITORY EFFECTS OF PUROMYCIN AND FLUOROPHENYLALANINE ON INDUCTION OF THYMIDINE KINASE BY VACCINIA INFECTED L-CELLS. S.Kit, D.R.Dubbs and L.J.Pierkski: Biochem. biophys. Res. Comm., 1963, 11, 176-181 (Div. Biochem. Viro. Baylor Univ. Coll. Med., Houston, Tex., U.S.A.)

Expt. with fluorophenylalanine and puromycin support the thesis that the thymidine kinase induced in this system is synthesised de novo.

B. Ketterer

3391. ASSAY OF INFECTIOUS RNA FROM BACTERIOPHAGE R17. W.Paranchych: Biochem. biophys. Res. Comm., 1963, 11, 26-33 (Wistar Inst., Philadelphia! Pa., U.S.A.) Bacterial protoplasts have been shown to be susceptible to infection by RNA from phage R17 and therefore suitable for its assay. The infectivity yield was much increased in the presence of a suitable concn. of protamine sulphate.

B. Ketterer

3392. INDUCTION OF DEOXYCYTIDYLIC ACID KINASE ACTIVITY BY DINUCLEOTIDE FRACTION DERIVED FROM ENZYMIC DNA DIGEST IN PNEUMOCOCCI. W.Firschein: Biochem. biophys. Res. Comm., 1963, 1¹ 187-194 (Dept. Biol.. Wesleyan Univ., Middletown, Conn., U.S.A.) A fraction from an enzymic DNA digest consisting primarily of dinucleotides selectively stim. DNA synthesis in virulent, but not avirulent, *Pneumococci*. This effect was associated with an increase in deoxycytidylic acid kinase activity. The other 3 deoxy nucleotide kinases were not affected.

B.Ketterer

3393. RELATIONSHIP BETWEEN DNA SYNTHESIS AND CONJUGATION IN *E. COLI*. N.Bouck and E.A.Adef*¹: Biochem. biophys. Res. Comm., 1963, 11, 24-27 (Dept. Microbiol., Yale Univ., New Haven, Conn-i U.S.A.) The effect of phenethyl alcohol, a sp. inhibitor of DNA synthesis on recombinant formation in *E. coli* is described and its implications discussed.

B. Ketterer

3394. REPRESSION OF VALINE-ISOLEUCINE PATHWAY IN SALMONELLA. F.B.Armstrong and R.P. Wagner: Proc. nat. Acad. Sci., Wash., 1963, 49, 628-633 (Dept. Genetics, North Carolina State Coll., Raleigh, N.C., U.S.A.) Continued investigations of the a repression of the pathway for the synthesis of valine, ^{redund} isoleucine in wild-type *S. typhimurium* show that ^h line, a precursor of isoleucine, is required in addition to va isoleucine, and leucine to repress maximally the reduce isomerase (1 of the 2 repressible enzymes). Available evidence emphasises the unusual complexities associated with the regulatory mechanisms of the pathway. Several features of the repression phenomenon are discussed.

j.R.Sargent

3395. REPRESSION OF INDUCIBLE TARTRATE DEHYDRATASES IN PSEUDOMONAS STRAINS. R-P. 413-berger and M.Shilo: J. gen. Microbiol., 1963, 31, prew 420 (Lab. Microbiol. Chem.. Dept. Biochem.. Heh Univ.-Hadassah Med. Sch., Jerusalem, Israel) ^{ife} effect of various growth substances on the synthesis 01 ^{win} 3 inducible stereosp. tartrate dehydratases was followed strains of *Pseudomonas*. In the inhibn. of induction by * org. acids, synthesis of d- and l-tartrate dehydratase wa repressed more strongly than synthesis of meso-tartrate dehydratase. Pre-induction did not prevent subsequent

repression and a degree of correlation was found between growth rate supported by substrates and extent of repression. The significance of the different degrees of repression by substrates is discussed. K.Brew

3396. SIMPLE METHOD OF PURIFYING STAPHYLO-KINASE. K.L.A.Glanville: Biochem. J., 1963, 88, 11-14 (Dept. Pathol., Inst. Orthopaedics, Royal Nat. Orthopaedic Hosp., Brockley Hill, Stanmore, Middx., England) Staphylokinase present in broth-culture supernatant fluid of selected strains of *Staphylococcus 4HEgus* was cone, by pptn. with $(\text{NH}_4)_2\text{SO}_4$. A soln. of the dialysed, pptd. material in citric acid-phosphate buffer, pH 4, was adsorbed on a CM-cellulose column and could be eluted by 2 alternative methods. The first, relying on elution with citric acid-phosphate buffer. pH 7, accomplished a purification of about 10-fold. The second, which relied on elution with phosphate buffers. pH 6, of increasing ionic strength, was more time-consuming but resulted in a purification of about 44-fold with respect to protein content.

^{3397.} DEHYDROGENASE OBTAINED FROM CELL MEMBRANES OF MICROCOCCUS LYSODEIKTICUS. N.S.German, L.G.Zhukova and A.I.Qparin: Biokhimija, 1963, 28, 122-127. An enzyme prep, isolated from the cytoplasmic membrane of *M. lysodeikticus*, This prep, contained malic and NADH₂ dehydrogenases. Carotenoids and a component with a fluorescence characteristic of flavine nucleotides were found in the prep. (Russian) B.J.Cooper

3398. SEPARATION AND ISOLATION OF CYTOPLASMIC PARTICLES FROM NORMAL AND ANAEROBIC BAKER'S EAST. G.Schatz, H.Tuppy and J.Klima: Z. Naturforsch. B, 1963, 18, 145-157 (Inst. Biochem., Univ. Wien, Austria) Mitochondria were isolated from *Saccharomyces cerevisiae* and from a 'petite' mutant by ultracentrifugation in a sucrose density gradient. The activity of various enzyme systems was compared in the cell homogenates and isolated mitochondrial fractions of the 2 strains. The activity of enzymes related to electron transport was considerably reduced in the mitochondria of the mutant strain. The whole mitochondrial fraction was distributed throughout a sucrose density gradient. Two major peaks were obtained on the basis of total N content, the first of which contained almost of the M8-stim. ATPase whilst electron "sport enzymes were cone, in the second.

^{3399.} NATURE OF THE GRANULES OF THE GENUS *IRILLUM*. R.J.Martinez: Arch. Mikrobiol., 1963, 48, 334-343 (Dept. Bacteriol., Univ. California, Los Angeles, Calif., U.S.A.) Granular inclusions of ³⁵Sn and ³⁵S in *S. cerevisiae* did not contain significant amounts of polyphosphates. They are composed primarily of ³⁵S and ³⁵Sn. E.M.Ling

^{3400.} ACID PRODUCTION BY AZOTOBACTER VINE-LANDII. G.H.Cohen and D.B.Johnstone: Nature. Lond., 1963, 198, 211 (Dept. Agric. Biochem., Univ. Vermont, Burlington, Vt., U.S.A.) Growth of *A. vineelandii* on broth was associated with acid production in slime-forming strains, the degree of acidity attained being proportional to the amount of carbohydrate supplied. It is suggested that in strains that do not produce slime, carbohydrate is completely oxidised, while in slime-forming strains, a sp. polymerase may combine the partial oxidised intermediates into the acidic poly-

saccharide, which is composed mainly of galacturonic acid. G.M.Lewis

3401. BACTERIAL CONVERSION OF D-GLUCARATE TO GLYCERATE AND PYRUVATE. H.J.Blumenthal and D.C.Fish: Biochem. biophys. Res. Comm., 1963, 11, 239-243 (Dept. Bacteriol., Univ. Michigan, Ann Arbor, Mich., U.S.A.) It is shown that each mole of D-glucarate utilised by *E. coli* gives rise to 1 mole each of pyruvic acid and D-glyceric acid. This paper gives evidence for the participation of tartronate semialdehyde reductase in the reaction sequence. B.Ketterer

3402. OXIDATION OF GLYCOLS BY ACETIC ACID BACTERIA. K.Kersters and J.De Ley: Biochim. biophys. Acta, 1963, 71, 311-331 (Lab. Microbiol., Fac. Sci., State Univ., Ghent, Belgium) Resting cells of 14 strains oxidised 1,2-ethanediol, DL-1,2-propanediol, DL-1,3-butaneadiol, rxesc-2,3-butaneadiol and 1,4-butaneadiol. *Gluconobacter oxydans* (*suboxydans*) oxidised 22 glycals. Isolated end products of oxidation of 1,2-ethanediol, 1,3-propanediol, 1,6-hexanediol, 1,7-heptanediol, DL-1,3-butaneadiol, 1,4-butaneadiol and 1,5-pentanediol by either this strain of *Acetobacter aceti* (*liauefaciens*) were chem. identified. Oxidation of the last 2 occurred in 2 steps. DL-1,3-butaneadiol did not serve as C source for *A. aceti* and inhib. growth in ethanol or glycerol media. Particulate fractions oxidised all the glycals. A sol. NAD-linked primary alcohol dehydrogenase oxidised monohydric primary alcohols and diols. DL-1,3-butaneadiol was slowly oxidised at C-1. A sol. NAD linked sec. alcohol dehydrogenase oxidised monohydric jec. alcohols and the sec. alcohol function of meso-2,3-butaneadiol. DL-2r5-butaneadiol, DL-1,2-propanediol, L(+)-1,2-propanediol, meso-3,4-hexanediol and (-)-3,4-hexanediol. The dehydrogenases were purified chromatographically. B.M.Stevens

3403. ITACONATE METABOLISM. L ITACONYL CoA SYNTHESISING REACTION IN CELL FREE EXTRACTS OF PSEUDOMONAS FLUORESCENS. J.Nagai: J. Biochem., Tokyo, 1963, 53, 181-187 (Dept. Chem., Fac. Sci., Kyoto Univ., Japan) Acetate, lactate, citramalate and pyruvate were formed from itaconate in the presence of ATP, CoA and MgCl₂ by extracts of *P. fluorescens* grown on media containing itaconate. Itaconohydroxamate was formed if NH₂OH was also present. No degradation was observed by extracts of cells grown on glucose medium. The enzyme synthesising itaconyl CoA was purified approx. 10-fold. The ratio itaconyl CoA synthesising rate:succinyl CoA synthesising rate was const, throughout purification and was independent of the culture medium. B.M.Stevens

3404. COMPETITIVE INHIBITION OF d-METHYL-GLUCOSIDE UPTAKE IN E. COLI. D.P.Kessler and H.V.Rickenberg: Biochem. biophys. Res. Comm., 1963, 10, 482-487 (Dept. Bacteriol., Indiana Univ., Bloomington, Ind., U.S.A.) Glucose, glycerol, fructose, lactose, maltose, lactate and succinate all inhibit a-methylglucoside uptake competitively in cultures grown on these substrates. B.Ketterer

3405. TRANSPORT OF D-XYLOSE AND SUGAR SPACE IN BAKERS' YEAST. A.Kotyk and A.Kleinzel: Folia Microbiol., 1963, 8, 156-164 (Lab. Cell Metab., Inst. Microbiol., Czechoslovak Acad. Sci., Prague, Czechoslovakia) D-xylose space in *S. cerevisiae* corresponded to 100% of cell water space in

BIOCHEMISTRY

resting yeast. Xylose space was reduced to 60% by N deficiency and to 82% by P deficiency. The space of N-deficient but not P-deficient cells was raised by treatment with NH₄Cl, amino acids, nucleotides from a yeast extract and ATP. Urea had a depressing effect on xylose space. Urea space was almost identical in size with xylose space.

J.R.Sargent

3406. LOCALISATION, FUNCTION AND FORMATION OF CAROTENOID PIGMENTS OF STRAIN OF MYCOBACTERIUM MARINUM. M.M.Mathews: Photochem. Photobiol., 1963, 2, 1-8 (Bacteriology Dept., California Univ., Berkeley, Calif., U.S.A.) This strain of *M. marinum* produces carotenoid pigments only when exposed to light. Only 1 pigment is produced and its intracellular location was found to be the cell envelope. It was active in protecting the cells against lethal photo-oxidations radiated by Toluidine Blue. Studies were carried out to investigate the characteristics of pigment production on exposure of the bacterium to light.

G.C.Barr

3407. ENZYMIC GLUCOSYLATION OF POLYGLYCEROPHOSPHATE. M.M.Burger: Biochim. biophys. Acta, 1963, 71, 495-497 (Dept. Biol. Chem., Washington Univ. Sch. Med., St. Louis, Mo., U.S.A.) A particulate enzyme prep. from *Bacillus subtilis* (ATCC 9945) which synthesised polyglycerophosphate from CDP-glycerol would also glucosylate the enzymically synthesised polymer using UDP-D-glucose as glucosyl donor. Prelim, comm.

B.M. Stevens

3408. MICROBIAL TRANSFORMATION OF n-OCTANE INTO DICARBOXYLIC ACIDS. M.Y.Ali Khan, A.N. Hall and D.S.Robinson: Nature, Lond., 1963, 198, 289 (Dept. Biochem., Manchester Coll. Sci. Technol., Manchester, England) A *Pseudomonas* grown on medium containing *n*-octane produced *n*-octanedioic acid and *n*-hexanedioic acid.

G.M.Lewis

3409. BIOSYNTHESIS OF METHANE FROM METHYL MOIETY OF METHYLCOBALAMIN. B.A.Blaylock and T.C.Stadtman: Biochem. biophys. Res. Comm., 1963, 11, 34-38 (Lab. Biochem., Nat. Heart Inst., Bethesda, Md., U.S.A.) Methylcobalamin when added in substrate level amounts to disrupted cell prep. of *Methanoscincus barkeri* served as a source of methane. Pyruvate was added as an electron donor.

B.Ketterer

3410. BIOSYNTHESIS OF NICOTINIC ACID BY MYCOBACTERIUM TUBERCULOSIS. D.Gross, H.R.Schutte, G.Hubner and K.Mothes: Tetrahedron Letters, 1963, 9, 541-544 (Inst. Biochem. der Pflanzen, Leipzig, Germany) It is shown with the BCG-strain, that aspartic acid is directly incorporated to form atoms 2, 3 and 4 of the nicotinic acid mol. and that the other 3 C-atoms could come from glycerol or glycerolaldehyde. Letter.

R.H.Kimberlin

3411. COURSE OF TRANSFORMATION OF BENZALDEHYDE BY S. CEREVIAE. H.Becvarova, O.Hanc and K.Macek: Folia Microbiol., 1963, 8, 165-169 (Res. Inst. Pharm. Biochem., Prague, Czechoslovakia) *S. cerevisiae* was capable of fermenting 0.2% benzaldehyde in the presence of a fermentable sugar. Benzaldehyde was fermented within 90-120 min. yielding 23-39% phenylacetylcarbinol and 40-24% benzyl alcohol. The presence of acetaldehyde in the media lowered transformation of benzaldehyde and raised the yield of phenylacetyl carbinol.

J.R.Sargent

3412. STRUCTURE OF CHORISMIC ACID, NEW INTERMEDIATE IN AROMATIC BIOSYNTHESIS. F.Gibson and L.M.Jackman: Nature, Lond., 1963, 198, 388-389 (Bacteriol. Sch., Univ. Melbourne, Australia) Analysis of chorismic acid and study of its i.r. and magnetic resonance spectra indicates that it can be formulated as the 3-enolpyruvic ether of *trans*-3,4-dihydroxycyclohexa-1,5-diene carboxylic acid.

G.M.Lewis

3413. [THE] METABOLISM OF PHENYLALANINE-CONTAINING PEPTIDE AMIDES IN E. COLI. S.Simmonds and D.D.Griffith: J. Bact., 1962, 83, 256-263 (Dept. Biochem., Yale Univ., New Haven, Conn., U.S.A.)

This is a study of the hydrolysis, by fresh and lyophilised cells of a phenylalanine auxotroph of *E. coli* of phenylalanylglycinamide and glycyl-L-phenylalaninamide. Despite the presence of intracellular activity towards the 2 dipeptides, neither permits as much growth as that observed with an equimol. concn. of free phenylalanine. The relatively small extent of growth on the dipeptide amides and also on L-phenylalaninamide, appears to result from the inability of the cells in a growing culture to take up all of the exogenous amide added to the growth medium. This, in turn, probably reflects the presence in the medium of the amides as a mixture of charged and uncharged forms, of which only the latter are readily taken into the cells.

C.Toothill

3414. BIOCHEMISTRY OF MICRO-ORGANISMS. IV. SYNTHESIS OF O, O-DIMETHYLCURVULINIC ACID.

A.Kamal and M.Akram Sandhu: Tetrahedron Letters, 1963, 10, 611-612 (West Regional Labs., Pakistan Council Sci. and Ind. Res., Ferozepur Rd., Lahore, Pakistan) The synthesis of O, O-dimethyl-curvulinic acid is reported as proof that the structure of curvulinic acid is 2-acetyl-3,5-dihydroxyphenylacetic acid.

R.H.Kimberlin

3415. FORMATION OF RESORCINOL AN INTERMEDIATE IN METABOLISM OF 2,4-DIHYDROXYBENZOIC ACID AND ITS CORRESPONDING ALDEHYDE. H.Halvorson: Biochem. biophys. Res. Comm., 1963, 10, 440-443 (Dept. Microbiol., Univ. Manitoba, Winnipeg, Canada) An *Aspergillus* sp. capable of converting 2,4-dihydroxybenzaldehyde to 2,4-dihydroxybenzoic acid, and the latter to resorcinol has been isolated.

B.Kettner

3416. MICROBIOLOGICAL DEGRADATION OF QUERICITRIN. D.W.S.Westlake: Canad. J. Microbiol., 1963, 9, 211-220 (Nat. Res. Council of Canada, Prairie Reg. Lab., Saskatoon, Sask., Canada)

A no. of moulds and bacteria were screened for their ability to degrade quercitrin. Quercitrin degradation is dependent upon the synthesis of an inducible glycosidase (quercitrinase) which is synthesised by only a few members of the *Aspergillus flavus* group. The enzyme is excreted into the culture medium and is induced by readily metabolised flavonols and flavonol-glycosides. The glycosidase liberates rhamnose from the 3-position of quercitrin and myricitrin and the 7-position of robinirin. The aglycone, quercetin, is subsequently metabolised to CO and the depside of phloroglucinol-carboxylic acid and protocatechuic acid.

S.L.Hoa*

3417. BIOSYNTHESIS OF PHENOLS. IV. NEW METABOLIC PRODUCT OF ASPERGILLUS TERREUS THOM. C.H.Hassall and D.W.Jones: J. chem. Soc., 1962, 4189-4191 (Dept. Chem., Univ. Coll., Swansea, Wales) A mutant strain derived from *A. terreus*, Thom

Produced 3,4-dihydro-6,8-dihydroxy-3,4,5-trimethyl-isocoumarin-7-carboxylic acid. The elucidation of the structure of this compound followed from degradative evidence and from comparison of a deriv. with a degradation product of citrinin. L. G. Gillies

3418. PURIFICATION OF STAPHYLOCOCCAL 0-LYSIN. A.W.Jackson: Canad. J. Biochem., 1963, 41, 755-761 (Lab. Hyg. Dept. Nat. Hlth. and Welfare, Ottawa, Canada) Staphylococcal β -lysin was purified 250 times with overall yields of 50-60% by the following procedure. Zn acetate was added to ice-cold, dialysed soln. of crude lysin followed by cold ethanol to ppt. the Zn-lysin complex. Zn was removed by dissolving the complex in water plus chelating agent, followed by dialysis at low temp. The β -lysin was re-ppt. by formation of the insol. complex Zn-mercuric-lysin and again resolved as a ter. salt at first pptn. Re-ppt'd lysin was further purified by chromatography, employing columns of hydroxyapatite. The final product was free of other known lysins, coagulase and phosphatase. J.B.Parish

3419. SOME PRODUCTS OF BACTERIAL DISSIMILATION OF STREPTOMYCIN. D.Klein and D.Pramer: J. Bact., 1962, 83, 309-313 (Dept. Agric Microbiol., Rutgers, State Univ., New Brunswick, N.J., U.S.A.) Products can be detected by Folin-Ciocalteau's reagent, ninhydrin (which is reagent; they also absorbed in the u.v. at $265 \text{ m}\mu$). Also a volatile base was detected, forming methamine. Urea and streptamine were found growing cultures and washed cell suspensions with streptomycin. More than 90% of the urea was recovered as urea or gen in culture filtrates. The bacterial dissimilation therefore involved hydrolysis of the amide group and the secondary amino-nitrogen of each and the products of the reaction were urea and streptamine. C.Toothill

3420. MECHANISM OF BIOSYNTHESIS OF CITRO-BISETIN. S.Gatenbeck and K.Mosbach: Biochem. Biophys. Res. Comm., 1963, 11, 166-169 (Inst. of Chem., Univ. Lund, Sweden) Evidence is given that citro-bisettin arises in its biosynthesis from the condensation of 2 distinct polyketochains. B.Ketterer

3421. SYNTHESIS OF PRODIGIOSIN IN SERRATIA LIQUESCENS. D.M.Shrimpton, G.S.Marks and R.S.Grad: Biochim. biophys. Acta, 1963, 71, 408-415 (Dept. Bot., Univ. Chicago, Ill., U.S.A.) It was demonstrated that Sraminolaevulinic acid was not used in prodigiosin. Prodigiosin precursor was apparently incorporated as a single unit; the dihydroxylic prodigiosin precursor produced ^{14}C and ^{3}H . Incorporation of uniformly labelled ^{14}C proline and [2- ^{14}C]proline into the prodigiosin precursor indicated that C-2, or the 2-oxo proline ring, was utilised mainly for the entire proline ring. Part of Prodigiosin. The oxynamoyl proline ring was not utilised in the formation of the 2-hydroxyproline ring of Prodigiosin. Incorporation of Ursolic acid into Prodigiosin and the dipyrrolic predane was rated that the glycine methyl C was incorporated efficiently into both parts of the prodigiosin. B.M.Stevens

3422. STIMULATION OF OXYTETRACYCLINE FORMATION BY N-ACETYL DERIVATIVES OF CERTAIN AMINO ACIDS. W.A.Zygmont: Nature, Lond., 1963, 198, 289-290 (Dept. Nutr. Res., Res. Center, Mead Johnson and Co., Evansville, Ind., U.S.A.) The yield of oxytetracycline in cultures of *Streptomyces rimosus* was markedly stim. by N-acetyl-DL-alanine or N-acetylglycine. The acetyl deriv. of methionine, leucine, valine, and glutamic acid did not stimulate antibiotic production above the level produced in the presence of the parent amino acid. G.M.Lewis

3423. SYNTHESIS OF DEGRADATION PRODUCT OF CEPHALOSPORIN C AND RELATED SULPHUR-CONTAINING α -TETRONIC ACIDS. E.Galantay, A.Szabo and J.Fried: Tetrahedron Letters, 1963, 7, 415-419 (Squibb Inst. Med. Res., New Brunswick, N.J., U.S.A.) The disulphide of β -mercaptomethyl- α -tetronic acid had antimicrobial activity against several organisms including *S. aureus* and *Trichophyton mentagrophytes*. Letter. R.H.Kimberlin

3424. DERIVATIVES OF α -TETRONIC ACID. A.G.Long and A.F.Turner: Tetrahedron Letters, 1963, 7, 421-427 (Glaxo Res. Ltd., Greenford, Middx., England) Letter. R.H.Kimberlin

3425. PRESENCE OF A MUCOPEPTIDE IN THE MEDIA OF AN E. COLI MUTANT AND ITS RELATION TO THE CELL WALL. A.M.Municio, T.Diaz and A.Martinez: Biochem. biophys. Res. Comm., 1963, 11, 195-200 (Inst. Chem., Madrid, Spain) When a lysine requiring mutant of *E. coli* is incubated in a lysine limited medium lysis occurs following depletion of the lysine. With the lysis a mucopeptide material is released into the medium which is chem. and immunol. related to the cell wall. B.Ketterer

3426. ISOLATION OF PROTOPLAST BURSTING FACTOR FROM PIG PANCREAS. K.Arima, T.Yamaguchi, K.Horikoshi and G.Tamura: Biochim. biophys. Acta, 1963, 71, 500-502 (Dept. Agric. Chem., Univ. Tokyo, Japan) The factor appeared to be a protein. Prelim. comm. B.M.Stevens

3427. ACRYLAMIDE ELECTROPHORESIS AND PROTEIN PATTERN DURING MORPHOGENESIS IN A SLIME MOULD. M.H.Zeldin and J.M.Ward: Nature, Lond., 1963, 198, 389-390 (Dept. Biol., Temple Univ., Philadelphia, Pa., U.S.A.) Extracts of protein from homogenates of *Physarum* were examined by acrylamide electrophoresis. Different patterns were obtained from the plasmodial and pre-sporangial stages and differences found in the activity of polysaccharidases A and B and α -amylase. G.M.Lewis

3428. BIOASSAY AND STANDARDISATION OF VENOM OF HONEY BEE. A.W.Benton, R.A.Moise and F.V.Kosikowski: Nature, Lond., 1963, 198, 295-296 (Dept. Entomol., Cornell Univ., Ithaca, New York, U.S.A.) The bacteriostatic effect of *Apis mellifera* venom can be assayed quant. by the inhibn. of growth of *Bacillus subtilis*. G.M.Lewis

3429. BIMODAL STIMULATION OF RETICULOENDOTHELIAL SYSTEM BY MYCOBACTERIUM PHLEI. F.J.Dicarlo, L.J.Haynes, S.G.Malam and G.E.Phillips: Canad. J. Biochem., 1963, 41, 731-736 (Biochem. Dept., Warner-Lambert Res. Inst., Morris Plains, NJ., U.S.A.) A variety of substances which stimulate the RE system in the mouse were rated in potency by employing active dry bakers' yeast as the reference stimulant.

BIOCHEMISTRY

M. phlei Halpern was found to be a particularly effective RE stimulant, a single i.v. injn. eliciting a bimodal stimn. of global phagocytic activity. The peak rates of phagocytosis occurred at 1 and 21 days post administration. *M. phlei* Halpern also caused pronounced hypertrophy of liver and spleen; 6 weeks elapsed before these organs returned to normal size. J.B. Parish

PLANT BIOCHEMISTRY

3430. THE DISTRIBUTION OF SUCCINATE DEHYDROGENASE AND MALATE DEHYDROGENASE AMONG COMPONENTS OF TOBACCO-LEAF EXTRACTS.

W.S.Pierpoint: Biochem. J., 1963, 88, 120-125
(Rothamsted Expt. Station, Harpenden, Herts., England)

The distribution of 3 enzymes has been followed among fractions made from tobacco-leaf extracts by both differential and density-gradient centrifuging. Succinate dehydrogenase sedimented as if it were completely attached to mitochondria. Only small proportions of the total malate dehydrogenase and aconitate hydratase were recovered in fractions containing mitochondria, and small amounts of malate dehydrogenase in those containing chloroplasts. Both these enzymes could be partially removed from the sedimented particles by washing. It is suggested that some of the malate dehydrogenase and aconitate hydratase activity of the supernatant fraction originated in the particles. *

3431. OXYGEN FIXATION INTO HYDROXYPROLINE OF PLANT CELL WALL PROTEIN.

D.T.A.Lamport: J. biol. Chem., 1963, 238, 1438-1440 (RIAS,

Baltimore, Md., U.S.A.) The hydroxyl oxygen of hydroxyproline of die primary cell wall protein in a sycamore cell suspension is derived entirely by fixation of atm. O. The hydroxyproline-rich primary cell wall protein is termed *ex tens in*. J.N.Ashley

3432. LIPID AND PROTEIN IN GERMINATING AND DEVELOPING FLAXSEED LINUM USITATISSIMUM L.

R.E.Huber and S.Zalik: Canad. J. Biochem., 1963, 41, 745-754 (Dept. Plant Sci., Univ. Alberta,

Edmonton, Alberta, Canada) The pattern of fatty acid interconversions during lipid synthesis suggested that more-unsat. acids were formed from less-unsat. ones. The relative proportions of each fatty acids during germination remained const, suggesting that fatty acids were being broken down at a rate proportional to the amount originally present. Protein increased steadily during flaxseed development, and the total content of each amino acid increased until 4 weeks after blooming, but the free amino acid portion and amide N decreased; subsequently all remained at a const. level. During germination the protein content and proportions of amino acids remained const, but the free amino acid content rose. J.B. Parish

3433. FRACTIONATION OF LEAF CELLS IN NON-

QUEOUS MEDIA.

R.Thalacken: Biochim. biophys. Acta, 1963, 71, 477-480 (Staatliches Chem. Untersuchungsamt, Giessen, Germany) The dependence of the amount of lipid extracted from young *Elodea canadensis* leaves by petrol ether and by CCl₄ on temp, and time of extraction and, for petrol ether, on the vol used was examined. (German) B.M.Stevens

H.Reisener, AJ.Finlayson, W.B.McConnell and G.A.Ledingham: Canad. J. Biochem., 1963, 41, 737-743 (Nat. Res. Council of Canada, Prairie Reg. Lab., Saskatoon, Saskatchewan, Canada) Evidence is presented that propionate metabolism in rust spores involved conversion of C-1 to CO₂ and utilisation of C-2 and C-3 as acetate with C-2 behaving as the carboxyl C. Uredospores were shaken for 3 hr. with phosphate buffer pH 6*2, containing [1-¹⁴C]propionate, [2-¹⁴C]- or [3-¹⁴C]propionate, resulting in the removal of about 55% of the ¹⁴C from soln. With [1-¹⁴C]propionate most of the ¹⁴C taken up was released as ¹⁴cO₂t whereas about 20% and 31% of propionate C-2 and C-3 respectively was incorporated into the spores. The sp. activity of various fractions increased with increase in position no. of propionate in which the ¹⁴C was located. J.B. Parish

3435. BIOSYNTHESIS OF 0-PYRAZOL-1-YLALANINE.

P.M.Dunnill and L.Fowdeic: J. exp. Bot., 1963, 14, 237-248 (Dept. Bot., Univ. Coll., London, England)

Enzymic synthesis of the amino acid occurred by condensation of pyrazole and serine. The prop. and distribution of (3-pyrazole-1-ylalanine synthetase have been studied in c'ru'de extracts of cucumber seedlings*. The enzyme was detected in other cucurbit seedlings. Indirect evidence demonstrated the presence of pyrazole in cucumber and melon seeds. I.D.J.Phillips

3436. [¹⁴C]CARBAMOYL-3-ALANINE AS PRECURSOR OF PYRIMIDINES IN HIGHER PLANTS.

J.Buchowicz, L.Reifer and I.Geric: Acta biochim. pol., 1963, 10, 157-162 (Inst. Biochem. Biophysics, Polish Acad.

Sci., Warszawa, Poland) Excised wheat blades were fed for 0*5-24 hr. with a 20mM [carbamoyl-l¹⁴C] carbamoyl-[3-alanine [CBA]] The resulting radioactive products were isolated from the tissue, identified and determined. About 0*5% of ¹⁴C introduced was recovered in the various products of anabolism, with uracil showing the highest radioactivity. After 8 hr. of incubation the activity of uracil amounted to 50% of the sp. activity of the introduced CBA. Activities of uridine, 5'-UMP, 5'-CMP as well as of the pyrimidine mononucleotides obtained on acid hydrolysis of the polynucleotide fraction, were also distinct but of a much lower order. M.Korbecto

3437. CHEMISTRY OF ATTRACTION OF POLLEN TUBE TO OVULE OF OENOTHERA.

H.Schildknecht and N.Benoni: Z. Naturforsch. B, 1963, 18, 45-54 (Inst.

Org. Chem., Univ. Erlangen-NQrnberg, Germany) The ovules of 5 spp. of *Oenothera* were extracted with water and alcohol and the products separated by paper chromatography. Several amino acids:- lysine, argini⁰* asparagine, valine, phenylalanine and leucine, 5 pep* tides, an aliphatic amine, aif indole, 2 ninhydrin-neg* amines and 6 sugars:- sucrose, galactose, glucose, arabinose and fructose were obtained. A combination of amino acids, sugars and KCl was required to show ma^g chemotropic effect. (German) j.C.CrawhaU

3438. LEVEL OF ORGANIC ACIDS IN PLANT TISSUES*

J.Carles and A.Alquier-Bouffard: Bull. Soc. Chim.

biol., Paris, 1963, 45, 157-163 (Lab. Physiol.

Végétale, Inst. CathoUque, Toulouse, France) (French) J.C.Crawha¹

3439. SYNTHESIS OF [¹⁴C]SHIKIMIC ACID IN PJJ¹⁴ LA¹⁴ RESINOSA, AIT. FROM SOME CARBON-14 COMPOUNDS.

S.Yoshida and G.H.N.Towers: Canad.

I. Biochem., 1963, 41, 579-586 (Bot. Depu. McGill Univ., Montreal, Quebec, Canada) ^{14C}-Labelled compounds were administered to the cut ends of young *Eijesinow* plants which were then incubated at 25° for 24 or 72 hr. in the light. The shoots were extracted and chromatographed to produce a band of shikimic acid; this was extracted and estimated quant. by spectrophotofluorometry. of the compounds administered pyruvic acid gave shikimic acid of the highest sp. activity, [3-¹⁴C]pyruvate gave a product if higher sp. activity than either [1-¹⁴C]- or [2-¹⁴C]pyruvate. Sugars were the next most effective but ^{14C} from several org. acids was not readily incorporated into shikimic acid.

J.B.Parish

3440. NATURE OF STABLE ADAPTATION INDUCED BY SELENOMETHIONINE IN CHLORELLA VULGARIS.

A.Shrift and M.Sprout: Biochim. biophys. Acta, 1963, 71, 332-344 (Kaiser Found. Res. Inst., Richmond, Calif., U.S.A.) A strain induced to resist the growth uncoupling effect of selenomethionine even after removal of the analogue, absorbed L-[35S]methionine much more rapidly than normal cells but incorporated a greater proportion of the absorbed 35S into protein. ^{35SO₄2-} absorption and conversion to protein were normal. S starvation, which deadadapted, restored permeability to methionine. DNP inhib. methionine uptake.

B.M. Stevens

3441. BIOSYNTHESIS OF Se-METHYLSelenocysteine FROM SELENIUM IN SELENIUM ACCUMULATING PLANTS. A.Sairift and T.K.Virupaksha: Biochim. biophys. A, 1963, 71, 483-485 (Kaiser Found. Res. Inst., Richmond, Calif., U.S.A.) ^{75SeO₃2-}

Jensupped ~~to exercise~~ ^{75SeO₃2-} converted to Se-methylselenocysteine. Prelim.

B.M.Stevens

[^] 2. STRUCTURE OF SIKKIMOTOXIN. SYNTHESIS OF STEREOISOMERIC 6,7-DIMETHOXY-ANALOGUES OF PODOPHYLLOTOXIN. E.Schreien Helv. chim. Acta, 1963, 46, 75-117 (Pharmazeutisch-chemische Forschungslaboratorien, Sandoz AG., Basel, Switzerland) The total synthesis of several stereoisomeric dimethoxy-analogues of podophyllotoxin, the main component of the resin of *Podophyllum emodi* and *P. peltatum* is described*. These are compared with natural materials and give rise to some doubt as to the correctness of the structure proposed for isosikkimotoxin and acetyl-isosikkimotoxin, or the purity of the compounds from the natural source.

(German) A.D. Smith

[^] 3. METABOLISM OF LABELLED ETHYLENE IN AVOCADO. APPEARANCE OF TRITIUM IN METHYL GROUP OF TOLUENE. E.F.Janseru J. bioL Chem., 1963, 238, 1552-1555 (Western Reg. Res. Lab., Albany, Calif., U.S.A.) [3H]Ethylene (40 mc/mol.) is incorporated into avocado fruit from the surrounding atm. to a small extent in 4 hr. At levels of 250 p.p.m. and 2000 p.p.m., 0.015% and 0.042%, respectively, is incorporated by the fruit. Approx. 75% of the radioactive metabolites present in 70% alcohol extracts are volatile, and benzene and toluene are present. The toluene is labelled and 95% of the activity is in the methyl group.

J.N.Ashley

^{3444. RESPIRATION AND PHOSPHORYLATION IN CROTISED POTATO TISSUES.} B.A.Rubin and O.L. Dr. P. I. A. kovsk a k. Biokhimiia. 1963, 28, 80-88. Potato tubers which stimulate respiration of healthy *P. tuberosum* and susceptible *P. tuberosum* tubers contaminated with *Phytophthora infestans*, inhib. the respiration of necrotised

tissues of the resistant type. This was shown by the high respiratory quotient, appreciable ethanol level, and low ratio of CO₂ release in N as compared with that in air. In the necrotised tissues of the resistant type, respiration appeared to be uncoupled from phosphorylation. It is thought that this may be related to the resistance to *Phytophthora* infestation. (Russian) B.J.Cooper

3445. CAROTENOIDS OF CARROT ROOT CAMBIAL

TISSUE CULTURES. J.Naef and G.Turian: Phytochemistry, 1963, 2, 173-177 (Inst. Bot. gén., Univ. Geneva, Switzerland) The carotenoids of a normal green strain and of a mutant orange strain of carrot root cambial tissue culture have been examined. The green strain contains only small quantities of α- and β-carotene and lutein in addition to chlorophylls *a* and *b*. The orange strain is devoid of chlorophyll, but larger quantities of the 3 carotenoids are present.

(French)

B.H.Davies

3446. ACTION OF DITERPENIC ALCOHOLS IN BIOSYNTHESIS OF CAROTENOIDS AND OF PHYTOL FROM [2-¹⁴C]ACETATE IN MAIZE SEEDLINGS. C.Costes: C.R. Acad. Sci., Paris, 1962, 255, 355-357 (C.N.R.A., Station centrale de Physiologie vegetale, Versailles, France) Etiolated maize seedlings were infiltrated under vacuum with radioactive acetate and 0.5% phytol, isophytol, geranylgeraniol or geranylinalool in Tween 80 soln., exposed to light for 30 hr. and the radioactivity of the chlorophylls and carotenoids formed determined.

Phytol and isophytol were incorporated into the chlorophylls but not into β-carotene or lutein; geranylgeraniol into α-carotene, the phytol of chlorophyll A but not of chlorophyll *a*, and into lutein; geranylinalool into α-carotene and lutein. The C40 chain of the carotenoids may result from condensation of geranylgeraniol and geranylinalool, which are interchangeable in the biosynthesis as in vivo each can change reversibly to its allyl isomer.

3447. CONSTITUTION OF MORELLIN. G.Kartha, G.N.

Ramachandran, H.B.Bhat, P.M.Nair, V.K.V.Raghavan and K.Venkataraman: Tetrahedron Letters, 1963, 7, 459-472 (Roswell Park Mem. Inst., Buffalo, N.Y., U.S.A.) The complete structure of morellin, an orange yellow pigment isolated from the seeds of *Garcinio morella* has been elucidated. Letter. R.H.Kimberlin

3448. RELATIVE CONFIGURATIONS BETWEEN VIROSECURININE, SECURININE AND ALLOSECURININE.

T.Nakano, T.H.Yang and S.Terao: Tetrahedron Letters, 1962, 10, 665-668 (Fac. Pharmacy, Kyoto Univ., Japan) The configuration of *CQ* in virosecurinine from Formosan *Securinega virosa* is established and also the relative configurations between virosecurinine and its related alkaloids. Letter. R.H.Kimberlin

3449. TRANSFORMATION OF KURCHI ALKALOIDS.

m. NEIGHBOURING GROUP EFFECTS IN DERIVATIVES OF HOLARRHIMINE. D.D.Godse, M.Ram and P.K. Bhattacharyya: Tetrahedron, 1963, 19, 784-788 (Nat. Chem. Lab., Poona, India). I.A.B.S.

3450. BIOGENESIS OF AMARYLLIDACEAE ALKALOIDS.

H. STUDIES WITH WHOLE PLANTS, FLORAL PRIMORDIA AND CELL FREE EXTRACTS. R.J.Suhadolnik, A.G.Fischer and J.Zulaliarc: Biochem. biophys. Res. Comm., 1963, 11, 208-212 (Res. Lab., Dept Biochem., Einstein Med. Center, Philadelphia, Pa., U.S.A.) Expt are described which suggest that the biosynthesis of

BIOCHEMISTRY

rings A and B of the Amaryllidaceae alkaloids involves the deamination of phenylalanine to *trans*-cinnamic acid which is then converted to *β*-hydroxycinnamic acid and then further hydroxylated to give 3,4-dihydroxycinnamic acid.

B.Ketterer

3451. POSITION OF OH GROUP IN DISCRETIN*.

F.Bernoulli, H.Linde and K.Meyer: *Helv. chim. Acta*, 1963, 46, 323-327 (Pharmazeutisches Institut der Universität Basel, Switzerland) Discretin, (monodesmethyl-(-)-norcoralydin) is an alkaloid of *Xylopia discreta*. After ethylation and KMnO₄ degradation 6-ethoxy-7-methoxy-1-keto-1, 2,3,4-tetrahydroisoquinoline was obtained. Discretin is therefore 3-desmethyl-(-)-norcoralydin. (German) A.D. Smith

3452. LOCATION OF ALKALOIDS IN FRUIT AND NUT OF ARECA CATECHU L.

H.-P.Guérin: *C.R. Acad. Sci., Paris*, 1962, 255, 363-365 (Lab. des Travaux pratiques de Micrographie, Fac. Pharmacie, Paris, France) The location of alkaloids in the betel nut and fruit was studied by micrography and by 'contact impregnation' of chromatographic paper with the cut surface of the nut. Alkaloids occur only in the internal coating of the nut and in the internal and external regions of the pericarp. (French) S.A.Thistlewood

3453. GLYCOSIDES OF CAMBIAL SAP OF SPRUCE.

K.Freudenberg and J.M.Harkin: *Phytochemistry*, 1963, 2, 189-193 (Forschungsinstitut für die Chemie des Holzes und der Polysaccharide, Org.-Chem. Inst. Univ., Heidelberg, Germany) In addition to large amounts of coniferin, the cambial sap from spruce (*Picea excelsa* Link) also contains coniferyl alcohol and its main dehydrogenation products and small amounts of syringin and *β*-coumaryl alcohol 4-O-glucoside, both of which have been isolated in a pure state. These findings support the theory that conifer lignin is a copolymer obtained by enzymic dehydrogenation of a mixture of coniferyl alcohol, sinapyl alcohol and *β*-hydroxycoumaryl alcohol, in which coniferyl alcohol is predominant. B.H.Davies

3454. STEROIDAL COMPONENTS OF DOMESTIC PLANTS. XLI. CONSTITUENTS OF REINECKIA CARNEA KUNTH. STRUCTURE OF REINECKIAGENIN, ISOREINECKIAGENIN AND ISOCARNEAGENIN.

K.Takeda, T.Okanishi, H.Minato and A.Shimakawa: *Tetrahedron*, 1963, 19, 759-772 (Shionogi Res. Lab., Fukushima-ku, Osaka, Japan) Convallamorogenin, isorhodeasapogenin, isoreineckiagenin, reineckiagenin, and isocarneagenin were isolated from *R. carnea* Kunth. The 3 sapogenins, isoreineckiagenin, reineckiagenin, and isocarneagenin are new and the only known steroidal sapogenins isolated from a plant source containing a hydroxyl group in the F-ring.

3455. GLYCOSIDES OF SAP OF ANTIARIS TOXICARIA LESCH FROM BOGOR (JAVA).

C.Juslen, W.Wehrli and T.Reichstein: *Helv. chim. Acta*, 1963, 46, 117-141 (Inst. Org. Chem. Univ., Basel, Switzerland)

A new analysis of this sap revealed 29 Kedde-pos. substances on paper chromatograms. Some of these were cryst. All isolated substances were monoglycosides and contained as the sugar L-rhamnose, D-glucose or L-acrifiose. (German) A.D. Smith

3456. GLYCOSIDES OF LEAVES OF DIGITALIS CANARIENSIS L.

D.O. P.Studer, S.K.Pavanaram, C.R. Gavilanes, H.Linde and K.Meyer: *Helv. chim. Acta*,

1963, 46, 23-45 (Pharmazeutisches Inst. Univ., Basel, Switzerland) An extract of the dried leaves was subjected to strophantobiase degradation. A new aglycone, named canarigenin, was obtained. A new sugar was named D-(+)-canarose and is 2-desoxy-D-rhamnose. The genin content distinguishes *canariensis* from variety *isabelliana*. (German) A.D. Smith

3457. GLYCOSIDES OF XYSMALOBİUM UNDULATUM R*

Br. [I]. A.M.Kuritzkes, C.Tamm, H.Jager and T.Reichstein: *Helv. chim. Acta*, 1963, 46, 8-23 (Inst. Org. Chem. Univ., Basel, Switzerland) The roots of *X. undulatum* are very rich in cardenolide glycosides. The main genins are: urzagenin, xysmalogenin, a little 17oc-uzarigenin, coroglaucongenin and pachygenol*. These occur to a minor extent in the free form but mainly combined with D-glucose. A no. of unidentified genins occur. (German) A.D. Smith

3458. VOLATILE VEGETABLE MATTERS. CLXXXH.

ALCOHOLS PRESENT IN BAY OIL. D.Lamparsky: *Helv. chim. Acta*, 1963, 46, 185-187 (Lab. Recherches de Givaudan, Societe Anonyme, Vernier-Geneve, Switzerland) The bay oil contains low % of (+)-3-octanol; (-)-1-octen-3-ol; (+)-1-terpinen-4-ol and a -terpinol. (French) A.D. Smith

3459. REACTIONS OF INERTOGENIN AND LEPTOGENIN.

H.Tobias: *Helv. chim. Acta*, 1963, 46, 147-158 (Inst. Org. Chem. Univ., Basel, Switzerland) Di-O-acetyl-leptogenin and di-O-acetyl-invertogenin were degraded to the corresponding etio acid methyl esters. The reactions of the latter with thionyl chloride are described. (German) A.D.SrnW¹

3460. 1a, 11a-OXIDO-STROPHANIHIDOL (MONO-ANHYDRO-OUABAGENIN) AND OTHER 1a, 11a-OXIDO STEROIDS FROM OUABAGENIN. G.Volpp and C.Tamm: *Helv. chim. Acta*, 1963*, 46, 219-237 (Inst. Org. Chem. Univ., Basel, Switzerland)

On treatment with 0% HCl in aq. ethanol 1,19-isopropylidene-ouabagenin and ouabagenin yield respectively monoanhydro-ouabagenin and tetraanhydro-ouabagenin. The 1a, 11a-epoxide group is novel for dts¹ cardenolide series. (German) A.D.Srn¹

3461. [PREPARATION OF] 11a, 19,21-TRIACETOXY-14-HYDROXY-11, 4-140-PREGNADIENDIONE-(3,20) FROM 1a, 11a-OXIDO-STROPHANTHIDOL (MONO-ANHYDRO-OUABAGENIN). C.Tamm and W.Zurchen: *Helv. chim. Acta*, 1963, 46, 237-241 (Inst. Org. Chem. Univ., Basel, Switzerland)

(German) A.D.Srn¹
3462. CONSTITUTION OF BIFLORIN, α -QUINONE OF DITERPENE SERIES. J.Comin, O.Goncalves de Lima, H.N.Grant, L.M.Jackman, W.Keller-Schierlein and V.Prelog: *Helv. chim. Acta*, 1963, 46, 409-415 (Org. chem. Lab. der Eidg. Technischen Hochschule, Zurich, Switzerland) Chem. and spectroscopic evidence leads to the constitution 3-(2-methyl-pent-2-enyl)-6, 9-dimethyl-1-oxa-phenalene-quinone(7,8) ^{tot} the bluish-red antibiotic biflorin obtained from *CaEES*⁸ biflora. (German) A.D.Srn¹

3463. SYNTHESIS OF SOME 1-OXA-PHENALINE DERIVATIVES BY CHROMOPHORE SYSTEM OF BIFLORIN. H.N.Grant, V.Prelog and R.P.A.Sneeden: *Helv. chim. Acta*, 1963, 46, 415-421 (Org.-chem. Lab. Eidg. Technischen Hochschule, Zurich,

Switzerland) * Several deriv. of 1-oxaphenalenone and 1-oxaphenalenone-7,8-quinone have been synthesised in order to support the constitution of biflorin by comparison of absorption spectra. (German) A.D.Smith

3464. CONSTITUTION OF ADYNERIN. P.St.Janiak, E. Weiss, J.v.Euw and T.Reichstein: *Helv. chim. Acta*, 1963, 46, 374-392 (Inst. Org. Chem. Univ., Basel, QO Switzerland) The structure of adynerigenin as β -D-hydroxy-8,140-epoxy-5g-carda-2O: 22-enolide has been established by degradation and partial synthesis. Δ^4 -lynerin is the corresponding 0-D-diginoside. (German) A.D. Smith

3465. STRUCTURE OF GYPSOSIDE-TRITERPENIC SAPONIN FROM GYPSOPHILA PACIFICA KOM. N.K.Kochetkov, AJ.Khorlin and Ju.S.Ovodov: *Tetrahedron Letters*, 1963, 8, 477-482 (Inst. Chem. Natural Products, Acad. Sci., Moscow, U.S.S.R.) R.H.Kimberlin

3466. STRUCTURE OF 0-BERGAMOTENE. K.S.Kulkarni, S.K.Paknikar, A.S.Vaidya, G.R.Kelkar, R.B.Bates and S.C.Bhattacharyya: *Tetrahedron Letters*, 1963, 8, 505-511 (Nat. Chem. Lab., Poona, India) Δ^2 -Bergamotene is the major hydrocarbon component extracted from the oil of *Valeriana wallichii*. Letter. R.H.Kimberlin

3467. SOME CONSTITUENTS OF ULEX EUROPAEUS L. J.McLean and J.B.Thomson: *Phytochemistry*, 1963, 2, 179-181 (Dept. Chem., Roy. Coll. Sci. and Technol., Glasgow, Scotland) The unsaponifiable fraction of the wax of *U. europaeus* L. contains p-amyrin, lupeol and β -sitosterol. Soyasapogenol C is obtained from an alcoholic extract of the plant. B.H.Davies

3468. ISOLATION AND IDENTIFICATION OF LUPEOL FROM STRAWBERRY TREE (ARBUTUS UNEDO L.). A.Sosa: *Bull. Soc. Chim. biol.*, Paris, 1963, 45, 117-126 (C.N.R.S., Gif-sur-Yvette, S.-et-O., France)

Lupeol was isolated from leaves of the Strawberry tree (*Arbutus unedo* L.). The acetate and benzoate were prep. and subl. β -Pinene was determined. U.v. absorption spectra in had α -acid were characteristic. Lupeol and these deriv. have an absorption max. close to 310 m μ and the benzoate has an additional peak at 264 m μ . (French) J.C.Crawhall

3469. FORMATION OF POLYPHENOLS IN TREES. A. Willis and M.Hasegawa: *Phytochemistry*, 1963, 2, 5-199 (Div. Forest Products, C.S.I.R.O., Melbourne, Australia) After administration of uniformly labelled labelling agent a kino vein in *Eucalyptus sieberiana*. Polypheophenols were found in the kino. The distribution and radioactivity and the presence of labelled sugars in the sapwood, indicated in situ formation of polyphenols from sugars. B.H.Davies

3470. PARTIAL CHARACTERISATION OF PRINCIPAL POLYPHENOL FROM ROOTS OF LITHOSPERMUM RUDERALE. G.Johnson, S.G.Sunderwith, H.Gibian, D.W.Moulter and F.X.Gassner: *Phytochemistry*, 1963, 2, 150 (Chem. and Endocrine Section, Colorado State Univ., Fort Collins, Colo., U.S.A.) Lithospermum acid from *L. ruderale* is a polyphenolic carboxylic acid with an empirical formula believed to be C₁₆H₁₄O₇. The mol. has two 1,2,4-trisubstituted benzene rings, "sixning" dihydroxy groupings; and an olefinic

grouping which is conjugated with one of the rings. The last oxygen atom is probably present as a tert. alcohol. Optical activity indicates that the mol. has 1 or more asymmetric centres. The structure of the mol. is discussed. B.H.Davies

3471. FLAVONOIDS OF CITRUS [FRUITS]. VI. STRUCTURE OF NEOHESPERIDOSE. R.M.Horowitz and B.Gentili: *Tetrahedron*, 1963, 19, 773-782 (Fruit and Vegetable Chem. Lab., Pasadena, Calif., U.S.A.)

The flavanone glycosides naringin, poncirin and neohesperidin all contain the disaccharide neohesperidose, since, on treatment with alkali, they yield the same degradation product, phloiacetophenone 4'-neohesperidose. The structure of neohesperidose is 2-O-OL-L-thamnopyranosyl-D-glucopyranose, as shown by methylation studies and optical rotations. Citrus flavanones that contain neohesperidose are bitter, while the corresponding flavanones that contain the isomer disaccharide, rutinose (6-O-CX-L-rhamnopyranosyl-D-glucopyranose), are tasteless. *

3472. BIOSYNTHESIS OF COUMARINS. IV. FORMATION OF COUMARIN AND HERNIARIN IN LAVENDER.

S.A.Brown: *Phytochemistry*, 1963, 2, 137-144 (Prairie Reg. Lab., Nat. Res. Council, Saskatoon, Saskatchewan, Canada) Data are presented for a sequence of herniarin biosynthesis from cinnamic acid, which, like D-glucose and L-phenylalanine, is a common precursor of coumarin and herniarin in *Lavendula officinalis* Chaix. Coumarin and herniarin are formed from o- and β -hydroxy-cinnamic acids respectively. Improved methods for the syntheses of [14c-carboxyl]umbelliferone, \pm -[a -14c-methoxycinnamic acid and [a -4c]2-glucosyloxy-4-methoxy-trans-cinnamic acid and the prep. of [2-14c]-umbelliferone are described; the metabolism of these compounds has been studied. B.H.Davies

3473. TANNIN FROM ACACIA ARABICA. II. ISOLATION OF POLYHYDROXYPHENOLS FROM SEED PODS.

H.Endres and M.Hilal: *Phytochemistry*, 1963, 2, 151-156 (Max-Planck-Inst. Eiweiss- und Lederforsch., Munich, Germany) Freshly harvested *A. arabica* pods were successively extracted with ether, ethyl acetate, ethanol and water. The ethanol extract, which contained 24 chromatographically separable compounds, was chromatographed on polyamide and cellulose columns. Gallic acid, α -digallic acid and chlorogenic acid were isolated. One of 3 phenolic compounds in the aq. extract was identified as robidiodiol (7,3,4',5'-tetrahydroxy-flavan-3,4-diol). (German) B.H.Davies

3474. STUDIES OF LIGNIN BIOSYNTHESIS USING ISOTOPIC CARBON. XH. BIOSYNTHESIS AND METABOLISM OF SINAPIC ACID. XIII. PHENYLPROPANOID SYSTEM IN LIGNIFICATION. T.Higuchi and S.A.

Brown: *Canad. J. Biochem.*, 1963, 41, 613-620, 621-628 (Prairie Reg. Lab., Nat. Res. Council, Saskatoon, Saskatchewan, Canada) XII. Wheat plants 25 days old converted [2-14c]sinapic acid to sinapyl lignin 6 times as efficiently as to coniferyl lignin; in heading wheat plants this factor was 16, indicating a lessening ability to demethoxylate the sinapyl nucleus with age. Feeding expt. with 5-hydroxyferulic acid showed that it participated in the conversion of ferulic to sinapic acid. In plants at an early stage of lignification 5-hydroxy-ferulic acid was dehydroxylated to ferulic acid and was converted to coniferyl lignin. Demethylation of sinapic acid to 5-hydroxyferulic acid was demonstrated.

BIOCHEMISTRY

[2-14C]ferulic acid was reduced to coniferyl aldehyde and coniferyl alcohol in heading plants.

XIII. The participation of a no. of org. acids in lignification was confirmed. Techniques of isotopic competition and trapping were used to study the phenyl-propanoid system of lignification. The feeding of coniferyl alcohol with [^{14}C]ferulic acid resulted in coniferyl and sinapyl-type lignin residues having lower sp. activities than those obtained after feeding [14C]ferulic acid alone. Feeding with coniferyl aldehyde or alcohol together with [14C]ferulic acid resulted in labelling of both compounds, that of the aldehyde being higher than that of die alcohol.

J.B.Parish

3475. ENZYMIC ASPECTS OF BIOSYNTHESIS OF LEAF-CUTINS BY LEAVES OF GASTERIA VERRICUOSA

AFTER INJURY. W.Heinen and Lv.d. Brand: Z. Naturforsch. B, 1963, 18, 67-79 (Bot. Inst., Univ.

Nijmegen, Netherlands) Stearic and oleic acid oxidases and lipoxygenase were considered to take part in cutin formation after damage to the top of a leaf of *G. verricuosa*. Pectinase also increased after injury. A formula for the constitution and a scheme for the synthesis of cutin were proposed.

(German) J.C.Crawhall

3476. NEW CYCLITOL, LEUCANTHEMITOL, ISOLATED FROM OX-EYE DAISY, CHRYSANTHEMUM LEUCANTHEMUM L. SURVEY OF OTHER COMPOSITAE (TRIBE ANTHEMIDEAE). V.Plouvier: C.R. Acad. Sci.. Paris, 1962, 255, 360-362 (Lab. de Chimie Appliquee aux corps organiques, Museum d'Histoire naturelle, Paris, France)

A new cyclitol, leucanthemitol, L-cyclohexene-tetrol configuration 1,2,4/3 was isolated from *C. leucanthemum*, *C. maximum* and *C. corymbosum*. It is most abundant in the stalks and heads. L-viburnitol occurs in the same plants and in *Achillea millefolium* and *Tanacetum vulgare*, but mainly in the leaves. L-inositol was isolated from *C. arcticum*, *C. uliginosum* and *Anthemis nobilis*. 13 other spp. were examined. Leucanthemitol, viburnitol, the quebrachitol of *Artemisia* and the L-pinitol of *Artemisia dracunculus* are all deriv. of inositol, the principle cyclitol of the Compositae.

(French) S. A. This tie wood

3477. IDENTIFICATION OF CHLOROGENIC ACID IN CASTOR BEAN AND ORANGES. A.L.Siddiqi and S.O.

Freedman: Canad. J. Biochem., 1963, 41, 947-952 (McGill Univ. Med. Clinic of the Montreal Gen. Hosp., Montreal, Quebec, Canada) Castor bean pomace and orange pulp were extracted by a new procedure with 70% isopropyl alcohol, cone, then pptd. with neutral lead acetate soln. and filtered through celite. The ppt. was suspended in water and stirred with amberlite to remove the lead. The resulting soln. was fractionated by column chromatography on dextran gel, eluted with water and chlorogenic acid identified by its u.v. absorption peak at 324 m μ . The fractions containing chlorogenic acid were subjected to paper chromatography and the material fluorescing in u.v. light was eluted with 50% ethanol and the chlorogenic acid cryst. by the K caffeine complex.

J.B.Parish

3478. CONSTITUTION OF JALARIC ACID. M.S.Wadia, V.V.Mhaskar and S.Dev: Tetrahedron Letters, 1963, 8, 513-517 (Nat. Chem. Lab., Poona, India)

Jalaric acid, obtained by the alk. hydrolysis of the resin secreted by the lac insect, *Laccifer lacca* has also been isolated as a hydrolysis product of *kusmi* seed lac. Letter.

R.H.Kimberlin

3479. CONSTITUENTS OF LEAVES OF FICUS CARICA L. I. ISOLATION OF PSORALEN, BERGAPten, tif-TARAXASTEROL AND P-SITOSTEROL. A.K.Athanasios, I.E.El-Kholy, G.Soliman and M. A.M.Shaban: J. chem. Soc., 1962, 4253-4254 (Chem. Dept., Fac. Sci., Univ., Alexandria, Egypt) Note. L.G.Gillies

3480. SYNTHESIS OF HIGH SPECIFIC ACTIVITY 14C-CARBOXYL INDOLEACETIC ACID AND OF 14C-NITRILE INDOLEACETONITRILE. B.B.Stowe: Analyt. Biochem., 1963, 5, 107-115 (Dept. Bot., J.W.Gibbs Lab., Yale Univ., New Haven, Conn., U.S.A.) A convenient one-day synthesis of pure IAA with sufficient sp. activity (16×10^9 mc./mmole) for use at physiol. concn. is described. Storage in acetonitrile minimises autoradio-sensitivity. A.D.Smith

3481. SUBSTANCES CAUSING WILTING, AND ANTI-BIOTICS. XXIV. CONSTITUTION OF LYCOMARASININ. E.Hardegger, P.Liechti, L.M.Jackman, A. Boiler and PL A. Planner: Helv. chim. Acta, 1963, 46, 60-74 (Org.-chem. Lab. der Eidg. Technischen Hochschule, Zurich, Switzerland) The functional groups and structures of lycomarasinin, lycomarasuric acid and anhydroylycomarasic acid, and the L-configuration of the aspartic acid moiety of these compounds, have been established. (German) A.D.Smith

3482. JG-HYDROXYLATION IN ISOLATED CHLOROPLASTS. A.Trebst and H.Ecte Z. Naturforsch. B, 1963, 18, 105-109 (Org.-diem. Inst., Tech. Hochschule, Mtlchen, Germany) Salicylaldoxime (10-2M) inhib. aerobic photophosphorylation in isolated chloroplasts of spinach. At a concn* of 10~3M or lower, salicylaldoxime acted as a cofactor in aerobic photophosphorylation after hydroxylation to the p-hydroquinone*. Various o- and j-hydroquinones with a carboxyl function on the benzene ring were reversibly oxidised and reduced during the photosynthetic phosphorylation by chloroplasts*. (German) J.C.Crawhall

3483. NITRITE REDUCTION BY ISOLATED CHLOROPLASTS IN LIGHT. A.Paneque, F.F.del Campo and M.Losada: Nature, Lond., 1963, 198, 90-91 (Sección de Bioquím. y Fisiol. Celular, Centro de Invest. Biol. Madrid, Spain) NO₂⁻ can be reduced by spinach grana in the presence of chloroplast extract both in the light when electrons are supplied by die ascorbate-dichlorophenol indophenol system, and in the dark when NADPH₂ is present. G.M.Lewis

3484. GENETICALLY CONTROLLED METABOLIC BLOCK IN PHOTOSYNTHETIC MUTANT OF VICIA FABA. U.Heber and W.Gottschalk: Z. Naturforsch. B, 1963, 18, 36-44 (Inst. Landwirtschaftliche Botanik, Univ. Bonn, Germany) The metabolism of a mutant of *V. faba* which was unable to reduce NADP was investigated. This mutant was able to reduce 2,6-dichlorophenolindole and to synthesize ATP from ADP plus P. No absence of soluble factors could be demonstrated and it was suggested that an insol. factor in the lamella structure of the chloroplasts which transferred electrons from chlorophyll a to NADP was absent. (German) J.C.Crawhall

3485. LIGHT-INDUCED BLEACHING OF PHOTOSYNTHETIC PYRIDINE NUCLEOTIDE REDUCTASE IN PRESENCE OF CHLOROPLASTS. B.Chance and A.San Pietro: Proc. nat. Acad. Sci., Wash., 1963, 49, 633-637 (Johnson Res. Fndn., Univ. Pennsylvania, Philadelphia, Pa., U.S.A.) Light-dark difference spectra

for photosynthetic pyridine nucleotide reductase reduction by illuminated chloroplasts, together with the kinetics of reduction of the pigment and its reduction of NADP, show that the pigment is a permissible intermediate in the photosynthetic pyridine nucleotide reductase activity.

I.R.Sargent

3486. PHOTOSYNTHETIC PHOSPHORYLATION IN MITOCHONDRIA FREE CHLOROPLAST SUSPENSIONS FROM LEAVES OF Vicia faba L. R.M.Leech:

Biochim. biophys. Acta. 1963, 71, 253-265 (Dept. Bot., Imperial Coll. Sci. Technol., London, England)

M. showed that crude chloroplast suspensions prep. by the classical differential centrifugation procedure were contaminated with mitochondria. The latter were completely removed by further centrifugation through a sucrose density gradient, after which all the chloroplasts were devoid of external membranes and thylakoids. Such chloroplast suspensions mediated photophosphorylation, in the presence of 3×10^{-5} M FMN and 10^{-4} M ADP, producing ATP. The rate of photophosphorylation and the nonadditive effect of the cofactors are similar to results obtained by other workers using Pmash chloroplasts.

B.M.Stevens

^{3487. SPECTROPHOTOMETRIC DETERMINATION OF DOX ENZYMES AND CO-ENZYMES IN CHLOROPLASTS.} H.Lundegardh: Physiol. Plant, 1963, 16, 454-465 (Penningby, Sweden) Spectrophotometric terminations were made in whole chloroplasts of cytochrome, flavoprotein, and pyridine nucleotide.

LD.J.Phillips

3488. CONVERSION OF PROTOCHLOROPHYLLIDE INTO CHLOROPHYLL. L.Vlasenok and A.A.Shlyk: Biokhimiia, 1963, 28, 57-69. Expt. with green algae involving the use of labelled CO₂, darkening illumination at pos. temp, and at -2° indicated that chlorophyllide was an intermediate product in the conversion of protochlorophyllide to chlorophyll.

(Russian) B.J.Cooper

3489. FORMATION OF STABLE FREE RADICAL IN ILLUMINATED CHLOROPHYLL COMPLEX. M.B.AUen? X! J-CMurchio: Biochem. biophys. Res. Comm., 1963, 11, 115-119 (Kaiser Fdn. Res. Inst., Lab. of Biomed. Res., Richmond, Calif., U.S.A.) A chlorophyll complex, non-sedimentable at 144000 g. at 5° settles sedimentable at 25-28% which enables it to be separated from other soluble constituents. Illumination with ³²P & ³²P resonance signal which is similar to that produced in intact cells, but which does not decay in the dark.

B.Ketterer

3490. PHOTOSYNTHESIS AND RESPIRATION. G.Hoch, H.Owens and B.Kole: Arch. Biochem., 1963, 101, of 180 MAS, Baltimore, Md., U.S.A.) Effects of O₂ production and uptake by algae were examined. Illumination with low light intensities inhibits O₂ uptake; illumination with medium or high intensities accelerates O₂ uptake. Inhib. of uptake was mainly sensitive to chlorophyll a. Effects of starvation, glucose, in Hesration and 3-(3,4-dichlorophenyl)-1,1-dichloro-urea inhibn. on O₂ uptake rates in light are described.

B.M.Stevens

3491. FUNCTION OF DIFFERENT CHLOROPHYLLS IN PHOTOSYNTHESIS AND ACTION SPECTRA OF ACTED LIGHT REACTIONS. A.Muller, D.C.Fork (IS-H-T-Witt: 2. Naturforsch. B, 1963, 18, 142-145 (J.Wolmer-Inst., Rysikalisch-chem. Inst., Tech. Univ. Berlin, Germany) By observing die changes

of light absorption at various max. during photosynthesis process it was deduced that there were 7 different chlorophylls in green plants. Five of these chlorophylls belonged to energy donor systems and only 2 representing only 1/1000 part of the total were energy acceptor mol.

J.C.Crawhall

3492. SEPARATION OF LIGHT AND DARK STAGES IN PHOTOPHOSPHORYLATION. G.Hind and AJ.Jagendorf: Proc. nat. Acad. Sci., Wash., 1963, 49, 715-722 (McCormick-Pratt Inst. and Biol. Dept., Johns Hopkins Univ., Baltimore, Md., U.S.A.) ADP,

phosphate, Mg and a pH of 8*0 are required for the dark stage of photophosphorylation. The redox cofactor must be present for photophosphorylation during the light stage. A pH of <6-0 during light stage photophosphorylation produces much higher energy yields partly by inhibiting the dark decay rate of a labile intermediate and apparently in part by an increase in the total amount of that intermediate which can be produced in the light. The intermediate is neither a purely photochem. entity, nor a high energy phosphate compound, nor an activated form of the redox factor. Max. yields of ATP formed are 1 mole per 15 moles of chlorophyll present.

J.R.Sargent

3493. INTRACELLULAR DISTRIBUTION OF SOLANESOL AND PLASTOQUINONE IN GREEN LEAVES OF TOBACCO PLANT. J.Stevenson, F.W.Hemming and F.A.Morton: Biochem. J., 1963, 88, 52-56 (Dept. Biochem., Univ. Liverpool, England) Fresh tobacco leaves were fractionated into chloroplasts, mitochondria and a supernatant fraction containing cell sol. material. Both solanesol (86 micromoles/kg. of leaf tissue) and plastoquinone (424 micromoles/kg. of leaf tissue) were found to be cone, in the chloroplasts. Each contained 9 isoprenoid units. The results are discussed together with recent work on the biosynthesis of quinones in animal tissues. Almost all of the solanesol isolated was unesterified.

J.C.Crawhall

3494. FUNCTION OF PLASTOQUINONE IN ELECTRON TRANSPORT SYSTEM OF PHOTOSYNTHESIS. J.Weikard, A.M.Qller and H.T.Witt: Z. Naturforsch. B, 1963, 18, 139-145 (Max-Volmer-Inst. Physikalisch-chem. Inst., Tech. Univ., Berlin, Germany) It was proposed that plastoquinone (2,3-dimethyl-5-solanesylbenzoquinone) acted as an electron acceptor substance at the end of the photosynthetic energy chain in chloroplasts as an additional link to the NADP-NADPH₂ reaction and substrate reduction. Plastoquinone II may have been an additional electron transfer compound earlier in the chain.

J.C.Crawhall

GENERAL BIOCHEMISTRY

3495. CYCLIC FUNCTIONS AND METASTABLE MOLECULES. A.Lwoff and M.Lwoff: J. theor. Biol., 1962, 2, 48-62 (Inst. Pasteur, Paris, France) With ref. to the polio virus, the problem of cyclical functions and factors controlling or disturbing them have been considered. This includes those initiating cell division and those controlling the phases of life cycles. The hypothesis that cyclic functions imply feed-back mechanisms and are controlled by reversible structural alterations of metastable mol. is considered.

J.A.Dawson

BIOCHEMISTRY

- 3496. MITOCHONDRIAL CHANGES IN LIVER OF ESSENTIAL FATTY ACID [EFA]-DEFICIENT MICE.** J.W.Wilson and E.H.Le Due: *J. cell Biol.*, 1963, 16, 281-296 (Dept. BioL, Brown Univ., Providence, R.I., U.S.A.) Livers of weanling mice fed essential fatty acid deficient diets for up to 80 days were studied in the E.M. and light microscope. Enlarged mitochondria in the periportal region of the lobule with additional cristae arranged in stacks in the central cavity are described. It is suggested that the uncoupling of oxidative phosphorylation in EFA-deficient mitochondria may be due to a mol. defect in the structure that determines the spatial relationship between the electron transport chain and phosphorylation due to lack of ATP. P. Barrow
- 3497. MITOCHONDRIAL FACTOR CONFERRING OLIGOMYCIN SENSITIVITY ON SOLUBLE MITOCHONDRIAL ATPase.** E.Racken *Biochem. biophys. Res. Comm.*, 1963, 10, 435-439 (Dept. Biochem., Publ. Res. Inst. of the City of New York, Inc., N.Y., U.S.A.) A factor conferring oligomycin sensitivity on sol. mitochondrial ATPase has been obtained in the supernatant obtained from submitochondrial particles treated first with trypsin, followed by exposure to urea and then sonic oscillation. B.Ketterer
- 3498. OXIDATIVE PHOSPHORYLATION BY PEA SEEDLING MITOCHONDRIA.** N.Rosa and S.Zalilev *Canad. J. Biochem.*, 1963, 41, 533-541 (Dept. Plant Sci., Univ. Alberta, Edmonton, Alta., Canada) Etiolated pea seedlings were homogenised in buffered sucrose soln. and fractionated to obtain the mitochondria. The addition of DNP at 10⁻⁴M uncoupled phosphorylation and the addition of malonate at 10⁻⁵M completely inhib. oxidation and phosphorylation but at 10⁻⁵M increased phosphorylation. Mitochondrial prep, from seedlings pre-soaked in standing water gave higher phosphorylative and oxidative activities than those presoaked in a stream of aerated water. J.B. Parish
- 3499. EFFECT OF COLD ON OXIDATIVE PHOSPHORYLATION IN MICE.** V.P.Skulachev, S.P.Maslov, V.G. Sivkova, L.P.Kalinechenko and G.M.Maslova: *Biokhimiia*, 1963, 28, 70-79. Expt. showed that exposure of albino mice to air temp. of -15° for 2 hr. resulted in an apparently reversible uncoupling of oxidative phosphorylation in their skeletal muscles. (Russian) B.J.Cooper
- 3500. INFLUENCE OF PHENOTHIAZINE ADMINISTRATION ON CYTOCHROME OXIDASE ACTIVITY IN LAMB BRAIN TISSUE.** R.B. Williams, W.R.Humphries and C.F.Mills: *Nature*, Lond., 1963, 198, 387-388 (Rowett Res. Inst., Bucksburn, Aberdeen, Scotland) Lambs born to ewes treated with 10 g. doses of phenothiazine during pregnancy showed lowered cytochrome oxidase levels in the brain stem. Cu concn. was not affected. It is suggested that phenothiazine be used as an anthelmintic with extreme caution in areas where Cu deficiency may produce 'swayback', also associated with lowered brain cytochrome oxidase. G.M.Lewis
- 3501. RIBONUCLEOTIDES AND ENZYMES OF PENTOSE PHOSPHATE CYCLE IN EXPERIMENTAL MYOCARDIAL INFARCTION.** A.L.Kolotilova, B.F.Korovkin, S.N. Lyzlova, V.K.Vagner, E.T.Vasilenko and N.K.Dzutsov: *Biokhimiia*, 1963, 28, 113-121. The free ribonucleotide level and the activity of individual enzymes of the pentose phosphate cycle were studied in the cardiac muscle of dogs with expt. infarction induced by ligation

of the descending branch of the left coronary artery. Various changes were observed, and these were most pronounced shortly after ligation, with return to approx* normal by day 13. (Russian) BJ.Cooper

- 3502. PAPER ELECTROPHORESIS OF SOLUBLE PROTEINS OF RABBIT HEART MUSCLE IN EXPERIMENTAL DIPHTHEROID INTOXICATION.** Ye.A.Michovicova and L.G.Ter-Sarkisyan: *Vop. Med. Him.*, 1963, 9, 204-206 (Chair of Animal Biochem., State Univ. Moscow, U.S.S.R.) Paper electrophoresis showed the presence of 5 distinct protein fractions in expt. with sol* a. proteins of normal rabbit heart muscle. During diphtheroid intoxication slight changes were observed in 3 of the fractions. J.R. Sargent

- 3503. SODIUM. POTASSIUM. NITROGEN. PHOSPHOR^ AND LIPID IN MUSCLE MITOCHONDRIA ISOLATED W SUCROSE MEDIA OF VARYING CONCENTRATIONS.** A.RXraston and J.F.Manery: *Canad. J. Biochem.*, 1963, 41, 831-847 (Dept. Biochem., Univ. Toronto, Ontario, Canada) Mitochondrial pellets isolated in 0⁰25M sucrose from pigeon breast muscle and washed one* contained 77 g. water/100 g. pellet, 7⁸ mequiv. K and 4³ mequiv. Na/kg. dry wt. The Na:K ratio for mitter chondria was nearly 5 times that of muscle. Comparisons were made of the Na, K, and water content of mito-chondria isolated in 0-25M, 0-45M and 0-88M sucrose when washed once and twice. Washing always resulted in loss of Na and K. A 'floating' layer, believed to be washed out of die mitochondria by resuspension, was unique in being high in lipid and Na content. J.B.Parish

- 3504. TISSUE STUDIES DURING RECOVERY FROM ^a IMMOBILISATION ATROPHY.** L.Eichelberger, M.*⁰¹*¹* and P.V.Moulden *J. appl. Physiol.*, 1963, 18, 623-628 (Div. Orthopedic Surgery, Surgery Dept., Univ. Chicago, 111, U.S.A.) Biochem. analysis and Uf⁰ chem. methods were used to study changes occurring during recovery from atrophy in the leg muscles of puppies. Partial recovery had occurred by 91 days and full recovery by 300 days after remobilisation of the limb. H.C.Jones

- 3505. REVERSAL OF THE INHIBITORY ACTION OF ^{trit}N¹⁴ AMMONIA ON THE RESPIRATION OF RAT LIVER N¹⁴ CHONDRIA.** M.Erecinska and A.Worcel: *Biochim. biophys. Acta*, 1963, 71, 305-310 (Neurochem. L^b, Dept. Neuropsychiatry, Univ. Texas Med. Sch., Galveston, Tex., U.S.A.) Glutamate reversed by preventing further amination of CX-oxoglutarate. Succinate also abolished the inhib., but without interfering with reductive amination of OL-oxoglutarate. A method of calculating the ratio of reduced: oxidised mitochondria, pyridine nucleotides, based on the equilibrium const. of the glutamate dehydrogenase reaction, is discussed. B.M.Stevens

- 3506. FIXATION OF TETANUS TOXIN BY FROG BRAIN.** W.E.van Heyningen and RJ.Woodman: *J. gen. Microbiol.*, 1963, 31, 389-392 (Dunn Sch. Pathol., Univ. Oxford, England) The apparent non-fixation of tetanus toxin by frog brain emulsion has been re-examined. Frog brain emulsion does fix tetanus toxin, but only w*^u 1/2000th the capacity of mammalian brain emulsion. The toxin-fixing capacity may be connected with the observation that the ganglioside in frog brain, unlabeled, in mammalian brain, is extractable with aq. solvent. Jijifrew

- 3507. ATP AND PHOSPHOCRZATENE [PC] LEVELS IN BRAIN AND MUSCLES OF ANIMALS ADAPTED AND**

NON-ADAPTED TO COLD. L.A.Gousseva: Vop. Med. Him., 1963, 9, 180-184 (Lab. Ind. Microclimate. Inst. Industrial Hygiene and Occupational Dis. Acad. Med. Sci. Moscow, U.S.S.R.) After cooling for * hr. at -5°, ATP and PC levels in brains of mice adapted to cold varied significantly. ATP and PC levels were decreased in muscles, PC levels being decreased more than ATP levels. Body temp. in cold-adapted animals did not alter. Under similar expt. conditions accumulation of ATP and PC occurred in brain and muscles of non-adapted mice. At the same time body temp. decreased by 6°. J.R.Sargent

3508. THIOL GROUPS OF BLOOD PLATELETS IN RELATION TO CLOT RETRACTION. P.Fantl: Nature, Lond., 1963, 198, 95 (Baker Med. Res. Inst., Commercial Rd., Prahran, Victoria, Australia) The presence of thiol groups in platelets is proved by the reaction with N-ethylmaleimide; this prevents normal gel retraction. G.M.Lewis

3509. THE OXIDATION OF VARIOUS PRECURSORS IN NORMAL AND TUMOUR-BEARING MICE IN VIVO. J.Kabara and G.Okita: Biochem. J., 1963, 88, 187-191 (Biochem. Res. Dept., Univ. Detroit, Mich., U.S.A.) The oxidation of 14c-labelled nutrients to CO_2 was studied in animals bearing a Seuich solid tumour or a lymphatic leukaemia (P-1534). Animals bearing the Ehrlich solid tumour showed a CO_2 production of 14CO₂ from [1-14C]acetate and [B-T¹⁴C]ucose no differences from [2-14C]acetate and Tr^{14}C glucose, and an increase from [1-14C]glucose. This agrees with the idea that tumour animals activate C2 fragments less than normal. The demonstration of hexose monophosphate for glucose metabolism! Leukaemic animals failed to show any deviation from their normal controls.

3510. NON-ENZYMIC HYDROXYLATION OF AROMATIC COMPOUNDS. J.H.Green, B.J.Ralph and P.J.Schofield: Nature, Lond., 1963, 198, 754-756 (Univ. New South Wales, Australia) Conversion of aniline to O_2H^+ in phenol was studied in the presence of ascorbic acid and metal cation, EDTA and O₂. Evidence is presented via to substantiate the hypothesis that the oxidation precedes a radical mechanism which may be represented: (1) iron-catalysed oxidation of ascorbic acid resulting in formation, (2) formation of an active radical intermediate with the substrate leading to oxidation of the latter to α -aminophenol. J.R.Sargent

3511. METABOLISM OF ACETALDEHYDE BY THE BRAIN IN VIVO. J.W.Ridge: Biochem. J., 1963, 88, 100 (Dr. Psychol. Med., Med. Sch., King's Univ. Durham, Newcastle-upon-Tyne, England) Administration of ethanol to the normal rat was followed by a series of wave-like fluctuations in the acetaldehyde concn. of blood and brain which lasted about 1 hr. before settling down to a steady decay, similar situations in the concn. of lactate, pyruvate, and α -oxoglutarate in the brain occurred simultaneously. These oscillations could be abolished by pretreatment with thylthiuram disulphide. It is suggested that the brain contains an aldehyde dehydrogenase and that oxidation of acetaldehyde in the brain is linked through NADH₂ to pyruvate reduction.

3512. ACTION OF ADENOSINE-5-MONOPHOSPHORIC ACID ON PORPHYRIA INDUCED IN WHITE RATS BY ALLYLISOPROPYLACETYLCARBAMIDE. A.Gajdos and M.Gajdos-Torok: C.R. Soc. Biol., Paris, 1962, 156, 1565-1566 (Clin. méd. l'Hôtel Dieu, Paris, France) 18 rats received 400 mg. allylisopropylacetylcarbamide (Sedormid)/kg. daily for 18 days. Expt. animals also received 20 mg. AMP per day. Sedormid increased the renal excretion of O-aminolaevulinic acid, porphobilinogen and coproporphyrin. In animals receiving AMP the urinary level of these compounds was decreased. The effect of AMP was also seen in rabbits.

(French) M.A.Price
3513. METABOLISM OF VANILLIN INGESTED WITH PHTHIVAZIDE. L.L.Grebennik, T.V.Gnevkovskaya and G.A.Smirnova: Vop. Med. Him., 1963, 9, 127-133 (Dept. Chem., All-Union S.Ordzhonikidze Inst. Pharmaceutical Chem., Acad. Med., Sci. of U.S.S.R., Moscow, U.S.S.R.) Up to 12% of vanillin ingested together with phtivazid was excreted as vanillin and vanillic acid. Up to 73% of vanillin ingested in the absence of phtivazide was excreted as vanillin and vanillic acid. J.R.Sargent

3514. IN VITRO INSTABILITY OF A COMMONLY USED TRICARBOCYANINE DYE. D.D.Michie, R.S.Goldsmit and A.D. Mason, jun.: Proc. Soc. exp. Biol., N.Y., 1962, 111, 540-543 (U.S. Army Surg. Res. Unit, Brooke Army Med. Center, Fort Sam Houston, Tex., U.S.A.) Significant increase in the absorbance of the dye, dissolved in solvent and whole blood, was observed over a period of 8 hr. Failure to correct this change when measuring cardiac function can introduce a significant error. M.M.Shapland

3515. GLYCOGEN AND SUCCINIC DEHYDROGENASE IN WOUND HEALING OF THE ORAL MUCOSA OF THE RAT. E.O.Butcher and J.Klingsberg: Proc. Soc. exp. Biol., N.Y., 1962, 111, 783-786 (Dept. Anat., Coll. Dentistry, New York Univ., N.Y., U.S.A.) Epithelial proliferation in wound healing appears to be associated with the disappearance of glycogen. Lack of growth causes a build up of glycogen. The metabolism of epithelial basal cells as indicated by the presence of succinic dehydrogenase appears to be related to epithelial and connective tissue continuity. Presence of this enzyme in the basal cells confirms that metabolic activity is highest where there is no glycogen.

M.M.Shapland
3516. TOTAL NITROGEN CONTENT IN MARTESSIA FRAGILIS. A WOOD BORING PHOLAD OF MADRAS. V.V.Srinivasan: Comp. Biochem. Physiol., 1963, 9, 31-36 (Zool. Res. Lab., Univ. Madras, India) The total N of *M. fragilis* amounts to 1.8-2.8% of wet wt. whilst *M. striata* contains 2.3-3.9%. Abs. values are greater for *M. striata*, the larger sp. In juvenile *M. fragilis* N content increases with size, but then remains const, during the o phase of the life history, increasing again after a sex change to the ? has occurred. The N content of immature forms actively burrowing is greater than that of non-active forms. M.S.Laverack

3517. NEMATODE BIOCHEMISTRY. I.E. EXCRETION PRODUCTS. M.Rothstein: Comp. Biochem. Physiol., 1963, 9, 51-59 (Lab. Comp. Biol., Kaiser Found. Res. Inst., Richmond, Calif., U.S.A.) Cultures of *Caenorhabditis briggsae* were incubated in flasks containing various labelled substrates: glycine, aspartic acid acetate and alanine. Creatinine, urea, uric acid, and "

BIOCHEMISTRY

allantoin obtained in small quantities by analysis at the end of incubation do not contain label and are not produced as major excretory products. NH₃ and free amino acids account for most of the excreted N, whilst considerable amounts of acidic and neutral material are also excreted with label. These results for a free-living nematode are in general agreement with those obtained for parasitic spp.

M.S.Laverack

3518. ENZYMIC CHEMICAL INVESTIGATION AFTER BURNS. R.RUenauer, H.KrOner and W.Staib: Hoppe-Seylers Z. physiol. Chem., 1963, 331, 143-153 (Physiol.-Chem. Inst. Med. Acad., DQsseldorf, Germany) Surface burns on rats and guinea-pigs resulted in considerable increase in the serum levels of aspartate and alanine transaminase, and aldolase and lactate dehydrogenase. The muscle-sp. creatine kinase was increased but the enzyme patterns of the kidney and liver were unchanged. (German) I.Cornish

5519. CHEMISTRY OF INSECT HAEMOLYMPH. IV. ACID-SOLUBLE PHOSPHATES. G.R.Wyatt, R.B. Krope and F.G.Carey: J. insect Physiol., 1963, 9, 137-152 (Dept. Biol., Yale Univ., New Haven, Conn., U.S.A.) The acid-sol. phosphate compounds in the haemolymph plasma of several lepidopterous insects were fractionated quant. by ion-exchange chromatography, and the principal components identified. The total acid-sol. P ranged from 26-44mM in Hyalophora cecropia. The main components were inorg. phosphate, OL-glycerophosphate, phosphorylcholine, and phosphorylethanolamine. Also present were UDP N-acetylgalactosamine and other UDP deriv., though in smaller amounts. The presence of phosphagen was indicated. During diapause, orthophosphate and the basic phosphates tended to be more abundant than during the active stages, while glycerophosphate changed in the reverse manner. Inj. ³²PO₄¹⁻ was incorporated into various esters at all stages, but incorporation using cell-free haemolymph was negligible. The distribution of phosphates in Antheraea Polyphemus, Samia cynthia, and Protoparce sexta was similar to that in H. cecropia. There was little cx-glycerophosphate in Bombyx mori whereas sorbitol 6-PQ4 was abundant and glucose 6-PO₄ was also present. R.J.Walker

3520. PHOTOLABILE PIGMENT FROM OCELLI OF SPIROCODON, AN ANTHOMEDUSA. M.Yoshida: Photochem. Photobiol., 1963, 2, 39-48 (Tamano Marine Lab., Shibukawa, Tamano, Okayama, Japan) Ocelli are morphol. specialised photoreceptors and contain photosensitive pigments. The prop. of the pigments from S. saltatrix resemble those of other known visual pigments. G.C.Barr

3521. STEREOCHEMICAL THEORY OF OLFACTION. J.E.Amoore: Nature, Lond., 1963, 198, 271-272 (Dept. Z00L, Univ. California, Berkeley, Calif., U.S.A.) G.M.Lewis

3522. THERMODYNAMICALLY BOUND WATER OF COTTON CELLULOSE, SILK FIBROIN, WOOL KERATIN AND INSULIN. J.L.Morrison: Nature, Lond., 1963, 198, 84-85 (Dept. Chem., Ontario Res. Foundn., Toronto, Ont., Canada). G.M.Lewis

3523. HISTOAUTORADIOGRAPHIC AND BIOCHEMICAL STUDY OF THE PREHYPOPHYSIS OF CARASSIUS AURATUS AFTER ADMINISTRATION OF Na₂³⁵SO₄. M.Deminatti: C.R. Soc. Biol., Paris, 1962, 156,

1924-1926 (Inst. His to L, Fac. M&L* Strasbourg, France) Histoautoradiographic study of die hypophysis of C. auratus, 24 hr. after injn. of Na₂³⁵SO₄, showed that max. radioactivity was associated with cells which were Gomori-pos., Schiff-pos. and Alcian Blue-pos. Electrophoresis of homogenate of hypophysis showed no free 35SO₄. The radioactivity was associated with a band at the origin of the paper. After acid hydrolysis this area contained free 35SO₄.

- (French) M.A.Price
3524. CRITICAL MICELLE CONCENTRATIONS OF DOUBLE LONG-CHAIN ELECTROLYTES (AMINE SOAR IN AQUEOUS SOLUTION. A.Packter and M.Donbrow: J. Pharm., Lond., 1963, 15, 317-324 (Chelsea Coll* Sci. and TechnoL, London, England) Micelle formation and 'gegenion*' binding were studied in aq. soln. of primary and quaternary NH₄ dodecyl sulphates by the conductivity method. Critical micelle concn. decrease markedly with increase in the cation chain length, due mainly to increase in the free energy of micelle formad⁰¹ 'Genenion' binding also increases with increasing cation chain length, reaching 95% for the octyl and higher NH₄₊ salts. J.M.Whitmarsh

METHODS

3525. SIMULTANEOUS DISTILLATION OF WATER AND EXTRACTION OF FAT FROM MOUSE CARCASSES AND TISSUES. G.L.Wolff and B.Bakay: Proc. Soc. exp. Biol., N.Y., 1963, 112, 524-526 (Inst. for Cancer Res., Philadelphia, Pa., U.S.A.) The apparatus is described for the simult. extraction of water and lipids from liver tissue or mouse carcasses. It involves the use of a Soxhlet apparatus attached to a flask of refluxing toluene; water collects over the toluene whilst lipids are removed from the mouse tissue and are found in the toluene in the Soxhlet extractor. A 98% yield of extractable fat is obtained in a 20 hr. refluxing period.

- D.N.Wheatley
3526. BLOTTING PROCEDURE FOR ADEQUATE DRYING OF ISOLATED TISSUE PREPARATORY TO CHEMICAL ANALYSES. R.R.Paradise: Nature, Lond., 1963, 198V 112 (Dept. Pharmacol., Sch. Med., Univ. S. CeMfott^A Los Angeles, Calif., U.S.A.) A blotting procedure recommended for isolated tissues which removes superfici^{WP} but not intercellular fluid. G.M.L^{WP}

3527. INTERFERENCE BY MENADIOL IN COLORXMETRIF. ESTIMATION OF NITRITE. C.K.Ramakrishna Kurup f C.S.Vaidyanathan: Biochim. biophys. Acta, 1963, 74*. 465-467 (Dept. Biochem., Indian Inst. Sci., Bangalore*, India). B.M. Steve*

3528. MICROMETHOD FOR SIMULTANEOUS DETERMINATION OF NITROGEN AND PHOSPHORUS IN SINGLE SAMPLES OF NUCLEOPROTEINS AND THEIR DERIVATIVES. B.Filipowicz, M.Gross and B.Skoczylas: Analyt. Biochem., 1963, 5, 187-194 (Dept. Physio* Chem., Acad. Med., Lodz, Poland) A method for mineralisation of samples of nucleoproteins and their cie^{MV} aimed at the simult. determination of N and P, has been described. The influence of different metallic catalyst* and H₂O₂ upon mineralisation and correct determinate^{MV} of P has been examined. Good results for pyrimidines,

BIOCHEMISTRY

337

purines. and proteins, using Se as catalyst, have been obtained. The recovery of lysine was 97.79%.

A.D.Smith

352. DETERMINATION OF PARTICIPATE ACID IN TOWN AIR. B.T.Commins: Analyst, 1963, 88, 364-67 JM.R.C., Air Pollution Res. Unit, St. Bartholomew's Hosp. Med. Coll., London, England.

L.A.B.S.

353. FLUOROMETRIC ASSAY OF 2-DIMETHYLAMIN(ROXYPURINE (DIMETHYLAMINOQUANINE) IN THE PRESENCE OF GUANINE. S.Udenfriend, Zaltzman-Nirenberg and G.L.Cantoni: Analyst, 1962, 87, 258-260 (N.I.H., Bethesda, Md., estimated). A 2,6-dimethylamino-6-hydroxypurine can be assayed in the presence of guanine, by converting the uric acid with HNO_2 to xanthine which is not fluorescent at the conditions employed. A direct fluorometric assay of 0.01 μ g/ml. of rabbit liver s-RNA gave a value within 2.5% of 100 moles guanine, comparing the figure of 4 per 100 obtained after chromatographic separation. A.D. Smith

354. CLEAVAGE OF ORGANICALLY BOUND IODINE BY ELECTROLYTIC OXIDATION. G.Hillmann and J.Kuhlmann: Hoppe-Seylers Z. physiol. Chem., 1963, 331, 287-288 (Chem. Lab. Med., Univ. Clinic, Tübingen, Germany). (German) LComish

355. DETERMINATION OF FLUORIDE BY COMPLEXOMETRIC TITRATION. M.A.Leonard: Analyst, 1963, 88, 404-405 (Boots Pure Drug Co. Ltd., Analytical Group, Standards Dept., Station St., Nottingham, England).

I.A.B.S.

356. PHOSPHORIMETRY AS QUANTITATIVE MICRO-ANALYSIS WITH APPLICATION TO SOME SUB-STANCES OF BIOCHEMICAL INTEREST. S.Freed and M.H.Vise: Analyst. Biochem., 1963, 5, 338-344 (Chem. Div., Brookhaven Nat. Lab., Upton, Long Island, N.Y., U.S.A.) Spectra at low temp. exhibit greater sharpness, resolution and intensity. Spectrophosphorimetry at liquid nitrogen temp. was chosen for the quant. analyses of α -chymotrypsin and N-acetyl-L-tyrosine ethyl ester in methanol:water:ethanol (55:25:20). A precision of 5 to 10% was achieved. A.D. Smith

357. MASS SPECTROMETER INLET SYSTEM FOR SAMPLING GASES DISSOLVED IN LIQUID PHASES. G.Hoch and B.Koks: Arch. Biochem., 1963, 101, 160-171 (BAS, Baltimore, Md., U.S.A.) The system permitted continuous sampling of gases dissolved in liquid low density using a semipermeable membrane which allowed gases but not the liquid phase to enter the mass spectrometer. Rapid time response and high sensitivity were achieved. Application to the study of H_2O_2 kinetics is described. B.M. Stevens

358. SEDIMENTATION AND PROPERTIES OF ROUGH AND SMOOTH MEMBRANES FROM RAT LIVER. G.Dallner, 426-SK and A.Bergstrand: J. cell Biol., 1963, 16, 121-128 (Inst. Pathol., Sabbatsberg Hosp., Karolinska on of JMS 01*0111!. Sweden) Differential centrifugation of rat liver components of the endoplasmic reticulum revealed microsomes at 250000 g resulted in 2 fractions differing in structure and function. The specific enzymes and glucose 6-phosphatase activity occur mostly in the rough vesicles. RNA and DT diaphorase activity to AT?A deconjugating enzyme, reacting equally with ^{35}S and ^{32}P (DPH₂) activity occur mostly in the smooth vesicle fraction. P.Barlow

359. APPARATUS FOR SAMPLING AFTER CESIUM CHLORIDE DENSITY GRADIENT CENTRIFUGATION IN THE PREPARATIVE ULTRACENTRIFUGE.

S.A.Ellison and H.S.Rosenkranz: Analyst. Biochem., 1963, 5, 263-265 (Dept. Microbiol., Coll. Phys. Surg., Columbia Univ., New York, U.S.A.)

A simple apparatus is described, which uses a 10 ml. syringe or metering pump, tygon tubing, 3 way stopcock and a disposable needle. This is used to apply controlled pressure to the top of the tube, to give a predetermined flow rate from the bottom. A.D. Smith

360. PHOTOMETRIC SCANNING OF CENTRIFUGED DENSITY GRADIENT COLUMNS. M.K.Brakke:

Analyst. Biochem., 1963, 5, 271-283 (Crops Res. Div., Agric. Res. Service, United States Dept. of Agric., Lincoln, Neb., U.S.A.) Results obtained with an apparatus for recording the u.v. absorbance at all depths in a centrifuged density gradient column and for collecting consecutive samples are presented. A heavy sucrose soln. is forced from a motor-driven syringe into the bottom of a gradient column. The gradient column floats on the heavy sucrose soln. and is slowly forced up through a plastic adaptor shaped like an inverted funnel and through a cell 1 cm. thick with silica windows. As the soln. passes through the cell, the light absorption at 253*6 mjj is measured and automatically recorded on a chart as absorbance. A.D. Smith

361. ZONAL ULTRACENTRIFUGE. NEW INSTRUMENT FOR FRACTIONATING MIXTURES OF PARTICLES.

N.G.Anderson: J. phys. Chem., 1962, 66, 1984-1989 (Biol. Div., Oak Ridge Nat. Lab., Oak Ridge, Tenn., U.S.A.) A new technique for carrying out zone ultracentrifugation is described. The rotor is a hollow cylinder with a capacity of 1625 ml. and the density gradient is established and the sample introduced while the rotor is spinning. Particle separation is achieved at 30000 r.p.m. and subcellular components, TMV and polio virus have been recovered in a high state of purity from crude extracts. G.C.Barr

362. STUDY BY INTERFERENCE OPTICS OF SEDIMENTATION IN SHORT COLUMNS. F.E.Labar and R.L.

Baldwin: J. phys. Chem., 1962, 66, 1952-1959 (Biochem. Dept., Stanford Univ. Sch. Med., Palo Alto, Calif., U.S.A.) Sedimentation equilibrium can be achieved more quickly by using short columns of soln. Interference optics were used here to carry out more accurate measurements. The accuracy of the method has been estimated from the behaviour of a sucrose soln. The method of computing the diffusion coeff. from the rate of approach to equilibrium has been reinvestigated and discussed. G.C.Barr

363. MOLECULAR WEIGHT DETERMINATIONS WITH MAGNETICALLY SUPPORTED ULTRACENTRIFUGE.

P.E.Hexner, R.D.Boyle and J.W.Beams: J. phys. Chem. 1962, 66, 1948-1951 (Physics Dept., Univ. Virginia, Charlottesville, Va., U.S.A.) The technique of using a magnetically suspended ultracentrifuge is described. This technique is particularly suitable for low speed equilibrium studies on the ultracentrifuge and can therefore be applied to macromol. with a mol. wt. in the range of 105 to 107. CC.Barr

364. SUBFRACTIONATION OF Sf 20-10 & LIPOPROTEINS IN SWINGING BUCKET ROTOR. F.T.Lindgren, A.V. Nichols, F.T.Upham and R.D.Wills: J. phys. Chem.,

BIOCHEMISTRY

1962. 66, 2007-2011 (Lawrence Radiation Lab., Univ. California, Berkeley, Calif., U.S.A.) Human serum lipoproteins have been sub-fractionated on a NaCl density gradient and a specially designed swinging bucket rotor which provides an increased radial flotation path (8*89 cm.). The various fractions differed in their glyceride content. G.C.Barr

3542. SIMPLE DESIGN FOR A FRACTION COLLECTOR. J.W.Mehl: *Analyt. Biochem.*, 1963, 5, 170-174 (Dept. Biochem., Univ. S. California, Los Angeles, Calif., U.S.A.) A very simple design of fraction collector is reported which can be made without demanding machine work and occupies very little space. The device collects 100- to 500-ml. samples at flow rates up to 450 ml./hr. A.D.Smith

3543. PAPER CHROMATOGRAPHIC SEPARATION OF ACETYL AND 3-HYDROXYBUTYRYL HYDROXAMATES. S.Kumar and R.M.Avena: *Analyt. Biochem.*, 1963, 5, 265-267 (Chem. Dept., Georgetown Univ., Washington, D.C., U.S.A.)

These hydroxamates were satisfactorily resolved using methylene chloride:n-butanol:acetic acid:water (80:20:15:30), giving Rf of 35 and 23 respectively. A.D.Smith

3544. APPARATUS FOR AUTOMATIC APPLICATION OF SPOTS TO CHROMATOGRAPHIC PAPER. M.M.Zaalishvili and F.O.Shraibman; Biokhimia, 1963, 28, 9-12. Description of a universal apparatus for the application of spots and streaks to chromatographic paper. The apparatus is controlled by an electronic device which regulates the duration of the application, thus providing spots of appropriate diam. The rate of application, and therefore the width, of streaks is also regulated, as is the interval between applications according to the drying time of the soln. being applied. (Russian) B.J.Cooper

3545. DETECTION AND DETERMINATION OF GLYCEROL IN TOBACCO: USE OF PAPER AND CELLULOSE-COLUMN CHROMATOGRAPHY FOR DETERMINING GLYCEROL IN PRESENCE OF SUGARS. S.J.Patterson: *Analyst*, 1963, 88, 387-393 (D.S.I.R., Lab. Government Chemist, London, England). I.A.B.S.

3546. FILTRATION CAPACITY OF ION EXCHANGE COLUMNS. C.E.Mellish and J.A.Payne: *Nature*, Lond., 1963, 198, 283 (Wantage Res. Lab. U.K. Atomic Energy Authority, Wantage, Berks., England) Very efficient removal of particulate matter from water by mixed bed ion exchange columns is described. G.M.Lewis

3547. IMPROVED TECHNIQUE FOR PREPARATION AND SCANNING OF THIN-LAYER CHROMATOGRAMS. R.L.Squibb: *Nature*, Lond., 1963, 198, 217 (Lab. Disease and Environmental Stress, Bureau Biol. Res., Rutgers St. Univ., New Brunswick, N.J., U.S.A.)

A satisfactory technique for thin layer chromatographic separation and scanning of free amino acids uses a clear plastic plate instead of glass; the stain used penetrates the silica gel without disturbing the spots. G.M.Lewis

3548. FAST SEPARATION OF RADIONUCLIDES BY THIN-LAYER CHROMATOGRAPHY. A.Breccia and F.Spalletti: *Nature*, Lond., 1963, 198, 756-758

(Inst. Chimica Fisica, Univ. Bologna, Italy) Thin layer chromatography on silica gel has been used to separate ^{95}Zr from ^{95}Nb and ^{90}Sr from ^{90}Y . A variety of solvent systems suitable for these separations are described. j. R. Sargent

3549. MICROANALYTICAL DETERMINATION OF DIHYDROXYAROMATIC ACIDS BY GAS CHROMATOGRAPHY. C.M.Williams and R.H.Leonard: *Analyt. Biochem.*, 1963, 5, 362-366 (Depr. Radiol., Univ. Florida Coll. Med., Gainesville, Fla., U.S.A.)

The acids are acetylated on the phenolic group with acetic anhydride and trifluoroacetic acid followed by methylation of the carboxyl group with diazomethane. They are then separated on a 15% silicone column at 190°. The method is of use in investigating cases of suspected neuroblastoma in which excretion of homoprotocatechic acid has been found to be elevated.

A.D.Smith

3550. ANALYSIS OF STEROID METABOLITES BY GAS CHROMATOGRAPHY. J.Chamberlain, B.A.Knights and G.H.Thomas: *J. Endocr.*, 1963, 26, 367-387 (Depr. Anat., Univ. Birmingham, England) Three stationary phases suitable for use in gas chromatography of urinary steroids and their respective selectivities are described. Data are given from an investigation of 17-oxosteroids and progesterone metabolites in human pregnancy and in rhesus monkey urine. G.F.Blane

3551. EFFECT OF STABILISING MEDIA ON ZONE MOBILITY AND SPREADING IN ELECTROPHORESIS. J.C.Giddings and J.R.Boyack: *J. theoret. Biol.*, 1962, 2, 1-6 (Chem. Dept., Univ. Utah, Salt Lake City, Utah, U.S.A.) Mathematical formulation of the 2-step process for migration of charged particles in a stabilising medium, gives an expression for apparent mobility, which is a function of the field strength. The process also results in zone spreading, important at high voltages for migrants with large effective charge. These conclusions are compared with expt. evidence.

J.A.Dawson

3552. HIGH VOLTAGE ELECTROPHORETIC AND PAPER CHROMATOGRAPHIC IDENTIFICATION OF BIOGENIC AMINES IN FAECES OF NORMAL DAIRY CATTLE. D.L.Van Rheezen: *Rec. Trav. chim. Pays-Bas*, 1963, 82, 225-227 (Lab. Vet. Biochem., State Univ., Utrecht, Netherlands) By using high voltage electro* phoresis followed by chromatography in various solventSt a method has been presented for separating and estimating quant. 24 amines of biol. importance. G.C.Barr

3553. LOW-LEVEL ^{14}C DETERMINATION BY IMPROVED SCHONIGER COMBUSTION AND IONISATION CHAMBER. S.Von Schuching and C.W.Karickhoff: *Analyt. Biochem.*, 1963, 5, 93-98 (Radio-isotope Service, V.A. Center, Martinsburg, W.Va., U.S.A.) A procedure for measuring low levels of ^{14}C radioactivity, dil. with large amounts of inactive C in heterogeneous samples, has been developed. The apparatus consists of a combustion apparatus with a specially designed ignition head, and an ionisation chamber. After combustion the $\pm\text{CO}_2$ formed is liberated with lactic acid into the ionisation chamber. The procedure is useful for all types of heterogeneous samples encountered in biol. expt. A.D.Smith

3554. MONOLAYER PERMEABILITY AND PROPERTIES OF NATURAL MEMBRANES. M.Blink: J. phys. Chem., 1962, 66, 1911-1918 (Physiol. Dept., Coll. Phys. Univ., New York, U.S.A.) The enz. monolayer permeation is described in terms of an \bar{W}^2 barrier theory where the energy depends on mono-layer thickness, the compressibility, the surface pressure, the size of the Permeant. The permeation of natural membranes can be formulated as a monolayer. Proc. 15th and me conclusions indicate that current for I on the structure of natural membranes can account for many of their prop. G.C.Barr

3555. SOME COMMENTS ON CORRELATION BETWEEN DIFFUSION, SEDIMENTATION, OSMOTIC PRESSURE AND LIGHT SCATTERING OF MACROMOLECULAR SUBSTANCES IN SOLUTION. I.Steinberg and t-Katchalski: Bull. Res. Coun. Israel, A, 1963, 11, 379-383 (Dept. Biophys.. Weizman Inst. Sci. of耶路撒冷, Israel) A theoretical analysis was made of the correlation between the diffusion and sedimentation coefficients and osmotic pressure and turbidity of high mol. wt. substances in soln. The treatment presented included macromolecules uncharged as well as electrically charged derivatives. For uncharged macromol. equations were derived. For polyelectrolytes diffusing or sedimenting in concn. containing 10^4 mol. wt. supporting salt of Bon^+ - Cl^- . Potential, correlations were predicted by j_{H_2O} assuming Donnan equilibrium along the diffusion and sedimentation paths, it was possible to evaluate off-resistance and sedimentation hydrodynamic friction L.G.Gillies

3556. EFFECT OF MAGNETIC FIELDS ON TISSUE RESPIRATION. V.R.Reno and L.G.Nutini: Nature, Lond., 1963, 198, 204-205 (Div. Biol., Inst. Divi Thomae, Cincinnati, Ohio, U.S.A.) The O₂ uptake of adult mouse tissues and tumour cell suspensions was affected by exposure to a magnetic field of 7300 Gaus, the effect being related to the type and age of the tissue. G.M.Lewis

***57. RELAYING MODEL OF SELF-REPRODUCING PROCESS.** Iu.N.Krol': Tsitologiya, 1962, 4, 580-584. Description of a machine performing the self-reproducing process of technical material. It is simpler than Neumann's machine and has greater possibilities than Ericse's machine. (Russian) B.J.Cooper

3558. FORMATION OF ADENINE BY ELECTRON RADIATION OF METHANE, AMMONIA AND WATER. M.onnarnperuma, R.M.Lemmon, R.Mariner and J.Calvin: Proc. nat. Acad. Sci., Wash., 1963, 49, 740 (Exobiol. Div., Nasa, Ames Res. Center, Moffett Field, Calif., U.S.A.) Adenine is a product of electron irradiation of a mixture of methane, ammonia and water. Amounts of adenine formed are inversely proportional to the amount of H₂ gas present. Of the 5' leucine bases adenine is the one most readily synthesized under prebiotic conditions. J.R.Sargent

3559. DIRECT ACTION OF X-RAYS ON AMINO ACIDS. I.Q. RaJewsky: Z. Naturforsch. B, 1963, 18, 110-114 (Max-Planck-Inst. Biophysik, Frankfurt am Main, Germany) Indirect irradiation of sparingly soluble amino acids in water gave rise to glycine, alanine, tyrosine, phenylalanine, tryptophan, 3-hydroxykynurenin, 3-hydroxyanthranilic acid and tryptamine were also formed. Mechanisms for this reaction involving HO₂ radicals were proposed. (German) J.C.Crawhall

acid and tryptamine were also formed. Mechanisms for this reaction involving HO₂ radicals were proposed.

(German) J.C.Crawhall

3560. PHOTOLYSIS AND PHOTO-OXIDATION OF AMINO ACIDS AND PEPTIDES. VI. INITIATION OF DISULPHIDE INTERCHANGE BY LIGHT IRRADIATION. J.E.Eager and W.E.Savage: Photochem. Photobiol., 1963, 2, 25-38 (Div. Protein Chem., C.S.I.R.O., Wool Res. Labs., Parkville, Victoria, Australia)

Disulphide interchange (RSSR -fR¹SR²) does not occur spontaneously in the pH range 1-6, but it can be initiated by the addition of a small amount of a thiol or by irradiation with u.v. or visible light. These reactions were investigated by the use of cystine, homocysteine, cystamine and related unsymmetrical disulphides. This work is extended to a consideration of the importance of these reactions during irradiation of proteins containing cystine residues. G.C.Barr

3561. EFFECT OF SUBLETHAL DOSES OF ARTIFICIAL SUNLIGHT ON ADAPTIVE ENZYME SYNTHESIS BY E.COLI. S.J.Webb: Canad. J. Biochem., 1963, 41, 859-866 (Depr. Bacteriol. Univ. Saskatchewan, Saskatoon, Canada) The oxidation of lactose by *E.coli* was the test system; into Warburg manometric flasks were placed suspensions of *E.coli* cells, lactose soln. and casein hydrolysate. Measurements of O₂ uptake were made over 2-3 hr. periods after mixing the contents of the flasks. A sunlamp was placed 1 or 2 ft. away from the flasks and filters consisting of dye soln. were used to obtain various wavebands of light. Direct sunlight inhibited enzyme synthesis but did not affect the action of pre-formed enzymes. Blue and yellow light were both effective in preventing enzyme synthesis but no effect was seen with red light. J.B.Parish

3562. γ -IRRADIATION AND WHEAT GLIADIN STRUCTURE. M.S.Reznichenko, E.E.Rydalevskii and E.S. Gankina: Biokhimia, 1963, 28, 52-56. Samples of wheat grain with varying amounts of moisture were subjected to γ -irradiation in vivo. Gliadin was extracted afterwards, and the amino acids and S were studied.

Aspartic and glutamic acids were found as terminal amino acids, as well as serine, threonine, lysine, phenylalanine and leucine. Quant. assay of aspartic and glutamic acids and serine showed that irradiation depressed their content. The decrease in the level of N-terminal amino acids was proportional to the radiation rate. In gliadin isolated from irradiated wheat with increased moisture, a decreased mol. wt. was found as compared with that isolated from dry irradiated wheat. (Russian) 3J.Cooper

3563. SECONDARY PROCESSES IN PROTEINS IRRADIATED AT ROOM TEMPERATURE. T.Henriksen, T.SanneSd A.Pihl: Radiat. Res., 1953, 18, 147-162 (Norsk Hydro's Inst., Montebello, Oslo, Norway) Secondary processes occurring in proteins irradiated in cryst. form at room temp. have been studied by electron spin resonance [ESR] spectroscopy after stepwise heat treatment. ESR patterns indicated that formation of sulphur radicals which appear just below room temp, coincided with increase in total no. of radicals. The extent of S resonance depended upon cysteine-cystine/glycine ratio, and was more pronounced when S was present in sulphhydryl rather than disulphide form. Radical yield for proteins was of the same order as that for many amino acids, and heat denaturation did not alter yields significantly. B.Payne

BIOPHYSICS

3564. URINARY EXCRETION OF 32-PHOSPHORUS AND DEOXYRIBOSE IN RATS FOLLOWING IRRADIATION OR ADMINISTRATION OF SINGLE DOSE OF METHIONINE SULFOXIMINE. J.Kolousek and Z.Dienstbien Inst. J. rad. Biol., 1963, 6, 271-280 (Inst. Biophys., Fac. Gen. Med., Charles Univ., Prague, Czechoslovakia) After i.p. administration of 50 mg. or 150 mg. L-methionine sulphoximine 32p excretion rose by an amount depending on the dose. 600 r of X-radiation or DNP administration produced similar effects. Scalding of 50% of the body surface reduced 32p excretion. Excretion of Dische pos. substances was increased after methionine sulphoximine or irradiation. B.M.Stevens
3565. SYNTHESIS OF PROTEIN, RNA, DNA AND INDUCED ENZYME IN BACTERIUM CADAVERIS AFTER X-IRRADIATION. H.Pauly: Int. J. rad.Biol., 1963, 6, 221-231 (Max-Planck-Inst. ftr Biophys., Frankfurt a.M., Germany) The rates of total protein synthesis, induced lysine decarboxylase synthesis and RNA formation immediately after irradiation were exponential functions of the dose, with inactivation doses all close to 30 kr. Colony forming ability also showed an exponential curve but the inactivation dose was approx. 10 kr. DNA formation showed a prolonged time lag after irradiation. The O₂ enhancement factor was approx. 4 for all the functions tested. B.M.Stevens
3566. EFFECT OF OXYGEN IN MAMMALIAN CELLS SENSITISED TO RADIATION BY INCORPORATION OF 5-BROMODEOXYURIDINE INTO DNA. R.M. Humphrey, W.C.Dewey and A.Cork: Nature, Lond., 1963, 198, 268-269 (Dept. Physics, Univ. Texas, Houston, Tex., U.S.A.) The mean lethal dose (D₀) of X-irradiation for mouse fibroblast cells in the presence of oxygen was 126 rads for normal cells and 89 rads for cells grown in die presence of 5-bromodeoxyuridine. Do values for cells irradiated under anoxic conditions were 350 rads for normal cells and 254 rads for cells grown in the presence of 5-bromodeoxyuridine. J.R.Sargent
3567. FATE OF TRITIATED NATIVE LIVER DNA INJECTED INTO LETHALLY IRRADIATED RATS. A.Popović, A.Becarević, D.Kanazir, N.Stošić and V.Pantić: Nature, Lond., 1963, 198, 165-167 (Inst. Nuclear Sci. 'Boris Kidrich', Belgrade, Yugoslavia) Autoradiographic evidence is presented concerning the incorporation of native homologous liver [³H]DNA into the nuclei of some cell lines of the testes, intestines, spleen and liver of X-irradiated rats. The macrophages seemed to be involved in the transport of the inj. DNA. G.M.Lewis
3568. ROLE OF DNA IN RADIATION DAMAGE OF THE CELL. A.M.Kuzin: Int. J. rad. Biol., 1963, 6, 201-209 (Inst. Biophys., Acad. Sci. U.S.S.R., Moscow, U.S.S.R.) A review. 21 ref. B.M.Stevens
3569. IDENTIFICATION OF ULTRAVIOLET-INDUCED THYMINE DIMERS IN DNA BY ABSORBANCE MEASUREMENTS. R.B.Setlow and W.L.Carrier: Photochem. Photobiol., 1963, 2, 49-58 (Biol. Div., Oak Ridge Nat.Lab., Oak Ridge, Tenn., U.S.A.) Native and heated DNA from calf thymus, *Micrococcus lysodeikticus* and phage T4 have been exposed ilfsolnt to u.v. light and thymine dimers have been isolated from the treated DNA. At high doses 50% of all the TT sequences can be made to form dimers and an incident dose of 100 erg/mm.² of 280mjj radiation will cause the formation of one dimer per mol. of calf thymus DNA. G.C.Barr
3570. INDUCTION BY X-RAYS OF DESTRUCTION OF DNA OF ESCHERICHIA FREUNDH. I. INFLUENCE OF COMPOSITION OF IRRADIATION AND INCUBATION MEDIUM. P.M.Osterrieth: Int. J. rad. Biol., 1963, 6 289-296 (Lab. Microbiol. Gén. et Méd., Univ. Liège Belgium) DNA destruction occurred when *E.freund* was irradiated with 54000 r and then incubated at 37° for 2 hr. in a medium which did not allow multiplication. Destruction was of the order of 25% in distilled water; addition of salts at various concn. modified the proportion of DNA destroyed. One type of protection was observed whenever the suspension medium was sufficiently concentrated, irrespective of its nature. Another type of protection was a function of the reducing ability of the suspension medium. Some substances at concn. of 6×10^{-2} - 5×10^{-3} M increased DNA destruction. This effect appeared to depend on the nature of the anion and became more intense with multivalent anions. (French) B.M.Stevens
3571. EFFECTS OF IN VITRO INCUBATION AND X-IRRADIATION ON RNA FRACTIONS OF RABBIT LYMPHATIC CELLS. K.Kumura: Bull. Yamaguchi Med. Sch., 1962, 9, 31-37 (Cytochem. Lab., Yamaguchi Med. Sch., Ube, Japan) The amount of the major component of the phenol-released fraction, pRNA, was kept const., while the yield of the residual fraction with a very high turnover rate [rRNA] decreased during the in vitro incubation. The in vitro incorporation of [32p]orthophosphate into pRNA-B was not affected by 800 r X-irradiation in vitro of lymphatic cells but that into rRNA was depressed to the same extent as that into DNA. K.Jones
3572. REACTIVATION OF IRRADIATED *E. COLI* BY RIBONUCLEASE. F.T.Gardner: Biochem. biophys. Res. Comm., 1963, 10, 454-459 (Dept. Mol. Biol. Biophysics, Yale Univ., New Haven, Conn., U.S.A.) The reactivation of irradiated *E. coli* by RNase is described. There is evidence that this effect may be due to degradation of damaged ribosomal RNA. B.Ketterei
3573. MOLECULAR ENVIRONMENT EFFECTS IN RADIATION DECOMPOSITION OF CL-D-GLUCOSE. G.O.Phillips and P.Baugh: Nature, Lond., 1963, 198, 282-283 (Dept. Chem., Univ. Coll., Cardiff, Wales) Ext. on the γ-radiation of (X-D-glucose in the polycrystalline or freeze-dried state, showed that the products of decomposition depend on the physical state of the sugar*. G.M.Levi
3574. EFFECT OF CULTURE MEDIUM ON RADIATION SENSITIVITY OF GLUCOSE OXIDATION IN BACTERIUM CADAVERIS. H.Pauly. Z. Naturforsch. B, 1963, 18, 23-25 (Max-Planck-Inst. Biophysik, Frankfurt am Main, Germany) *B. cadaveris* was cultured in a bactotryptone medium and in a synthetic salt medium respectively. Irradiation with 1*2 and 6 million r did not affect O₂ uptake in the former medium but progressively decreased it in the latter medium. TM effect of increasing doses of radiation on the 2 systems after 1 hr. was also studied and similar inhibition effects were observed at doses above 6 million r. (German) J.C.Crawhall
3575. LIPID PEROXIDE IN LIVERS OF IRRADIATED RATS. P.B.McCay, M.G.Macfarlane and E.Boyland: Nature, Lond., 1963, 198, 98-99 (Lister Inst., London, England) In rats irradiated with between 2-16000 r & X-rays, the fatty acid ester content of the liver, lipid P₂/P₁₂ value, peroxide content and proportion of triglycerid⁶, cephalin and lecithin fractions was not significantly

different from the values in the liver of non-irradiated animals. There was a slight increase in peroxide-like material extracted with saline in the liver of irradiated rats.

G.M.Lewis

3576. EFFECT OF IONISING RADIATION ON LIPID METABOLISM IN BLOOD CELLS IN VITRO.

B.Malamos, C.Miras and J.Mead: *Nature*, Lond., 1963, 198, 401-402 (Dept. Clin. Therapeutics, Univ. Athens, Sch. Med., Athens, Greece) Incorporation of Li-14Cacetate into the lipids of w.b.c. and platelets « not significantly affected by exposure to 1000 r ionising fediation.

G.M.Lewis

3577. CHANGES IN PHOSPHOLIPIDS OF MOUSE SKIN AFTER ULTRAVIOLET IRRADIATION IN VITRO.

A.Tickner: *Biochem. J.*, 1963, 88, 80-84 (Dept. PathoL, Croydon Group Lab., Mayday Hosp., Thornton Heath, Surrey, England) The skins of stain A mice were removed and irradiated in vitro. The Riospholipids were extracted and analysed. Ethanolamine Nasmalogen was decreased to 28% and phosphatidyl-¹⁴thanolamine to 78% of control values. Other phospho-¹⁴Pid fractions were not significantly affected.

3578. EFFECT OF X-RAY IRRADIATION ON PHOSPHOLIPIDS OF LIVER MITOCHONDRIA. H.P.Schwarz, L.Dreisbach and A.Kleschick: *Arch. Biochem.*, 1963, 101, 103-107 (Div. Biochem., Philadelphia Gen. Hosp., Philadelphia, Pa., U.S.A.) Whole body

Radiation increased total lipid P as well as changing ³²TM³phospholipid distribution in fasted rats. Phosphatidyl-Styceol increased more than 4-fold to become a significant component of irradiated mitochondria. Cardiolipin ³²as if anything, reduced in amount by irradiation. The ³²J¹ value of phosphatidylethanolamine dropped almost enough to balance the increase in phosphatidylglycerol. ³²I¹osphatidylcholine, phosphatidylserine, phosphoinositide ³²d sphingomyelin % values were slightly lower or unchanged. The actual amount of mitochondrial phosphatidylglycerol/g. wet liver increased more than 4-fold, while that of phosphatidylcholine increased by 21% and amounts of other phosphatides were almost unchanged.

B.M.Stevens

3579. BIOSYNTHESIS AND METABOLISM OF OESTROGENS IN RAT. H. CONVERSION OF [4-14C]TESTOSTERONE INTO [14C]OESTRADIOL-17_β BY THE OVARY AFTER WHOLE-BODY IRRADIATION.

S.R.Stitch, R.E.Oakey and S.S.Eccles: *Biochem. J.*, 1963, 88, 76-80 (M.R.C. Radiobiol. Res. Unit, Harwell, Didcot, Berks., England) Female albino rats were given 400 rads of whole-body X-irradiation at 50 days ^{ab} age. ^{ab} e CSL¹SLC¹y ^{ab} f¹te ovaries of the ^{ab}uated animals to produce oestrogen in vitro was compared with sham-irradiated controls at times varying from 4 to 180 days after irradiation or after sham-irradiation. After an initial lag, the biosynthesis of oestradiol-17_β by ovaries of the irradiated animals appeared to be as high as with tissue from the non-irradiated controls. The biosynthesis of oestrogen by ovarian tissue after destruction of the follicular structures by high doses of irradiation is discussed.

3580. CHANGES IN HISTAMINE CONTENT OF VARIOUS TISSUES AFTER MASSIVE DOSES OF Y-IRRADIATION. L.Mariani, F.Fornasari and M.Giorgi: *Atti. Acad. Med., Lombarda*, 1962, 17, 221-225 (1st. Farmacol., Univ. Milano, Italy) High, rapid doses of y rays ^{ab} 250 r in 35 sec.) killed guinea-pigs within 4 days.

10 min. after the irradiation, the histamine level of the blood and various organs, particularly the lungs and liver, was greatly reduced, but the animals did not show shock phenomena. A similar depletion of histamine was observed after anaphylactic shock. After massive irradiation, the guinea-pigs could still show anaphylactic shock, even though the histamine levels were already lowered.

(Italian) G.N.Godson

3581. CHEMICAL TRANSFORMATION OF CATECHOLAMINES INDUCED BY U.V. IRRADIATION. E.Walaas: *Photochem. Photobiol.*, 1963, 2, 9-24 (Inst. Med. Biochem., Oslo Univ., Oslo, Norway) The conversion of catecholamines exposed to u.v. irradiation has been investigated by a spectrophotometric technique which allows the elucidation of the nature of intermediates. At neutral pH and in the presence of O₂ «adrenaline is converted to adrenochrome and then polymerised to melanin. At alk. pH different products are formed and melanin production is low. The corresponding reactions for nor-adrenaline were investigated.

G.C.Barr

3582. X-RADIATION AND 5HT CONTENT IN BRAIN OF RATS AND MICE. D.Palaic, M.Randić and Z.Supek:

Int. J. rad. Biol., 1963, 6, 241-246 (Biol. Div., Inst. Ruder Bosković, Zagreb, Yugoslavia) High doses of whole body X-radiation increased the 5HT content. Smaller doses produced this effect only in adrenalectomised rats. Shielding the head or body or pretreatment with iproniazid or reserpine did not suppress the phenomenon.

B.M.Stevens

3583. EFFECT OF X-IRRADIATION ON HAEMOPOIETIC FUNCTION OF MOUSE LIVER. J.F.Duplan: *Nouv. Rev. franc. Hemat.*, 1963, 3, 121-132 (Laboratoire Pasteur, Inst. Radium, Paris, France)

Foetuses of strain XVII were exposed to a single dose of 240, 580 or 960 r on the 13-16th day of intrauterine life. The radiation technique avoided damage to the mother and to other foetuses in the same uterus. The haemopoietic structures of the foetus liver showed greatest sensitivity on the 14th day, but seemed less sensitive than in the adult animal. This may be due to a 'radioresistant' phase of development, or to maternal protection from radiation and infection. The hepatic cells were most sensitive on the 13th day.

(French) V.Eisen

3584. ELECTROPHORESIS OF BLOOD FROM IRRADIATED MICE. K.P.Kashkin, P.LGrabar and Z.Kurkon:

Biokhimiia, 1963, 28, 89-99. Immunoelectrophoresis was used to study changes in the serum proteins of non-inbred mice subjected to X-irradiation (1000 r). Irradiation caused a fall in protein concn. immediately afterwards, and recovery about day 5-6. Recovery was linked with an increase of (X2- and fe-globulins, together with a decrease in serum albumins, y-, P3- and p-proteins, even a disappearance of some fractions. The increase in 0,2-globulins was associated with the appearance within this zone of new and degraded old Ag with the mobility of ag-globulins.

(Russian) BJ.Cooper

3585. RECOVERY OF ERYTHROPOIESIS AFTER IRRADIATION: A QUANTITATIVE STUDY IN THE RAT.

E.V.Hulse: *Brit. J. Haemat.*, 1963, 9, 365-375 (Med. Res. Council, Radiobiol. Res. Unit, Harwell, Didcot, Berks., England) Erythropoietic activity recovered in die rat after single exposures of 100, 200 or 400 r of X-rays. Quant. studies on blood and bone marrow showed a profound fall in r.b.c. precursors in the first 24 hr. after irradiation followed by a rapid increase during the first week. This produced an increase in all cells of the normoblast series.

above normal, being earlier after the smaller irradiations. After 400 r doses the haemopoietic picture did not revert to normal until after 10 weeks. 21 days after this dosage the reticulocyte count showed a temporary max. 5 times greater than normal. Macrocytic anaemia developed in the 5th week. Early normoblasts take 3-4 days to develop into circulating reticulocytes in the rat. J.Sneath

3586. LYMPHOCYTIC RECOVERY AFTER IRRADIATION AND ITS RELATION TO OTHER ASPECTS OF HAEMOPOIESIS. E.V.Hulse: Brit. J. Haemat., 1963, 9, 376-384 (M.R.C. Radiobiol. Unit, Harwell, Didcot, Berks., England) Marrow lymphocytes return quickly after a single dose of radiation, in inverse rate to the radiation dose. After a dose of 200 r no. exceeded the normal count temporarily (but not after 100 r or 400 r). Blood lymphocytes took longer to return to normal (longer than 6 weeks after 200 r, 10 weeks after 400 r). Comparison with erythropoietic and myelopoietic cell counts lead to the conclusion that the lymphocytes are not multi-potential stem cells but have a trephocytic function. J.Sneath

3587. METHAEMOGLOBIN FORMATION BY X-RAYS IN HAEMOLYSATES AND INTACT ERYTHROCYTES OF VARYING CATALASE CONTENT. J.P.Heiniger and H.Aebi: Helv. chim. Acta, 1963, 46, 255-268 (Med.-chem. Inst. Univ. Bern, Switzerland) Radiation induced metHb-formation in haemolysates and in r.b.c. suspensions of normal and acatalatic human blood has been studied under various expt. conditions. The abs. amount of metHb produced by a given X-ray dose depends on Hb concn., the nature of die gas phase, catalase activity of the blood sample and the presence of catalase inhibitors (azide). (German) A.D.Smith

3588. PARTIAL MARROW SHIELDING AND TOTAL-BODY IRRADIATION. W.D.Noyes, C.A.Finch, H.Wasserman and K.Glickman: J. appl. Physiol., 1963, 18, 629-632 (Med. Dept., Univ. Washington Med. Sch., Seattle, Wash., U.S.A.) When rat femurs were shielded from whole-body irradiation of 550 r there was no depopulation of nucleated cells in the shielded marrow as there was in irradiated bone marrow. Hb synthesis following artificial haemorrhage was greater in shielded animals than in those with unshielded femurs. H.C.Jones

3589. SOME EFFECTS OF LONG-TERM ALPHA IRRADIATION ON COMPOSITION AND STRUCTURE OF BONE. B.J. Stover and W.S.SJee: Health Physics, 1963, 9, 267-275 (Divn. Radiobiol., Dept. Anat., Univ. Utah, Salt Lake City, Utah, U.S.A.) Dogs were inj. i.v. with 3 fie 239Pu/kg. and the composition of their humeri and third lumbar vertebrae analysed after 3-5 yr. These dogs showed severe skeletal degeneration, with anaemia and liver damage. Their wt. were only 70% of control dogs non-inj. There is decrease in fractional water content, about 1%/year and mineral content also rises slightly. There is an increase in marrow content reflected by an increase in the fractional water content in the humeri, with a simult. decrease in org. and inorg. material representing loss of ossified material.

M.S.Lavrack

3590. DEMONSTRATION OF MORPHOLOGICAL NUCLEAR CHANGES IN PYKNOTIC IRRADIATED THYMOCYTES. J.F.Scaife: Canad. J. Biochem., 1963, 41, 823-825 (Defence Res. Chem. Lab., Defence Res. Board, Dept. Nat. Defence, Ottawa, Canada) Thymocytes from rats and rabbits were

examined 4 hr. after the animals received 800 rads of 60co y or X-irradiation by fixing in either Susa fixative or osmic acid and then either staining in Mayer's haemalum for light microscope studies or treating for E.M. study; pyknotic cells were observed best in Susa fixative when stained with haemalum and in osmic acid fixative when viewed by the E.M. Prelim, comm.

J.B.Parish

3591. ROLE OF DISTURBANCE OF METABOLIC PROCESSES IN RADIATION DAMAGE OF THE CELL. A.M.Kuzin: Int. J. rad. Biol., 1963, 6, 211-220 (Inst. Biophys., Acad. Sci. U.S.S.R., Moscow, U.S.S.R.) A review. 21 ref. B.M.Stevens

3592. SYSTEMATIC MICROSCOPIC STUDY OF THE ACTION OF IONISING RADIATION ON ANIMAL CELLS IN CULTURE. I. ACTION OF LARGE DOSES OF X-RAYS. J.Driessens, P.Cappelaere, G.Giaux and G.Decoster: C.R. Soc. Biol., Paris, 1962, 156, 1650-1653 (Inst. Recherches Cancer, Lille, France)

Application of 38000 r X-rays to a culture of striated muscle from 9-day chick embryos resulted in decreased mitoses, fragmentation of the mitochondria and decrease in contractions of the cell membrane. Later the cytoplasm of certain cells fragmented, with secondary reunification and displacement of the nuclei from the cell* (French) M.A.Price

3593. EFFECT OF COOLING UPON IRRADIATED CELLS. E.Wendfc: Z. Zellforsch., 1963, 59, 309-325 (Zool. Inst. Univ. Bonn, Germany) In order to evaluate the biol. effect of ionising radiation upon individual cells and cell complexes, tissue cultures of chicken heart cells, ascites tumour of mice and 8-day-old chicken embryos were irradiated with X-rays (60 kV, 10 mAmp), and cooled immediately after irradiation down to 10° and then again incubated at 37°. In chicken heart cells which had been irradiated with 3000 r only slight cellule damage was seen; the same effect was also observed in the cells of the ascites tumour after a dosage of 1500 r t 8-day-old chick embryos irradiated with 3000 r and kept at a low temp, afterwards for 5 hr., died when incubated again. The author concludes that direct radiation damage can be strongly decreased in single cells, but that the damage caused to the higher biol. systems is undiminib^ and merely delayed by cooling*

(German) J.E.Linder

3594. EFFECTS OF X-IRRADIATION UPON POSTNATAL GROWTH IN MOUSE. D.J.Nash and J.W.Gowen: Bid. Bull. Woods Hole, 1962, 122, 115-136 (Dept. Genetics, Iowa State Univ., Ames, Iowa, U.S.A.)

Changes in body wt., after irradiation, were studied during post-natal growth in 3 strains of mice, Ba, K and S and all their possible hybrids. Pregnant females were exposed to single whole body dosages of X-rays at 6, 10, 14, 20 and 17i days gestation, timed from the appearance of & vaginal plug. Weighing was carried out at birth and 12i, 26, 40, 60 and 75 days after birth. Body wt. response was found to be dependent on the level of irradiation and embryological age at irradiation. Max. effect of these treatments was not usually evident until 40 days post-partum. Little recovery was evident at 75 days.

G.J.Peakin

3595. IMMEDIATE RETINAL RESPONSE TO X-RAYS AT MILLIROENTGEN LEVEL. C.S.Bachofen and S-E-Wit¹⁵: Radiat. Res., 1963, 18, 246-254 (Dept. Biol., Univ. Notre Dame, Ind., U.S.A.) The retina of frog (Rana pipiens) responded immediately to flashes of X-rays and were recorded as an electroretinogram. The lower level of sensitivity was 7 mr per flash, and sufficient

time for recovery between flashes was about 1 min. When rapid stimm. was applied, e.g. every 2 sec. all prop. of electroretinogram such as amplitude, rate of rise etc. were immediately modified, but were restored after efficient time for recovery of retina. B. Payne

3596. ULTRASTRUCTURAL CHANGES INDUCED IN FASCICULATE ZONE OF ADRENAL CORTEX OF ANIMALS BY LOCALISED AND GENERALISED IRRADIATION. G.Poggi Longostrevi and L.Lombardi: Atti. Acad. med., Lombarda, 1962, 17, 179-194 (1st. Farmacol., Univ. Milan, Italy) Morphol. changes occurring in the fasciculate zone of the adrenal cortex of rats after X-irradiation of 1000 r, locally or generalised (same dose), were studied with the E.M. Within 24 hr. localised irradiation and 3 days after generalised Radiation, submicroscopic alteration were observed in the mitochondria and endoplasmic reticulum. The mitochondria had developed irregular shape and sometimes fused with each other and the endoplasmic reticulum had developed vesicles and distortions. These abnormalities partially regressed within 7 days.

(Italian) G.N.Godson

***597. MOLECULAR RADIobiOLOGY OF HUMAN CELL LINES. IV. VARIATION IN U.V. LIGHT AND X-RAY SENSITIVITY DURING DIVISION CYCLE.** RX.Erikson and W.Szybalski: Radiat. Res., 1963, 18, 200-212 (McArdle Mem. Lab., Univ. Wisconsin, Madison, Wis., U.S.A.) The transient inhibition of thymidylate acid synthesis in D98/AG strain of human cell culture synchronises all cells into the same phase of division. The sensitivity of such cells to u.v. and X-rays was found to vary during replication cycle according to a sp. pattern. The period of greatest radioresistance follows completion of DNA synthesis preceding cell division. 5-Bromodeoxyuridine incorporated into DNA radiosensitises cells quite independently of phases of the division cycle. B.Payne

***598. AGE AT EXPOSURE AND ACCELERATION OF INTERCAPILLARY GLOMERULOSCLEROSIS [IGS] IN MICE.** P.H.Guttmann and H.L.Kohn: Lab. Invest., 1963, 12, 250-256 (Cancer Res. Inst., California Univ. San Francisco, Calif., U.S.A.) A marked acceleration of progressive IGS in mice was obtained by irradiating body shortly before and after birth. In a rat at 12-13 days of age produced a lesser effect, whereas the effect occurred earlier and was more marked in older mice. Glomerular injury was evident on the dose. A.M.Mackay

3599. T⁹A COMPARISON OF RADIATION INDUCED GRANULOCYTOPENIA IN SEVERAL MAMMALIAN SPECIES. J.Patt and M.A.Malone: Radiat. Res., 1963, 18, 223-235 (Div. Biol. and Med. Res., Argonne Nat. Lab., Lemont, Ill., U.S.A.) Study of early granulocytopenia in mouse rat, hamster, rabbit, dog and monkey. Parallel irradiation showed similar rate of decline which was similar to normal rate of disappearance of neutrophilic granulocytes from circulation. The time between onset of granulocytopenia and radiation varied and may be attributed to differences in non-mitotic differentiating pool. B.Payne

3600. PARTIAL-BODY X-RAY EXPOSURE AND PROGRESSION OF PROGRESSIVE INTERCAPILLARY GLOMERULOSCLEROSIS IN THE BALB/c MOUSE. H.L.Kohn: Radiat. Res., 1963, 18, 241-250 (Cancer Res. Inst., Univ. California, Los Angeles, Calif., U.S.A.) BALB/c mice were sub-

jected to partial and whole-body irradiation (37-56 rad/min.) at the age of 58-93 days, and were killed about 500 days later. Their kidneys were examined microscopically and were graded for intercapillary glomerulosclerosis which is accelerated by irradiation. High X-ray dose (750-900 rad) received by kidneys in partial-body irradiation resulted in most severe lesions and was associated with early renal arteriosclerosis. B. Payne

3601. MECHANISM OF PRODUCTION OF TERMINAL AND LETHAL ANAEMIA IN CHRONICALLY IRRADIATED GUINEA-PIGS. P.W.Edmondson and J.E.Morris: Brit. J. Haemat., 1963, 9, 351-364 (M.R.C. Radiobiol. Res. Unit, Harwell, Didcot, Berks., England)

Measurement of red cell mass [RCM] and estimation of haemorrhage in irradiated guinea-pigs was made possible by injn. of ⁵¹Cr-labelled red cells. The guinea-pig received 10 r per day and developed typical lethal anaemia which was sudden and late in onset. The RCM was correlated with a very low platelet count. Haemorrhage was gastrointestinal and after 1000-1400 r accumulated dose the r.b.c. production was only half that of the control group. Thus the anaemia is due to haemorrhage and an inability to increase erythropoietic activity. The ⁵¹Cr-labelled red cells were unaffected by the irradiation. Extravascular retention of Cr in the spleen was observed.

J.Sneath

3602. ACTION OF GENERAL IRRADIATION WITH X-RAYS OF DIFFERENT DOSES ON APPEARANCE OF METASTASES OF TRANSPLANTABLE MAMMARY EPITHELIOMA OF RAT. M.R. Riviere, L.Chouroulinkov and M.Guerim: CR. Soc. Biol., Paris, 1962, 156, 1607-1611 (Lab. Méd. exp., Inst. Recherches Cancer, Villejuif, Seine, France) General irradiation with X-rays of ^aWistar rats carrying a graft of transplanted mammary epithelioma G6 had a direct effect on the appearance of metastases. There was a decrease in the no. of pulmonary metastases while the total lymphatic metastases increased by ^{1/2}Pf in irradiated rats.

(French) M.A.Price

3603. INFLUENCE OF HISTAMINE AND OF CYSTEINE ON EXCRETION OF NITROGEN COMPOUNDS IN SPLEEN ISOLATED FROM IRRADIATED GUINEA-PIG. A.Dekleva-Likan: Radiat. Res., 1963, 18, 133-136 (LStephan Inst., Ljubljana, Yugoslavia)

1ml. 10⁻²M cysteamine injn. i.p. or i.v. before irradiation reduced excretion of nitrogen from an isolated perfused rat spleen. Similarly 1 ml. 10⁻³M histamine gave a less pronounced protection against irradiation. B. Payne

3604. RADIATION PROTECTION BY SULPHUR IN MODEL SYSTEM. P.G.Garratt and M.G.Ormerod: Int. J. rad. Biol., 1963, 6, 281-287 (Hqs. Branch, Royal Military Coll. Sci., Shrivenham, Nr. Swindon, Wilts., England) The protection of polymethylvinylsiloxane by colloidal S during γ -radiation at room temp. was estimated by measuring the increase in the gelation dose. The free radical concn. was measured using electron spin resonance. It was confirmed that the S was a good protector and this was attributed, at least in part, to its efficiency as a radical scavenger. B.M.Stevens

3605. RADIOPROTECTION OF MICE BY HYPO-OXIA AND CHEMICAL AGENTS. W.E.Rothe, M.M.Grenan and S.M.Wilson: Nature, Lond., 1963, 198, 403 (Walter Reed Army Inst. Res., Washington, D.C., U.S.A.) The 30-day survival of mice irradiated while breathing 5% O₂ is compared with that when irradiated while protected by combinations of hypo-oxia and

BIOPHYSICS

chem. agents. It appeared that radioprotection by δ -aminopropiophenone, 5HT, and probably diethyldithiocarbamate and dimethyl sulphoxide, is associated with hypo-oxia of radiosensitive tissues. The action of thiol agents is also concerned with intercellular hypo-oxia, but is probably also associated with metabolic factors, which may be O₂-dependent.

G.M.Lewis

3606. IN VIVO MEASUREMENT OF ^{131}I IODINE IN THYROID OF DAIRY COW AS AID FOR MONITORING MILK. N.Yamagata and K.Iwashima: Nature, Lond., 1963, 198, 169-170 (Inst. Publ. Hlth., Tokyo, Japan)

In vivo measurements of ^{131}i levels in cattle thyroid by use of a scintillation receptor in direct contact with skin are apptox. correlated with actual ^{131}I levels in thyroid and also with ^{131}I levels in milk.

J.R.Sargent

3607. FOETAL METABOLISM OF CAESIUM-137 IN THE RAT. W.Moore, jun. and C.L.Coman: Int. J. rad. Biol., 1963, 6, 233-239 (Dept. Phys. Biol., New

York State Vet. Coll., Cornell Univ., Ithaca, N.Y., U.S.A.) ^{137}Cs appeared rapidly in the foetus after oral administration to the mother, reaching equilibrium with maternal blood in approx. 16 hr. % dose/g. foetal tissue appeared to be independent of foetal age or wt. The general pattern of distribution in the foetus was the same as that in the mother but the accumulating ability of foetal tissues was lower. The $^{137}\text{Cs}/\text{K}$ ratio was greater in the mother than in the foetus.

B.M.Stevens

3608. PATHOCHEMISTRY OF LIVER AFTER ADMINISTRATION OF PLUTONIUM-239. N.I.Yolkina and Z.B.Tokarskaya: Vop. Med. Him., 1963, 9, 154-160 (Inst. Biophys., Acad. Med. Sci., Moscow, U.S.S.R.)

Administration of ^{239}Pu to rabbits and dogs caused a gradual decrease in total plasma proteins, particularly albumin. A gradual increase in transaminase activity occurred in dogs. Reduction of urea biosynthesis occurred in dogs during the development of pronounced liver cirrhosis. Plasma alk. phosphatase activity was increased only in cases of distinct liver cirrhosis and jaundice. Decrease in albumin levels and increase in transaminase levels in plasma were noted before any morphol. manifestation of intoxication occurred.

J.R.Sargent

3609. PLUTONIUM INHALATION STUDIES. III. EFFECT OF PARTICLE SIZE AND TOTAL DOSE ON DEPOSITION, RETENTION AND TRANSLOCATION. W.J.Bair and D.H.Willard: Health Physics, 1963, 9, 253-266 (Biol. Lab., Hanford Labs., G.E.C., Richland, Wash., U.S.A.) Dogs were exposed to aerosol particles of PuO_2 .

The particle sizes were either 0[#]086, 0-43 or 0^{*}60 (μ in diam., with activities of 10["]7 to 10⁻³ pe/cm.^{*}) The amount of Pu deposited in lungs amounted to 4, 30 and 60% of total $^{239}\text{PuO}_2$ inhaled respectively. For a particular wt. of Pu deposited the % deposited in alveoli increased with particles of largest diam., whereas pulmonary clearance, translocation and excretion in urine and faeces was greatest for the smallest diam. particles.

M.S.Laveick

IMMUNITY TO INFECTION

3610. RELATIONSHIP OF PROPERDIN LEVELS TO THE BACTERICIDAL ACTIVITY OF HUMAN SERA. O.Ovsthus and J.Bøe: *Acta path. microbiol. scand.*, 1963, 57, 307-312 (Med. Dept. B., Univ., Bergen, Norway) In 3 groups of persons, one with consistently high properdin levels, another with consistently low properdin levels, and a third group whose properdin titre rose from low values in the acute phase of an infection to normal values during convalescence, there was no correlation between the properdin levels and the bactericidal activity of the sera. L.Friedmann

3611. IMMUNOLOGY OF TUBERCULOSIS. II. GUINEA-PIG EXPERIMENTS WITH FRACTIONS OF TUBERCULIN PARENT SUBSTANCE. H.Micke. in. **FRACTIONS OF TUBERCULIN PARENT SUBSTANCE TESTED WITH ISOLATED GUINEA-PIG INTESTINE. IV. ANTIGENIC COMPOSITION OF TUBERCULIN PARENT SUBSTANCE, OLD TUBERCULIN AND PURIFIED TUBERCULIN.** H.Micke and H.G.Oing: *Z.Immun.-Forsch.*, 1962, 124, 287-301, 302-314, 315-324 (Paul Ehrlich Inst., Frankfurt a.M., Germany) II. Fractions of tuberculin parent substance (unheated culture filtrate) prep, by paper electrophoresis were given i.v. to tuberculous guinea-pigs. Three kinds of shock reaction were seen: (1) an immediate acute reaction to unheated tuberculoprotein, (2) a protracted reaction to purified* tuberculin, (3) a delayed reaction to the carbohydrate fraction. Certain polysaccharides from human tubercle bacilli inhib. anaphylactically and local reactions, even those due to unrelated Ag. III. Electrophoretic fractions of tuberculin mother substance were tested against isolated guinea-pig intestine by the Schultz-Dale technique. An anaphylactic reaction, destine from tuberculous guinea-pigs, was proved by tuberculopolysaccharides, but not by proteins. V. Electrophoretic fractions of tuberculin culture filtrates were used, with Freund's incomplete adjuvant, to immunise guinea-pigs. The carbohydrate fraction evokes Ab against itself and also against the protein C fraction, protein fractions evoke Ab against themselves only. Results are compared with the responses to 'old tuberculin' and purified tuberculin. It is concluded that the isophoretic fractions are not pure Ag. (German) D.P.Winstanley

3612. SERUM AND SERUM FRACTIONS IN THE FORMATION AND INHIBITION OF STREPTOLYSIN S. K.Klinge: *Z.Immun.-Forsch.*, 1962, 124, 346-358 (Hyg. Inst., Univ. Saarland, Germany) The conditions for optimum production of streptolysin S in horse serum by resting cells of a Group A streptococcus were investigated. The serum protein fraction pptsd. by 68-80% sat. (NH₄)₂SO₄ best shift from the inhibitor of streptolysin S and was the by RMJJ*1*1®. Lipids played no part. Egg-white digested the first and half the activity of serum as a substrate for inactivation of streptolysin S.

3613. ACTIVITY OF COMPONENTS OF BORDETELLA PERTUSSIS CELL WALLS. I.W.Sutherland: *Immunology*, 1963, 6, 246-254 (Bacteriol. Dept., Univ. Edinburgh, Scotland) Cell walls of *B. pertussis* O₄ a P- and purified by treatment with sodium lauryl xonate & trypsin digestion. Such material gave protection wat. & st expt. intracerebral infection. This prep. was toxic and contained no histamine-sensitising factor. Antisera PreP- by inj. of cell wall material oits conferred passive protection in mice. The

product of detergent and trypsin treatment remained chem. complex. Agar gel diffusion tests indicated that it contained at least 2 antigenic components. One of these, the sp. lipopolysaccharide of *B. pertussis* had an apparently minor role in protection.

3614. CLOSTRIDIUM PERFRINGENS AGGLUTININS AND HOMOLOGOUS INCOMPLETE ANTIBODIES IN SERA OF IMMUNISED AND NON-IMMUNISED RABBITS. H.Meisel, B.Pogorzelska and P.Trembowler: *Bull. Acad. pol. Sci.*, 1963, 11, 57-60 (State Inst. Hyg., Warsaw, Poland) No *C. perfringens* agglutinins were present in sera of non-immunised rabbits. The time after which agglutinins became first demonstrable in rabbits inj. with suspensions of *C. perfringens* varied between animals.

J.E.Hobbs

3615. MEASLES ANTIBODIES IN MULTIPLE SCLEROSIS. J.M.Adams and D.T.Imagawa: *Proc. Soc. exp. Biol., N.Y.*, 1962, 111, 562-566 (Dept. Ped., Sch. Med., Univ. California, Los Angeles, Calif., U.S.A.) Elevated levels of measles Ab were found in serum and c.s.f. of patients suffering from multiple sclerosis.

M.M.Shapland

3616. INFLUENZA ANTIBODY LEVELS DURING T.A.B. IMMUNISATION. H.J.Gerth and W.Wundt: *Z. Immun.-Forsch.*, 1962, 124, 370-381 (Hyg. Inst., Univ. Tübingen, Germany) Haemaggl.-inhibg. and CF Ab to several influenza strains were followed in a group of 8 students who were undergoing T.A.B. immunisation. The Ab litres showed no relation to the typhoid/paratyphoid agglutinin curve. The authors cast doubt on the existence of truly nonsp. anamnestic reactions and believe that those previously reported are due to common Ag shared between the micro-organisms in question.

(German) D.P.Winstanley

3617. HI [HAEMAGGLUTINATION INHIBITING]-ANTIBODIES IN FERRETS CROSS-INFECTED WITH DISTANTLY RELATED INFLUENZA VIRUSES. A.Harboe: *Acta path. microbiol. scand.*, 1963, 57, 211-221 (Virus Dept., Nat. Inst. Publ. Hlth., Oslo, Norway) Ferrets infected with influenza A2-strains and cross-infected half a yr. later with different A-strains, the Dutch '56 Ai-strains' produced a greater anamnestic A2-titre rise than the other strains. In cross-infected ferrets Dutch '56 Ai and horse influenza virus produced a marked anamnestic iAb increase. After cross-infection cross-absorbing Ab could be demonstrated. Swine influenza Ab appeared after cross-infection with PR-8 and FM-1, and also with FM-1 and Dutch '56 Ai-strains.

L.Friedmann

3618. ANTIBODY RESPONSES AFTER INJECTION OF AQUEOUS AND EMULSIFIED INFLUENZA VIRUS VACCINES IN MICE CHRONICALLY EXPOSED TO Y-RAYS. B.S.Berlin: *Radiat. Res.*, 1963, 18, 223-230 (Sch. Publ. Hlth., Univ. Michigan, Ann Arbor, Mich., U.S.A.) Haemaggl.-inhib. Ab levels induced by aq. and emulsified influenza vaccines (PR 8 strain) were compared in mice continuously exposed to y-rays, beginning either 8 months or 1 day before vaccn. Continuous exposure to low-level radiation almost completely suppressed Ab production. In 1 day y-irradiated mice emulsified vaccine induced higher Ab levels at 21 and 42 days of treatment than aq. vaccine, and only slightly higher levels in 8 month Y-irradiated mice. Mercaptoethylamine by mouth did not protect the Ab forming mechanism to prolonged Y-irradiation.

B.Payne

3619. EFFECT OF HETEROLOGOUS ANTIBODIES ON THE SEROLOGICAL CONVERSION RATE AFTER 17D YELLOW

IMMUNOLOGY AND EXPERIMENTAL PATHOLOGY

FEVER VACCINATION. A.Fabiyi and F.N.Macnamara: Amer. J. trop. Med. Hyg., 1962, 11, 817-821 (Virus Res. Unit, W. African Council Med. Res., Yaba, Lagos, Nigeria) The presence of CF Ab to viruses serol. related to yellow fever interfered, in a small proportion of persons, with the Ab response after vaccn. with 17D mouse brain yellow fever virus.

A.A.Zimmerman

3620. ANTIBODY RESPONSES TO BRITISH TRIVALENT ORAL POUOVACCINE [O.P.V.]. D.S.Dane, G.W.A. Dick and E.M.Briggs: Lancet, 1963, i, 940-942 (Dept. Microbiol., Queen's Univ., Belfast, Ireland) Poliovirus-neutralising Ab levels were measured in groups of children immunised with O.P.V. according to the recommended schedules. Satisfactory primary immunisation of infants against poliomyelitis was obtained under field conditions with 3 doses. Comparatively poor results were found when the primary course of immunisation had consisted of 2 doses of Salk-type vaccine followed by 1 of trivalent O.P.V. CH.Bell

3621. IMMUNOLOGICAL RESPONSES TO HKTOMONAS MELEAGRIDIS IN THE TURKEY AND FOWL. M.J. Clarkson: Immunology, 1963, 6, 156-168 (Sch.

Trop. Med., Liverpool, England) Turkeys or fowls were infected intra-rectally with H. meleagridis. The turkeys were treated with a drug after infection so that the protozoa were destroyed. The fowls recovered spontaneously by resolution of the lesions in the liver and caeca. Both the turkeys and fowls developed a protective resistance to further infections with H. meleagridis. Serum precipitins were found in the birds and the development of Ag in the caecal contents studied. It was not possible to transfer a passive protective immunity by inocn. of serum from the immune to susceptible birds. *

3622. DIAGNOSIS OF LIVER FLUKE (FASCIOLA HEPATICA) INFECTION IN HUMAN BEINGS BY MEANS OF IMMUNOELECTROPHORESIS. D.Todorović, I. Berkes and M.Milovanović: Nature, Lond., 1963, 198, 204 (Clin. Lab., Children's Hosp., Titograd, Yugoslavia) Blood serum of a child infected with F.hepatica was subjected to electrophoresis in agar gel; application of F.hepatica Ag revealed a characteristic pptn. arch in the y-globulin region. CM.Lewis

3623. PLASMA CARD TEST FOR RAPID SERODIAGNOSIS OF SCHISTOSOMIASIS. E.H.Sadun, FUJVndeisoii and MJ.Schoenbechler: Proc. Soc. exp. Biol., N.Y., 1963, 112, 280-283 (Army Inst. Res., Washington, D.C., U.S.A.) A rapid method of testing for Schistosoma mansoni utilised an Ag-cholesterol-lecithin complex with charcoal in plasma as a spot on a card. Suspect blood was added and mixed with the wetted plasma: aggln. denotes a pos. reaction. The test did not give 100% pos. reaction with cases of schistosomiasis and gave pos. results with some cases of trichinosis, filariasis and leishmaniasis so it was only valid where there was prevalent endemic schistosomiasis. D.N.Wheatley

3624. ACQUIRED IMMUNITY TO ECHINOCOCCUS GRANULOSUS IN SHEEP. G.K.Sweatman, RJ.Williams, K.M.Moriarty and T.CHenshall: Res. vet. Sci., 1963, 4, 187-198 (N.Z. M.R.C., Otago Univ. Med. Sch., Dunedin, New Zealand) 10 groups of 3 lambs were given doses of E.granulosus eggs varying from 10 to 10⁵, and challenged 9 months later with 7000 eggs. Abs. resistance to superinfection was not stim., but the high initial doses produced partial resist-

ance. A decreased serum albumen/globulin ratio occurred in the superimposed infections. Indirect haemaggl. tests with hydatid fluid Ag gave titres of greater than 1:400 in infected sheep, and the titres were raised by the superimposed infections in sheep which received a low initial dose. Only low titre cross-reactions occur red with T.hydatica, T.ovis, M.multiceps and L.serrata.

J.B.Derbyshire

HYPERSENSITIVITY

3625. IN VITRO STUDIES OF REVERSED ANAPHYLAXIS WITH RAT CELLS. J.H.Humphrey, K.F.Austen and H.J.Rapp: Immunology, 1963, 6, 226-245 (Nat. Inst' Med. Res., Mill Hill, London, England) Rabbit anti-rat Y"globulin Anti-RGG] was used to bring about reversed anaphylaxis in vitro using rat mesentery, peritoneal cells, or a suspension of isolated peritoneal mast cells. Histamine and 5HT were released but not slow reacting substance. The effects of numerous org. substances and of Ca and Mg on the reaction were studied* The addition of Ag to mesentery or peritoneal mast cells from actively sensitised rats did not produce histamine release even though the donor animals had high levels of circulating Ab and exhibited anaphylactic shock with each Lv. booster dose of alum-ptd. Ag. These finding? indicate that either the cells did not carry the y-globul¹ identical with the circulating Ab or that the Ab was bio-inert in terms of releasing histamine after interaction with Ag. •

3626. NON-PERSISTING DYES IN ANAPHYLACTIC INVESTIGATION. J.G.Feinberg and J.M.Dewdney: Immunology, 1963, 6, 189-203. Coomassie Blue, which was completely eliminated in 3-6 hr., was used for visualising local anaphylactic phenomena in mice or guinea-pigs. It was suitable in active and passive cutaneous and pinnal anaphylaxis, and could be given either i.v. or i.p. *

3627. ANAPHYLACTIC SHOCK AND BRADYKININ: COMPARISON BETWEEN THE CHARGES IN THE COB₂TICO-PIAL CIRCULATION OF GUINEA-PIGS AFTER ANAPHYLACTIC SHOCK AND AFTER BRADYKININ; G.Breda, M.Concioli and L.Mariani: Atti. Acad. Me¹ Lombarda, 1962, 17, 235-241 (1st. di FarmacoL, ... Univ. Milano, Italy) Using a microcinematograph¹ technique the cordeco-pial circle of guinea-pigs showed a remarkable vasodilation, at the arteriolar level, after induction of anaphylactic shock. This effect increased with the seriousness of the shock. Similar pictures were obtained after i.v. injn. of bradykinin. Very dissimilar pictures were obtained after treatment with 5HT, hist' amine or ACh. Anaphylactic shock, induced arteriolar vasodilation may be due to a release of bradykinin-U²* substance. (Italian) CN.Godson

3628. ANAPHYLAXIS IN PIGS AND ITS RELATIONSHIP TO THE PATHOGENESE OF OEDEMA DISEASE AND GASTRO-ENTERITIS ASSOCIATED WITH E. COLI J.R.Thomlinson and A.Buxton: *Immunology*, 1963, 6, 126-139 (Dept. Vet. Path., Univ. Liverpool, England) Pigs were subjected to active anaphylactic shock using egg albumen and to reversed passive anaphylaxis using *E. coli* (0138). The symptoms and lesions closely resembled those of oedema disease and haemorrhagic gastroenteritis. Catarrhal enteritis was also observed. There was a relationship between the character of the lesions and the severity and duration of the anaphylactic symptoms. Clinically normal pigs developed hypersensitivity to those serotypes of *E. coli* which were associated with these conditions. It is considered that the diseases develop from anaphylactic hypersensitivity to *E. coli* rather than from direct toxæmia due to sudden absorption of increased quantities of bacterial polysaccharide.

3629. PASSIVE ACUTE GLOMERULONEPHRITIS INDUCED BY ANTIGEN-ANTIBODY COMPLEXES SOLUBILISED IN HAPten EXCESS. R.T.McCluskey, B.Benacerraf and F.Miller: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111, 764-768 (Dept. Path., New York Univ. Sch. Med., N.Y., U.S.A.) Acute glomerulonephritis was produced passively in normal mice by sol. Ag/Ab complexes TMP. from rabbit anti-DNP bovine yglobulin which was Pptd. at equiv. with DNP-bovine serum albumin and dissolved in excess hapten (fNH_2 DNP lysine). Three injn. 24 hr. resulted in acute disease, with marked accumulation of complexes in glomeruli 24 hr. after injn. Purified Ab did not localise in the glomeruli.

M.M.Shapland

3630. DELAYED HYPERSENSITIVE REACTIONS IN BUR-SEC TXtylSED CHICKENS. B.DJanković, M.Jsvaneski, ^Milosević and L.Popeskić: *Nature*, Lond., 1963, 200, 298-299 (Univ. Belgrade, Yugoslavia) Removal of ^{fe} ^{re} ^b ^{rea} ^{et} ^{their} ^{en} ^{et} ^{their} ^{en} ^{ce} ^{Phalomyelitis}, ^{spinal} ^{cord} ^{old} ^{tuberculin}, ^{skin} ^{homograft}. CM.Lewis

3631. FATE OF 1311 LABELLED ANTIGENS IN THE SKIN OF NORMAL GUINEA-PIGS AND THOSE WITH DELAYED TYPE HYPERSENSITIVITY. J.Oort and J.L.Turk: *Immunology*, 1963, 6, 140-147 (Nat. Inst. Med. Res., London, England) Labelled PPD was eliminated more rapidly from the skin of normal guinea-pigs than human skin. It was concluded that retention of PPD was probably not sp. to delayed type hypersensitivity but was related to the difference in character and severity of die ^{err} ¹¹¹³¹⁰ Process, which itself was related to the nature of the Ag involved.

3632. INFLUENCE OF TUBERCULOLIPIDS ON THE TYPE OF HYPERSENSITIVITY. G.Bendixen: *Acta path. microbiol. scand.*, 1963, 57, 222-234 (Inst. Gen. Path. Univ., Copenhagen, Denmark) Ag mixtures of varied composition containing whole tubercle bacteria, de-oiled ^{de} ^{Dercle} bacteria, 'purified wax' or 'crude phosphatides', ^{or tube} ^{tube} ^{rele} bacteria, tuberculin, egg albumin, ^o ^t ^{Pa} ^{Vr} ^{or tube} Win oil were inj. or implanted s.c. in guinea-pigs.

The wax fraction was of no importance for the type of hypersensitivity and merely enhanced the existing ability to induce immediate or delayed hypersensitivity. Lipid solvents, including paraffin oil rendered the bacteria capable of inducing immediate hypersensitivity. After delipidation with neutral, org. solvents the ability of tubercle bacteria to induce delayed hypersensitivity decreased. The ability to induce delayed hypersensitivity was probably associated with some quality in the bacterial body itself, and not with any single fraction. LFried ma nn

3633. THE LOSS OF MACROPHAGES FROM PERITONEAL EXUDATES FOLLOWING THE INJECTION OF ANTIGENS INTO GUINEA-PIGS WITH DELAYED TYPE HYPERSENSITIVITY. D.S.Nelson and S.V.Boyden: *Immunology*, 1963, 6, 264-275 (Dept. Expt. Path., Australian Nat. Univ., Canberra, Australia) The cell content of the exudates induced by glycogen was examined after 4 days in normal and hypersensitive animals. In animals uninj. with Ag, there was a high proportion of macrophages, with lymphocytes and polymorphs. In BCG vaccinated animals, s.c. i.v. or i.p. injn. of tuberculin resulted in a profound fall in the macrophage content within an hr. of i.p. injn. and after very small doses of tuberculin. No such effect occurred after the i.p. injn. of tuberculin into guinea-pigs with Arthus hypersensitivity to tuberculin. Similar results were obtained in animals sensitised to ovalbumin. Bacterial endotoxin inj. i.p. caused a similar fall in the macrophage contents of exudates of both normal and BCG vaccinated animals.

3634. RADIOAUTOGRAPHIC STUDY OF CELLULAR MECHANISMS IN DELAYED HYPERSENSITIVITY. I. DELAYED REACTIONS TO TUBERCULIN AND PURIFIED PROTEINS IN THE RAT AND GUINEA-PIG. T.U.Kosunen, B.H.Waksman, M.H.Flax and W.S.Tihen: *Immunology*, 1963, 6, 276-290 (Dept. Bacteriol., Harvard Med. Sch., Boston, Mass., U.S.A.) In delayed skin reactions to PPD or bovine serum albumin in the rat and to old tuberculin and diphtheria toxoid in the guinea-pig, i.v. injn. of [³H]thymidine shortly before skin testing produced labelling of a high proportion of the cells entering the perivascular infiltrates 12-18 hr. later. The majority of the cells in the infiltrates were haematogenous. They were synthesising DNA before entering the lesions, and many did so in the lesion itself. The principal cell type labelled in both expt. resembled medium-sized lymphocytes of the lymphoid tissues or large lymphocytes of the blood. Over several hr. many of these became typical histiocytes. In non-sp. reactions, a similar pattern of labelling was observed, but the total no. of infiltrating cells was very small.

3635. ASSOCIATION OF SKIN-SENSITISING ANTIBODY WITH fe A' GLOBULINS IN SERA FROM RAGWEED-SENSITIVE PATIENTS. P.Fireman, W.E.Vannier and H.C.Goodman: *J. exp. Med.*, 1963, 117, 603-620 (Children's Hosp., Boston, Mass., U.S.A.) Removal of feA-globulin from sera of treated ragweed-sensitive individuals by immune absorption resulted in the loss of skin-sensitising Ab detectable by the Prausnitz-Kustner test. Gel filtration with Sephadex G-200 indicated that the macroglobulin fractions did not contain skin-sensitising Ab activity. Immune absorption of the yglobulins did not remove Ab activity from a serum fraction containing P2A, y-globulins and a trace of pgM-globulins. The removal of a portion of the albumin from the allergic sera by immune absorption, with no change in skin-sensitising activity, indicated that the loss of Ab was not due to non-sp. absorption on an Ag-Ab ppt.

H.E.H.Jones

IMMUNOLOGY AND EXPERIMENTAL PATHOLOGY

TISSUE ANTIGENS (EXCLUDING TUMOURS)

3636. EFFECT OF TANNIN ON ABH(O) RED CELL ANTIGENS. A.Majsky: Z.Immun.-Forsch., 1962, 124, 464-475 (Inst. Haematol. Prague, Czechoslovakia)

After treatment with 1:40000 tannin for 1 hr. at 20°, A₁A₂ and B cells were no longer agglutinable by ordinary non-immune antisera, though their agglutinability by immune sera was little reduced (not more than 3 diln.). This could be used as a test for immune anti-A and anti-B. Aggltn. by anti-H lectin from *Qononis spinosa* and the absorbing power of the cells were not much affected.

(German) D.P. Winstanley

3637. TEMPORARY SUPPRESSION OF LEWIS BLOOD-GROUP ANTIBODIES TO PERMIT INCOMPATIBLE TRANSFUSION. P.L.Mollison, M.J.Polley and P. Crome: Lancet, 1963, i, 909-912 (M.R.C. Expt. Haemat. Res. Unit., St. Mary's Hosp. Med. Sch., London, England) In order to bypass the problem of finding enough group B, Le (a-b-) donors, the anti-Le^b in a patient's serum was temporarily suppressed by injecting Le^b substance; large amounts of group B, Le(b+) blood were then transfused. There was a rapid and striking immune response, but no signs of a haemolytic reaction, apparently because the transfused Le(bf) cells rapidly lose Leb substance and within 3 or 4 days of transfusion were behaving as if they were virtually Le(b-).

CH.Bell

3638. PHYTAGGLUTININS. IV. SPECIFIC ANTIGENICITY OF THE AGGLUTININ-ACTIVE GLYCOPROTEIN FRACTION OF POTATO. M.Krtlpe and A.Engsgraber: Z. Immun.-Forsch., 1962, 124, 359-367 (64 Fulda, M.Irquardstr. 31, Germany) A rabbit was given a long course of injn. of 'raw substance' from potatoes, together with Freund's adjuvant. It produced sp. precipitins against the agglutinin-active glycoprotein fraction and also against inactive protein fractions.

(German) D.P.Winstanley

3639. AGGLUTININ RESPONSE TO SHEEP R.B.C. IN MICE FOLLOWING INTRAPERITONEAL INJECTION OF ALLOGENIC SPLEEN CELLS. G.O.Bain: Canad. J. Biochem., 1963, 41, 573-578 (Dept. Path., Univ. Alberta, Edmonton, Alta., Canada) C3H mice were inj. with spleen cells from C57BL mice and 24 hr. later with sheep r.b.c. The recipients of spleen cells from C57L donors which had previously been inj. with C3H tissue developed lower sheep haemagglutinin titres than control mice, neither donor serum nor saline extracts of lyophilised donor spleen cells had any cytotoxicity in vitro, but both heat-killed spleen cells and lyophilised spleen cells inj. in vivo depressed the anti-sheep haemagglutinin titre. The injn. of spleen cells from donors not previously exposed to C3H Ag did not lower the anti-sheep haemagglutinin titre.

J.B.Parish

3640. IMMUNISATION AFTER INTRAVENOUS INJECTION OF SMALL AMOUNTS OF SICr-LABELLED R.B.C. P.L.Adner, S.Adner, S.Foconi and S.Sjolin: Brit. J. Haemat., 1963, 9, 288-298 (Dept. Clin. Chem., Univ. Hosp., Uppsala, Sweden) Compatibility between donor and recipient in the ABO and D blood groups only resulted in immunisation in 16 out of 45 cases, judged by the incidence of curtailed SICr-labelled r.b.c. survival curves, although Ab were detected serol. in only 4 cases. K-recipients receiving K+ blood responded by making anti-K in 1 case out of 14, and the survival of

K+ cells in this patient showed very variable results. The 51cr-method is recommended as a useful serol. technique.

J.Sneath

3641. PROPERTIES OF THE PLATELET-CONNECTIVE TISSUE MIXED AGGLUTINATION REACTION. T.H. Spaet, J.Cintron and M.Spivack: Proc. Soc. exp. Biol., N.Y., 1962, 111, 292-295 (Dept. Haem., Lab. Div., Montefiore Hosp., N.Y., U.S.A.) Aggltn. of platelets by a suspension of connective tissue fragments or by Polybrene of mol. wt. 6000 was inhib. by Polybrene mol. wt. 2800, hypertonic electrolyte soln., pH extremes or trypsinisation of platelets. It is suggested that this mixed aggltn. is an electrostatic charge reaction.

M.M.Shapland

3642. FATE OF INJECTED BENCE-JONES PROTEIN.

F.Meyer and F.W.Putnam: J. exp. Med., 1963, 117, 573-581 (Chem. Dept., Harvard Univ., Cambridge, Mass., U.S.A.) Bence-Jones protein inj. into rabbits was excreted rapidly into the urine. The excreted protein was not altered physicochem. or immunochem. In spite of the rapid excretion much of the inj. Bence-Jones protein was metabolised. After re-injn. of radioactive Bence-Jones protein into the donor patient only a little radioactivity was recovered in the urinary protein.

H.E.H.Jones

3643. SIGNIFICANCE OF THE 'SENSITIVITY TO INHIBITION¹' OF THE TEST SYSTEM IN Gm SERUM GROUP DETERMINATIONS. V.Sachs and R.Maltzan: Z. Immun.-Forsch., 1962, 124, 325-336 (Hyg. Inst., Univ. Kiel, Germany) Two-dimensional inhibn.

titrations of 23 anti-Gm^a sera under standard conditions showed that the inhibn. systems fell into 3 groups as regards their suitability for Gm(a+) determinations. Eight rheumatoid sera aggl. the sensitised r.b.c. in high diln., but were inhib. only by high concn. of Gm(a+). Twelve other sera, mostly rheumatoids, were intermediate in both respects. Three non-rheumatoid sera aggl. sensitised r.b.c. in moderate or high diln. and were inhib. by Gm(a+) in low concn. Sera of this last group were the most suitable for Gm(a+) grouping.

(German) D.P.Winstanley

3644. HUMAN, RABBIT AND BOVINE Y GLOBULINS IN DETECTING OF RHEUMATOID FACTOR. D.Skakba:

Bull. Acad. pol. Sci., 1963, 11, 65-68 (Dept. Microbiol., Univ. Lodz, Poland) In the haemaggltn. re* action of BDB-globulin r.b.c. human, rabbit and bovine y-globulins enabled sera containing rheumatoid factor to be divided into groups reacting with all three y-globulins* with human and rabbit y globulins, or with y globulins of only one of the three spp. In diagnosis of rheumatoid disease human, rabbit and bovine y globulins raise the % of pos. tests. The expt. results confirm the view that rheumatoid factor is composite in character.

J.E.Hobbs

3645. SEROLOGICAL REACTIONS OF RHEUMATOID FACTOR AND ANTI-GLOBULIN SERUM WITH HEATED Y-GLOBULINS. D.Skakba: Bull. Acad. pol. Sci., 1963, 11, 69-70 (Dept. Microbiol., Univ. Lodz, Poland)

y-Globulins heated to 63-67° inhib. rheumatoid factor more than normal yglobulin: anti-globulin serum had the reverse effect. At 7(T), yglobulins became large* inactive towards rheumatoid factor and anti-globulin serum. Serol. differences between rheumatoid factor and anti-globulin serum were demonstrable in haemaggltn. inhibn. tests, with const. quant. of heated Y" S1°buli^ *? progressive diln. of serum. The results show that rheumatoid factor reacted more strongly with partly denatured y globulins, whereas anti-globulin serum reacted mo*e weakly with heated yglobulins.

J.E.Hobson

3646. • RHEUMATOID FACTOR¹ -LIKE PROPERTIES OF ISOLATED CRYOGLOBULINS. V.Balázs, M.M.FrO-Uch and M.Csáti: Amer. J. med. Sci., 1963, 245, 206-209 (1st Dept. Med., Univ. Med. Sch., Szeged, Hungary) The cryoglobulins obtained from 10 different cases were studied by immuno-electrophoresis and ultracentrifugation. In addition, their ability to aggl. sensitised sheep r.b.c. latex particles coated with human Y^gglobulin and tanned r.b.c. sensitised with human y-globulin was investigated. E.E.Hobbiger

3647. IMMUNOLOGICAL METHOD FOR DEMONSTRATING FIBRIN DEGRADATION PRODUCTS IN SERUM AND ITS USE IN THE DIAGNOSIS OF FIBRINOLYTIC STATES. H.C.Ferreira and L.G.Murat: Brit. J. Haemat., 1963, 9, 299-310 (Univ. São Paulo, Haemat. Clin. Rua Leoncio de Carvalho 98, São Paulo, Brazil) Anti-human fibrin serum was prepared in rabbits and after absorption to remove Ab to the Y^gglobulin fraction antiH^{Cle d s P ecific ally} with human fibrin and fibrinogen, hrv^{A i T A ? leir} digestion products after incubation with B(S^{Sin})^{*? b}rinolysin and the proteolytic venom from YP&rops;jararaca. The reaction is detected by means of *ccn. (Fibrin Degradation Flocn. Test) and gave pos. reactions in 20 cases of abruptio placentae uterine rup-S^A and trauteilne foetal death associated with abnor-jj^{ai} Weeding. A few other cases possibly associated with increased fibrinolysis were also pos. (myocardial infarct with thrombo^oPblebitis, snake-bite and cardiac surgery *m extra corporeal circulation). 120 control cases *ete neg. J.Sneath

3648. NORADRENALINE AND MONOAMINEOXIDASE CONTENT IN IMMUNOSYMPAIHECTOMISED ANIMALS. R.Levi-Montalcini and P.U.Angeletti: Int. J. Neuropharm., 1962, 1, 161-164 (Zool. Dept., Washington Univ., St. Louis, Mo., U.S.A.) Permanent destruction of sympathetic ganglia was obtained by inj. new hou mice of rats wit** an antiserum to nerve growth thmi^{at d} from mouse submaxillary salivary glands. Al-though there was no detectable difference between the t^Tl^{ev}s of noradrenaline and monoamineoxidase of sur^{ed} and co^{ntrol} animals, peripheral levels of these stances were low in the treated animals. CF.Blane

3649. COMPLEMENT FIXATION IN DISEASED TISSUES. II. FIXATION OF GUINEA-PIG COMPLEMENT IN RENAL LESIONS OF SYSTEMIC LUPUS ERYTHEMATOSUS. P.M.Burkholder: Amer. J. Path., 1963, 42, 201-215 (Dept. Pathol., New York Hosp., New York, N.Y., U.S.A.) Frozen sections of human kidney from 7 patients were examined after exposure to fluorescein labelled human globulin and also after exposure to g^g-Pig C followed by fluorescein labelled anti-f3^a-Pig C. Sites where both Ab became specifically thirS^{inclu}led glomerular capillary wire loops, diffusely somp^{ened} glomerular capillary walls, and the walls of petioles. Sites where only anti-globulin became fixed eluded hyaline droplets in tubular cells and tubular casts. It is concluded that immunol. or physico-chem. reactions with prop, indistinguishable from immunol. re-actions, are involved in the pathogenesis of systemic L.E.

3650. FDnSS[^]ULATING ANTIBODIES TO COWS MILK PROTEINS AND GLUTEN IN THE NEWBORN. R.Wright, ¹B¹:aylor, S.C.Truelove and R.J.schaffenburg: Brit. J. 1962, ii, 513-515 (Radcliffe Infirmary, Univ. of England) Determination of levels of circu-⁸¹uten^{te} to cows mil^k Protein and to proteolysed wheat bettyn^{ce} in titres in cord blood of 100 newborn infants and

in the blood of their mothers. The titre of Ab to 3-lactoglobulin and fraction IE was usually higher in cord than in maternal blood. The source of the cord blood Ab and their influence on development of sensitivity to dietary proteins are discussed. M.E.Nutt

3651. SPONTANEOUS AUTO-IMMUNE DISEASE IN NZB/BLMICE. BJ.Helyer and J.B.Brown: Brit.J.Haemat., 1963, 9, 119-131 (Dept.Path., Otago Univ. Med. Sch., Dunedin, New Zealand) Early splenectomy and injn. of ACTH diminished the severity of the syndrome, which is described with details of morbid anatomic, clinical and haematol. features. The syndrome had 100% incidence with reduced survival time. A small proportion had pos. L.E. tests and in a majority of the animals the glomeruli showed obliterative lesions, resembling human lupus nephritis. Cross-breeding with another inbred strain greatly reduced the incidence of the disease but offspring showed a high incidence of florid changes resembling lupus nephritis, associated with renal failure and about a third showed pos.L.E.tests. J.Sneath

3652. RELATIONSHIP BETWEEN AETIOLOGY, L.E. CELL PHENOMENON AND ANTI-NUCLEAR ANTIBODY IS DISSEMINATED LUPUS ERYTHEMATOSUS : A HYPOTHESIS. A.J.Sbarra, W.A.Bardawil and W.Shirley: Nature, Lond., 1963 198, 159-161 (Dept. Pathol., St. Margaret's Hosp., Boston, Mass., U.S.A.) Serum from patients with disseminated L.E. increased the respiration of rabbit polymorphs, increased the uptake of glucose, production of lactic acid and the DNase activity of the leukocytic granules. It is suggested that the aetiological agent is phagocytosed, intracellular DNase is liberated and freed to attack nuclear DNA. The attacked nuclear material is ejected, opsonised and phagocytosed or picked up by immunol. competent cells, producing in the former case, L.E. cells, and in the latter, anti-nuclear Ab. G.M.Lewis

3653. DEVELOPMENT OF THE FOETUS IN FEMALE RATS INJECTED WITH HOMOLOGOUS HEART TISSUE. L.P.Cawley, A.Riner and C.P.Houser: Nature, Lond., 1963, 197, 1307-1309 (Dept. Lab., Wesley Hosp., Wichita, Kans., U.S.A.) Attempts to immunise rats against homologous heart tissue failed to interfere with normal cardiac development in the foetus. There was no serol. evidence of immunization. G.M.Lewis

3654. GASTRO-INTESTINAL SPECIFIC ANTIGEN: AN IMMUNOHISTOLOGICAL AND SEROLOGICAL STUDY. R.C.Naim, J.E.Fothergill, M.G.McEntegart and I.B. Porteous: Brit. med. J., 1962, i, 1788-1790 (Dept. Path., Univ., Aberdeen, Scotland) Immunofluorescent and serol. methods, using antisera from rabbits immunised with a microsomal fraction of normal human gastric mucosa, showed a gastrointestinal-sp. Ag in the secretory region of the mucosal cell. The Ag was a mucopolysaccharide and was present in the intestines of sheep, cattle, dogs and cats, but not in rodents and not in any other organ studied. M.E.Nutt

3655. AUTO-IMMUNE PHENOMENA IN PERNICIOUS ANAEMIA: GASTRIC ANTIBODIES. K.B.Taylor, I.M. Roitt, D.Doniach, K.G.Couchman and CShapland: Brit. med. J., 1962, ii, 1347-1352 (Nuffield Dept. Clin. Med., Oxford, England) Sera of 143 patients with pernicious anaemia were tested for auto-Ab to intrinsic factor [IF] by in vivo inhibn. of vit. B12 absorption, electrophoretic retention of IF-B12 complex and by radioactive copm. Results of the 3 methods correlated

IMMUNOLOGY AND EXPERIMENTAL PATHOLOGY

well and the electrophoretic method was most convenient. Ab to gastric parietal cells, were shown by CF and immunofluorescence. The CF Ab was a 7S-Y"globulin and cross-reacted with mucosal extracts of other spp. The Ag was present in the paniculate fraction of gastric mucosal homogenates and confined to parietal cells. Auto-Ab to IF were present in 44% of patients with pernicious anaemia. Immunofluorescent Ab were present in 86% of patients and in 93% of those aged < 60 yr. Comparable control values for this Ab were 11% and 5%.

M.E.Nutt

3656. AUTOIMMUNITY IN PERNICIOUS ANAEMIA AND IRON-DEFICIENCY ANAEMIA. A COMPLEMENT-FIXATION TEST USING HUMAN GASTRIC MUCOSA. J.L. Markson and J.M. Moore: Lancet, 1962, ii, 1240-1243 (Stobhill Gen. Hosp., Glasgow, Scotland) A

CF test, with saline extracts of human gastric mucosa as Ag, was applied to sera from 72 patients with pernicious anaemia, 34 patients with Fe-deficiency anaemia, and 41 patients with Hashimoto's disease. The test was pos. in 41.7%, 17.6% and 12.2% of these groups respectively, and in 4.5% of controls. Achlorhydria was not invariably associated with a pos. test. The test is thought to indicate an Ag-Ab reaction and is not due to an Ab to intrinsic factor.

CH.Bell

3657. LIVER 'AUTOANTIBODIES' IN A CASE OF DRUG-INDUCED JAUNDICE. M.G. Okcen and H.J. Zinneman: Gastroenterology, 1963, 44, 69-72 (Dept. Med., Univ. Minnesota Med. Sch., Minneapolis, Minn., U.S.A.)

Immunol. methods detected autoAb, di"globulins which reacted with the cytoplasm of liver parenchyma cells and Y"globulins which reacted with bile duct cells, in a patient suffering from jaundice induced probably with PAS and perhaps INH.

D.N.Wheatley

3658. AUTO-ANTIBODY PRODUCTION IN TOE RABBIT. HI. EFFECT OF INFECTION WITH EIMERIA SUEDAE AND ITS RELATION TO NATURAL ANTIBODY. G.L. Asherson and M.E. Rose: Immunology, 1963, 6, 207-216 (Nat. Inst. Med. Res., Mill Hill, London, England)

Expt. infection of rabbits with E. stiedae, the cause of hepatic coccidiosis, led to a rise in the titre of CF factors present in normal rabbit serum when tested with rabbit liver or kidney. The rise was statistically significant 14, 21 and 28 days after infection. The factors were regarded as Ab because they behaved as macroglobulins on DEAE-cellulose chromatography or sucrose gradient centrifugation, and as auto-Ab because they fixed C with the kidney of the rabbits in which they occurred. The Ab reacted with widely distributed Ag with high activity in brain and low activity in skeletal muscle. *

3659. GLOMERULONEPHRITIS INDUCED IN MONKEYS BY INJECTIONS OF HETEROLOGOUS GLOMERULAR BASEMENT MEMBRANE AND FREUND'S ADJUVANT.

R.W. Steblay: Nature, Lond., 1963, 197, 1173-1176 (Dept. Obstet., Univ. Chicago, Ill., U.S.A.) Chronic glomerulonephritis was produced in Rhesus monkeys by repeated injn. of glomerular basement membrane prep, from human, rabbit, rat or dog kidneys together with Freund's adjuvant. The glomerular lesion presumably occurred by an auto-immune mechanism. The monkeys showed delayed hypersensitivity to the Ag used for injn.

G.M.Lewis

3660. PRODUCTION OF A HIGHLY TISSUE-SPECIFIC ANTIGEN AGAINST A PARTICULAR SUB-FRACTION SEPARATED FROM KIDNEY MICROSOMES. T.S. Oka da and A.G. Sata: Nature, Lond., 1963, 197, 1216-1217

(Zool. Inst., Fac. Sci., Univ. Kyoto, Japan) The microsomal fraction from chicken kidneys treated with deoxycholate was fractionated with (NH₄)₂SO₄.

Antisera to the subfractions were produced in rabbits and examined by ring precipitin and double diffusion tests. Each antiserum contained relatively a high concn. of the Ab to the homologous Ag.

G.M.Lewis

3661. ENZYMIC ACTIVITIES OF THE SOLUBLE ANTIGENS IN KIDNEY MICROSOMES. K.Ozato and T.S. Okada: Nature, Lond., 1963, 197, 1310-1311 (Zool.

Inst., Fac. Sci., Univ. Kyoto, Japan) Rabbit antisera were prep, against various fractions of microsomes from chicken liver or kidney. The activities of esterase and the phosphatases resided respectively in immunol. different components of the microsomes.

G.M.Lewis

3662. EFFECTS OF HEPARIN, NICOTINIC ACID AND ACTH ON EXPERIMENTAL NEPHROSB. K.G. Wakim, B.F. McKenzie, W.F. McGuckin, A.L. Brown, jun. and A.J. Baggenstoss: Amer. J. med. Sci., 1963, 245, 259-276 (Sect. Physiol., Mayo Clin., Rochester, Minn.* U.S.A.) Renal lesions corresponding to the nephrotic phase of chronic glomerulonephritis could be produced in dogs or rats by injecting with the serum of rabbits sensitised to dog or rat kidney respectively. ACTH ameliorated the biochem. and clinical manifestations in the nephrotic animals, whereas heparin and nicotinic acid did not.

E.E. Jobbiger

3663. IMMUNOCHEMICAL STUDIES ON KIDNEY HYPER-

TROPHY OF THE RAT. F.J. Hiramoto, J. Bernecke and J. Jurand: Proc. Soc. exp. Biol., N.Y., 1962, 111, 648-651 (Dept. Biochem. Res., Roswell Park Mem. Inst., Buffalo, N.Y., U.S.A.) Rabbit anti-rat kidney globulin was used as a marker to demonstrate that after unilat. nephrectomy no new functional glomeruli were formed in the remaining kidney during the period of compensatory hypertrophy.

M.M. Shapland

3664. E.M. STUDIES OF EXPERIMENTAL NEPHRITIS WITH FERRITIN-CONJUGATED ANTIBODY [Fer-Ab]. LOCALIZATION OF ANTIGEN-ANTIBODY COMPLEXES IN RABBIT GLOMERULI FOLLOWING REPEATED INJECTIONS OF BOVINE SERUM ALBUMIN [BSA].

G.A. Andres, B.C. Seegal, K.C. Hsu, M.S. Rothenberg and M.L. Chapeau: J. exp. Med., 1963, 117, 691-704 (Inst. Med. Pathol., Univ. Rome, Italy) The development of glomerulonephritis in rabbits repeatedly inj. with BSA was dependent on the development of a suitable ratio of Ab to Ag. Fer A^P was used to show the presence of Ag aggregates from the blood, crossing the endothelium and the basement mem" brane, and in deposits between the basement membrane ?? the epithelial cytoplasm. In rabbits dying of anaphylactic shock after injn. of BSA Ag-Ab could be demonstrated with in glomerular capillaries.

H.E.H. Jones

3665. IMMUNOLOGICAL SPECIFICITY OF AUTOLOGOUS Y-GLOBULIN IN GLOMERULI OF RABBITS WITH EXPERIMENTALLY INDUCED GLOMERULONEPHRITIS. A.L. Sherwin, A. Leznoff, M. Richter and B. Rose: Canad. J. Biochem., 1963, 41, 897-904 (Div. Immunochem., McGill Univ. Clin., Royal Victoria Hosp., Montreal, Que., Canada)

Expt. glomerulonephritis was induced in rabbits by the i.v. injn. of chicken anti-rabbit glomerulus serum. These rabbits were simult. immunised, either actively or passively, with bovine serum albumin [BSA] or ovalbumin. Autologous y-globulin was identified in the glomeruli of these nephritic rabbits by immunofluorescence. The presence of an anti-BSA or anti-ovalbumin component

could not be shown in the y globulin in the glomeruli although they were present in high titre in the blood.

J.B.Parish

366. INFLUENCE OF RICE DIET ON EXPERIMENTAL NEPHROSIS IN RATS. J.E.Dutra de Oliveira and W.A. Hadler: Arch. int. Physiol., 1962, 70, 459-468 (Fac. Med., Ribeirão Preto, Estado de São Paulo, Brazil) Nephrosis was produced in Wistar rats by inj. of rabbit anti-kidney serum. Diseased animals were randomly selected for stock or rice diet. Control groups of animals were also maintained on the 2 diets. Proteinuria and high blood cholesterol, with low albumin and high (X-Sabulin, persisted in nephrotic animals on the stock diet and histol. examination revealed severe damage to kidney Parenchyma. Animals on the rice diet tended to recover, *in decrease in proteinuria and return of blood proteins and cholesterol to normal values. Histol. examination showed normal kidneys in 11 of 22 rats and lesions of only moderate degree in the others after 4 months on the rice diet. The influence of dietary Na and quantity and quality of dietary protein is discussed in relation to the above results. M.E.Nutt

366? TRANSFER OF EXPERIMENTAL AUTO-IMMUNE NEPHROSIS IN RATS. W.Heymann, J.L.P.Hunter, D.B.Hackel and F.Cuppige: Proc. Soc. exp. Biol., N.Y., 1962, 111, 568-573 (Dept. Ped., Western Res. Sch. Med., Cleveland, Ohio, U.S.A.) Induction of auto-immune nephrosis in normal rats was effected by paraparapiosis and by i.v. inj. of spleen emulsions of rats with infant renal disease into littennates made immunological at birth. M.M.Shapland

366 8. ANTIGEN DISTRIBUTION PATTERN OF THE HUMAN PLACENTA. AN IMMUNOFLUORESCENT MICROSCOPIC STUDY USING THE KIDNEY AS AN EXPERIMENTAL MODEL. J.J.Bass: Lab. Invest., 1963, 12, 332-342 (Pathol. Dept., Med. Sch., Pittsburgh, Pa., U.S.A.) Human placental Ag capable of producing rabbit Ab was localised to foetal vascular trophoblast basement membranes. It was very similar to Kidney basement membrane Ag immunol. Free antigen in the serum of normal or pre-eclamptic pregnant women was not demonstrable. A.M.Mackay

366 9. IMMUNOLOGICAL STUDIES WITH COMMERCIAL REPARATION OF HUMAN CHORIONIC GONADOTROPHIN [HCG]. S.Hamashige and E.R.Arquilla: J. clin. Invest., 1963, 42, 546-555 (Dept. Pathol., Univ. California Sch. Med., Los Angeles, Calif., U.S.A.) Ab to HCG were demonstrated immunol. by haemagglutination and neutralisation of the biol. activity of HCG in the 3jjd rat. The HCG prep. was not pure, as shown by electrophoretic and immunoelectrophoretic studies. K.Jones

3670. EXPERIMENTAL ALLERGIC THYROIDITIS IN GUINEA-PIG. I. RELATIONSHIP OF DELAYED HYPERSENSITIVITY AND CIRCULATING Ab TO DEVELOPMENT OF THYROIDITIS. M.H.Flax, B.D.Iankovic and S.Sell. U. MORPHOLOGICAL STUDIES OF DEVELOPMENT OF DISEASE.

M.H.Flax: Lab. Invest., 1963, 12, 119-129, 199-213 (Pathol. Dept., Harvard Med. Sch., Boston, Mass., U.S.A.) I. Thyroiditis was induced in guinea-pig by inj. of homologous thyroid extract in Freund's adjuvant. The severity of thyroiditis was correlated with intensity of delayed hypersensitivity to thyroglobulin, but not with thyroglobulin Ab titres.

n. The early lesion consisted of perivenous inflammation. Mononuclear cells invaded follicles and progressively destroyed them. Adjacent acini underwent hyperplasia. Plasma cells appeared later. A.M.Mackay

3671. ANTITHYROID ANTIBODIES; THEIR UTILISATION IN INVESTIGATION OF ANTIGENIC THYROID SUBSTANCES IN MATERIAL OBTAINED BY CYTOLOGICAL ASPIRATION. P.Paseyro, E.Negrin, J.Moraté-Manaro and O.F.Grosso: J. clin. Endocr., 1963, 23, 387-390 (List. Clin. Endocr., Montevideo, Uruguay). K.Jones

3672. IMMUNOPATHOLOGY OF CHRONIC NON-SPECIFIC THYROIDITIS [AUTO-IMMUNE THYROIDITIS]. R.C. Mellors, W.J.Brzosko and L.S.Sonkin: Amer. J. Path., 1962, 41, 425-430 (Hosp. Special Surg., P.D.Wilson Res. Fdn., New York, N.Y., U.S.A.) The direct fluorescent Ab method was used to detect human thyroglobulin and Ab to human thyroglobulin in this study of thyroid tissue obtained surgically from a 32 yr. old woman with a 2 yr. history of chronic non-sp. thyroiditis. Thyroglobulin was found not only within follicles but also amongst the cellular infiltrate between follicles. Cells containing 7S Ab to thyroglobulin formed part of the infiltrate. Thyroglobulin intimately associated with 7S Ab globulin was found within macrophages, and extracellularly both within and between the follicles. It is suggested that the mixture of thyroglobulin and Ab to thyroglobulin represents immune complexes. D.G.Scott

3673. IMMUNOASSAY OF BOVINE AND HUMAN PARATHYROID HORMONE. S.A.Berson, R.S.Yalow, G.D. Aurbach and J.T.Potts: Proc. nat. Acad. Sci., Wash., 1963, 49, 613-617 (Bronx V.A. Hosp., New York, N.Y., U.S.A.) The principle of competitive inhibbn. of binding of [¹³¹I]parathyroid hormone to sp. hormone Ab was used to assay bovine and human parathyroid hormones in the fiftig.-mpg. range. The results were comparable to those obtained using bioassay methods. Human parathyroid hormone extracted from a parathyroid adenoma reacted sufficiently well with guinea-pig Ab to bovine parathyroid hormone to be detectable at concn. of 1-5-6 mU/ml. (250-1000 fiftig./ml.). Endogenous parathyroid hormone was detected in plasma from 2 hyperparathyroid subjects and in plasma from normal subjects but not in plasma from 9 hypoparathyroid subjects. J.R.Sargent

3674. IMMUNOLOGICAL STUDIES ON ADRENAL GLANDS, in. INTERSPECIES RELATIONS OF THERMOSTABLE ADRENAL-SPECIFIC ANTIGENS. F.Milgrom, M.Tuggac and E.Witebsky: Immunology, 1963, 6, 105-118 (Dept. Bacteriol., Sch. Med., Buffalo, N.Y., U.S.A.) Rabbit antisera were prep. against human, equine and porcine adrenal prep. obtained by extraction at 100° then ethanol ptn. With these antisera it was shown that man, horse and pig contain adrenal-sp. Ag of similar physicochem. prop. to the Ag previously described in ox. Two adrenal-sp. Ag were found in each spp. tested. One, represented by heavier ptn. lines, had distinct serol. prop. in ox, man, horse or pig and could be detected only by the homologous immune serum. The other, represented by a thinner ptn. line, had very similar serol. prop. in all 4 spp. *

3675. THYROID AUTO-ANTIBODIES IN PERNICIOUS ANAEMIA. J.L.Markson and J.M.Moote: Brit. med. J., 1962, ii, 1352-1355 (Stobhill Gen. Hosp., Glasgow, Scotland) The incidence of thyroid auto-Ab was significantly greater in patients with pernicious anaemia than in control subjects. M.E.Nutt

IMMUNOLOGY AND EXPERIMENTAL PATHOLOGY

3676. ENCEPHALITOGENIC FACTOR IN EXPERIMENTAL 'ALLERGIC ENCEPHALOMYEUTIS. E.A.Caspari and E.J.Field: Nature, Lond., 1963, 197, 1218 (M.R.C. Group Demyelinating Dis., King's Coll., Newcastle-upon-Tyne, England) A material capable of producing encephalomyelitis in guinea-pigs when 1 fig. was inj. with Freund's adjuvant was isolated from human brain. Fractionation on a Sephadex column produced material which, although apparently homogeneous electrophoretically and in the ultracentrifuge, was immunol. heterogeneous. No circulating Ab to the encephalomyelitic factor could be found in allergic encephalomyelitis. Skin sensitivity reaction occurred in response to inactive material as well as to the encephalomyelitic factor.

M.Lewis

3677. IMMUNOLOGY OF COLLAGEN. I. PREPARATION OF AN ANTIBODY AGAINST SOLUBLE COLLAGEN PREPARATIONS. C.Steffen, R.Timpl and I.Wolff: Z. Immun.-Forsch., 1962, 124, 476-492 (Hanusch Krankenhaus, Vienna, Austria) Hydroxam-collagen, soL at pH 7-3, prep, from calves' joints, was used to immunise rabbits and to sensitise tanned r.b.c. All the rabbit sera gave pos. results by the passive haemagglutination technique; these were inhib. by adding hydroxam-collagen but not by human albumin or y-globulin. Insol. collagen cross-reacted with hydroxam-collagen Ab. The relationship of these to collagen Ab in rheumatoid arthritis is discussed.

(German)

D.P.Winstanley

3678. ROLE OF INFLAMMATORY CELLS IN REJECTION OF SKIN HOMOGRAFTS IN RABBITS. C.M.C.Chen and H.L.Chang: Nature, Lond., 1963, 198, 158-159 (Dept. Surg., Nat. Def. Med. Centre, Taipei, Taiwan, Formosa) Eosinophils and histiocytes were rarely seen, but small lymphocytes were the most active cells participating in the reaction, their population being proportional to the extent of revascularisation of the graft and in reverse proportion to the immune status of the host after initial sensitisation. Plasma cells were confined to the recipient bed and reached their peak 2 days before epidermal breakdown. Neutrophils were seen secondary to cellular degeneration. Cytotoxic humoral Ab are thought to be directly responsible for homograft destruction.

G.M.Lewis

3679. ASSOCIATION OF TRANSPLANTATION ANTIGENS WITH MICROSOMAL LIPOPROTEINS OF NORMAL AND MALIGNANT MOUSE TISSUES. L.A.Manson, G.V.Foschi and J.Palm: J. cell. comp. Physiol., 1963, 61, 109-118 (Wistar Inst. Anat., Philadelphia, Pa., U.S.A.) The microsomal lipoproteins from DBA/2 mouse spleen and DBA/2 lymphoblast (L-5178Y) contained homograft sensitising Ag when tested against C57BL/6 mice, whereas non-microsomal lipoproteins did not, nor did lipoprotein fractions from DBA/2 liver homogenates. The active lipoproteins were also sp. inhibitors of DBA/2 haemagglutinins and elicited anti-DBA/2-haemagglutinins in C3H mice. The role of the endoplasmic reticulum as a major intracellular site of transplantation Ag is suggested.

G.M.Lewis

3680. SERUM HAEMAGGLUTININS IN HETEROLOGOUS CHIMAERAS. E.M.Uyeki: Nature, Lond., 1963, 198, 196-197 (Biol. Lab., Hanford Lab., Gen. Electric Co., Richland, Washington, U.S.A.) LAF mice were inj. within 2 hr. of 950 r total body X-irradiation with viable bone marrow cells from Sprague-Dawley rats, either normal or immunised against LAF by spleen implantation

and injn. of lymphoid tissue. Serum haemagglutinin determination revealed the presence after 3 weeks of both host anti-graft and graft anti-host reactions. G.M.Lewis

3681. TRANSPLANTATION ANTIGENICITY OF LYMPHOE CELLS GROWN IN VITRO. J.A.Mannick, H.R.Cress, H.M.Lee and R.H.Egdahl: Amer. J. Surg., 1963, 105, 167-173 (Dept. Surg., Med. Coll. Virginia, Richmond, Va., U.S.A.) Doses of 2-20 x 10⁶ spleen cells from adult New Zealand rabbits, grown in Eagle HeLa medium with 20% rabbit serum for 2, 3 or 6 weeks, were inj. i.d. into 18 allogeneic animals, followed 8 days later by a skin homograft from the same donor and a skin autograft*. The mean survival time of the homografts was 4[#]4 ± 1[#]1 days, whereas 20 first set homografts in controls survived 7-4 ± 1-2 days and 15 second set homografts for 4-1 ± 2[#]1 days. Similar expt., in which the medium used for culturing spleen cells was inj. prior to homografts in 12 animals, gave a mean survival time of 5^{*9} ± 1-0 days: in 3 instances the time was 4-5 days.

B.Cruickshank

3682. SURVIVAL OF SKIN HOMOGRAFTS AS A FUNCTION OF QUANTITY AND FREQUENCY OF RNA INJECTIONS. F.L.Ashley, D.Berman and J.Jessamy: Amer. J. Surg., 1963, 105, 174-176 (Dept. Surg., Univ. California, V* Angeles, Calif., U.S.A.) RNA prep, from spleens of adult Wistar rats was inj. into Long-Evans rats 7 times on alternate days from birth in total doses of 0^{*}022-0^{*}11 mg^{*} The animals received skin homografts of uniform size ft⁰P¹ Wistar rats at 21 days of age. 88-100% of the grafts were viable after 13 days and 6-73% after 20 days. In control animals 42% of the grafts were viable after 13 days and none after 20 days.

B.Cruickshank

3683. ANTIBODY RESPONSE TO HOMOGRAFTS. VIII. RELATION OF MOUSE HAEMAGGLUTININS AND CYTO TOXINS. P.I.Terasaki and J.D.McClelland: J. exp. Med., 1963, 117, 675-690 (Surg. Dept., Univ. California Med. Center, Los Angeles, Calif., U.S.A.) TM> differences between certain inbred strains of mice which could not be revealed by haemagglutination techniques were disclosed by lymphocyte cytotoxicity. Though both activity were absorbed from antisera proportionally by r.b.c. and lymph node cells, 100 to 1000 times as many r.b.c. as lymphocytes were necessary to produce an equiv. reduction in Ab activity. This suggests that r.b.c. may possess only min. amounts of certain Ag which are present in detectable levels on lymphocytes. Lymphocyte cytotoxicity may therefore assay a wider range of alloigenic Ag than haemagglutination.

H.E.H.Jones

3684. LIVER AND SPLEEN PHOSPHATASE ACTIVITY IN BONE MARROW TRANSPLANTATION. E.J.M.Uyeki: Int. J. rad. Biol., 1963, 6, 247-255 (Biol. Lab., Hanford Lab., G.E. Co., Richland, Wash., U.S.A.) T^{*}, acid phosphatases of spleen and liver of C3H x 101 hyb^o [C31] mice showed a max. 14 days after i.p. injn. of spleen cells from C57L x A hybrids [LAF]. Q values, i.e. organ wt. x 1000/body wt., were also max. after 14 days* If 400 r whole-body X-irradiation preceded injn. acid phosphatase was max. after 30 days. I.v. injn. of LAF bone marrow suspension after 950 r whole-body irradiation doubled liver acid phosphatase after 14 days. Without radiation, injn. of LAF or C31 bone marrow produced no changes in liver acid phosphatase; rat bone marrow produced a 50% increase in 14 days. Alk. phosphatase was not associated with the Q value. The acid phosphatase response pattern after inocn. of foreign haemopoietic tissue resembled that after introduction of PVP. B.M.Stevens

ANTIBODY FORMATION

3685. SYNTHESIS OF ANTIBODIES BY BLOOD LEUCOCYTES OF THE RABBIT. L.Hulliger and E.Sorkin: Nature, Lond., 1963, 198, 299 (Schweizerisches Forschungsinst., Med. Abteilung, Davos, Switzerland) w.b.c. from rabbits hyperimmunised against human γ -globulin contained large amounts of Ab 4 days after a poster injn.; their role may be as important as that of the spleen. CM.Lewis

3686. HETOPHYSIOLOGY OF THE ANTIBODY RESPONSE. I. HISTOGENESIS OF PLASMA CELL REACTIONS IN RABBIT SPLEEN. H.L.Langevoort. H. ANTI-BODY RESPONSES AND SPLENIC PLASMA CELL REACTIONS IN SUBLETHALLYX-IRRADIATED RABBITS. r.J.Kernig, J. vanderMeer and P.Oudendijk: Lab. Invest., 1963, 12, 106-118, 156-170 (Histol. Dept., Univ. Groningen, Netherlands) I. Rabbit splenic biopsies were performed following one injn. of Ag. Asmablasts were first seen in the periarteriolar lympho-sheaths after 24 hr. The plasma cells migrated to the sinusoids and disappeared in 6 days. At 4 days, γ -globulin cells appeared in the follicles. From 5-10 days after γ -globulin mitosis lymphocytes and cell death associated with follicular enlargement were noted. II. Rabbits were given 500 r total body irradiation before or after i.v. Ag. The Ab response was depressed if radiation was given 12 hr. before injn. Although γ -globulin follicles degenerated periarteriolar sheaths survived irradiation and, in animals irradiated after Ag γ -globulin normal plasma cell reactions were noted. Plasma cells seemed to arise from small lymphocytes.

3687. HETEROLOGICAL RESPONSE OF RABBITS TO TWO INJECTIONS OF PURIFIED PROTEIN ANTIGEN. P.A. Johnston and M.R.Abell: Lab. Invest., 1963, 12, 180-192 (Pathol. Dept., Michigan Univ., Ann Arbor, Mich., U.S.A.) The histological changes in rabbit spleen and lymph nodes following 2 injns. of Ag 7 weeks apart were germinal centre hyperplasia and prominent modified reticular cells. Mature plasma cells apparently from the latter, arose in red pulp node medulla after the Ab titre started to drop. Differences between primary and secondary immune response are discussed. A.M.Mackay

3688. ANTIBODY PRODUCTION BY IMMUNOLOGICAL CELLS OF COMPETENT CELLS TRANSFERRED TO A HETEROLOGOUS HOST. T. A.Zlotnicfc: Lab. Invest., 1963, 12, 306-315 (Expt. Pathol. Div., Scripps Clin., La Jolla, Calif., U.S.A.) Lymph node cell suspensions from rabbits sensitised to bovine albumin or γ -globulin were stimulated in vitro with the same Ag and injected into the cheek pouch of X-irradiated hamsters. There produced Ab identical with rabbit γ -globulin. Morphology and mitotic index after colchicine are described and discussed. A.M.Mackay

3689. RABBIT V-GLOBULIN ALLOTYPES AS GENETIC MARKERS FOR THE SOURCE OF ANTIBODY PRODUCED IN RECIPIENTS OF SHIGELLA-INCUBATED LYMPH NODE CELLS. T.N.J.larris, S.Dray, B.Ellis (C.Mi/nd - Harris: Immunology, 1963, 6, 169-178) and Univ. Pennsylvania, Philadelphia, Pa., U.S.A. Rabbits, homozygous for each of an allelic pair of allotypes of γ -globulin (A4 and A5), were used as donor and recipients of transferred Ag-incubated

lymph node cells, the cells of donors of one allotype being in each case transferred to recipients of the other. When Ab appeared in the sera of the recipient animals, its allotype was determined by treatment with fluorescein-conjugated rabbit anti-A5-Y^g globulin and anti-A4-Y^g globulin, respectively. In each case the reactions of the recipients' sera were pos. for Y^g globulin of the donors' allotype but not of their own. *

3690. ANTIBODY FORMATION INITIATED IN VITRO. H. ANTIBODY SYNTHESIS IN X-IRRADIATED RECIPIENTS OF DIFFUSION CHAMBERS CONTAINING NUCLEAR ACID DERIVED FROM MACROPHAGES INCUBATED WITH ANTIGEN. M.Fishman and F.L.Adler: J. exp. Med., 1963, 117, 595-602 (Immunol. Dept., Publ. Hlth. Res. Inst., New York, N.Y., U.S.A.) Rats

which had been treated by X-irradiation developed sp. Ab when implanted i.p. with diffusion chambers containing normal lymph node cells and a cell-free homogenate of macrophages which had been incubated in vitro with T2 bacteriophage. The cell-free homogenate could be replaced effectively by its RNA fraction isolated by the phenol method. Ab was not formed if this RNA fraction was treated with RNase. The question of the possible presence of Ag complexed to the RNA is discussed.

H.E.H.Jones

3691. ANTIBODY ABSORPTION, RETENTION AND PRODUCTION BY THE BABY PIG. E.R.Miller, B.G.Harmon, D.E.Ullrey, D.A.Schmidt, R.W.Luecke and J.A.Haefen: J. anim. Sci., 1962, 21, 309-314 (Michigan State Univ., Mich., U.S.A.) Absorption of Ab to *Salmonella pullorum* or immune globulin by piglets from colostrum declined logarithmically from birth to 24 hr. and then practically ceased. Absorbed serum Ab and immune globulin titres reached max. in 24 hr. and diminished with age logarithmically with half lives of 4.7 and 7.5 days, respectively. Production of the Ab in the piglets began at approx. 3 weeks of age and had increased 20-fold at 6 weeks. Early weaning of the pigs (4 days) delayed their growth, the maturation of the serum-protein profile and lowered the Ab response.

A.C.Pollard

3692. ROLE OF THYMUS AND RELATED ORGANS IN IMMUNITY. M.Bumet: Brit. med. J., 1962, ii, 807-811 (Hall Inst. Med. Res., Melbourne, Victoria, Australia) Report of a lecture. 18 ref. M.E.Nutt

3693. INDUCTION OF TOLERANCE TO HETEROLOGOUS PROTEINS AND THEIR CATABOLISM IN C57BL/6 MICE. F.M.Dietrich and W.O.Weigle: J. exp. Med., 1963, 117, 621-631 (Expt. Pathol. Dept., Scripps Clin., La Jolla, Calif., U.S.A.) Mice were made tolerant to a sol. Ag by a single injn. of 20 mg. of the protein within 24 hr. of birth. In these mice there was no correlation between the duration of the tolerant state and the persistence of labelled Ag after injn. so that the tolerant state was not dependent on the rates of catabolism of the Ag.

H.E.H.Jones

3694. INHIBITION OF LESIONS OF PRIMARY VACCINIA AND OF DELAYED HYPERSENSITIVITY THROUGH IMMUNOLOGICAL TOLERANCE IN RABBITS. J.A.Flick and W.B.Pincus: J. exp. Med., 1963, 117, 633-646 (Microbiol. Dept., Grad. Sch. Med., Univ. Pennsylvania, Philadelphia, Pa., U.S.A.) Newborn rabbits inj. with 0.5 mg. of purified inactive vaccinia virus failed to respond with a typical local lesion when inj. on the skin a few days later, though virus could be isolated from their tissues. Skin allergy to the active virus failed to develop in these tolerant animals as it did in normal controls. The probable

IMMUNOLOGY AND EXPERIMENTAL PATHOLOGY

allergic nature of the primary lesion is indicated by these results. The tolerant group showed a high mortality rate, associated with generalised vaccinal infection. Normal animals rapidly developed an active immunity which prevented virus leaving the site of the infection to any great extent.

H.E.H Jones

3695. MECHANISMS OF END OT OX IN TOLERANCE.

I. RELATIONSHIP BETWEEN TOLERANCE AND RETICULO-ENDOTHELIAL SYSTEM PHAGOCYTIC ACTIVITY IN RABBIT. S.E.Greisman, F.A.Carozza jun. and J.D.Hills: *J. exp. Med.*, 1963, 117, 663-674 (Med. Dept., Univ. Maryland Sch. Med., Baltimore, Md., U.S.A.) Pyrogenic tolerance following 7 daily i.v. injn. of 2 fig./kg. *E. coli* endotoxin was associated with increased phagocytosis of colloidal C by the RE system. Four hr. after blockade of the RE system with thorotrast the tolerant rabbits developed lower fever than in i.v. endotoxin challenge than the controls, though C clearance was similar in the 2 groups. This passive protection extended to heterologous endotoxins. The tolerant animal appeared to possess a dual endotoxin defence system, one which could be blocked by thorotrast, whereas the other was possibly humoral and consistent with an opsonin with high endotoxin specificity. H.E.H.Jones

3696. TOLERANCE TO TWO SUCCESSIVE HOMOGRAFTS IN GUINEA-PIG. A.Rebel and J.Marescaux: *C.R. Soc. Biol.*, Paris, 1962, 156, 1690-1691 (Inst. Histol. Fac. Méd., Strasbourg, France)

A graft of a fragment of guinea-pig adenohypophysis on the thyroid of testis of the same or a different animal showed no antigenic prop, capable of rejecting a second graft of the same or different tissue. These results were obtained when the second graft was from the same animal and when it was placed near the first. (French) M.A.Price

3697. A GERMPLASM-TRANSMITTED ALTERATION OF HISTOCOMPATIBILITY IN THE PROGENY OF HOMOGRAFT TOLERANT MICE. R.D.Guttmann and J.B.

Aust: *Nature*, Lond., 1963, 197, 1220-1221 (Dept. Suig., Univ. Minnesota Med. Sch., Minneapolis, Minn., U.S.A.) A *C3H* mouse, made immunol. tolerant to A strain by injn. of spleen cells within 24 hr. of birth, was crossed with (A x C3H)F₁ mice. The offspring showed an altered response to injn. with an A strain or hybrid spontaneous mammary adrenocarcinoma. G.M.Lewis

3698. PROLONGED SUPPRESSION BY X-RAY OF ADAPTATION FOR THE SECONDARY ANTIBODY RESPONSE. R.J.Porter: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111.

583-584 (Dept. Epidemiol., Univ. Michigan Sch. Publ. Hlth., Ann Arbor, Mich., U.S.A.) Rabbits previously sensitised to bovine Y" globulin lost this sensitisation after sublethal X-irradiation. Challenging with Ag 24 weeks after exposure gave only primary responses. M.M.Shapland

3699. ABILITY OF LARGE DOSES OF ANOL2 PLASMA PROTEIN TO INHIBIT ANTIBODY PRODUCTION.

J.F.Mowbray: *Immunology*, 1963, 6, 217-225 (Med. Unit, St. Mary's Hosp., London, England) An(X2~glycoprotein fraction separated from bovine serum inhib. Ab production to a no. of Ag in a high % of animals. It acted in the early stages of Ab production. It did not affect an established Ab level, and was ineffective if given after Ab production had been initiated. Other sources of the fraction, from other spp., were also effective.

IMMUNOCHEMISTRY

3700. ADJUVANT EFFECT OF DIFFUSION CHAMBERS ON SOLUBLE ANTIGENS. F.L.Adler and M.Fishman: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111, 691-695 (Pub. Hlth. Res. Inst., City of New York, N.Y., U.S.A.)

The presence of diffusion chambers had a marked adjuvant effect on the antigenicity of 2 sol. Ag (haemocyanin and ferritin) in rats and mice. This effect occurred not only when Ag were placed in the chamber but also after insertion of a saline-filled chamber followed by i.p. injn. of Ag. Chamber components were not responsible for the enhanced Ab production. M.M.Shapland

3701. ANTIGEN CONFORMATION DURING ANTIBODY PURIFICATION. J.C.Bennett and E.Haber: *J. biol. Chem.*, 1963, 238, 1362-1366 (Dept. Med., Harvard Med. Sch., Boston, Mass., U.S.A.)

Fluorescent labelling of Ag was used for determination of the degree of dissociation of RNA from its Ab as the helical structure was altered over a sp. temp. range. With full unfolding, complete separation of Ag from antibody was possible. Standard procedures, such as heat, M-acetic acid, 2°/o Na lauryl sulphate, or large excess of hapten, were insufficient to dissociate fluorescent lysozyme p-aminohippurate completely from anti-p-aminohippurate Ab. Dissociation of a fraction of Ab more tightly bound to Ag probably needs a conformational change in either the Ag or the Ab. J.N.Ashley

3702. ALUM-PRECIPITATED PROTEINS AFTER INTRAMUSCULAR INJECTION. J.D.Hawkins: *Immunology*, 1963, 6, 179-188 (Dept. Biochem., Med. Coll., St. Bartholomew's Hosp., London, England)

After i.m. injn. of alum-ppt. bovine serum albumin, trace-labelled with 131I into rabbits there was a single peak in the plasma-PBISli concn. 4-6 days later. There were 2 peaks in the plasma non-PB¹³¹I concn. and the urinary excretion of 131I, one coincident with the plasma P#L31I peak and the other a few days later when there was no PB¹³¹I* in the plasma. It is concluded that these 2 peaks were caused by non-immune phases of catabolism of the Ag. Alum-pptd., trace-labelled bovine serum albumin was also inj. into rabbits in the anamnestic state. *

3703. IMMUNOLOGICAL PROPERTIES OF ISONICOTYL PROTEINS. E.Neuzil and R.Camain-Giacibani: *C.R. Soc. Biol.*, Paris, 1962, 156, 1678-1681 (Lab. BiocWj' méd., Fac. Méd., Dakar-Fann, Senegal)

The action of INH on serum albumins produced isonicotylproteins which had a lower solubility and isoelectric point than the original proteins. Rabbit antisera to isonicotyl proteins did not ppt. the original proteins. The antigenic prop. of human serum isonicotylproteins were slight or absent. (French) M.A.Piice

3704. PYRIMIDINE-SPECIFIC ANTIBODIES WHICH REACT WITH DNA. S.W.Tananbaum and S.M.Beiser: *Proc. nat. Acad. Sci.*, Wash., 1963, 49, 662 (Dept. Microbiol., Columbia Univ., New York, N.Y., U.S.A.)

Synthesis of polyfunctional Ag containing uracil-1 (3)¹⁴-5-acetyluracil-1(3)-residues is described. The latter Ag was used to elicit sp. Ab in rabbits. Antisera thus obtained cross-reacted with thermally denatured DNA and to a considerably lesser extent with native DNA, as measured by CF reactions. Their reaction with DNA could also be demonstrated by PCA in the guinea-pig. Possible uses for these antisera in the investigation of the biol. functions of nucleic acids are discussed. J.R.Sargent

3705. IMMUNOLOGICAL REACTIONS OF SNAKE VENOM BY CROSSING PAPER ELECTROPHORESIS. S.Nakamura, A.Katsuno, S.Tbminaga and N.Yamamoto: Bull. Yamaguchi Med. Sch., 1962, 9, 45-53 (List. Med. Chem., Yamaguchi Med. Sch., Ube, Japan) The venom of Akistrodon halys (Pallas) contained 7 electro-Pnoretic fractions, and the purified antisera [3- and/or y Wobulins. Over 20 Ag were detected in the venom im-Jjunol., and the distribution of these Ag in the electro-PQoretic fractions was studied by the crossing paper electro-phoresis. K.Jones

3706. LOSS OF IMMUNOLOGICAL REACTIVITY OF AN O₂ GLOBULIN AFTER PROLONGED FREEZING OF SERUM. W.J.Fessel: Nature, Lond., 1963, 197, 1307 (Dept. Med., Univ. California Sch. Med., San Francisco, Calif., U.S.A.) Immunoelectrophoretic studies Jith rabbit antiserum to pooled human serum proteins showed that a-2 globulins lost their immunol. reactivity after prolonged storage in the deep freeze; one of the ^mponents was thought to be the Sf 0-400 lipoproteins. Mother was not identified. G.M.Lewis

3707. IMMUNE HAEMOLYSIS IN ALKALINE MEDIA. S.Ueno and Iishiyama: Z. Immun.-Forsch., 1962, 124, 447-463 (Dept. Legal Med., Univ., Tokyo, Japan) Sensitised sheep r.b.c. were not lysed by C if PH exceeded 9.3. The binding of C'1 was blocked at PH at 37°, but could occur at 0°. Reaction with C'4 C'2 was little affected by alkali, but C'3 binding was completely blocked at 37° and partly at C'. D.P.Winstanley

3708. EFFECT OF IONIC STRENGTH ON THE HAEMOLYTIC ACTIVITY OF COMPLEMENT. A.C.Wardlaw and H.G.Walker: Immunology, 1963, 6, 291-300 (Connaught Med. Res. Lab., Univ., Toronto, Ont., Canada) The haemolytic activity of guinea-pig C' was measured in isotonic soln. of various ionic strengths in the range 0.034 to 0.28 and was max. at an ionic strength of 0.08. Haemolytic activity was virtually abolished at ionic strength 0.034, whereas at 0.28, the C' titre ion. Only about 20% of the value found at the physiol. ionic strength 0.155. NaCl, KC1, LiBr and K₂SO₄ were used to provide ionic strength, and sucrose, mannitol and glucose to maintain isotonicity. Nine permutations of the 8 electrolytes with the 3 mm-electrolytes were tested and similar results. Human and rabbit C' also showed a haemolytic activity at ionic strength 0.08 to 0.10. D.P.Winstanley

3709. MECHANISM OF IMMUNE HAEMOLYSIS. I. RELATIONSHIP OF RATE OF DESTRUCTION OF RED CELLS TO THEIR AGE, FOLLOWING THE ADMINISTRATION TO RABBITS OF AN IMMUNE HAEMOLYSIN. F.B.Gower and W.M.Davidson: Brit. J. Haemat., 1963, 132-140 (Dept. Clin. Path., King's Coll. Hosp. Med. Sch., Denmark Hill, London, England) Conditions resembling those found in patients with acute haemolytic anaemia have been simulated in rabbits by injn. of goat anti-rabbit-cell immune sera. Subsequent labelling of rabbit r.b.c. of different ages with ¹⁴C, ⁵⁹Fe or ¹⁴C + ⁵⁹Fe in the same rabbit showed that the relative resistance to haemolysis is shown by young r.b.c. was a major factor in limiting haemolytic anaemia. L.Sneath

3710. SIMPLE METHOD OF OVERCOMING ANTI-COMPLEMENTARY ACTIVITY. R.Wigand: Z Immun.-Forsch., 1962, 124, 368-369 (Hyg. Inst., Univ. Saarland, Germany) Anticomplementary activity in serum

and cs.f. can be removed by 30 min. heating at 60° after the usual 30 min. inactivation at 56°

(German) D.P.Winstanley

3711. MICROMETHOD FOR COMPLEMENT ESTIMATION. E.J.Cuwert, K.Mai and T.Mesten: Z. Immun.-Forsch., 1962, 124, 428-446 (Stiftung Z.Erfoischungspinale Kinderlähmung, 2 Hamburg 20, Germany) A method for C estimation in 0.2 ml. of capillary blood is described. It gave results consistently about one-third lower than those obtained by a macromethod when tested on 78 healthy adults. (German) D.P.Winstanley

EXPERIMENTAL ONCOLOGY

3712. CARCINOGENESIS AND CANCER PREVENTION.

P.R.J.Burch: Nature, Lond., 1963, 197, 1145-1151 (M.R.C. Environmental Res. Unit, Dept. Med. Physics, Univ., Leeds, Yorks., England) The role of gene mutation, viruses, hormones and immune reactions in malignant transformations are discussed. The theoretical possibility of limiting the incidence of post-zygotic cancer is considered. J.R.Sargent

3713. SARCOMA INDUCED REMOTELY IN RATS FED 3-METHYLCHOLANTHRENE.

CHuggins and L.C.Grand: Cancer Res., 1963, 23, 477-480 (B. May Lab. Cancer Res., Univ. Chicago, Ill., U.S.A.) Repeated feeding of large but tolerable doses plus reiterated injn. in a given area of sesame oil or NaCl soln., with or without dissolved hormones, frequently evoked a fibrosarcoma at the injn. site but nowhere else in \$ albino rats. B.M.Stevens

3714. CARNOGENICITIES OF FLUORO DERIVATIVES OF 10-METHYL-1,2-BENZANTHRACENE.

H. SUBSTITUTION OF THE K REGION AND THE 3-, 6- AND 7-POSITIONS. J.A.MiUer and E.C.MiUer: Cancer Res., 1963, 23, 229-239 (McArdle Mem. Lab., Med. Sch., Univ. Wisconsin, Madison, Wis., U.S.A.) Substitution of F in the 4 position of the K region had little effect on carcinogenic activity towards mouse skin or mouse or rat s.c. tissue. The 3-, 6- and 7-fluoro deriv. had considerable carcinogenic activity in 2 or more of the 4 tests used. 1,2-Benzanthracene and its 3-fluoro deriv. showed little or no activity. 4'-Fluoro-1,2-benzanthracene showed considerable carcinogenic activity towards rat s.c. tissue. The role of the K region in carcinogenesis by poly cyclic aromatic hydrocarbons is reviewed. B.M.Stevens

3715. SARCOMA INDUCTION BY Fe-CARBOHYDRATE COMPLEXES.

J.Jielding: Brit. med. J., 1962, i, 1800-1803 (Paddington Gen. Hosp., London, England) Sarcoma was induced locally in mice by s.c. injn. of Fe-dextran and Fe-dextrin in doses smaller than previously described. Fe complexes were given in weekly doses of 1 mg. Tumours developed in 2 of 20 animals given 28 mg. Fe-dextran after a latent period of approx. 1 yr. Twenty animals were given Fe-dextrin: one of these developed a tumour after a latent period of 6 months, having received 28 mg. Fe, and 2 given 30 mg. Fe after 12 and 13 months. Forty mice were given 30 mg. Fe-sorbitol s.c.: 28 of these survived more than 12 months and none had developed tumours 17 months after the start of the expt. Sarcoma induction probably depended on the amount of Fe remaining at the injn. site. This was greater for compounds of higher mol. wt. which were mainly absorbed via the lymphatics. M.E.Nutt

IMMUNOLOGY AND EXPERIMENTAL PATHOLOGY^A

3716. ADRENAL IMBALANCE IN MOUSE SKIN CARCINOGENESIS. N.Trainin: *Cancer Res.*, 1963, 23, 415-419 (Dept. Expt. Biol., Weizmann Inst. Sci., Rehovoth, Israel)

All the SWR mice were fed 7,12-dimethylbenz(a)anthracene once and thereafter were painted twice weekly with 5% croton oil for 20 weeks. The initial tumour incidence was 77% in controls, 16% in hydrocortisone fed animals and 69% in adrenalectomised animals, the tumour yields/animal being 2.0 ± 0.2 , 1.3 ± 0.2 and 1.2 ± 0.3 respectively. In the promoting phase, however, hydrocortisone reduced the tumour incidence to 11% whereas adrenalectomy increased it to 100%.

B.M.Stevens

3717. ADULT LEUKAEMIAS AND DIAGNOSTIC X-RAYS.

A.Stewart, W. Penny backer and R.Barber: *Brit. med. J.*, 1962, ii, 882-890 (Dept. Social Med., Univ., Oxford, England) A survey was made of 963 cases of leukaemia (512 lymphatic and 511 others), 1011 cancers (60 lymphosarcomas, 951 others) and 974 control subjects in order to discover possible associations between diagnostic X-rays and adult leukaemias. It was modelled on a recent survey of childhood leukaemias. Findings are reported in detail. It was concluded that 8% of leukaemias, other than lymphatic leukaemias, were caused by diagnostic X-rays and a further 3.6% by therapeutic X-rays.

M.E.Nutt

3718. INFLUENCE OF FOSTER-NURSING ON VIRUS-

INDUCED AND SPONTANEOUS LEUKAEMIA IN [C3H] MICE. L.W.Law: *Proc. Soc. exp. Biol., N.Y.*, 1962, 111, 615-623 (Nat. Cancer Inst., Bethesda, Md., U.S.A.) Reciprocal foster-nursing expt. revealed

that transmission of the leukaemogenic virus, MLV, could occur from mother to offspring during the prenatal period. Low freq. and later age at death from the disease were observed in litters born to 'infected' ♀ but foster-nursed upon normal mothers of the C3H strain. Foster-nursing upon low leukaemic (C3Hf/LW) mothers combined with thymectomy through successive generations of high-leukaemic (C3Hf/Fg) strain mice did not influence the freq. or mean age at death from the disease.

M.M.Shapland

3719. VIRAL STUDIES ON GENERALISED FRIEND DISEASE AND A TUMOUR VARIANT IN BALB/c AND RELATED HYBRID MICE. A.J.Fieldsteel, P.J.Dawson and W.L.Bostick: *Cancer Res.*, 1963, 23, 355-362 (Dept. Pathol., Univ. California Sch. Med., San Francisco, Calif., U.S.A.) Viruses passed in BALB/c and

Swiss mice were antigenically identical. Virus titres were equiv. after 25 passages in BALB/c. BALB/c mice were more uniformly susceptible when inoc. with more than the median infective dose, but more Swiss mice were susceptible with lower doses. Strain A and (BALB/c x A) first generation [F¹] hybrids were resistant to virus passed in Swiss mice but they and other BALB/c and A back-crosses and second generation mice were susceptible to virus passed in BALB/c mice. C57BL mice were immune to virus passed in BALB/c or Swiss mice but (BALB/c x C57BL)F₁ hybrids were susceptible. The virus in induced transplantable tumours and spleens of tumour bearing BALB/c or (BALB/c x A)F₁ mice was equiv. to that in spleens of mice inoc. with virus.

B.M.Stevens

3720. PATHOLOGIC STUDIES OF FRIEND VIRUS LEUKAEMIA AND THE DEVELOPMENT OF A TRANSPLANTABLE TUMOUR IN BALB/c MICE. P.J.Dawson, A.H.

Fieldsteel and W.L.Bostick: *Cancer Res.*, 1963, 23, 349-354 (Dept. Pathol., Univ. California Sch. Med., San Francisco, Calif., U.S.A.) The pathol. was

similar to that in other highly susceptible strains. 328 mice received grafts of liver or spleen from other mice inoc. with virus 43-124 days previously. Two tumour lines, established from the liver and spleen, respectively, of 1 mouse, grew rapidly and were readily transplantable. The incubation period fell from 46 to 7 days. Virtually all mice developing a tumour showed signs of generalised Friend disease. Microscopically the 2 lines were identical reticulum-cell sarcomas. Spleens and livers of tumour-bearing animals contained nodules of reticulum cells. Cells from the spleen nodules produced tumours histol. and genetically indistinguishable from the original. Tumours were produced only by injn. of living cells. Virus was consistently associated with tumour. B.M.Stevens

3721. BRONCHIOLAR PROLIFERATION AND METAPLASIA ASSOCIATED WITH THROMBO-EMBOLISM. S.W.Berk' heisen: *Cancer, Philad.*, 1963, 16, No.2, 205-211 (Lab. Dept., Harrisburg Polyclin. Hsp., Pa., U.S.A.)

The incidence and type of bronchiolar proliferation in human cases of thrombo-embolism without infarcts and that observed in expt. produced lesions of rabbits were similar. The single common factor responsible appeared to be localised anoxia. It is suggested that the occurrence of multifocal proliferations of this variety may be an important aetiological factor in the genesis of lung cancer particularly that of peripheral origin. D.I.Connell

3722. BIOCHEMICAL STUDIES OF RESISTANCE TO 6-THIOGUANINE [TG]. D.B.Ellis and G.A.LePage:

Cancer Res., 1963, 23, 436-443 (Life Sci. Res., Stanford Res. Inst., Menlo Park, Calif., U.S.A.) Several TG-resistant mouse ascites tumours were developed. Susceptible cells incorporated significant amounts of TG int° nucleic acids, whereas resistant sublines incorporated only minor amounts. An in vitro assay for synthesis of thioguanine acid by the nucleotide pyrophosphorylase TO' action in sol. enzyme prep, is described. Two resistant Ehrlich sublines were developed, 1 retaining its capacity for thioguanine acid synthesis whereas the other had a greatly decreased capacity. The former responded to combined therapy with azaserine and TG. Azaserine treatment greatly increased the amounts of thioguanine acid formed and the amounts of TG in nucleic acid. The second subline did not respond to azaserine in this way*

3725. VINBLASTINE IN NEOPLASTIC DISEASE. Midwest Cooperative Chemotherapy Group: Cancer Res., 1963, 23, 169-179. Of 265 patients treated the best and frequent responses were obtained in those with Hodges disease, often after they were refractory to other drugs of therapy. Patients with other types of neoplastic disease obtained worthwhile objective responses infrequently. It is suggested that which produces leukopenia without severely depressing the bone marrow. Recovery from leukopenia was usually prompt.

B.M.Stevens

3726. CYTOTOXIC EFFECTS OF MALEURIC ACID [(N-CARBAMYLMALEAMIC ACID)] AND THE STRUCTURALLY RELATED COMPOUNDS ON EHRLICH ASCITES TUMOUR CELLS. T.A.Okada and E.Roberts: Cancer Jfs, 1963, 23, 217-222 (Dept. Biochem., City Hope Center, Duarte, Calif. U.S.A.) The most active compounds were ethylenebis(maleurate) and the allyl hydroxyethyl, allyl, 2-chloroethyl, isopropyl esters of maleuric acid. All produced pykninatin masses, severe cytoplasmic Mebbing and normalities at all stages. Effective esters disrupted spindle fibres and prevented spindle entering mitosis. Glutathione given counteracted the cytotoxic effects.

B.M. Stevens

3727. EFFECTS OF HEAT AND RADIATION ON CANCERS PLANTED ON THE FEET OF MICE. G.Crile, jun.: Heart Clin. Fdn., Cleveland, Ohio, U.S.A.) 1963, 23, 372-380 (Dept. Gen. Surg., Cleveland Clin. Fdn., Cleveland, Ohio, U.S.A.) Styrene S⁹¹ melanoma in DBA/1 mice or Sarcoma-180 in ion of 86 to 100 for 30-40 min* destroyed a high proportion of mice without damaging the feet. Heat and X-irradiation Siven within a few hr. of each other showed moderate effects regardless of which was given first. Small doses thus cured some radio-resistant tumours, and large ones were more radiosensitive than large ones. Ones ^{the} tumour K were more heat-sensitive than small *W^P tumours and normal tissues became heat-resistant to 33% of the lethal heat dose. Tumour was transplantable immediately after otherwise lethal heat treatments * in. of 5HT into-tumours greatly increased heat sensitivity. Repeated 5HT injn. alone inhib. the S⁹¹ melanoma growth rate.

B.M.Stevens

3728. EFFECT OF YEAST POLYSACCHARIDES ON MOUSE TUMOURS. I.C.Diller, Z.T.Mankowski and M.E.Fisher: Cancer Res., 1963, 23, 201-208 (Inst. Cancer Res., Philadelphia, Pa. U.S.A.) I.v. injn. of hydroglucan induce^a regression of 90-95% of weU established Sarcoma 180 and 83% of Krebs-2 carcinoma with no Letia Uty[#] ^J of same amount i.P. i.m.* or ynik^c ^aer regression % Neither hydroglucan nor ynik^c ai*ected the ascites* forms of the tumours nor

Carcinoma 755, Rhabdomyosarcoma MC-1a, spontaneous mammary tumours in C3H mice or a transplantable tumour derived therefrom. Tumour resorption and necrosis occurred without haemorrhage. Phagocytic elements of liver and spleen were stimulated.

B.M.Stevens

3729. TUMOUR NEUTRALISATION BY ANTI-EHRLICH TUMOUR AND ANTE-MOUSE TISSUE SERA. D.W.Garrison and W.J.Nungester: Proc. Soc. exp. Kol., N.Y., 1962, 111, 743-745 (Dept. Bact., Univ. Michigan Med. Sch., Ann Arbor, Mich., U.S.A.)

Sera from rabbits inj. with Ehrlich ascites cells had 3-4 times the tumour neutralising power of sera from animals inj. with normal mouse tissues. The peak of neutralising titres was reached after 3 injn. of Ag and dropped significantly following injn. Dutch Pee Wee rabbits produced higher Ab titres than did either New Zealand or Ginger Giant rabbits.

M.M.Shapland

3730. EFFECT OF BCG INFECTION ON LEUKAEMIA AND POLYOMA IN MICE AND HAMSTERS. P.Lemonde and M.Clode: Proc. Soc. exp. HLoL, N.Y., 1962, 111, 739-742 (Inst. Microbiol., Univ. Montreal, Que., Canada)

In AK mice inj. with live BCG and submitted to isologous transplantation of leukaemic tissue, body wt. was maintained longer, partial regression of local implanted tumours was observed, development of leukaemia was delayed and survival prolonged, as compared with controls without BCG infection. In hamsters inj. with live BCG and later with polyoma virus, development of polyoma was delayed and survival prolonged.

M.M.Shapland

3731. INTERACTION OF VACCINIA VIRUS WITH ADENOCARCINOMA 755. F.E.Durr and B.A.Briody: Cancer Res., 1963, 23, 410-414 (Dept. Microbiol., Seton Hall Cool. Med. and Dent., Jersey City, NJ., U.S.A.)

The most significant degree of oncolysis was produced with virus strains IHD-T and IHD-E. 107 pock-forming units of virus incubated with tumour fragments produced almost complete suppression of tumour growth. Diln. of virus decreased tumour inhibn. Extensive virus multiplication accompanied tumour inhibn. but virus multiplication did not ensure oncolysis. Haemagglutinin inhibiting Ab to virus were not found in sera of tumour bearing mice. Virus, shown to persist in tumour for up to 1 month, was successfully transferred with tumour tissue through 11 transplants with min. effect on tumour growth. Virus multiplication and oncolysis were abolished when virus-treated tumours were implanted into vaccinia-immunised mice.

3732. IMMUNOLOGICAL TOLERANCE, INFECTIVE TOLERANCE AND VIRUS-INDUCED NEOPLASTIC TRANSFORMATION. P.G.Stansly: Nature, Lond., 1963, 198, 110-111 (Detroit Inst. Cancer Res., Wayne State Univ., Detroit, Mich., U.S.A.) The phenomena of immunol. and infective tolerance and virus-induced neoplasia are discussed in relation to data on lymphocytic choriomeningitis in mice and lymphomatosis in chickens.

G.M.Lewis

3733. IMMUNOLOGICAL PROPERTIES OF TUMOURS. N.Molomut, L.Gross and M.Padnos: Nature, Lond., 1963, 198, 38-39 (Waldemar Med. Res. Fdn., Inc., Port Washington, N.Y., U.S.A.)

The immunisation of mice against homologous and isologous tumours was effected best by X-irradiated tumour cells, followed by a live challenge, next by X-irradiated cells, then dead cells, then lyophilised material, and lastly by passive immunisation. The level of induced protection was affected by the site of injn. and challenge. X-irradiation did not alter the antigenic prop. of lyophilised tumour, presumably causing only attenuation of the cells.

G.M.Lewis

3734. MOUSE FIBROSARCOMA FRACTIONS AS ANTIGENS BY LATEX AGGLUTINATION REACTIONS. J.M. Cruse, W.W.Germany and A.D.Dulaney: *Z. Immun.-Forech.*, 1962, 124, 419-427 (Div. Path., Univ.

Tennessee, Tenn., U.S.A.) Ab were prep, in rabbits against various fractions extracted from a transmissible fibrosarcoma of mice. The fractions included DNA, nucleoprotein, acid-stable and heat-stable components. The antisera were tested against their respective Ag adsorbed on latex particles and a variety of results are recorded.

D.P.Winstanley

3735. TUMOUR-SPECIFIC ANTIGENS AND THE HOMOGRAFT REACTION. R.T.Prehn: *Amer. J. Surg.*, 1963, 105, 184-191 (Dept. Path., Univ. Washington, Seattle, Wash., U.S.A.) Review. 28 ref. B.Cruickshank

3736. LOSS OF GASTROINTESTINAL-SPECIFIC ANTIGEN IN NEOPLASIA. R.C.Nairn, J.E.Fothergill, M.G.McEntegart and H.G.Richmond: *Brit. med. J.*, 1962, i, 1791-1793 (Dept. Pathol., Univ., Aberdeen, Scotland)

A mucopolysaccharide gastrointestinal-sp. Ag was absent from 45 of 54 gastrointestinal carcinomas. In the remaining 9, 5 before mucoid, immunofluorescent staining occurred in a small no. of cells scattered amongst unstained acini. Four pre-malignant polyps stained similarly, but the scattered fluorescent cells were more numerous. In 8 benign polyps staining was dimmer than in normal mucosa, but similar in distribution. Lymph node metastases from 10 cases did not stain. Staining may indicate intrinsic differences between benign and malignant states and thus aid diagnosis.

M.E.Nutt

3737. OPSONKATION OF CELLS BY ISOANTBODY IN VITRO. B.Bennett, L.J.Old and E.A.Boyse: *Nature*, Lond., 1963, 198, 10-12 (Div. Expt. Chemother., Sloan-Kettering Inst., New York, N.Y., U.S.A.)

Peritoneal macrophages from non-immunised mice were highly phagocytic for a wide range of types of mouse tumour cells in the presence of sp. isoimmune serum; no significant phagocytosis occurred in the absence of antiserum. Phagocytosed tumour cells were entirely surrounded by a rim of macrophage cytoplasm and were viable at the time of ingestion as determined by their stainability with Trypan Blue. The phagocytic capacity of macrophages from immunised animals was abolished by washing the cells; the activity could be restored by cell-free peritoneal washings from immunised animals.

G.M.Lewis

3738. ACTION OF γ GLOBULIN ANTIBODIES ON THE INCORPORATION OF [14c]GLYCINE BY CELLS OF WALKER AND YOSHIDA TUMOURS. P. De Gregorio: *C.R. Soc. Biol.*, Paris, 1962, 156, 1569-1573 (Inst. Gen. Path., Univ. Turin, Italy)

Anti-Walker γ -globulins inhib. by 44% the incorporation of glycine to Walker tumour cells in suspension. Anti-Walker γ -globulin adsorbed on tumour cells did not modify glycine incorporation but when adsorbed on r.b.c., incorporation was inhib. by 24%. Anti-Walker γ -globulins inhib. by 23% the incorporation of glycine in Yoshida tumour cells and by 22% when adsorbed on r.b.c. Anti-Yoshida γ -globulins inhib. by 28% glycine incorporation into Walker cells and by 35% in Yoshida cells. These γ -globulins adsorbed on to Yoshida cells did not modify glycine incorporation in either group. (French) M.A.Price

3739. NEUTRALISATION OF THE MOUSE MAMMARY TUMOUR VIRUS BY RABBIT ANTISERA AGAINST C3Hf TISSUE. P.B.Blair: *Cancer Res.*, 1963, 23, 381-384 (Dept. Zool., Univ. California, Berkeley, Calif.,

U.S.A.) An antigenic similarity was found between C3H mammary tissue extracts containing mammary tumour virus and an extract of genetically similar tissues containing abundant virus-like particles but no biol. active mammary tumour virus. B.M.Stevens

3740. ENZYMIC DEDIFFERENTIATION OF NEOPLASTIC CELLS. M.Thiery and R.G.J.Willighagen: *Nature*, Lond., 1963, 197, 1312-1313 (Dept. Gynaecol., State Univ., Ghent, Belgium) An invasive squamous cell carcinoma induced by painting the mouse cervix with 3⁴ benzpyrene showed a high 5-nucleotidase activity which was maintained during prolonged transfer and contrasted with the low 5-nucleotidase activity of the normal cervico-vaginal epithelium. In the ascites line of this tumour, the enzyme was absent and did not reappear when die cells were grown as solid s.c. nodules.

CM.Lewis

3741. GUANASE ACTIVITY IN NORMAL AND NEOPLASTIC HUMAN TISSUE. R.Levine, T.C.Hall and C.A.Harris: *Cancer*, Philad., 1963, 16, No.2, 269-272 (Publ. Hlth. Dept., Pondville Hosp., P.O.Box H[Walpole, Mass., U.S.A.) An adaptation of the R³² Norris spectrophotometer method for the determination of guanase is described. The deletion hypothesis received no support from the examination of tumours, except in case of brain tumours, although few tumour tissues have been obtained from tissues normally high in guanase. Determination of guanase activity in heart muscle and r.b.c. of human, dog, rabbit, rat, mouse and hamster showed marked spp. difference.

D.I.Conne

3742. COMPARATIVE ENZYMOLOGY AND CELL ORIGIN OF RAT HEPATOMAS. IV. PYRIMIDINE METABOLISM IN MINIMAL-DEVIATION TUMOURS. T.Ono, D.G. Blair, V-R.Potter and H.P.Morris: *Cancer Res.*, 1963, 23, 240-249 (McArdle Mem. Lab., Med. Sch., I¹ Wisconsin, Madison, Wis., U.S.A.) Morris 7316, Morris 7800, Reuber H-35 and Morris 5123 were classified as "minimal-deviation" hepatomas since they all possessed significant though reduced levels of liver 'marker' enzymes, such as carbamyl phosphate synthetase, ornithine transcarbamylase, uracil reductase and thymine reductase, in contrast to Novikoff hepatoma which possessed little or none of the 'marker' enzymes. Other pyrimidine enzymes studied included aspartic transcarbamylase, orotic decarboxylase and enzymes converting orotic acid via orotidylic acid to the uridine nucleotides. These enzymes were found in almost normal amounts in the hepatomas.

B.M.Steven

3743. PLASMA LACTIC DEHYDROGENASE [LDH] IN MICE WITH MYELOID LEUKAEMIA. I. RELATION OF ENZYME LEVEL TO COURSE OF DISEASE. K.Nishimura, K.B.Jacobson, V.K.Jenkins and A.C.Upton. II. ³²P³²f³²C³² PRODUCTION OF THE ENZYME.

K.B.Jacobson and K.Nishio: *Cancer Res.*, 1963, 23, 340-343, 344-345 (Biol. Div., Oak Ridge Nat. Lab., Oak Ridge, Tenn., U.S.A.) I. LDH activity was increased in R.F. mice with primary or transplanted X-irradiation induced leukaemia. The increase in mice with transplanted ³²P³²f³²C³² varied irregularly with time after transplantation and the transplant generation, the mean of all values being approx. 14 times normal. The extent of increase in transplant generation was correlated with the severity of leukaemic infiltration of liver and other organs.

Whole-body X-irradiation in normal mice also produced transition increase in LDH activity. II. The LDH of normal organs was characterised using

IMMUNOLOGY AND EXPERIMENTAL PATHOLOGY

359

analyses of NAD and differed from the LDH of leukaemic Plasma. The most likely source of the leukaemic plasma enzyme appeared to be the tumour cell. B.M. Stevens

3744. METABOLIC ADAPTATIONS IN RAT HEPATOMAS. m. GLUCOSE 6-PHOSPHATE DEHYDROGENASE AND PYRIMIDINE REDUCTASES. T.Ono, V.R.Potter, H.C. Pitot and H.P.Morris. IV. REGULATION OF THREONINE AND SERINE DEHYDRASE. R.H.Bottomley, H.C. Pitot and H.P.Morris. V. RECIPROCAL RELATIONSHIP BETWEEN THREONINE DEHYDRASE AND GLUCOSE 6-PHOSPHATE DEHYDROGENASE. R.H.Bottomley, H.C. Pitot, V.R.Potter and H.P.Morris: Cancer Res., 1963, 23, 385-391, 392-399, 400-409 (McArdle Mem. Lab., Med. Sch., Univ. Wisconsin, Madison, Wis., U.S.A.)

All 3 enzymes increased on a high protein diet and decreased on a low protein diet in normal livers from Buffalo or Holtzman rats. These changes were remarkably suppressed in livers of Buffalo rats bearing Morris Hepatoma 5123. In the hepatoma the pyrimidine reductase did not change at all. Distinct sex differences were shown in hepatoma enzyme levels, the differences being opposite to those found in control and host livers. The differences were not reversed by feminisation of hosts.

IV. The capacities of several hepatomas to respond to a high protein diet with increased dehydrase activities varied. The response in one tumour depended on the presence of the adrenals. The effect of portal vein ligation on the capacity of hepatic tissue to respond to a high protein diet with increased dehydrase levels was also studied.

In normal liver under various dietary and hormonal conditions both enzymes could not be induced to high levels at the same time. In a series of "minimal deviation" hepatomas a wide range of values of both enzymes was found. One tumour had fairly high levels of both enzymes after high protein feeding. B.M.Stevens

3745. METABOLISM OF ETHIDIUM BROMIDE [(3, 8-DIAMINO-5-ETHYL-6-PHENYL-PHENANTHRIDIUM BROMIDE)] IN NORMAL AND NEOPLASTIC TISSUES. T.S.Kandaswamy and J.F.Henderson: Cancer Res., 1963, 23, 250-253 (Dept. Pharmacol., G.Washington Univ. Sch. Med., Washington, D.C., U.S.A.)

Ethidium bromide was rapidly cleared from the blood after i.p. in mice. 50% of the dose was excreted in 24 hr. by normal mice and 24% by mice bearing Ehrlich ascites carcinomas. After an initial period of high concn. the drug gradually left most tissues, but appeared to be accumulated in muscle. High levels were found in ascites fluid soon after injection, but the drug disappeared rapidly in time. All the drug could be accounted for unaltered. B.M.Stevens

3746. DEAMINATION OF DEOXYNUCLEOTIDES AND DEOXYNUCLEOSIDES BY NORMAL RAT LIVER HEPATOMAS. J.S.Roth, B.Sheid and H.P.Morris: Cancer Res., 1963,

454-461 (Inst. Cell. Biol., Univ. Connecticut, Storrs, Conn., U.S.A.) Normal liver was shown, by a PMR assay diffusion technique of NH₃ determination, to have even tissues with low deaminase activity, to about 46 Mmoles of deoxycytidylate/g. protein/hr. in the Patoma and a no. of Morris 5123 sublines showed V high activity; Dunning hepatoma had 50% of this activity. MDAB and Novikoff hepatomas had extremely high activities. Deoxyadenylate and deoxyguanylate deaminase, by the liver and the hepatoma but up to 0.3% may have been involved. Deamination of deoxyuridine and deoxyguanosine varied greatly in different Patomas. B.M.Stevens

3747. IN VITRO SYNTHESIS OF ACID-SOLUBLE THYMINE COMPOUNDS BY HUMAN NEOPLASTIC TISSUES. G.D.Bimie and C.Heidelberger: Cancer Res., 1963, 23, 420-430 (McArdle Mem. Lab., Med. Sch., Univ. Wisconsin, Madison, Wis., U.S.A.) [14c]Formate

was the most effective precursor when tumour minces were incubated in Eagle's medium with ATP, phosphoglycerate, glucose, deoxyuridine and pH 7.0 phosphate buffer. [14c]Formaldehyde or, to a lesser extent, [2-14c]uracil were also incorporated but not L-[3-14c]serine, [6-14c]orotic acid, [2-14c]deoxyuridine, [3H]deoxyuridine or L³H]deoxyuridylic acid. The synthesis was inhibited by 5-fluorouracil, 5-fluoro-2'-deoxyuridine or 3', 5'-diacetyl-5-fluoro-2'-deoxyuridine, considerable variations in responses by the various tumours being observed.

B.M.Stevens

3748. SIALIC ACID CONTENT OF THE R.B.C. AND OF AN ASCITES TUMOUR CELL OF THE MOUSE. A.Miller, J.F.Sullivan and J.H.Katz: Cancer Res., 1963, 23, 485-490 (Radioisotope Serv., V.A.Hosp., Boston, Mass., U.S.A.) Neuraminidase released 36 times more sialic acid/cell from Ehrlich cells than from r.b.c. If all located on the surface the sialic acid density on Ehrlich cells was calc. to be approx. 4 times greater than that on r.b.c. Trypsin released a fragment containing bound * sialic acid from both. The sialic acid thus released from Ehrlich cells was only approx. 15% of that released by neuraminidase, although the 2 enzymes released approx. equal amounts from r.b.c. The r.b.c. sialic acid-containing compound was nondialysable and not pptd. by TCA. Paper chromatography showed that 30% of the tumour cell sialic acid was in N-glycolneuraminic acid whereas the other 70% and virtually all the r.b.c. sialic acid was in N-acetylneuraminic acid.

B.M.Stevens

3749. DISTRIBUTION OF TRITIUM LABELLED 0-3-THIENYL-Irr ALANINE IN TISSUES OF ADULT MALE RATS BEARING MURPHY-STURM LYMPHOSARCOMA. A.B.A. Samal, L.E.Frazier, G.Monto, A.Slesers, Z.Hruban and R.W. Wissler: Proc. Soc. exp. Biol., N.Y., 1963, 112, 442-445 (Dept. Pathol., Univ. Chicago, IL, U.S.A.)

Holtzman c² rats bearing Murphy-Sturm lymphosarcomata were for. ft ft H ft A. Aaw iit Vi Q-o-^---t-T -- -

L-aiaiunc. 1 ney were Killed 5, 29 or 53 hr. later. The greatest concn. were present in the kidney and liver at any of die times studied. High concn. occurred in the jejunal mucosa and the pancreas after 29 hr. There was little concn. in the tumour. D. N. Wheatley

3750. METABOLISM OF [36c]DICHLOROMETHOTREXATE [DCM] BY TRANSPLANTABLE LIVER TUMOURS. R.H.

Adamson, T.L.Loo and H.P.Morris: Proc. Soc. exp. Biol., N.Y., 1962, 111, 566-568 (Nat. Cancer Inst., N.I.H., Bethesda, Md., U.S.A.) In vitro metabolism of [36ci]-DCM in liver neoplasms, 5123, 7800, 5123TC and Reuber hepatoma occurred at a rate similar to that of normal liver. The Novikoff tumour had no activity whereas tumour 3683 had only slight activity.

M.M.Shapland

3751. ELECTROPHORETIC MOBILITY OF HUMAN TUMOUR CELLS. P.S.Vassar: Nature, Lond., 1963, 197, 1215-1216 (Dept. Pathol., Univ. British Columbia, Vancouver, B.C., Canada)

Fine cell suspensions were made from tumour tissues freshly excised from human patients and their electrophoretic mobility measured. Epithelial malignant cells tended to have a rather low electrophoretic mobility, whereas that of connective tissue tumour cells was fairly high.

G.M.Lewis

IMMUNOLOGY AND EXPERIMENTAL PATHOLOGY

1963, 44, 410-418 (Dept. Path., Med. Coll., Albany, N.Y., U.S.A.) The most significant features found on E.M. of 4 tumours were the irregular nature of the basement membranes and the sparsity and irregularity of microvilli on tumour cells which bordered the lumen of the colon.

D.N.Wheatley

3753. FACTOR FROM HeLa CELLS PROMOTING COLONIAL GROWTH OF HUMAN FIBROBLAST LIKE CELLS IN CULTURE. J.F.Foley, BJ.Kennedy and J.D.Ross: Cancer Res., 1963, 23, 368-371 (Dept. Med., Univ. Minnesota, Minneapolis, Minn., U.S.A.) Irradiated

HeLa cells, lysed HeLa cells and medium from irradiated HeLa cultures all contained a substance stimulating colonial growth of cells derived from human amnion cultures. The substance appeared to be non-dialysable, inactivated by acid or alk. hydrolysis, resistant to boiling, DNase or RNase but susceptible to trypic digestion.

B.M.Stevens

3754. A NEW CELL CONCENTRATION METHOD FOR CANCER CYTOLOGY OF SPUTUM. M.Takahashi and M.Urabe: Cancer, Philad., 1963, 16, No.2, 199-204 (Path. Dept., Central Hosp. Japanese Nat. Railways, Tokyo, Japan) A marked improvement in diagnostic accuracy was reported using the new method of concentrating cellular elements in sputum by liquefaction and centrifugation. The stock soln. used preserved the cells without autolysis.

D.I.Connell

3755. IMMEDIATE DESTINATION OF CANCER CELLS INJECTED INTRAVENOUSLY TO NORMAL ANIMALS.

I. MICROSCOPIC AND RADIOACTIVE STUDY OF THE EPITHELIOMA OF GUERIN FROM WHITE MICE.

L.Driessens, G.Giaux, L.Adenis and P.Quandalle: OR. Soc. Biol., Paris, 1962, 156, 1653-1656 (Inst. Rech. sur le Cancer, Lille, France) 1-30 min. after injn. of tumour cells into rats, few cancer cells were found in the circulating blood. There was a lower level of tumour cells in muscle, brain and genital organs. Uptake of cells by the spleen continued at a const. rate for 30 min. Fixation by the adrenal and bone was marked during the first few min. The liver and lung showed the greatest accumulation of tumour cells.

(French) M.A.Price

3756. RECENT ADVANCES IN THE KNOWLEDGE CONCERNING CHEMOECTOMAS. I.Costera Lab. Invest., 1963, 12, 270-284 (Nat. Inst. Cardiol., Mexico City, Mexico) Silver impregnation histol. studies and assure culture of a carotid body tumour are described in detail. The main tumour components were pyriform chief cel¹ with single long processes ending round blood vessels; nerve fibres and synaptic complexes; and argentaffin cells.

A.M.Mackay

3757. USE OF SERUM GLYCOPROTCIN LEVELS IN SELECTION OF PATIENTS WITH ADVANCED BREAST CANCER FOR ENDOCRINE SURGERY. W.Burnett, R.A.McAllister and R.Shields: Scot. Med. J., 1963, 8, 197-203 (Univ. Dept. Surg., Western Infirmary, Glasgow, Scotland)

Serum glycoproteins were estimated in 41 women with advanced breast cancer before and after endocrine ablation (ovaries, adrenals or pituitary). A high level was present initially which fell with remission. Very high levels had a poor prognosis and on this basis only 23 of the patients would have had endocrine ablation. The remission rate would then have been 70%. Seromucoid-bound carbohydrate was the most useful index.

A.M.Mackay

3758. SUPRARENAL FUNCTION IN MICE INJECTED WITH HOMOGENATES OF SARCOMA 180. E.Mascitelli-

Corfandoli and F, Di Re: Atti Acad.. med., Lombarda, 1962, 17, 89-93 (1st. di Anat. e Istologia Patologica, Univ. Pavia, Italy) Mice were inj. i.p. with 0.5 ml. of a homogenate of Sarcoma 180 and killed after various time intervals. Compared with a control group which were inj. with a homogenate of normal tissue (liver, kidney, heart, etc.) the wt. of the thymus gland in the expt. animals decreased constantly with time, and the adrenal and plasma CoA and corticosterone levels decreas^{ed} to about 50% normal within 2 weeks. A 'toxohomone' present in the neoplastic tissue was implicated as the causative agent. (Italian) G.N.Godson

3759. VARIATIONS OF THE CONTENT OF LYSOZYME IN NORMAL RATS AND IN RATS BEARING JENSEN SARCOMA FOLLOWING SURGERY. G.C.Peni, J.G.Cappuccino, M.Faulk, J.Mellors and C.C.Stock: Cancer Res., 1963, 23, 431-435 (Div. Expt. Chemother., Sloan-Kettering Inst., New York, N.Y., U.S.A.) Lysozyme activity increased in sarcoma-bearing rats, especially in the kidney. Levels in lung and intestine were little affected. Surgical removal of the tumour restored renal lysozyme to normal rapidly. A decrease also occurred if the tumour regressed spontaneously. Splenectomy reduced renal lysozyme activity in normal rats and, to a lesser extent, in tumour-bearing rats.

B.M.Stevens

3760. PITUITARY ROLE IN THE OESTROGEN DEPENDENCY OF EXPERIMENTAL MAMMARY CANCER.

A^terental, J.M.Dominguez, C.Weissman and O.H. Pearson: Cancer Res., 1963, 23, 481-484 (Dept. PathoL, Western Res. Univ. Sch.Med., Cleveland, Ohio, U.S.A.) Mammary tumours were induced in 50 day old albino Sprague-Dawley rats by feeding 20 mg² of 7,12-dimethylbenz(a)anthracene. Adrenalectomy and ovariectomy or hypophysectomy within 10-20 days of tumour appearance produced regression in all cases. Oestrogen reactivated tumour growth after adrenalectomy and ovariectomy but not after hypophysectomy, even when thyroid and cortisone replacement therapy was employed.

B.M.Stevens

3761. TREATMENT OF ANAEMIA IN THE TUMOUR BEARING HAMSTER WITH CORTISONE AND SODIUM SALICYLATE. J.D.Sherman and G.H.Friedell: Cancer Res., 1963, 23, 180-183 (Dept. Pathol., Massachusetts Mem. Hosp., Boston, Mass., U.S.A.) Both cortisone acetate and Na salicylate given from the time of, or 1 week after, fibrosarcoma transplantation inhib. tumour growth and prevented the concomitant anaemia and splenomegaly. In anaemic hamsters bearing large ad^{vanced} fibrosarcomas cortisone prevented profound spleen changes and restored the Hb to normal. Tumour necrosis was increased somewhat, but abnormal splenic haemolysis was inhib. Na salicylate gave transient benefit in¹ correcting the haemolytic anaemia and the spleen mot^{ility} was less abnormal than in untreated tumour bearing animals.

B.M.Stevens

3762. EFFECT OF PROGRESSIVE SARCOMA 180 GROWth UPON THE UTEROTROPHIC RESPONSE TO OESTROGEN IN MICE. R.Hill, L.J.Lemer, E.Lang and A.Bor man: Cancer Res., 1963, 23, 304-309 (Squibb Ins^{titute} Med. Res., New Brunswick, N.J., U.S.A.)

response to various doses of oestradiol benzoate, oestriol or oestriol in ovariectomised mice decreased as tumour growth progressed. Tumour-free ovariectomised mice showed an unaltered uterine response to oestradiol when food intake was restricted, but pair-fed tumour-bearing ovariectomised mice showed a reduced uterine growth response.

B.M.Stevens

- 3763. OUTLINE OF A GENERAL PATHOLOGY OF HUMAN TUMOURS.** R.De Riuyck: C.R. Acad. ScL, Paris, 1962, 255, 426-428. When the log of human body wt. was plotted against the log of age from conception in menstrual cycles a 3-part curve was obtained covering infancy to 18 months, pituitary controlled growth ³²P to 19 yr. and maturity and senescence. If the rate of Occurrence of tumours was plotted on a similar graph ³²P showed inhibn. between 11 and 19 yr., but in every case all tumours of the same organ gave the same curve. The origin of all cancer in a virus infection in embryo is Postulated. (French) S.A.Thistlewood

EXPERIMENTAL PATHOLOGY

3766. LOCAL RELEASE OF ADRENALINE-LIKE SUBSTANCE DURING INFLAMMATION. D.A.Willoughby and W.G.Spector: Int. J. Neuropharmac., 1962, 1, 217-220 (Dept. Morbid Anat., University Coll. Hosp., London, England) MAO inhibitors suppressed certain ~~and~~ ^{and} responses in the rat. This effect may be like $\times T^{10}$ Presivation of locally released adrenaline-distance in the injured area. G.J.F.Blane

- ⁶⁷, HTO TAMINE AND 5HT AND THE INFLAMMATORY
PROCESSSES. K.G.S.Bhatt and R.K.Sanyal: J. Pharm.
Lond., 1965, 15, 78-79 (MaulanaAzad. Med. Coll.,
New Delhi, India). A letter. J.M.Whitmarsh

3768. SERUM HAPTOGLOBIN IN RABBITS AFTER SUB-
OR V^{IT} INJECTION OF FREUND'S ADJUVANT
ex^sPENTINE. J.B.Miale and J.W.Kent: Proc. Soc.
thniv "X" N? Y- 1962 » n* 589-590 (Dept. Path.,
Institute of Miami Sch. Med., Miami, Fla., U.S.A.)
The level^r tⁱp^te injn. of turpentine significantly raised
reund V^o serum haptoglobin. Similar treatment with
adjuvant did not have this effect.

- 3769. EXPERIMENTAL LATHYRISM. MODEL OF A GENERAL MESENCHYMAL DISEASE.** F.Hartmann, K.Siefert and F.Bolsing: Z. ZeForsch., 1963, 59, 358-394 (Path.Inst., Univ. Kiel, Germany) Expt.osteango-lathyrism was produced by giving 3 g. of p - aminopropionitile[BAPN] orally to 3 piglets for 12,19 and 38 days. Two control animals were used. Expt. and control animals were killed at the same time. The osteolathyrism caused disturbance of endochondrial ossification; cartilage cells were swollen; acid mucopolysaccharides in cartilage and in the aorta were decreased. This generalised lathyrogenic change of the connective tissues is regarded as an expression of an impediment in the biosynthesis of acid mucopolysaccharides in the local connective tissue cells.

(German) J.E.Linder

- 3770. ALKALINE PHOSPHATASE, FEATHERING AND BONE ASH IN CHICKS AS AFFECTED BY HEMIN.**
W.O.Pollard, M.S.Shorb and R.D.Creek: Proc. Soc. exp. Biol., N.Y., 1963, 112, 478-480 (Dept. Poultry Sci., Univ. Maryland, College Park, Md., U.S.A.)
The alk. phosphatase level in the serum of White Rock chicks treated with 5 mg. of haemin daily after the 8th day of hatching was considerably lower than in the controls. The birds which did not die within 10 days had feather abnormalities as well in some cases. The development of the barbs and barbules was suppressed.

- B.N.Wheatley

3771. ACUTE HYPERVITAMINOSIS A IN GUINEA-PIGS.

I. EFFECTS ON ACID HYDROLASES. G.Weissman,
J.W.Uhr and L.Thomas. II. EFFECTS ON DELAYED-
TYPE HYPERSENSMIVITY. J.W.Uhr, G.Weissmann
and L.Thomas: Proc. Soc. exp. Biol., N.Y., 1963,
112, 284-287, 287-291 (Dept. Med., N.Y. Univ. Med.
Sch., New York, N.Y., U.S.A.) I. Acute hyper-
vitaminosis was induced in guinea-pigs by oral vit.A.
There was probably a release of acid phosphatase, 3-
glucuronidase and cathepsin from lysosomes for these en-
zymes were lost from the lysosome prep, obtained by ultra-
centrifuging homogenates of the livers.

II. Treatment of guinea-pigs with vit. A and oils or palmitate resulted in a greater depression of the delayed hypersensitivity and Arthus reactivity than in controls which had a normal vit. A level. The inflammatory response to diphtheria toxin was also reduced. Clearance of phage from the circulation was unaffected by hypervitaminosis. The explanation is sought on the basis of the suppression of lysosome activity by excess vit. A.

D.N.Wheatley

- 3772. REGENERATION OF BONE MARROW IN IRRADIATED PARABIONT RATS.** S.Warren and E.M.Farrington: Lab. Invest., 1963, 12, 193-198 (Cancer Res. Inst., New England Deaconess Hosp., Boston, Mass., U.S.A.)
Castrate of rats in parabiosis with castrate ? were given supralethal total body X-irradiation. The *d* survived, with functional marrow recovery. Female w.b.c. appeared transiently in greater no. than usual in the *p* peripheral circulation but rarely in the regenerating *s* marrow.

A.M.Mackay

3773. FUNCTIONAL DEVELOPMENT OF THE RE SYSTEM
OF THE CHICK EMBRYO. K.Karthigasu and C.R.Jenkin:
Immunology, 1963, 6, 255-263 (Dept. Bacteriol.,
Univ., Adelaide, Australia) A quant. study has been
made of the phagocytosis of various particles by the de-
veloping chick embryo. The phagocytosis of rough strains
of bacteria was much more efficient compared with that
of smooth strains. The importance of serum opsonins in
promoting phagocytosis and the possible origin of these
factors in the chick embryo is discussed. *

IMMUNOLOGY AND EXPERIMENTAL PATHOLOGY

3774. COMPARATIVE PROTECTIVE ACTION OF UNSATURATED FATTY ACIDS FOR MICE AGAINST EXOTQXIN, ENDOTQXIN AND SNAKE VENOM. W.W. Spink and C.K.Su: Proc. Soc. exp. Biol., N.Y., 1963, 112, 463-466 (Dept. Med., Univ. Minnesota Med. Sch., Minneapolis, Minn., U.S.A.) *Staphylococcus* or *QL¹Iridium* endotoxins were used and inj. i.v. in lethai¹ doses into Swiss-Webster mice. Inj. of the toxin along with 0*05% oleic or linoleic acid gave complete protection. The antidote effect of these unsat. fatty acids on snake venom was similar. No protection was obtained against endotoxins of *E. coli* and *Brucella melitensis*. D.N.Wheatley

3775. RIGHT VENTRICULAR HYPERTROPHY IN SPONTANEOUS AND EXPERIMENTAL PULMONARY EMPHYSEMA. H.T.Strawbridge: Amer. J. Path., 1963, 42, 173-184 (Gen. Hosp., Winnipeg, Manitoba, Canada) In this study a decrease in the ratio left/right ventricular wt. was taken to indicate right ventricular hypertrophy [RVH]. Spontaneous generalised chronic emphysema was not associated with RVH in rabbits. The i.v. inj. of Caledon Blue into rabbits produced widespread pulmonary embolism with or without generalised emphysema. In rabbits showing RVH after the inj. of Caledon Blue, RVH was not related to the degree of emphysema, nor did a direct relationship exist between die degree of RVH and of vascular obstruction. D.G.Scott

3776. PRODUCTION OF ARTERIAL LESIONS BY A HUMORAL FACTOR IN PARABIOTIC RATS. P.R.Patek, S.Bernick and D.K.MacCallum: Circulat. Res., 1963, 12, 291-297 (Dept. Anat., Sch. Med., Univ. S. California, Los Angeles, Calif., U.S.A.) Coronary artery lesions were observed in both members of the pair when one had been treated before parabiosis with colloidal C to block the RE cells. R.E.Moore

3777. ATHEROSCLEROSIS IN THE RAT. EFFECT OF X-RAY AND A HIGH FAT DIET. H.Gold: Proc. Soc. exp. Mol., N.Y., 1962, 111, 593-595 (Beaumont Mem. Res. Lab., Mt. Sinai Hosp., Cleveland, Ohio, U.S.A.) Exposure to X-rays accelerated the development of atherosclerotic lesions in the coronary arteries of rats fed on a high fat diet. M.M.Shapland

3778. INDUCTION OF ATHEROSCLEROSIS BY CHOLESTEROL FEEDING IN THE HYPOPHYSECTOMISED RAT. P.R.Patek, S.Bernick, B.H.Ershoff and A.Weils: Amer. J. Path., 1963, 42, 137-145 (Dept. Anat., Sch. Med., Univ. S. California, Los Angeles, Calif., U.S.A.) The hypercholesterolaemia following the feeding of 1% cholesterol to hypophysectomised rats was reduced by desicated thyroid. Intact rats fed cholesterol developed thyroid hyperplasia; hypophysectomised rats did not. Cholesterol given to hypophysectomised rats was associated with the development of coronary and aortic atherosclerosis. D.G.Scott

3779. PREVENTION OF EXPERIMENTAL HYPERTENSION AND ARTERIOSCLEROSIS WITH TUBERCULIN, BCG OR MYCOBACTERIAL EXTRACTS. I.Somogyi, J.Rigo and J.Sos: Acta med. Acad. Sci. hung., 1962, 18, 423-428 (Pathophysiol. Inst., Med. Univ., Budapest, Hungary) Rats were made hypertensive and arteriosclerotic by feeding a diet containing large amounts of vit. D2. Treatment with BCG vaccine, tuberculin, extracts of bacterial cell wall or cell contents was effective in inhibiting the pathol. effect of the diet. (German) CF.Blane

3780. EXPERIMENTAL STRANGULATION OBSTRUCTION IN GUINEA-PIGS. C.E.Floyd, CH.Bomside and I.Cohn, jun.: Amer. J. Surg., 1963, 105, 228-232 (Dept. Surg., Louisiana State Univ., Sch. Med., New Orleans, La., U.S.A.) Segments, 6-8 cm. long, of the proximal intestine of adult guinea-pigs were strangulated by ligation of a branch of the mesenteric vein; in some animals the affected loop was also ligated (closed loop). Average survival times were 24 * 3 hr. after closed loop and 30-9 hr. after open loop strangulation. S.c. inj. of saline prolonged the survival times to 29*2 and 39-7 hr.; additional i.p. or intraluminal inj. of kanamycin to 37-2 and 57-6 hr. I.p. inj. of loop fluid was lethal to mice but non-toxic if gas gangrene antitoxin was inj. into the mice 24 hr. previously. Loop fluid from guinea-pigs treated with kanamycin was uniformly non-toxic. B.Cruickshank

3781. LIMITED USEFULNESS OF SERUM LACTIC DEHYDROGENASE [LDH] AS A TEST FOR STRANGULATION OBSTRUCTION. H.Laufman, P.F.Nora and J.J. Bahuth: Amer. J. Surg., 1963, 105, 233-238 (Dept. Surg., Northwestern Univ. Med. Sch., Chicago, Ill., U.S.A.) Serum LDH activity in 64 control patients was 100-620 units/ml. In 25 patients with acute abdominal conditions other than strangulation the value was < 600 in 24 and 940 in one. In 3 out of 9 patients with proved intestinal obstruction of 6-30 hr. duration the value was > 700, but in the other 6 it was < 600. B.Cruickshank

3782. SEX DIFFERENCE IN INDUCTION OF FATTY LIVER IN RAT BY DIETARY OROTIC ACID. H.Sidransky: Endocrinology, 1963, 72, 709-714 (Pathol. Dept., Med. Sch., Pittsburgh, Pa., U.S.A.) A diet containing 1% orotic acid fed to rats resulted in a greater degree of fatty liver development in ♀ than in ♂. Ovariectomy of ♀ did not affect fat deposition but castration of the ♂ resulted in a fatty liver similar to that of the ♀. H.C.Jones

3783. THE EFFECTS OF HEPATIC VEIN OCCLUSIONS. W.D.Widman, M.R.Hales and R.H.Greenspan: Amer. J. Path., 1962, 41, 439-447 pept. Pathol., Yale Univ. Sch. Med., New Haven, Conn., U.S.A.) Tubes placed so as to block the ostium of most of the hepatic veins were successfully introduced into 11 dogs. Four dogs developed portal hypertension and ascites associated with centrilobular necrosis, central or translobular fibrosis diminution of the portal venous system and enlargement of the hepatic arterial system. In 7 cases die development of collateral veins prevented the onset of portal hypertension. It is suggested that the opening up of collateral venous channels, the origin of which is discussed, accounts for asymptomatic cases of the Budd-Chiari syndrome. D.G.Scott

3784. THE PANCREATIC ISLET TISSUE IN MICE WITH OBESITY INDUCED BY GOLDTHIOGLUCOSE. B.Pete* son and B.Heliman: Acta path. microbiol. scand., 1962, 55, 401-406 (Histol. Dept. Univ., Uppsala, Sweden) There was an increase of more than 10% in the total islet vol. in naturally lean adult mice of p^e American strain, but no significant change in the incidence of silver-pos. A cells. The results support the hypothesis that hyperphagia is not the cause of the marked changes in the pancreatic islet tissue associated with & obese-hyperglycaemic syndrome. LFriedmann

3785. CONNECTIVE TISSUE. I. GRANULOMA FORMATION INDUCED BY THE IMPLANTATION OF JAPANESE

IMMUNOLOGY AND EXPERIMENTAL PATHOLOGY

363

AGAR, K.Konn[©] and T.Tetsuka: J. Biochem. Tokyo, 1963, 53, 231-237 (Dept. Biochem., Fac. Med., Univ. Tokyo, Japan) Granulomas were produced on s.c. "Plantation in rats. The characteristics of several other granuloma producing substances were examined. The Uagen formed was examined. B.M.Stevens

3786. CONNECTIVE TISSUE. VIII. EFFECT OF RICKETS UPON CHEMISTRY OF INFLAMMATION. J.C.Houck and R.A.Jacob: Proc. Soc. exp. Biol., N.Y., 1963, 112, 446-448 (Biochem. Res. Lab., Children's Hosp., Georgetown Univ. Med. Sch., Washington, D.C., U.S.A.) Rachitic rats developed less of an inflammatory response in dermal lesions caused by croton oil than control animals. Apart from there being less of hydroxyproline and no gain in hexosamine, the chemistry of the changes was little different in the rachitic group from the healthy controls. The healing of such lesions appeared to be complete more quickly in rachitic rats. As estimated from the chemistry of recovery, dermal tissue of rachitic rats did not display the 'distal mucin collagen response' to the adjacent local inflammation. D.N.Wheatley

3787. SERUM POLYSACCHARIDES IN THE DIAGNOSIS OF SYSTEMIC LUPUS ERYTHEMATOSUS. F.W.Wiggs^U: Scot. Med. J., 1963, 8, 204-207 (Dept. Phys. Med. Royal Infirmary, Aberdeen, Scotland) Estimations of serum IgG bound polysaccharide were performed on 59 patients with rheumatoid arthritis and LE diagnosed by standard methods. The level was highest in untreated LE than in rheumatoid arthritis, although there was slight overlap this simple test formed a basis for differentiating the diseases. A.M.Mackay

3788. ROLE OF PARATHYROIDS IN PRODUCTION OF OSTEITIS FIBROSA AND SOFT TISSUE CALCIFICATION BY LEAD ACETATE. H.Selye, B.Tuchweber and G.Gabbiani: Endocrinology, 1963, 72, 782-786

(Inst. Med., Univ. Montreal, Montreal, Que., Canada) The presence or absence of the parathyroids in rats did not influence the development of cutaneous calcification and osteitis fibrosa induced by Pb acetate injn. followed by s.c. injn. of histamine liberator or NaCl soln.

H.C.Jones

3789. HISTOLOGY OF OESTEODYSTROPHY IN HAEMIN TREATED CHICKS. W.O.Pollard, M.S.Shorb and R.D. Creek: Proc. Soc. exp. Biol., N.Y., 1963, 112, 480-483 (Dept. Poultry Sci., Univ. Maryland, College Park, Md., U.S.A.) White Rock chicks were treated with haemin at a dosage of 5 mg. daily from the second day post-hatching. There was an arrested development of the epiphyseal regions and less matrix formation in the leg bones of treated as compared with control birds. This histopathology was similar to that found in certain nutritional deficiencies, especially cationic deficiencies.

D.N.Wheatley

3790. ADJUVANT INDUCED POLYARTHRITIS IN RATS. I. ADJUVANT COMPOSITION, ROUTE OF INJECTION AND REMOVAL OF DEPOSIT SITE. J.R.Ward and R.S. Jones: Arthritis and Rheumatism, 1962, 5, 557-564 (Dept. Med., Univ. Utah, U.S.A.) The i.d. route was the most effective and the i.v. the least. A simple suspension of M. butyricum in oil was more effective than an emulsion of M. butyricum. Wax fractions of the mycobacteria were ineffective. Removal of the adjuvant depot later than 2 hr. after injn. did not prevent the development of arthritis. It is suggested that the polyarthritis is dependent upon dissemination of mycobacteria and oil through regional lymph nodes.

D.G.Scott

3791. ROLE OF SEX HORMONE IN THE PATHOGENESIS OF OSTEOARTHROSIS OF MICE. M.Silberberg and R.Silberberg: Lab. Invest., 1963, 23, 285-289 (Pathol. Dept., Washington Univ. Med. Sch., St.Louis, Mo., U.S.A.) Testosterone given to ovariectomised C57Bl mice significantly increased the incidence of osteoarthritis of old age compared with controls. A.M.Mackay

GENERAL

(INCLUDING STRUCTURE AND VARIATION)

3792. RUPTURE OF BACTERIA BY EXPLOSIVE DE-COMPRESSION. J.W.Foster, R.M.Cowan and T.A.Maag: *J. Bact.*, 1962, 83, 330-334 (Dept. Microbiol., Sch. Vet. Med., Univ. Georgia, Athens, Ga., U.S.A.) C.Toothill
3793. SIMPLIFIED METHOD FOR THE ROUTINE DETERMINATIONS OF ANTKTREPTOKINASE TITRE. J.Boszormenyi: *Z. Immun.-Forsch.*, 1962, 124, 411-418 (Serum and Vacc Inst., 'Human', Budapest, Hungary) A technical contribution. D.P.Winstanley
3794. METHOD FOR THE ISOLATION OF MYXOBACTERIA IN PURE CULTURE. H.D.McCurdy jun.: *Canad. J. Microbiol.*, 1963, 9, 282-285 (Dept. Biol., Essex Coll., Assumption Univ. Windsor, Windsor, Ont., Canada) Note. S.L.Hoare
3795. MEDIA FOR THE ENUMERATION AND ISOLATION OF HETEROTROPHIC SALT-MARSH BACTERIA. T.R.G. Gray: *J. gen. Microbiol.*, 1963, 31, 483-490 (Dept. Bot., Univ. Nottingham, England) The relative merits of several media for counting salt-marsh bacteria were investigated. A nitrogenous medium was apparently the least selective. For the salt water muds studied, media with a salinity about the same as sea water gave the highest counts of bacteria, particularly for samples from the salicornietum. A possible correlation of this and the origin of the mud is discussed. K.Brew
3796. HAEMAGGLUTINATION PROCEDURE FOR THE ASSAY OF TETANUS ANTITOXIN OF CHILDREN'S SERA. M.Surjan and G.Nyerges: *Z. Immun.-Forsch.*, 1962, 124, 390-400 (State Hyg. Inst., Budapest, Hungary) The antitoxin titres of 752 children immunised with tetanus toxoid were determined by the haemagglutination technique. In most cases the results agreed with those found by toxin neutralisation tests in mice, but in a few there were discrepancies up to five-fold. The results of toxin neutralisation tests are, however, inconsistent among themselves, and depend on the dose of toxin (they used L+/10 and L+/400). D.P.Winstanley
3797. DIPHTHERIA ANTITOXIN TITRATION OF HUMAN SERA BY HAEMAGGLUTINATION. M.Surjan and G.Nyerges: *Z. Immun.-Forsch.*, 1962, 124, 401-410 (State Hyg. Inst., Budapest, Hungary) 187 human sera were titrated by the haemagglutination technique and by the rabbit i.d. test. In most cases the results agreed, but sometimes there were 5-6 fold discrepancies. These are attributed to differences in avidity and are thought not to detract from the value of the method. The lower limit of antitoxin detectable is 0.006-0.012 AU/ml. D.P.Winstanley
3798. DEMONSTRATION OF TETRATHIONATE-REDUCTASE IN FACULTATIVE ANAEROBIC GRAM-NEGATIVE BACTERIA (ENTEROBACTERIACEAE, AEROMONAS AND PASTEURELLA). METHOD AND DIAGNOSTIC VALUE. L.Le Minor and F.Pichinoty: *Ann. Inst. Pasteur*, 1963, 104, 384-393 (Inst. Pasteur, Paris, France) Tetrathionate reductase (TTTR) was measured by a simple method based on incubation of culture with potassium tetrathionate followed by titration with N/10 iodine of the

liberated thiosulphate. 1020 strains of Enterobacteriaceae studied in this way showed Arizona, Citrobacter and Proteus were all TTR + and Salmonella, Providence TTR with few rare exceptions. E. coli, Klebsiella and Shigella were all TTR -, and most Aerofacter were TTR -, Cholera and El tor vibrios, Pasteurella pseudotuberculosis and P. pestis were TTR - and P. septica was TTR +. M⁺ Aeromonas were TTO -. (francRT*** B.Payne

3799. SITE OF GRAM STAIN IN CELLS OF GRAM-POSITIVE MICRO-ORGANISMS. Y.T.Tchan: *Nature*, Lond., 1963, 198, 213-214 (Microbiol. Sect., Dept. Agric, Univ. Sydney, Australia) Using the modified Gram stain technique, differentiation and dehydration of material could be carried out in iodinated alcohol, which did not remove the stain. Examination of ultra thin sections by light or phase microscope showed that in cells of yeast and Bacillus the cytoplasm was uniformly stained. G.M.Lewis

3800. EFFECT OF WATER ACTIVITY, SOLUTES AND TEMPERATURE ON THE VIABILITY AND HEAT RESET ANCE OF FREEZE-DRIED BACTERIAL SPORES. B.J. Marshall, W.C.Murrell and W.J.Scott: *J. gen. Microbiol.*, 1963, 31, 451-460 (Commonwealth Sci. and Indust. Res. Organisation, Div. Food Preservation, Ryde, N.S.W., Australia) Freeze dried spores of Bacillus megaterium, B. stearothermophilus, Clostridium bifermentans and C. botulinum type E suffered little loss of viability after storage at 25° at water activity (a_w) values of 0.2 to 0.8. At a_w values outside this range different losses of viability occurred, depending on conditioⁿ. The effect on viability of addition of various compounds to spore suspension before drying is described. Greatest resistance to heating was found after storage for 2-6 yr. in spores kept at a_w values of 0.4, 0.6 and 0.8. KBrew

3801. NITROGEN METABOLISM OF RUMEN PROTEOLYTIC BACTERIA. A.R.A.Akkada and T.H.Blackbum: *h gen. Microbiol.*, 1963, 31, 461-469 (Rowett Res. Inst., Bucksburn, Aberdeen, Scotland) Isolates from rumen of sheep identified as Bacteroides amylophilus, B. ruiningcola, spp. of Bacteroides, Selenomonas, Butyrivibrio. Bacillus, Eubacterium, Clostridium and Gram-pas. cocc were found to de proteolyse some strains had exopeP*** dase and amidase activity, but deamidase was rare. Most strains preferentially utilised NH₃ in synthesising cell constituents in media containing preformed amino acids. Few of the strains had urease activity. KBrew

3802. CARBON DIOXIDE FIXATION BY ORGANOTROPHIC BACTERIA. R.M.Lafferty: *Arch. Mikrobiol.*, 1963, 373-405 (Inst. Mikrobiol., Univ. Gottingen, Germany) The effect of CO₂ decrease on endogenous respiration, substrate respiration and oxidative assimilation was examined for a no. of bacterial strains. CO₂ assimilation was related to O₂ uptake by the quotient -ACO₂/AO₂. The highest quotient was obtained during oxidative assimilation of branched fatty acids by 2 newly isolated strains of Mycobacterium, when CO₂ fixation increased with increasing CO₂ pressure up to 5% CO₂. After 1-3 min. the CO₂ was fixed as asparagine and glutamic acid. With butyric acid as substrate the main CO₂ is built up by carboxylation of propionyl CoA. (German) EM-W

3803. MEASUREMENTS OF THE REMOVAL OF ⁵¹C¹⁴ LABELED ENDOTOXIN FROM THE CIRCULATION IN EXPERIMENTAL ANIMALS. D.Koch-Weser, ^{w,j} J.^f ^{**} intyre and R.L.Schapiro: *In.: J. appl. Radiat.*, 1^{y,b}f' 75-80 (Dept. MecU Western Res. Univ., Cleveland.

Ohio, U.S.A.)* A lipopolysaccharide from *E. coli* endotoxin labelled with ^{57}Cr has been found to be taken up by RE system of normal rabbits. The clearance of this endotoxin and its uptake by various organs has been studied in normal and tolerant rabbits (made tolerant by related injn. of endotoxin). Clearance of ^{51}Cr endotoxin, ^3H compounds and colloidal ^{198}Au has been measured by cannulation of carotid artery through scintillation crystal. These measurements were correlated with external counting over liver and head, and with in vitro assays of fluid samples and organs. The carotid artery shunt technique is preferred for its greater sensitivity and accuracy.

B.Payne

3804. TRITIATED ENDOTOXIN. I. PREPARATION AND ANALYSIS OF TRITIATED ENDOTOXIN. W.H.Schrader and B.F.Woolfrey: Amer. J. Path., 1963, 42, 225-233 (Dept. Pathol., Univ. Minnesota Med. Sch., Minneapolis, Minn., U.S.A.) Physical, chem. and bioassay prep. of [^3R]endotoxin (0.3-4 mc/mg.) were closely similar to those of control material. Decrease in mouse lethality and Shwartzman toxicity decreased with higher quantities of ^3H .

D.C.Scott

3805. INFECTION-PROMOTING ACTIVITY OF HIGH MOLECULAR WEIGHT ACIDIC MICROBIAL POLYSACCHARIDES. M.Shilo: Bull. res. Counc. Israel A, WBS, 11, 310-318 (Lab. Microbiol. Chem., Dept. Biochem., Hebrew Univ., Hadassah Med. Sch., Jerusalem, Israel) A no. of acidic high mol. wt. polysaccharides, including polysaccharides of *Xanthomonas* and *Arthrobacter* and phosphomannan of *Hansenula holstii* promoted peritoneal infections in mice with *Salmonella typhi*, *S. paratyphi* B, *Pasteurella pestis* strain E.V. 76 and "Mycopoccus" aureus and promoted dermonecrosis in rabbits infected intracutaneously with different pathogens. It was suggested that the infection- and necrosis-promoting activity of a Polysaccharide depend on its colloid properties that these activities are not a function of the conformation, manner of linkage of the individual repeating units or the presence of polar groupings in the carbohydrate polymer.

L.G.Gillies

3806. SPORES OF MICRO-ORGANISMS. XII. NON-PARTICIPATION OF THE PRE-EXISTING SPORANGIAL CELL WALL IN THE FORMATION OF SPORE ENVELOPES AND THE GRADUAL SYNTHESIS OF DIAMINO- α -IMELIC ACID [DAP]-CONTAINING STRUCTURES PURING SPOROGENESIS OF BACILLI. V.Vinten Foua: Microbiol., 1963, 8, 147-155 (Dept. General Microbiol., Inst. Microbiol., Czechoslovak Acad. Sci., not Hg. Uef Czechoslovakia) Exogenous [^{14}C]DAP but not DAP^{U} Preexisting in vegetative cells is incorporated into the envelope proteins, one before formation of the envelope. When [^{14}C]lysine "forced" by decarboxylation of the DAP^{U} incorporated with the latter, the other during sporulation of DAP^{U} [^{14}C]lysine is not incorporated markedly elevated during the pre-sporulation and at the outset of sporogenesis.

J.R.Sargent

3807. COMPOSITION AND STRUCTURE OF BACTERIAL SPORES. A.D.Warth, D.F.Ohye and W.C.Murrell: J. anit Bfol., 1963, 16, 579-592 (Commonwealth Sci. Ind. Res. Org., Div. Food Preservation, Ryde, N.S.W., Australia) A comparative analysis of the from 2? f^{esol} contents and insol. integuments of disrupted spores of *Bacillus cereus*, *B. subtilis*.

B. coagulans and *B. stearothermophilus* was made and electron micrographs of thin sections compared. The spores of the 4 spp. are structurally similar, consisting of 2 coats, a cortex and cortical membrane around the spore. The structure of the outer coat differs in the 4 spp. The mucopeptide constituents α, β-diaminopimelic acid and hexosamine are cone, in the insol. integuments of the thermophiles but in the sol. fraction of *B. cereus* and *B. subtilis*.

F.I.Barrow

3808. LOCATION AND COMPOSITION OF SPORE MUCOPEPTIDE IN BACILLUS SPECIES. A.D.Warth, D.F.Ohye and W.C.Murrell: J. cell Biol., 1963, 16, 593-609 (C.S.I.R.O., Div. Food Preservation, Ryde, N.S.W., Australia) Integuments from disrupted *B. coagulans*

spores lost all the hexosamine and DU ε-diaminopimelic acid, which was released as non-diffusible mucopeptide, by autolysis. The residual cortical structure and cortical membrane were destroyed. Lysozyme digestion of integuments of several heated *Bacillus* spp. specifically removed the cortex and membrane releasing the mucopeptide. This appears to be mainly located in the residual cortex and cortical membrane.

P.Barrow

3809. CHARACTERISTICS OF SPORES OF BACILLUS CEREUS PRODUCED BY A REPLACEMENT TECHNIQUE. E.A.Pelcher, H.P.Fleming and Z.J.Orbak: Canad. J. Microbiol., 1963, 9, 251-258 (Dept. Food Technol., Univ. Illinois, Urbana, Ill., U.S.A.) A replacement technique whereby spores of *B. cereus* were produced by transferring vegetative cells into non-nutritive soln. was employed for investigation of the relationship between Ca, dipicolinic acid, and heat resistance in spores. Replacement soln. of distilled water, fresh medium, Ca and other metal salts were employed. Spores produced in distilled water were heat sensitive and contained low levels of Ca and dipicolinic acid. Heat resistant spores with a normal level of Ca and dipicolinic acid were formed only in fresh medium or in soln. containing suitable levels of Ca.

S.L.Hoare

3810. GENERATION TIMES OF INDIVIDUAL BACTERIA: SOME CORROBORATIVE MEASUREMENTS. E.O.Powell and F.R.Errington: J. gen. Microbiol., 1963, 31, 315-327 (Microbiol. Res. Estab., Porton Down, Salisbury, Wilts., England) Measurements of individual generation times in 3 spp. of bacteria in 2 different growth media confirmed previous conclusions about the broad features of the generation time pattern. The results supported the following inferences: (i) complex media give rise to a greater dispersion of generation time than simple media, (ii) there is pos. association between the generation times of second cousins.

K.Brew

3811. FIXATION OF TETANUS TOXIN, STRYCHNINE, SHT AND OTHER SUBSTANCES BY GANGLIOSIDE. W.E.van Heyningen: J. gen. Microbiol., 1963, 31, 375-387 (Dunn Sch. Pathol., Univ. Oxford, England)

Tetanus toxin is fixed by brain ganglioside but not by a no. of similar substances. Considerable variation in toxin-fixing capacity is found in isolated brain gangliosides. In chloroform and methanol brain extracts a no. of gangliosides differing in toxin-fixing ability can be separated chromatographically. The effects of complexing ganglioside with substances and of Ca^{2+} or fixation of toxin are described. The ability of ganglioside to fix many compounds was investigated and the results are presented.

3812. NATURAL CYTOTOXIC ANTIBODIES IN HUMAN BLOOD SERA WHICH REACT WITH MAMMALIAN CELLS AND BACTERIA. II. EFFECT OF HEATED

MICROBIOLOGY

HUMAN SERUM ON MICRO-ORGANISMS. SJ.Webb and SJFedorofft Canad. J. Microbiol., 1963, 9, 155-162 (Dept. Bact., Univ. Saskatchewan, Saskatoon, Sask., Canada) Certain bacterial and mammalian cells have similar receptor sites which react with natural Ab present in human blood sera. Heated human sera containing these Ab are bacteriostatic to E. coli and Mycobacterium phlei and bactericidal to Bacillus subtilis. -The antibacterial effect is eliminated when the serum is treated with mouse cells.

S.L.Jioare

3813. VIABLE ORGANISMS FROM FAECES AND FOOD-STUFFS FROM EARLY ANTARCTIC EXPEDITIONS.

G.H.Meyer, M.B.Morrow and O.Wyss: Canad. J. Microbiol., 19b3, 9, 163-167 (Dept. Microbiol., Univ. Texas, Austin, Tex., U.S.A.) Microbiol. studies of continuously frozen human faeces and foodstuffs from sites of early Antarctic expeditions revealed viable organisms after 50 yr. Aerobic and anaerobic spore forming and non-spore forming bacteria, actinomycetes, yeasts, and moulds were recovered. No coliform bacteria were found and other enteric bacteria were of low incidence.

S.L.Hoare

3814. EMERGENCE OF COMPETENCE (FOR TRANSFORMATION) OF THREE HAEMOPHILUS SPECIES IN A CHEMICALLY DEFINED ENVIRONMENT. G.Leidy, I. Jaffee and H.E.Alexander Proc. Soc. exp. Biol., N.Y., 1962, 111, 725-731 (Dept. Ped., Coll. Phys. and Surg., Columbia Univ., New York, N.Y., U.S.A.) Three spp. of Haemophilus (H. influenzae, H. aegyptius and H. pa rainfluenzae) grown under the method of Goodgal and Hernibit in buffered saline containing L-aspartic and L-glutamic acids, Ca and Mg, were shown to emerge to a state of competence for transformation to streptomycin resistance. The emergence of competence was temp, dependent and inhib. by chloramphenicol; multiplication was not necessary.

M.M.Shapland

3815. EFFECT OF CHEMICAL MODIFIERS ON INACTIVATION AND MUTATION-INDUCTION BY γ -RADIATION IN E. COLI. BJ.Bridges: J. gen. Microbiol., 1963, 31, 405-412 (Isotope Res. Div., Wantage Res. Lab.

(A.E.R.E.), Berks., England) A study is presented of the effect of chem. sensitising and protective agents on the rate of mutation induction by γ radiations in strain WP2 of E. coli B/r. The organism mutates spontaneously at a slow rate to a tryptophan non-dependent form from the normal tryptophan dependent form but mutates under the influence of radiation at a much higher rate. The effect of sensitising agents and protective agents on inactivation and mutation-induction by radiation is described.

K.Brew

3816. ACTION OF MUTAGENIC AGENTS ON AUXOTROPHIC STRAINS O⁺ STREPTOMYCES. MJárai: Acta microbiol. Acad. Sci. hung., 1962, 9, 273-283 (Microbiol. Lab., Dept. Antibiotics, Chinoim Pharm. Works, Budapest, Hungary)

The mutagenic action of u.v. and probably of X-rays has an optimal dose on back mutation freq. of Streptomyces auxotrophs. Under the same conditions mutagenic specificity of 6 markers was observed. Acridine Orange, streptomycin, hydroxylamine, phenyl isocyanate and 8-oxyquinoline exerted also a definite mutagenic effect.

S.Igali

3817. NATURE OF COMPETENCE OF TRANSFORMABLE STREPTOCOCCI. R.Rakula and W.Walezak: J. gen. Microbiol., 1963, 31, 125-133 (Dept. Bacteriol., State List. Hyg., Warsaw, Poland) Transformable streptococci produce an exocellular factor provoking com-

petence under certain conditions and non-competence cultures become competent on addition of this factor. The process of conversion is time and temp, dependent and the kinetics concomitant with an enzymic reaction. The factor is heat sensitive. Competence is provoked by the action of hypothetical enzyme on cells of a non-transformable Streptococcus.

K.Brew

BACTERIA

3818. PRODUCTION O⁺ OCTADECENOIC ACID IN PLASMA BY STAPHYLOCOCCUS AUREUS. J.T.Weld, B.H. Kean and W.M.O'Leary: Proc. Soc. exp. Biol., N.Y., 1963, 112, 448-461 (Dept. Publ. Hlth. and Microbiol., Cornell Univ. Med. Coll., New York City, N.Y., U.S.A.)

Lipid droplets or plaques can be found on human blood-agar plates or 10% plasma-agar plates when inoc. with certain strains of S. aureus or when exposed to active sterile agar segments. Staphylococcus antitoxin prevented this phenomenon. ItTs suggested that S. aureus strains release lipase which causes the formation of lipid plaques due to its action on human plasma lipids.

D.N.Wheatley

3819. ANTIGENIC STRUCTURE OF STAPHYLOCOCCUS EPIDERMIDIS. DJungezmais Bull. Acad. pol. Sci., 1963, 11, 125-128 (Dept. Med. Microbiol., Sch. Med., Warsaw, Poland) The results obtained from chem. analysis showed no significant differences between the structure of cell fractions of S. epidermidis and of S. aureus. Chromatographic analysis of polysaccharide fractions revealed certain differences. The presence of a hexose of Rf 0*30 was found in all the glycoprotein fractions of S. aureus but in S. epidermidis this hexose was found in only very small amounts in one fraction. E.Parkinson

3820. FREQUENCY OF ELEVATED ANTISTAPHYLOLYSIN VALUES OVER TEN YEARS. O.Widholm: Ann. Med. exp. Fenn., 1963, 41, 93 (Dept. Serol. and Bacteriol., Univ. Helsinki, Finland) The object of the investigation has been to study the use of the reaction and to compare the annual distribution of normal and elevated values. The results of titrations in the 1st, 4th, 7th and 10th yr. of the period (1949-1959) have been subjected to statistical treatment. No direct correlation of elevated values with a general incidence of infections of staphylococcal origin could be demonstrated.

G.Faulkner

3821. MECHANISM OF LONG-CHAIN PHENOMENON O⁺ GROUP A STREPTOCOCCI. J.J.Hahn and R.M.Cole: J. exp. Med., 1963, 117, 583-594 (Med. Dept., Univ. Illinois, Chicago, 111, U.S.A.) Formation and destruction of long chains of Group A streptococci in the presence of type-sp. Ab were studied with the fluorescent Ab technique. Long chains were only formed in the presence of free Ab during the growth of the bacteria. Destru^{*}tion of long chains was shown to be dependent on continued growth and division of the bacteria in the absence of free Ab. Univalent fragments of digested Ab do not give rise to long chains. End-to-end aggln. during growth of G&P A streptococci has been suggested to explain the mechanism of this phenomenon.

H.E.HJones

3822. IDENTITY OF STREPTOCOCCAL GROUP D ANTIGEN AND TEICHOIC ACID. AJ.Wicken, S.D.Elliott

and J.Baddiley: *J. gen. Microbiol., 1963, 31, 231-239 (Dept. Anim. Pathol., Univ., Cambridge, England) isolated intracellular teichoic acids from 2 strains of group D streptococci were purified and their serol. and chem. P^A^P. examined. Both compounds reacted serol. with group D streptococcal antiserum, and were shown to be &em. similar. Group Ag prep, from 3 other group D streptococcal strains were serol. identical and chem. ^{^A far to the} teichoic acid from strain 39. The difference in serol. activity between intracellular teichoic acid from strain 8191 and that from the other 4 strains is probably associated with small differences in chem. imposition. K.Brew

3831. TESTS OF *BACILLUS THURINGIENSIS* VAR. *THURINGIENSK BERLINER* AND *B. CEREUS* *FRANKLAND* AND *FRANKLAND* ON LARVAE OF *CHORISTONEURA FUMIFERANA* (CLEMENS). W.A.Smirnoff: Canad. Ent.,

1963, 95, 127-133 (Forest Res. Lab., P.O. Box 35. Silviculture, Quebec, Canada) The host was the spruce budworm. Field tests indicate that some strains of B. cereus are as effective as B. thuringiensis and at a low temp. (13•#) the former is toe more effective. Since B. cereus does not form crystals these are perhaps not essential to mortality. It may be possible to select a bacillus strain to suit a particular condition. Field tests showed that previous laboratory tests gave an incomplete picture of bacterial effectiveness. Temp, and pptn, seem the most important factors. The presence also of a microsporidian pathogen complicates the assessment of results. H.W.Spencer

T. Spencer

**3832. EFFECTIVENESS OF A MICROBIAL INSECTICIDE
AGAINST LARVAE OF THE EUROPEAN PINE SHOOT
MOTH, RHYACIONIA BUOLIANA (SCHIFFERMULLER).
P.J. Pointing.
J. insect Path., 1962, 4, 484-486 (Forest**

P.J. Pointing: J. Insect Path., 1962, 4, 484-486 (Forest Insect Lab., Sault Ste. Marie, Ont., Canada) Fresh, uninfested buds of *Pinus resinosa* were treated with a commercial prep. of *Bacillus thuringiensis* and placed in 2-in. vials with single third-instar larvae of *R. buoliana*. After 7 days there was 80% mortality among Tarvae provided with buds contaminated on all surfaces but only 50% among those

MICROBIOLOGY

provided with uncontaminated bud base. The insecticide is toxic to *R. buoliana* but relatively ineffective because the insect rejects surface plant tissue, so avoiding the insecticide or only ingesting small amounts of it.

R.J.Walker

3833. COMPARATIVE DATA ON CLOSTRIDIUM PERFRINGENS (W. WELCHH) TOXINS AND ANATQXINS PURIFIED BY DIFFERENT METHODS. I.M.Khaustova and A.G.Ougleva: Vop. Med. Him., 1963, 9, 209-213 (State Res. Inst. Vaccines and Sera, Leningrad, U.S.S.R.) Toxin and anatoxin of *C. perfringens* were purified by 4 methods: (1) ammonium sulphate pptn. (2) isoelectric and ethanol pptn. (3) pptn. by TCA. (4) pptn. by sodium hexamethaphosphate in acid media. Highest yields and highest degreee of purification were obtained using the last method. J.R.Sargent

3834. E. COLI INFECTION. I. REPRODUCTION OF TOE DISEASE IN NATURALLY-REARED PIGLETS. C.N. Saunders, A.J.Stevens, J.B.Spence and W.Sojka. n. REPRODUCTION OF THE DISEASE IN PATHOGEN-FREE¹ PIGLETS. CN.Saunders, AJ.Stevens, J.B. Spence and A.O.Betts: Res. vet. Sci., 1963, 4, 333-346, 347-357 (Vet. Invest. Centre, Cambridge, England)

I. Fourteen new-born piglets were dosed orally with 1012 *E. coli* serotype G7, and 7 were dosed with 108 serotype-668 type 1. All the piglets scoured, and 11 died. Of 25 in-contact piglets, 15 scoured and excieted the infecting serotype, and 6 died. Strain P50, which was believed to be non-pathogenic was given to 7 piglets in a dose of 10^8 organisms. Only 1 piglet died, and this strain did not produce the typical clinical syndrome of neonatal diarrhoea, but this expt. was confused by a iatural infection with an E68 type 1 serotype.

II. Hysterectomy-derived, colostrum-deprived piglets reared in isolation were dosed when 12 hr. old with *E.coli* serotype E68 type 1, or with P50, a non-pathogenic strain. Of 6 piglets given 103 to 109 E68 type 1, 3 died and 3 scoured and recovered, but the severity of the disease was not related to the dose. 3 piglets given 106 to 10^9 P50 scoured, but all recovered. No scouring occurred in 4 isolated controls from the same litter which were dosed with peptone water. At 6 days of age, 3 of the controls and 2 of the P50-dosed piglets were given E68 type 1, and all died. J.B.Derbyshire

3835. COMMON HAPten ASSOCIATED WITH ENDO-TOXIN FRACTIONS OF E. COLI AND OTHER ENTEROBACTERIACEAE. CM.Kunin, M.V.Beard and N.E. Halmagyi: Proc. Soc. exp. Biol., N.Y., 1962, 111, 160-166 (Dept. Prev. Med., Univ. Virginia Sch. Med., Charlottesville, Va., U.S.A.) Sera from rabbits immunised with *E. coli* 014 Ag aggl. human and sheep r.b.c. coated withlipopolysaccharide or crude O type. Ag extracted from a wide variety of Enterobacteriaceae but did not produce heterologous bacterial aggl. Inhibn. and absorption studies indicated this was due to a hapten associated with the endotoxin moiety which was so structured in *E. coli* 014 as to be able to induce Ab formation. M.M. Shapland

3836. COLICINEA. G.T.Barry, D.L.Everhart and M. Graham: Nature, Lond., 1963, 198, 211-213 (Univ. Tennessee Mem. Res. Center, Knoxville, Tenn., U.S.A.) Purification and prop. of colicine A produced in cultures of *Citrobacter freundii* CA31A is described. The macromol. material consists of carbohydrate, protein and lipid, is thermostable, toxic and antigenic to rabbits and its biol. activity is neutralised by antisera

against the parent micro-organism or purified material. Immunol. studies showed that several strains of *C.freundii* and *E. coli* elaborate a similar colicine A. Colicine A appeals to be qual. similar chem. to colicines K and V.

G.M.Lewis

3837. MUTANTS OF AEROBACTER AEROGENES BLOCKED IN THE ACCUMULATION OF INORGANIC POLYPHOSPHATE. R.L.Harold and F.M.Harold: J. gen. Microbiol. 1963, 31, 241-246 (Dept. Expt. Chem., Div. Res. Lab., Nat. Jewish Hosp., Denver, Colo., U.S.A.) A method for isolating die mutants is described. Two classes of mutants are produced. The majority did not accumulate polyphosphate when phosphate was added to a phosphate-starved culture, but did so on prolonged S starvation. The remainder of the mutants did not accumulate polyphosphate under either condition. Both kinds of mutant grew well in a defined medium and showed no obvious physioLdisabilities. K.Brew

3838. NITRATE-REDUCTASE IN AEROBACTER AEROGENES. PROPERTIES. ACTION SPECIFICITY AND INHIBITION BY OXYGEN. F.Pichinoty: Ann. Inst. Pasteur, 1963, 104, 394-413 (Lab. Chim. Bact., Centre Nat. de la Recherche Sci., C.R.S.I.M., Mar seille, France) The affinity const. and activation energy of nitrate reductase of *A. aerogenes* were measure^d by a manometric method. Inhibn. of the reaction by cyanide and azide were also studied. Of the ions IO₃⁻, BrQ₃⁻ and ClO₃⁻ only ClO₃⁻ was found to be a substrate of the system. This is thought to be due to relative dis- pensions of ions. A physiol. system has been constructed in vitro containing ethanol dehydrogenase, NADH2-FMN reductase and nitrate reductase which catalyses reduction of nitrate at expense of ethanol. Aerobically O₂ acts as electron acceptor resulting in inhibn. of nitrate-reductase system. (French) B.Payne

3839. PREPARATION OF TYPHOID SOMATIC ANTIGEN VACCINE. IV. METHODS OF LYING TYPHOID ORGANISMS AND THE USE OF BENTONITE IN 1HE PREP; ARATION OF TYPHOID VACCINE. B.B.Diena, R.Wallace and L.Greenberg: Canad. J. Microbiol., 1963, 9, 279-282 (Lab. Hyg., Dept. Nat. Hlth. and Welfare, Ottawa, Canada) Note. S.L.Jioare

3840. HYPOGLYCAEMIA IN CHICK EMBRYOS INFECTED WITH SALMONELLA TYPHI VIA THE ALLANTOIC CAVITY. W.P.Weidanz and M.F.Shaffer: Proc. Soc. exp. Biol., N.Y., 1962, 655-659 (Immunol. Sect., Lab. Chem. Pharm., Nat. Cancer Inst., DHEW, Bethesda, Md., U.S.A.) Strains Ty2 and Vil of *S.typhi* produced marked hypoglycaemia in 10 day old embryos 16 hr. after infection. Blood glucose levels remained normal after infection of the 16 day old embryo. M.M.Shaplan^d

3841. FLOCCULATION TEST FOR SALMONELLA ANTIBODIES USING SENSITISED BENTONITE PARTICLES. B.B.Diena, R. Wallace and L.Greenberg: Canad. J. Microbiol., 1963, 9, 221-226 (Lab. Hyg., Dept. Nat. Hlth. and Welfare, Ottawa, Canada) A rapid slide flocc. test using bentonite particles sensitised with *Salmonella*. O somatic Ag extracts is described. A polyvalent Ag was also prepared using a no. of *Salmonella* extracts thereby making the test useful for the screening of either a monovalent Ab or covering a wide range pt^g, groups. S-L.Hoa*

3842. MODIFICATION OF SALMONELLA TYPHIMURB_J INFECTION OF EMBRYONATED EGGS BY ANTSER^g

ADULT SPLENIC TISSUE AND COMBINATIONS OF THESE AGENTS. E.G.Bлизнаков, J.P.Ransom and J.H. Heller- Proc. Soc. exp. Biol., N.Y., 1963, 112, 367-370 (New England Inst. Med. Res., Ridgefield, Conn., U.S.A.) White Leghorn eggs were treated at 8 days with antiserum to *S. typhimurium* or spleen implants from normal or immune donor hens. After the 13th day when the eggs were expt. infected, the average survival time of the treated eggs was increased. The most effective treatment was implantation of *immune* spleen plus antiserum on the day of injn. with the bacteria.

D.N.Wheatley

3843. IMMUNOCHEMICAL STUDIES ON SALMONELLA. K. FIRST RESULTS ON FACTOR 27 OF GROUP B, A AND D CONVERTED BY PHAGE 27. A.B.Staub and N. Forest: Ann. Inst. Pasteur, 1963, 104, 371-383 (Inst. Pasteur, Serv. des Vaccins, Paris, France) Conversion of strains of group A, B and D by phage 27 gave rise to different factors 27A, 27B and 27D and to one factor common to all three. Inhibitn. of pptn. by simple sugars shows that terminal sugar of 27A, 27B and 27D was the J-tetraose as the terminal sugar for the relative sp. factor - xylose for 27D, abequose for 27B and paratose for 27A. of *Salmonella* polysaccharides present in partial hydrolysates hvr. + anc. " Polysaccharides of group B suggested an hypothesis to explain formation of the 3 factors by modification of one enzyme system. (French) B.Payne

3844. HAEMAGGLUTINATION: A RAPID METHOD FOR DIFFERENTIATING VIBRIO CHOLERAE AND EL TOR VIBRIOS. R.A.Finkelstein and S.Mukerjee: Proc. Soc. exp. Biol., N.Y., 1963, 112, 355-359 (Walter Reed Inst. Res., Washington, D.C., U.S.A.) Suspect bacteria are added to chicken blood. Haemagglutination within 1 min. occurred with all *V. El Tor* strains but not with *V. cholerae* strains. D.N.Wheatley

3845. SEROLOGICAL STUDIES ON HAEMOPHILUS INFLUENZAE AND RELATED SPECIES. II. EXAMINATION OF THE TYPE SPECIFIC ANTIGENS OF H. INFLUENZAE BY MEANS OF THE CAPSULAR SWELLING METHOD. T.Omland: Acta path. microbiol. scand., 1963, 57, 286 (Bact. Inst., Oslo Univ., Norway) 36 H. influenzae strains proved typable by capsular swelling tests (22 fa). 14 of the strains gave a doubtful reaction. The commonest type was type b. Others belonged to c, f, a, d but none to e, y, P, e, C. The importance of s-forms is stressed. L.Friedmann

3846. RECENT ADVANCES OF WHOOPING COUGH VACCINATION IN HUNGARY. K.Solt and G.Barsy: Acta microbiol. Acad. Sci. hung., 1962, 9, 227-236 (State Inst. Hyg., Budapest, Hungary) As a result of combined continuous vaccination of the most susceptible child population of Hungary the whooping cough morbidity has largely decreased. The campaign-vaccination system has groups to provide sufficient protection to the youngest children. S.Igali

3847. OUTBREAK DUE TO LEPTOSPIRA POI IN WEST-HUNGARY. M.Filzi: Acta microbiol. Acad. Sci. hung., 1962, 9, 265-272 (Inst. Microbiol., Univ. Med. Sch., Budapest, Hungary) The characteristics of 7 cases of leptospirosis and the sources of the infection were studied. The leptospiral sources of the human infections are field rodents and small animals. S.Igali

3848. NUTRITIONAL STUDIES ON DESULPHOVIBRO DESULPHURICANS USING CHEMICALLY DEFINED MEDIA.

R.Macpherson and J.D.A.Miller: J. gen. Microbiol., 1963, 31, 365-373 (Nat. Chem. Lab., Teddington, Middx., England) A non-pptg. chem. defined medium containing lactate, sulphate and other inorg. salts supported repeated subculture of *D. desulphuricans* strain Hildenborough and gave yields comparable with those from media containing yeast extract or peptone. Addition of yeast extract, amino acid mixtures or ATP to the defined medium increased the crop. The effects of replacing various constituents of the defined media by other chemicals are described. K.Brew

3849. SPECIFICITY OF THE SALT REQUIREMENT OF HALOBACTERIUM ANTIRUBRUM. J.Boring, D.J.Kushner and N.E.Gibbons: Canad. J. Microbiol., 1963, 9, 143-154 (Div. Appl. Biol., Nat. Res. Council, Ottawa, Canada) Decrease in turbidity, release of cell constituents, and morphol. alterations were examined during the exposure of the extreme halophile, *H. antirubrum*, to graded concn. of various salts. NaCl, MgCl₂, CaCl₂ or Na acetate 3.5M or higher were required to maintain the cells as rods, although much lower concn. prevented gross release of cell constituents. Salt requirement was not solely to maintain a suitable osmotic pressure. There was no evidence to differential release of large (nucleic acids) or small (inorg. phosphate) mol. when bacteria were suspended in decreasing concn. of NaCl or MgCl₂. A no. of salts preserved cellular integrity, but high concn. of NaCl were essential for growth. S.L.Hoare

3850. STRUCTURAL TRANSFORMATIONS AND LYSIS OF HALOBACTERIUM SALINARIUM IN HYPOTONIC AND ISOTONIC SOLUTION. S. V. Mohr and H.Larsen: J. gen. Microbiol., 1963, 31, 267-280 (Dept. Biochem., Tech. Univ. Norway, Trondheim, Norway) The behaviour of *H. salinarium* in varying NaCl concn. and the effect of different chemicals and ionic spp. on die shape and size of the organism is described. Isolated cell wall fragments disintegrate into smaller units when exposed to conditions under which whole organisms lyse. The results indicate that enzyme action and osmotic phenomena are unimportant factors in the structural transformations and lysis of *H. salinarium*. The reaction of the cell wall globular lipoprotein particles to the various chemicals and ionic spp. results in the structural changes of the organism. K.Brew

3851. FINE STRUCTURE OF RHODOSPIRILLUM RUBRUM. G.Cohen-Bazire and R.Kunisawa: J. cell Biol., 1963, 16, 401-419 (Dept. Bacteriol., Univ. California, Berkeley, Calif., U.S.A.) Cultures were grown in a modified Hutner's medium under aerobic and semi-anaerobic conditions exposed to varying light intensities. Electron micrographs of cells post-stained with Pb(OH)₂ were studied and bacteriochlorophyll and protein determinations made. Membrane-bound vesicles of diam. 50 mil observed in the cytoplasm are inversely related to light intensity and directly to the chlorophyll content. The vesicular membrane is indistinguishable from the cytoplasmic membrane. The organisation of the bacterial photosynthetic apparatus is discussed. P.Barlow

3852. GROWTH FACTORS FOR SELENOMONAS RUMINANTIUM. P.N.Hobson, S.O.Mann and W.Smith?: Nature, Lond., 1963, 198, 213 (Rowett Res. Inst., Bucksburn, Aberdeen, Scotland) Strain 6 of *S. ruminantium* does not utilise ammonia and requires amino acids for growth. Acetate alone of the volatile fatty acids stimulates growth. G.M.Lewis

MICROBIOLOGY

3853. SYSTEMATIC POSITION OF GLUCONOBACTER UQUIFACIENS. M.R.Kimmitt and P.J.Le B.Williams: J. gen. Microbiol., 1963, 31,447-449 (H.P. Sauce Ltd., Aston Cross, Birmingham, England) A strain of *G.liquifaciens* was found to possess peritrichous flagella. It is proposed that the organism should be transferred to the genus *Acetobacter* as restricted by Liefson because of this and its biochem. similarity to *Acetobacter aceti*.

RICKETTSIAE AND VIRUSES

3854. DIAGNOSIS OF SMALLPOX BY IMMUNOFLUORESCENCE. H.G.S.Murray: Lancet, 1963, i, 847-848 (Virus Vaccine Dept., Lister Inst. Prev. Med., Elstree, Herts., England) A method is described for rapid diagnosis of smallpox by immunofluorescence. Several specimens from patients with smallpox were examined by this method: all gave pos. results. Specimens from patients which chickenpox, examined at the same time, were neg. G.H.Bell

3855. SEROLOGICAL RELATIONSHIPS BETWEEN HUMAN HERPES VIRUS TYPES 1 AND 2 AND SIMIAN HERPES VIRUS. K.E.Schneweis: Z. Immun.-Forsch., 1962, 124, 337-341 (Hyg. Inst., Univ., GOTtingen, Germany) Cross neutralisation tests using 2 strains of Type 1 and one strain of Type 2 human herpes virus showed distinct differences between them and a strain of simian herpes virus. (German) D .P. Winstanley

3856. SIMPLE METHOD FOR PURIFICATION OF INFLUENZA VIRUS. H.Mizutani: Nature, Lond., 1963, 198, 109-110 (N.IJH., Kamiosaki, Shinagawa-ku, Tokyo, Japan) A useful method for the prep. of influenza virus vaccines combines adsorption on barium sulphate and differential centrifugation techniques. G.M.Lewis

3857. HUMAN INFLUENZA VIRUSES IN DOMESTICATED ANIMALS. P.N.Meenan, M.R.Boyd and R.Mullaney: Brit. med. J., 1962, ii, 86-90 (Univ. Coll., Dublin, Eire) There is no reservoir of A2 viruses in domesticated animals in Ireland and there was no spread to them during the 1961 influenza epidemic. M.E.Nutt

3858. ADAPTATION OF HORSE INFLUENZA VIRUS TO CELL CULTURE. H.Mirchamsy and H.Taslimi: C.R. Acad. Sci., Paris, 1962, 255, 424-425 (Inst. d'Etat Razi, B.P. no. 656, Teheran, Iran) A strain of virus current during the epidemic of horse sickness in Iran became adapted to culture on hamster kidney cells. The virus was isolated from infected horse blood by passage through 4 young mice, then introduced into a medium containing 3 x 10⁵ hamster kidney cells/ml, in 20% inactivated calf blood and subcultured after 6 days at 37°. 1 ml. of the undiluted culture was used as inoculum. 0*9 ml. of lactalbumin hydrolysate containing 10% of Ab free normal horse serum was added to the culture after 30 min. at 37°. After 5 passages the virus killed white mice in 4 days instead of 8 days. (French) S. A. This tie wood

3859. INDUCTION, BY TRYPSINATION, OF PRODUCT-ION OF INFECTIOUS VIRUS BY KB CELLS CARRYING A CHRONIC LATENT INFECTION WITH MYXOVIRUS PARAINFLUENZAE I. (SENDAI VIRUS). G.Demont, A.Berkaloff and L.ColoberC C.R. Acad. Sci., Paris, 1962, 255, 421-423 (Centre Rech. du Serv. de Santé

des Armées, Div. de Microbiol., Lyon, France) KB cells inoc. with Sendai virus cultured on chicken embryo become capable of haemadsorption. At doses of 1-10 ID₅₀/cell cytopathogenic reactions and formation of viral Ag but not of much virus, occur. At 10-100 ID₅₀/cell large syncytia, but no Ag or vims, are formed. At O*⁰^ ID₅₀/cell cytopathogenic reactions do not occur but small quantities of infective virus are formed. The cells can be repeatedly subcultured and continue to produce virus. After 2 trypsin treatments within 1 to 5 days rapid cytopathogenic reactions occur, and both viral Ag and large quantities (400 ID₅₀/cell) of infective virus are produced. The max. effect is given by primary trypsination 5 days after inocn. Competition between processes producing AS, and virus is postulated. (French) S.A.ThistlewooOo

3860. ABO BLOOD GROUPS AND ACUTE RESPIRATORY DISEASE. J.C.McDonald and A.J.Zuckerman: Brit. med. J., 1962, ii, 89-90 (Epidemiol. Res. Lab., Colin^m dale, London, England) Investigation in approx. 2000 persons admitted to R.A.F. sick quarters during ¹⁹⁶¹ 61 with respiratory virus infection (diagnosed serol. or by virus isolation) showed a relative excess of group O and deficiency of group A amongst those infected by influent A2 virus ($p < 0.00001$). There was an opposite trend of lesser significance ($p < 0.005$) in adenovirus infections. Figures for influenza A1, influenza B and Coxsackie A21, infections did not differ significantly from those expected* Distribution of Rh genotypes, hair colour, eye colour and colour perception was similar in all groups studied.

3861. g-PROPIOLACTONE [BPL] INACTIVATED NEWCASTLE DISEASE [ND] VACCINES. G.B.Simmins and B.A.Baldwin: Res. vet. Sci., 1963, 4, 286-293 (Cent. Vet. Lab., Weybridge, England) The efficiencies of BPL inactivated ND vaccines prepared from virulent Her¹⁹³³ and mild F strains were compared by measuring serum haemaggl.-inhibin. titres, and by challenge of fowls by the Herts strain. F strain virus was harvested from eggs at varying intervals after inocn., and the later harvests, up to 112 hr., produced as efficient a vaccine as that prepared from the Herts strain. J.B.Derbyshire

3862. GROWTH OF A VACCINE STRAIN (KOMAROV) ^{1/} NEWCASTLE DISEASE VIRUS [NDV] IN BOVINE KH^r TISSUE CULTURE AND PREPARATION OF A VACCINE. Chuygelen and J.Peetermans: Res. vet. Sci., 1963, 294-303 (R.I.T. Labs., Genval, Belgium) The growth of the attenuated KH strain of NDV was studied in bovine kidney tissue cultures. High titres of virus were obtained at an incubation temp. of 40° for 32-34 hr., ⁿ when the inoculum gave a TCD₅₀/cell ratio of 0.1 to ². There was no loss in the antigenicity of the virus ^{a*te}-Q^{*} 15-25 passages, but its intracerebral pathogenicity Ry^K day chicks was decreased. The virus was not transmxte to chickens in contact with vaccinated birds.

J.B.Derbyshire

3863. VIROLOGICAL EXAMINATION OF URBAN SEWAGE IN PERIODS OF MASS IMMUNISATION WITH LIVE TENUATED POLIOVIRUSES. M.Daniel and I.D.^{omg-239} Acta microbiol. Acad. Sci. hung., 1962, 9, 251-259 (State Inst. Hyg., Budapest, Hungary) In the urt sewage of Budapest poliovirus types 2 and 3 were ^{detf} ^{ter} able in most of the samples taken on the 2nd day of ^{*x} after the immunisation campaign of the children una^{ep} yr. of age with trivalent live poliovirus vaccine. Sva samples proved to be more valuable than catch ^{on} S.I.g.ii

3864. COXSACKIE A9 MYOCARDITIS IN ADULT MICE. A.M.Lemer and J.A.Shaka: Proc. Soc. exp. Biol., N.Y., 1962, 111, 804-808 (Dept. Biol., Massachusetts Inst. Technol., Cambridge, Mass., U.S.A.) Coxsackie A9 viNSI strain 13, replicated in the hearts of 1 yr. old mice and produced an isolated myocarditis in some without concomitant lesions of striated muscle. Differential susceptibility of striated muscle and heart was shown to vary with age; in suckling mice there was only myositis with 10000 times more virus per g. produced in skeletal Muscle than in myocardium, whereas in 1 yr. old mice, myocardium contained 10000 times as much virus as the b.
M.M.Shapland

3865. HAEMAGGLUTINATION BY CERTAIN TYPES OF ECHO VIRUSES. I. SOME PROPERTIES OF THE HAEMAGGLUTININS. G.Gaudin, A.M.Baraal and R.Sohier Ann. Inst. Pasteur, 1963, 104, 313-334 (Lab. Hyg., Fac. Med., Lyon, France) Certain types of ECHO virus (3, 6, 7, 11, 12, 19, 20, 21 and JN-10) are capable of Blutinatliig human r.b.c. R.b.c. from certain spp. of ¹¹⁰¹V₁₁₀₁ were used to demonstrate haemaggltn. using virus types 7 and 12. Treatment with trypsin or formol did not alter virus receptor on the r.b.c. surface, and this receptor was destroyed by virus type 7. Study of the behaviour of the virus towards pH and temp. gave similar classification of viruses into groups as study of growth of viruses on nonkey kidney culture. Haemagglutinins type 6 were found to be labile. This may explain differences in haemaggltn. found by different workers. (French) B.Payne

3866. FACTORS INHIBITING THE INTERFERENCE OF WESTERN EQUINE ENCEPHALITIS (WEE) VIRUS BY RABIES VIRUS IN CHICK EMBRYO TISSUE CULTURES. P-Cohen, S.Mazzur, M.M.Kaplan and H.Koprowski: Nature, Lond., 1963, 198, 270-271 (Wistar Inst., Philadelphia, Pa., U.S.A.) A heat-labile inhibitory factor in normal mouse brain prevents the interference of WEE virus by rabies virus. Variation in WEE plaqueing efficiency and rabies interference was observed between different embryonated eggs used. G.M.Lewis

3867. HAEMAGGLUTINATION BY MEASLES VIRUS. IV. A SIMPLE PROCEDURE FOR PRODUCTION OF HIGH TITRE ANTIGEN FOR HAEMAGGLUTINATION-INHIBITION (HI) TESTS. E.Norrby: Proc. Soc. exp. Biol., N.Y., 1962, 111, 814-818 (Dept. Virus Res., Karolinska Inst. Sch. Med., Stockholm, Sweden) By treatment with Tween 80 and ether a 4- to 8-fold increase in haemaggltn. titre was obtained with virus material grown in human embryonic cell line (Lu 106) and an 8- to 16-fold increase when grown in dog kidney tissue culture. We haemaggltn. titres obtained with 2 unconc. materials of 1:1024 and 1:4096. Serum titres greater by a factor of 16 were obtained when Tween/ether treated virus was substituted for untreated material as Ag in HI tests.
M.M.Shapland

3868. PATHOGENICITY OF LYMPHOCYTIC CHOROMENINGITIS VIRUS. III. AN INFLAMMATORY REACTION READILY VISIBLE. THE VIRAL OEDEMA ON THE HIND LEG OF A MOUSE. J.Roger: Ann. Inst. Pasteur, 1963, 104, 347-360 (Inst. Pasteur, Paris, France) s.c. injn. of the virus into foot of 11 g. albinomouse produced a local delayed response similar to those described in guinea-pigs and rabbits. A red oedema which was readily visible was produced within about 5 days. In 75% of animals this was accompanied by a temporary illness. In other animals there was a severe disease appearing at about 12th day which led to acute phase

and death within 3 to 5 days, or a chronic phase lasting 40-50 days. S.c. injn. into foot gave highest survival rate as compared with other routes of injn. and is the only method giving a local reaction readily visible to naked eye. (French)
B.Payne

3869. NEUTRALISATION OF VISNA VIRUS BY HUMAN SERA. H.Iltiormar and H. von Magnus: Acta path. microbiol. scand., 1963, 57, 261-267 (Enterovirus Dept., Statens Seruminst., Copenhagen, Denmark)

The majority of human sera studied in neutralisation tests against visna virus contained substances which neutralised the virus: one substance was inactivated by heating to 56° for 30 min. and another was not affected by this heating. The latter substance was most easily detected after incubation with virus at 37° for 18 hr. It was found as often in sera from normal blood donors as in sera from patients with multiple sclerosis. The heat-stable substance probably is a non-sp. inhibitor of visna virus.

L.Friedmann

3870. SECONDARY STRUCTURE OF REOVIRUS RNA. P.J. Gomatos and L.Tamm: Proc. nat. Acad. Sci., Wash., 1963, 49, 707-714 (Rockefeller Inst., New York, N.Y., U.S.A.) Reovirus contains a larger complement of genetic material than is present in any other RNA virus thus far studied, be it bacterial, plant, or animal. The RNA of reovirus has a no. of characteristics usually associated with DNA, its base ratios are complementary and it behaves as if it were double-stranded. If it is indeed double-stranded, then reovirus nucleic acid is the first RNA to be found in nature having this unusual structure. The RNA of wound tumour virus appears to have a similar structure.
J.R.Sargent

3871. HISTOLOGICAL OBSERVATIONS ON EXPERIMENTAL SCRAPIE IN MOUSE. I.H.Pattison and K.Smith: Res. vet. Sci., 1963, 4, 269-275 (A.R.C. Field Stn., Compton, Berks., England) Single sagittal sections of brain, stained with Haematoxylin and Eosin, were examined from 168 mice which were inoc. with scrapie mouse brain and killed at intervals. The lesions were extracellular vacuolation in the grey and white matter of the brain, and neuronal vacuolation in the cerebral cortex. Histol. lesions preceded clinical symptoms, and the incubation period correlated with the titre of inoculum used.
J.B.Derbyshire

3872. EXPERIMENTAL SCRAPIE IN MOUSE. R.J.L.Chandlen Res. vet. Sci., 1963, 4, 276-285 (A.R.C. Field Stn., Compton, Berks., England) Mice inoc. intracerebrally or i.p. with brain suspension from goats affected with scrapie developed nervous symptoms, and vacuolation and astrocytosis occurred in the c.n.s. This disease was passaged in mice with various tissues inoc. by various routes. The agent was filterable and resisted boiling for 30 min. Scrapie developed in goats which were inoc. with mouse brain material, and the disease was considered to be a form of expt. scrapie in the mouse. J.B.Derbyshire

3873. PREPARATIVE ULTRACENTRIFUGATION OF FOOT-AND-MOUTH DISEASE VIRUS THROUGH IMMISCIBLE FLUID INTERFACES INTO A CAESIUM CHLORIDE DENSITY GRADIENT. R.Trautman, S.S.Breese jun. and H.X.Bachrach: J. phys. Chem., 1962, 66, 1976-1983 (Plum Island Animal Dis. Lab., Agric. Res. Serv., U.S.D.A., Greenport, L.I., N.Y., U.S.A.) Foot-and-mouth disease virus has been purified by a simple technique of layering on to a tube containing CsCl isodense with the virus and also an immiscible org. layer of lower density

MICROBIOLOGY

than the virus particles and of higher density than the contaminating proteins. Removal of tissue particles of similar size and density was achieved and satisfactory electron micrographs were obtained of the virus particles.

3874. EFFECT OF VARIOUS INACTIVATING AGENTS ON VIRAL AND RNA INFECTIVITIES OF FOOT-AND-MOUTH DISEASE VIRUS AND ON ITS ATTACHMENT TO SUSCEPTIBLE CELLS. F.Brown, B.Cartwright and D.L.Stewart. J. gen. Microbiol., 1963, 31, 179-180 (Res. Inst., Anim. Virus Dis., Pirbright, Surrey, England)

The seiol. prop. of foot-and-mouth virus partially inactivated by various methods were studied, their RNA content determined by phenol extraction and ability to attach to susceptible cultivated pig kidney cells examined. Decrease in infectivity from formaldehyde or acetylethyleneamine, u.v. treatment or heat at 25° or 37° was proportional to loss of infective RNA, but loss of activity on mixing with antiserum trypsin or cell extracts was due to failure of virus to attach to susceptible cells.

K.Brew

3875. CINEMATOGRAPHIC STUDY OF CYTOPATHOGENIC EFFECTS PRODUCED BY RUBARTH VIRUS IN SPECIAL CELL MICROCUltURES. P. de Fonbrune and P.Reculard: Ann. Inst. Pasteur, 1963, 104, 335-346 (Inst. Pasteur, Annexe de Garches (S.-et.-O.), France)

A technique is described for culture and photography of epithelial dog kidney cells over a period of more than 200 hr. The cytopathogenic effects of Rubarth virus on these cultures was studied. After 20 hr. the cells showed lesions extending through the culture plaque, consisting of nuclear transformations, followed by cytoplasmic retraction. The culture was totally destroyed after 115-147 hr.

(French) B.Payne

3876. FLUORESCENT ANTIBODY STUDY ON THE FORMATION OF SIMIAN VIRUS 40 [SV40] IN MONKEY KIDNEY CELLS. H.Diderholm: Acta path. microbiol. scand., 1963, 57, 348-352 (Inst. Virol., Univ. Uppsala, Sweden)

The indirect fluorescent Ab technique was used to study the formation of SV40 in kidney cell cultures of the African green monkey. A few nuclei contained sp. fluorescent material 2 days after infection. During the next 3 days more nuclei were affected and the intensity of the fluorescence increased. Thereafter a sp. cytoplasmic fluorescence developed and increased with time, while the nuclear fluorescence decreased or completely disappeared.

L.Friedmann

3877. MORPHOLOGICAL AND VIROLOGICAL INVESTIGATION OF HUMAN TISSUE CULTURES TRANSFORMED WITH SIMIAN VIRUS 40 [SV40]. J.Pontí, F.Jensen and H.Koprowski; J. cell. comp. Physiol., 1963, 61, 145-164 (Wistar Inst., Philadelphia, Pa., U.S.A.)

Infection of human organ cultures and monolayers of human diploid fibroblasts by SV40 resulted in cytopathic changes within 2 to 4 weeks followed by disorganized multilayer growth, increased mitotic activity, loss of mitotic inhibn. and gradual replacement of fibroblasts by foci of epithelial-like cells. Clones derived from the epithelioid cells released virus while fibroblasts did not. The SV40 Ag was localised by immunofluorescence in the nuclei.

G.M.Lewis

3878. PERSISTENT INFECTION OF HUMAN CARCINOMA AND PRIMARY CHICK EMBRYO CELL CULTURES WITH SIMIAN VIRUS 40 [SV40]. B.Eddy, G.E.Grubbs and R.D.Young: Proc. Soc. exp. Biol., N.Y., 1962, 111, 718-722 (Div.Biol. Standards, N.I.H., Bethesda, Md.,

U.S.A.) Continued multiplication of SV40 was observed in HeLa cells for approx. 8 month*and in HEp-2 cells for a period of 6 months. Concn. of virus in culture fluids was high and neoplasms were induced in hamsters by 2 such fluids. SV40 was also shed into the fluid of chick embryo cultures kept for 6 months but concn. was low and neoplasms were not induced in hamsters inj. with fluid from 91 day old infected cultures. M.M.Shapland

3879. MORPHOLOGY AND DISTRIBUTION OF SV40-INFECTED CELLS IN HUMAN, SIMIAN AND HAMSTER RENAL CELL CULTURE AS DETECTED BY IMMUNOFLUORESCENCE. J.D.Levinthal and H.M.Schein: Proc. Soc. exp. Biol., N.Y., 1963, 112, 405-409 (Dept. Bacteriol. and Immunol., Children's Hosp. Med. Cente Harvard Med. Sch., Boston, Mass., U.S.A.) Simian virus 40 infected into a variety of cell lines maintained if culture showed by immunofluorescence a staining of the viral Ag in the nucleus and more precisely in the nucleolus of the cells. A correlation is believed to have been shown between the intensity of staining and the infectivity.

D.N.Wheatley

3880. VARIATION IN INTERFERON PRODUCTION BY POLYOMA VIRUS STRAINS OF DIFFERING ONCOGENIC CITY. R.M.Friedman, A.S.Rabson and W.R.Kirkhairst: Proc. Soc. exp. Biol., N.Y., 1963, 112, 347-349 (Pa.* Anat. Branch, Nat. Cancer Inst., N.I.H., Bethesda, Md. U.S.A.) Two variants of polyoma virus (S and M)

were compared with regard to their production of interferon in mouse embryo fibroblasts. Hie M strain was m^on^o effective. It is suggested that interferon may not be directly related to oncogenicity but a low interferon titre may explain a greater plaque size from oncogenic variants as compared with non-oncogenic variants.

D.N.Wheatley

3881. METABOLISM OF MOUSE EMBRYO CELLS GROWN IN VITRO AND INFECTED WITH THE ONCOGENIC VIRUS SE POLYOMA. M.Gumińska, B.Skarzinski and Z.Porwit-Babc: Acta biochim. pol., 1963, 10, 163-171 (Dept. Physiol. Chern., Med. Sch., Kraków, Poland)

The infected cells displayed diminished O₂ uptake, incieased aerobic glycolysis and incieased Crabtree effect. Release of virus into the medium was precede by reduction of O₂ uptake, observed after 24 hr. The lowest O₂ uptake on the 6th day was simult. with max. release of virus and with appearance of cytopathic change. In surviving cells (on the 9th day) O₂ consumption was greater than during the cytopathic process.

M.Korbeck*

3882. TRANSMISSION OF NUCLEAR-POLYHEDROSIS VIRUS IN LABORATORY POPULATIONS OF TRICHOPLUSIA NI (HUBNER). R.P.Jaques: J. insect Path.. 1962, 4, 433-445 (Res. Stn., Canada Dept. Agric* ^A Kentville, N.S., Canada)

T. ni larvae infected w[^] nuclear polyhedrosis transmitted the virus to healthy i[^]j[^]v[^]viduals with which they were -ssociated prior to death*. It would appear that much of the virus dispersed by in[^]fed larvae was transferred as external contamination ft[^]m¹the deposit of polyhedra upon which the larvae had fed and was not released from infected tissues of the live u[^]larvae. Group*infected larvae transmitted the w[^]to more members of the population and contaminated food more extensively than did individually infected... larvae. Excrement from infected larvae was not higiv infectious.

R.J.Walker

3883. CAUSATIVE AGENT AND HETOPATHOLOG^{tf}* A VIRUS DISEASE OF THE WESTERN OAK LOOPER*

OJSLMORRIS: J. insect Path., 1962, 4, 446-453 (Forest Entom. and Path. Lab., Dept. Forestry, Victoria, B.C., Canada) The causative agent of the nuclear polyhedrosis of Lambdina fiscellaria sqnniaria was studied D^{or}phol. and chem. The histopathology of the disease was followed in a series of larvae examined at 24 hr. intervals. The average diam. of the polyhedra was 1⁵ fi. The average size of die virus rods was 332 mji by 62 mp, < virus making up about 5³% of the total mass of the Polyhedron. The DNA content of the virus particles was approx. 7-9%. 6-7 days after the infection, the fat-body nucleus showed an increase in size, while some nuclei disrupted, liberating the polyhedra. Considerable packaging and retraction of the hypodermis from the uticle occurred, and numerous bodies resembling uric acid crystals in shape accumulated in all the infected tissues save blood cells. On the 8th to 9th day of infection, breakdown of fat-body and hypodermal cytoplasm occurred. Death took place on the 9th day.

R.J. Walker

3884. MULTIPLICATION OF NUCLEAR AND CYTO-LASMIC POLYHEDROSIS VIRUSES IN STARVED LARVAE OF THE SILKWORM, BOMBYX MORI (LINNAEUS). A.i.zawa and Y.Furuta: J. insect Path., 1962, 4, 465-468 (Sericul. Expt. Stn., Suginami-ku, Tokyo, Japan) After centrifugation, the supernatant of the haemolymph from infected larvae of B. mori was inj. into the haemo-coel of 5th-instar larvae which were kept at 25° unfed. The virus titre was determined at various intervals. When 24 hr. all amount was in increased phase began about Ph. Mowing the inj. and turned into a stationary coils after a W^{10K} 72 h*. The formation of polyhedra can be observed in the blood corpuscles after 96 hr. In the stationary Phase, the titre was nearly the same in few larvae as in fed larvae. There were generally fewer cytoplasmic polyhedra formed in starved larvae than those normally fed. T¹⁶ means size of the polyhedra from the starved larvae was generally smaller than the normally fed ones. R.J.Walker

3885. INDUCTION OF BACTERIOPHAGE FORMATION IN LYSOGENIC BACTERIA BY A POTENT CARCINOGEN, 4-NITROQUINOLINE 1-OXIDE, AND ITS DERIVATIVES. H.Endo, M.Ishizawa and T.Kamiya: Nature, Lond., 1963, 198, 195-196 (Div.Chem., Cancer Res. Inst., Kyus Univ., Fukuoka, Japan) Aplete coincidence was observed between the carcinogenicity and the ability to induce phage in E. coli K 12 among the deriv. and related compounds of 4-nitroquinoline 1-oxide. C.M.Lewis

3886. BACTERIOPHAGE AND BACTERIOCIN SYNTHESIS BY SPHEROPLASTS OBAINED BY MEANS OF LEDERBERG TECHNIQUE. THE ROLE OF PENICILLIN. J.Franon and Y.Peron: Ann. Inst. Pasteur, 1963, 104, 361-370 (Inst. Pasteur, Serv. Bacteriophages, Paris, France) Using Lederberg** technique bacteriophage developed and colicin synthesis by spheroplasts were max. only in absence of penicillin and if spheroplasts were treated to 1:100. Virulent bacteriophages showed different sensitivities to penicillin during spheroplast development. E. coli phages T1, T2 and T6 were blocked but T5 propagated well. Colicin titre of spheroplasts from 153, TR15 and TR21 after 10⁶ U/ml penicillin and increase in presence of 1000 U/ml penicillin. Impotent increase in presence of 10⁶ U/ml - irradiation of spheroplasts from strain P. rettgeri of 1⁰ U/ml. penicillin initiated synthesis of lysogenic power but apparently synthesis of

certain bacteriophage proteins cannot occur. Penicillin prevented transfer from prophage to RNA. (French)

B.Payne

3887. INFECTION OF E. COLI WITH LAMBDA (X,2> PHAGE AND THE ESTABLISHMENT OF LYSOGENY. B.A.Fry: J. gen. Microbiol., 1963, 31, 297-309 (Dept. Microbiol., Univ. Sheffield, England) Infection of E. coli by phage X 22 in 0.02M Sr, Ca or Mn occurred as readily as in 0.02M Mg and response in Sr, Ca and Mg was predominantly lysogenic. In optimal conditions with Mn, at least 25% of infected bacteria gave the lytic response. On transference of newly infected bacteria to a growth medium, a lapse of 40 min. occurred before the prophage could be detected. 100 min. period was required before all the bacteria giving the lysogenic response could be induced by u.v. radiation. K.Brew

3888. STRUCTURE OF COLIPHAGES. D.E.Bradley: J. gen. Microbiol., 1963, 31, 435-446 (Zool. Dept., Univ. Edinburgh, Scotland) The detailed morphology of several new coliphages is compared with the more familiar types. An examination at mol. level of the T even' phage tail structure makes it possible to propose the mol. packing changes accompanying sheath contraction. Phage T3 is shown to have an octahedral head and a new phage with octahedral head and contractile tail is described. The structure of pR (a epx 174 type phage) is revealed by E.M. K.Brew

3889. PHENOCOPY OF RESISTANCE OF PHAGE W IN BACILLUS ANTHRACIS. G.Ivánovics and J.Lantos: Acta microbiol. Acad. Sci. hung., 1962, 9, 237-246 (Inst. Microbiol., Univ. Med. Sch., Szeged, Hungary) Infection and lysis of capsulogenic and non-capsulogenic strains of B. anthracis by mutants of phage W were followed by a secondary growth and sporulation of the surviving bacteria. The vegetative population appeared to be resistant to the homologous phage but colonies grown from the spores were found to be highly sensitive. The temporary loss of the sp. receptor to phage W appears to be a phenocopy of phage resistance. S.Igali

3890. TRANSDUCING PHAGES FOR BACILLUS SUBTILIS. I.Takahashi: J. gen. Microbiol., 1963, 31, 211-217 (Microbiol. Res. Inst., Re. Branch, Canada Dept. Agric., Ottawa, Canada) Transducing phage PBS1 and a clear-plaque type mutant PBS2 derived from PBS1 show similar growth characteristics and are related serol. The phages are moiphob. indistinguishable, but PBS1 is more efficient in transduction and its plaque-forming activity more sensitive to u.v. irradiation than PBS2. The host range of phages is limited to B. subtilis strains and all Marburg strains tested were sensitive to the lytic action of the phages. Prophages of P3S1 and PBS2 were not u.v. inducible. Organisms lysogenic for PBS1 and PBS2 were not stable and reverted to the sensitive state. K.Brew

3891. LYSOGENY IN PROTEUS RETTGERI AND THE HOST-RANGE OF P. RETTGERI AND P.HAUSERI BACTERIOPHAGES. LN.Coetze: J. gen. Microbiol., 1963, 31, 219-229 (Dept. Microbiol., Univ. Pretoria, S. Africa) 22 different phage types of P. rettgeri were investigated by lysogeny by growing strains singly, in mixtures and by u.v. induction. Five strains were lysogenic for other members of the group. 18 different lytic phages were isolated from sewage with action on one or more of the strains, and the host range of all 23 phages tested against a no. of P. hauseri, P.morganii, Providence and other intestinal organisms. The results indicate close ties between

MICROBIOLOGY

the P.hauseri and P.rettgeri groups and between P.rettgeri and the Providence strains. "XBrew"

3892. PHYSICOCHEMICAL PROPERTIES OF PHAGES FOR AGROBACTERIUM RADIOBACTER. E.B.Roslycky, O.N. Allen and E.McCoy: Canad. J. Microbiol., 1963, 9, 199-209 (Univ. Wisconsin. Madison, Wis., U.S.A.)

Four selected phages for A.radiobacter were examined for plaque characteristics, morphology in die E.M., sensitivity to u.v. irradiation, thermal inactivation and its protection by cations. S.LJioare

3893. TRANSFER OF VIRUS BY A DIRECT LEAF-TO-LEAF METHOD. H.JH.Murakishi: Nature, Land., 1963, 198, 312-313 (Dept. Bot., Michigan State Univ., East Lansing, Mich., U.S.A.) A technique for transfer of plant virus by gently nibbing a young leaf face to face on a Carborundum-dusted leaf of the indicator plant gives results as sensitive as the leaf-disc method and generally superior to the juice inocn. technique. The method was tested using tobacco mosaic, cucumber mosaic, potato virus X and tobacco severe etch viruses. G.M.Lewis

3894. BEHAVIOUR OF SUSPENSIONS OF TURNIP YELLOW MOSAIC VIRUS [TYMV]. STUDY OF THE DIFFUSION OF LIGHT. C'Strazielle, P.Jiorn and L.Jiirth C.R. Acad. Sci., Pads, 1962, 255, 418-420 (Centre Rech. Macromol., Centre de Rech. Nucleaires, Strasbourg, France) RNA from TYMV suspended in a versene buffer instead of a phosphate buffer suffered fragmentations as shown by an immediate decrease in sedimentation const. and a further slow decrease to a limit. The ratio of the mol. wt. to the square root of the radius of rotation also decreased, indicating a change in configuration. Addition of Mg increased the final mol. wt. TMV does not react similarly. TYMV may consist of sub-units linked by heavy ions e.g. Mg or removal of the heavy ions could activate an enzyme present in the suspension. (French) S^A.Thistlewood

3895. CLOVER PHYLLODY AND STRAWBERRY GREEN PETAL DISEASES, CAUSED BY THE SAME VIRUS IN EASTERN CANADA. L.N.Chiykowski: Canad. J. Bot., 1962, 40, 1615-1617 (Plant Res. Inst., Res. Branch, Canada Dept. Agric, Ottawa, Qnt., Canada) Expt. were carried out to determine the relationship between clover phyllody and strawberry green petal diseases in Eastern Canada. The results, based on leafupper transmission and symptomatology indicated that clover phyllody and strawberry green petal diseases in Eastern Canada are caused by the same virus. The virus is transmissible from clover to strawberry and from strawberry to clover by Aphrodes bicinctus and Macrosteles fascifrons. A.Meany

3896. RESISTANCE OF CRYPTOCOCCUS NEOFORMANS TO DESICCATION AND HIGH TEMPERATURES. F. Staik Arch. Mikrobiol., 1963, 44, 323-333 (Inst. Hyg. und Mikrobiol., Univ. Wuczburg, Germany)

Cultures of C.neoformans from canary excreta remained viable in dry river sand and garden soil for 480 days. Desiccated cells showed remarkable heat tolerance.

viable cells being present after exposure at. 80° for 24 hr., 100° for 3 hr. and 12(f for 1 hr. Undried Cells showed no heat tolerance. (German) E.M.Iing

3897. MYCOTIC INFECTIONS OF ANIMALS TRANSMISIBLE TO MAN. H.CRowsell: Amer. J. med. Sci., 1963, 245, 333-344 pept. Physiol. Sci., Ontario Vet. Coll., Guelph, Ont., Canada) Review. 153 ref. E.E.Hobbiger

3898. ULTRA-VIOLET MICROSCOPY OF BUDDING SACCHAROMYCES. D.O.McClary, W.J.XBowers jun. and G.R.Millen J. Bact., 1962, 83, 276-283 (Biol. Res. Lab., S. Illinois Univ., Carbondale, Ill., U.S.A.)

Synchronous cell division was obtained in Saccharomyces by transferring starved cells into nutrient medium. U.v. microscopy and Giemsa stained prep* of these cells showed nuclear division to occur in the mother cell early in the budding process. The divided nucleus passed into the neck between the mother cell and the bud and either fused together again or the 2 parts became so closely associated that one continuous dumb-bell shaped body was seen which seemed to divide by constriction. This effect was probably due to retention of the intact nuclear membrane until nuclear division was otherwise complete*. The nuclear apparatus lies outside the vacuole. These techniques cannot be used to determine the extent to which these 2 bodies function together. C.Toothill

3899. DETERMINATION BY AMMONIUM OF THE MANNER OF YEAST NUCLEAR DIVISION. J.J.MiUer: Nature, Lond., 1963, 198, 214-215 (Dept. Biol., Hamilton Coll., McMaster Univ., Hamilton, Ont., Canada) Active vegetative growth with little sporulation occurred in cultures of S.cerevisiae on a medium containing acetate, salts-vitamins and ammonium sulphate. Omission of the ammonium sulphate induced meiosis in more than half the cells. Further work has shown that both C and N sources are involved in inhibn. of sporulation. G.M.Lewis

3900. UPTAKE OF SOME SULPHUR-CONTAINING AMINO ACIDS BY A BREWERS' YEAST. G.A.Maw: J. gen. Microbiol., 1963, 31, 247-259 (A.Guinness Son and Co., Ltd., Dublin, Eire) A study of the accumulation by brewers' yeast of six [35]labelled S containing amino acids was carried out and the patterns of uptake described. Accumulation of S containing amino acids was inhib. by certain other amino acids with a close structural relationship to them and when present in high concn. Reduced glutathione enhanced cysteine uptake*. These effects were shown to be primarily changes in the transport of sulphur amino acids into die yeast although subsequent incorporation into protein may also be affect[©]. K.Brew

3901. METABOLISM OF YEAST SPORULATION. V. STIMULATION AND INHIBITION OF SPORULATION AND GROWTH BY NITROGEN COMPOUNDS. J.J.Mu^{let} Canad. J. Microbiol., 1963, 9, 259-277 (Dept. Biol., Hamilton Coll., McMaster Univ., Hamilton, Ont., Canada) The effects of a variety of N compound*, mainly amino acids, on ascus production by S.ceiexjs2z in sporulation media containing several C sources were[^] compared. A sporulation medium is recommended containing 0.02M dihydroxyacetone and 0.01M lysine. SL Hop

3904. RHODOTORULA NITENS SP. NOV. ISOLATED FROM THE ATMOSPHERE. D.W.R.Mackenzie and B.J. Aurora: J. gen. Microbiol., 1963, 31, 171-177 (Dept. of Microbiol., Queen's Univ., Belfast, Ireland) A new species Rhodotorula was isolated from the atm. in Edinburgh. Characteristics of this new yeast are described. A kmin * P^{sent} and the sp. has a predilection for low KBrew

3905. E.M. * RHODOTORULA GLUTINIS. T.R.Tliyargha, S.F.-Conti and H.B.Naylor: J. Bact., 1962, 83, 38-44 (Dept. Microbiol., Dartmouth Med. Sch., New Haven, Conn., U.S.A.) E.M. studies of R. glutinis by a [^] the nucleus is spherical to oval and is bounded as numerous membrane. Intranuclear structures identified. The inner membrane persists throughout the various stages of elongation and constriction. The fine structure of mitochondria and other components of the yeast cell and their behaviour during cell division are described. The vacuole is absent in actively dividing cells of R. glutinis. C.Toothill

3906. SLOOFFIA N. SP. E.K.Novák and Feucai: Acta microbiol. Acad. Sci. hung., 1963, 14, 261-263 (State Inst. Hyg., Budapest, Hungary) A new sp. "R. slooffii" was isolated from a laryngeal Swab sao. It multiplies only with budding, produces a carotenoid pigment, assimilates sucrose, lactose, galactose and glucose but not maltose, raffinose and starch. It does not utilise KNQ3, does not produce spUts arbutin. SJGau

- 3907. NUTRITIONAL STUDIES ON THE YEAST PHASE OF BLASTOMYCES DERMA TITIDIS AND B. BRASILIENSIS, CLGildardi and N.C.Laffer: J. Bact., 1962, 83, 219-227 (Dept. Microbiol., Univ. Maryland.**

College Park, Md., U.S.A.) The nutritional characteristics of the yeast phase of 22 cultures (9 of B.brasiliensis and 13 of B. dermatitidis) were studied to determine whether these might aid classification. Quiescent, agar slant and shake cultures were used. Both spp. synthesised their own vitamins, utilised the same 21 C and 25 N substrates when these were the sole source of the respective element, and produced their most luxuriant growth in shake cultures in the presence of either ammonium salts or org. N. S-containing compounds, reducing agents and Tween 80 retarded or inhibit, growth; the conversion to the mould phase at 35° occurred in the presence of tyrosine. No difference was detected between the 2 spp.

3908. DEVELOPMENT OF COREMIA. H. PENICILLIUM ISARIIFORME. MJ.Carlile, J.S.W.Dickens, E.M.Mor-due and M.A.A.Schipper: m. P. CLAVIGERUM, WITH SOME OBSERVATIONS ON P. EXPANSUM AND P. ITALICUM. MJ.Carlile, J.S.W.Dickens and M.A.A. Schipper: Trans. Brit. Mycol. Soc., 1962, 45, 457-461, 462-464 (Bot. Dept., Univ. Coll., Ibadan, Nigeria)

n. light is required for the initiation and development of coremia and spores by P. isariiforme. The coremia are positively phototropic and are not affected by gravity,
m. Lfeht has no effect on the coremia of P. clavigerum and P. italicum. The hyphae of P. expansum are positively phototropic. di ide

3909. ADAPTIVE METABOLISM OF D-GALACTOSE IN ASPERGILLUS NIDULANS. C.F.Roberts: J. gen. Microp. biol., 1963, 31, 285-295 (Microbiol. Unit, Dept. Bio-chem., Univ. Oxford, England) Methods are described for growth of A. nidulans in submerged culture. In intact organisms, D-galactose was oxidised by an inducible enzyme system and D-fucose was a poor inducer of this system. Mutants isolated by their failure to grow on galactose as sole C source were defective in die oxidation of galactose.

K.Brew

3910. MECHANISM OF ACTION OF AN INFECTIVE DOSE OF BOTRYTIS SPORES ON BEAN LEAVES. R.L.Wastie: Trans. Brit. Mycol. Soc, 1962, 45, 465-473 (Bot. Sch., Univ. Cambridge, England) The no. of spores required to bring about the development of one or more lesions on the leaves of broad bean plants in 50% of the total no. of unit leaf areas inoc. was 4 in the case of B. fabae and 500 in the case of B. cinerea. The lower infectivity of the individual spores of B. cinerea might be associated with their small size.

D.Hide

3911. DISPERSAL OF SPORES OF BOTRYTIS CINerea IN RASPBERRY PLANTATION. W.R.Jarvis: Trans. Brit. Mycol. Soc., 1962, 45, 549-559 (Scottish Hordcult. Res. Inst., Invergowrie, Dundee, Scotland) The dispersal of spores of B. cinerea in a raspberry plantation was studied using an automatic volumetric spore trap. Max. airborne spore concn. occurs when the R.H. is in die region of 65-85%. D.Hide

3912. GROWTH AND SPORULATION OF FUSARIUM UDUM IN RELATION TO C/N RATIO AND NITROGEN SOURCES. H.CShanna: Physiol. Plant., 1963, 16, 276-280 (Dept. Bot., Univ. Rajasthan, Jodhpur, India) The N source (nitrate, NH₄ or org. N) was more important than the C/N ratio in the control of growth and

MICROBIOLOGY

sporulation. KNO_3 and asparagine gave optimal growth and sporulation. Drifts in pH of the medium were governed by N-source. The extent of growth and sporulation varied with N level.

I.D.J.Phillips

3913. INFLUENCE OF OXYGEN UPON GROWTH AND RESPIRATORY BEHAVIOUR OF FUNGI FROM DECOMPOSING RYE-GRASS ROOTS. J.S.Waid: *Trans. Brit. Mycol. Soc.*, 1962, 45, 479-487 (Bot. Dept., Univ.

New England, Armidale, N.S.W., Australia) Fungi isolated from the inner cortex of decomposing rye-grass roots were more tolerant of low O_2 concn. than those isolated from the outer cortex and root surfaces. The R.Q. of fungi isolated from the inner cortex were lower in reduced O_2 concn. than those of fungi isolated from the outer cortex and root surfaces.

3914. INTRACELLULAR POLYPHENYLOXIDASES OF BROWN-ROT FUNGI, in. COMPARATIVE INVESTIGATIONS WITH MERULIUS LACRYMANS (WULF.) SCHUM EX FRIES, M. SILVESTER FALK AND CONIOPHORA CEREBELLA (PERS) DUBY. R.Rosch: *Arch. Mikrobiol.*, 1963, 44, 344-351 (Bot. Inst., Techn. Hochschule, Karlsruhe, Germany) The same polyphenyloxidase is active in all 3 fungi at optimum pH 3.0-4.0. Substrate specificity and pH optima exclude tyrosinase action. No definite physiol. differences between *M.lacrymans* and *M.Silvester* could be established by these and previous investigations. (German) E.M.Ling

3915. PRECIPITATION AND KINETICS OF FUNGAL CELLULASES. E.E.M.Taha and A.A.Abuzied: *Arch. Mikrobiol.*, 1963, 44, 366-372 (Microbiol. and Enzyme Res. Unit, Nat. Res. Centre, Cairo, U.A.R.) Acetone was the most suitable precipitant for cellulases of *Penicillium oxalicum* and *Helminthosporium cyclops*. Both cellulases were most active at 40° at pH 4.5. Cellulolytic activity increased to a max. after 30 min.

E.M.Ling

3916. SINGLE MITOCHONDRIA, FINE STRUCTURE AND GERMINATION OF THE SPORE OF BLASTOCLADIUM EMERSONII. E.C.Cantino, J.S.Lovett, L.V.Leak and J. Lythgoe: *J. gen. Microbiol.*, 1963, 31, 393-404 (Dept. Bot. and Plant Pathol., Michigan State Univ., East Lansing, Mich., U.S.A.) The fine structure of the motile spore of this water fungus is described. The spore contains a single mitochondrion and a single flagellum and a nuclear cap overlies the nucleus. The flagellum undergoes a series of characteristic movements before spore germination. The nuclear apparatus then rotates through 270° and the flagellum is retracted into the cell. Spore germination follows by formation of a germ tube, and the nuclear cap disintegrates.

3917. METHOD FOR INDUCING SPORULATION OF PURE CULTURES OF THE MYXOMYCETE PHYSARUM POLYCEPHALUM. J.W.Daniel and H.F.Russet: *J. Bact.*, 1962, 83, 234-240 (McArdle Mem. Lab., Univ. Wisconsin Med. Sch., Madison, Wis., U.S.A.) Small plasmodia grown in agitated culture were harvested, allowed to fuse into large plasmodia (1 $\frac{1}{2}$ g. wet wt. each) and, after incubation in the dark on a salts medium, exposed to light for 2 hr. The ensuing formation of sporangia containing spores was complete after 12-16 hr. The obligatory conditions for sporulation are: (1) an optimal growth age occurring just prior to the maximal growth of the organism and at a time when the nutrients in the medium are exhausted, (2) 4 days of incubation on a medium containing only inorg. salts and niacin or tryptophan, (3) subsequent

illumination with light of wavelengths between 350 and 500 m \AA .

3022. PATHOLOGY OF TOXOPLASMA INFECTION IN PREGNANT EWE. W.J.Hartley and J.C.KateP R.A. ve Sci., 1963, 4, 326-332 (Wallaceville A.R.S., Private Bag, Wellington, N.Zealand) Foetuses and foetal membranes from sheep expt. infected with *Toxoplasma* were examined. The lesions resembled those seen in similar material from field cases. In the foetus there was multiple focal necrosis of the central white matter of the cerebral hemispheres, with sometimes focal S ^{and} rarely clumps of *Toxoplasma*. Chronic focal in

sometimes occurred, in the liver* lung and heart. In the membranes there was focal necrosis in the foetal cotyledon, fifth hyperplasia and hypertrophy of the trophoblast Pithelium and occasional Toxoplasma clumps.

3923. B₁₂ VITAMINS AND GROWTH OF THE FLAGELLATE PRYMNESIUM PARVUM (CHRYSMONADINA). M.Rahat and K.Reich: J. gen. Microbiol., 1963, 31, 195-202 (Zool. Dept., Hebrew Univ., Jerusalem, Israel*) Vit[#] B₁₂ ** an essential nutrient for P.parvum. Growing in axenic culture and is replaceable only by a few complete analogues (devoid of one or both benzimidazole-methyl groups). Some substituted analogues can replace vit. B₁₂, but others (e.g. pseudovit. B₁₂, 2-methylmercaptoadenine, the ethylamide mono-acid, imidazole and anilide of vit. B₁₂) act as competitive inhibitors of the growth of P.parvum. K.Brew

3924. ROD-SHAPED PARTICLES IN SAPROSPIRA. R.J.Lewis: Nature, Lond., 1963, 198, 103-104 (Scripps Inst. Oceanography, Univ. California, La Jolla, Calif., U.S.A.) Large no. of rod-shaped particles, hollow rods or solid rods with tails, appear in natural lysates of Saprosira. The particles contain RNA and protein ratio 1:2 and have been termed ihapidosomes.

3925. METABOLISM CHANGES IN TETRAHYMENA PYRIFORMIS W ADAPTED TO POTASSIUM CYANIDE. B.W.Cashland and R.H.Steinacher: Proc. Soc. exp. Biol., 1962, 111, 789-793 (Dept. Zool., Univ. Neb., Neb., U.S.A.). KCN adapted T.pyriformis. After considerable alteration in glucose, acetate and elan metabolism. Total lipid metabolism is increased. Although adapted cells remove more amino acids from B₁₂ during growth, this is due more to increased oxidation. Methionine, proline, serine and valine oxidative activities are especially lowered, as is glucose oxidation. These changes show increase in auxin of Phalaenopsis isoleucine and threonine as well as methionine and

logarithmic growth phase. Cell litres in the max. stationary phase were approx. the same in all cultures.

S.L.Hoare

3927. METHICILLIN RESISTANCE IN STAPHYLOCOCCI. M.P.Jevons, A.W.Coe and M.T.Parker: Lancet, 1963, i, 904-907 (Cross-Infect. Res. Lab., Central Publ. Hlth. Lab., Colindale, London, England) 27479 cultures of Staphylococcus aureus sent to the Reference Laboratory in the 2 yr. from October, 1960, to September, 1962, were tested for sensitivity to methicillin. 102 were resistant.

CH.Bell

3928. INACTIVATION OF METHICILLIN, OXACILIN AND ANCILLIN BY STAPHYLOCOCCUS AUREUS. L.D. Sabath and M.Finland: Proc. Soc. exp. Biol., N.Y., 1962, 111, 547-550 (Thomdike Mem. Ub., Harvard Med. Sch., Boston, Mass., U.S.A.) The activity of the 3 penicillins decayed much more rapidly in a nutrient medium at 37° when exposed to a moderately heavy concn. of penicillinase-producing S.aureus than when incubated without these organisms.

M.M.Shapland

3929. EFFECT OF pH AND INORGANIC SALTS ON PENICILLINASE FORMATION BY STAPHYLOCOCCUS AUREUS. F.Leitner and S.Cohen: J. Bact., 1962, 83, 314-323 (Dept. Microbiol., M. Reese Hosp. and Med. Center, Chicago, Ill., U.S.A.) S.aureus strain S5-C-1 exhibited a progressive increase in penicillinase activity as the pH of its growth medium dropped from pH 6.0 to 4.7. At pH 4.7, the increase in enzymic activity was inhibited markedly by Ca and to a lesser extent by Mg and moderately by NaCl, KCl and NH₄Cl. Growth at the same pH in the presence of small concn. of Fe(NH₄)₂(SO₄)₂ (10⁻⁶ to 10⁻⁶M) elevated penicillinase activity greatly; this effect was also produced to a lesser extent by FeCl₃ and CoCl₂.

3933. PURIFICATION AND CHARACTERISATION OF CHICK EMBRYO INTERFERON. G.P.Lampson, A.A. Tytell, M.M.Nemes and Hilleman: Proc. Soc. exp. Biol., N.Y., 1963, 112, 468-478 (Div. Virus and Tissue Culture Res., Merck Inst. Therap. Res., West Point, Pa., U.S.A.) A description of the complete prep. of chick embryo interferon is presented. It involves die use of WS influenza virus infecting eggs. The purification begins with acid pptn. The supernatant is treated with Zn at pH 6*0. A no. of chromatographic separations, dialyses and zone electrophoreses finally yield a prep., with 4500-fold the original interferon activity. The prop. of this pure interferon show that it is a basic protein of fairly low mol. wt. The u.v. absorption spectrum has a max. at 278 m μ and a min. at 253 m μ . The N content was about 16%. Arginine and lysine contents were calc. The prep. was free from nucleic acid. It prevents infection of cells with Eastern equine encephalitis virus and acts as a prophylactic suppressing development of Rous virus induced tumours. It is effective as an inhibitor of Newcastle disease virus infection but these biol. prop. did not effect the energy-releasing mechanisms in a no. of different systems.
D.N.Wheatley

3934. EFFECT OF INTERFERON ON SYNTHESIS OF VIRAL RNA AND PLAQUE FORMATION. M.Ha Proc. Soc. exp. Biol., N.Y., 1963, 112, 511-515 (Dept. Med., Brooklyn Hosp., State Univ. New York Coll. Med., New York City, N.Y., U.S.A.) WS influenza virus-induced interferon was extracted and shown to inhib. Eastern equine encephalitis virus in a predictable fashion up to a certain concn. after which it has little effect on plaque formation. The reduction in viral RNA synthesis when interferon was present had no relationship with the viral replication inhibn. It is concluded that interferon does not necessarily act merely by suppressing viral RNA synthesis.
D.N.Wheatley

3935. ACCELERATION OF BACTERIAL DEATH BY GROWTH SUBSTRATES. J.R.Postgate and J.R.Huntec Nature, Lond., 1963, 198, 273 (Microbiol. Res. Estab., Pojton Down, Wilts., England) Bacterial growth was limited in a variety of spp. by omitting certain C, N or P substrates. Culture of such limited cells in non-nutritive buffer in the presence of the limiting substrate resulted in acceleration of death. This phenomenon, termed 'substrate-accelerated death*', occurred with C-, N- and P-limited populations but only partially with S-limited populations and not at all with Mg-limited populations.
J.R.Sargent

3936. FACTORS AFFECTING VIABILITY OF AIRBORNE BACTERIA. VII. RELATIONSHIP BETWEEN STRUCTURE OF CHEMICAL ADDITIVES AND THEIR ACTION ON AIRBORNE CELLS. SJ.Webb Canad. J. Biochem., 1963, 41, 867-873 (Dept. Bacteriol., Univ. Saskatchewan, Saskatoon, Sask., Canada) Survival of airborne cells was studied with respect to *Serrada marcescens*, prepared as an aerosol and mixed with various test chemicals to give a final concn. of chem. of 0.25% w/v in the spray suspension. From a study of several amino-hydroxy benzenes and pyrimidines it was found that the -OH group was largely responsible for the protectiveness or toxicity of an added compound and that this activity could be greatly modified by an -NH₂ group as well as the ring nucleus on which it is held. The R.H. determined the toxicity or protectiveness of a given compound.
J.B.Parish

3937. SERIOUS LIMITATIONS OF A PORTABLE ETHYLENE OXIDE STERILISER. J.T.Taguchi, P.Edmonds and G.A. Harmon: Amer. J. med. Sci., 1963, 245, 299-303 (Cardiol. Sect., V.A. Center, Dayton, Ohio, U.S.A.) Two existing models of portable ethylene oxide sterilisers were found unsatisfactory since ethylene oxide diffused too rapidly from the chambers.
E.E.Hobbiger

3938. ANTIBACTERIAL ACTION OF GLYCINE. R.V.John and A.D.Russell: I. Pharm., Lond., 1963, 15, 346-347 (Welsh Coll. Adv. Technol., Cardiff, Wales) Spheroplasts of *E.coli* can be produced.
J.M.Whitmarsh

3939. ANTI-STREPTOCOCAL ACTIVITY OF LACTOPEROXIDASE. in. CRJago and M.Morrison: Proc. exp. Biol., N.Y., 1962, 111, 585-588 (Dept. Biochem-Sch. Med. and Dent., Univ. Rochester, N.Y., U.S.A.) Streptococcal growth is inhib. by purified lactoperoxidase under aerobic but not under anaerobic conditions. The inhibitory activity of this enzyme is reversed by catalase or horse-radish peroxidase.
M.M.Shapland

3940. T1ON-SPECIFIC RESISTANCE OF THE ORGANISM AND MYXOVIRUS INHIBITORS (COMPARISON OF SCANTT-BACTERIAL AND ANTI-VIRAL MECHANISMS). L.Borecky, V.Rathova and O.Krizanova: Folia Mice biol., 1963, 8, 137-146 (Inst. Viiol., Czechoslovak Acad. Sci., Bratislava, Czechoslovakia) Classified t.i.on of myxovirus inhibitors present in sera and tissues & discussed. Similarities in the prop. of 3-inhibn. of influenza virus and of bactericidal Gram-neg. organisms are emphasised. Ab formed by rats immunised with influenza virus and reacting with r.b.c. sensitised with O or Vi A₈ salmonellae were found to be Ab against the hosts' tissue present in allantoic fluid.
J.R.Sargent

3941. INFLUENCE OF SOME METAL IONS AND pH ON & INACTIVATION OF VACCINIA VIRUS BY HEAT. C.Kaplan: J. gen. Microbiol., 1963, 31, 311-314 (Lister Inst. Plev. Med., Elstree, Herts., England) The addition of metal ions to the suspending medium of vaccinia virus prep. made them more resistant to heat. Monovalent metals were more effective than divalent, a mixture of the 2 kinds was the most effective. Virus infectivity was rapidly destroyed by heavy metals. The protective effect is probably due to the formation of metal-protein complexes with increased resistance to heat denaturation.
K.Bre

3942. ULTRAVIOLET SENSITIVITY OF FROZEN PHAGE. M.Levine and E.Cox: Radiat. Res., 1963, 18, 213-222 (Brookhaven Nat. Lab., Upton, N.Y., U.S.A.) The phage of *Salmonella typhimurium* was more sensitive to 2537 m μ u.v. when irradiated in frozen state at -80° than at room temp. The absence of this effect at 2894 m μ suggested that it was connected with DNA rather than protein of phage, and absence of the effect in glycerol suggested that the cryst. state of water played an important part.
B.Payne

3943. REPORT OF THE EUROPEAN MEETING ON THE MICROBIOLOGY OF IRRADIATED FOODS. PAR? 1960. Int. J. appl. Radiat., 1963, 14, 1-58 (Organised by Food and Agricultural Organisation of the United Nations) *Clostridium botulinum* is particularly resistant to irradiation and in hermetically sealed food packages where may occur irradiation required for safety renders most parts unpalatable. Irradiation at non-sterilising dose is to heat pasteurisation in destruction of sp. micro-org.

Irradiation induces mutations at an increased rate, and resistance to irradiation in some bacteria has been demonstrated; planning and control are necessary to minimise these hazards. *Salmonellae*, *staphylococci*, *enterococci* and *Candida* spp. may survive selectively in H_2O -sterilising treatments due to their greater resistance. The present indicator organism *E. coli* is more sensitive than several pathogens, and a new indicator is desirable, viruses in food constitute a special problem due to their resistance and reactivation and recombination potentials.

B.Payne

^{Q94} 3944. TRANSIENT SENSITIVITY OF INTRACELLULAR PSITTACOSIS VIRUS TO X-RAYS. M.Pollard, N. Sharon and W.R.Klemm: Nature, Lond., 1963, 198, 313-314 (Lobund Lab., Dept. Biol., Univ. Notre Dame, Ind., U.S.A.) Irradiation of turkey psittacosis virus with X-rays destroyed its infectivity when exposure was during the stage of replication of DNA. Irradiation of infected human synovial cells caused inactivation of 80-90% I^* toe virus during the initial 3-9 hr. Capacity of the host cell to support virus was not affected. G.M.Lewis

^{Q945} 3945. RESPIRATION OF yIRRADIATED BRUCELLA ABORTUS AND M. TUBERCULOSIS. TJH.Ahn, H.Nishihara, C.M.Carpenter and G.V.Tapliir Proc. Soc. exp. Biol., N.Y., 1962, 111, 771-773 (H.N.Falk Res. Lab., Univ. California Sch. Med., Los Angeles, Calif., U.S.A.) ^{Ca, M, of} ^{uVz} ^{uphilised} *B.abortus* 19 and *M. tuberculosis* ^{WTRY} exposed from 750000 to 800000 r failed to grow ^T ^A ^Y ^O ^A ^r ⁱ ^a ^t culture media, yet continued to respire at 40% to 50% of the rate of the non-irradiated cells.

SOIL MICROBIOLOGY

^{Q947} • SURVIVAL OF NITRIFYING BACTERIA IN SOIL. M.Garbosky and N.Giambiagi: Plant and Soil, 1962, 17, 271-278 (Direccion Invest. Forestales, Inst. Snelos, by Igrotechnia, Argentina) Nitrification as measured by survival of nitrifying bacteria was studied in 25 different soils, maintained in sterile flasks in darkness for 5 years. Temperature and joint action of Ca and K in adequate amounts were the most important factors governing survival. Mg^{++} , Cu^{++} , MB matter, org. N and pH of the soil did not influence the initial no. or survival of nitrifying bacteria. W.A.Stevens

^{Q948} 3948. AZOTOBACTER SPECIES IN SOIL. I. COMPARISON OF MEDIA AND TECHNIQUES FOR COUNTING AZOTOBACTER IN SOIL. E. POPULATIONS OF AZOTOBACTER IN THE RHIZOSPHERE AND EFFECTS OF ARTIFICIAL INOCULATIONS. M.E.Brown, SJOBurlingham and R.M.Jackson: Plant and Soil, 1962, 17, 309-319, 320-332. The highest counts of *Azotobacter* were obtained from soil suspensions shaken in sterile water containing 10 g/g glass beads and plated on to glucose agar. Mannitol enhanced lower counts than glucose, an effect enhanced by drying the agar blocks. A dear, pptd. phosphate and $CaCO_3$ free medium is recommended for the

agar plate method. The count is affected by phosphate concn. The diln. plate method is less accurate but more convenient than agar plates when soil samples have to be examined.

n. Rhizosphere effect is small and *Azotobacter* was often suppressed. Root washings indicated absence of cells from root surface. *Azotobacter* was absent from rhizosphere in acid soils. Soils of pH above 6.5 containing natural *Azotobacter* populations gave best inoc. results with seeds, roots and soils. Seed inocn. was the most practical and led to good establishment throughout the root system. Final population in the rhizosphere depended on size and age of initial inoculum and best results came from spraying seeds with 14-day old cultures and sowing seeds on the same day.

W.A.Stevens

^{Q949} 3949. ABSORPTION OF SODIUM BENTONITE PARTICLES ON BACILLUS SUBTILIS. N.Lahar. Plant and Soil, 1962, 17, 191-208 (Hebrew Univ., Fac. Agric., Rehovoth, Israel) Measurement was made of the electrophoretic mobility of *B. subtilis* under the influence of Na bentonite particles smaller than bacterial cells at different pH's and in various ionic strengths of NaCl and Na phosphate. The adsorption of the Na bentonite was measured quant. using a micro-electrophoretic method. Bacteria affected in electrophoretic mobility by Na bentonite were found in the same population as those not affected: they represent absorbing and non-absorbing groups of bacteria. Na bentonite absorption is reversible and influenced by pH and ionic strength. The mechanisms of adsorption are discussed.

W.A.Stevens

^{Q950} 3950. BIOCHEMICAL EXAMINATION OF RHIZOBIA STRAINS. E.Manningen Acta microbiol. Acad. Sci. hung., 1962, 9, 219-225 (Inst. Soil Res. Agrochem., Acad. Sci. Hung., Budapest, Hungary) 45 *Rhizobium* strains were divided into 3 groups on the basis of their biochem. reactions. Strains belonging to group A did not produce acid from sucrose, galactose, glucose, laevulose, raffinose, xylose and salicin. Strains B produced acid and gas from these substances and acid from aesculin. Group C strains formed only acid and did not split aesculin. Strains isolated from root nodules of one plant sp. could be included in different biochem. groups, therefore the classification of Rhizobia on an ecological basis is not justified.

^{Q951} 3951. MICROBIAL POPULATIONS OF WOODS. V. INFLUENCE OF SEVERAL SOURCES OF CARBON AND NITROGEN ON DECOMPOSITION OF SAWDUST. M.J.Mangenot and J.Reymond: Rev. gen. Bot., 1963, 70, 107-129. The competitive effects, of mainly *Trechispora* sp., but also *Stereum pugnireum* and *Sjogrenium*, *Peniophora incamata*, *Radula lcula* and *Tephritis mucida*, with the microbial population of various types of soil were studied using sterilised washed beech sawdust with soln. of glucose and asparagine, NH_4NO_3 gelatin and tannin-gelatin. (French) C.W.Mith

^{Q952} 3952. LYSIS OF SOIL FUNGI BY BACTERIA. R.Mitchell and M.Alexander Canad. J. Microbiol., 1963, 9, 169-177 (Lab. Soil Microbiol., Dept. Agron., Cornell Univ., Ithaca, N.Y., U.S.A.) A no. of bacteria able to lyse *Fusobacterium oxysporum* were isolated from soil. One of these, a strain of *Bacillus cereus*, was studied in detail. Living and dead *iusanum* mycelium as well as cell-wall prep. were digested. Chitin and the hyphae of a no. of other fungi also served as C sources for the active organisms. Lysis appeared to be associated with

MICROBIOLOGY

chitinase and laminarinase activity in *B. cereus*, but incubation of fungus mycelium with chitinase alone, or with chitinase with laminarinase, proteases and cellulase, did not result in lysis. N-Acetylhexosamine appeared during digestion*
 S.L.Hoare

3953. INFLUENCE OF SOIL AND ROOT EXTRACTS ON THE ASSOCIATIVE GROWTH OF SELECTED SOIL BACTERIA. E.C.S.Chan, H.Katzenelson and J.W.Roualt
 Canad. J. Microbiol., 1963, 9, 187-197 (Microbiol.
 Res. Inst., Canada Dept. Agric., Ottawa, Canada)
 Population changes of *Agrobacterium radiobacter*, *Arihrobacter citrous*, *Azotobacter chroococcum*, *Bacillus cereus* and a *Rseudomonas* sp. in pure and mixed culture were followed by plating on selective media (soil extract and root extracts of 2-, 4-, and 8-week old oats, soybeans and wheat).
 S.L.Hoare

3954. MICRO-ORGANISMS IN THE ROOT ZONE IN RELATION TO TEMPERATURE. J.W.Roualt, E.A.Peterson, H.Katzenelson and V.E.Henderson: Canad. J.

Microbiol., 1963, 9, 227-236 (Microbiol. Res. Inst., Dept. Agric, Ottawa, Canada) A study was made of the no. and kinds of micro-organisms in the root zone of wheat and soybeans grown in the greenhouse at 3 ranges of temp.: 55-60°, 70-75° and 85-9(f. The results suggest that temp. exerts a direct effect on the micro-organisms in the root zone and an indirect effect by influencing plant growth.
 S.L.Hoare

3955. POPULATIONS OF FUSARIUMOXYSPORUMF MELONIS AND THEIR RELATION TO THE WILT POTENTIAL OF TWO SOILS. R.N.Wensley and CD.McKeen:
 Canad. J. Microbiol., 1963, 9, 237-249 (Res. Stn., Canada Dept. Agric, Harrow, Ont., Canada) The relation of soil populations of the musk melon wilt fungus to the wilt potentials of a yellow Fox sandy loam soil and a dark Colwood loam was investigated. In either soil a direct relationship existed between the size of the population of the fungus and wilt incidence. With the same fungus population there was a greater incidence of wilt in the yellow Fox sandy loam.

ANTIBIOTICS AND CHEMOTHERAPY

³⁹⁵ 6. AMINOADIPYL PENICILLIN IN PENICILLIN FERMENTATIONS. M.Cole and F.R.Batchelor: Nature, Lond., 1963, 198, 383-384 (Beecham Res. Lab., Research Park, Betchworth, Surrey, England) Extracts of the mycelium of Penicillium chrysogenum were ground chromatographically and found to contain an acid-labile compound destroyed by penicillinase and signaled penicillin M. The production of penicillin M in ¹⁴C-tim¹⁴ by addition of DL-a-amino adipic acid to the thiomu¹⁴ Its prop# after Purification were very similar to cephalosporin N, and it is suggested that penicillin M is a¹⁴ amino adipylpenicillin with a side chain fission¹⁴ configuration, in contrast to cephalosporin with the D configuration. G.M.Lewis

³⁹ 57. ANTI-BIOTIC ACTION IN ADAPTATION. T.D.Luckey: Nature, Lond., 1963, 198, 263-265 wept, Biochem., Univ. Missouri Med. Center, Columbia, Mo., U.S.A.) The effect of penicillin, streptomycin, chloramphenicol and a¹⁴ C-mycin on heat stress in nematodes of Turbratrix was found to be inhibitory to heat survival at low concentrations stimulatory at higher concn. with 2 peaks of activity¹⁴ by a 2nd inhibitory zone. The result¹⁴ discussed in relation to theories of action of antibiotics. G.M.Lefkis

³⁹ 58. DETERMINATION OF EPITETRACYCLINE AND TETRACYCLINE BY ION-EXCHANGE PAPER CHROMATOGRAPHY AND ITS APPLICATION TO HUMAN URINE AND SERUM. E.Addison and R.G.Clark: J.Pharm., Lond., 1963, 15, 268-272 (Pfizer Ltd., Sandwich, Kent, Eng!) Whatman modified vitreous Phosphate cation-exchange paper is developed un 0.05% NH₄X soln. The spots are located under NH₄Cl¹⁴ solution, eluted in 10% NH₄Cl soln. Quantitative extinction measured at 356 mp. The method is direct for Urine and Qual. for serum, but is unsuitable for tetracycline or oxytetracycline. J.M.Whitmarsh

³⁹ 59. COMPARISON OF THE ACTION OF AUREOMYCIN AND MEXOCIN ON PROTEUS MIRABILIS. J.GuiUaume, R.Osteux, F.Wattel and F.Deschamps: C.R. Soc. Biol., Paris, 1962, 156, 1829-1832 (Inst. Pasteur, Lille, France) 100 fig./ml. mexocin or aureomycin decreased uptake by P. mirabilis in the absence¹⁴ of glucose, pyruvate, citrate and succinate. In presence¹⁴ of antibiotics, incubation of [14C]glucose with P. mirabilis resulted in the appearance of alanine, glutamate, malate and aspartate and later H₂O¹⁴ and fumarate. Addition of mexocin or aureomycin caused accumulation of pyruvic acid, acetic and citric acid. Traces of succinic, fumaric and malic acids were present but no citric acid was found.

³⁹ 60. EFFECT OF ORAL NEOMYCIN ON THE CONVERSION OF CHOLIC ACID TO DEOXYCHOLIC IN MAN. J.G.Hamilton: Arch. Biochem., 1963, 101, 7-13 (Dept. Biochem., Tulane Univ. Sch. Med., New Orleans, La., U.S.A.) Neomycin lowered serum cholesterol and increased faecal bile acid excretion. The formation of deoxycholic acid from cholic acid by intestinal bacteria was inhibited but the bacteria hydrolysed¹⁴ conjugated bile acids were unaffected. A simplified¹⁴ procedure for bile acid Purification and paper chromatograms for 2 dimensional thin layer and glass chromatography of bile acids are described. B.M.Stevens

^{3961.} SENSITIVITY TO DRUGS OF AUSTRALIAN LEPTOSPIRAL SEROTYPES. P.B.Spradbrook: Brit. J. Pharmacol., 1963, 20, 230-236 (Dept. Preventative Med., Sch. Vet. Sci., Univ. Queensland, Australia) Twelve leptospiral serotypes were tested and in general were susceptible to streptomycin, penicillin and tetracycline. L. icterohaemorrhagiae, L. canicola and L. zanoni were more resistant than the rest. High concn. of penicillin caused lysis of leptospirae but streptomycin and the tetracyclines did not. The results do not agree well with those on the chemotherapy of expt. infections. A.E.Brooks

^{3962.} CHEMOTHERAPY OF EXPERIMENTAL LEPTOSPIRAL INFECTION IN MICE. P.B.Spradbrook: Brit. J. Pharmacol., 1962, 20, 237-244 (Dept. Preventative Med., Sch. Vet. Sci., Univ. Queensland, Australia) Leptospira zanoni is used to produce chronic renal infections in young white mice, and a variant to produce acute disease with 50% mortality. If treated before jaundice developed a single dose of streptomycin and suitable doses of the tetracyclines prevented death and chronic infection. The penicillins had no permanent action. Concluded that streptomycin is the best treatment for leptospirosis in animals. A.E.Brooks

^{3963.} DIFFERENCES IN ACTION OF LARGE AND SMALL POLYENE ANTIFUNGAL ANTIBIOTICS. J.O.Lampen and P.M. Amow: Bull. Res. Coun. Israel, A, 1963, 11, 286-291 (Inst. Microbiol., Rutgers, State Univ., New Brunswick, N.J., U.S.A.) The polyene anti-fungal antibiotics combine with yeast cell membrane and decrease its permeability. In K-free medium the cells became deficient in K and glycolysis ceased. Adding K or NH₄ prevented or reversed the inhibn. of glycolysis by certain polyenes, e.g., nystatin or amphotericins A and B. Inhibn. by etruscomycin or filipin was not prevented even by a combination of K, NH₄, glycolytic cofactors and boiled yeast juice. Polyenes whose inhibn. was reversible contained 46-47 C atoms in their mol, whereas those which caused irreversible inhibn. contained 34-37 C atoms. The smaller mol. produced more drastic damage to the cell membrane. L.G.Gillies

^{3964.} STIMULATION OF TWO PATHOGENIC FUNGI BY HIGH DILUTIONS OF FUNGICIDES. F.J.Nutman and F.M.Roberts: Trans. Brit. mycol. Soc., 1962, 45, 449-456 (Coffee Berry Dis. Res. Unit, Dept. Agric, Kenya) Low concn. of a wide range of fungicides stimulates conidial germination, growth and infectivity of the pathogenic form of Colletotrichum coffeaeum as well as stimulating the germination of uredospores of Hemileia vastatrix. The author suggests that the physiol. mechanism leading to stimn. may be the same for all fungitoxic compounds. D.Hide

^{3965.} A TUMOUR INHIBITOR IN LAMPTEROMYCES JAPONICA. T.O.Yoshida, J.A.Rising and W.J. Nungesten: Proc. Soc. exp. Biol., N.Y., 1962, 111, 676-679 (Dept. Bact., Univ. Michigan, Ann Arbor, Mich., U.S.A.) An ethanol extract of this fungus was found to inhibit the growth of human cancer cells in tissue culture and was not inactivated by human serum. Ehrlich ascites tumour cells were inhibited in vivo providing the extract was put into contact with the cells. M.M.Shapland

^{3966.} ACTIVITY OF 1,3-D-ARABINOFURANOSYL-CYTOSINE HYDROCHLORIDE [CA] AGAINST HERPES SIMPLEX KERATITIS. G.E.Underwood: Proc. Soc. exp. Biol., N.Y., 1962, 111, 660-664 (Dept. Inf. Dis.,

PHARMACOLOGY

Upjohn Co., Kalamazoo, Mich., U.S.A.) The pyrimidine nucleoside, CA_t was found to be at least as effective as 5-iodo 2'-deoxyuridine in the treatment of herpes simplex keratitis in rabbits. M.M.Shapland

CENTRAL NERVOUS SYSTEM

3967. HYPOTENSION FROM ABSENT CIRCULATORY REFLEXES. EFFECTS OF ALCOHOL, BARBITURATES, PSYCHOTHERAPEUTIC DRUGS, AND OTHER MECHANISMS. M.A.Barraclough and E.P.Sharpey-Schafen Lancet, 1963, i, 1121-1126 (St. Thomas's Hosp. Med. Sch., London, England) Circulatory reflexes were investigated by standard procedures and were found to be absent in neuritis due to alcohol, porphyria, infective polyneuritis, and other conditions. Acute loss of circulatory reflexes was found in alcoholic intoxication and in poisoning due to barbiturates and drugs used in psychotherapy. Cerebrovascular accidents also caused acute interruption of the reflex pathways. Severe hypotension in the supine posture was usual in the acute group, and was precipitated in chronic neuritis by minor decreases in blood-vol., artificial respiration, and therapeutic doses of hypnotics or drugs for psychotherapy. In circulations without reflexes, the mechanism of hypotension is explained and its treatment determined by the simple relation existing between stroke output and arterial b.p. G.H.Bell

3968. EFFECTS OF INTRACAROTID AND INTRAVERTEBRAL THIOPENTAL, AMOBARBITAL, PHENOBARBITAL, CHLORPROMAZINE AND DIPHENYLHYDANTOIN IN CONSCIOUS, INTACT CATS. G.B.Jacobs, A.B.Rothbaler, F.C.Coppola and M.E. Jarvik: Int. J. Neuropharm., 1962, 1, 323-332 (Dept. Anat., A.Einstein Coll. Med., New York, U.S.A.) While the general nature of the lateralised syndrome which develops after administration of the different barbiturates was similar for each, differences in latency and duration of effect are interpreted in the light of differences in permeability const., cerebral extraction ratio, binding fraction and sp. receptor site action. Chlorpromazine provoked a characteristic behavioural response and there was little difference between intracarotid and the intravertebral route. Diphenylhydantoin also caused a barbiturate-like response from which the animals did not fully recover although recovery from the effects of the other drugs was complete. G.F.Blane

3969. A COMPARISON OF THE EFFECTS OF SIX BARBITURATES AND A PLACEBO ON INSOMNIA AND MOTILITY IN PSYCHIATRIC PATIENTS. J.M.Hinton: Brit. J. Pharmacol., 1963, 20, 319-325 (Acad. Dept. Psychy., Middlesex Hosp., London, England)

Cyclobarbitalone, hexobarbitalone, quinalbarbitalone sodium, pentobarbitalone-sodium, phenobarbitalone sodium, neal-barbitalone and a placebo are compared in psychiatric patients. The barbiturates prolong sleep and reduced motility, but there was little difference between them. Phenobarbitalone, quinalbarbitalone and pentobarbitalone were most effective. A.E. Brooks

3970. MECHANISM OF POTENTIATION OF BARBITURATES AND MEPROBAMATE ACTIONS BY IMIPRAMINE. R.Kato, E.Chiesara and P.Vassanelli

Biochem. Pharmacol., 1963, 12, 3&7-364 (Inst. PharmacoL, Univ., Milan, Italy) Imipramine potentiates the actions of hexobarbital, pentobarbital, meprobamate and carisoprodol but not of barbital and chloral hydrate. Unlike SKF 525-A, imipramine can reinduce sleep in rats awakening from pentobarbital hypnosis. In vitro studies indicated that imipramine inhibited the microsomal drug-metabolising enzymes, especially the enzyme which metabolised pentobarbital. In imipramine-treated rats, carisoprodol, meprobamate, hexobarbital *jj pentobarbital concn. in the brain, determined on recover) from the loss of the righting reflex, were a little lower than in controls. Imipramine could be classified both as a prolonging agent and a potentiating agent by its inhibitory action on drug metabolism and its ability to increase the sensitivity of the c.n.s. towards the drugs.

L.G.GUUES

3971. METABOLISM AND EXCRETION OF METHOHEXITAL IN THE RAT AND DOG. J.S.Welles, R.E. McMahon and W.J.Doran: J. Pharmacol. exp. Ther. 1963, 139, 166-171 (Eli Lilly and Co., Indianapolis, Ind., U.S.A.) Methohexitonal, a-(±)-1-methyl-5-allyl-5-(1-methyl-2-pentynyl)barbituric acid was metabolised to the 4-hydroxy deriv. Demethylation of the N-methyl group was unimportant. Excretion of meta*-bolites was rapid. J.M.Whitmarsh

3972. A COMPARATIVE CONTROLLED CLINICAL TRIAL⁰¹ SEVEN HYPNOTIC AGENTS IN MEDICAL AND PSYCHIATRIC IN-PATIENTS. K.Rickels and H.Bass: Amer. J. med. Sci., 1963, 245, 142-152 (Hosp. Univ. Pennsylvania, Philadelphia, Pa., U.S.A.) In medical patients 300 w methyjrylon, 800 mg.meprobamate and 500 mg.glutethimide produced a hypnotic effect similar to that of 100-200 mg. secobarbital sodium. In psychiatric patients with a? insomnia which did not respond to tranquillisers or &^{ab*} depressants, the same drugs, in the doses stated, were fl more effective than a placebo. The data show that the higher the psychopathology score of a patient the poorer the response to hypnotic medication. E-E-Hobbig^

3973. SPECIES DIFFERENCES IN THE EFFECT OF BODY WEIGHT ON PENTOBARBITAL INDUCED SLEEP. R.W.Morris: Arch. int. Pharmacodyn., 1963, 142, 550-555 (Dept. Pharmacognosy and PharmacoL, Univ. Illinois, Chicago, m., U.S.A.) Pentobarbit^{nt} sleeping times are measured in guinea-pigs, rabbits and mice, using doses of 30, 30 and 60 mg./kg. respectively. Changes of ambient temp. produce alterations of sleep times in rabbits and mice, but not in guinea-pigs. Differences are also formed with differing body wt. in guinea-pigs and rabbits but not in mice. S.E.Srmth

3974. USE OF DRUG-BINDING PROTEIN FROM ELECTRIC TISSUE TO EXPLAIN ACTION OF NEUROTROPIC AGENTS. S.Ehrenpreis: lit. J. Neuropharm., 1⁹⁶², 273-281 (Pharmacol. Dept., Sch. Med., Georgetown Univ., Washington, D.C., U.S.A.) The mechanism of action of a no. of drugs with marked action on ^{*e} is re-examined in the light of evidence on the strength^p interaction between the drugs and a protein extracted ^{fl***up} from the eel electric organ. The drugs considered ^{fl***up} tubocurarine, chlorpromazine, local anaesthetics, benzodryl, banthine, chlorisondamine, ACh and eserine. G.F.B.^{lane}

3975. DETERMINATION OF CHLORDIAZEPOXIDE [LIBRIUM] AND OF A METABOLITE OF LACTAM CHARACTER IN PLASMA OF HUMANS, DOGS, AND RATS BY A SPECIFIC SPECTROFLUOROMETRIC

METHOD. B.A.Koechlin and L.D'Arconte: Analyt. Biochem., 1963, 5, 195-207 (Dept. Pharmacol., Hoffman-La Roche Inc., Nutley, N.J., U.S.A.) CMordiazepoxide [I], after selective extraction, is hydrolysed to a lactam deriv. which converts in light to a fluorescent compound. This lactam is a major metabolite of I in man and dogs. I and the lactam can be quantitated separately by this method, with sensitivity of 25 µg./ml. of plasma, adequate for normal therapeutic doses. The half-life of I was 20-24 hr. in man, 14-20 hr. in dogs and 4-6 hr. in rats. A.D. Smith

^{3976.} EFFECTS OF BENZODIAZEPINES UPON AMYGDALA AND HIPPOCAMPUS OF CAT. A.Morillo: Int. J. Neuropharm., 1962, 1, 353-359 (Thudichum Psychiatric Res. Lab., Galesburg State Res. Hosp., Ill., U.S.A.) Two newly synthesised benzodiazepines, related chem. to chlordiazepoxide were studied in *cerveau isolé* and *encéphale isolé* prep. It is concluded that these drugs exert direct inhibitory actions at the level of the amygdala and hippocampus. G.F.Blane

^{3977.} ACTH-HYPERSECRETION INDUCED BY PHENOTHIAINE TRANQUILLISERS. R.L. Smith, R.P. Maickel and B.B.Brodie: J. Pharmacol. exp. Ther., 1963, 139, 185-190 (Nat. Heart Inst., Bethesda, Md., U.S.A.) Subacute doses of the tranquillisers evoke a persistent hypersecretion of ACTH, reducing its content in the pituitary by 70%, thus preventing response to stress. J.M.Whitmarsh

^{3978.} EFFECT OF DERIVATIVES OF PHENOTHIAZINE AND HALOPERIDOL ON AUDIOGENIC CRISIS IN THE MOUSE. G.Raynaud and G.Valette: Arch. int. Pharmacodyn., 1963, 142, 425-439 (Pharmacol. Lab., Pharmacy Fac., Univ. Paris, France) Various sound stimuli caused audiogenic crises in mice. These were inhibited by chlorpromazine, methopromazine and levosetazine; aminopromazine and afimemazine had similar but weaker effects. Thioproperazine, prochlorophenazine and haloperidol in some cases potentiated the crisis. T.J.Sullivan

^{3979.} NEUROPHYSIOLOGICAL BASIS AND PHARMACOLOGICAL MODIFICATION OF INHIBITORY EMOTIONAL BEHAVIOUR IN THE RABBIT. W.M.Davis: Arch. int. Pharmacodyn., 1963, 142, 349-360 (Univ. Oklahoma Coll. Pharm., Norman, Okla., U.S.A.) The nobilising effects of various drugs are studied in 5th m.s. M^or^oi^{ne} 1-5 mg./kg., chlorpromazine 1<25-^{ct} /kg. and pentobarbitone 10 mg. Ag. produce increased immobility. Levallorphan 0-1-1 mg. Ag. Phetamine 0<5-1 mg./kg. and meprobamate 2[#] 5-^{bra} Ag. decrease it. The action of these drugs on the limbic systems is discussed. S.E. Smith

^{3980.} RELATION BETWEEN STRUCTURE AND CENTRAL NERVOUS ACTION OF 5th ME HYDRAZINE DERIVATIVES. A.F.Crowther, A.Spinks and E.H.P.Young: J. Neuropharm., 1962, 1, 141-144 (I.C.I., Pharmaceuticals Div., Macclesfield, Cheshire, England) Some 300 arylhydrazines and araloxyalkylhydrazines were examined with particular ref. to possible antidepressant activity. G.F.Blane

^{3981.} RELATIONSHIP BETWEEN CHEMICAL STRUCTURE AND C.N.S.-DEPRESSANT ACTIVITY OF BASIC KETOSES RELATED TO HALOPERIDOL. P.A.J.Janssen: Int. J. Neuropharm., 1962, 1, 145-148 (Res. Lab., Beersse, Belgium) The finding of neuroleptic, anal-

gesic or hypotensive prop, among 2000 compounds screened is described. G.F.Blane

^{3982.} ACTION OF CHLORDIAZEPOXIDE ON TWO TYPES OF TEMPORAL CONDITIONING IN RATS. M.Richelle, B.Xhenseval, O.Fontaine and L.Thone: Int. J. Neuropharm., 1962, 1, 381-391 (Service Psychologie, Univ., Liege, Belgium) Chlordiazepoxide increased the conditioned activity and disrupted timing behaviour of rats suitably trained in a Skinner box to reinforcement schedules. The muscle relaxant action of the drug is tentatively suggested as an explanation of these effects on timing behaviour. G.F.Blane

^{3983.} EFFECTS OF RESERPINE AND MORPHINE ON BEHAVIOUR SUPPRESSED BY PUNISHMENT. L.Geller, E.Bachman and J.Seifter: Life Sci., 1963, No. 4, 226-231 (Wyeth Labs., Inc., Philadelphia, Pa., U.S.A.) Chronic administration of reserpine reinstated the suppressed lever-pressing behaviour of hungry rats, whose suppression of behaviour had been conditioned by simultaneous rewarding with food and punishment. Morphine sulphate had no such effect. K.Jones

^{3984.} ANALYSIS OF CENTRAL EFFECT OF (+)TUBOCURARINE CHLORIDE IN CAT. H.Kumagai, F.Sakai and Y.Otsuka: Int. J. Neuropharm., 1962, 1, 157-159 (Pharmacol. Dept., Univ., Tokyo, Japan) Electrophys. technique was used to study the effect of minute amounts of (+)-tubocurarine inj. directly into subcortical structures. The discharges which generally began in the hippocampus, then spread to other areas, were found to be similar to those produced by carbachol or muscarine administered sub-cortically. G.F.Blane

^{3985.} BEHAVIOURAL AND CENTRAL MUSCLE RELAXANT PROPERTIES OF 2-ETHYL-3-METHYL-VALERAMIDE. A.P.Roszkowski and W.M.Govien: Int. J. Neuropharm., 1962, 1, 423-430 (Pharmacol. Dept., McNeil Labs. Inc., Fort Washington, Pa., U.S.A.) 2-Ethyl-3-methylvaleramide was found to have central skeletal muscle relaxing prop, of long duration. Tranquillising prop. were also demonstrated in a variety of spp. Attention is drawn to apparent preferential suppression of polysynaptic rather than monosynaptic spinal reflexes. G.F.Blane

^{3986.} BEHAVIOURAL OUTPUT ENHANCING EFFECT OF IMIPRAMINE IN PIGEONS. P.B.Dews: Int. J. Neuropharm., 1962, 1, 265-272 (Dept. Pharmacol., Harvard Med. Sch., Boston, Mass., U.S.A.) Pigeons were trained on a multiple pos. reinforcement schedule and given drugs i.m. Imipramine, demethylimipramine and methylamphetamine but not chlorpromazine increased the behavioural output in this test. G.F.Blane

^{3987.} A NEW TECHNIQUE FOR STUDYING INHIBITORY EFFECTS OF DRUGS ON DISCRIMINATORY AVOIDANCE-ESCAPE BEHAVIOUR IN RATS. C.J.E.Niemegeers: Int. J. Neuropharm., 1962, 1, 79-83 (Res. Lab., Dr. C.Janssen, Beerse, Belgium) A complex test is described using a newly designed 'brightness discrimination' box for inducing discriminatory-avoidance habits. All of several groups of drugs with central actions acted as inhibitors of avoidance but only typical neuroleptic agents such as haloperidol and perphenazine were capable of blocking avoidance at dose levels below those which promote signs of gross neurological impairment. G.F.Blane

PHARMACOLOGY

- 3988. EFFECTS OF PSYCHOACTIVE DRUGS ON YOHIMBINE INDUCED RESPONSES IN CONSCIOUS DOGS.** W.J.Lang and S.Gershon: *Arch. int. Pharmacodyn.*, 1963, 142, 457-472 (Psychopharmacol. Unit, Pharmacol. Dept., Univ., Melbourne, Australia)
- A screening procedure for anti-anxiety agents is described. Yohimbine ($0.5\text{ mg. per kg. i.v.}$) caused an anxiety state in dogs similar to that caused in man. This was given 15 min. after the anti-anxiety drug being tested. Modification of the response to yohimbine provided an index of the activity of drugs including chlor diazepoxide, chlorpromazine, amylobarbitone, and meprobamate which correlated with the results of clinical trials on these compounds. T.J.Sullivan
- 3989. CEREBRAL AUTONOMIC CONTROL SYSTEMS AND THEIR PHARMACOLOGICAL EVALUATION.** E.C.Hoff, M.N.Carroll, jun. and J.F.Kell, jun.: *Int. J. Neuropharm.*, 1982, 1, 309-322 (Dept. Neurol. Sci., Med. Coll. Virginia, U.S.A.) Chiefly a review of attempts that have been made to correlate psychology with physiology. Attention is drawn to the effects of various psychotropic drugs including alcohol and the tranquillisers, with emphasis on their effect on brain autonomic control centres and the interpretation of the response in psychol. terms. G.F.Blane
- 3990. METABOLISM AND BEHAVIOURAL ACTION OF PSYCHOTROPIC TRYPTAMINE HOMOLOGUES.** S.Szara, E.Hearst and F.Putney: *Int. J. Neuropharm.*, 1962, 1, 111-117 (Clin. Neuropharmacol. Res. Center, St. Elizabeth's Hosp., Washington, D.C., U.S.A.) The final behavioural effect of 2 of the 3 homologues tested, N, N-dimethyltryptamine and N, N-diethyltryptamine, appeared to depend on the interaction between circulating unchanged compound which depresses motor activity and 6-hydroxylated metabolite which elicits hyperactivity. Hyperactivity produced by DL-C₁₈-methyl-tryptamine did not appear to depend on 6-hydroxylation. G.F.Blane
- 3991. EFFECT OF PSYCHOTROPIC DRUGS ON DE-CARBOXYLASE OF AROMATIC AMINO ACIDS IN RAT BRAIN.** W.P.Burkard, R.Pavlin, A.Pletscher and K.F.Gey: *Int. J. Neuropharm.*, 1962, 1, 233-237 (Med. Res. Dept., Hoffmann-La Roche and Co. Ltd., Basle, Switzerland) A variety of drugs including sedatives, psychostimulants and hallucinogens were administered to rats i.p. Extracts from die brains of these animals were tested for decarboxylase activity in vitro on the substrates, 3,4-dihydroxyphenylalanine and 5HTP. There was evidence of partial inhibn. of brain decarboxylase only after (X-rnethyl-5-hydroxytryptophan and a-methyl-3,4-dehydroxytoienylalanine. G.F.Blane
- 3992. EFFECT OF DRUGS ON 'METABOLIC PATTERN¹ OF BRAIN. EFFECT OF ISONIAZID, IPRONIAZIDE, AND PHENYL CYCLOCOPROPYLAMINE ON UTILISATION OF ENDOGENOUS SOURCES OF BRAIN IN PRODUCTION OF RESPIRATORY CO₂.** A.Geiger, G.Gombos, S.Otsuki, V.Aguilar, B.Gotheff, W.Scrucca and G.Whitney. *Int. J. Neuropharm.*, 1962, 1, 283-294 (Dept. Psychiatry, Univ. Illinois Coll. Med., Chicago, 111, U.S.A.) In studies made on cats, the brains of which were perfused *in situ* with blood containing [¹⁴C]glucose, isoniazid, iproniazide and phenylcyclopropylamine added to the perfusate increased the proportion of labelled CO₂ in the expired air. Transamination appeared to be inhibited by these drugs as judged by the low sp. activities of free brain glutamate and aspartate.

Since raising the brain level of 5HT or dopa did not produce the same changes in intermediate metabolism it is concluded that the effective drugs exert their action by a mechanism other than MAO inhibn. G.F.Blane

- 3993. AMINO ACID AND CARBOHYDRATE METABOLISM OF BRAIN AFTER RESERPINE.** D.Palm, H.Balzer and P.Holtz: *Int. J. Neuropharm.*, 1962, 1, 173-177 (Pharmacol. Dept., Univ., Frankfurt, Germany) Mice treated with reserpine showed enhanced gluconeogenesis as determined by tracer studies and glycogen determinations on brain and liver. The opposing action of reserpine and iproniazid on brain y-aminobutyric acid levels is discussed in the light of this finding. G.F.Blane
- 3994. METHOD FOR SIMULTANEOUS NUMERICAL COMPUTATION OF DIFFERENT TYPES OF SPONTANEOUS MOTILITY.** W.A.Behrendt, R.Deininger and H.O. Hillers: *Int. J. Neuropharm.*, 1962, 1, 125-128 (Res. Div., Nordmark-Werke, Hamburg, Germany) Method permits the simult. differential count of spontaneous motor activity and activity on a fixed site of small laboratory animals. The effects of amphetamine, caffeine and bemegride are discussed. G.F.Blane
- 3995. LOCALISATION OF ACTION OF CHLORPROMAZINE AND ANALGESICS IN RETICULAR FORMATION OF BRAIN STEM.** A.V.Valdman: *Int. J. Neuropharm.*, 1962, 1, 197-200 (Dept. Pharmacol., 1st Pavlov Med. Inst., Leningrad, U.S.S.R.) Different morphol. elements of the reticular formation and reticular neurones of cats and rabbits were found to differ greatly in their sensitivity to a no. of psychotropic drugs. Diagrams show the localisation of chlorpromazine action on the ponto-medullary reticular formation. G.F.Blane
- 3996. ANALYSIS OF TRANQUILLISERS IN CHRONICALLY ELECTRODE IMPLANTED CAT.** R.Kido and K.Yamamoto: *Int. J. Neuropharm.*, 1962, 1, 49-53 (Shionogo Res. Lab., Osaka, Japan) Gross behaviour and e.e.g. patterns from various regions of the brain described for cats receiving chlorpromazine and reserpine could be clearly differentiated from those seen in cats receiving phenobarbitone. Meprobamate had an effect intermediate between the tranquillisers and the hypnotic. G.F.Blane
- 3997. THE EFFECT OF CHLORPROMAZINE ON FREE AMINO ACIDS IN THE RAT BRAIN.** R.S.Piha, S.S.Oja and A.J.Uusitalo: *Ann. Med.*, 1962, 40, Supp. 5 (Inst. Physiol. and Dept. Biochem., Univ. Helsinki, Finland) The distribution of 14 amino acids or other amino compounds was examined by paper chromatography in whole brain homogenates and in four separate regions of the brain, the cerebral cortex, cerebellum, pons-medulla and interior of the cerebrum in normal rats and rats inj. with chlorpromazine. In whole brain homogenates a slight decrease in concn. of all amino acids was noted after chlorpromazine. Chlorpromazine appeared to affect the four regions investigated differently. The possible causes of the changes in the concn. of amino acids and the relationship of the amino acid status to protein formation in the brain are discussed. G.Faulkner
- 3998. DEMONSTRATION OF EARLY ENTRY OF IPRONIAZID INTO CENTRAL NERVOUS SYSTEM.** V.Nair, H.Lal and L.J.Roth: *Int. J. Neuropharm.*, 1962, 1, 361-369 (Pharmacol. Dept., Chicago Univ., Ill., U.S.A.) The prep. of ¹⁴C-iproniazid is described. Studies with rats and mice showed that the drug appears in

the c.n.s. within one minute after i.v. administration. It is suggested that breakdown to isopropylhydrazine may be a first stage in the catabolism of iproniazid within the cell and that this more potent MAO inhibitor may account for much of the activity of the inj. material.

G.F.Blane

- 399. RELATIONSHIP BETWEEN CENTRAL ANTI-CHOLINERGIC ACTIONS AND ANTI-PARKINSON EFFICACY OF PHENOTHIAZINE DERIVATIVES.** &P.White and E.J.Westerbeke: Int. J. Neuropharm., 1962, 1, 213-216 (Pharmacol. Div., Univ. Tennessee, Memphis, Tenn., U.S.A.) Diethazine, promethazine, and ethopropazine in high enough dose blocked the e.e.g. effects of physostigmine or DFP thus supporting the hypothesis that some phenothiazines such as these which are effective antiparkinson agents may act through antagonism of brain cholinergic systems. Other phenothiazines known not to be effective clinically in Parkinsonism were inactive in this test. G.F.Blane

- 400. CLINICAL APPLICATION OF DEMETHYL-IMIPRAMINE [DMI: A NEW TYPE OF ANTIDEPRESSANT DRUG.** N.S.Kline: Int. J. Neuropharm., 1962, 1, 55-60 (Rockland State Hosp., Orangeburg, N.Y., U.S.A.) DMI, a naturally occurring metabolite of Imipramine, was found to act more rapidly than the parent compound in patients with primary clinical Depression. 15 out of the 20 depressives studied showed improvement within 2 weeks and in 2 given the drug enterally the response was almost immediate. G.F.Blane

- 4001. EFFECT OF IMIPRAMINE ON MONOAMINE OXIDASE ACTIVITY OF CAT BRAIN.** R.A.Chaunina and L.P.Lapirc: Vop. Med. Him., 1963, 9, 184-188 (Lab. Psychopharmacol., V.M.Bechterev State Res. Inst., Leningrad, U.S.S.R.) Activity of cat brain MAO in vitro was inhibited 15-30% by imipramine with noreadrenaline as substrates. Enzyme activity was inhibited to about the same extent by iproniazid and chlorpromazine. Single and repeated administration of imipramine (5 mg./kg.) to cats had no effect on MAO activity subsequently measured in vitro. J.R.Sargent

- 4002. STUDIES ON THE METABOLISM OF MEPROBAMATE.** J.F.Douglas, B.J.Ludwig and N.Smith: Proc. Soc. exp. Biol., N.Y., 1963, 112, 436-438 Wallace Lab., Div. Carter Products Inc., Cranbury, N.J., U.S.A.) Meprobamate (2-methyl-2-propyl-1-hydroxypropandiol dicarbamate) excretion has been studied in different mammals including man following administration by several different routes. It was found that there was little difference in excretion of meprobamate or its major deriv. (hydroxymeprobamate) after the different routes but it was found with man that the initial dose was excreted mostly as meprobamate itself but chronic administration of the drug resulted in increasing appearance of metabolites in the urine. D.N.Wheatley

- 4003. EFFECT OF PROTRACTED MEPROBAMATE TREATMENT ON BIOELECTRIC AND PHOSPHORYLASE ACTIVITY OF DOG BRAIN.** F.Kajtor, O.Veres and L.Kocsar: Acta med. Acad. Sci. hung., 1962, 18, 384 (Dept. of Neurol. and Psychiatry, Univ. Med. Debrecen, Hungary) In dogs treated with ketipimide daily for periods ranging from 6 to 20 days there was a marked slowing of the EEG waves and appearance of 0-spindles associated with tranquillisation... Phosphorylase activity of

several regions from the brains of these animals was less than that seen in untreated controls although there was no correlation between this apparent enzyme inhibn. and the degree of e.e.g. change.

G.F.Blane

- 4004. CONVERSION OF TRANQUILLISERS TO ANTI-DEPRESSANTS BY REMOVAL OF ONE N-METHYL GROUP.** M.H.Bickel, F.Sulser and B.B.Brodie: Life Sci., 1963, No. 4, 247-253 (Nat. Heart Inst., Bethesda, Md., U.S.A.) Demethylation of certain phenothiazines such as promazine and trifluromazine converted potent tranquillisers to antidepressant agents. Since N-demethylation is a common reaction in drug metabolism, these findings are suggested to have a wide significance in pharmacology. K.Jones

- 4005. STRENGTH OF ANALEPTIC ACTION OF BEMEGRIDE, PENTYLENETETRAZOLE AND PICROTOXIN IN PHENOBARBITONE-HYDROXYDIONE-ETHINAMATE ANAESTHESIA AND THEIR RECIPROCAL ANTAGONISM.** F.Hahn and A.Oberdorf: Arch. int. Pharmacodyn., 1963, 142, 371-394 (Pharmacol. Inst., Freiburg im. Br., Germany) Mutually antagonistic median lethal doses of bemegride, pentylenetetraazole and picrotoxin and of phenobarbitone, hydroxydione and ethinamate were studied in mice. No life-saving action of the analeptics can be demonstrated against ethinamate. Against phenobarbitone and hydroxydione, the anti-lethal action of the analeptics increases in order picrotoxin, pentylenetetraazole, bemegride. (German) S.E. Smith

- 4006. COMPARISON OF EFFECTS OF ARECOLINE AND MUSCARINE ON C.N.S.** J.L.Riehl, J.Paul-David and K.R.Unna: Int. J. Neuropharm., 1962, 1, 393-401 (Pharmacol. Dept., Univ. Illinois, U.S.A.) The e.e.g.-activating effect of para-sympathomimetic drugs muscarine and arecoline was studied in cat encephale isolé prep. Responses to muscarine were abolished by adequate doses of atropine while those to arecoline remained relatively unaffected. These results are interpreted as evidence that the e.e.g.-activating system possesses cholinergic-'muscarinic' receptors and that when these are blocked a drug such as arecoline which has ganglion-stimulating 'nicotinic' action may still act by stimulating more centripetal synapses. G.F.Blane

- 4007. ROLE OF THAM IN PROTECTING MICE AGAINST CONVULSIVE EPISODES CAUSED BY EXPOSURE TO OXYGEN UNDER HIGH PRESSURE.** S.F.Gottlieb and R.V.Jagodzinski: Proc. Soc. exp. Biol., N.Y., 1963, 112, 427-430 (Res. Lab., Linde Co., Division of Union Carbide Corp., Tonawanda, N.Y., U.S.A.) Tris (hydroxy-methyl) aminomethane [THAM] was found to prolong the period of induction of convulsions when given in a dose of 1 ml. i.p. of a 0.3M soln. to male Swiss mice which were being exposed to 100% O₂ at 4 atm. THAM at this dosage was ineffective against mice at 6 atm. O₂. The administration of NaCl or KCl soln. of 0.01M concn. reversed the effect of THAM when given simult. D.N.Wheatley

- 4008. TREATMENT OF DRUG-INDUCED COMA: EFFECTIVENESS OF METHYLPHENIDATE.** R.J.Hoagland and R.J.McCarty: Amer. J. med. Sci., 1963, 245, 189-197 (Dept. Med., U.S. Tripler Gen. Hosp., Honolulu, Hawaii, U.S.A.) The analeptic drug methylphenidate, i.v., was found to accelerate die return to consciousness of patients who had taken excessive doses of depressant drugs, e.g. barbiturates. E.E.Hobbiger

PHARMACOLOGY

- 4009. CONCERNING ANALGESIC AND ANTICONVULSANT ACTIVITY OF SOME ANTICOAGULANT DRUGS AND VITAMIN K.** V.Kovalčík and R.Capek: Int. J. Neuropharm., 1962, 1, 153-156 (Pharmacol. Dept., Komensky Univ. Med. Sch., Bratislava, Czechoslovakia) Vit. K, warfarine and the bromo- and nitro-deriv. of a-naphthyl-indandione were found to be effective analgesics only in the rat-tail/radiant heat test. Some of die compounds tested also had some anticonvulsant activity but there was no relationship between this and their efficacy as anticoagulants. G.F.Blane
- 4010. EST [ELECTRO-SHOCK THRESHOLD] EFFECTS OF DIPHENYLHYDANTOIN IN HYPOPHYSECTOMISED RATS.** S.DeSalva: Arch. int. Pharmacodyn., 1963, 142, 366-370 (Dept. Pharmacol., Armour Pharmaceut. Co., Kankakee, 111, U.S.A.) Diphenylhydantoin 50-100 mg./kg. s.c. in rats increases the electro-shock seizure threshold. This effect is reduced or abolished by hypophysectomy 2 weeks previously. S.E. Smith
- 4011. EFFECT OF DRUGS ON EST [ELECTRO-SHOCK THRESHOLD] IN VARIOUS ENDOCRINE DEFICIENT STATES.** S.De Salva: Arch. int. Pharmacodyn., 1963, 142, 361-365 (Dept. Pharmacol., Armour Pharmac. Co., Kankakee, 111, U.S.A.) Increases in electro-shock seizure threshold induced in rats wi \pm diphenylhydantoin 50 mg./kg. phenobarbitone 25 mg./kg. meprobamate 100 mg./kg. and 5HT 20 mg./kg. are abolished or reversed by total or adenohypophysectomy, 2 weeks previously. Prior adrenalectomy exaggerates the anticonvulsant effects. Alone all the surgically-induced endocrine deficiencies lower the threshold. S.E. Smith
- 4012. TEMPERATURE AND BLOOD SUGAR ACTIONS OF BEIMEGRIDE, PENTYLENETETRAZOLE, AND PICROTOXIN IN NORMAL AND BARBITURATE-TREATED ANIMALS.** F.Hahn, O.Heidenreich and A.Oberdorf: Arch. int. Pharmacodyn., 1963, 142, 395-424 (Pharmacol. Inst., Freiburg im.Br., Germany) In mice and rabbits the analeptic drugs bemegride, pentylene tetraazole and picrotoxin induce hypothermia. In rabbits this is accompanied by hyperglycaemia. Barbitone- or 'Numal*' induced anaesthesia abolishes the hypothermic action. The analeptics may induce hyperthermia, resulting from direct stimn. of the temp.-regulating centre. (German) S.E. Smith
- 4013. PHARMACOLOGICAL ANALYSIS OF HYPERTHERMIA CAUSED BY PHENAMINE [AMPHETAMINE].** M.L.Belenky and M.Vitolina: Int. J. Neuropharm., 1962, 1, 1-7 (Pharmacol. Dept., Med. Inst., Riga, U.S.S.R.) A concomitant rise in skin and peritoneal temp, was observed in restrained conscious normal cats and rabbits given 15-20 mg./kg. amphetamine i.p. This effect was not modified by autonomic ganglion blockade but was prevented by muscle relaxants. Thalamic animals were more susceptible than normals to the hyperthermic effect but section of the brain between the superior and inferior quadrigeminal bodies abolished the response to amphetamine. G.F. Blane
- 4014. AMPHETAMINE AND COLD AND WARM STRESS.** L.Mariani, L.Moro and M.Giorgi: Atti. Acad. med. Lombarda, 1962, 17, 226-231 (1st. FarmacoL, Univ. Milano, Italy) (+)-Amphetamine, (\pm)-amphetamine and methyl amphetamine administered to rats in doses that result in a slightly increased body temp. (5-15 mg./kg. body wt.) induced a lethal hyperthermia when

the animals were exposed to heat stress (42°). Small doses (2.5-5 mg./kg.) gave a small protection against hypothermia in animals exposed to cold stress (Or), but large doses (15 mg./kg.) increased the hypothermic state and induced death. (Italian) G.N.Godson

- 4015. RELATIONSHIP BETWEEN BRAIN 5HT AND HYPERTHERMIA INDUCED BY TYPHOID VACCINE.** A.Ornesi: Atti. Acad. med. Lombarda, 1962, 17, 156-158 (1st. FarmacoL, Univ. Milano, Italy) When rabbits were treated with 1 mg./kg. reserpine i.v., 24 hr. before injn. of typhoid vaccine (T.A.B. 1 ml. AsO the normal hyperthermic response was considerably reduced. This effect was nullified by treatment of the reserpinised animals with 5HT (10 mg./kg.) or mono-amino oxidase inhibitor (2.5 mg./kg.) at the same time as with the typhoid vaccine. (Italian) G.N.Godson
- 4016. CORRELATION BETWEEN HYPERTHERMIA INDUCED BY LYSERGIC ACID DIETHYLAMIDE AND 5HT.** A.Ornesi: Atti. Acad. med. Lombarda, 1962, 17, 158-162 (1st. FarmacoL, Univ., Milano, Italy) LSD (25 fig./kg. body wt.) induces hyperthermia in rabbits which is not modified by pretreatment with reserpine (1 mg./kg. 24 hr. before LSD treatment) or MAO inhibitor (5 mg./kg. 24 hr. before LSD injn.). In animals resistant to LSD, hyperthermia inducing substances such as typhoid vaccine were still capable of provoking an increase in body temp. Sometimes, after induction of fever by typhoid vaccine in a LSD resistant rabbit, the animal became sensitive to LSD hyperthermia. (Italian) G.N.Godson
- 4017. RELATIONSHIP BETWEEN THE HYPOTHERMIAS INDUCED IN RABBITS BY CHLORPROMAZINE AND RESERPINE.** A.Ornesi: Atti. Acad. med. Lombarda* 1962, 17, 163-165 (1st. FarmacoL, Univ., Milano, Italy) Injn. of 2.5 mg./kg. body wt. of reserpine into rabbits induced a transitory hyperthermia, followed by a marked hypothermia lasting up to 10 hr. or more* Chlorpromazine (2.5 mg./kg.) also induced hypothermia* When administered together, they act synergistically, but in animals blocked with MAO inhibitor, chlorpromazine antagonised the reserpine induced hypothermia. This effect was probably caused by a decrease in 5HT in the brain. (Italian) G.N.Godson
- 4018. INTERFERENCE OF CHLORPROMAZINE WITH THE VARIOUS FORMS OF EXPERIMENTAL HYPERTHERMIA IN RABBITS.** A.Ornesi: Atti. Acad. med. Lombarda, 1962, 17, 166-169 (1st. FarmacoL, Univ., Milano, Italy) In order to demonstrate that chlorpromazine induction of hypothermia and inhibn. of hyperthermia is through its effect on 5HT, chlorpromazine effects on 5HT-mediated hyperthermia (induced by 5HTP, typhoid vaccine, dinitrophenol) were studied in relation to dose and time of administration. In the centrally-mediated expt. chlorpromazine protected in doses lower than would alone induce hypothermia, but it gave little protection with the peripherally-acting DNP. It appears to antagonise 5HT at encephalic level. (Italian) LA.B.*
- 4019. ACTION OF NICOTINE ON ASCENDING RETICULAR ACTIVATING SYSTEM.** D.E.Knapp and E.F. Domino: Int. J. Neuropharm., 1962, 1, 333-351 (Pharmacol. Dept., Michigan Univ., Ann Arbor, Mich., U.S.A.) Nicotine provoked activation of a* e.g. at doses between 10 and 20 fig./kg. i.v. In rabbit* cats, dogs and monkeys with pontine transections. From a study of the mechanism of action in die dog it is

Suggested that nicotine activates the e.e.g. by mimicking releasing ACh in ^A ponto-mesencephalic site. The possibility that vasopressin may be involved is not ruled out.

G.F.Blane

4020. DEPRESSION OF SPINAL INHIBITION BY ELECTROPHORETICALLY ADMINISTERED STRYCHNINE.

D.R.Curtis: *Int. J. Neuropharm.*, 1962, 1, 239-250
Stimulants^As¹⁰¹-! Nat. Univ., Canberra, Australia)
Strychnine and related compounds applied to lumbar motoneurons of cats from the outer barrel of co-axial electrodes depressed the hyperpolarising inhibitory potentials evoked by a variety of afferent stimuli, membrane potentials and excitatory postsynaptic potentials were not affected.

G.F.Blane

4021. AXI. PHARMACOLOGICAL EFFECTS OF A NEW ANAESTHETIC IN MAN. M.Swerdlow: *Int. J.*

Jfuiopharm., 1962, 1, 193-195 (Salford Royal Hosp., Chester, England) 2-Methoxy-4-allyl-phenoxyacetic acid diethylamide was found to be effective "clinically" as an ultrashort-acting i.v. anaesthetic. There was rapid onset and brief duration of anaesthesia with rapid recovery of full consciousness.

G.F.Blane

4022. A NEW LOCAL ANAESTHETIC WITH A LONG DURATION OF ACTION. P.Hey and G.L.Willey: *Nature*, Lond., 1963, 198, 390-391 (Smith Kline and French Res. Inst., Welwyn Garden City, Herts., England) The analgesic activity of some substituted amine oxyethylalkylamines is compared with the effect of different substituents discussed. Prop. of SKF 90054 are described in some detail.

4023. SPINAL ANAESTHETIC WITH LONG DURATION ACTION. F.Glyn Davies: *Nature*, Lond., 1963, 200, 390 (Nuffield Inst. Med. Res., Univ. Oxford, U.K.) SKF 90054 is a local anaesthetic suitable for spinal and epidural anaesthesia in sheep with a duration of action more than twice that of lignocaine.

4024. THE EFFECT OF CARBON DIOXIDE, ANAESTHETICS AND STRYCHNINE ON JAW REFLEXES. L.Juma and T.E.C. Archibald: *Arch. int. Pharmacodyn.*, 1963, 142, 338 (Nobel Inst. for Neurophysiol., Karolinska Hospital, Stockholm, Sweden) A study is made of chiro-oral and poly-synaptic jaw reflexes in pentobarbitone-Cat^{aldehyde} anaesthetised decerebrate cats. Hypercapnia and hypocapnoea increases these reflexes, at different rates. These effects are abolished by CO₂.

4025. THE EFFECT OF CARISOPRODOL UPON THE RETI-

CUL CONTROL OF MONOSYNAPTIC REFLEXES. J.DelCastillo and T.E.Nelson: *Arch. int. Pharmacodyn.*, 1963, 142, 572-590 (Dept. Pharmacol., Sch. Med., Univ. Juan Puerto Rico) The effect of carisoprodol on knee jerk monosynaptic reflex is studied in anaesthetised or decerebrate or spinal cats. Electrical stimulation of the medulla inhibits the reflex, the effect being exaggerated by carisoprodol 1-2 mg./kg. i.v. Supraspinal facilitation is blocked in some highly excitable prep. Physostigmine and carisoprodol are mutually antagonistic respects, probably at the reticular level.

4026. ROLE OF ACHE IN CONDUCTION IN MAMMALIAN N-MYELINATED NERVE FIBRES. J.M.Ritchie and C.J.Ammett: *J. Pharmacol. exp. Ther.*, 1963, 139,

201-207 (A.Einstein Coll. Med., New York, U.S.A.) Hexamethonium and prostigmine in concn. as high as 50mM do not block conduction. None of the compounds that inhibit the action of ACh, to which are now added dibucaine, morphine and nalorphine, has any effect on the action potential. The evidence is against the theory of a physiol. role of ACh in axonal conduction.

J.M.Whitmarsh

4027. ACTION OF MORPHINE ON IMPULSE PROPAGATION IN NERVE FIBRES. A.B.Cairnie and H.W.Kosterlitz: *Int. J. Neuropharm.*, 1962, 1, 133-136 (Physiol. Dept., Univ. Aberdeen, Scotland) Morphine was

found to have no effect on the threshold responses of nerve fibres to electrical stimn., on die conduction velocity of the nerve impulse or on the recovery of excitability after a single conditioning stimulus.

G.F.Blane

4028. AN ANALYSIS OF EFFECT OF DRUGS ON CONDUCTION OF EXCITATION IN DIFFERENT PARTS OF NEUROMUSCULAR JUNCTION WITH AID OF MULTIBARRELLED MICROELECTRODES. A.I.Shapovalov: *Int. J. Neuropharm.*, 1962, 1, 183-187 (Pharmacol. Dept., 1st Pavlov Med. Inst., Leningrad, U.S.S.R.)

Using the frog sciatic-sartorius prep, it was found that different pharmacol. agents produce neuromuscular block affecting different parts of die junction: presynaptic nerve terminals, subsynaptic receptive membrane, and so-called electrically excitable membrane of muscle fibre.

G.F.Blane

4029. NEUROMUSCULAR BLOCKING ACTION OF SUBSTANCES RELATED TO CHOLINE. W.C.Bowman and M.J.Rand: *Int. J. Neuropharm.*, 1962, 1, 129-132 (Pharmacol. Dept., Sch. Pharm., London, England)

Choline analogues were screened in an attempt to determine the structural requirements for a pre-synaptic blocking action at the neuromuscular junction. Compounds with ethyl groups attached to the quaternary N possessed optimal activity.

G.F.Blane

4030. OBSERVATIONS UPON ROLES OF ETHER OXYGEN, ALKYL GROUP SIZE, NUMBER OF ONIUM CENTRES AND INTER ONIUM DISTANCE UPON NEUROMUSCULAR BLOCK IN BIS- AND POLYONIUM COMPOUNDS. J.J.Lewis, M.Martin-Smith and T.C.Muin: *Brit. J. Pharmacol.*, 1963, 20, 307-318 (Div. Exp. Pharmacol., Inst. Physiol., The Univ., Glasgow, Scotland) Using die method of Van Rossum and Aviens (1959), some bis-tris, and tetra-onium neuromuscular blocking agents are classified into depolarising, non-depolarising and intermediate-acting compounds. The reasons underlying the quant. and qual differences between these groups are discussed.

A.E. Brooks

4031. POTENTIATION OF STRIATED MUSCLE CONTRACTION BY PIPERIDYL METHYLROSTANE (PMA). T.A.Loomis and B.Salafsky: *Proc. Soc. exp. Biol., N.Y.*, 1962, 111, 667-670 (Dept. Pharm., Sch. Med., Univ. Washington, Seattle, Wash., U.S.A.)

The potentiating effect of PMA on twitch response of intact, ant. tibial rabbit muscle was shown to occur following both direct stimn. and indirect stimn. This effect was accompanied by an increase in conduction time of indirectly induced cell depolarisation, and an increased duration of transmembrane and surface potentials of single muscle cells.

M.M.Shapland

4032. SOME OBSERVATIONS ON ACTIONS OF CERTAIN PHARMACOLOGICAL AGENTS ON FIBRILLATION POTENTIALS AND ON SENSITIVITY OF SKELETAL

PHARMACOLOGY

MUSCLE OF RABBIT IN ADVANCED LOCAL TETANUS. V.G.Prabhu, Y.T.Oester and A.G.Karczman: Int. J. Neuropharm., 1962, 1, 371-379 (Dept. Pharmacol. The rap. t Grad. Sch. Med., Loyola Univ., Chicago, 111, U.S.A.) Fibrillation potentials occurring spontaneously in the rabbit tibialis muscle 10-12 days after local injn. of minute amounts of tetanus toxin were analogous to those seen in chronically denervated muscle. Since the response to depolarising agents, anticholinesterases and (+)-tubocurarine were also similar to the denervated prep, it is proposed that tetanus toxin may have local as well as central effects, the former representing an abnormality of the neuromuscular junction.

G.F.Blane

4033. SOME ASPECTS OF THE PHARMACOLOGY OF ORPHENADRINE. G.Onuaguluchi and J.J.Lewis: J. Pharm., Lond., 1963, 15, 329-336 (Dept. Mat. Med., Univ., Glasgow, Scotland) Orphenadrine possesses muscle-relaxant activity resembling that of tubocurarine in prep. of the hen, rat, and frog. It antagonises suxamethonium-induced contracture in the hen but increases the duration of depression of the twitch height. The relation of this to anti-Parkinson's activity and other applications is discussed. J.M.Whitmarsh

4034. EFFECTS OF PHARMACOLOGICAL DRUGS ON MINIATURE END-PLATE POTENTIALS [m.e.p.p.]. LM.Glagoleva and E.A.Liberman: Int. J. Neuropharm., 1962, 1, 39-42 (Inst. Biophys., Acad. Sci., Moscow, U.S.S.R.) Evidence is presented to suggest that the quantum of ACh released from Rana nerve endings to provoke m.e.p.p. consists of more than a single mol. The effects of atropine, deplacine, procaine, caffeine, urethane and phosphacol on m.e.p.p. parameters are given in a table. G.F.Blane

4035. STUDIES ON THE REPETITIVE DISCHARGES EVOKED IN MOTOR NERVE AND SKELETAL MUSCLE AFTER INJECTION OF ANTI-CHOLINESTERASE DRUGS. L.C.Baber and W.C.Bowman: Brit. J. Pharmacol., 1963, 20, 326-344 (Dept. Pharmacol., Sch. Pharmacy, Brunswick Sq., London, England) The effect of edrophonium, neostigmine and ambenonium on repetitive discharges from the ventral root and gastrocnemius in response to single and closely spaced motor nerve shocks is described. A 1 to 5 msec. interval potentiated the repetitive firing, longer intervals did not. Tetanic stimn. depressed the repetitive firing. The action of anti-cholinesterases on these effects is discussed in relation to their sites of action. A.E.Brooks

4036. ACTION OF CHOLINOLYTICS AND ADRENO-MIMETICS ON TONIC MUSCLES. L.G.Magazanik, MJ.Michelson, E.K.Roshkova and LA.Shumova: Int. J. Neuropharm., 1962, 1, 165-168 (Sechenov Inst. Evolutionary Physiol., Acad. Sci., Leningrad, U.S.S.R.) A study was made of the sensitivity of tonic and non-tonic fibres of mixed muscles of cyclostomata, amphibia and birds to a wide variety of cholinomimetics and cholinolytics. Some attention was also given to the effects of adrenomimetics on the cholinergic contracture of some skeletal muscles. G.F.Blane

4037. EFFECT OF MORPHINE ON THE MOBILISATION AND TRANSPORT OF LIPIDS. R.Ventura and M.Usardi: Atti. Acad. med. Lombarda, 1962, 17, 144-148 (1st. Farmacol., Univ. Milano, Italy) I.p. injn. of rats with 10 and 20 mg. A.g. body wt. of morphine-HCl, induces a fall in adrenal ascorbic acid level and an

increase in plasma corticosterone and tryptophan pyrrole activity of the liver. Besides this stimn. of the hypothalamic-hypophysis-adrenal axis, there is an increased mobilisation of free fatty acids and an increase in triglycerides in the liver. (Italian) G.N.Godson

4038. THE EXCRETION OF PETHIDINE AND ITS DERIVATIVES. A.M.Asatoor, D.R.London, M.D.Milne and M.L.Simenhoff: Brit. J. Pharmacol., 1963, 20, 285-298 (Dept. Med., Westminster Med. Sch., London* England) Excretion of pethidine and its metabolite norpethidine is increased in acid urine and decreased in alkaline urine, where it is excreted as meperidinic and normeperidinic acids. NH₄Cl therapy is indicated for pethidine poisoning. A chromatographic method for diagnosis of pethidine poisoning is given. A.E.Broote

4039. EFFECT OF REPLACING THE PHENYL RADICAL BY A PROPARGYL RADICAL ON THE ACTIONS OF I-PHENETHYL^PHENYL^PROPIONOXY-PIPERIP^. G.Deltour, J.Mercier, R.Charlier, M.Prost, F.Binon*^{no} P.Etzensperger Arch. int. Pharmacodyn., 1963, 142' 493-509 (Services de Recherche Labaz., Brussels, Belgium) Substitution of a propargyl radical for a phenyl radical caused various changes in pharmacol. effects, especially in relation to tolerance to analgesic and anti-tussive actions. The addiction producing effects of the propargyl deriv. are less common.

(French) T.J.Sullivan*^{no}

4040. EXPERIMENTS IN RELIEF OF CLINICAL PAIN WITH N-(2,3-XYLYL)ANTHRANILIC ACID (CI-473, MEFERAMIC ACID). L.J.Cass and W.S.Frederik: J. Pharmacol. exp. Ther., 1963, 139, 172-176 (Univ. Health Serv Harvard Univ., Cambridge, Mass., U.S.A.) Oral medication with 250 mg. of CI-473 gave results superior to those with 600 mg. of aspirin, and equiv. to those with 50 mg. of codeine. Addition of codeine or prodilidine did not enhance the efficacy of CI-473 but doubling its dose gave a striking increase in efficacy.

j.M.Whitmarsh

4041. VISCERAL RECEPTORS CONCERNED IN VISCERAL PAIN AND THE PSEUDAFFECTIVE RESPONSE TO INTRA-ARTERIAL INJECTION OF BRADYKININ AMP OTHER ALGESIC AGENTS. R.K.S.Lim, C.N.Liu, F.Guzman and C.Braun: J. comp. Neurol., 1962, 129 269-293 (Med. Sci. Res. Lab., Miles Laboratories, Inc., Elkhart, Ind., U.S.A.) In rats, cats and dogs using the Methylene Blue method, paravascular free-branching receptors which constitute the visceral divis*^{no} of the spinal nerves were detected in connective tissue around main vessels and nerves, voluntary muscle, joint, stomach, intestine, spleen, heart and meninges* These appear to be responsible for evoking the sensations of visceral pain when bradykinin and other algesic agents are inj. Ia. GM.Lewis

AUTONOMIC NERVOUS SYSTEM

4042. LIMITATIONS IN THE METHOD OF MAGNUS f^R THE ESTIMATION OF ACTIVITY OF AN ANTI-CHOLINERGIC SUBSTANCE. P.Duchene-Marull^{f,p} J.VacheK C.R. Soc. Biol., Paris, 1962, 156, 1631* 1638 (Centre Européen de Recherches Mauvernay, Riom, France) The activity of 10 anticholinergic

^{S1*}stances was estimated by their ability to inhibit the effect of ACh on the isolated ileum and auricles of smne-a-pig and the effect of vagal stimn. on the heart 2^{te} of ^{an}esthetised guinea-pig. The relative amio-^unnergic activity of the compounds varied with the Method of assay. (French) M.A.Price

4043. ACTION OF CHOLINE SALICYLATE AND OTHER DERIVATIVES ON ARTERIAL PRESSURE OF RAT.

P.Bouvet, T.Gayet-Hallion and N.Dorme: C.R. Soc. civi. biol., Paris, 1962, ¹⁵⁶ « 1762 » 1763. Choline salicylate was more active in inducing arterial hypotension than choline bitartrate and citrate. Choline salicylate in concn. above 15 mg./kg. caused hypertension of 2040 mm. Hg. 1 mg./kg. atropine inhibited hypotensive effects of choline salicylate, bitartrate and a citrate. (French) M.A.Price

^{4044.} ACTION OF CHOLINE SALICYLATE AND OTHER CHOLINE DERIVATIVES ON THE SMOOTH MUSCULATURE OF GUINEA-PIG. P.Bouvet, T.Gayet-Hallion and N.Dorme: C.R. Soc. Biol., Paris, 1962, ¹⁵⁶ 3-1595. Choline salicylate in concn. of 100 ml./kg. caused contraction of the isolated ileum and gall bladder of guinea-pig. Salicylic acid was less effective. The effect of choline salicylate was antagonised by atropine. Choline chloride and choline citrate were less active than the salicylate. Choline eff. showed a weak effect. Na citrate inhibited the effect of choline salicylate and Na salicylate augmented effect of choline citrate. (French) M.A.Price

^{4045.} EFFECTS OF AUTONOMIC AGENTS, ALONE AND IN COMBINATION WITH ANTI-EPILEPTIC DRUGS, ON ECTROSHOCK SEIZURES IN RATS. B.Zablocka: ^{*JJ*} int. Pharmacodyn., 1963, 142, 533-538 (Farmaco⁰⁰¹, Dept. Acad., Warsaw, Poland) The effect of various drugs affecting the autonomic system was studied on rats submitted to electric shocks. The drugs were given alone and in combination with phenobarbitone and phenytoin. Pilocarpine and atropine showed anticonvulsant activity, neostigmine and physostigmine had little effect. Methacholine prolonged electric shock seizures but potentiated phenobarbitone and phenytoin. T.J.Sullivan

^{4046.} EFFECT OF ATROPINE ON CARDIOVASCULAR REACTIONS ELICITED BY CATECHOLAMINES, ANGIOTENSIN, HISTAMINE, 5HT AND ACETYLCHOLINE IN THE CONSCIOUS DOG. K.D.Bock and M.Meier: Arch. int. Pharmacodyn., 1963, 142, 444-460 (Res. ^{ab} « cab Ltd# » Switzerland) Arterial pressure and vena caval pressure were measured in trained conscious dogs, together with heart rate and respiratory movements. Atropine caused a fall in arterial pressure. It affected circulatory effects of noradrenaline, angiotensin, adrenalin, 5HT, histamine and acetylcholine, probably by inhibiting cardiovascular reflexes. T.J.Sullivan

^{4047.} COLLAGEN SENSITIZATION AND MOLECULAR PHARMACOLOGY OF GANGLIONIC BLOCKING AGENTS. I. 97¹-J.A.van Rossum: Int. J. Neuropharm., 1962, 1, 401-421 (Dept. Pharmacol., R.K. Univ. of Nijmegen, Nijmegen, Netherlands) The mechanism of ganglionic synaptic transmission and mode of action of stimulants. Guinea-pig intestine is taken as a model in which the mode of action of drugs on ganglionic transmission are studied and

classified. Part I deals with ganglionic stimulant-depolarising agents such as nicotine. Their action on other cholinergic receptors are also considered and it is suggested that there is a close similarity between ganglion and myoneural junctions while the parasympathetic receptors are different.

n. Mode of action of competitive and non-competitive ganglionic blocking agents. G.F.Blane

4048. REACTIVATION OF ALKYLPHOSPHORYLATED CHOLINESTERASE BY A CONSTITUENT OF LIVER.

V.Neuhoff and H.Kewitz: Int. J. Neuropharm., 1962, 1, 169-171 (Pharmacol. Inst. Free Univ., Berlin, Germany) A brain AChase prep. which had been inhibited by treatment with Paraoxon could be reactivated by a substance isolated from liver homogenates by dialysis against water. The substance was identified as laevulinic acid. G.F.Blane

^{4049.} EFFECTS OF GANGLIOLYTICS ON INTERNEURONAL TRANSMISSION IN SYMPATHETIC GANGLIA. D.A.Kharkevich: Int. J. Neuropharm., 1962, 1, 149-152 (Inst. Pharmacol. and Chemotherapy Acad. Med. ScL, Moscow, U.S.S.R.) Hexamethonium, pendiomide and mecamylamine were studied for their effects on ganglionic transmission in anaesthetised or decerebrate cats. From the results obtained it is proposed that the ganglion-blocking action of these 3 substances may depend partly on presynaptic effect as well as on the well known blockade of ganglionic cholinergic receptors. G.F.Blane

^{4050.} NEW METHOD FOR CONTINUOUS RECORDING OF THE PUPIL SIZE BY MEANS OF A PHOTOTRANSISTOR. S.Ueki and S.Cono: Arch. int. Pharmacodyn., 1963, 142, 339-348 (Dept. Pharmacol., Kyushu Univ. Fac. Med., Fukuoka, Japan) A continuous record of pupil size is obtained by recording the output of a small photo-transistor installed inside the eye-ball of pentobarbitone-anaesthetised cats. The actions of adrenergic and cholinergic drugs and of sympathetic stimn. are studied. S.E. Smith

^{4051.} MYDRIATIC RESPONSE OF MICE TO ATROPINE. R.M.Quirois: J. Pharm. Lond., 1963, 15, 239-250 (Pfizer Ltd., Sandwich, Kent, England) The time after s.c. injn. at which atropine produces max. mydriasis in mice increases with body wt. This relationship holds over the range 16-50 g. The time courses of the response are parallel to the time courses of the atropine concn. in the cardiac blood of mice of the same wt. range. The response to a standard dose of atropine is nearly constant between 8 a.m. and 2 a.m. if sufficient illumination is provided. J.M.Whitmarsh

^{4052.} POTENTIATION OF POST GANGLIONIC RESPONSES TO STIMULATING AGENTS FOLLOWING REPETITIVE PREGANGLIONIC STIMULATION. R.L.Voile: Int. J. Neuropharm., 1962, 1, 209-211 (Riarmacol. Dept., Pennsylvania Univ., Philadelphia, Pa., U.S.A.) Conditioning of sup. cervical ganglia of cats by repetitive preganglionic volleys resulted in an enhanced postganglionic discharge response to treatment with drugs known to stimulate ganglia. This is interpreted as evidence for the existence of a presynaptic component in the actions of these drugs. G.F.Blane

^{4053.} ANTAGONISM BY MEFENAMIC AND FLUFENAMIC ACIDS OF THE BRONCHOCONSTRKTOR

PHARMACOLOGY

ACTION OF KININS IN THE GUINEA-PIG.

H.O.J.Collier and P.G.Shorley: Brit. J. Pharmacol., 1963, 20, 345-351 (Dept. Pharmacol. Res., Parke, Davis and Co., Hounslow, Middx., England) These substances antagonise bronchoconstriction, not hypotensions, produced by kinins, nor do they reduce bronchoconstrictor responses to ACh, histamine or 5HT. They are equivalent in potency to i.v. acetylsalicylic acid and duodenal phenylbutazone. Higher doses of bradykinin restore the effect. The results agree with competitive antagonism.

A.E.Brooks

4054. OBSERVATIONS ON THE ISOLATED VAS DEFERENS.

P.Ohun and B.C.R.Stromblad: Brit. J. Pharmacol., 1963, 20, 299-306 (Inst. Physiol., Univ., Lund, Sweden) The effect of stimn. of the hypogastric nerve of the isolated vas deferens was increased by parasympathetic blocking agents or sympathetic blocking agents e.g. dihydro-ergotamine and phenoxybenzamine. This is not considered due to anticholinesterase activity, and both addition and removal of a drug from the bath had an effect. Chronic denervation expt., addition of hexamethonium and histol. examination indicate a distribution of ganglion cells along the nerve, just outside the organ. A.E.Brooks

4055. CENTRAL HYPERTENSIVE EFFECTS OF ANGIOTENSIN II.

R.P.Haftday and J.P.Buchley: Int. J. Neuropharmac., 1962, 1, 43-47 (Dept. Pharmacol., Univ., Pittsburgh, Pa., U.S.A.) Cross-circulation expt. with dogs in which the carotid body-sinus complex was denervated were used to provide further evidence that part of the hypertensive effect of angiotensin II is mediated by central sympathetic structures. This effect depends on peripheral sympathetic discharge which is independent of the carotid receptor system and is not due to hypo-oxia. G.F.Blane

4056. NORMAL HYPERTENSIVE REACTION OF CAT TO SPARTEINE.

R.Hazard, A.H.Nezamie, S.Larno, P.Mouillé and A.Renier-Cornec: C.R. Soc. Biol., Paris, 1962, 156, 1743-1745 (Lab. Pharmacol., Fac. Méd., Paris, France) Injn. of sparteine 0.02 g./kg. to chloralose anaesthetised cats resulted in prolonged carotid hypertension, unaccompanied by renal vasoconstriction. Injn. of a 2nd dose of sparteine 90 min. later had no effect on b.p. The hypertensive effect of sparteine was not modified by hexamethonium, yohimbine, ergotamine, tolazoline, or chlorpromazine. (French) M.A.Price

4057. THE ACTION OF SUBSTANCES WHICH BLOCK SYMPATHETIC POSTGANGLIONIC NERVOUS TRANSMISSION. J.H.Burn and H.Froede: Brit. J. Pharmacol., 1963, 20, 378-387 (Pharmacol. Dept., Washington Univ. Sch. Med., St. Louis, Mo., U.S.A.) Phenyltrimethylammonium blocks the inhibn. of the rabbit ileum produced by stimn. of the periarterial nerves in the mesentery after an initial augmentation. This effect is not modified by hyoscine. A.E.Brooks

4058. MECHANISM OF CATECHOLAMINE RELEASE

FROM THE ADRENAL MEDULLA AND THE ROLE OF CALCIUM IN STIMULUS-SECRETION COUPLING.

W.W.Douglas and R.P.Rubin: J. Physiol., Lond., 1963, 167, 288-310 (Dept. Pharmacol., A.Einstein Coll. Med., Yeshiva Univ., New York, U.S.A.) Expt. made on perfused cat's adrenal glands to examine further the role of Ca and other inorg. ions in the secretion of catecholamines evoked by ACh or K. ACh still evoked catecholamine release from adrenal glands

perfused with a soln. consisting simply of isosmotic sucrose with glucose and CaCl_2 but wa'i ineffective when CaCl_2 was omitted. Omission of Cl from Locke's soln. did not prevent the response to ACh; omission of either Na or K potentiated it. Excess Ca stim. secretion in the presence of ACh or excess K but not in their absence, there was a direct relation between Ca concn. and the rate of catecholamine release. Mg antagonised the stimulant effects of ACh and K; this effect was overcome by additional Ca. The introduction of Ca after perfus[^] with Ca-free Locke evoked secretion; this effect was partially antagonised by adding Mg along with Ca - it was completely suppressed by having Mg present throughout the period of Ca deprivation. ACh was still effective in depolarising concn. of K_2SO_4 - provided Ca was present* The results support the view that ACh (and K) evoke secretion by promoting Ca influx into the chromaffin cells. •

4059. EFFECT OF RESERPINE ON THE ADRENAL

M.Bianchi and M.C.Fargien: C.R. Soc. Biol., Paris, 1962, 156, 1797-1802 (Lab. Physiol., Fac. Méd., Alger, Algeria) Two hr. after injn. <* 1 mg. reserpine per kg. body wt. to dogs there was no variation in the adrenal medulla secretion of adrenaline and noradrenaline. 2-8 hr. after injn. the secretion of catecholamines increased by 0.100 to 0.25 pg./kg.¹¹¹¹. Extraction of the medulla showed the presence of larg[^] quantities of dopamine with a decrease in the levels of adrenaline and noradrenaline. 8-24 hr. after reserpine, the secretion of catecholamines decreased to 0.023 p¹/kg./min. and the catecholamines content of the adren¹ was 25% of the normal level. (French) M.h.&c;

4060. SYMPATHOLYTIC DRUGS AND SOME ENZYMES INVOLVED IN METABOLISM OF CATECHOLAMINE¹

T.L.Chrusciel: Int. J. Neuropharmac., 1962, 1, 1S²-140 (Pharmacol. Dept., Silesian Sch. Med., Zabrze, Poland) The influence of guanethidine, phenoxybenzamine and bretylium upon the activity of the amine oxidase of dog serum and of decarboxylases of mouse tissues was tested in vitro and in vivo. Phenoxybenzamine in vitro inhibited dopa decarboxylase and in vivo decreased the activity of the brain enzyme only, while guanethidine and bretylium had little effect. CF.Blaney

4061. EFFECT OF ADRENERGIC BLOCKING AGENTS¹

TYRAMINE-INDUCED RELEASE OF CATECHOL-^{proc} AMINES FROM THE CAT HEART.

C.R.Swaine: Soc. exp. Biol., N.Y., 1963, 112, 388-390 (pep^L, Pharmacol., Woman's Med. Coll. Pennsylvania, Philadelphia, Pa., U.S.A.) It has been shown &nd that perfusion of cat's hearts with 50 g./ml. tyramine at various agents preventing catecholamine release off¹⁰ phenoxylbenzamine was quite potent as was N-(2-nicotinyl)-ethyl-N-ethyl-cyclohexanemethylamine. Phentoian and dihydroergotamine were ineffective. Since the 3-haloalkylamine was effective, and seeing that it does not have a blocking effect on adrenergicⁿ endings, it is suggested that tyramine-induced release of catecholamines is blocked by compounds of similar structural arrangement. D.N. wne

4062. EFFECTS OF BLOCKADE OF MONOAMINE^{EXCIT¹} STORAGE PROCESSES UPON LIMBIC SYSTEM^{REZIN¹}

ABILITY AND BEHAVIOUR IN CAT.

AM-Rezin, S.Spector and E.Costa: Int. J. Neuropharmac., 1962, 1, 85-95 (Lab. Chem. Pharmacol., Nat. Heart Inst., Bethesda, Md., U.S.A.) Reserpine and a benzodiazepine

quinolizine-deriv. blocked the storage of noradrenaline and 5HT in cat brain. The associated neurological effects were not mimicked by administration of a-methyl-m-tyrosine which blocks the storage of noradrenaline only, the role of brain amines in the response to reserpine is discussed in the light of these findings.

G.F.Blane

⁴⁰⁶ 3. CHANGES IN NORADRENALINE AND 5HT CONTENT OF BRAIN AFTER SHIGELLA SHIGAE TOXIN ADMINISTRATION. K.Masek, R.Smetana and H.Raskova: Int. J. Neuropharmac., 1962, 1, 71-77 (Acad. Sci. and Dept. Pharmacol., Charles Univ., Praha, Czechoslovakia)

A dose-dependent depletion of brain 5HT and noradrenaline occurred in mice between 24 and 48 hr. after i.p. administration of the exotoxin. No such changes were found in heart tissue although the catecholamine content of the adrenals was reduced. These results are taken to support the thesis that the toxin may act indirectly by releasing 5HT from stores. G.F.Blane

⁴⁰⁶ 4. SUBCELLULAR DISTRIBUTION OF CATECHOLAMINES IN DOG HEART. EFFECTS OF RESERPINE AND NORADRENALINE ADMINISTRATION.

n-A.Campos and F.E.Shideman: Int. J. Neuropharmac., 1962, 1, 13-22 (Dept. Pharmacol. and Toxicol., Wisconsin Univ., Madison, Wis., U.S.A.) The homogenate Peculate and soluble fractions obtained by centrifuging samples of right atrial or cat heart muscle were assayed for total norepinephrine and adrenaline. Details are given of the course of depletion after reserpine and build-up on adrenaline infusion. G.F.Blane

⁴⁰⁶ 5. HYPERTENSIVE ACTION OF TOLAZOLINE AND HYDROXYMETHYLDERGINE. B.G.Benfey and D.R.Varma: Canad. J. Biochem., 1963, 41, 941-946 (Dept. Pharmacol., McGill Univ., Montreal, Que., Canada) The effects of tolazoline (0.5 mg./kg.) and i.v. Hydergine (10 mg./kg.) on b.p. of cardiac contractility and heart rate were studied in dogs under pentobarbital anaesthesia. Following s.c. reserpine (0.5 mg./kg.) the pressor effect of tolazoline had a marked pressor effect differentiated with pos. inotropic and neg. chronotropic (10^{-8}). These were abolished by i.v. phenoxybenzamine (10^{-8}). Hydergine had pressor and neg. chronotropic effects in the absence of reserpine and pos. inotropic actions after reserpine, the effects being abolished by phenoxybenzamine. J.B.Parish

⁴⁰⁶ 6. STRUCTURE OF SYMPATHOMIMETICS AS RELATED TO RESERPINE INDUCED SENSITIVITY. V.N.GEYER - B.I.THEUMLA SCHMIDT and 230; V.K.Fleming: J. Pharmacol. exp. Ther., 1963, 139, 1-10. (W.Virginia Med. Center, Morgantown, W.Va., U.S.A.) The α - and β -methyl groups are not both essential to direct action. Dichlorosubstitution of hydroxyl groups on the catechol nucleus only slightly reduces direct action. The p-hydroxyl group is not for direct action. Substitution of a β -methoxy but the β -hydroxyl group profoundly reduces direct action than to β -substitution. J.M.Whitmarsh

⁴⁰⁶ 7. ON THE SERPINE ANTAGONISTS AND THEIR EFFECTS ON THE SERPINE-INDUCED CATECHOLAMINE DEPLETION IN THE RAT ADRENAL MEDULLA. G.Zbinden: J. Neuropharmac., 1962, 1, 435-445 (Dept. Biol. Hoffmann-La Roche Inc., Nutley, N.J., U.S.A.)

Compounds which blocked the reserpine-induced catecholamine depletion from the adrenal medulla included iponiazid, tranylcypromine, anti-depressants and a benzoquinolizine deriv. Amphetamine, other monoamine oxidase inhibitors, chlorpromazine and scopolamine were inactive. Good correlation existed between anti-reserpine activity in this test and clinical anti-depressant efficacy.

G.F.Blane

⁴⁰⁶ 8. MECHANISM OF THE INITIAL ADRENERGIC EFFECTS OF BRETYLIUM AND GUANETHIDINE.

S.D.Gokhale, O.D.Gulati and V.V.Kelkar: Brit. J. Pharmacol., 1963, 20, 262-277 (Pharmacol. Res. Unit, Council of Sci. and Industr. Res., Med. Coll., Baroda, India) The effects of bretylium and guanethidine are prevented by phenoxybenzamine and dichloroisoprenaline and reduced by cocaine, imipramine and reserpine in anaesthetised and spinal cats. I.v. noradrenaline increases sensitivity to bretylium and guanethidine and restores the response in the reserpinised cat. It is concluded that their initial adrenergic effects are partly mediated through a release of catecholamine stores from the effector organ.

A.E. Brooks

⁴⁰⁶ 9. RELATIONSHIPS BETWEEN THE RELEASE AND TISSUE DEPLETION OF NORADRENALINE [NA] FROM THE HEART BY GUANETHIDINE AND RESERPINE.

D.C.Harrison, C.A.Chidsey, R.Goldman and E.Braunwald: Circulat. Res., 1963, 12, 256-263 (Cardiol. Branch, Nat. Heart Inst., Bethesda, Md., U.S.A.)

Coronary sinus and arterial blood levels of NA, indicated discharge of the NA by guanethidine in open chest dogs under pentobarbital. Myocardial NA was depleted more by reserpine but with no real evidence of discharge in the blood. The higher blood levels of NA corresponded with higher arterial pressure.

R.E.Moore

⁴⁰⁶ 0. ORIGIN OF HYPERSENSITIVITY TO CATECHOLAMINES INDUCED BY RESERPINE AND GUANETHIDINE.

A.Cession-Fossion: C.R. Soc. Biol., Paris, 1962, 156, 1935-1936 (Inst. Léon Fredericq, Univ. Liège, Belgium) Pretreatment of rats with reserpine (1 mg./kg.) or guanethidine (10 mg./kg.) caused hypersensitivity to exogenous adrenaline or noradrenaline (0.1 μ g.). This hypersensitivity was reduced by perfusion of noradrenaline ($200-400$ μ g./kg.) but reappeared after further treatment with guanethidine or reserpine.

(French) M.A.Price

⁴⁰⁶ 1. STUDY OF THE RELATIONSHIP BETWEEN THE NEUROTRANSMITTER STORE AND ADRENERGIC NERVE BLOCK INDUCED BY RESERPINE AND GUANETHIDINE.

T.E.Gaffney, C.A.Chidsey and E.Braunwald: Circulat. Res., 1963, 12, 264-268 (Cardiol. Branch, Nat. Heart Inst., Bethesda, Md., U.S.A.) The heart rate response to cardio-accelerator nerve stimn. was compared with noradrenaline [NA] concn. in the myocardium of dogs under pentobarbital. Guanethidine blockade was independent of NA concn., whereas reserpine blockade was only manifest when NA concn. had been reduced to about 0.3 μ g./g. Infusion of NA did not restore the response in either case.

R.E.Moore

⁴⁰⁶ 2. HAEMODYNAMIC EFFECTS OF GUANETHIDINE IN MAN.

J.N.Cohn, T.E.Liptak and E.D.Freis: Circulat. Res., 1963, 12, 298-307 (Dept. Med., Georgetown Univ. Med. Center, Washington, D.C., U.S.A.) Lv. infusion into supine men produced transient pressor effects followed in hypertensive subjects by hypotension. Digital vasoconstrictor reflexes were

PHARMACOLOGY

incompletely blocked and vascular responses to tyramine and ephedrine were not reduced. Splanchnic vascular resistance increased but cardiac output was hardly altered.

R.E.Moore

4073. STUDIES ON CARDIOVASCULAR ACTIONS OF ANTSYMPATHOMIMETIC DRUGS. B.G.Benfey and D.R.Varma: *Int. J. Neuropharm.*, 1962, 1, 9-12 (Pharmacol. Dept., McGill Univ., Montreal, Canada) Dibenamine, chlorpromazine and phentolamine stim. the heart and raised the blood pressure in barbiturate anaesthetised cats with autonomic ganglia blocked or the spinal cord transected between C1 and C2. Pretreatment with reserpine abolished the cardiac effect but potentiated the hypertensive action. The peripheral vasoconstrictor action of phentolamine (and hydergine) could be abolished by pretreatment with adrenergic vasoconstrictor blocking agents while piperoxan and phenoxybenzamine were still hypertensive and apparently acting directly rather than on adrenergic receptors.

G.F.Blane

4074. ACTION OF RESERPINE AND INHIBITORS OF MONOAMINE OXIDASE ON ANAPHYLACTIC SHOCK IN MICE. B.N.Halpern, T.Neveu, A.Branellec and C.Baracco-Drudi: *C.R. Soc. Biol.*, Paris, 1962, 156, 1739-1743 (Chaire Méd. expt., Coll. de France, Paris, France) 1-2 mg./kg* reserpine protected mice against passively induced anaphylactic shock. Previous administration of iproniazide or pheniprazine, at doses which inhibit the action of reserpine on the group toxicity of amphetamine, did not modify the protective action of reserpine against anaphylactic shock.

(French)

M.A.Price

4075. A NEW TEST FOR DETECTING MONOAMINE OXIDASE-INHIBITOR EFFECTS. A.Lehmann and R-G.Busnel: *Int. J. Neuropharm.*, 1962, 1, 61-70 (Lab. of Acoustic Physiology, I.N.R.A. Jouy-en-Josas, France) The increased sensitivity of audiogenic mice after treatment with 1 mg./kg. reserpine led to fatal seizures in 78% of the animals. MAO-inhibitors antagonised this effect of reserpine although given alone they have no influence on the seizure level. Non-MAO-inhibitors, acetazoleamide and imipramine also give a pos. reaction in this test.

G.F.Blane

4076. THE ACTION OF TYRAMINE ON THE ISOLATED DOG ATRIUM. W.J.Hall: *Brit. J. Pharmacol.*, 1963, 20, 245-253 (Dept. Physiol., Univ., Sheffield, England) Tyramine has pos. inotropic and chronotropic actions on dog isolated atrium, which are completely and reversibly inhibited by cocaine, but reversibly blocked by phenoxybenzamine. Concluded that tyramine liberates catecholamines from storage sites, but this release is different from that of adrenergic nerve stimm.

A. E. Brooks

4077. ACTION OF SYMPATHOMIMETIC DRUGS ON THE ISOLATED JUNCTION OF THE BILE DUCT AND DUODENUM. A.Crema and F.Berte: *Brit. J. Pharmacol.*, 1963, 20, 221-229 (Dept. Pharmacol., Univ., Pavia, Italy) The actions of adrenaline, noradrenaline and phenylephrine are studied on the terminal tract of the bile duct (as spiral strips or intact) and on the adjacent duodenum from the calf and the cat. They contract the bile duct and release the duodenum. On the basis of action of adrenaline antagonists it is suggested that there are α-receptors mediating contraction of muscle in the sphincter zone of the bile duct.

A.E.Brooks

4078. DOPAMINE-O-OXIDASE ACTIVITY IN MAN USING HYDROXYAMPHETAMINE AS SUBSTRATE. A.Sjoerdsema and W.von Studnitz: *Brit. J. Pharmacol.*, 1963, 20, 278-284. Hydroxyamphetamine is administered orally to 5 human subjects in daily doses of 26 to 118 mg. Approx. half the dose is recovered unchanged in the urine, and 43-7 to 94% excreted as hydroxy norephedrine. In vitro this conversion is effected by dopamine-o-oxidase. No impairment of the (3-hydroxylation was noted in an adrenalectomised subject.

A.E.Brooks

4079. INFLUENCE OF ANTI-BRADYKININ SUBSTANCES ON THE VARIATION OF THE CORTICO-PIAL CIRCULATION AFTER ANAPHYLACTIC SHOCK OF GUINEA-PIGS. M.Concioli, L.Mariani and R.Villiani: *Atti. Acad. med. Lombarda*, 1962, 17, 242-246 (1st. di FarmacoL, Univ. Milano, Italy) Sodium salicylate (250 mg./kg. body wt.) and phenylbutazone (50-100 mg*/kg.) administered i.v. to guinea-pigs completely inhibited the arteriolar vasodilation of the pial-circle that is normally induced by bradykinin or anaphylactic shock. These drugs also showed other anti-bradykinin activity & on the bronchial muscles. (Italian) G.N. Godson

4080. HYPOTHESIS FOR THE MODE OF ACTION OF α-METHYLDOPA IN RELIEVING HYPERTENSION. M.D.Day and M.J.Rand: *J. Pharm. Lond.*, 1963, 15, 221-224 (Señ. Pharm., 29-39 Brunswick Sq., London, England) Review. 19 ref. J.M.Whitmarsh

4081. MECHANISM OF CATECHOLAMINE RELEASE BY TYRAMINE. H.J.Schumann and A.Philippic *Int. J.* Neuropharm.*, 1962, 1, 179-182 (Biarmacol. Dept. #, ^ Frankfurt Univ., Germany) Isolated adrenal medullary chromaffin granules when incubated in vitro spontaneously release equivalent amounts of catecholamines and ATP. Indirectly acting sympathomimetic agents were found to accelerate this release of catecholamine but not that of ATP. It is argued that in the case at least of tyramine and phenylethylamine these more basic amines displace the less basic catecholamines from their storage sites in the granules and are themselves attached to the ATP*.

G.F.Blanc

4082. SIMPLE DEVICE FOR DETERMINATION OF CATECHOLAMINES. R.Smetana: *Int. J. Neuropharm.*** 1962, 1, 189-192 (Pharmacol. Lab., Acad. Sci., ^ Prague, Czechoslovakia) An apparatus and method** described for the differential estimation of adrenaline *^{no} noradrenaline by the trihydroxyindole technique with photographic recording of the fluorescence from corresponding lutines.

G.F.Blane

4083. EFFECT OF ESERINE ON ACTIVITY OF ADRENERGIC NERVES IN RAT. V.Varagić, R.Lesić, J.Vučo and B.Stamenović: *Int. J. Neuropharm.*, 1962, 1, 201-202. The hypertensive effect of eserine in the rat is due to central adrenergic stimm. rather than to release of pressor catecholamines from peripheral stores.

G.F.Blanc

4084. PHARMACOLOGICAL ANALYSIS OF NEUROGENIC MYOCARDIAL LESIONS. Z.I.Vedeneyeva: *Int. J. Neuropharm.*, 1962, 1, 207-208 (Int. Exp. Med., Leningrad, U.S.S.R.) Neurogenic lesions of rat myocardial tissue were produced by repeated stimm. of sympathetic ganglia lying on the efferent pathway to the heart. Similar muscle lesions could be made by the injn. of large doses of noradrenaline and adrenaline. The effects of other sympathomimetic agents are also reported and discussed.

G.F.Blane

4085. COMPARISON OF THE PHARMACOLOGICAL EFFECTS OF SOME COMPOUNDS RELATED TO 2-AMINOETHYLISOTHTORONIUM BROMIDE HYDROBROMIDE [AET]. V.Di Stefano, P.S.Korn and D.E.

Leary. Radiat. Res., 1963, 18, 177-185 (Dept. Pharmacol., Univ., Rochester, N.Y., U.S.A.) The pharmacol. effects of 9 compounds closely related to AET were studied in anaesthetised cats in an attempt to find a radiation protective drug of lower toxicity. In general the compounds gave attenuated gut response, amplified ganglionic blocking activity and resulted in neuromuscular depressant activity. No prediction could be made from pharmacol. evidence as to whether these compounds would give effective radiation protection. B. Payne

CR. Soc. Biol., Paris, 1962, 156, 1932-1934 (Inst. L.Fredericq, Univ., Liège, Belgium) The arterial hypotension induced in rat by 1-3 fig. bradykinin/100 g. was inhibited by 50-70 mg. Na salicylate/100 g. Purified ACTH did not reduce the concn. of Na salicylate required for inhibn. Bilateral adrenalectomy increased the duration of hypotension induced by bradykinin but did not modify the inhibn. by Na salicylate. (French) M. A. Price

4091. ADRENAL CORTICOID' TYPE HORMONAL PROPERTIES OF A TRITERPENIC ACID, POLYPORENIC ACID A. A.R.Ratsimamanga, B.Pasich, P.Boiteau and M.Nigeon-Dureuil: C.R. Soc. Biol., Paris, 1962, 156, 1552-1554 (Lab. Physiol. Nutrit., Fac. Méd., Paris, France)

Polyporenic acid A, (PPA), extracted from Polyporus betulinus, was administered to young adrenalectomised rats subjected to 2(f, to 2 hr. at & or to exhaustion. The survival rate of rats kept at 20° and receiving 0*05-3*5 mg. PPA was similar to those receiving 0*2 mg. DOCA. 0*005-0*25 mg. PPA increased the survival rate of animals subjected to 3°. The result was similar to that obtained after administration of 0*005-0*25 mg. hydrocortisone. (French) M.A.Price

4092. ADRENAL FUNCTION AFTER PROLONGED CORTICOSTEROID THERAPY. B.H.B. Robinson, D.Mattingly and C.L.Cope: Brit. med. J., 1962, i, 1597-1583 (Postgrad. Med. Sch., London, England)

Sixteen of 17 patients showed no evidence of damage to the pituitary-adrenal axis after prolonged corticosteroid therapy. The other patient showed severe adrenal inertia due to damage to his corticotrophin-releasing mechanism. Prompt response of collapsed patients to hydrocortisone i.v. is not evidence of adrenal cortical failure. M.E.Nutt

4093. RELATIONSHIP BETWEEN HYPOPHYSIS AND ALDOSTERONE SECRETION: MECHANISM OF DIURETIC INHIBITION BY RESERPINE. F.Clementi, F.Fraschini, E.Muller, A.Ornesi and A.Zanoboni: Atti. Acad. med. Lombarda, 1962, 17, 209-221 (1st. FarmacoL, Univ., Milano, Italy) After a long

lasting treatment of rats with a high dosage of aldosterone (0*1-0*5 mg./100 g. body wt.), diuresis was depressed. E.m. showed the pinealocytic cells to be depleted of dense granules. Reserpine (2*5 mg./kg.) exerted similar effects, but these were abolished by hypophysectomy. Aldolactone abolished the reserpine depression of diuresis. Thus, the hypophysis probably plays an important role in the electrolyte metabolic regulation. (Italian) G.N.Godson

4094. ACTION OF PITRESSIN ON OUTPUT AND CONCENTRATION OF URINE IN NORMAL AND HYPOTHYROID RATS DURING POLYURIA. P.Reville, H.Jahn and F.Stephan: C.R. Soc. Biol., Paris, 1962, 156, 1686-1690 (Chaire Pathol. expt., Fac. Méd., Strasbourg, France)

20 mU pitressin was administered to normal rats and those receiving propylthiouracil. Pitressin increased the urine Na content and increased antidiuresis in both groups. 50 mU pitressin inhibited diuresis and the osmotic concn. of urine increased above the plasma level. There were no significant differences between the results from normal and propylthiouracil treated rats.

4095. INFLUENCE OF 2a-METHYL-17p-HYDROXY-5(X-ANDROSTAN-3-ONE [MHA] ON INCORPORATION OF [2-14C3GLYCINE INTO PROTEINS OF A IMT MARY FIBROADENOMA. A POSSIBLE BIOASSAY METHOD. O.Abe, A.Herranen and R.I.Dorfman: Proc. Soc. exp. Biol., N.Y., 1962, 111, 706-708 (French) M. A. Price

ENDOCRINES

4086. CYTOPLASTIC BODIES IN THE ADRENAL CORTEX OF PATIENTS TREATED WITH SPIROLACTONE.

P.T.Janigan: Lancet, 1963, i, 850-852 (Dept. Path., Univ. Kansas Med. Center, Kansas City, Kansas, U.S.A.) cytoplasmic bodies with a predominant phospholipid content were found in the cells of the adrenal zona glomerulosa of 18 patients, all of whom had been treated with spiro lactone. G.H.Bell

4087. EFFECT OF HYDROCORTISONE ON a-AMINO ISOBUTYRIC ACID [AIB] UPTAKE BY ISOLATED ^-REFUSED RAT LIVER. A.D.Bass, J.W.Chambers and A.A.Richtarik: Life Sci., 1963, No. 4, 266-269 (Pt. Pharmacol., Sch. Med., Vanderbilt Univ., and Nashville, Tenn., U.S.A.) Livers from both normal Adx rats adrenalectomised rats exhibited an increase in uptake with hydrocortisone which acts directly on the liver to stimulate AIB uptake. K.Jones

4088. INHIBITION OF THE HYPOPHYSEAL-SUPRARENAL AXIS IN YOUNG CHILDREN BY THE PROLONGED ADMINISTRATION OF CORTICOSTEROIDS.

G.Chiumento: Atti. Acad. med. Lombarda, 1962, 17, 21-28 (Clin. Pediatrica, Univ., Pavia, Italy) doses of prednisolone to infants, had an inhibiting effect on the adrenal-pituitary axis which was considerable after oral intake of 10 mg. and max. after intake of 23S n? Total intake of 10 mg. & impound S excretion. (Italian) G.N.Godson

4089. DIFFERENTIAL ABSORPTION OF VARIOUS CORTICOSTEROIDS IN THE INTESTINE. G.Chiumento: Atti. Acad. med. Lombard, 1962, 17, 140-142 (CIP, Univ., Pavia, Italy) Babies and children were treated orally with 9-a-fluoro-16(X-17a,21-triol-3,20-dione(prednisolone) 0*8 mg./kg. body wt.), M-4-pregnane-17a,21-triol-3,20-dione(pregnane-17a,21-triol-3,20-dione) (dexameetasone, 0-15 mg./kg.) and 6a-fluoroprednisolone (0*4 mg.-Ag-)» amount per day. The intestine calc. from the changes in urinary excretion of a 17-OHCS, 6a-fluoroprednisolone was adsorbed and is recommended for clinical use.

4090. ANTAGONISM BETWEEN SYNTHETIC BRADYKININ AND SODIUM SALICYLATE IN RAT. J.Lecompte: (Italian) G.N.Godson

PHARMACOLOGY

(Worcester Found, for Expt. Biol., Shrewsbury, Mass., U.S.A.) The end-point of [2-14c] glycine uptake in proteins of transplanted rat mammary tumours has been used in assaying the effectiveness of anti-tumour steroids. Tumours were inhib. by testosterone propionate but more effectively by MHA. M.M. Shapland

4096. RESPONSE OF OBESE PATIENTS TO AN 11 β -HYDROXYLASE INHIBITOR, METHOPYRAPONE [SU-4885]. B.Simkin and R.Arce: Proc. Soc. exp. Biol., N.Y., 1962, 111, 780-783 (Div. Med., Cedars of Lebanon Hosp., Los Angeles, Calif., U.S.A.) Obese subjects exhibit 2 different responses to SU-4885 depending upon the level of the base line urinary 17-ketogenic steroid excretion Subjects with a normal base line have a normal response, whereas subjects with an elevated 17-ketogenic steroid give a markedly impaired response.

M.M. Shapland

4097. OBSERVATIONS ON A DITHIOCARBAMOYLHYDRAZINE [ICI 33828] AS AN INHIBITOR OF PITUITARY GONADOTROPHIC ACTIVITY. P.S.Brown: J. Endocr., 1963, 26, 425-436 (Obst. Med. Res. Unit, Univ., Aberdeen, Scotland) ICI 33828 had gross anti-

gonadotrophic effects on the sex organs of ? and <\$ rats. Sirnult. administration of ICI 33828 and gonadotrophin did in some cases result in a reduced response to the gonadotrophin but this could not be conclusively attributed to a sp. effect of the inhibitor at the gonadal level. Since pituitaries of rats treated with ICI 33828 contained less FSH than control glands it is concluded that the drug does act by reducing the formation of pituitary gonadotrophin. G.F.Blane

40981 EFFECT OF DERIVATIVE OF DITHIOCARBAMOYL HYDRAZINE [ICI 33828] ON TIBIAE OF HYPHYSECTOMISED RATS. H.E.C.Cargill Thompson: J. Endocr., 1963, 26, 447-448 (Clin. Endocr., Res. Unit, Univ., Edinburgh, Scotland) Compound ICI

33828, known to inhibit pituitary gonadotrophic activity, was found to diminish bone and body growth in immature hypophysectomised rats. When administered together with beef growth hormone the effect of the latter on tibial epiphysial width and on body wt. was reduced.

G.F.Blane

4099. EFFECT OF STEROIDAL ANTI-PROGESTINS ON IMPLANTATION OF FERTILISED EGGS OF RATS AND MICE. U.K.Banik and G.Pincus: Proc. Soc. exp. Biol., N.Y., 1962, 111, 595-602 (Worcester Found. Expt. Biol., Shrewsbury, Mass., U.S.A.) Of 9 steroidal anti-progesterones studied for their implantation-inhibiting activity, 3 were without effect, 4 were very active and 2 were effective in mice but not in rats. M.M.Shapland

4100. INSULIN-PRE-HYPOGLYCAEMIC THERAPY BY LUMBAR PUNCTURE IN CASES OF CEREBRAL APOPLEXY. A.Roversi, E.Pannaggi, L.C.Remonini and C.Borelli: Atti. Acad. med. Lombarda, 1962, 17, 231-234 (1st. Idrologia Med., Univ., Milano. Italy)

When insulin-pre-hypoglycaemic therapy (T.I.P.I.) was applied to diabetic cerebrally apoplectic patients using a lumbar puncture technique 18/24 showed improvement, whereas when the T.I.P.I. was applied to a group of 187 patients by hypodermic injn. only 54% showed an improvement. In a third group of 181 patients treated by other therapeutic methods, but no insulin only 38% showed any improvement. (Italian) G.N.Godson

4101. ACTION OF NEUROMIMETIC AMINES ON IN VITRO THYROID METABOLISM. J.E.Dumont and

P.Hupka: CR. Soc. Biol., Paris, 1962, 156, 1942-1946 (Lab. Méd. expt., Fac. Méd., Bruxelles. Belgium) Adrenaline, noradrenaline and 5HT increased the in vitro oxidation of C-1 of glucose by thyroid slices of sheep. Adrenaline was oxidised to adrenochrome during incubation and inhibn. of the oxidation by ascorbic acid decreased the action of adrenaline on glucose oxidation. Preincubation of adrenaline increased the effect on thyroid metabolism. (French) M.A.Price

4102. EFFECT OF AN EXTRACT OF LITHOSPERMUM (LITHOSPERMUM OFFICINALE L.) ON THE THYROID ACTIVITY OF THE MOUSE. F.Lachiver and B.Seshadrulu Arch. Sci. physiol., 1962, 16, 305-323 (Lab. Physiol. gen.. Museum d'Histoire Naturelle, 7 rue Cuvier, Paris, France) The effects of an aq. extract of stalks or leaves of *L. officinale* on the thyroid gland in mice were studied. The extract caused transitory inhibn. of fixation of ^{131}I and reduced the secretion of thyroid hormone and total body excretion of iodine. The intra-thyroid biosynthesis of hormones appeared unaltered.

(French) S. A. Thistlewood

4103. THYROID INFLUENCE ON THE TOXICITY OF RESPIRATORY IRRITANT GASES, OZONE AND NITROGEN DIOXIDE. E.J.Fairchild, II and S.L. Graham: J. Pharmacol. exp. Ther., 1963, 139, 177-184 (Div. Occupation Hlth., U.S.Dept. HI*, Cincinnati, Ohio., U.S.A.) Chem. or surgical thyroideectomy enhanced survival of mice or -rats exposed to O_3 and NO_2 . Increased thyroid activity rendered mfc highly susceptible to the gases. Thyroid blocking agents gave protection and thyroid hormone augmented toxic action. Doses of DNP which elevated metabolism did no alter the toxic response to O_3 .

J.M.Whitmarsh

GENERAL PHARMACOLOGY

4104. CLINICAL EFFECTS OF BITES BY MALAYAN VIPER (ANCISTRODON RHODOSTOMA BOIE).

H.A.Reid, P.C.Thean, K.E.Chan and A.R.Baharom: Lancet, 1963, i, 617-621 (Penang Gen. Hosp., Malaya) The clinical features following bites by ^{hc} *Ancistrodon rhodostoma* in 250 patients personal observed in 1960-61. Clotting defect is the principal characteristic of systemic poisoning, which was present in 39% of victims. In 15% there is an overt haemorrhage syndrome, of which haemoptysis is the earliest sign ana sparsely scattered discoid ecchymoses are a distinctive feature. The coagulation defect in the absence of sp-^ treatment may continue for over 3 weeks. G.H**

4105. PROLONGED COAGULATION DEFECT (DEFIBRINA TION SYNDROME) IN MALAYAN VIPER BITE.

H.A.Reid, K.E.Chan and P.C.Thean: Lancet, 1963, i, 621-626 (General Hosp., Penang, Malaya) Defibrination is the main feature of systemic poisoning following bites of the Malayan Pit-viper *Ancistrodon rhodostoma*. Observation of a clot quality closely parallels ^{tab. or ?} ¹ ¹ tests such as the thrombin titre. An outstanding find in this viper-bite defibrillation syndrome is its long ^{per} ¹ ¹ ^d ence. Treatment by blood-transfusion or by cone ^P ¹ ¹ ^d human fibrinogen is disappointing. In contrast, sp-¹ ¹ ^d venene is dramatically successful.

4106. RELATION BETWEEN TUMOURICIDAL AND PROPHAGE-INDUCING ACTION. H.Endo, M.Ishizawa, T.Kamiya and S.Sonoda: Nature, Lond., 1963, 198, 258-260 (Divn. Chem., Inst. Cancer Res., Kyushu re J~inv. Fukuoka, Japan) A direct relationship is in^{re}te^{ce}* between the capacity to induce phage formation in^{re}2li²K12(X) and carcinostatic activity of mito-anthrⁿ and^{re}gated compounds and nitrogen mustard Dm^{it} J^S deriv. The induction of lysogenic bacteria may E, V^{lde} a rapid and simple screening method for anti-tumour agents. G.M.Lewis

4107. IN VIVO ANTI-TUMOUR ACTIVITY OF ETHYL HEPTYLOXYACETATE AGAINST EHRLICH ASCITES CELLS. G.F.Townsend, W.H.Brown and E.E.Felauer: Nature, Lond., 1963, 198, 384-385 (Dept. Agric, [16SS] 8¹¹⁰ A⁸fic Coll., Guelph, Ont., Canada) B^W-De canoate inj. into mice is rapidly destroyed by blood destr^{ion}* Substitution of an O atom for the 3rd C in^{re}s its degr^aation in vivo without affecting its cytotoxic effect on transfers of AKR leukaemia cells in into mice for 5 days after transplant of Ehrlich ascites nth reduced the total packed cell count in ascites fluid n^o ~6th day to Mr^o of the control, due to reduction in Urine large cells. The treatment did not increase Val. G.M.Lewis

4108. ANTIMITOTIC ACTION OF 5-(2'-BROMO-^N-CETAMIDO)-URACIL [BAU] ON THE EHRLICH ASCITES TUMOUR. T.A.Okada and E.Roberts: Proc. Soc. p. Biol., N.Y., 1962, 111, 695-698 (Dept. Biochem., City of Hoep Med. Center, Duarte, Calif., U.S.A.) Single i.p. inj. of BAU produced a variety of anomalies in mitotic rat^e tumour cells causing a mid^oase in mitotic rate from 3-24 hr. after injn. but *** inhib. was not observed. This antimitotic effect was prevented by injn. of glutathione or cysteine simult^{an} with BAU. M.M.Shapland

4109. EFFECTS OF VIPERA AMMODYTES AMMODYTES VENOM ON ISOLATED HEART. I.Ivancevic, N.Marian Knezevic: Toxicon, 1963, 1, 65-66 (Inst. Hygiene Col^t Dep^t Pam^bl. Hosp. Stojanovic, Zagreb, Yugoslavia) The venom of V. ammodytes ammodytes produces sp. changes in the isolated hearts of frogs and mice hⁱ which are quite different in most instances from his tam^V produced by histamine, strophanthine and the me-liberator. K.Brew

4110. PREPARATION OF EGYPTIAN BLACK SNAKE ANTIVENIN. A.H.Mohamed and A.M.Kamek: Toxicon, 1963, 1, 71-79 (DePt- Physiol., Fac. Med., Ein Gez, Cairo, Egypt) Antivenin was prep. in the unis^{ed} and goats[#] During the early part of the i^{se} Ved t^h Programme, the deleterious signs, usually inj. of cor^t sone and a^{nt}ropine. These drugs did not appear affect^{an} antigenicity; they reduced mortality. K.Brew

4111. ANTIVENIN ACTIVITY OF SOME SNAKE SERA. K. 89⁹, T⁰ ras and V.B.Mhasalkar: Toxicon, 1963, 1, 79-84 (Inst., Bombay, India) Studies are the effects of certain snake sera on snake venoms. The inhibitor activity of those sera was observed and the effects on r.^hc. in the presence of K.Brew

4112. EFFECT OF EDUCED DERIVATIVES OF FOLIC ACID ON TOXICITY ANU ANTI-LEUKAEMIC EFFECT

OF METHOTREXATE IN MICE. J.A.R-Mead, J.M. Venditti, A.W.Schrecker, A.Goldin and J.C.Keresztesy: Biochem. Pharmacol., 1963, 12, 371-383 (Lab. Chem. Pharmacol., Nat. Cancer Inst., Bethesda, Md., U.S.A.) Mice were inoc. with leukaemia L1210 and 3 days later were treated daily with combinations of methotrexate and a no, of folic acid deriv. Treatment with methotrexate alone or with folic acid resulted in a considerable prolongation of life. With all other treatments leukaemic death resulted at the same time as in the controls. Delayed administration of citrovorum factor and prefolic acid A, after large doses of methotrexate, reduced the toxicity with little effect on the antileukemic effect when given 12-24 hr. after, but not 48 hr. after. L.G. Gillies

4113. ANOXIC CHANGES OF LIVER CELLS. E.M. AFTER INJECTION OF COLLOIDAL MERCURY. P.R.Oudea: Lab. Invest., 1963, 12, 386-394 (Pathol. Dept., Mt. Sinai Hosp., New York, U.S.A.) Male rats were ether anaesthetised and colloidal Hg inj. i.v. They were allowed to breathe a low O₂ mixture for about 1 hr., the liver was then prep. for E.M. Numerous pinocytic vacuoles were observed containing colloidal particles. Lysosomes appeared to come from these. Mitochondria were usually swollen and ergastoplasm usually unaltered. A.M.Mackay

4114. CYTO-ACTIVE AMINO ACIDS AND PEPTIDES. K. FURTHER STUDIES OF N-ACYL-DIPEPTIDES FROM MELPHALAN. F.Bergel, J.M.Johnson and R.Wade: J. chem. Soc., 1962, 3802-3805 (Chester Beatty Res. Inst., Fulham Rd., London, England) The synthesis of a series of N-acetyl-L- and -D-aminoacyl deriv. of melphalan ethyl ester [$\text{N}(\text{H})\text{-di-(2-chloroethyl)-aminophenylalanine ethyl ester}$] was described. The tendency of acetamido-acids to racemise during the mixed-anhydride procedure and the advantage of the azide method for peptide synthesis were confirmed. Throughout the series there was considerable variation in carcinostatic activity and toxicity although the chemical reactivity of the 'mustard' group remained constant. Within each stereoisomeric pair for which data were available, the L,L- was more active than the D,L-isomer by a factor of at least 100. L.G.Gillies

4115. CYTO-ACTIVE AMINO ACIDS AND PEPTIDES. X. PENTAPEPTIDE AND BASIC DIPEPTIDE FROM MELPHALAN. J.M.Johnson and J. A. Stock: J. chem. Soc., 1962, 3806-3808 (Chester Beatty Res. Inst., Fulham Rd., London, England) The prep. of the ethyl esters of L-arginyl-melphalan and L-prolylglycyl-L-valyl-L-phenyl-alanyl-melphalan was described and some of their biol. effects were briefly reported. L.G.Gillies

4116. EFFECT OF PURINE ANTIMETABOLITES ON SERUM GLOBULINS IN THE RABBIT. S.M.Wolff and H.C.Goodman: Proc. Soc. exp. Biol., N.Y., 1963, 112, 416-419 (Lab. Clin. Invest. and Immunol., Nat. Inst. A.I.L, N.I.H., Bethesda, Md., U.S.A.) The purine antimetabolites 6-mercaptopurine and 6-thio-guanine have been shown to affect the serum globulins of albino rabbits as demonstrated by agar and paper electrophoresis of sera. Immuno-electrophoretic methods demonstrated, apart from the increase in the 32-globulin fraction and decreases in the y-globulin fraction, a fast moving y_x fraction precipitin which was masked in the other techniques used. D.N.Wheatley

PHARMACOLOGY

4117. INFLUENCE OF pH ON REACTIVITY OF CHLORAMBUCIL. J.H.Linford: Biochem. Pharmacol., 1963, 12, 317-324 (Dept. Biochem., Univ. Manitoba, Winnipeg, Canada) The reactivity of chlorambucil in aq. soln., as measured by the rate of the alkylation reaction with K_b , decreased with the decrease of pH below 7. Both the solubility of chlorambucil and the degree of dissociation of the carboxyl group also decreased in soln. of low pH. A study of the related changes in these three factors indicated that activation of the molecule to the carbonium ion form was brought about by an approach of the -COOH group to the Cl-group. This led to an explanation of the relation of reactivity of compounds in this series with length of aliphatic chain and point of attachment to the benzene ring. L.G. Gillies

4118. STUDIES OF MECHANISM OF ACTION OF 1-AMINOCYCLOPENTANE-1-CARBOXYLIC ACID [ACC]. W.R.Sterling and J.F.Henderson: Biochem. Pharmacol., 1963, 12, 303-316 (Dept. Pharmacol., G.Washington Sch. Med., Washington, D.C., U.S.A.) The mechanism of action of the non-metabolisable (X-amino acid, ACC, was investigated in ascites tumour cells *in vitro*. It replaced no natural amino acid in protein synthesis nor did it interfere with the endogenous synthesis of natural amino acids from glucose. ACC appeared to be taken, in the cells by an active transport system utilised by some natural amino acids. Participation in a heteroexchange diffusion process with DL-leucine and DL-valine was demonstrated. The inhibn. of incorporation of amino acids at high concn. was probably due to inhibn. of transport and the relation of this to carcinostatic action is discussed. L.G.Gillies

4118&. NEW POTENT INHIBITOR OF MICROSOMAL DRUG-METABOLISING ENZYMES 2,4-DICHLORO-6-PHENYLPHENOXYETHYLAMINE HC1 [DPEA] (LILLY 32391). R.Kato, P.Vassanelli and E.Chiesara: Biochem. Pharmacol., 1963, 12, 353-356 (Inst. Pharmacol., Univ., Milan, Italy) The inhibitory action of DPEA on the microsomal drug-metabolising enzymes was studied and compared with the action of SKF 525-A and Lilly 18947. DPEA is a primary amine analogue of Lilly 18947 and has an inhibitory action 5 times greater. Although it has no N-N-diethylamino group, it was about as potent an inhibitor as SKF 525-A both *in vitro* and *in vivo*. The mechanism of the inhibn. was not known. L.G.Gillies

4120.. ENHANCED PHENOBARBITAL INDUCTION OF LIVER MICROSOMAL ENZYMES IN MICE INFECTED WITH MURINE HEPATITIS VIRUS. R.Kato, Y.Nakamura and E.Chiesara: Biochem. Pharmacol., 1963, 12, 365-370 (Inst. Pharmacol., Univ., Milan, Italy) The effect of an infection in mice with a murine hepatitis virus, Buescher type, on the liver microsomal drug metabolising enzyme was investigated, alone and in combination with phenobarbital pretreatment. A diphasic effect on the infection was observed. The enzyme activity increased slightly 12 hr. after the infection and was markedly depressed after 48-60 hr. The effect of phenobarbital pretreatment on the microsomal drug metabolising enzymes was enhanced in mice infected 12-24 hr. previously. The results suggested that the condition of stim. biosynthesis of protein and RNA in the liver of infected mice enhanced the effect of phenobarbital. L.G.Gillies

4121. INHIBITION OF SOME MICROSOMAL DRUG-METABOLISING ENZYMES BY INHIBITORS OF CHOLESTEROL BIOSYNTHESIS. R.Kato, P.Vassanelli and

E.Chiesara: Biochem. Pharmacol., 1963, 12, 349-351 (Inst. Pharmacol., Univ., Milan* Italy)

Microsomal enzymes were observed to help some stages of cholesterol biosynthesis. They acted in the same manner as those responsible for the metabolism and consequent inactivation of several drugs, e.g., pentobarbital and carisoprodol. Some well-known inhibitors of the cholesterol synthesis like triparanol and carisoprodol were proved to have an inhibitory action also on the *in vitro* and *in vivo* metabolism of both pentobarbital and carisoprodol.

L.G.Gillies

4122. OXIDATIVE METABOLISM OF TISSUE CULTURE CELLS IN THE PRESENCE OF PORPHYRIA INDUCING DRUGS. M.L.Cowger, R.F.Labbe and M. Sewell; Arch. Biochem., 1963, 101, 96-102 (Dept. Pediatrics* Univ. Washington Sch. Med., Seattle, Wash., U.S.A.)

The drugs produced stoichiometric increases in lactic acid production and glucose consumption in mammalian cells. Concomitant decreases in ATP levels, catalase activity and O_2 uptake occurred. Cell multiplication decreased; mean cell diam. and RNA and protein content/cell increased. 'Porphyric*' cells took up more ^{59}Fe , incorporated more ^{59}Fe into cellular haemin and cone, more total Fe/cell.

r.M.Stevens

4123. RADIOACTIVE DRUG: 2-METHYL-6-TRITIO-1,4-NAPHTHAQUINOL BIS(DISODIUM PHOSPHATE) AND 2-METHYL-5,6, 7-TRITRITIO-1,4-NAPHTHAQUINOL BIS(DISODIUM PHOSPHATE). K.J.M.Andrews, F.Bultitude, E.A.Evans, M.Gronow, R.W.Lambert and D.H.Marrian: J. chem. Soc., 1962, 3440-3446 (D^{1*}) Radiotherapeutics, Univ., Cambridge, England

The first-named compound was prep. by reductive dehalogenation of the corresponding 6-iodo-compound by carrier-free tritium. The product, of sp. activity 27 c/mM, remained essentially radiochemically pure in aq. soln. for several months. Preliminary laboratory and clinical investigations of the compound as a new form of treatment of human malignancies suggested the need for even higher activity. 5,6,7-Tribromo-2-methyl-1,4-naphthaquinol bis(disodium phosphate) was therefore synthesised and similarly reduced to the tritio-compound of sp. activity 83 c/riM.

L.G.Gillies

4124. MECHANISM OF STIMULATION OF MAMMALIAN NITRO REDUCTASE BY FLAVINS. J.J.Kamm and h* Gillette: Life ScL, 1963, No. 4, 254-260 (Nat. Heart Inst., Bethesda, Md., U.S.A.) Evidence is presented to show that treatment of rabbit liver microsomes with pancreatic lipase destroys endogenous nitro reductase, but solubilises an enzyme which catalyses the reduction of nitro compounds in the presence of large amounts of FAD. The solubilised enzyme, probably NAD(H)-cytochrome β reductase, catalysed the reduction of flavins by NAD(P)_H, the reduced flavin then converting nitro compounds to primary amines.

K.Jones

4125. OPHIOFAGUS HABITS OF PSEUDOBOA CLOE^{LLA}. J.W.Abalos: Toxicon, 1963, 1, 90 (Inst. Nacion^{*1} Microbiol., Santiago del Estero, Argentina) T&e sensitivity of P. cloelia to the venom of various other snakes is discussed. Illustrations are presented of a ? P. cloelia capturing and swallowing Rothrops neuquensis.

4126. TREATMENT OF MEDULLARY APLASIA BY PHARMACOLOGICAL PROVOCATION WITH AUTOGRAPHIC GRAFTS OF MEDULLARY BONE-MARROW. S.Pie^{10#}

G.Pellegris and G.Caprio: Atti Acad. med. Lombarda, 1962, 17, 252-255 (Ist. Nazionale Studio e la Curadei tumori, Italy) Bone marrow autografts, stored at $\frac{1}{4}$ °C were successfully implanted into 3 patients with Malignant neoplasia (metastatic thyroid and generalised carcinoma) already receiving anti-tumour chemotherapy. (Italian) G.N.Godson

4127. CASE OF PURE RED-CELL APLASIA SUCCESSFULLY TREATED WITH COBALT. M.A.Voyce: Brit. J. Haemat., 1963, 9, 412-418 (S.Devon and E.Cornwall Hosp., Freedom Fields, Plymouth, Devon, England) Oral CoCl₂ therapy prevented the need for numerous blood transfusions in a patient with erythroblast hypoplasia. Immunoelectrophoresis showed an "normal protein of localised y-mobility, cross-reacting" & normal globulin which is typical of multiple myelomatosis. The Co has not produced any undesirable side effects. The literature is reviewed. J.Sneath

4128. CLINICAL EXPERIENCE WITH IRON-SORBITOL, A NEW INTRAMUSCULAR IRON MEDICATION. M.Van Slyck: Amer. J. med. Sci., 1963, 245, 176-183 (Div. Haematol., H.Ford Hosp., Detroit, Mich., U.S.A.) The drug is a colloidal iron-sorbitol-citric acid Prep, it is rapidly absorbed after i.m. injn., non-toxic, well tolerated and effective in iron-deficiency states. E.E.Hobbiger

4129. SIDEROCALCIPHYLACTIC SENSITISATION TO MASTOCYTE DISCHARGERS. H.Seyle, J.M.Dieudonné and R.Veilleux: Canad. J. Biochem., 1963, 41, 291-297 (Inst. Méd. et de Chirurgie expt., Univ. Montréal, Que., Canada) Female rats of approx. 100 g. were given dihydrotachysterol [DHT] in a dose of 1 mg. in 0.5 mL corn oil by stomach tube for calcification sensitisation. Some rats received no additional ferric dextran while others received ferric dextran containing sulphur. As mastocyte dischargers polymixin B 100 units 0.1% W/I 48/80, or stilbamidine 0.1 pg.-af 1 in 0.2 ml. of saline were given s.c. immediately after ferric dextran. Rats were killed 7 days after treatment and the resulting calcified wheals were measured. Pretreatment with both DHT and ferric dextran was essential for development of wheals, their size 8 Proportional to the dose of mastocyte discharger. J.B.Parish

4130. EFFECTS OF SKF 525-A ON HEPATIC GLYCOGEN AND RATE OF HEPATIC DRUG METABOLISM. J.A.Rogers, R.L.Dixon and J.R.Fouts: Biochem. Pharmacol., 1963, 12, 341-348 (Dept. Pharmacol., Coll. Med. State Univ. Iowa City, Iowa, U.S.A.) The level of hepatic glycogen and rates of certain drug metabolisms were studied after administration of SKF 525-A (β -diethylaminoethyl diphenylpropyl acetate HCl) to adult I $\frac{1}{2}$ yr. SKF 525-A inhib. hepatic drug metabolism after $\frac{1}{2}$ hr. and a significant effect was seen up to 24 hr. to a $\frac{1}{2}$ hr. inistration. SKF 525-A lowered hepatic glycogen level in 8-12 hr. The recovery of hepatic glycogen and rate of hepatic drug metabolism to control values occ. at the same time. The effects on certain enzymes of hepatic glycogenesis and glycogenolysis were also studied. L.G.Gillies

4131. PHARMACOLOGICALLY ACTIVE ACIDIC PHOSPHOLIPIDS AND GLYCOLIPIDS. W.Vogt: Biochem. Pharm. *COL 1963 - 12 415-420 (Pharmak. Abteilung Forschungsanstalt Max-Planck Gesellschaft, Gothenburg, Sweden, Germany). The occurrence and smooth

muscle stimulating action of darmstoff, a substance found in the fluid bathing isolated frog intestine prep., was described and a phosphatidic acid and other acidic phospholipids were identified as the active principles. The smooth muscle stimulating activity of these substances depended on their acidity which enabled them to form lipid-sol. salts with inorg. cations. A possible relationship exists between pharmacological activity and Ca-binding of these compounds. L.G.Gillies

4132. EFFECT OF HYPOCHOLESTEROLAEMIC AGENTS ON INTESTINAL CHOLESTEROL ABSORPTION. S.A.Hyun, G.V.Vahouny and C.R.Treadwell: Proc. Soc. exp. Biol., N.Y., 1963, 112, 496-501 (Dept. Biochem., G.Washington Univ. Med. Sch., Washington, D-C, U.S.A.) The action of certain agents such as cholestyramine (MK-135), pectin, nicotinuric acid, was studied with regard to die cholesterol level in lymph of adult o rats. MK-135 and pectin caused a considerable reduction in the cholesterol level and inhibited the uptake of labelled [¹⁴C]cholesterol. Cholesterol trimethyl-acetate, nicotinuric acid and pyridine-3-acetic acid did not have this effect. The % of cholesterol esterification of absorbed cholesterol-4-14c was independent of the degree of absorption. Diarrhoea and death was experienced to a high degree in the expt. groups. D.N.Wheatley

4133. INHIBITION OF THE INCREASED BIOSYNTHESIS OF CHOLESTEROL INDUCED BY CCI4, BY SECTION OF THE SPINAL CORD. E.Grossi, A.Faccioli and R.Vertua: Atti. Acad. med. Lombarda, 1962, 17, 153-155 (Ist. di Farmacologia, Univ., Milano, Italy) Administration of CCI4 (1 g/kg body wt.) to rats induced a marked increase in [¹⁻¹⁴C]acetate incorporation into liver cholesterol, but had no effect on the acetate incorporation into fatty acids. This effect is antagonised completely if the 5th cervical segment is sectioned before CCI4 treatment. (Italian) G.N.Godson

4134. MECHANISM OF ACTION OF CATECHOLAMINE IN ANIMALS WITH CCI4 INDUCED FATTY LIVER. R.Vertua and M.Usardi: Atti. Acad. med. Lombarda, 1962, 17, 149-152 (Ist. di Farmacol., Univ. Milano, Italy) In normal adrenal-medullectomised rats and in similarly operated animals treated with noradrenaline (1 mg./rat) administration of CCI4 (0.5 ml./100 g. body wt.) did not induce an increase in plasma free fatty acid as is the case in unoperated animals. Thus, CCI4-induced fatty liver is not related to increased mobilisation of lipids. The increase in liver triglyceride, induced by the CCI4 in normal animals is antagonised by removal of the adrenal medulla, but this increase appears again on administration of noradrenaline. (Italian) G.N.Godson

4135. INTESTINAL ACTION OF BENZMALECENE: THE RELATIONSHIP OF ITS HYPOCHOLESTEROLAEMIC EFFECT TO ACTIVE TRANSPORT OF BILE SALTS AND OTHER SUBSTANCES. L.Lack and LM.Weinen: J. Pharmacol. exp. Ther., 1963, 139, 248-258 (Sch. Med., Johns Hopkins Univ., Baltimore, Md., U.S.A.) Benzmalecene inhibits the active absorption of taurocholate, and also of sugar and tyrosine, by the small intestine in vivo and in vitro. This is thought to contribute to its hypocholesterolaemic action. The maleyl moiety is not essential for activity. The a-diastereoisomers are more active than the β . Dehalogenation has significant effect on potency. Benzmalecene inhibits enzymes of die Krebs cycle. J.M.Whitmarsh

PHARMACOLOGY

4136. EFFECT OF HYPERCHOLESTEROLAEMIA ON DIGOXIN TOLERANCE. P.L.Rodensky, W.C.Grant and F.Wasserman: Proc. Soc. Exp. Biol., N.Y., 1962, 111, 629-631 (Dept. Med., Vet. Admin. Hosp., Coral Gables, Miami, Fla., U.S.A.) A significant increase in digitalis tolerance was observed in hypercholesterolaemic d* rabbits when compared to normal animals. M.M.Shapland

4137. GLYCEROL INTAKE, BLOOD CHOLESTEROL LEVEL AND ANAEMIA IN THE GUINEA-PIG AND RABBIT. R.Ostwald: Proc. Soc. exp. Biol., N.Y., 1962, 111, 632-634 (Dept. Nutrit. Sci., Univ. California, Berkeley, Calif., U.S.A.) Guinea-pigs given more than 5 ml. of a 50% soln. of glycerol daily died with acute toxic symptoms but rabbits tolerated at least 10 ml. daily. In neither animal did the level of plasma or cell cholesterol show consistent changes attributable to the intake of glycerol. It appears probable that in the guinea-pig intake of glycerol is accompanied by an anaemia. M.M.Shapland

4138. DIRECT EFFECT OF RESERPINE ON VENTRICULAR CONTRACTILITY. W.G.Naylen: J. Pharmacol. exp. Ther., 1963, 139, 222-229 (Baker Med. Res. Inst., Melbourne, Australia) Reserpine at 1 μ g./ml. evoked a pos. inotropic response from isolated toad ventricle but at 1.5-5 fig./ml. a neg. response. The neg. response was reversed by caffeine, strophanthin-G or additional Ca^{2+} . The treated ventricles displayed a 'reversed staircase', and post-stimn. potentiation was absent, there was an altered efflux of ^{45}Ca . The relation between Ca^{2+} efflux and release of catecholamine stores is discussed. J.M.Whitmarsh

4139. EFFECT OF RESERPINE IN COARCTATION OF AORTA. A.Actis-Dato and E.de Giorgi: Brit. Heart J., 1963, 25, 343-346 (Dept. Cardiovasc Surg., Univ., Torino, Italy) Reserpine, 0.5-0.75 mg. daily by mouth was given to 15 patients with coarctation of the aorta. In all, the systolic b.p. decreased in the arms and there was a progressive rise of the systolic b.p. in the legs. It is probable that the drug induces dilatation of the vessels bypassing the point of obstruction. P.F.Meyer

4140. ACTION OF RESERPINE AND TETRABENAZINE ON THE MELANOPHORES OF LEBISTES RETICULATUS PETERS. K.Opitz and M.Stanisic: Arch. int. Pharmacodyn., 1963, 142, 556-561 (Pharmacol. Inst., Munster Univ., Germany) The action of various drugs in surrounding water on skin melanophores are studied in *Lebistes* fish. Reserpine 5 fig./l. and tetrabenazine 100 $\mu\text{g}/\text{l}$ cause pigment spread, the latter of shorter duration. Amphetamine 2 mg./l. inhibits these changes. (German) S.E. Smith

4141. OBSERVATIONS CONCERNING THE EFFECTS OF A THIOXANTHINE UPON THE HEART OF THE INTACT ANIMAL. G.M.Maxwell, R.B.Elliott and G.M. Kneebone: Aust. J. exp. Biol. med. Sci., 1962, 40, 335-340 (Dept. of Child Health, Univ., Adelaide, South Australia) 3-Isobutyl-1-methyl-6-thioxanthine (M and B 5924), when given i.v. in a dose of 1*0 mg./kg. to anaesthetised, but otherwise intact dogs, gave statistically significant increases in respiratory rate, respiratory vol., O₂ consumption, CO₂ production and pulse rate. Femoral and pulmonary arterial pressures decreased, as did the total peripheral resistance. Coronary blood flow and cardiac metabolic rates for O₂

and CO₂ increased. Cardiac efficiency and coronary vascular resistance decreased. B.A.Stone

'4142. CARDIOVASCULAR RESPONSES FOLLOWING INJECTION OF PICROTOXIN INTO LATERAL CEREBRAL VENTRICLE OF RABBITS. D.R.Varma, N.N. Share and K.I.Melville: Int. J. Neuropharm., 1962, 1, 203-206 (Pharmacol. Dept., McGill Univ., Montreal, Canada) Picrotoxin could stimulate central sympathetic mechanisms leading to increased sympathetic outflow affecting the cardiovascular system as evidenced by cardiac arrhythmias and a rise in b.p. This effect appeared to be independent of the analeptic action of picrotoxin. G.F.Blane

4143. QUINIDINE POLYGALACTURONATE IN THE TREATMENT OF CARDIAC ARHYTHMIAS: A CLINICAL REPORT. R.L.Uber, A.M.Clark, A.Foe and D.G.Hudson: Amer. J. med. Sci., 1963, 245, 171-175 (Yakima, Washington, U.S.A.) The polygalacturonate of quinidine is more potent than its sulphate as an antiarrhythmia agent and produces less gastrointestinal irritation than the latter. E.E.Hobbiger

4144. PLASMA QUINIDINE CONTENT LEVELS FOLLOWING SINGLE ORAL DOSES OF QUINIDINE POLYGALACTURONATE. R.Khorsandian, R.F.Caplan, L.J. Feinberg and S.Bellet: Amer. J. med. Sci., 1963, 245, 311-316 (Div. Cardiol., Philadelphia Gen. Hosp., Pa., U.S.A.) Studies of the plasma concn. of quinidine showed that there is no difference between the levels obtained at various times after the administration of equimolar amounts of quinidine sulphate and quinidine polygalacturonate. E.E.Hobbiger

4145. CLINICAL EXPERIENCES WITH POLYTHIAZIDE IN THE TREATMENT OF HYPERTENSION. J.J.Kelly, jun., E.L.Housel and J.W.Daly: Amer. J. med. Sci., 1963, 245, 160-165 (Dept. Med., Jefferson Med. Coll., Philadelphia, Pa., U.S.A.) Polythiazide, 2-methyl-3,4-dihydro-3-(2,2,2-trifluoroethylthiomethyl)-6-chloro-7-sulphamyl-1, 2,4-benzothiadiazine-1-l-dioxide, is an antihypertensive agent, which acts in doses of 1 to 2 mg. and does not produce any serious side effects. It is thought that the drug produces its effect by reducing arteriolar tone through changing the Na⁺ gradient between interstitial fluid and arteriolar cells. E.E.Hobbiger

4146. CLINICAL OBSERVATIONS ON THE ANTIHYPERTENSIVE EFFECT OF PARGYLINE HYDROCHLORIDE. A.L.Sutnick, J.W.Fewell and L.A.Soloff: Amer. J. med. Sci., 1963, 245, 166-170 (Dept. Cardiol., Temple Univ. Sch. Med., Philadelphia, Pa., U.S.A.) Pargyline, N-benzyl-N-methyl-2-propynylamine HCl is an antihypertensive agent which causes primarily an orthostatic hypotension. The frequency and nature of side-effects are reported. E.E.Hobbiger

4147. INJECTION OF DYE INTO ISOLATED ARTERIES SUPPLYING BRAIN OF DOG. W.A.Himwich and OR-Inman: Int. J. Neuropharm., 1962, 1, 303-307 (Thudichum Psychiatric Res. Inst., Galesburg State Res. Hosp., IL, U.S.A.) When the basilar artery is occluded with a clip all functional connection between the vertebral and carotid arterial circulations appeared to be absent. Exteriorisation of segments of the carotid or vertebral arteries did not affect dye distribution. The significance of these findings in the interpretation of behavioural responses of dogs to intra-carotid artery drug administration is discussed. * G.F.Blane

PHARMACOLOGY

4148. INFLUENCE OF DRUGS AND POTASSIUM ON RESPIRATION AND POTASSIUM ACCUMULATION BY BRAINISSUE. F.Bilodeau and K.A.C.Elliott: Canad. J- Biochem., 1963, 41, 779-792 (Donner Lab. Expt. Neurochem., Montreal Neurolog. Inst., Montreal, Que., Canada) When rat brain cortex slices, ⁵Pleated of K⁺, were incubated at 38° in a K⁺-free, sucrose containing medium, the addition of 3'6mM K⁺ increased the rate of O₂ uptake and caused a re-accumulation of K⁺ in the tissue with an approx. equal extrusion of Na⁺; the absence of substrate or Na⁺ these effects do not occur. Malonate pentobarbital and protamine, which increase K⁺ uptake, and phenobarbital, chlorpromazine, diphenine and procaine, which have no effect on K⁺ uptake, suppressed the stimulatory effect of 3'6mM K⁺ on respiration. Protoveratrine and DNP enhanced the stimulatory effect of 3'6mM K⁺ on respiration. J.B.Parish

4149. STRUCTURE-ACTION STUDIES ON SPASMODIC HYDROXY-ACIDS AND COMPARISON WITH CEREBRAL HEMISPHERE ACID. N.Ambache and M.Reynolds: Int. J. Neuropharmac., 1962, 1, 119-123 (Dept. Physiol., M.R.C., Royal Coll. Surgeons, London, England) A method for the purification of a (1,3,5-trihydroxy-acid resembling irin and obtained from rat brain is described. The activity of the extract was compared with a series of hydroxy-acids and lactones in an attempt to determine the essential groups of biological material. G.F.Blane

4150. RESPONSE OF VASCULAR SMOOTH MUSCLE TO K⁺ AND ITS ANTAGONISM BY PHENOXYBENZAMINE. J.A.Bevan, J.V.Osher and C.Su: J. Pharmacol. exp. Ther., 1963, 139, 216-221 (Univ. California Med. Center, Los Angeles, Calif., U.S.A.) The contraction of rabbit aorta strip after increase of K⁺ is slower than that due to (-)-noradrenaline. It is reversible but is maintained indefinitely. The ED₅₀ is approximately 1 mg./ml. The response is antagonised by phenoxybenzamine, by N-(2-chloroethyl)-N-ethyl-L-naphthalene-1-hydrazine HCl (SY-14) but not by yohimbine. J.M.Whitmarsh

4151. EFFECT OF LYSOLECITHIN ON THE SMOOTH MUSCLE STIMULATING ACTIVITY OF HISTAMINE, pETYLCHOLINE, 5-HYDROXY-TRYPTAMINE, APHYLACTIC SLOW-REACTING SUBSTANCE AND BRADYKININ. E.Middleton, jun. and G.B.Phillips: Jature, Lond., 1963, 198, 758-760 (Dept. Med., Oil, phys. and surgn., Columbia Univ., New York, W.I.S.A.) Evidence presented indicates that lysophosphatidylserine may produce a non-competitive type of inhibition. The specific action of the substances examined on pig ileum. J.R.Sargent

4152. ACTION OF TRINITROGLYCERIN ON CHRONIC-OBSTRUCTED PERIPHERAL ARTERIES. C.Ghirighelli and A.Grassò: Atti. Acad. med. Lombarda, 1962, 17, 43-102 (Clin. Chirurgica Generale, Univ., Milano, Italy) Rheographic, histological and clinical evidence is presented to indicate that trinitroglycerine has a vasodilatory effect on the peripheral blood vascular system and can obtain therapeutic success on patients with chronic active atherosclerosis of the limbs.

4153. COMPARISON OF CONTINUOUS LONG-TERM HEPARIN AND ORAL ANTICOAGULANT THERAPY IN PATIENTS WITH SEVERE ANGINA PECTORIS. G.N.Godson, F.Hughes, F.Mortensen and L.Shourie: Amer. Heart

J., 1963, 65, 615-627 (Dept. Med., Med. Coll. Alabama, Birmingham, Ala., U.S.A.) In a long-term trial of anticoagulant treatment of angina pectoris, 53 patients were given twice daily injn. i.m. of 100-200 mg. heparin sodium in cone. aq. soln. and 51 were treated with coumarin drugs. There were fewer deaths and fewer reinfarctions in the heparin treated group which also showed greater subjective improvement and improvement in e.cg., b.cg. and in cholesterol levels.

P.F.Meyer

4154. CLINICAL AND PHYSIOLOGICAL EFFECTS OF ANTAZOLINE, A NEW ANTI-ARRHYTHMIC AGENT. L.S.Dreifus, T.F.McGarry, Y.Watanabe, S.R.Kline, M.Waldman and W.Likoff: Amer. Heart J., 1963, 65, 607-614 (Dept. Med., Cardiovasc. Section, Hahnemann Med. Coll., Philadelphia, Pa., U.S.A.) The effect of an antihistaminic, 2-(N-benzylanilinomethyl)-2-imidazoline, was investigated in anaesthetised dogs; 10-20 mg. i.v. caused a temporary fall in cardiac output and stroke vol.; the b.p. remained unchanged, peripheral vascular resistance increased. In patients, 400-800 mg. daily by mouth, or 10 mg. i.v., abolished premature beats and often terminated ectopic rhythms other than atrial fibrillation and flutter. P.F.Meyer

4155. CARDIAC STIMULATING ACTIVITY OF VASODILATORS. F.Lourdan, G.Faucon and G.Schaff: C.R. Soc. Biol., Paris, 1962, 156, 1855-1859 (Inst. de Recherches Cardiol. de Royat, France)

IsoprenaUne (8-16 fig./kg.), aminophylline (0.8-1.2 eg./kg.), papaverine (1.4-2.2 mg./kg.) and khelline (2.2-4.4 mg. Ag.) increased the amplitude and freq. of the heart beat of the chloralose anaesthetised dogs. The duration of effect was greatest with aminophylline.

(French) M.A.Price

4156. LIPID SPASMOGENS APPEARING IN CONNECTION WITH HISTAMINE LIBERATION. B.Uvnas: Biochem. Pharmacol., 1963, 12, 439-443 (Dept. Pharmacol., Karolinska Inst., Stockholm, Sweden) Histamine release was induced from perfused cat paws and isolated rat mast cells with compound 48/80, and from sensitised guinea-pig lungs with Ag. Several spasmogenic substances were obtained which were separated chromatographically. Chem. and biol. prop. indicated the presence of unsat. fatty acids, phosphatidyl and phosphatidyl choline and an SRS principle. The SRS principles from the 3 spp. seemed to be identical or closely related. L.G.Gillies

4157. IRIN AND HYDROXY-ACID FROM BRAIN. N.Ambache: Biochem. Pharmacol., 1963, 12, 421-428 (M.R.C., Royal Coll. Surg., London, England) Intracocular injn. of irin mimicked the prolonged atropine-resistant meiosis elicited by antidromic mechanical stimn. of the trigeminal nerve in rabbits. Procedures for extraction, assay and purification of irin were described and evidence presented that it is a lipid-sol. unsat. hydroxy-acid. A similar substance was present in aq. extracts of blood-free rabbit brain tissue. Both acids were purified by chromatography on silica. Studies of hydroxy-acids suggested that their spasmogenic action on certain muscles depended on free -COOH and -OH groups and was enhanced by unsatn. L.G.Gillies

4158. STUDIES ON ISOLATION OF BRADYKININOGEN. L.M.Greenbaum and T.Hosoda: Biochem. Pharmacol., 1963, 12, 325-330 (Dept. Pharmacol., Coll. Med., State Univ. New York, Downstate Med. Cent., Brooklyn, N.Y., U.S.A.) A purified protein from bovine blood can be obtained in solid form and in high

PHARMACOLOGY

yield which, when incubated with trypsin, released Pharmacol, active material, either bradykinin or a similar substance. This substance contracted guinea-pig ileum, caused vasodepression in the cat via vasodilatation and was destroyed by chymotrypsin. The precursor protein was obtained by relatively simple procedures and could be stored without deterioration. The prep, was reproducible. Certain physical prop, of the protein and the kinetics of the reaction with trypsin were studied.

L.G.Gillies

4159. ACTION OF STROPHANTHIN ON RENAL FUNCTION. F.Solti, L.Marton, J.Rev and R-Hermann: Acta med. Acad. Sci. hung., 1962, 19, 31-41 (Med.

Klinik, Med. Univ., Budapest, Hungary) The action of Strophanthin-K on a variety of indices of renal activity was studied in patients with chronic cardiovascular diseases and in dogs. The results suggest that the drug effects are mediated chiefly by sympathetic centres in the c.n.s. (German) G.F.Blane

4160. EVIDENCE FOR THE RENAL TUBULAR ACTION OF HYGROTOM IN THE COCKEREL. Y.Cuypers: Arch. int. Pharmacodyn., 1963, 142, 274-275 (Clin. Dept.. Med. Inst., Brussels, Belgium) Hygrotom, 1-oxo-3-(3'-sulphamyl-4'-chlorophenyl)-3-hydroxy-iso-indoline, was inj. into the renal blood vessels of the cockerel, and increased excretion of water and electrolytes was demonstrated. (French) T.J.Sullivan

4161. PHENACETIN IN RENAL PYRAMIDAL TISSUE IN CASES OF RENAL PAPILLARY NECROSIS. L.Meurman, A.Karkela and M.Oka: Ann. Med. exp. Fenn., 1963, 41, 6-9 (Dept. Path. Med., Central Hosp., Kuopio, Finland) Five autopsied cases of renal papillary necrosis and 5 cases without renal diseases were examined for the presence of phenacetin in the renal pyramids. Ftienacetin could be detected in 3 cases of renal papillary necrosis and in one control. All pos. cases had been phenacetin abusers. G.Faulkner

4162. ULTRASTRUCTURAL CHANGES PRODUCED IN THE RAT KIDNEY BY A MERCURIAL DIURETIC [MERALLURIDE]. A.Sanabria: Brit. J. Pharmacol., 1963, 20, 352-361 (Lab. Ultrastructure, Inst. Investig. Cientif., Caracas, Venezuela) Meralluride causes const, structural changes in the proximal tubules, but not the distal tubules. Vacuolation, intracytoplasmic oedema, and mitochondrial swelling occurs. Glomerular changes are variable, but the mitochondrial matrix and the vesicles of the endoplasmic reticulum are affected. A.E.Brooks

4163. RELATION BETWEEN ENZYME INHIBITION AND PHYSIOLOGICAL RESPONSE IN THE CARBONIC ANHYDRASE SYSTEM. T.H.Maren: J. Pharmacol. exp. Ther., 1963, 139, 140-153 (Coll. Med., Univ., Gainesville, Fla., U.S.A.) Five inhibitors of varying types were studied with respect to their concn. in the kidney. The dose-response curve of very potent inhibitors was influenced by the concn. of enzyme in the tissue. It is concluded that carbonic anhydrase is the dominant receptor in tissues for monosulphonamides of the type aryl-SO₂NH₂. J.M.Whitmarsh

4164. EVALUATION OF FIVE HOURS AND TWENTY-FOUR HOURS DURATION OF URINE COLLECTION FOR ASSESSING DIURETIC ACTIVITY IN RATS. K.N.Modi, M.N.Vartak and U.K.Sheth: Arch. int. Pharmacodyn., 1963, 142, 539-549 (Pharmacol. Dept., Seth G.S.Med. Coll., Bombay, India) Freq.

distribution of urination was studied over 5 and 24 hr. in control rats and rats treated with hydrochlorothiazide. Over 5 hr. the urine flow of control rats did not follow a normal distribution, but it did so with treated rats. 24 hr. periods give more reliable results. T.J.Sullivan

4165. SODIUM DEPLETING EFFECT OF SULPHIN-PYRAZONE. J.P.De Koster, F.Vanderveken, P.Vereerstraeten and P.P.Lambert: Arch. int. Pharmacodyn., 1963, 142, 473-492 (Lab. Expt. Med., Free Univ., Brussels, Belgium)

In the dog, sulphinpyrazone caused an increased urinary excretion of Na and Cl and also, to a lesser extent, of K. This was independent of variations in glomerular filtration, nor was the drug an aldosterone antagonist. It appeared to affect an active process of indeterminate nature in the proximal tubule. (French) T.J. Sullivan

4166. CARRAGEENIN-INDUCED OEDEMA IN HIND PAW OF THE RAT AS AN ASSAY FOR ANTI-INFLAMMATORY DRUGS. C.A.Winter, E.A.Risley and G.W.Nuss: Proc. Soc. exp. Biol., N.Y., 1962, 111, 544-547 (Merck Inst. Therap. Res., West Point, Pa., U.S.A.) Measurement of the effect of a single oral dose of anti-inflammatory drugs was made by observing the inhib. of carrageenin-induced oedema in the hind paw of rats. M.M.Shapland

4167. INHIBITION OF INFLAMMATORY AND OEDEMATOUS PHENOMENA BY e-AMINOCAPROIC ACID. A.Bertelli, M.Proto and M.Rossano: Atti. Acad. med* Lombarda, 1962, 17, 204-208 (Ist. Farmacol., Univ. Milano, Italy) 6-Aminocaproic acid (300 mg./kg' body wt.) and 6-acetoamidocaproic acid (300 mg./kg' gave great protection to rats against expt. induced albumin oedema, some protection against kaolin oedem* and still less protection against agar granuloma. Amino* phenazone also showed some anti-phlogistic activity. C-Aminocaproic and 6-acetoamidocaproic acids also showed a marked inhib. of local oedema caused by histamine itself. (Italian) G.N.Godson

4168. MECHANISM AND PHARMACOLOGY OF ENDO-TOXIN SHOCK IN SHEEP. D.F.J.Halmagyi, B.Starzecki and G.J.Homer: J. appl. Physiol., 1963, 18, 544-552 (Med. Dept., Univ., Sydney, Australia) Administration of colic-lipopolsaccharide and staphylococcus toxin to sheep resulted in increased pulmonary arterial and pulmonary arterial wedge pressure, and a fall in cardiac output and systemic pressure. Lung compliance fell due to terminal airway closure. Isoproterenol reduced these effects. Endotoxin resistant sheep were also not responsive to pulmonary embolism and incompatible blood transfusion. H.C.Jones

4169. ACCELERATED DEVELOPMENT OF SALIVARY GLANDS OF EARLY POSTNATAL RATS FOLLOWING ISOPROTERENOL. C.A.Schneyer and J.M.Shackleford* Proc. Soc. exp. Biol., N.Y., 1963, 112, 320-324 (Dept. Physiol., Univ. Alabama Sch. Dent., Birmingham, U.S.A.) dosage of 1*5 mg. to neonatal rats over long periods or time resulted in vast increases in the sizes of the submaxillary and parotid salivary glands but not of the sublinguals whilst the total body wt. and size showed a far slower grow* rate than controls. The heart size was slightly increased as compared with controls. In the salivary glands differentiation was enhanced as well as increase in cell size. * D.N.Wheatley

4170. TERATOGENIC ACTION OF N-PHTHALYLGUT-AMINIC ACID 1MIDE. A LABORATORY TEST
METHOD. R.Riemschneider, K.Brockmeyer and H.Sommer. Z. Naturforsch. B, 1963, 18, 166-167 (Inst. Biochem., Freien Univ. Berlin-Dahlem, Germany) Note. (German) J.C.Crawhall

4171. INCIDENCE OF MALFORMATIONS SINCE INTRODUCTION OF THALIDOMIDE. LM.Leck and E.L.M. Millan. Brit. med. J., 1962, ii, 16-20 (Dept. Soc. Med., Univ., Birmingham, England) Incidence of malformations in Birmingham children born in 1957-61 was examined for secular changes. Bilat. reduction deformities of limbs have become more common since introd. of thalidomide in 1958, but unilat. deforms have not increased. Ten children born in 1960 had bilat. defects which have been described in SW. Association with thalidomide and 5 of these survived. Ear defects may have occurred in approx. 800 children in the U.K. to children without reduction deformities of limbs the incidence of other deformities did not seem to have risen, except in the case of thiamine. There are similarities between the effects of thiamine and those of vit. B deficiency. M.E.Nutt

4172. INCIDENCE OF LIMB AND EAR DEFECTS SINCE THE WITHDRAWAL OF THALIDOMIDE. R.W.Smithells and L.Leck: Lancet, 1963, i, 1095-1097 (Dept. Child Health, Univ., Liverpool, England) 71 children with limb and ear defects of the type often caused by thalidomide were born to residents of Birmingham, birth year and B.M.C. 1960-62. The freq. of affected limbs rose to a peak in late 1961, nine months after the greatest thalidomide output was highest. Incidence in 1962, and was lower nine or more months after the withdrawal of thalidomide than in any previous year since 1960. The thalidomide sales and incidence of affected births were much higher in Liverpool and Bootle than in Birmingham. The findings suggest that thalidomide was largely, if not entirely, responsible for the recent epidemic of reduction deformities of the limbs and ears. G.H.Bell

4173. THALIDOMIDE INDUCED MALFORMATIONS IN PREGNANCY AND EXPERIMENTAL RESEARCH. A.Pisati and R.Nodari: Atti. Acad. med. Lombarda, febbraio 1962, 172, 178 (1st. FarmacoL, Univ., Milano, Italy) Statistical and clinical data are given for 172 babies born in a Milan hospital with abnormalities due to treatment of the mother with thalidomide. When rats and rabbits were treated with 50 mg./kg. body wt. of thalidomide per day orally, abnormalities developed in the foetuses of the rabbits, but not of the rats.

4174. EFFECTS ON EARLY EMBRYO OF AGENTS APPLIED TO THE MOTHER. C.Lutwak-Mann (Italian) G-R Godson and X. Sato: Brit. med. J.: 1962, 1, 944-946 (Agric. Eng. Coun. Unit of Reprod. Physiol., Univ., Cambridge, England) The action of maternally transmitted agents on the early embryo of the rabbit was studied by histol. examination of flat-mounts of rabbit blastocysts obtained from treated and normal untreated pregnant rabbits. Changes produced by 6-mercaptopurine, E39 sol. alidomide and phthaloyl-DL-isostearate in doses which did not affect maternal health, were studied. Use of the method as a screening test for cussed. M.E.Nutt

4175. COMPARATIVE EFFECTS OF A PURIFIED AND STOCK DIET ON DBH [2,5-DI-TERT-BUTYLHYDRO-

QUINONE] TOXICITY IN THE RAT. B.H.Ershoff: Proc. Soc. exp. Biol., N.Y., 1963, 112, 362-365 (Inst. Biol. Res., Culver City, Calif., U.S.A.)

Immature rats were fed DBH as well as either a basal stock diet (commercial chow) or a well defined basal purified diet. The DBH caused retardation of growth and alopecia in the groups fed purified diet but some unknown constituents of the stock diet abrogated the detrimental effect of DBH. No difference was found in the effect of DBH between the sexes. D.N. Wheatley

4176. ANTIFERTILITY ACTIVITIES OF TWO DIPHENYL-DIHYDRONAPHTHALENE DERIVATIVES. G.W.Duncan, S.C.Lyster, J.J.Clark and D.Lednicer: Proc. Soc. exp. Biol., N.Y., 1963, 112, 439-442 (Res. Labs., Upjohn Co., Kalamazoo, Mich., U.S.A.) Antifertility activity by oral administration of U-10520 A (2-[E-(3,4-dihydro-6-methoxy-2-phenyl-1-naphthyl)phenoxy]-triethylamine hydrochloride) and also the phenoxy-ethyl pyrrolidone deriv. (U-11100A) has been demonstrated in rats, guinea-pigs and rabbits but not hamsters. They also inhibited the uterine stimulating effect of oestradiol. To date these are the most potent antifertility agents. D.N.Wheatley

4177. ACTION OF SODIUM SALICYLATE AND ASPIRIN ON SOME KALLKREIN SYSTEMS. P.Hebborn and B.Shaw: Brit. J. Pharmacol., 1963, 20, 254-263 (Res. Dept., Boots Pure Drug Co., Notts., England)

Na salicylate and aspirin are tested on pancreatic, salivary and serum kallikreins and kinin production assessed on a guinea-pig isolated ileum prep. Esterolytic action is measured by acid release from toluene-p-sulphonyl-L-arginine methyl ester. 50mM Na salicylate gives 50% salivary kallikrein inhib. and 5mM of either substance has no effect on esterolytic activity. Prior incubation with the drug has no effect. Concluded that Na salicylate and aspirin are poor inhibitors of kallikrein activity in vitro. A.E.Brooks

4178. TOPICAL ACTION OF SALICYLATES IN GASTRO-INTESTINAL EROSION AND HAEMORRHAGE.

J.L.A.Roth, A.Valdes-Dapena, P.Pieses and E.Buchman: Gastroenterology, 1963, 44, 146-158 (Div. of Gastroenterology, Grad. Hosp., Univ. of Pennsylvania, Philadelphia, Pa., U.S.A.) It has been shown that topical application of acetyl salicylates between the gum and lip for 30 min. in man causes desquamation of the buccal mucosa. Phenacetin and acetaminophen did not. In cats given topical application of acetyl salicylate in the stomach for 2 to 3 hr. under anaesthesia, these subjects suffered from bleeding and mucosal damage at die site of application. Again the two other drugs had no effect. It is suggested that these effects of salicylates should be kept in mind especially when prescribing such drugs for patients already suffering from lesions of the gastrointestinal tract. D.N.Wheatley

4179. BANANA AND EXPERIMENTAL PEPTIC ULCER.

A.K.Sanyal, K.K.Gupta and H.K.Chowdhury: J. Pharm. Lond., 1963, 15, 283-284 (S.N. Med. Coll., Agra, India) A letter. Banana helps distinctly in die prevention and care of the phenylbutazone-induced ulcers. J.M.Whitmarsh

4180. ROLE OF BIOGENIC AMINES IN THE DEVELOPMENT OF SOME EXPERIMENTAL GASTRIC ULCERS. J.Necina and I.Krejci: Arch. int. Pharmacodyn., 1963, 142, 316-322 (Res. Inst. Natural Drugs, Prague, Czechoslovakia) Reserpine-induced gastric ulcers are studied in rats.. Treatment with iproniazid and

PHARMACOLOGY

tranylcypromine does not influence the incidence of ulceration. The occurrence is inhib. by pyrogallol 40 mg./kg. which inhibits catechol Omethyltransferase and by D₁, L-dopa 500 mg./kg. The results suggest that decreased catecholamine concn. are concerned in the production of these ulcers.

S. E. Smith

4181. COMPARATIVE ANTHELMINTIC EFFICACY OF THIABENDAZOLE AND MIXTURES OF PHENOTHIAZINE AND PHENZIDOLE. J.R.Egerton, W.H.Ott and A.C.Cucklen *Nature, Lond.*, 1963, 198, 309-310 (Merck Inst. Therap. Res., Rahway, N.J., U.S.A.)

The relative anthelmintic potencies of phenothiazine, phenzidole and thiabendazole against 6 spp. of gastrointestinal worms in sheep were assessed after 1 week of treatment. Combination of phenothiazine and phenzidole did not have any synergistic action.

G.M.Lewis

4182. EFFECT OF ETHYL *trans*-AMINOBENZOATE [MS 222] ON THE ELASMOBRANCH. E.C.G. G.D.Campbell and D.H.Davies: *Nature, Lond.*, 1963, 198, 302 (Oceanographic Res. Inst., Durban, South Africa) MS 222 caused a bradycardia in 3 spp. of elasmobranch fishes.

G.M.Lewis

4183. RELEASE OF HISTAMINE ON STIMULATION OF NERVES TO FROG'S STOMACH MUSCLE AND ITS SIGNIFICANCE. I.Singh: *Arch. int. Pharmacodyn.*, 1963, 142, 522-532 (Physiol. Dept., Med. Coll., Agra, India)

The frog's stomach muscle was found to release histamine spontaneously. This was increased on nervous or electrical stimn. of the stomach. Mepyrain decreased the mechanical response of the muscle to stimn. whereas histamine enhanced it.

T.J.Sullivan
4184. OBSERVATION OF EFFECT OF ISONIAZID ON DEVELOPMENT OF ANEURINE DEFICIENCY. B.Bhagat: *Arch. int. Pharmacodyn.*, 1963, 142, 440-443 (Dept. Physiol. Pharmacol., Chelsea Coll. Sci. and Technol., London, England)

In doses up to 100 mg./kg. isoniazid failed to influence the rate of growth of aneurine deficient rats.

T.J.Sullivan

4185. EFFECT OF BIS-(2,2,2-TRIFLUOROETHYL)ETHER ON BRAIN ELECTROLYTES AND WATER DISTRIBUTION IN RAT. A.S.Clangand J.C.Krantz, jun.: *Biochem. Pharmacol.*, 1963, 12, 394-395 (Dept. Pharmacol., Sch. Med., Univ. Maryland, Baltimore, Md., U.S.A.) Short comm.

L.G.Gillies

4186. PRODUCTION OF A CONDITION RESEMBLING MYASTHENIA GRAVIS OR FAMILIAL PERIODIC PARALYSIS IN RAT. P.Stern, B.Nikodijević and M.Kundurović: *Int. J. Neuropharmac.*, 1962, 1, 431-434 (Inst. Pharmacol., Fac. Med., Sarajevo, Yugoslavia)

Small doses of strophanthin followed by insulin caused muscular weakness in the rat which resembled myasthenia gravis or familial periodic paralysis in its characteristics and response to drugs. It is suggested that such an animal might serve as a model for the evaluation of drugs.

G.F.Blane

4187. RELATION BETWEEN CHEMICAL STRUCTURE AND BIOLOGICAL ACTIVITY: DISCUSSION OF POSSIBILITIES, PITFALLS AND LIMITATIONS. J.M.van Rossum: *J. Pharm.*, Lond., 1963, 15, 285-316 (Catholic Univ., Nijmegen, Netherlands) A review. 70 ref.

J.M.Whitmarsh

4188. POTENTIOMETRIC MEASUREMENTS IN SOLUTIONS OF NON-IONIC SURFACTANTS. M.Donbrow and C.T.Rhodes: *J. Pharm.*, Lond., 1963, 15, 233-238

(Chelsea Coll. of Sci. and Technol., London, England) In deionised cetomacrogol soln. the surfactant did not affect the pH values of NaOH or HC1 soln. In buffer soln. containing cetomacrogol the pH was changed to an extent depending on the buffer acid. Possible mechanisms are discussed.

J.M. Whitmarsh

4189. USE OF THIN-LAYER CHROMATOGRAPHY FOR THE ANALYSIS OF DRUGS. ISOLATION AND IDENTIFICATION OF BARBITURATES AND NON-BARBITURATE HYPNOTICS FROM URINE, BLOOD AND TISSUE. J.Cochin and J.W.Daly: *J. Pharmacol. exp. Ther.*, 1963, 139, 154-159 (Nat. Inst. Arthritis, Bethesda, Md., U.S.A.)

The drugs are extracted and applied to the TLC without purification. Rf values in 3 systems are given. Two metabolites of secobarbital were identified in human urine, 5-allyl-5-(1-hydroxy-1-methyl"butyl)barbituric acid and 5-(methylbutyl)barbituric acid

J.M.Whitmarsh

4190. USE OF THIN-LAYER CHROMATOGRAPHY FOR THE ANALYSIS OF DRUGS. IDENTIFICATION AND ISOLATION OF PHENOTHIAZINE TRANQUILLISERS AND OF ANTIHISTAMINICS IN BODY FLUIDS AND TISSUES. J.Cochin and J.W.Daly: *J. Pharmacol. exp. Ther.*, 1963, 139, 160-165 (Nat. Inst. Arthritis, Bethesda, Md., U.S.A.) The extracted drugs are applied without further purification, Rf values are given for 18 phenothiazines and related compounds, 8 sulph" oxides and 18 antihistaminics and chlordiazepoxide.

J.M.Whitmarsh

4191. QUANTITATIVE CONVERSION OF BARBALOIN T⁴ ALOE-EMODIN AND ITS APPLICATION TO THE EVALUATION OF ALOES. J.W.Fairbairn and S.Simi*: *J. Pharm.*, Lond., 1963, 15, 325-328 (Sch. Pharm., Brunswick Sq., London, England) Barbaloin is quant. converted to aloe-emodin by heating to 100° under reflux in 4N HC1 with 4% FeCl₃ for 4 hr. The aloe-emodin is extracted with CCl₄ and the extinction at 500 mp is&^a in aq. soln.

J.M.Whitmarsh

4192. NOTE ON THE SYNTHESIS OF ESTERS OF N-METHYLPYRROLIDINYLAALKANOLS. F.Perks and P.J. Russell: *J. Pharm.*, Lond., 1963, 15, 341-353 (Co.^o, Technol., Portsmouth, Hants., England) The V&R of a series of esters of 1-methyl-2,5-di(2^{fc}hydroxy-2', phenylethyl)pyrrolidine is described. They are assign[^] trans configurations on the basis of their pK_a values.

J.M.Whitmarsh

4193. NOTE ON THE STABILITY OF THE TRIFLUORO-\$, METHYL GROUP OF BENDROFLUMETHIAZIDE IN Δ^{\pm} G.Hasselmann and K.Roholt: *J. Pharm.*, Lond., 1963, 15, 339-340 (Leo Riarm. Products, Copenhagen, Denmark) No release of F was detected when the title substance was administered for 85 days to carious in comparison with NaF.

J.M. Whitman

4194. MOUSE STRAIN DIFFERENCE IN RESPONSE T° ANTI-HISTAMINE DRUGS. A.M.Brown: *J. VbBt^A*, Lond., 1963, 15, 344-345 (M.R.C. Lab., Vloodtrw⁺, sterne Rd., Carshalton, Surrey, England) A ^{lett}_{i,u} Differences are of genetic origin.

J.M. Whitman

4195. CONVERSION OF DL-LACTATE-2-14C OR -3-14C OR PYRUVATE-2-14C TO BLOOD GLUCOSE IN HUMANS; EFFECTS OF DIABETES, INSULIN, TOLBUTAMIDE AND GLUCOSE LOAD. R.CDe Merte^{er} and V.W.Shreeve: *J. clin. Invest.*, 1963, 42, 52&¹, 53², 54³, 55⁴ (Med. Res. Center, Brookhaven Nat. Lab., U.P.**¹, Belg^{2,3,4}) U.S.A.; Serv. Med., Hôp. Civil de Renaix, Belg

A/ter i.v. inj. of DL-lactate-2-14C or -3-14C, non-diabetic subjects showed 10-15% of the inj. 14c in calc. extracellular glucose and severe diabetics, up to 30%. Jj^ulin, tolbutamide and glucose inj. to diabetics before toe administration of labelled compound, reduced the ^PPearance of 14c in extracellular glucose. The possible Mechanisms for their action are discussed. K.Jones

4198. CATATONIC ACTION OF METHYL ETHERS OF MONO- AND POLYPHENOLAMINES. R.Michaux and W.G.Verly: Life Sci., 1963, No. 3, 175-183 (Lab. Isotope, Dept. Biochem., Univ. de Liege, Belgium) Among the compounds tested, 4-methoxy-phenylethyl-mime (tyramine methyl ether) was most active in catatonic action. Any further substitution on the ring or the side chain was associated with a cumulative loss of activity. (French) K.Jones

4197. FILM PENETRATION AND ADSORPTION. EFFECT OF VERATRINE AND PROCAINE ON DESORPTION KINETICS OF MONOLAYERS OF MONO-OCTADECYL PHOSPHATE. N.L.Gershfeld: J. phys. Chem., 1962, 66, 1923-1927 (Nat. Inst. Arthritis and Metabolic Dis., N.I.H., Bethesda, Md., U.S.A.) Monolayers of nonooctadecyl phosphate slowly desorb and this desorption rate decreases as the surface pressure is raised, w/ increased van der Waals interactions between the hydrocarbon chains of the monolayer. Veratrine speeds the loss of film material by penetrating the hydrocarbon region; But procaine, while at low concn. it increases desorption rate by penetrating the ionic layer, at higher concn. it decreases the desorption. This is parallel to the pharmacol. activity and possible mechanisms of action are presented. G.C.Barr

4198. AN IMPROVED MICROMETER DEVICE FOR STEROTAXIC MANIPULATIONS. B.Blum and D.Feldman: Int. J. Neuropharm., 1962, 1, 445-446 (Dept. E&T, Weizmann Inst. Sci., Rehovoth, Israel) A short note with diagram. G.F.Blane

4199. NOTE ON THE PREPARATION OF RICINOLEIC ACID BY UREA COMPLEXING. D.Chakravarty and A.Bose: J. Pharm., Lond., 1963, 15, 337-338 (Smith, Kline & French Co. Ltd., Calcutta, India) Some SL acids were separated from hydrolysed castor oil in a 1:10 soln. by successive additions of urea. Ricinoleic acid of B.P. 1948 standard was thus prep. j.M.Whitmarsh

4200. DIOSCOREA BELIZENSIS LUNDELL AS A SOURCE OF DIOSGENIN. G.Blunden and R.Hardman: J. Phann., 1963, 15, 273-280 (Dept. Kiarm., The Univ., Wild Pts., England) Saponins were sought in 29 spp. of *Dioscorea* from British Honduras. The tubers of *D. hispida* yielded steroids amounting to w/oot of various methods of handling. Much of the product is produced by an endogenous enzyme system integration of the tissue. J.M.Whitmarsh

TOXICOLOGY

4201. PREPARATION, PURIFICATION AND IDENTIFICATION OF SOME COMMON BARBITURATES IN

TOXICOLOGICAL ANALYSIS. R.C.Gupta and J.Kofoed: Nature, Lond., 1963, 198, 384 (Attorney-General's Lab., Toxicol. Sect., Toronto, Canada)

A combination of paper chromatography and sublimation was successfully applied to obtain barbiturates from blood and other tissue materials in a pure state for characterisation by crystal tests. G.M.Lewis

4202. GROUP EFFECT IN THE FISH, GAMBUSIA HOLBROOKI. H. ACTION OF DEXAMPHETAMINE, DL-AMPHETAMINE AND METHAMPHETAMINE. J.Delphaim C.R. Soc. Biol., Paris, 1962, 156, 1892-1894 (Fac. Méd. et de Pharm., Marseille, France)

The toxicity of dexamphetamine and DL-amphetamine on *G. holbrooki* was less pronounced in fish kept in groups than those kept singly. The group effect was greatest in groups of 10 fish. The group effect of methamphetamine was less pronounced than that of the other compounds. (French) M.A.Price

4203. GROUP EFFECT IN THE FISH, GAMBUSIA HOLBROOKI. I. ACTION OF CHLORPROMAZINE, POTASSIUM ARSENATE AND POTASSIUM CYANIDE. J.Delphau C.R. Soc. Biol., Paris, 1962, 156, 1881-1884 (Fac. Med., Marseille, France) The % mortality of *G. holbrooki* maintained for 24 hr. in 1-6.5 mg. chlorpromazine/l., was greater in fish kept singly than in those in groups. There was no difference in the results obtained with potassium arsenite or KCN between single fish and those in groups. (French) M.A.Price

4204. FIXATION OF TETANUS TOXIN BY GANGLIOSIDE. W.E.van Heyninger: Biochem. Pharmacol., 1963, 12, 437 (Dunn Sch. Path., Univ. Oxford, England) Review. 10 ref. L.G.Gillies

4205. EFFECT OF 4,4'-DIAMINODIPHENYLMETHANE AGAINST FASCIOLA HEPATICA IN THE RABBIT AND IN CATTLE. V.N.Williams: Nature, Lond., 1963, 198, 203-204 (Vet. Res. Divn., May and Baker Ltd., Fyfield Rd., Ongar, Essex, England) 4,4'-Diaminodiphenylmethane inj. i.p. into rabbits at dose 0.2 g./kg. was active against immature as well as mature *F. hepatica*; it was inactive when administered orally. Although the compound was also effective in cattle, toxic symptoms were manifest, a dose of 0.2 g./kg* proving fatal. G.M.Lewis

4206. ALLEVIATION OF 1-AMINOCYCLOPENTANE-L-CARBOXYLIC ACID TOXICITY BY VALINE. L.J.Machlin, R.S.Gordon and F.Puchal: Nature, Lond., 1963, 198, 87-88 (Lab. Biochem. and Nutr., Monsanto Chem. Co., St. Louis, Mo., U.S.A.)

The toxicity of 1-aminocyclopentane-l-carboxylic acid to chicks was reduced by increasing the protein content of the diet. Of the amino acids, only valine was effective in preventing growth inhibn. by this compound, which is presumed to be a valine antagonist. Loucine, also a valine antagonist, induced more severe growth retardation than the drug alone. G.M.Lewis

4207. ACTION OF FUMIGANTS ON INSECTS. IV. EFFECTS OF OXYGEN ON TOXICITY OF FUMIGANTS TO INSECTS. E.J.Bond: Canad. J. Biochem., 1963, 41, 993-1004 (Res. Inst., Canada Dept. Agric, Univ. Post Office, London, Ont., Canada) Two spp. of insects, *Sitophilus granarius* (L.) adults and *Tenebrio molitor* (L.) larvae were exposed to a series of fumigant concn. then divided into groups and placed in N₂ or air for 48 hr. They were then placed in air for

PHARMACOLOGY

5 days after which mortality counts were made. The fumigants used were HCN, acrylonitrile, methyl bromide, ethylene dibromide, ethylene oxide, hydrogen phosphide and chloropicrin. O₂ at and below 1 atm. enhanced the toxicity of all fumigants to both spp., although it had no obvious effects on untreated insects. J.B. Parish

4208. MODIFICATION OF THE TOXICITY OF HISTAMINE DURING POST-NATAL DEVELOPMENT IN MICE. D.N.Halpern, T.Neveu and A.Banellec: CR. Soc. Biol., Paris, 1962, 156, 1536-1538 (Lab. Méd. expt.. Coll. France, Paris, France)

The toxicity of histamine was studied in mice during three weeks of post-natal life and compared with that of adults. The toxicity decreased progressively with development of the animal. The dose of histamine dihydrochloride producing 50% mortality was 5*75 mg. at 3 days, 1*625 mg. after 18 days and 1*5 mg. in adults.

(French) M.A.Price

4209. CENTRAL NERVOUS INJURY BY A CHEMICAL HERBICIDE. I.Desi and J.Sos: Acta med. Acad. Sci. hung., 1962, 18, 429-433 (Inst. Pathophysiol., Univ. Med.

Sch., Budapest, Hungary) The weed-killer 2,4-di-chlorophenoxyacetic acid given parenterally as a single dose of 200 mg./kg. caused reversible inhibn. of the e.e.g. pattern in anaesthetised laboratory animals. In chronic expt. neurol. impairment was shown in the shortened desynchronisation time and deterioration in cond. refl. response.

G.F.Blane

4210. IMMUNOLOGICAL (OUCHTERLONY METHOD) IDENTIFICATION OF INTRASUBSPECIES QUALITATIVE DIFFERENCES IN SNAKE VENOM COMPOSITION. S.Schenberg: Toxicon, 1963, 1, 67-75 (Lab.

Physiol. Inst. Butantan, São Paulo, C.P.65, Brazil) The venoms of 298 snakes of 6 *Bothrops neuweidi* subsp. were studied using the Ouchterlony method by comparison with three venom pools and two sera. Five basic immunol. variants with 20 different well-defined venoms were found and results show that no close relationship between morphology and venom composition exists in this sp. The geographical distribution of some of the snakes with these variations supports the existence of the variations and seems to indicate that the variants are genetically determined. Staining and photographic improvements for immuno-pptn. are described.

K.Brew

4211. STUDIES OF THE VENOMS OF SOME CONIDAE.

R-Endean and C.Rudkin: Toxicon, 1963, 1, 49-64 (Dept. Zool., Univ. Queensland, Brisbane, Australia) The effects of the venoms of 14 spp. of Conidae on a variety of animals are described. The authors suggest that only piscivorous sp. of Conidae present a real threat to man.

K.Brew

4212. HYDROXOCOBALAMINE IN THE TREATMENT OF CYANIDE POISONING. G.Paulet, J.P.Bernard and M.Olivien C.R. Soc. Biol., Paris, 1962, 156, 1867-1869.

The anti-cyanide action of 50 mg. hydroxocobalamin/kg. was studied in chloralose anaesthetised dogs, receiving an i.v. infusion of 0*1 mg./kg./min. NaCN. Hydroxocobalamine prevented death of 3/5 dogs at the stage of secondary apnoea. Hydroxocobalamine was more efficient than nitrates but less efficient than EDTA-CO₂.

(French) M.A.Price

4213. HYPERVENTILATION IN CO POISONING.

G.L.Leatharc Brit. med. J., 1962, ii, 511-512 (Med. Sch., King's Coll., Newcastle-on-Tyne, England)

Arterial blood pH measurements indicated a non-respiratory acidosis in 4 patients hyperventilating during recovery from coal gas poisoning. Acidosis may have contributed to their prolonged coma. Such patients are better treated with pure O₂ than with 5% or Tfo carbogen. MENU*

4214. STUDIES ON THE MECHANISM OF THE POISONOUS EFFECT OF PHALLOIDIN [CYCLIC PEP-¹TIDE ANTIBIOTIC] WITH RADIOACTIVELY LABELLED TOXIC AGENTS. D.Rehbinder, G.LBfler, O.Wieland and T.Wieland: Hoppe-Seylers-Z. physiol. Chem., 1963, 331, 132-142 (Inst. Org. Chem. Univ. Frankfurt/M., Germany) Phalloidin labelled with ³H and ³⁵S was inj. into rats and the highest concn. was found in the liver and the kidneys. From the organs two ^ radioactive substances were separated by paper chromatography. The radioactive toxin was also found in perfused prep. of isolated liver and was not decreased by perfusion with fresh medium.

(German)

4215. E.M. STUDY OF THE LIVER AFTER X-IRRADIATION CARBON TETRACHLORIDE TREATMENT.

G.P.Longostrevi and L.Lombardi: Atti. Acad. Med.Lombarda, 1962 J17, 195-204 (1st. di Farmacol. Univ., Milano, Italy) Three days after injn. of rats, with 0-1 ml. of 30% CCl₄ s.c. (0-15 ml./100 g. body WW the liver mitochondria were observed with the E.M. to D_i* swollen and to contain osmophilic accumulation of lip_m* the endoplasmic reticulum had developed localised dilations and distortions. When the animals were irradiated with 200 r X-rays no pathol. lesion in the liver cells could be detected by E.M. (Italian) G.N.Godson

4216. PROTECTIVE EFFECT OF 0-MERCAPTOETHYL AMINE [MEA] AND MESENTERIC VESSEL CLAMPBJ_j IN INTESTINE IRRADIATED RATS. K.N.Prasad, G.M. Kolimorgen, T.H.Kent and J.W.Osborne: Int. J. rad. Biol., 1963, 6, 257-269 (Rad. Res. Lab., Coll. Me*, Univ. Iowa, Iowa City, Iowa, U.S.A.) I.p. MEA

15 min. before, or clamping of the mesenteric vessel during, X-irradiation of the exposed ileum and jejunum reduced mortality, body wt. loss in survivors and micto damage. Mortality and histol. responses after 1800 r w_x MEA were similar to those after 1400 r with no other ^ treatment. MEA was ineffective at and above 2200 r, clamping was ineffective at and above 3000 r. A combination of the 2 treatments gave 67% survival at 350U* but became ineffective at and above 4500 r.

B.M.Stevei*

4217. CARBON TETRACHLORIDE POISONING. H. SERUM ENZYMES, FREE FATTY ACIDS [FFA] ^ LIVER PATHOLOGY: EFFECTS OF PHENOXYBENZAMINE AND PHENERGAN (R).

C.F.Fox, B.D.Dinner* and W.J.Frajola: Proc. Soc. exp. Biol., N.Y., 111, 731-734 (Dept. Biochem., Univ. Chicago, U.S.A.) Serum FFA were decreased by CCU *** increased by phenoxybenzamine, simulu admintoijf * produced effects which appeared to be additive. benzamine was ineffective in protecting the liver from damage caused by CCl₄ vapour. Phenergan (N-2 -> 1 methylamino-2'-methyl)ethyl phenothiazine) ^ JS rohepatic necrosis and serum activity of glutamic dehydrogenase. Lipophilic staining was increased while se.**.Jntly activity of liver supernatant enzymes was not conw. Shapland MM.

4218. SOME EFFECTS OF ALDRIN, CHLORDANE, DIELDRIN AND HEPTACHLOR ON EUROPEAN FORFICULA AURICULARIA. E.F.Legner and D. ...

J. econ. Entomol., 1963, 56i 29-31 (Utah Agric.Expt. Stn., U.S.A.) <Adults and final instar nymphs were fleeted with baits. Six insects were confined in Petri jshes with a wooden pot marker which had been dipped ^a wettable powder and a piece of moistened cellulotton. The insecticides were used at 3 dosages/100 gal. jests were performed at nil, 204-7, 522-4 hr. after treat- *en. t. Also plastic tubes treated with 1 lb./100 gal. insecticide concn. confined 6 insects for 1,5,10,15,30 or IT!&c¹ One pound dieidrin Save 50% mortality after /* hr. and 2 lb. gave 100% after 207 hr. but heptachlor flower^q the quickest kill. All substances gave 96-99% kill in the field on the 6th day. H.W.Spencer

⁴219. TESTS WITH SYSTEMIC INSECTICIDES FOR CONTROL OF GASTEROPHILUS LARVAE IN HORSES. R.O. Drummond: J. econ. Entomol., 1963, 56, 50-52 (Entom. Res. Div., Agric. Res. Serv., U.S.D.A., Kerrville, Tex., At^st 4') At slaughter *G. nasalis* larvae were found attached to the pylorus and anterior duodenum and *G. intestinalis* larvae mostly attached to the pharyngeal stomach of horses. Using a stomach pump 50 mg./kg. Bayer 37341, a phosphorothioate, and 100 mg./kg. butenamate, a butyl analogue of dipterex, were highly effective in ridding horses of bot-flies. In a single feed 50 mg./kg. butonate or 10-75 mg./kg. DDVP were effective. Most

fly larvae consequently expelled in manure of treated horses died. H.W.Spencer

4220. EXPERIMENTAL GROUNDNUT POISONING IN PIGS. J.D.J.Harding, J.T.Done, G.Lewis and R.Allcroft Res. vet. Sci., 1963, 4, 217-229 (Cent. Vet.Lab., Weybridge, England) Pigs were fed rations containing 17*5-20% toxic groundnut meal, and killed at intervals for histol. examination of the organs. The main lesions were in the liver, in which changes progressed through steatosis, ductule proliferation and pericellular fibrosis to nodular hyperplasia. There was an increased fat concn. in the liver, and a decrease in hepatic vit. A. There were sometimes elevated serum levels of GOT and alkaline phosphatase. The thyroid/body wt. ratios were low in the expt. pigs. J.B.Derbyshire

4221. TOLERANCE AND TOLERANCE STUDIES ON AET. C.Hanna and N.V.Collough: Arch. int. Pharmacodyn., 1963, 142, 510-515 (Childrens' Cancer Res. Fdn., Boston, Mass., U.S.A.) The LD₅₀ dose of 6, 2-aminoethyl-isothiouronium bromide hydrobromide [AET] by i.p. injn. was raised by 25% by repeated injn. over 14 days in rats, and over 12-20 days in dogs. Tolerance did not develop in rabbits over 7 days. By increasing tolerance, a radio-protective dose could be given to the rat, but not to the dog or rabbit. T.J. Sullivan

PHYSIOLOGY

GENERAL AND METHODS

- 4222. POLAR PHYSIOLOGY. ITS DEVELOPMENT IN BRITAIN.** H.E.Lewis and J.P.Masterton: Lancet, 1963, i, 1009-1014 (Div. Human Physiol., Nat. List. Med. Res., London, England) Review. GJH.Bell
- 4223. PHYSIOLOGICAL AND MEDICAL ASPECTS OF THE HIMALAYAN SCIENTIFIC AND MOUNTAINEERING EXPEDITION, 1960-61.** L.G.C.E.Pugh: Brit. med. J., 1962, ii, 621-627 (M.R.C. Lab., Holly Hill, Hampstead, London, England) Physiol. investigations were made, in a prefabricated laboratory, (during 5 months), at 19000 ft. (380 mm.Hg) during the attempted ascent of Mt. Makalu (27790 ft.). Eight months were spent at heights above 15000 ft. Data are reported on B.M.R., muscular exercise, respiratory regulation, blood vol., Hb and r.b.c., e.c.g. changes, nutrition and endocrine and renal function. Lung diffusion, cardiac output and arterial O₂ satn. were measured during exercise at 19000 ft. and O₂ intake, ventilation and heart rate at heights up to 24400 ft. (300 mmHg). At 24400 ft. max. O₂ intake was 1-4 l./min., ventilation B.T.P.S. 119 l./min. and heart rate 135 min. Haldane end-expiratory alveolar samples at rest had mean pO₂ 33 mm.Hg and mean pCO₂ 14 mm. Hg. Arterial O₂ satn. < 50% was observed during 2-3 min. max. exercise at 19000 ft., the mean resting value being 67%. Acclimatisation to 19000 ft. was good and there was no objective evidence of mental impairment but wt. loss was progressive and indefinite tolerance of stay doubtful. Newcomers with 4-6 weeks acclimatisation were marginally fitter and more active than those who had wintered at 19000 ft. There were cases of cerebral thrombosis, pulmonary infarction, acute pulmonary oedema and frostbite. The ascent was made without O₂, but this was available for medical purposes. M.E.Nutt
- 4224. INCREASE OF YIELD OF SERUM FROM SAMPLES OF BLOOD.** A.A.Hirata: Nature, Lond., 1963, 198, 96-97 (Nat. Inst. Hlth., Nat. Cancer Inst., Bethesda, Md., U.S.A.) A method for obtaining high yields of serum within 1 hr. of bleeding and with min. haemolysis involves centrifugation at 2400 g after treatment with thromboplastin. The procedure is applicable to rabbit, guinea-pig, hamster and chicken blood. G.U.Lewis
- 4225. QUANTITATION OF HAEMAGGLUTINATION BY ENUMERATION OF FREE CELLS BY AN ELECTRONIC COUNTER.** M.B.Gibbs and E.L.Becker: Nature, Lond., 1963, 198, 90 (Dept. Immunochem., W. Reed Army Med. Center, Washington, D.C., U.S.A.) Prelim. comm., G.M.Lewis
- 4226. ELECTRONIC MICROMETER.** E.A.Lentini and W.V. Guyette: J. appl. Physiol., 1963, 18, 636-638 (Physiol. Dept., Univ. Oregon Med. Sch., Portland, Ore., U.S.A.) An electronic micrometer has been described to measure myocardial shortening without affecting movement of the tissue, during simult. O₂ consumption measurements. The apparatus consists of an oscillator, amplifier and a demodulator. H.C.Jones
- 4227. SIMPLE PHOTOELECTRIC METHOD FOR MEASURING SYSTOLIC BLOOD-PRESSURE IN THE NEWBORN.** T.E.Oppé and F.Gellen: Lancet, 1962, ii, 1255-1256 (St. Mary's Hosp. Med. Sch., London, England). GJH.Bell

- 4228. APPARATUS FOR THE AUTOMATIC RECORDING OF SYSTOLIC AND DIASTOLIC BLOOD-PRESSURE.** D.H.Follett, H.F.Freundlich, D.B.Shaw and D.H.Davies: Lancet, 1963, i, 808-809 (Gen. Hosp. Branch, Bristol Roy. Hosp., Bristol, England) Korotkov sounds are recorded simult. with cuff pressure. G.H.Bell
- 4229. SIMPLE METHOD OF INTRA-ARTERIAL PRESSURE MEASUREMENT.** E.F. de Bona: Lancet, 1963, i, 1142-1143 (Dept. Med., St. Thomas's Hosp. Med. Sch. London, England) An arterial needle may be connected to 20 cm. of polythene tubing or 10 cm. capillary glass tubing. The air in the tubing is compressed and the length of the column of blood gives the b.p. GHBeU
- 4230. HYDRAULIC IMPEDANCE OF RIGID CANNULAS.** J.E.Randall: J. appl. Physiol., 1963, 18, 648-649 (Physiol. and Pharmacol. Dept., Missouri Univ. Med. Center, Columbia, Mo., U.S.A.) Inertia for pulsating flow in polyethylene tubing has been demonstrated to be an important factor at higher freq. and the hydraulic impedance of the tubing has been calc. from the Navier Stokes Equation. H.C.Jones
- 4231. METHOD FOR IN VIVO CANNULATION OF BOTH ADRENAL GLANDS OF HAMSTER.** K.M.Knigge: An** Rec., 1961, 141, 145-149 (Dept. Anat., Sch. Med., Univ. Cincinnati, Ohio, U.S.A.) An in vivo cannulation method is described which permits perfusion and collection of effluent blood from both adrenal glands of hamster. The method consists of cannulating and ^Ugartering abdominal vessels in such a manner that perfusate is delivered to the adrenals via the abdominal aorta and adren? effluent blood collected from the inferior vena cava. F.Beck
- 4232. TECHNIQUE FOR TEMPORARY OR CHRONIC VASCULAR OCCLUSION OR NARROWING IN INTACT ANIMALS.** R.W.Eckstein and T.E.Driscoll: Proc. Soc. e*P-Biol., N.Y., 1963, 112, 318-319 (Dept. Med., Western Res. Univ. Med. Sch., Cleveland, Ohio, U.S.A.) A new technique is described using polythene tubing for temporary or permanent occlusion or constriction of art^ies. It involves the passing of surgical thread out & ^ A snare through the chest wall so that it can be operated w* to occlude or block an artery such as the aorta without recourse to surgery every time the vessel is to be occluded. D.N.Wheatley
- 4233. ECHOENCEPHALOGRAPHY. MEASUREMENT OF POSITION OF MID-LINE STRUCTURES IN THE SKULL WITH HIGH FREQUENCY PULSED ULTRASOUND.** R.Ford and J.Ambrose: Brain, 1963, 86, 189-196 (Atkinson Morley Hosp., Wimbledon, London, J^{angle}land) 1000 unselected patients were examined to assess ^{wid} appilability and clinical reliability of the method. 1** overall * to accuracy in determining the position of the mid-line was 93* 85. The method is r^Did, atraumatic and easily reproducible. R.H.Kimberlin
- 4234. MEASUREMENT OF PRESSURE BETWEEN FOOT AND SHOE.** J.H.Bauman and P.W.Brand: Lancet, 1963, 629-632 (Christian Med. Coll., Vellore, South India) Thin capacity transducers are connected to a transistored pre-amplifier.
- 4235. CONTINUOUS MEASUREMENT IN AN ANIMAL OF SPECIFIC RADIOACTIVITY OF EXPIRED CO₂ AFTER THE ADMINISTRATION OF COMPOUNDS TAGGED WITH 14C. STUDY OF KOTOPIC EQUILIBRIA.**

PHYSIOLOGY

407

P.Chevallier, M.Briere, F.Serrell and M.Cumin J. Physiol*. Paris, 196°, 54, 701-710 (Dept. Biol., Centre d'Etudes Nucléaires, Saclay, S.-et-O., France) A technique is described for the continuous measurement of quantity and radioactivity (and hence the sp. radioactivity) of expired CO₂ in an animal receiving a compound tagged with ¹⁴C. The method gives information on equilibrium of a compound from a study of its ¹⁴C-radioactivity, which is const. with time.

(French) A.Angel
4236. METHOD FOR AUTOMATICALLY MAINTAINING BODY TEMPERATURE OF RATS AT CONSTANT LEVEL. A-Ashworth and R.E.Haist Canad. J. Biochem., 1963, 41, 1081-1083 (Dept. Physiol., Univ. Toronto, Canada) A device is described whereby the body temp. of ¹⁴C rats can be maintained at sub-normal levels. The rats were suspended in tunnels with a lamp above each rat and a fan at open end by means of a special circuit design the temp. of each rat could be controlled with less than ± 1° variation for 24 hr. Prelim. J.B.Parish

4237. CLOSED SYSTEM FOR PROLONGED EXPOSURE OF SMALL ANIMALS TO ARTIFICIAL ATMOSPHERES. J.H.Dines and F.A.Hitchcock: J. appl. Physiol., 1963, 17, 663-636 (Physiol. Dept., Ohio State Univ., Columbus, U.S.A.) Apparatus is described whereby can be investigated in situ. O₂ consumption could be determined and excreta collected throughout the expt. H.C.Jones

4238. SIMPLE DEVICE FOR MEASUREMENT OF SPONTANEOUS MOVEMENTS OF ANIMALS. F.Alvarez-Urquiza and H.Redetzke Arch. int. Pharmacodyn., 1963, 142, 516-521 (Dept. Pharmacol., Louisiana State Univ. Sch. Med., New Orleans, La., U.S.A.) Spontaneous movements of a mouse in a small box are picked up by a crystal gramophone cartridge, amplified and recorded by a pen writer. Potentiometric records are quantitated by eluting the ink off the paper and measuring absorbance spectrophotometrically. S.E.Smith

a. MODIFIED MUSCLE ERGOGRAPH. R.B.J. De Jong (ALV-Terpoorten: J. appl. Physiol., 1963, 18, 672 ASST Vsiol. Dept., Coronel-Lab. Hyg., Univ. Netherland) In order to load a muscle resistance without mass a force of a piston connecting a vacuum containing a variable vacuum has been used, H.C.Jones

BODY TEMPERATURE

240. PARTITION OF INSENSIBLE LOSSES OF BODY WEIGHT AND HEAT FROM CATTLE UNDER VARIOUS CLIMATIC CONDITIONS. J.A.McLean: J. Physiol., Lond., 1963*, 167, 427-447 (Physiol. Dept., Hannah Dairy Res. Inst., Ayr, Scotland) Insensible wt. loss of calves aged 6 to 10 months increased from 66 g./hr. at 15° air temp. to 412 g./hr. at 4C*. Of this, all except approximately 20% presented vaporised moisture at all temperatures. Presented vaporised moisture at all temperatures. Cutaneous and respiratory evaporation were of magnitude at 15° but at 4(f) the skin contributed 45% of the total vapourised moisture. Non-evaporative heat appeared to be primarily determined by the insulation

of the coat and the physical prop. of the environment at air temp., above 2(f). Evaporation from the skin was quant. controlled by physiol. means near to a level that made up the difference between heat production and other forms of heat loss. Except under extremely humid conditions the physical prop. of the environment could directly influence cutaneous evaporation only from limited skin areas or for transient periods. There was evidence that the air expired by cattle is 90 to 100% sat. with moisture at body temp., but the mask worn by the animals limited respiratory evaporation in the expt. *

4241. MEASUREMENT OF CUTANEOUS MOISTURE VAPORISATION FROM CATTLE BY VENTILATED CAPSULES. J.A.McLeaK J. Physiol., Lond., 1963, 167, 417-426 (Physiol. Dept., Hannah Dairy Res. Inst., Ayr, Scotland) The rate of moisture vaporisation from the skin under ventilated capsules is dependent on the geometry of the capsule and die ventilation rate. The critical air flow rate* which gives ventilation under a capsule equiv. to that over undisturbed skin may be assessed by comparing skin temp. inside and outside the capsule. *

4242. LOSS OF WEIGHT AND METABOLIC RATE OF RATS WITH LESIONS IN THE MEDIAL AND LATERAL HYPOTHALAMUS. J.A.F.Stevenson and D.C.Montemurra Nature, Lond., 1963, 198, 92, (Dept. Physiol., Univ. Western Ontario, London, Qnt., Canada) The resting O₂ consumption and metabolic rate of hypothalamic, hyperphagic rats was normal while that of aphagia, adipsic rats was greater than normal. Rats with lesions in die ventromedial or lateral hypothalamus showed metabolic rates as much as 50% greater than controls for 3 days post-operatively; this would account for the more rapid loss of wt. of such animals compared with rats deprived of food and water. G.M.Lewis

4243. CHANGES IN BODY TEMPERATURE AND BASAL METABOLIC RATE OF AMA. B.S.Kang, S.H.Song, C.S.Suh and S.K.Hong: J. appl. Physiol., 1963, 18, 483-488 (Riysiol. Dept., Yonsei Univ. Med. Coll., Seoul, Korea) The duration of work periods in Korean diving women was determined by the water temp., and hence the oral temp., of the women. The average body temp. declined to 34°6° in summer and 30° in winter. The B.M.R. of these women was higher in winter than in summer. H.C.Jones

4244. METABOLIC RESPONSE TO COLD AIR IN MEN AND WOMEN IN RELATION TO TOTAL BODY FAT CONTENT. E.R.Buskirk, R.H.Thompson and G.D. Whedon: J. appl. Physiol., 1963, 18, 603-612 (Metabolic Dis. Br., Nat. Inst. Arthritis and Metabol. Pis., N.I.H., Bethesda, Md., U.S.A.) The metabolic response to cold of men and women was inversely related to % body fat, and the total body insulation after 2 hr. exposure at 15° was proportional to % body fat. Nevertheless, large individual differences were observed in the metabolic response to cold. H.C.Jones

4245. METABOLIC AND THERMAL RESPONSE OF ESKimos DURING MUSCULAR EXERTION IN COLD. K.N. Anderson, J.S.Hart, H.T.Hammel and H.B.Sabean: J. appl. Physiol., 1963, 18, 613-618 (Inst. Work Physiol., Blindem, Oslo, Norway) No higher heat production rates during exercise in a cold environment, could be demonstrated in Eskimos than in Caucasians, but previously cooled skin on the hands rewarmed more quickly in Eskimos as a result of exercise in the cold.

H.C.Jones

PHYSIOLOGY

4246. THERMOGENESIS DUE TO EXERCISE AND COLD IN WARM- AND COLD-ACCLIMATED RATS. J.S. Hart and L.Jansky: *Canad. J. Biochem.*, 1963, 41, 629-634 (Div. Appl. Biol., Nat. Res. Council, Ottawa, Canada) White rats were acclimated to 30° and 6° for 4-6 weeks after which tests were carried out at various temp, during rest and running. In warm- and cold-acclimated rats the max. heat production during exercise did not exceed the max. at rest in extreme cold. Exercise substituted for shivering in warm-acclimated rats and, below 10°, resulted in hypothermia. Exercise also substituted for shivering in cold-acclimated rats below -2GP resulting in hypothermia, but above -20° the heat derived from exercise added to non-shivering thermogenesis. **J.B.Parish**

4247. PARTICIPATION OF SKELETAL MUSCLE AND KIDNEY DURING NON-SHIVERING THERMOGENESIS IN COLD-ACCLIMATED RATS. L.Jansky and J.S.Harc Canad. J. Biochem., 1963, 41, 953-964 (Div. Appl. Biol., Nat. Res. Council, Ottawa, Canada) Ob consumption of the partly isolated leg muscles and of the kidney was measured in situ in cold-acclimated rats, anaesthetised with Na barbital, before and during exposure to cold or during noradrenaline infusion. During cold exposure and noradrenaline infusion O₂ consumption of the rats was doubled and so too was that of the leg muscles without any increase in blood flow. No increase in O₂ consumption of the kidney was observed in similar circumstances. Thus direct evidence for the participation of striated muscles in non-shivering thermogenesis was obtained. **J.B.Parish**

4248. ADJUSTMENTS TO CONSTANT LOW TEMPERATURES IN WHITE RATS LIVING IN GROUPS. O.Héroux: Canad. J. Biochem., 1963, 41, 587-595 (Div. Appl. Biol., Nat. Res. Council, Ottawa, Canada) Rats in groups of 10 were exposed for 3 months in the laboratory to 19° or -10°. Grouping of the rats did not alter the pattern of metabolic adaptation usually observed in individually cold-acclimated rats and in group-caged white rats exposed out-doors during the winter. Group caging at low temp, prevented the development of cold injuries and the enlargement of pituitary, thyroid and adrenals and resulted in increased resting metabolism, normal adrenal cortex activity and no increase in pelt insulation in contrast to rats grouped out-doors. **J.B.Parish**

4249. INFLUENCE OF RESPIRATORY AND RENAL FACTORS ON CARDIAC ACTIVITY DURING DEEP HYPOTHERMIA. J.Hunter and D.A.Hurley: *Canad. J. Biochem.*, 1963, 41, 551-560 (Def. Res. Med. Lab., Toronto, Ont., Canada) Rats were anaesthetised with pentothal and the kidneys placed in small cups around which water at a desired temp, could be circulated. Blood, colonic and renal temp, were measured by thermocouples and heart rate and b.p. were recorded continuously. After initial measurements the animals were cooled in crushed ice. With and without artificial ventilation, the effects of warming the kidneys during general body cooling, cooling kidneys at the same rate as the body and isolating the kidneys before hypothermia were studied. Maintenance of renal circulation by warming resulted in improved b.p. and cardiac function at colonic temp, below 22°. **J.B.Parish**

4250. NORADRENALINE AND SURVIVAL OF RATS IN COLD ENVIRONMENT. E.SchOnbaum, EA .Sellers and G.EJohnson: *Canad. J. Biochem.*, 1963, 41, 975-983

(Dept. Pharmacol., Univ., Toronto, Ont., Canada) Large doses of noradrenaline (500 μ g./rat, i.e. 2 mg./kg.) given s.c. to rats produced hypothermia, frequently lethal in rats acclimated to 23° and acutely exposed to 2°, but not in rats acclimated to 23° and kept at that temp. T^Δ dose of noradrenaline inhibited shivering and reduced O₂ consumption in acutely cold-exposed rats but stim. O₂ consumption in cold-acclimated rats. Rats living at 2° and treated with guanethidine or reserpine to reduce tiss^{ue} levels of noradrenaline still became acclimated, indicating that increased amounts of noradrenaline were not required for acclimation to cold. **J.B.Parish**

4251. HKTAMINE AND COLD ADAPTATION. J.LeBland Proc. Soc. exp. Biol., N.Y., 1963, 112, 25-26 (Dept. Physiol., Med. Sch., Laval Univ., Quebec City, Canada) Histamine was excreted at substantially higher rates from rats maintained during the course of t&c expt. at a temp, of 6° than from rats kept at normal ^{toot} temp. Guinea-pigs similarly maintained, showed less in* cidence of bronchospasms in the group kept at 6° than m the other group when subjected to aerosol sprays of hist* amine. **D.N.Wheatley**

4252. EFFECT OF EXTENDED EXPOSURE TO HOT ENVIRONMENT ON RESPONSE OF CHICKEN TO HYPER* THERMIA. H.S.Weiss, H.Frankel and K.C.Hollands: Canad. J. Biochem., 1963, 41, 805-815 (Physiol. ^{mic} Sect., Rutgers State Univ. New Jersey, New Brunswick, N.J., U.S.A.) Adult ? chickens lived for ~~20~~ te either 32-36° and 50-60% R.H. or 22-24° with R.H. uncontrolled. Hyperthermia was induced by exposing the restricted animal to 40*5° and 60% R.H. and measurements w^o made of body temp., respiratory rate, min. vol., tidal vol., heart rate, and systolic, diastolic and pulse pressure for i-i° changes in body temp. The adapted birds resisted hyperthermia better than the controls and the results suggested that the mechanisms of adaptation were other tn^g increased respiratory elimination of heat. **J.B.P¹¹**

4253. RESPIRATORY AND CIRCULATORY RESPONSES & HYPERTHERMIC CHICKENS. H.Frankel, K.G.Hoip and H.S.Weiss: Arch. int. Physiol., 1962, 70, 555-563 (Physiol. Sect., State Univ. New Jersey, New Brunswick, N.J., U.S.A.) Body temp., respirat^{xw} rate and min. vol., heart rate and b.p. were measured * White Leghorn chickens exposed to an environmental temp, of 40-5 ^0-5°, R.H. 56%. Body temp, rose ^{progres} to a max. of 46-47°. Respiratory rate rose to a ^{max} of 140-170/min. at 43-5-44-8° and thereafter ~~decreas~~ ^{at} Min. vol. reached a max. at 44-5-45-5° being ^{maintained} at the higher body temp, by increase in tidal vol. Decline in heart rate occurred at temp.> 46°. B.p. ^{remained} unchanged in cT or declined slowly in ? until 45° for * systolic and 46° for systolic p., thereafter there was a ^{temp} at capitous decline in p. in both sexes. Thus body ^{temp} at which changes occurred was different for the various responses measured and there was some sex difference * **M.E.Lutt**

WORK AND METABOLISM

4254. BASAL CALORIC PRODUCTION ON 541 SUBJECTS OF BOTH SEXES BETWEEN THE AGES OF 40-91 YEAI

PHYSIOLOGY

409

STUDY OF TWO FACTORS MODIFYING BASAL METABOLISM. L.Binet, M.Bochet and J.Vallery-Masson: *J.Physiol.*, Paris, 1962, 54, 687-700. Basal metabolism was measured on 541 subjects judged to be in good health clinically. Arterial hypotension (with no signs of thyroid hypertrophy) was associated with an elevation of B.M.R. higher in women than men. Heat production was measured in 15 men with gonadal insufficiency when B.M.R. was 11% less than in normal men.

(French) A.Angel

4255. INTERRELATIONSHIP OF ACTIONS OF GLUCAGON AND SOMATOTROPHIN [GH] ON PROTEIN METABOLISM IN FASTED HYPOPHYSECTOMISED RAT. J.L.Izzo and S.R.Glasser: *Endocrinology*, 1963, 72, 701-708 (Med. Dept., Univ. Med. Center, Rochester, N.Y., U.S.A.) Administration of glucagon to fasted hypophysectomised rats did not result in the increased protein catabolism seen when it is administered to intact rats. Administration of GH to hypophysectomised rats resulted in reduced protein catabolism and estrogon treatment in these animals reversed these H.Clones

4256. EFFECT OF PAINFUL STIMULI ON NITROGEN BALANCE. I.Gontzea, P.Sutzescu and L.Gontzea: *J. Physiol.*, Paris, 1962, 54, 637-646 (Inst. de Med. et Pharm., Bucarest, Roumania) Painful stimuli (injn. teve, 10-3 ml. of turpentine into the paw) produced a fte of N balance by an increase in renal excretion, This J? als (rats > losin 8 considerable quantities of N. Peptic ed even when ** Protein intake was maintained at ievel which had previously maintained N balance.

4257. T. (French) A. Angel
w¹. INFLUENCE OF ENDOCRINES ON CARBOHYDRATE TABOLISM. IV. EFFECT OF THYROID HORMONES PYRUVIC ACID METABOLISM. L.Macha Arch. Int. Physiol., 1962, 70, 507-522 (Endocrinol. List., Slowak Acad. Sci., Bratislava, Czechoslovakia) Untreated normal, thyroidectomised and thyrocoine chinchilla rabbits, wt. 2-3 kg, were given 20 mg./kg. bod^w of a-ketoglutaric acid neutralised topH 7.4 by Na₂CO₃ into a marginal ear vein. The excess a-ketoglutarate disappeared from the blood at a mean rate of 4.20 ± 0.17% min. in normal rabbits, indicating an efficient mechanism for maintenance of a const. blood level. F¹? of disappearance of a-ketoglutarate was faster in thyroidectomised than in normal animals and was slowest in those seated with thyroxine. Urinary ex of <10% small during the period, thus changes in rate of disappearance from blood do not result from changes in M.E.Nutt

4258. EFFECTS OF PROLONGED HYPERGLYCAEMIA ON GLUCOSE METABOLISM IN NORMAL DOG. W.M. Staquet, J.R.M. Jrackson and V.Conard: *Arch. Med. Bel.* 1962, 16, 364-378 (Lab. Expt. ft 164'r Tee Univ., Brussels, Belgium) Seven dogs, 4-a t? 8- received infusions of glucose, 3 g./kg./hr., iNrv iv. Blood glucose concn. and a-v. difference and ^w n^w Hx^w on of glucose, blood lactic acid concn., at^w spaces and cardiac output were estimated, as estima^w alic. during the infusion. Glucose assimilation metabolised and expressed as the ratio between glucose glucose concn. rises and ratio of assimilation increases due to stimm. o^w pancreatic islet cells by the hyperglycaemia, in^w peak rate being reached in 2-3 hr. In some animals hyperglycaemia then increases progressively with re-

duction in cardiac output and GFR. In others the blood glucose concn. oscillates around a plateau and cardiac output and GFR remain const. In all animals the ratio of assimilation falls due to intervention of factors such as limitation of rate of penetration of glucose into cells, satn. of insulin producing potential of pancreas and alterations in cellular metabolism. (French) M.E.Nutt

4259. MECHANISM OF ETHANOL-INDUCED HYPOGLYCAEMIA. J.B.Field, H.E.Williams and G.E.Mortimore: *J. clin. Invest.*, 1963, 42, 497-506 (Clin. Endocr. Branch., Nat. Inst. Arthr. and Metab. Dis., Bethesda, Md., U.S.A.) Ingestion of 35-50 ml. of ethanol after a 2-day fast consistently produced hypoglycaemia in humans. Ethanol inhibited glycogen synthesis and interfered with glucose and urea formation in isolated, perfused rat liver, but not with amino acid mobilisation, suggesting a block in oxidative deamination of amino acids. Inhib. of gluconeogenesis is suggested to be responsible for hypoglycaemia, in conjunction with depletion of liver glycogen. K.Jones

4260. CHICK GLYCOGEN BODY: EFFECTS OF HORMONES AND NORMAL GLYCOGEN TURNOVER. J.G. Snedecor, D.B.King and R.C.Henrikson: *Gen. comp. Endocr.*, 1963, 3, 176-183 (Zool. Dept., Univ. Massachusetts, Amherst, Mass., U.S.A.) Administration to chicks of regular insulin, glucagon-free insulin, adrenaline, cortisone, hydrocortisone, corticosterone, and mammalian growth hormone, was without effect on the glycogen content of the glycogen body. Studies using [¹⁴C]glucose showed that glycogen turnover was occurring without change in the total concn. S.A.Carney

4261. INFLUENCE OF CORTICOSTERONE ON THE METABOLISM OF PALMITATE AND GLUCOSE IN COCKERELS. C.L.Nagra and R.K.Meyer: *Gen. comp. Endocr.*, 1963, 3, 131-138 (Dept. Zool., Univ. Wisconsin, Madison, Wis., U.S.A.) Cockerels treated with i.m. injn. of corticosterone had decreased carcass protein and glycogen but increased carcass lipid, and also increased plasma levels of total lipids and cholesterol. Wt. and lipid content of liver, adrenal wt., and corticosterone secretion were unaffected. There was no sustained effect on rate of CO₂ exhalation or [¹⁴C]calmitate metabolism, but the in vivo disposition of glucose carbon was altered. S.A.Carney

SKIN AND BONE

4262. ACTION OF DETERGENTS AND Ca ON ELECTRICAL POTENTIAL ACROSS ISOLATED FROG SKIN. E.Schoffeniels, R.Gilles and G.Dandrifosse: *Arch. int. Physiol.*, 1962, 70, 335-344 (Inst. Léon Fredericq, Univ. Liege, Belgium) Ionic detergents (Lauryl Na sulphate, Lauryl triethanolamine SO₃, benzalkonium Cl) applied to one surface of the isolated skin of Rana temporaria result in an increase, followed by a decrease, in the spontaneous p.d. between the 2 skin surfaces. The non-ionic detergent polyethylene glycol has no effect. Increase in Ca concn. of the fluid bathing the external surface of the skin results in augmentation of the spontaneous p.d. followed by decrease to a steady level slightly

PHYSIOLOGY

below the control value. Increase in Ca concn. on the internal surface has the opposite initial effect. These changes probably result from changes in the passive permeability of die skin to K. Effects of the ionic detergents are not altered in the presence of varying Ca concn. It is thus unlikely that they act by modifying die Ca concn. in cell membranes. (French) M.E.Nutt

4263. CONSUMPTION OF OXYGEN BY SWEAT GLANDS OF INDIAN ZEBU CATTLE. D.P.Sadhu and D.R. Chowdhuiy: *Nature, Lond.*, 1963, 198, 311 (Dept. Physiol. and Nutr., Bengal Vet. Coll., Calcutta, India) The O₂ consumption of slices of skin from regions of the hump, dewlap and dorsal trunk of Zebu cattle was measured with or without addition of succinate or ascorbate. There was a definite correlation between the O₂ consumption, sweating rate, and density and vol. of sweat glands. It was concluded that the hump is a well-developed evaporatory surface. CM.Lewis

4264. ACTION OF LOCAL APPLICATION OF HYDROCORTISONE ON DIFFERENT TISSUES OF THE SHAVED SKIN OF MOUSE. MJ.Tharanne: *C.R. Soc. Biol., Paris.* 1962, 156, 1584-1587 (Lab. d'HistoL., Fac. Méd., Paris, France) Application of 1% hydrocortisone cream to the shaved skin of adult mice for 24 days, resulted in a local growth of hair with a decrease in sebaceous gland activity. There was a decrease in adipose tissue of the hypodermis with an increase in growth and differentiation of the epidermis. The same effect was seen on areas adjacent to the treated zone. Application of 0.1% hydrocortisone cream gave similar but less consistent results. (French) M. A. Price

4265. LOW VALUES FOR SEBUM IN EUNUCHS AND OOPHORECTOMISED WOMEN. J.B.Hamilton and G.E. Mestler: *Proc. Soc. exp. Biol., N.Y.*, 1963, 112, 374-378 (Dept. Anat., State Univ. New York Coll. Med., Brooklyn, N.Y., U.S.A.) In man the testicular secretions or their metabolites and also the ovarian secretions have been shown to induce sebum production since the production of sebum is significantly lower in castrated cT and oophorectomised ?. In eunuchs the urinary metabolites of the adrenal secretions were little altered and Aerefore the TQw ~sebum level cannot be associated with lack of adrenocorticoid secretions. After orchietomy the decline in sebum production is very slow. D.N.Wheatley

4266. ENDOGENOUS HISTAMINE AND OEDEMA FOLLOWING CYSTAMINE INJECTION. J.Lecompte and P. Franchimont: *C.R. Soc. Biol., Paris.* 1962, 156, 1951-1953 (Inst. Léon Fredericq, Liège, Belgium) 5 min. after injn. of 500 fig. cystamine to the foot of rat, there was an increase in wt. of the skin and a decrease in the histamine content of the skin from 29 jg./g. to 5.9 fig./g. The histamine content returned to the normal level 45 min. after injn. with an increase to 32.7 jg./g. after 90 min. (French) M.A.Price

4267. ENDOCRINE CONTROL OF SKELETAL DEVELOPMENT IN MAN. B.W^A.LeemJig: *Brit. med. J.*, 1962, ii. 358-361 (Wellington Hosp., New Zealand) Radiographic study of hands and pelvis in 25 cases of ovarian agenesis leads to the view that 3 components of bone growth, assumption of final dimensions, assumption of final shape and epiphyseal closure are under separate endocrine control. In the Y epiphyseal closure is controlled by oestrogens. M.E.Nutt

MUSCLE

4268. AN X-RAY AND LIGHT DIFFRACTION STUDY # THE FILAMENT LATTICE OF STRIATED MUSCLE IN THE LIVING STATE AND IN RIGOR. G.J.F.Elliott, J. Lowy and C.R.Worthington: *J. mol. Biol.*, 1963, 6, 295-305 (M.R.C. Biophys. Res. Unit, King's Coll., London, England) The spacings and relative intensities of the small-angle equatorial X-ray reflections obtained from vertebrate striated muscles have been studied over a wide range of lengths in living muscles, and in muscles in a state of rigor. It has been shown that the relative intensity of the reflections changes with sarcomere length, and does not depend primarily on whether the muscle is alive or in rigor. It is also shown for HyW muscle that over a wide range of muscle lengths the filament lattice maintains a const. vol. *

4269. ACTIVE RELAXATION OF UNSTRIATED MUSCLE PRODUCED BY NORADRENALINE. I.Singh: *Arch. int. Physiol.*, 1962, 70, 547-554 (Dept. Physiol., Med. Coll. Agra, India) Muscle of frog stomach and pig uterus relaxes without application of external force when treated with noradrenaline. Relaxation is accompanied by increase in O₂ consumption and is inhibited by CN'. DNP and iodoacetic acid. Relaxation produced by noradrenaline, like that produced by adrenaline, is probably an active process. M.E.Nutt

4270. DKTRIBUnQN OF WATER, SODIUM AND POTASSIUM IN RESTING AND STIMULATED MAMMALIAN MUSCLE. F.A.Sréter: *Canad. J. Biochem.*, 1963, 41, 1035-1045 (Dept. Anat., Univ. British Columbia, Vancouer, B.C., Canada) K and Na concn. and inulin space were measured in samples of rat gastrocnemius after direct or indirect stimn. in situ for 1, 3 or 6 hr. in the proximal, middle and distal regions of the muscle. After prolonged stimn. the intra-fibre Na and K concn. were not uniform along the fibre but K depletion ana Na accumulation was greater in the middle. After prolog but slower stimn. the proximal and middle portions of muscle showed similar cationic distributions whereas the distal portion showed the most marked cationic debt. J.B.Parish

4271. SODIUM EXCHANGE IN SMOOTH MUSCLE. C.Bumstock, DJ.Dewhiirst and S.E.Simon: *J. Physiol., Lond.*, 1963, 167, 210-228 (Dept. Zool., Univ. Melbourne, Australia) The exchange of ²²Na⁺ isolated sheets of smooth muscle from the toad's stomach was studied, in conjunction with estimations of the extracellular space using 1311-labelled albumin. Na⁺ exchange change was rapid; the efflux curve indicated no single major rate limiting step to diffusion at 2(f). The ²²Vf curves of ²²ta and [1311]albumin were compared with theoretical curves for diffusion from a plane sheet. The divergence of the ²²NSL curve from the plane suggested that factors other than the geometry of the tissue impede Na exchange. Evidence is presented suggesting that intracellular Na is heterogeneous; part exchange with a high, and part with a low temp. coeff.

4272. ACTION OF DEOXYCORTICOSTERONE ACETATE ON GLYCOGEN. II. RELATIONSHIP OF MUSCLE GLYCOGEN FORMATION TO POTASSIUM METABOLISM. W.Niedermeier and E.B.Cannichael: *Proc. Soc. exp. Biol., N.Y.*, 1962, 111, 777-780 (Arth. and Rheum. Res. Labs., Dept. Med., Univ. Alabama Med. Center, Birmingham, Ala. U.S.A.) Daily administrate

PHYSIOLOGY

411

DOCA to intact rats resulted in inhibn. of muscle glycogen formation, accompanied by an approx. proportional increase in K concn. of both serum and skeletal muscle, maintenance of normal K levels by forced intake to r^{1/2}A treated rats resulted in non-inhibited glycogen production. These results indicate that DOCA induced inhibition of muscle glycogen formation was secondary to depletion. M.M.Shapland

1273. MUSCLE GLYCOGEN IN JUVENILE DIABETES BEFORE AND DURING TREATMENT WITH INSULIN. (Bergström, E.Hultman and A.E.Roch-Norlund: Nature, Lond., 1963, 198, 97-98 (Central Lab., St. Erik's Hosp., Stockholm, Sweden) In 6 uncomplicated juvenile diabetics, the muscle glycogen values were significantly lower than the normal range; after treatment with insulin, the muscle glycogen levels rose to normal values. G.M.Lewis

1274. RELATIVE IMPORTANCE OF GASTROCNEMIUS AND SOLEUS MUSCLES IN THE ANKLE JERK OF MAN. (yv. J. neurol. neurosurg. psychiat., 1963, 26, J. 150 (Neurol. Unit, Northern Gen. Hosp., Edinburgh, Scotland) In 12 normal subjects the composition of the reflex contraction was greater over the soleus than over the gastrocnemius. It is suggested that the soleus plays a greater part in the production of the ankle jerk. A.Angel

1275. EFFECT OF CHANGES IN Na⁺ CONCENTRATION ON ACTION POTENTIAL OF RAT UTERINE SMOOTH MUSCLE. (H. Niijima, A.Nakajima and M.Kumamoto: B.I.U., Yamaguchi Med. Sch., 1962, 9, 55-61 (Dept. in T. Yamaguchi Med. Sch., Ube, Japan) During spontaneous activity the membrane potential was around -15 mV and varied from 40 to 50 mV, the spikes of trivalent spontaneous contraction ranging from -60 to -70 mV. Little changes were detectable in spike configuration when the external Na concn. was reduced to 20 mM but further reduction to 10 mM or less affected spike height and configuration gradually, so that no activity was maintained in Na free soln. small if? < more & the spikes degenerated into peaked negativities. K. Jones

BLOOD

1276. INDUCED UPHILL AND DOWNHILL TRANSPORT: RELATIONSHIP TO THE USSING CRITERION. H.G. Britton: Nature, Lond., 1963, 198, 190-191 (Physiol. Dept., St. Mary's Hosp. Med. Sch., London, Bigland) The phenomenon of induced outward flux of radioglucose, fructose or galactose against a concn. gradient in human, rat, dog and monkey cells during the entry of glucose is shown to be directly related to the ratio of the inward and outward fluxes across the membrane. A reversible thermodynamic derivation of the Ussing criterion is presented. C.M.Lewis

1277. SEASONAL VARIATIONS IN THERMAL FRAGILITY OF R.B.C. IN MAN: INFLUENCE OF AGE. (L.G. Oldschmidt: Nature, Lond., 1963, 198, 297; L.G. Oldschmidt: Queens W. (Creedmoor Inst. ftychobiol. Studies, Queens Jamaica, N.Y., USJL) Observed seasonal

changes in the thermal fragility of r.b.c. with ageing could not be correlated with the thyroid function but appeared to be due to sex differences. G.M.Lewis

4278. CHANGES IN BLOOD VOLUME AND BLOOD PICTURE DURING THE LIFE OF THE RAT AND GUINEA-PIG FROM BIRTH TO MATURITY. B.J.Constable: J. Physiol., Lond., 1963, 167, 229-238 (Nutr. Lab., Cambridge, England) Plasma and blood vol. throughout the actively growing life of the d¹ rat and d guinea-pig were determined, together with haematol. values. A gradual decrease in blood vol. in the guinea-pig from 11.5 to 5.9% (body wt.) was found between birth and maturity; no such fall was observed in the rat. An increase of over 100% in the red cell count between birth and 250 g. body wt. was noted only in the rat. An anaemic period occurred during weaning in rats and guinea-pigs which is probably common to most animals. *

4279. ERYTHROCYTE SURVIVAL IN GUINEA-PIGS. L.H. Smith and T.W.McKinley jun.: Proc. Soc. exp. Biol., N.Y., 1962, 768-771 (Biol. Div., Oak Ridge Nat. Lab., Oak Ridge, Tenn., U.S.A.) Calcn. from survival curves of 51Cr-labelled guinea-pig r.b.c. showed that disappearance rates of autologous and isologous cells were almost the same but homologous cell clearance rate was significantly faster. A value of 80-90 days was suggested as an estimate life span for guinea-pig r.b.c.

M.M.Shapland

4280. EFFECT OF TEMPERATURE ON RED CELL SURVIVAL IN THE ALLIGATOR. M.J.Cline and T.A.Waldmire: Proc. Soc. exp. Biol., N.Y., 1962, 111, 716-718 (Metab. Serv., Nat. Cancer Inst., N.I.H., Bethesda, Md., U.S.A.) R.b.c. survival in immature American alligators kept at 16°-17° for 6 to 7 months was at least 3 times that in reptiles kept at 31°-32° for the same period. M.M.Shapland

4281. EFFECT OF A DECREASE IN PARTIAL PRESSURE OF OXYGEN IN INSPIRED AIR ON CARBONIC ANHYDRASE ACTIVITY OF RED BLOOD CELLS IN THE RAT. P.L. Biget and M.Roberc: C.R. Acad. Sci., Paris, 1962, 255, 380-381 (Centre d'Enseignement et de Recherches du Méd. Aéronautique, 5 bis, Avenue de la Porte-de-Sèvres, Paris, France) 12 Wistar rats were exposed to a simulated altitude of 5000 m. for 1 hr. CO₂ accumulation was prevented. R.b.c. counts, haematocrit and carbonic anhydrase activities were then compared to those of controls kept at normal barometric pressure. The haematocrits and r.b.c. counts were unchanged. Carbonic anhydrase activity was significantly increased.

(French) S.A.Thistlewood

4282. USE OF CARBON MONOXIDE TO PREVENT SICKLE-CELL FORMATION. J.A.Sire: Lancet, 1963, i, 971-972 (Physics Dept., St. Mary's Hosp. Med. Sch., London, England) CO both in vivo and in vitro reduces the risk of sickle cell formation. G.H.Bell

4283. IS HAEMOGLOBIN ESSENTIAL STRUCTURAL COMPONENT OF HUMAN ERYTHROCYTE MEMBRANES? R.J.Weed, C.F.Reed and G.Berg: J. clin. Invest., 1963, 42, 581-588 (Dept. Med., Univ. Rochester Sch. Med. Dent., Rochester, N.Y., U.S.A.) Ghosts prepared from normal human r.b.c. by gradual osmotic lysis (99.5% of Hb was removed), had glucose 6-phosphate dehydrogenase and Na⁺ + id⁻-dependent ATPase activities independent of their Hb content, and retained all the cholesterol and phospholipid content of the cells from which they were prepared. They also retained the bi-concave disc shape of intact r.b.c. and osmotic responsive-

PHYSIOLOGY

- ness. The results showed that Hb was not an essential structural component of the human r.b.c. membrane. K.Jones
- 4284. ALKALI-RESISTANT HAEMOGLOBIN CONTENT OF BLOOD IN CONGENITAL HEART DISEASE.** J.F. Farrar and J.Bломfield: Brit. J. Haemat., 1963, 9, 278-287 (Children's Med. Res. Fdn., Royal Alexandra Hosp. for Children, Sydney, Australia) Differences in foetal Hb content of 344 children forming 3 groups (those with normal hearts, with acyanotic congenital heart disease and those with cyanotic congenital heart disease) showed no significance. Abnormal quant. were found in 2/79 subjects in the cyanotic congenital heart disease group. Family studies in both these cases revealed no relatives with foetal Hb. 11 Mongol children were also tested but none possessed foetal Hb. The acid-denaturation method was found to be more reliable than paper electrophoresis. J.Sneath
- 4285. ERYTHROPOIETIC ACTIVITY OF HUMAN PLASMA IN HAEMATOLOGICAL AND OTHER DISORDERS.** P.Boivin, G.Lagru and R.Fauvert Nouv. Rev. Franc. Hémat., 1963, 3, 35-80 (Centre Rech. Applications méd. Radioisotopes, Hop. Beaufon, Clichy, Seine, France) Erythropoiesis was estimated by the rate at which S^3Fe was incorporated into r.b.c. The rate was appox. normal after injn. of plasma from cases of polycythaemia, spherocytosis, renal failure or liver cirrhosis, and increased in some cases of bone marrow failure, renal cancer, haemolytic anaemia or myxoedema. (French) V.Eisen
- 4286. SUGGESTED MECHANISM OF ERYTHROPOIETIC CONTROL BY JUXTAGLOMERULAR CELLS.** G.Reeves, L.Lowenstein and S.C.Sommers: Amer. J. med. Sci., 1963, 245, 184-388 (Scripps Mem. Hosp., La Jolla, Calif., U.S.A.) In non-cirrhotic patients the blood Hb levels are directly proportional to the no. of juxtaglomerular cells. E.E.Hobbiger
- 4287. METABOLISM OF ^{59}Fe -SORBITOL COMPLEX IN MAN.** G.Wetherley-Mein, J.G.Buchanan, U.H.Glass and L.C.Pearce: Brit. med. J., 1962, i, 1796-1800 (St. Thomas's Hosp., London, England) A [^{59}Fe]-sorbitol complex was rapidly cleared from an i.m. injn. site in man. Mean half-time (T_{1/2}) deltoid clearance was 46 min. in Fe-deficient and 174 min. in control groups. Clearance was almost complete in 10 days. Clearance times for L-[^{59}Fe]sorbitol were shorter than for [59-Fe]-dextran, probably due to lower mol. wt. which also resulted in rapid urinary excretion. Urinary excretion was max. in the first 12 hr. after injn., 18-53% of the inj. dose was excreted in 48 hr. Incorporation into r.b.c. at 10 days was 27-66% and was greater in the Fe-deficient than in the control group. The curve of utilisation of ^{59}Fe in the deficient group showed that max. utilisation had not occurred by T+ 10 days. Surface counting indicated that retained Fe, not utilised for Hb synthesis by T+ 10 days, was stored predominantly in the liver. M.E.Nutt
- 4288. INFLUENCE OF AGE UPON IRON CONTENT OF BONE-MARROW.** R.McD. Benzie: Lancet, 1963, i, 1074-1075 (Law Hosp., Carlisle, Lanarkshire, Scotland) Manow-Fe deposits increase with age irrespective of disease, including even blood-disease. Caution must therefore be exercised in interpreting marrow-Fe estimations. G.H.Bell
- 4289. SIDEROTIC GRANULES AND GRANULES OF PUNCTATE BASOPHILIA.** T.Beritic: Brit. J. Haemat., 1963, 9, 185-188 (Inst. Med. Res., Zagreb, Yugoslavia)

Fe-containing granules of siderocytes have rarely been clearly differentiated from the RNA-containing granules of stippled cells. Patients with Pb poisoning and refractory sideroblastic anaemia had blood and bone-marrow smears with 3 kinds of r.b.c. those with either Fe-pos. or Fe-neg. granules and some with both. J.Sneath

- 4290. BLOOD GROUPS AND ENZYMES OF HUMAN RED CELLS AFTER A YEAR IN LIQUID N₂.** RG.Huntsman. B.A.L.Hum, E.W.Ikin, H.Lehmann and J.Liddell Brit. med. J., 1962, ii, 1508-1514 (St. Bartholomew's Hosp. London, England) Blood was preserved in liquid N₂ with EDTA as anticoagulant. After more than 1 yr. 90% of cells could be recovered intact and all blood groups were demonstrable, though acidity and titre of some agglutinogens decreased. Activity of aldolase decreased significantly on storage. Activity of transaminase decreased to a lesser extent, but concn. of TPN dependent dehydrogenases was maintained. Advantages of the method compared with glycerol storage are discussed. MENU*

- 4291. ISOLATION OF A MUCOID WITH N BLOOGR ACTIVITY FROM HORSE ERYTHROCYTE STROMA.** G.Uhlenbruck and M.Krtlpe: Z. Immun.-Forsch., 1962, 124, 342-345 (Physiol.-chem. Inst., Univ., Koln, Germany) Extraction of horse r.b.c. stroma with phenol-saline yielded a mucoid which reacted strongly with anti-N phytagglutinin from Vicia graminifera, though not with ordinary anti-N serum from rabbits. (German) D-P.WinstanM

- 4292. VARIATIONS IN INHIBITORY POWER OF THE FACTOR Gm(A) ACCORDING TO THE SEROLOGICAL PHENOTYPE Gm OF THE SUBJECT.** J.Ruffie, J.Duc[<] and M.Vatsi: CR. Acad. Sci., Paris, 1962, 255, 45-405. Sera from subjects of phenotypes Gm (a + b + x-), Gm (a f b + x-) and Gm (a+b- x-) were titrated by Morten Harboe's method against 3 serums containing anti-Gm(a) (anti-Gm(a) SNAGG) Nos. 8972, 7429 and 10424. In each case satn. of the Ab was greatest for phenotype Gm (a + b- x-) and least for Gm (a f b + x-), i.e. the presence of Gm (b) and Gm (x) decreases the quantity of factor Gm (a) present. Perhaps a single base substance is converted according to the genes present in factor Gm (a) and/or Gm (b) and/or Gm (x), the total quantity of factor Gm produced being const. (French) S.A.Thistlewood

- 4293. HAEMOLYTIC SYSTEM ASSOCIATED WITH ENTERITIS IN RABBITS. I. NATURE OF CELL CHANGE AND SERUM FACTORS CONCERNED.** RS.Evans, Bingham and R.S.Weise: J. exp. Med., 1963, H^G, 647-661 (Med. Serv., V.A. Hosp., Washington, D.C., U.S.A.) A disease in which enteritis is associated with agglutinable r.b.c. often develops in weanling rabbits. The r.b.c. abnormality was found to be resistant to the action of trypsin or papain and persisted in heated stroma prep. derived from a⁺luminable r.b.c. Factors necessary for aggln. and haemolysis of these r.b.c. are present in normal rabbit sera but are lacking in the sera of affected rabbits. The sera of rabbits with agglutinable r.b.c. contained normal levels of C^f and properdin. Aggln. factor of normal serum is heat stable (56° f^r, 30 min.) while the haemolytic factor is heat labile. C^f is fixed when the stroma from agglutinable cells was rea with normal serum. H.E.H Jones

- 4294. LEUCOCYTE PREPARATION FROM HUMAN BLOOD; EVALUATION OF THEIR MORPHOLOGIC AND METABOLIC STATE.** H.J.Fallon, E.Frei, J.-L'Davidson, J.S.Trier and D.Burte: J. Lab. clin. Med.,

1962, 59, 779-791 (Biochem. Lab., Cancer Inst., Bethesda, Md./U.S.A.) W.b.c. were prepared free ^r.b.c. by sedimentation with dextran and subsequent j?posure ^{to} hypotonic saline to remove remaining r.b.c. j?ross changes in cellular respiration or glycolysis were no^ted in either normal or leukaemic prep. E.M. studies, Trypa_n Blue staining and their ability to decarboxylate orotic acid showed w.b.c. to be unchanged.

C.Toothill

4295. LEUCOCYTES OF PERIPHERAL BLOOD IN HUMAN FOETUS. L.H.L.Playfair, M.R.Wolfendale and H.E.M. Kay: Brit.J.Haemat., 1963, 9, 336-344 (Dept.Clin.Path., of F.O. Maisden Hosp., London, England) Blood counts in foetuses between 8 and 27 weeks old showed a decrease in erythroblast count and an increase in granulocyte count with increased age. Granulocytes were found in the earliest foetuses. In 41 foetuses from abortions, the erythroblast and granulocyte counts were about 4 times higher than in foetuses obtained by hysterectomy. At 6 months, the foetuses suggest a higher lymphocyte count than at full-term which suggests a sizeable immunological potential at this stage. J.Sneath

4296. MITOGENIC PROPERTY TO PHYTOHAEMAGGLUTININ (PHA*) STUDIES ON HUMAN LEUCOCYTES. M.W.Elves and M.C.G.Israels: Brit. J. Haemat., 1963, 10, 406-411 (Dept. Clin. Haemat., Royal Infirmary, Manchester, England) PHA can be obtained in the same form as HA(M) containing protein and mucopolysaccharide and in a relatively pure form PHA(P) which is purified. The lymphocyte response is greater to PHA and PHA(P) and the mitogenic power of PHA is proportional to the haemagglutinating strength. PHA is not by itself during culture and prednisolone inhibits lymphocyte transformation. J.Sneath

4297. EOSINOPHIL TURNOVER IN THE RAT. E.C.Foon Nature, Lond., 1963, 198, 297-298 (Dept. Pathol., Jt. Mary's Hosp. Med.Sch., London, England) A method involving continuous infusion of thymidine that the turnover time of eosinophils in rat peripheral blood was 6 days. G.M.Lewis

4298. HUMORAL REGULATION OF PLATELET PRODUCT-ION. K.Rak: Acta med. Acad. Sci. hung., 1962, 67-75 (1st Dept. Med., Univ. Med. Sch., Szeged, of Hungary) Available information on the existence of a factor governing the production of thromboplastin is briefly reviewed and tests for this factor in serum presented, based on 139 cases, conclusions are drawn regarding the nature of this humoral factor, "thrombopoietin", which is distinguished from erythropoietin. C.F.Blane

4299. P'T ASJOTOM ET RIC STUDY OF EFFECT OF ADP ON PLATELETS. H.Vainer and J.Caen: Nouv. Rev. franc., nat., 1963, 3, 149-156 (Centre Rech. Leucémies, Claude-Bernard, Hop. Saint-Louis, Paris, France) Platelets from normal subjects, from patients with untreated or treated (transfusions or corticosteroids) disease, and from patients with Von Willebrand's disease (Glanzmann) were studied. ADP 0.05-50 μg/ml was added to buffered platelet rich plasma. At 15 sec. agitation, the O.D. at 610 Å was measured. The decrease in O.D. was in thrombopenic patients more than in normal subjects. In Willebrand's disease, decreased normality with ADP concn. of 15-50 μg/ml decreased normality with ADP concn. of 18 μg/ml, but 0.05 μg./0.8 ml. produced a slight increase in O.D. (French) V.Eisen

4300. PLATELET DISINTEGRATION DURING CLOTTING.

N.F.Rodman, J.C.Painter and N.B.McDevitt: J. cell Biol., 1963, 16, 225-241 (Dept. Path., Sch. Med., Univ. N. Carolina, Chapel Hill, N.C., U.S.A.) Platelet-rich plasma prepared from human citrated blood at 37° was followed macroscopically for platelet agglgn. and aliquots of citrated and recalcified citrated plasma fixed in OsO₄ and embedded in methacrylate or Epon. 10 min. after recalcification the platelet degenerates with disruption of the limiting membrane. Granular material agglomerates and finally disappears on clot retraction and vesicular platelets progressively disintegrate during 2 hr. P.Barlow

4301. EFFECT OF ETHYL ALCOHOL ON SOME COAGULA-

TION FACTORS IN MAN DURING ANTICOAGULANT THERAPY. E.Waris: Ann. Med. exp. Fenn., 1963, 41, 45-54 (Med. Dept., South Saimaa Central Hosp., Lappeenranta, Finland) Healthy men were given moderate amounts of ethyl alcohol orally first in normal conditions then during anticoagulant therapy. Quick's thromboplastin time was determined before and after alcohol. Alcohol had no effect on thromboplastin time. Alcohol was also administered by drip infusion during anticoagulant therapy to patients with coronary disease, the blood coagulation activity was followed by Owren's thrombotest before and after alcohol. A slight fall in the thrombotest values was seen in some cases. G.Faulkner

4302. EFFECT OF ETHYL ALCOHOL ON SOME COAGULATION FACTORS IN RAT.

E.Waris and O.Mustala: Ann. Med. exp. Fenn., 1963, 41, 54-60 (Dept. Pharmacol., Univ. Helsinki, Finland) The effect of ethyl alcohol on the blood coagulation activity of rat was studied by Owren's thrombotest method. This method can be used to establish the changes in the prothrombin and factor VII, IX and X contents. No differences were found between controls and the groups given alcohol. C.Faulkner

4303. PURIFICATION OF FACTOR VIII (ANTIHAEMOPHILIC GLOBULIN).

S.E.Michael and G.W.Tunnah: Brit. J. Haemat., 1963, 9, 236-244 (Crookes Lab. Ltd., Park Royal, London, England) Purification of crude porcine Factor VIII was effected by chromatography on ion-exchangers using the carboxylic resin XE 64 and the basic exchanger Whatman DEAE-cellulose. Adsorption from dil. neutral phosphate buffer soln. and subsequent elution produced a prep. containing 75-150 Oxford u./mg. protein. This contained appreciable amounts of fibrinogen and was only moderately stable in aq. soln. Sterile filtration and freeze-drying were possible after addition of stabilisers such as human serum proteins. The prep. was successfully used on a boy of 12 yr. suffering from a severe form of haemophilia, while undergoing appendicectomy. J.Sneath

4304. ANTIHAEMOPHILIC GLOBULIN (FACTOR VIII) (AHG) INHIBITOR PURIFICATIONS, CHARACTERISATION AND REACTION KINETICS.

A.Leitner, E.Bidwell and G.W.R.Dike: Brit. J. Haemat., 1963, 9, 245-258 (Blood Coagulation Res. Unit, Churchill Hosp., Oxford, England) Circulating anti-coagulants sometimes develop in haemophiliacs receiving AHG. Plasma from such a patient was used to obtain an inhibitor of AHG by salt pptn. and anion exchange chromatography. Immunoelectrophoresis showed that it belonged to the Y "globulin group (medium fast) and ultracentrifugation gave a sedimentation const. corresponding to 7.6 proteins. It was stable over a wide pH and temp. range and unaffected by crude pepsin. Enzymic digestion and heat denaturation altered

PHYSIOLOGY

some prop, but did not effect its inhibitory activity. The AHG-anti AHG complex appeared to be bimol. in the first reaction phase but final combining properties were altered by relative concn., temp, and pH. Dissociation of the complex could not be shown. J.Sneath

4305. FURTHER EXPERIENCE WITH A CONCENTRATE CONTAINING HUMAN ANTI-HAEMOPHILIC FACTOR [AHG]. W.d'A.Maycock, S.Evans, L.Vallet, B.Cambridge, P.Wolf, N.McGibbon, E.E.French, L.H.Wal-latt, J.V.Dacie, R.Biggs, D.Handley and R.G.Mac-farlane: Brit. J. Haemat., 1963, 9, 215-235 (Lister Inst. Prevent. Med., Elstree, Herts., England) 69

haemophiliacs, of whom 36 suffered from a clinically severe form of the disease received a prep. of human AHG concentrate. A plasma antihaemophilic factor [AHF] raised to 25% above the normal, achieved haemostasis and operations ranging from dental extractions to hysterectomy and gastrectomy were carried out successfully. The AHF level due to infused AHG fell rapidly and seldom lasted longer than 24 hr. Two patients who became refractory to treatment with human or animal AHG had developed a circulating anti-coagulant. Reactions to the AHG prep, occurred in some patients but could be eliminated by slowing the rate of infusion, there was no lasting ill-effect. The prep, is a reliable means of controlling bleeding in haemophiliacs. J.Sneath

4306. TRANSFUSION STUDIES IN VON WILLEBRAND'S DISEASE: EFFECT ON BLEEDING TIME AND FACTOR VIII. P.Cornu, M.J.Larrieu, J.Caen and J.Bernard: Brit. J. Haemat., JL 963, 9, 189-202 (Inst. Rech. Maladies du Sang, Hop. St.-Louis, 2, Place du Docteur Fournier, Paris, France) Transfusions of normal blood into patients with von Willebrand's disease produced an increase in Factor VIII concn. a few hr. after the end of the transfusion which declined slowly during the following 48 hr. This rise was often greater than could be expected from the vol. transfused. Bleeding time (Duke's method) was completely corrected in a majority of transfusion. Haemophilic blood was also responsible for a correction in the Factor VIII level in the recipient, in contrast to results of in vitro expt. Haemophilic blood seemed to be more effective than normal blood in correcting the bleeding time. Nilsson's 'vascular factor' hypothesis is confirmed by these results. J.Sneath

4307. TREATMENT OF HAEMORRHAGE IN VON WILLEBRAND^A DISEASE AND THE BLOOD LEVEL OF FACTOR VIII [AHG]. R.Biggs and J.M.Matthews: Brit. J. Haemat., 1963, 9, 203-214 (Blood Coagulation Res. Unit, Churchill Hosp., Oxford, England) Control of traumatic bleeding seemed to be correlated with the blood level of Factor VIII. Various infusions stimulated the production of this factor. The substance appears to be cone, in the fibrinogen fraction of plasma and is present in substantial amounts in fibrinogen made from "out-dated" plasma. It is present in serum, is not adsorbed by Ca₃(PO₄)₂ and is not present in the albumin or γ-globulin fractions. J.Sneath

4308. FIBRINOLYSIS. I. A CIRCULATING SUBSTANCE CAPABLE OF CONVERTING PLASMIN-SENSITIVE TO PLASMIN-RESISTANT CLOTS. S.F.Rabiner and K.C. Robbins: Ptoc. Soc. exp. Biol., N.Y., 1962, 111, 701-706 (Dept. Haem. Res., M. Reese Hosp., Chicago, 111, U.S.A.) In vitro resistance to fibrinolysis was produced by incubation of thrombin-fibrinogen clots in either serum, plasma, BaSO₄ adsorbed plasma or serum globulin

fraction. The agent responsible for this clot resistance was non-dialysable, destroyed by acid or heat and distinguishable from serum antiplasmin. M.M.Shapland

4309. ALTERATIONS IN FIBRINOLYTIC PARAMETERS OF SUBJECTS WITH DIABETES MELLITUS. H.Sandberg, O.Muller, S.Bellet, L.J.Feinberg, F.Gagnon and L.Gelber: Amer. J. med. Sci., 1963, 246, 153-159 (Div. Cardiol., Philadelphia Gen. Hosp., Pa., U.S.A.) The anti-fibrinolysis lysis time of diabetic subjects is much shorter than that of healthy people. It is thought that this is due to an action of insulin and not a manifest* don of the diabetic state. E.E.Hobbiger

4310. INHIBITION OF HUMAN FIBRINOLYTIC SYSTEM BY NORMAL AND PATHOLOGIC SERA. J.T.Corrall and A.Sjoerdsma: Proc. Soc. exp. Biol., N.Y., 1962, 111, 274-277 (Expt. Therap. Branch., Natl. Heart fast.. Bethesda, Md., U.S.A.) Pathol. sera from 8 of 32 patients with various diseases inhib. standardised fibrinolytic systems to a significantly greater extent than norm* human sera. None of abnormal sera used were from patients with increased accumulation of fibrin. M.M.Shapland

4311. FIBRINOLYTIC ACTIVITY OF HUMAN ERYTHROCYTES. W.Klinzer and A.Haberhausen: Nature, Londi 1963, 198, 396-397 (Univ. Kinderklin. Freiberg im Breisgau, Germany) Adult human r.b.c. display a high spontaneous fibrinolytic activity which becomes apparent only after haemolysis and is associated with the stromata; the activity is enhanced by streptokinase. CM.Lewis

4312. FIBRINOLYSIS RELATED TO AGE IN MEN. H.T. Swan: Brit. J. Haemat., 1963, 9, 311-318 (Dept.Haemat., Royal Inf., Sheffield, England) Fibrinolysis was measured by timing the complete dissolution of fibrin clots prepared by serial diln. of plasma in ice-cold veronal buffer incubated at 37°. 135 men, aged 20-83 yr., were tested and the mean lysis time of the 50% plasma clots were grouped in order of donor-age. The regression line of to* means showed shortening of lysis time with increased af# The correlation did not apply to diln. of < 30% plasma* J.Sneath

4313. EFFECT OF THYROID HORMONE ON HUMAN SERUM RNase. R.D.Leepen J. clin. Endocr., 1963, 23, 426-432 (Div. Clin. Invest., Mem.-Sloan-Kettering Cancer Center, New York, N.Y., U.S.A.) 1*Q... sera of hyperthyroid patients showed higher RNase active than those from normal and myxoedematous individuals. The administration of thyroid hormone to a patient with myxoedema increased serum RNase activity. The serum RNase was inhib. by heating and heparin in the same manner as was bovine cryst. RNase. K.Jones

4314. EFFECT OF ETHANOL tN PLASMA FREE FATTY ACIDS [FFA] IN MAN. C.S.Lieber, C.M.Leevy, S.W. Stein, W.G.George, G.R.Cherrick, W.H.Abelmann and C.S.Davidson: J. Lab. clin. Med., 1962, 59, 826-83* (Dept. Med., Harvard Med. Sch., Boston, Mass., U.S.A.) Ethanol was given i.v. to 13 fasting patie^ who had no evidence of liver disease or disturbance.on. lipid metabolism. All 13 had a significant drop (P < .01) of arterial FFA averaging 30% of the initial concn. At this FFA tended to rise again despite continued ethanox fusion. No change was observed in the blood sugar DU* the blood lactate rose in all the patients, these blood lactate concn. were comparable with the levels in 3

PHYSIOLOGY

415

subjects given i.v. lactate infusions but who did not show any changes in EFA. In 6 patients in whom the initial Peripheral FFA a-v. difference across the forearm or leg was pos. ethanol produced a reduction of this difference ≈ 2 and a reversal in 4 subjects suggesting that the observed fall in FFA levels during ethanol infusion is partly due to a decreased release or to an increased uptake of FFA in peripheral tissue.

C.ToothiU

- 4315.** ADIPOKINETIC EFFECT OF INTRAVENOUS CORTISOL IN HUMAN SUBJECTS. R.V.Nayak, E.B.Feldman and A.C.Carten Proc. Soc. exp. Biol., N.Y., 1962, 111, 682-686 (Dept. Med., State Univ. New York, Brooklyn, N.Y., U.S.A.) Lv. injn. of cortisol caused significant rise in serum free fatty acids and a fall in jejunum triglycerides in healthy fasting human subjects. injn. of either saline or cortisol vehicle induced a significantly lesser rise in serum free fatty acid levels and no change in serum triglyceride levels. M.M.Shapland

- 4316.** BLOOD LACTATES AFTER PROLONGED SEVERE EXERCISE. PJVstrand, LHaUback, R.Hedman and B. Saltin: J. appl. Physiol., 1963, 18, 619-622 (Physiol. ^{^e}Pt. Kungliga Gymnastiska Central-inst., Stockholm, dt. ^{^e}Jedén) Blood lactate measured at the end of exercise decreased with the duration of the exercise, when assessed in cross-country skiers distancing 10-85 km. H.Clones

- 4317.** EFFECT OF MUSCULAR ACTIVITY ON LACTATES, pH AND PLASMA FATTY ACIDS. A. De Coster, M. Levarlet, v.Conard and J.R.M.Jrancckson: C.R. Soc. Biol., Paris, 1962, 156, 1937-1939 (Lab. de Med. expt., Univ. Libre de Bruxelles, Belgium) Muscular activity resulted in a reduction in total plasma fatty acids[#]. During const. activity this reduction was accompanied by an increase in lactic acid. During increasing activity the increase in lactic acid was less significant, while the increase in fatty acid content did not vary with the degree of muscular activity. (French) M.A.Price

- 4318.** ACTION OF ADRENALINE AND GLUCAGON ON GLYCAEMIA, PLASMA LACTATES AND FATTY ACIDS. M.Levarlec C.R. Soc. Biol., Paris, 1962, g*. 1940-1942 (Lab. de Méd. expt., Univ. Libre de Bruxelles, Belgium) Injns. of 10 µg. glucagon/kg. or 0.5 µg/kg. adrenalin to pentobarbital anaesthetised dogs increased blood glucose level to 150 mg./100 ml. Glucagon did not effect plasma lactic acid cemcn. while adrenalin increased the level from 19 to 45 mg./100 ml. Adrenalin increased the fatty acid content of the femoral fatty. a?d vein « Glucagon induced a slight increase in the content of the femoral artery but not of the vein. (French) M.A.Price

- 4319.** CHANGES IN RAT PLASMA AND SERUM CALCIUM DURING STORAGE. A.L.Wilk and C.T.G.King Nature, Dent-B, 1963, 198, 187-188 (Lab. Biochem., Nat. Inst. W.W.?) ^{^e}esda, Md., U.S.A.) Rat plasma after ^{^F}ated to months showed a drop in the Ca level when d. in ^y ^{^e} Munsan technique unless the sample was maintained at the ⁰ S?P⁴terstorag e. G.M.Uwis

- 4320.** INFLUENCE OF PARTIAL PRESSURE OF O₂ ON TOTAL SERUM-CALCIUM CONCENTRATION. F.-Radcliff, P.E.Baume and W.O.Jones: Lancet, 1962, 2, 1249-1251 (fost. Med. Res., Royal North Shore Hospt. Sydney, Australia) Blood for the estimation of serum-calcium concen> should be taken without the vein or exercising the arm. ~C JLBell

4321. ERRORS RELATED TO VARIATIONS IN BLOOD PROTEIN LEVEL IN THE CALCULATED VALUE FOR IONISED CALCIUM IN SERUM. J.Paupe: C.R.Soc. Biol., Paris, 1962, 156, 1591-1593 (Lab. Pathol., Fac. de Méd., Paris, France) From an estimation of the serum Ca level in human subjects by bioassay on the isolated heart of toad, errors were demonstrated in the graphical method of free Ca estimation based on total serum Ca and serum protein level. This error was apparent in subjects with abnormal serum protein levels as in hyperglobulinaemia. In this case, the value for free Ca as determined by graphical methods was lower than that obtained by bioassay. (French) M.A.Price

- 4322.** DETERMINATION OF CALCIUM AND MAGNESIUM IN BLOOD PLASMA BY MEANS OF SODIUM TRIPOLYPHOSPHATE. YeJ.Galkina and S.F.Zavgorodnyi: Vop. Med. Him., 1963, 9, 207-209 (Chair Ihorg. Analyt. Chem., State Med. Sch., Rostov, U.S.S.R.) Ca and Mg can be determined directly in dil. plasma adjusted to pH 10.0 with NH₃ by titration with Na tripolyphosphate (Na₅P₃Qio). Mg alone is determined after pptn. of Ca as CaCO₃. J.R.Sargent

RESPIRATION

- 4323.** RECORDING OF INVISIBLE MOVEMENTS OF ROOT OF TONGUE AND OF LARYNX WHICH ACCOMPANY THOUGHT AND COMPARISON WITH THOSE OBSERVED DURING SPEECH AND WHISPERING. M.Marchat C.R. Acad. Sci., Paris, 1962, 255, 382-384. Movements of the tongue and larynx were recorded by 'Kinedensography' in subjects speaking, whispering or thinking of a number. Traces from different subjects for the same number were similar. The movements observed during thought, though slight, were similar to those observed during speech. Kinedensography involves observation of the changing X-ray shadows with a radio-electric receptor and display as a moving trace. (French) S.A.Thistlewood

- 4324.** RESPIRATORY RESPONSES MEDIATED THROUGH SUPERFICIAL CHEMOSENSITIVE AREAS ON MEDULLA. R.A.Mitchell, H.H.Loescheke, W.H.Mission and J.W. Severinghaus: J. appl. Physiol., 1963, 18, 523-533 (Cardiovasc. Res. Inst., Univ. California Med. Center, San Francisco, Calif., U.S.A.) A chemosensitive area on the surface of the medulla in the subarachnoid space has been demonstrated by perfusing with modified CSF. Respiration was stim. by increased PCO₂, increased [H+] and depressed by procaine, NaCN, lobeline, cold, decreased PCO₂ and [H+] H.C.Jones

- 4325.** SPECIFICITY OF H ION CONCENTRATION AS CAROTID CHEMORECEPTOR STIMULUS. T.F.Hornbein and A.Roos: J. appl. Physiol., 1963, 18, 580-584 (Div. Anesthesiol., Washington Univ. Med. Sch., St. Louis, Mo., U.S.A.) The electrical activity of the cat Hering nerve was recorded during variations in [H+] pCO₂ and PO₂ of arterial blood. The results suggest that [H+] was the primary chemoreceptor stimulus, CO₂ acting through its affect on [H+]. H.C.Jones

- 4326.** INFLUENCE OF PARTIAL PRESSURE OF O₂ ON COMPLIANCE OF ISOLATED BRONCHIAL TREE OF

PHYSIOLOGY

GUINEA-PIG. F.Hagemeijer, A.Vanwijck and J.M. Petit Arch. int. Physiol., 1962, 70, 469-475 (Inst. L. Fredericq, Univ. Liège, Belgium) Pressure/vol. diagrams of isolated trachea and lungs of guinea-pig were made in vitro at 37°, pH 7*3, PCO₂ 41 mm.Hg and pO₂ varying from 0-658 mm.Hg. Of 19 prep, which responded normally to ACh 9 showed anoxic broncho-dilatation while the others gave no response. There was no evidence for a direct broncho-constrictor action of anoxia.
 (French) M.E.Nutt

4327. CHANGES IN COMPLIANCE IN RABBITS SUBJECTED TO ACUTE BRONCHOCONSTRICCTION. N.R. Anthonisen: J. appl. Physiol., 1963, 18, 539-543 (Physiol. Dept., Dartmouth Med. Sch., Hanover, N.H., U.S.A.) During bronchospasm induced in anaesthetised rabbits by injn. of acetyl 3-niethylcholine, the functional residual capacity increased and the dynamic compliance decreased. The results suggest that the airway occlusion accounted for part of the decrease in compliance. Bronchoconstriction in artificially ventilated animals reduced the semistatic compliance. H.CJones

4328. RELATION BETWEEN WORK OUTPUT OF RESPIRATORY MUSCLES AND END-TIDAL CO₂ TENSION. J.Milic-Emili and J.M.Tyler: J. appl. Physiol., 1963, 18, 497-504 (Physiol. Dept., Harvard Sch. Publ. Hlth., Boston, Mass., U.S.A.) A linear relationship was found between work output of the inspiratory muscles in man and end-tidal CO₂ tension. It was not affected by the addition of resistances to inspiration. No consistent relationship was found between ventilation or the work output of the expiratory muscles and end-tidal CO₂ tension. H.CJones

4329. DIRECT MEASUREMENT OF RESPIRATORY PLEURAL PRESSURE CHANGES IN NORMAL MAN. W.J.Daly and S.Bondurant J. appl. Physiol., 1963, 18, 513-518 (Med. Dept., Indiana Univ. Med. Sch., Indianapolis, Ind., U.S.A.) Pressures recorded from the pleural space in man showed that respiratory pressure changes vary in different pleural sites. A large pneumothorax equalised the respiratory pressure changes but the oesophageal respiratory pressure change was not affected by a pneumothorax. Acute central vascular engorgement resulted in similar changes in intrapleural and oesophageal respiratory pressure changes. H.CJones

4330. NUMERICAL INDEX OF STABILITY OF LUNG EXPANSION. P.Gruenwald: J. appl. Physiol., 1963, 18, 665-367 (Pathol. Dept., Sinai Hosp., Baltimore, Md., U.S.A.) A numerical index of stability of lung expansion has been devised using pressure-vol. curves of infants lungs obtained at autopsy. The values obtained fell into two groups of good and poor stability. Results have also been obtained from other mammals. H.CJones

4331. VOLUME-PRESSURE RELATIONSHIPS DURING PRESSURE BREATHING AND VOLUNTARY RELAXATION. L.F.Johnson jun. and J.Mead: J. appl. Physiol., 1963, 18, 505-508 (Physiol. Dept., Harvard Sch. Publ. Hlth., Boston, Mass., U.S.A.) Lung vol. during pressure breathing were measured using a body plethysmograph with pressure applied through a breathing tube, and secondly by applying external pressure to the body and recording lung vol. through a bag-box system. The first method gave results which were closest to those obtained by relaxation pressure measurements. H.CJones

4332. LUNG VOLUMES AND VENTILATORY RESPONSES TO HIGH CO₂ AND LOW O₂ IN THE AMA. S.H.Song, D.H.Kang, B.S.Kang and S.K.Hong: J. appl. Physiol., 1963, 18, 466-470 (Physiol. Dept., Yonsei Univ. Med. Coll., Seoul, Korea) Korean diving women had a higher lung vital capacity and a higher inspiratoiy capacity than control subjects. Max. inspiratory pressure for a given lung vol. was higher for diving women but max. expiratory pressure and resting alveolar gas composition was the same for both groups. H.CJones

4333. RELATION BETWEEN ANATOMICAL RESPIRATORY DEAD SPACE, BODY SIZE AND LUNG VOLUME. M.G. Hart, M.M.Orzalesi and C.D.Cook: J. appl. Physiol., 1963, 18, 519-522 (Med. Dept., Children's Hosp. Met Center, Boston, Mass., U.S.A.) The respiratory anatomical dead space measured by die N₂ washout method, was found to correlate with height, body wt. surface area, and functional residual capacity. There was no difference in dead space values for τ and Ψ . Dead space appeared to have a const. relation with height from infancy to adult* hood. H.CJones

4334. VENTILATORY POSITION AND DYNAMIC PULMONARY RESISTANCE. R.Marcelle, J.M.Petit and J. Troquec Arch. int. Physiol., 1962, 70, 476-482 (Inst. L. Fredericq, Univ. Liege, Belgium) Dynamic pulmonary resistance was measured in 6 normal 0° adults by interruption of air-flow during slow forced inspiration and expiration of 1 l. of air, utilising successively, the whole range of the vital capacity. Dynamic resistance is obtained by relating the change in buccal p. on interrupting air-flow (this represents the alveolar-buccal p. gradient) to the rate of flow immediately prior to the interruption. Resistance to both inspiration and expiration increases progressively as the ventilatory position is displaced towards max. forced expiration in the expiratory reserve zone. It remains relatively const, in the inspiratory reserve zone. (French) M.E.Nutt

4335. MEASUREMENT OF THORACIC GAS VOLUME IN NEWBORN INFANT. P.A.M.Auld, N.M.Nelson, R.B. Cherry, A.J.Rudolph and C.A.Smith: J. clin. Invest., 1963, 42, 476-483 (Dept. Pediat., Harvard Med. Sch., Boston, Mass., U.S.A.) Thoracic gas vol. [TGV] and total lung capacity [TLC] were established within a few W after birth in normal infants and increased little during subsequent neonatal life. A decrease in TGV and TLC was observed in newborn infants with the hyaline memj* brane syndrome, the decrease in vol. occurring early in the disease. Trapped gas seemed to exist in the lungs of some normal newborn infants. K Jones

4336. PEAK FLOW RATES IN NORMAL AND ASTHMA CHILDREN. P.J.D.Heaf and M.S.Gillam: Brit. med. J., 1962, 1, 1595-1596 (University Coll. Hosp., London, England). M.E.Nutt

4337. INDEX OF ALVEOLAR VENTILATION. S.T.A.Lichtneckert and C.E.G.Lundgren: J. appl. Physiol., 1963*, 18, 639-645 (Lab. Aviation Med., Physiol. Inst., Västerås, Lund, Sweden) An expression for alveolar ventilation efficiency is given which is based on an analysis of N₂ elimination from air-containing lungs during O₂ breathing. N₂* J_0 in the end tidal air is measured. The alveolar ventilation index was calc. in several expt. and good reproducibility was obtained. H.CJones

PHYSIOLOGY

417

4338. ALVEOLAR GAS EXCHANGE DURING BREATH HOLDING WITH AIR. E.H.Lanphier and H.Rahn: J. appl. Physiol., '1963, 18, 478-482 (Physiol. Dept., State Univ. New York, Buffalo, N.Y., U.S.A.) During breath holding with air and during exercise, O₂ uptake slowly declined and CO₂ transfer fell to zero as the alveolar pCO₂ rose. Arterial PCO₂ became equal to mixed venous pCO₂ and then exceeded it. H.C.Jones

4339. ALVEOLAR GAS EXCHANGE DURING BREATH-HOLD DIVING. E.H.Xanphier and H.Rahn: J. appl. Physiol., 1963, 18, 471-477 (Physiol. Dept., State Univ. New York, Buffalo, N.Y., U.S.A.) Breath-hold dives up to 33 ft. were simulated in a recompression tank. O₂ uptake was normal until the ascent owing to maintenance of alveolar pO₂ by the increased ambient pressure. CO₂ was taken up during the descent, longer dives were made possible by hyperventilation before rehand. H.C.Jones

4340. ALVEOLAR GAS EXCHANGE DURING SUBMARINE ESCAPE. A.B.DuBois, G.J.Bond and K.E.Schaefen: J. appl. Physiol., 1963, 18, 509-512 (Physiol. Dept., Grad. Med. Sch., Univ. Pennsylvania, Philadelphia, Pa., U.S.A.) The alveolar PCO₂ was found to be the same at the beginning as at the end of a buoyant ascent, from a depth of 90 ft. pO₂ indicated normal arterial O₂ saturation. H.C.Jones

4341. DIVING PATTERN, LUNG VOLUMES, AND ALVEOLAR GAS OF THE KOREAN DIVING WOMAN (AMA). ^K.Hong, H.Rahn, D-H.Kang, S.H.Song and B.S.Kang: J. appl. Physiol., 1963, 18, 457-465 (Physiol. Dept., Division of Medicine, Seoul University, Korea) Unassisted divers of Korean women were typically to a depth of 45 ft. holding 30 sec. averaging 60 dives/hr. Before a dive, men hyperventilated and the lungs were filled to 100% of vital capacity. Both O₂ and CO₂ were removed from the lungs during a dive, the CO₂ uptake having accounted for by gas compression. O₂ pressure was at the bottom of a dive but fell rapidly during ascent. H.C.Jones

4342. EFFECT OF EXERCISE ON PULMONARY DIFFUSING CAPACITY. C.M.Tuiino, E.H.Bergofsky, R.M.Goldberg and A.P.Jishman: J. appl. Physiol., 1963, 18, 478-482 (Med. Dept., Columbia Univ., Coll. Physn. and Physiol., New York City, N.Y., U.S.A.) Pulmonary diffusing capacity for O₂ (DLO₂) was found to increase with severity of exercise, and to increase to a greater extent than CO₂ at the same level of exercise. At rest, the level of exercise DLO₂ exceeded DLCO by a lesser extent than can be accounted for by the difference in diffusion rates of the two gases. Body position did not influence DLO₂ and DLCO during exercise. H.C.Jones

A.C. MONITORING FUNCTION IN NEWBORN INFANT! ALVEOLAR-ARTERIAL OXYGEN GRADIENT. N.M.Nelson, T.L.S.Prod'horn, R.B.Cherry, P.J.Upsitz and C.A. Deppert: J. appl. Physiol., 1963, 18, 534-538 (Pediat. Dept. Harvard Med. Sch., Boston, Mass., U.S.A.) The venous admixture component of alveolar-arterial O₂ gradient has been measured in infants. The high gradients found in both normal babies and babies with respiratory distress syndrome accounted for by a shunt flow revealed good air breathing, as distribution of ventilation was good. H.C.Jones

4344. EFFECT OF A SYSTEMIC ARTERIO-VENOUS FISTULA AND OF PULMONARY EMBOLISATION ON

DIFFUSING CAPACITY. M.H.Williams and B.J.Sobel: J. appl. Physiol., 1963, 18, 553-556 (Cardioresp. Lab., Grasslands Hosp., Valhalla, N.Y., U.S.A.) Pulmonary diffusing capacity in dogs was increased by the opening of an a-v. fistula and was slightly decreased by pulmonary embolisation. H.C.Jones

4345. RADIOACTIVE XENON FOR STUDIES OF REGIONAL LUNG FUNCTION. COMPARISON WITH 1502. C.T. Dollery, P.Hugh-Jones and C.M.E.Matthews: Brit. med. J., 1962, ii, 1006-1016 (Postgrad. Med. Sch., London, England) ¹³³Xe was taken as a single breath and distributed to different lung areas measured. Blood flow was deduced from clearance slope during breath-holding. Relatively insol. ¹³³Xe entered both well and badly ventilated areas of lung during rebreathing from a close-circuit spirometer and ventilation of different regions was compared by time of washout on resuming air breathing. ¹³³Xe gave more information about badly ventilated areas than did single breaths of O₂. Comparisons of blood flow were made by injecting ¹³³Xe dissolved in saline i.v. and observing the amount evolved in different regions of lung. Xe and O₂ gave similar results for most purposes, but ¹³³Xe was useless for detecting left to right shunts for which CO₂ labelled with ¹⁵⁰O is valuable. ¹⁵⁰O₂ can be used to measure flow rate and changes in it, but Xe only determines relative flow through areas. Normal subjects had low blood flow through upper zones of lungs in contrast to subjects with mitral stenosis who had high upper zone and limited lower zone flow. Both methods revealed regional ventilation abnormalities not apparent from chest radiographs. M.E.Nutt

4346. REBREATHING METHOD FOR DETERMINATION OF MIXED VENOUS pCO₂. E.J.M.Campbell and J.B.L. Howell: Brit. med. J., 1962, ii, 630-631 (Dept. Med., Middlesex Hosp., London, England) Factors affecting the two-stage rebreathing method for measurement of mixed venous pCO₂ are discussed. Vol. of gas in the bag should be not more than twice the tidal vol., but exact ratio is not critical. Suitable equipment, practical problems and variations in technique are described.

M.E.Nutt

4347. REBREATHING METHOD FOR DETERMINING MIXED VENOUS pCO₂ DURING EXERCISE. C.H.Ashton and G.J.R.McHardy: J. appl. Physiol., 1963, 18, 668-671 (Pharmacol. Dept., Middlesex Hosp. Med. Sch., London, England) The rebreathing method for determining mixed venous PCO₂ in subjects at rest has been modified for use in subject in exercise. The accuracy of the method and possible sources of error are discussed. H.C.Jones

4348. RESPONSE TO HIGH PRESSURE OXYGEN OF CONSCIOUS VOLUNTEERS AND PATIENTS. C.A.Foster and L.Churchill-Davidson: J. appl. Physiol., 1963, 18, 492-496 (Anaesthetics Dept., St. Thomas's Hosp., London, England) The results of exposure to high pressure O₂ of normal subjects and patients with malignant tumours are described. Subjects at rest did not show signs of toxicity after 1 hr. at 3 atm. O₂ pressure. H.C.Jones

4349. EFFECT OF VARIOUS MODES OF O₂ ADMINISTRATION ON ARTERIAL GAS VALUES IN PATIENTS WITH RESPIRATORY ACIDOSIS. D.J.Massaro, S.Katz and P.C.Luchsingen: Brit. med. J., 1962, ii, 627-629 (Georgetown Univ. Med. Sch., Washington, D.C., U.S.A.) Patients with respiratory acidosis (15) were

PHYSIOLOGY

divided into groups receiving O₂ by mask for 10 min., O₂ by nasal catheter for 10 min. and O₂ by nasal catheter for 150-240 min. Hypo-oxia was not relieved for an appreciable time by intermittent O₂ and often became worse on its cessation. PCO₂ increased in all groups given O₂*. Continuous O₂ by catheter gave sustained increase in arterial pO₂, but acidosis seriously worsened in 2 subjects. Administration of O₂ to patients with respiratory acidosis should be by mechanical respirator or with pharmacological stimulant to ensure continued alveolar ventilation.

M.E.Nutt

4350. RELATION OF ARTERIAL HYPO-OXAEMIA TO THE HYPERVENTILATION OF CHRONIC LIVER DISEASE.

R.E.Snell and P.C.Luchsinger Amer. J. med. Sci., 1963, 245, 289-292 (Cardiopulmonary Physiol. Res. Lab., Mt. Alto V.A. Hosp., Washington, D.C., U.S.A.) In patients with chronic liver disease no correlation exists between hyperventilation and arterial hypo-oxaemia.
E.E.Hobbiger

HEART

4351. RECORDING OF MECHANICAL ACTIVITY OF THE SEMI-ISOLATED HEART OF PORCELLIO DILATATUS, (SPONTANEOUS ACTIVITY AND INDUCED RHYTHM). A.Holley and Y.M.Gargouil: C.R. Soc. Biol., Paris, 1962, 156, 1910-1915 (Lab. de Physiol. animale, Fac. des Sci., Poitiers, France) In the recording of activity of the heart of *P. dilatatus* via a transducer, the heart remained attached to a section of integument. The ventral nerve cord was removed during dissection. A const. recording of heart beat was obtained for 1 hr. at 280 beats/min. Electrical stimm. of an inactive heart resulted in a return to rhythmic activity. (French) M.A.Price

4352. MOVEMENTS OF Ca IN FROG HEART VENTRICLES AT REST AND DURING CONTRACTURES. R.Niedergerke: J. Physiol., Lond., 1963, 167, 515-550 (Biophys. Dept., University Coll., London, England) To test the hypothesis that Ca inward movement initiates the contraction of heart cells 45Ca was used to examine the Ca fluxes in frog heart ventricles. Ca influx was facilitated by application of 'contracture fluids' which contained reduced Na concn. and either normal or increased K concn. The magnitude of this effect increased, similarly to the strength of the observed contractures, with increasing depletion of Na and also on addition of K. Approx. influxes in fibres of average size (at room temp.): are (a) resting influx, 0.009 p-mole/cm², sec⁻¹ (b) influx associated with 'threshold' contracture, 0.11 p-mole/cm², sec. Ca efflux was also facilitated by these 'contracture-fluids'; large effluxes were found associated with relaxation after max. contractures induced by Na-free fluids.

4353. MOVEMENTS OF Ca IN BEATING VENTRICLES OF THE FROG HEART. R.Niedergerke: J. Physiol., Lond., 1963, 167, 551-580 (Biophys. Dept., University Coll., London, England) Periods of electric stimm. increased the influx and also the efflux of Ca in ventricles of the frog heart, both fluxes being determined by means of 45C. The magnitude of the extra-influx depended, like the strength of the heart beat, on the ratio [Ca]/[Na]² in the external fluid. Approx. values of the influx/beat in fibres of average size: 0.15, 0.23 and 0.25 p-mole/cm². in the presence of 1 mM Ca-Ringer, 2 mM Ca

Ringer and 0.5 mM Ca, 50% Na-50% choline Ringer, respectively. The extra-efflux/beat was of similar magnr. aide as the extra-influx. *

4354. EFFECTS OF ALDOSTERONE ON CONTRACTILE AND ELECTRICAL PROPERTIES OF DRIVEN ISOLATED RABBIT ATRIA. J.V.Levy and V.Richards: Proc. Soc. exp. Biol., N.Y., 1962, 111, 602-606 (Surg. Res. Lab., Presbyterian Med. Center, San Francisco, Calif. U.S.A.) Both the natural and racemic isomers of aldosterone had no significant effect on the contractile prop. of driven isolated rabbit atria.

M.M.Shapland

4355. CARDIOTONIC ACTION OF (+)-ALDOSTERONE. A.Loubatieres and A.Sassine: C.R. Acad. Sci., Paris, 1962, 255, 374-376 (Lab. de Physiol. appliquee., Fac. de Med., Montpellier, France) 5-10-5 or 5*10⁻⁶ fig./ml. of (+)-aldosterone were added to the soln. bathing a prep. of isolated papillary muscle from the right cardiac ventricle of the cat. The drug delayed the onset of fatig^{ue} on repeated stimm. of fresh muscle but did not relieve fatigue already established. 3*10⁻⁴ jjg./ml. (+)-aldosterone are found in normal human plasma and may be concerned in maintaining cardiac tone.

(French) S.A.Thistlewood

4356. EFFECT OF THYROXINE ADMINISTERED IN VITR^O AND IN VIVO ON SUCCINOXIDASE AND MALIC DE; HYDROGENASE REACTIONS OF FROG MYOCARDIUM. P.V.Tishler: Endocrinology, 1963, 72, 673-676 (Dept. Med., Harvard Med. Sch., Boston, Mass., U.S.A.)

In vitro administration of thyroxine to frog myocardial homogenates resulted in enhanced succinate oxidation and inhib. malate oxidation. These effects were not seen following in vivo administration, malate oxidation being slightly stimulated.

H.C.Jones

4357. TURNOVER RATES OF NORADRENALINE [NA] IN HEARTS OF INTACT MICE, RATS AND GUINEA-PIGS USING TRITIATED NORADRENALINE. R.Montanari, E.Costa, M-A.Beaven and B.B.Brodie: life Sci., 1963, 4, 232-240 (Lab. Chem. Pharmacol., Nat. Heart Inst., Bethesda, Md., U.S.A.) NA was formed continually at a const. rate, as studied using PH³NA. The labelled amine was taken up into a readily miscible pool and then slowly diffused into a second pool. At equilibration, the slope of the exponential decline in radioactivity was related to, but not equal to, the rate of NA synthesis.

K.Jones

4358. TURNOVER OF NORADRENALINE [NA] IN THYROID TOXIC AND NONTHYROTOXIC MICE. M.A.Beaven, E.Costa and B.B.Brodie: life Sci., 1963, 4, 241-247 (Lab. Chem. Pharmacol., Nat. Heart Inst., Bethesda, Md., U.S.A.) The total NA content of the heart remained unaltered, although the concn. of endogenous NA was decreased after triiodothyronine treatment, as shown using ³HNA. The rate of synthesis of endogenous NA was not affected by triiodothyronine administration. The symptoms of hyperthyroidism cannot be explained on basis of more rapid formation of NA.

A.Jones

4359. CARDIOVASCULAR EFFECTS OF THYROXINE, TREATMENT IN HYPOPHYSECTOMISED RATS. J.J.^oUnak: Circulat. Res., 1963, 12, 333-340 (Dept. of Physiology, Univ., Ottawa, Canada) Thyroxine treatment restores the cardiac output, work etc measured under JV_d barbital anaesthesia. It does not enable the heart to respond just to acute expansion of blood vol. or to chronic a^or constriction as effectively as in a normal rat.

R.E.Moore

PHYSIOLOGY

- 4360.** CARDIOVASCULAR EFFECTS OF INFUSION OF ADRENALINE AND ANGIOTENSIN SINGLY AND IN COMBINATION^t: P.F.Binnion and J.DJHatcher. Circulat. Res., 1963, 12, 393-398 (Dept. Physiol., Queen's Univ., Kingston, Ont., Canada) A transient augmentation of cardiac output and stroke work was observed ^{**} aogs under Na pentobarbital when the two substances were administered at the same time, suggesting a degree of interaction between them. R.E.Moore
- 4361.** INHIBITION OF ACh-INDUCED ATRIOVENTRICULAR BLOCK BY K. CFisch, H.Feigenbaum and J.A. Weiss: J. clin. Invest., 1963, 42, 563-569 (Kramnert Heart Res. Inst., Marion County Gen. Hosp., Indianapolis, Ind., U.S.A.) Elevation of the plasma K from control mean of 3⁴ mequiv./l. to a mean of 6¹ l⁻¹ v/l. inhibited the ACh-induced block and prevention of the p wave and segment in dogs. This ACh effect of moderate hyperkalaemia is discussed. A Possible explanation of the paradoxical behaviour of A_V conduction in patients with atrial fibrillation treated with digitalis and with K. K.Jones
- 4362.** MECHANISMS OF CARDIAC ARREST PRODUCED BY POTASSIUM. B.Surawicz and L.S.Gettes: Circulat. Res., 1963, 12, 415-421 (Univ. Vermont Coll. Med - Burlington, Vt., U.S.A.) Transmembrane potentials and e.c.g. were recorded from fibres in the isolated Perfused rabbit heart. The arrest observed on changing from normal K⁺ concn. is attributed to pacemaker taMbn. The normal velocity of repolarisation was much increased in the myocardium whilst resting potential² and upstroke velocity of action potential were little changed. R.E.Moore
- 4363.** DYCARDIA IN HUMAN DIVERS. LJrving: J. Physiol., 1963, 18, 489-491 (Arctic Hlth. Res. Ctr. Box 960, Anchorage, Alaska, U.S.A.) In & records showed that bradycardia develops rapidly in subjects during apnoea in air and when submerged in water. H.C. Jones
- 4364.** RELATION BETWEEN RATE AND AMPLITUDE IN ATRIAL MYOCARDIUM OF HAMSTER COMPARED WITH THAT IN GUINEA-PIG AND RAT. V.Kruta and JskalovS: Arch. int. physiol., 1962, 70, 443-458 (Inst. of Med., J.E.Purkyne Univ., Brno, Czechoslovakia) The relation between amplitude and rate of contraction of the electrically driven atrium of the guinea-pig, rabbit, cat and dog is represented by a triphasic curve with a min. amplitude at 40-60/min. (postural contractility). In the rat the curve amplitude/rate is hyperbolic. In the hamster atrium at 2T and below, the relationship of amplitude to rate follows the more common pattern but at 34¹ and above, it is a hyperbolic curve with a min. amplitude at 300-400/min. (optimal contractility). Between 2ST and 34T the amplitude is intermediate in type, amplitude is low freq. then decreases and increases again with increased rate to a low optimum reached at fairly low rate. Anoxia or metabolic inhibitors (fluoracetate, iodoacetate, DNP) progressively convert the typical triphasic pattern of guinea-pig auricle into an intermediate type. M.E.Nutt (French) M.E.Nutt
- 4365.** EFFECT OF CONTINUOUS ADMINISTRATION OF ANGIOTENSIN ON VENTRICULAR FUNCTION. S.E.Dorning and E.H.Sonnentag: J. appl. Physiol., 1963, 18, 585-592 (Lab. Cardiovasc. Physiol., Natl. Heart Inst., N.I.H., Bethesda, Md., U.S.A.) Administration of angiotensin II to cats resulted in a greater increase in b.p. than with noradrenaline, but only a transient increase in ventricular contractility was seen. In some cases myocardial depression occurred and small reductions in coronary blood flow were sometimes seen at the same time. H.C. Jones
- 4366.** SYNCHRONICITY OF VENTRICULAR CONTRACTION: OBSERVATIONS COMPARING HAEMODYNAMIC EFFECTS OF ATRIAL AND VENTRICULAR PACING. J.P.Gilmore, SJ.Samoff, J.H.Mitchell and RJXinden: Brit. Heart J., 1963, 25, 299-307 (Lab. Cardiovasc. Physiol., Natl. Heart Inst., Bethesda, Md., U.S.A.) Central pressure and aortic flow were recorded in dogs with open chests to investigate the effect on cardiac function of electrical pacing applied to atria or ventricles at a rate slightly above the spontaneous heart rate. Ventricular function curves relating stroke work to atrial or ventricular end-diastolic pressure were obtained with repeated blood transfusions during periods of electrical stimm. When atrium and ventricle contract at or about the same time instead of sequentially, the ventricle is deprived of atrial contribution to ventricular filling, mean atrial pressure rises in relation to left ventricular end-diastolic pressure, the end-diastolic pressure is lower, and the ventricle produces less external work; when the ventricle is caused to contract as the result of direct electrical stimm. instead of a normally propagated impulse, it will produce less external work from any given end-diastolic pressure. Haemodynamic evidence suggests that this is due at least in part to a less synchronous ventricular contraction. P.F. Meyer
- 4367.** LEFT VENTRICULAR FILLING PRESSURE GRADIENT IN MITRAL INCOMPETENCE. P.CF.Nixon and G.H. Woolen: Brit. Heart J., 1963, 25, 382-388 (Dept. Thoracic Surg., Gen. Infirmary, Leeds, England) Simult. left atrial and left ventricular pressure tracings, recorded in 5 patients with mitral incompetence, showed an abnormally large left ventricular filling pressure gradient in predominant mitral incompetence when there was a degree of fusion of the mitral valve cusps, and also in pure mitral incompetence. This gradient disappears when the heart rate is slow. P.F.Meyer
- 4368.** EFFECT OF COCARBOXYLASE ON CARDIAC OUTPUT IN ACUTE HYPO-OXIA. Z.Nagy and L.Skolnik: Acta med. Acad. Sci. hung., 1962, 19, 59-66 (2nd Dept. Med., Univ. Med. Sch., Budapest, Hungary) Lv. administration of 50 mg. cocarboxylase to dogs rendered hypo-oxic by breathing an O₂-low mixture reduced the rise in cardiac output seen under control conditions, although there was no concomitant change in the degree of arterial desatn. Cocarboxylase had no effect on the cardiac output of animals with normal arterial O₂ satn. CF.Blane
- 4369.** ON-LINE COMPUTATION OF CARDIAC OUTPUT FROM DYE DILUTION CURVES. H.H.Hara and J.W. Bellville: Circulat. Res., 1963, 12, 379-385 (Beckman/Berkeley Div., Richmond, Calif., U.S.A.) An analogue computer circuit for calculating cardiac output and mean transit time is described which receives as its input the output of a cuvette densitometer. R.E.Moore
- 4370.** DETECTION AND MEASUREMENT OF EXPERIMENTALLY PRODUCED AORTIC REGURGITATION BY

PHYSIOLOGY

MEANS OF INDICATOR-DILUTION CURVES RECORDED FROM THE LEFT VENTRICLE. E.Arrielin, L.Michaels, H.W.Marshall, D.E.Donald, R.J.Cheeseman and E.H. Wood: *Circulat. Res.*, 1963, 12, 269-290 (Mayo Clin.. Rochester, Minn., U.S.A.) Acute or chronic aortic incompetence was produced surgically in dogs. The regurgitant fraction, which was calc. from left ventricular dye-diln. studies, following aortic root injn., correlated well with the incompetence as determined by post-mortem pressure-flow observations. Neither catheter tip position nor time of injn. in relation to cardiac cycle were major determinants of the calc. back flow.
R.E.Moore

4371. COMPARISON OF CENTRAL AND PERIPHERAL INJECTION SITES IN THE ESTIMATION OF CARDIAC OUTPUT BY DYE DILUTION CURVES. G.A.Bousvaros, W.H.Palmer, P.Sekelj, M.McGregor: *Circulat. Res.*, 1963, 12, 317-321 (Royal Victoria Hosp., Montreal, Canada) Injn., with flushing, into an antecubital vein was as efficient as central injn. in human subjects.
R.E.Moore

4372. EFFECT OF ACUTE PULMONARY ARTERY CONSTRICKTION ON FORM OF THE INDICATOR-DILUTION CURVE. R.C.Little, B.H.Brundage, R.A. Orlando and Pwr Moedjona: *Proc. Soc. exp. Biol.*, N.Y., 1962, 111, 786-788 (Dept. Physiol., Seton Hall Coll. Med. and Dent., Jersey City, N.J., U.S.A.) Time requirements for the various parts of the indicator-diln. curve decreased with mild pulmonary artery constriction and increased with more severe reduction in artery lumen. Peak concn. of dye decreased with increasing constriction. It is suggested that the form of the curve is dependent upon degree of cardiac compensation as well as severity of the constriction.
M.M.Shapland

4373. DETECTION AND QUANTITATION OF INTRACARDIAC LEFT-TO-RIGHT SHUNTS BY AN OKIMETRIC INERT GAS TECHNIQUE. R.C.Wood, H.W. Marshall and E.J.H.Wood: *Circulation*, 1963, 27, 351-359 (Mayo Clin., Rochester, Minn., U.S.A.) Changes in blood O₂ satn. at sites within the right heart and a systemic artery produced by breathing a small amount of an inert gas were recorded by oximetry. This technique permitted even quite small left-to-right shunts to be calc.
R.S.Duff

4374. DISTRIBUTION OF HEART POTENTIALS ON THE THORACIC SURFACE OF NORMAL HUMAN SUBJECTS. B.Taccardi: *Circulat. Res.*, 1963, 12, 341-352 (Inst. Cardiol. Sperimentale, Via Bellerio 43, Milano, Italy) A series of isopotential lines were plotted for the QRS complex. These showed two 'sources' and 'sinks' for parts of the cycle and one during other parts.
R.E.Moore

4375. ELECTRICAL AND ANATOMICAL STUDY OF PURKINJE SYSTEM OF CANINE HEARTS. M.S.Spach, S. Huang and C.R.Ayeis: *Amer. Heart J.*, 1963, 65, 554-673 (Dept. of Pediat., Duke Univ. Sch. Med., Durham, N.C., U.S.A.) The activation of the conducting system and adjacent muscle of the subendocardium of the entire left ventricle and right ventricular free wall were studied in the intact canine heart by means of plunge electrodes. Penetration of Purkinje potentials to a depth of 3-4 mm. beneath the endocardial surface was recorded first in mid left septal surface areas 1-1*5 cm. below the bifurcation of the left bundle. No such penetration occurred in the upper left septal surface. Measurement of the period between Purkinje potentials and adjacent muscle activation suggested that muscle activation begins in the

lower left septal surface 2-3 mm. below the endocardial surface. Purkinje potentials recorded in the right ventricular free wall indicated that the activation wave to this area is transmitted by the peripheral conducting system. There was 81% correlation of the localisation of sp. strands of conducting tissue demonstrated by iodine staining with the recording sites which demonstrated Purkinje potentials.
P.F.Meyer

4376. TECHNIQUE FOR RECORDING MULTIPLE AVIAN EMBRYONIC ELECTROCARDIOGRAMS. S.D.Burton, H.N.Uhley and T.Ishida: *J. appl. Physiol.*, 1963, 18, 650-651 (H.Brunn Inst., Mt. Zion Hosp., San Francisco, Calif., U.S.A.) A unit has been constructed for recording simult. the electrical activity of 8 isolated embryonic chick or duckhearts. The method can be used for biol. assays.
H.C.Jones

4377. E.C.G. CHANGES AT HIGH ALTITUDE. J.S. Milledge: *Brit. Heart J.*, 1963, 25, 291-298 (M.R.C. Lab., Dept. Human Physiol., Holly Hill, Hampstead, London, England) E.c.g. recorded on climbers during an Himalayan expedition at altitudes of 19000-24400 ft. showed a shift of the QRS and T vectors to the right in the frontal plane, and inversion of T waves in the chest leads. O₂ breathing did not usually reverse these changes which suggested right ventricular overload.
P.F.Meyer

4378. ELECTROCARDIOGRAPHS AND CIRCULATORY CHANGES IN PROGRESSIVE MUSCULAR DYSTROPHY. F.Solti, E.Zadory and G.Bekeny: *Acta med. Acad. Sci. hung.*, 1962, 19, 1-10 (1st Dept. of Med., Univ. Med. Sch., Budapest, Hungary) Pathcl. changes in the heart and circulatory dynamics were found in 80% of patients suffering from progressive muscular dystrophy. Stroke vol. was freq. subnormal and peripheral resistance elevated, associated with atypical e.c.g. patterns. It is concluded that those processes which affect the skeletal muscles also influence the cardiac muscle.
G.F.Blane

4379. METHOD FOR INVESTIGATING TRANSTHORACIC AND DIACARDIAC PROPAGATION OF SOUND WAVES. K.W.Victor and P.Heintzen: *Z.Kreisl.-Fisch.*, 1963, 52, 298-305 (Kinderklin., Univ. Kiel, Germany) A sound transmitter placed on the chest wall, and a Ba-titanate receiver placed in the heart or in the oesophagus were used to study the propagation of sound waves through the chest wall or in the heart. The technical details are described, including the amplifier for the transmitter and the preamplifier constructed for the phonocatheter.
(German)
P.F.Meyer

4380. HAEMODYNAMIC CORRELATES OF VARIOUS COMPONENTS OF FIRST HEART SOUND. P.M.Shah, M. Mori, D.M.MacCanon and A.A.Luisada: *Circulat. Res.*, 12, 386-392 (Div. Cardiovasc. Res., Chicago Med. Sch., Chicago, Ill., U.S.A.) Three high freq. components were recognised in the dog, the first 2 originating in the left ventricle and the third in the aorta.
R.E.Moore

4381. CONSTITUENTS OF FIRST HEART SOUNDS IN CLINICAL AND EXPERIMENTAL AORTIC STENOSIS. A. van Bogaert, A. van Genabeek, M.Amoldy, J.Wauerts, H. van der Henst, M.Keireebelik and J.Vandael-Arch. Mai. Coeur, 1963, 56,40-54 (Serv. des Recheiches Cardio-Vasculaires 'Groupe Comte de Launoit' Inst., Bunge) The first heart sound was inaudible in 14/25 cases of aortic stenosis, and clearly heard in the remainder. In dogs with a stenosing ligature round the ascending aorta, the 1st pre-ejection component of the 1st heart sound increased in intensity and the interval between Q waves in the

e.c.g. and onset of the first heart sound was shortened, with the result that the phonocardiogram suggested a pre-systolic murmur. The 2nd pre-ejection component of the 1st heart sound extended its duration and reached into the ejection period. Onset of ventricular strains or excessive ventricular dilation with mitral incompetence reduced the intensity of the 1st and 2nd component of the 1st heart sound with the result that a silent gap appeared between the 1st heart sound and onset of ejection murmur.

(French) P.F. Meyer

4382. CORRELATION OF INTRACARDIA PRESSURE AND PRECORDIAL MOVEMENT IN ISCHAEMIC HEART DISEASE. D.G.Dimond and A.Benchimol: Brit. Heart J., 1963, 25, 389-392 (Inst. f. Cardiopulm. Dis., Scripps Clin. and Res. Fdn., La Jolla, Calif., U.S.A.) The apex cardiogram, a left ventricular pressure tracing and the phonocardiogram were recorded in patients with angina of effort. Angina provoked by mild exercise caused marked accentuation of the 4th heart sound in the Phonocardiogram and an increased amplitude of the atrial component in the apex cardiogram; there was also a rise in left ventricular end-diastolic pressure. These changes were reversed after sublingual nitroglycerol administration. It is suggested that the apex cardiogram can be used to measure changes in left ventricular end-diastolic Pressure.

P. F. Meyer

4383. PHASES OF DIASTOLE IN VARIOUS SYNDROMES OF MITRAL VALVULAR DISEASE. P.C.F.Nixon and G.H.Woolen: Brit. Heart J., 1963, 25, 393-404 (Dept. Thoracic Surg., Gen. Infirmary, Leeds, England)

Left heart pressure pulses, phonocardiograms and displacements curves of the left ventricular apex were recorded in Patients with mitral valve disease. A prolonged phase of filling beginning with the 3rd heart sound was present in every case of severe mitral incompetence; this observation was not consistent with the belief that the 3rd sound is caused by the left ventricle suddenly reaching the limit of extensibility. An analysis of the events occurring at the time of the 3rd heart sound suggests that it is caused by sudden tensing of the mitral cusps and chordae.

P.F.Meyer

4384. SIMPLIFIED THEORY OF SHOCK. FUNDAMENTAL ROLE OF MYOCARDIUM. F.E.Weale: Lancet, 1963, i, 973-976 (St. Bartholomew's Hosp., London, England)

The hypotension of shock is due to acute myocardial failure. Changes in other organs are secondary to a diminished flow of blood. Improvements in the treatment of irreversible shock will depend on the facilitation of the transport of O₂ to the myocardium.

Gil.Bell

4385. SODIUM AND POTASSIUM IN PATHOGENESIS OF 'ELECTROLYTE-STEROID CARDIOPATHY WITH NECROSIS'. P.Prioreschi: Canad. J. Biochem., 1963, 41, 965-968 (List. Expt. Med., Univ. Montreal, Que., Canada)

Groups of rats were treated twice daily with doses of Na₂HPO₄, KCl, Na-cifrate in water by stomach and a suspension of 1-5 mg. of 9a-fluorocortisol in water was inj. s.c. once daily. Rats were killed on the 5th JIV and Na and K were measured in the serum and in the "atria". In the second expt. the treatment was continued for 10 days omitting the K-salt. Following the decrease in myocardial K produced by 9a-fluorocortisol the administration of Na-salts increased the Na content of the heart. The concomitant administration of KCl corrected K depletion and inhibited the entry of Na into the cells.

J.B.Parish

4386. ACYANOTIC FORMS OF TETRALOGY OF FALLOT. G.Gottsegen and B.Zaborszky: Acta med. Acad. Sci.

hung., 1962, 18, 405-416 (Inst. Cardiol., Univ. Med. Sch., Budapest, Hungary) An analysis of the congenital heart diseases generally classified as Fallot's tetralogy. Special consideration is given to the cases where cyanosis is absent.

CIRCULATORY SYSTEM

4387. STOCHASTIC MODELS FOR TRACER EXPERIMENTS IN THE CIRCULATION: PARALLEL RANDOM WALKS.

C.W.Sheppard: I. theor. Biol., 1962, 2, 33-47

(Physiol. Div., Tennessee Univ. Med. Units, Memphis, Tenn., U.S.A.) The theory of parallel combinations of simple walks with different horizontal magnifications h and randomising const, k is considered, for use in studying transit times of labelled material through the circulatory labyrinth. Occasions when a parallel system can be approximated by one simple random walk are discussed.

J.A.Dawson

4388. EFFECTS OF FLOW PROFILE ON ELECTROMAGNETIC FLOW METER ACCURACY. S.C.Goldman, N.B.Marple and W.L.^colnik: J. appl. Physiol., 1963, 18, 652-657 (Biomed. Eng. Lab., Sch. Eng. and Appl. Sci., Columbia Univ., New York City, N.Y., U.S.A.) Expt.

have been made to determine the effect of radial asymmetry of the flow profile on the voltage developed by an electromagnetic flow-meter. The results indicate that asymmetry of the flow profile has an important effect on flow measurements and it is possible that these effects occur in closed blood vessels.

H.C.Jones

4389. METHOD FOR STUDY OF PERIPHERAL VASCULAR RESPONSES IN RAT. M.J.Brody, R.A.Shaffer and R.L. Dixon: J. appl. Physiol., 1963, 18, 645-647 (Pharmacol. Dept., State Univ. Iowa Med. Coll., Iowa City, Iowa, U.S.A.) A surgical technique is described for auto-perfusion of the hind quarters of rats anaesthetised with Na pentobarbital. The method can be used for studying peripheral vascular phenomena uncomplicated by cardiac or reflex activities.

H.C.Jones

4390. CONDUCTION OF CARDIOVASCULAR SOUND ALONG ARTERIES. J.J.Farber and J.H.Purvis: Circulat. Res., 1963, 12, 308-316 (Dept. Biophysics, Univ. W. Ontario, London, Ont., Canada) Evidence was

obtained in dogs and man using phonocatheters with external microphones, that most of the energy of heart sounds is conducted in a manner analogous to the pulse wave.

R.E.Moore

4391. DIMENSIONS OF BLOOD VESSELS FROM DISTRIBUTING ARTERY TO COLLECTING VEIN. M.P.Wiedeman: Circulat. Res., 1963, 12, 375-378 (Dept. Physiol., Temple Univ. Sch. Med., Philadelphia, Pa., U.S.A.)

Vessels in the unanaesthetised bat (*Myotis*) wing were measured by direct microscopic examination. The greatest cross sectional area was found in venules, and it is estimated that up to 80% of the blood vol. is held in the venous system.

R.E.Moore

4392. CORTICOPYRAMIDAL FIBRES PRODUCING VASODILATATION OF THE LIMBS. P.Zwirn and J.Coriol: Arch. Sci. physiol., 1962, 16, 325-345 (Lab. de

PHYSIOLOGY

physiol., Fac. de Méd., Marseille, B.-du-R., France) Stimn. of the cortex causes hypertension in conscious animals and hypotension in deeply anaesthetised animals. Dogs were anaesthetised with 0.04 g. Nembutal/kg. body wt. and paralysed with 2-4 mg./kg. (+)-tubocurarine or Flaxedil (galiamine triethiodide). Their carotid arterial pressure and resistance to perfusion of the hind limbs and kidney were recorded during electrical stimn. of the sigmoid gyrus and pyramid. Stimn. produced a transient drop in blood pressure and a vasodilatation confined to the muscles. Section of the pyramid, ergotamine or sympathectomy but not atropine blunted these responses. Unilateral stimn. produced a bilateral response. The vasodilatation is attributed to inhibn. of vascular tone. Cortical control of circulation is discussed in general.

(French) S. A. This tie wood

4393. VASODILATATION AND BODY WARMING IN THE RAT. R.T.GranC J. Physiol., Lond., 1963, 167, 311-317 (Dept. Expt. Med., Guy's Hosp., London, England) Vessels of the rat's ear do not dilate in response to body warming or to sympathetic nerve section. A-v. anastomoses are absent from the rat's ear. These and other observations suggest that vasodilatation through inhibn. of vasoconstrictor tone in response to body warming may be limited to areas containing numerous a-v. anastomoses. *

4394. VENI-VENOMOTOR RESPONSE TO LOCAL CONGESTION. W.Wallis, R.Brennan and CR.Hong: J. appl. Physiol., 1963, 18, 593-596 (Physiol. Dept., Univ. Rochester Med. Sch., Rochester, N.Y., U.S.A.) A nervous mechanism has been shown to be responsible for a vasoconstrictor response which occurred with local congestion in man. H.C.Jones

4395. DOES 'RESTRICTED DIFFUSION¹ OCCUR IN MUSCLE CAPILLARIES? C.Crone: Proc. Soc. exp. Biol., N.Y., 1963, 112, 453-455 (Inst. Med. Physiol., Univ. Copenhagen, Denmark) Comparison of the diffusion coeff. of sucrose and inulin in the capillaries of the hind leg of a dog, showed that the ratio of the two values approached more closely the ratio expected from free diffusion coeff. (observed 2.53 ± 1.65 : theoretical 2.98). This suggests that restricted diffusion through pores of 35A as deduced by Renkin and Pappenheimer probably was not the operative mechanism. D.N.Wheatley

4396. A CONCEPT OF NEGATIVE INTERSTITIAL PRESSURES IN IMPLANTED PERFORATED CAPSULES. A.C. Guyton: Circulat. Res., 1963, 12, 399-414 (Dept. Physiol., Univ. Med. Center, Jackson, Miss., U.S.A.) Hollow perforated plastic capsules were chronically implanted into dogs. Pressures within the capsules were measured by needle puncture and were normally neg. (mean -6.4 mm. Hg) but became pos. if oedema developed. The pressure changed in the expected directions when arterial or venous pressures were altered or when hydrating or dehydrating procedures were employed. It is argued that the pressures measured represented better estimates of interstitial pressure than obtained by direct needle puncture of tissues which normally gave pos. values and were insensitive to physiol. alteration. . R.E.Moorc

4397. CIRCULATORY RESPONSES TO HIGH ALTITUDE IN CAT AND RABBIT. J.T.Reeves, E.B.Grover and R.F. Grover J. appl. Physiol., 1963, 18, 575-579 (Cardio-vasc. Lab., Med. Dept., Univ. Colorado Med. Center, Denver, Colo., U.S.A.) Cats taken to 14000 ft. all died without developing heart failure or pulmonary hypertension. Of 8 rabbits, 5 survived the altitude with poor

blood oxygenation and right ventricular hypertension and dilatation. H.C.Jones

4398. EFFECTS OF CO₂-INDUCED RESPIRATORY ACIDOSIS ON DEPRESSOR AND PRESSOR COMPONENTS OF THE DOG'S BLOOD PRESSURE RESPONSE TO ADRENALINE. W.B.Wood, E.S.Manley and R.A.Woodbury: J. Pharmacol, exp. Ther., 1963, 139, 238-247 (Univ. Tennessee Med. Units, Memphis, Tenn., U.S.A.) The 2 components of the response were dissociated by the use of dichloroisoproterenol and phentolamine. Hypoxia and acidosis strikingly reduced the amplitudes of the pressor and depressor responses, the latter more so in the case of acidosis. The roles of acidosis and hypo-oxia in the development of adrenaline refractoriness are discussed. J.M.Whitmarsh

4399. FACTORS INFLUENCING ARTERIAL PRESSURE IN THE GENERAL POPULATION IN JAMAICA. W.E.Miall, E.H.Kass, J.Ling and K.L.Stuart Brit. med. J., 1962, ii, 497-506 (Dept. Med., Univ. Coll. W. Indies, Kingston, Jamaica, W. Indies) A statistical survey. M.E.Nutt

4400. VARIATIONS OF BLOOD-PRESSURE IN HYPERTENSIVES DURING SLEEP. D.B.Shaw, M.S.Knapp and D.H.Davies: Lancet, 1963, i, 797-799 (Bristol Royal Infirmary, Bristol, England) The sleeping and waking b.p. has been studied in hypertensive patients with an automatic b.p. recorder. The patients with benign hypertension showed a significant fall in systolic and diastolic b.p. during sleep of 15.4 and 9.1 mm. Hg respectively. There was no fall in b.p. in hypertensive patients. CH.Bell

4401. HYPERTENSION EXPLAINED BY STARLING'S THEORY OF CIRCULATORY HOMEOSTASIS. J.G.G. Borst and A.Borst-De-Geus: Lancet, 1963, i, 677-682 (Binrengasthuis, Univ. Amsterdam, Netherlands) In this review paper the authors postulate that on the basis of Starling's theory of fluid balance and circulatory homeostasis, hypertension is part of a homeostatic reaction to deficient renal Na output. When the Na output is insufficient at a normal arterial pressure, accumulation of extra-cellular fluid will raise the pressure to the abnormally high level required for the re-establishment of Na balance? thus, a seemingly normal Na output is maintained at the expense of hypertension. 70 ref. G.H.Bell

4402. RENIN IN EXPERIMENTAL RENAL HYPERTENSION IN MONKEYS. M.H.Frank: Circulat. Res., 1963, 12, 241-255 (Dept. Physiol., Univ. Illinois Coll. Med., Chicago, Ill., U.S.A.) Renin from man or monkey was pressor but that from dog or hog was not. Anti-human renin from dogs but not anti-dog or hog renin, reduced b.p. in hypertensive (renal artery clamp) monkeys. Some post-mortem findings in hypertensive monkeys are described. R.E.Moore

4403. NON-SPECIFIC RESISTANCE IN SPONTANEOUS HAEMORRHAGE. W.M.Chubaty and L.B.Jaques: Canad. J. Biochem., 1963, 41, 1079-1080 (Dept. Physiol., Univ. Saskatchewan, Saskatoon, Sask., Canada)

Rats were exposed to stress in the form of i.p. 10% NaCl, electric shock, restraint, insulin or frostbite and after recovery were again subjected to stress and then given dicoumarol daily for 10 days; previous exposure to stress in many cases lowered mortality due to spontaneous haemorrhage. Prelim. comm. J.B.Parish

4404. COMPARATIVE VASOMOTOR ACTION OF TWO INSULIN FREE PANCREATIC EXTRACTS. J.Xecompte:

C.R. Soc. Biol., Paris, 1962, 156, 1727-1729 (Inst. L. Fredericq, Ujiiv. L'fege, Belgium) Angioxyl caused arterial hypotension in rat, rabbit and cat. The duration of hypotension induced by Padutine was more prolonged. Chromatographic analysis showed Angioxyl to contain a high level of ATP and Padutine to contain kallikrein. Trasylol, an inhibitor of kallikrein, did not modify the hypotension induced by Angioxyl. Phenylbutazone inhibits the effects of Padutine but not of Angioxyl.

(French) M.A. Price

4405. ANTAGONISM OF ISOPROPYLNORADRENALINE [UFA] TO SYMPATHETIC MEDIATORS. STUDY ON RAT'S BLOOD PRESSURE. D.Delia Bella, F.Rognoni and U.M.Teotina Arch. int. Physiol., 1962, 70, 327-334 (Res. Lab., Selvi and Co., Milan, Italy)

The hypotensive action of IPA is only partially dependent on dose and does not occur when basal b.p. is 50 mm.Hg or less. The hypotensive effect is not reversed by pre-treatment with adrenergic blocking agents. IPA reduces the hypertensive effect of adrenaline and noradrenaline on rat b.p. and modifies responses of the isolated aortic strip of rat to these substances by its action on receptors. By antagonising at 3 receptors it inhibits the reversed response to adrenaline in animals treated with adrenergic blocking agents.

M.E.Nutt

4406. INTRAVENTRICULAR PRESSURE AND THE DISTRIBUTION OF CORONARY BLOOD FLOW. R.Cutarelli and M.N.Levy: Circulat. Res., 1963, 12, 322-327 (Res. Div. St. Vincent Charity Hosp., Cleveland, Ohio, U.S.A.) ⁸⁶Rb was used to assess relative capillary flows in the dog myocardium. In the normal heart the transmural distribution was not affected by intraventricular pressure, but in the fibrillating heart or ischaemic region of a heart the capillary flow was reduced subendocardially.

R.E.Moore

4407. SYSTEMIC AND CORONARY HAEMODYNAMIC EFFECTS OF SYNTHETIC BRADYKININ. G.G.Rowe, S.Alfonso, C.A.Castillo, F.Lioy, J.E.Lugo and C.W. Crumpton: Amer. Heart J., 1963, 65, 656-663 (Cardiovasc. Res. Lab., Dept. Med., Univ. Wisconsin Med. Sch., Madison, Wis., U.S.A.) In anaesthetised dogs, right atrial infusion of bradykinin, usually 2-5 fig./kg./ttfn. for 20 min., resulted in a fall of peripheral, pulmonary and coronary vascular resistance, and in systemic arterial hypotension; cardiac output increased; coronary blood flow increased in those animals with a normal or low resting coronary flow, and decreased in those with high resting coronary flow. The depletion of catecholamine, through the administration of reserpine, did not change the response basically.

P.F. Meyer

4408. ANGIOGRAPHIC EVIDENCE OF PULMONARY VASOMOTION IN DOGS. J.C.Hirschman and R.J.Boucek Brit. Heart J., 1963, 25, C75-381 (Sect. Cardiol., Univ. Miami Sch. Med., Miami, Fla., U.S.A.) In dogs, contrast material was inj. into a pulmonary artery segment of the right lower lobe. Inj. and subsequent X-ray exposures were electronically programmed from the R-wave of the e.c.g. Optimum dye inj. and X-ray viewing times were established. This precise X-ray viewing permitted comparisons of arteries of 0.2-0.3 mm. diam. Adrenaline (0.01 mg.), 5HT (0.1 mg./kg.), ¹³¹I-gamma-inulin (1 mg.) inj. into the pulmonary artery, and hypo-oxygenation (10% O₂ in N₂) caused segmental narrowing and occlusion of smaller arteries while the larger, proximal vessels passively dilated.

- P.F.Meyer

4409. PRESSURE WAVE FORM IN PULMONARY ARTERY.

D.B.Shaw: Brit. Heart J., 1963, 25, 347-356 (Cardiac Dept., United Bristol Hosp., Bristol, England) A catheter-tip micromanometer was used to study the pulmonary artery wave form during diastole in 43 patients. A small presystolic wave, presumably reflecting right atrial contraction, was seen in 30. A dicrotic wave was present in 35; it was large when pulmonary blood flow was increased as the result of a septal defect, and it was small or absent in pulmonary hypertension or pulmonary stenosis. A small, secondary pressure wave followed the dicrotic wave especially when the dicrotic wave was large. It is believed that the dicrotic and secondary waves have a common origin in the main pulmonary trunk; possible mechanisms for their production are discussed.

P.F.Meyer

4410. RELATION BETWEEN PRESSURE AND DIAMETER IN MAIN PULMONARY ARTERY OF MAN. J.C.Greenfield jun. and D.M.Griggs, jun.: J. appl. Physiol., 1963, 18, 557-559 (Sect. Clin. Biophys., Cardiol. Branch., Nat. Heart Inst., Bethesda, Md., U.S.A.)

The pressure-diam. relationships of the main pulmonary artery have been determined in normal and hypertensive patients undergoing open-heart surgery.

H.Clones

4411. PULMONARY VASOCONSTRICKTION IN STEERS AT HIGH ALTITUDE. R.F.Grover, T.T.Reeves, D.H.Will and S.G.Blount jun.: J. appl. Physiol., 1963, 18, 567-574 (Cardiovasc. Lab., Med. Dept., Univ. Colorado Med. Center, Denver, Colo., U.S.A.)

A rapid increase in pulmonary arterial pressure was seen in steers kept at a high altitude, this appeared to be due to pulmonary vasoconstriction induced by chronic hypo-oxia.

H.C.Jones

4412. PULMONARY CIRCULATION AND OXYGEN TRANSPORT IN LAMBS AT HIGH ALTITUDE. J.T.Reeves, E.B.Grover and R.J.F.Groven: J. appl. Physiol., 1963, 18, 560-566 (Cardiovasc. Lab., Med. Dept., Univ. Colorado Med. Center, Denver, Colo., U.S.A.) Lambs native to low altitude showed good adaptation and normal growth at high altitude. Depressed arterial 62 satn. and reduced a-v. O₂ pressure were seen, usually without an increase in pulmonary arterial pressure.

H.C.Jones

4413. BLOOD FLOW IN THE CAROTID AND VERTEBRAL ARTERIES OF THE SHEEP AND CALF. B.A.Baldwin and F.R.Belk: J. Physiol., Lond., 1963, 167, 448-462 (Dept. Physiol., Royal Vet. Coll., London, England)

Blood flow in the carotid and vertebral arteries of the sheep and calf have been measured using the Density Flowmeter. The rate of blood flow in the carotids in both spp. is considerably greater than in the vertebrals. The comparative rate of flow in the vertebral of the calf is greater than the sheep. In both spp. occlusion of one common carotid causes an increase in flow in the remaining carotid and in both vertebrals but occlusion of one vertebral causes only an increase in flow in the opposite vertebral. In both spp. as more of the vessels contributing to the cephalic blood supply are occluded an immediate increase in flow occurs in the remaining patent vessels. The evidence collected suggests that the cerebral circulation depends upon physical processes, mainly differences in pressure. *

4414. THE EFFECT ON BLOOD PRESSURE IN THE SHEEP AND CALF OF CLAMPING SOME OF THE ARTERIES CONTRIBUTING TO THE CEPHALIC CIRCULATION.

B.A.Baldwin and F.R.Belk: J. Physiol., Lond., 1963, 167, 463-479 (Dept. Physiol., Royal Vet. Coll., London,

PHYSIOLOGY

England) The changes which occur in the cephalic and systemic b.p. on occluding some of the arteries contributing to cephalic blood flow in the sheep and ox have been examined. Because the vertebral arteries in the sheep do not provide blood to the Circle of Willis, occlusion of the occipital and carotid arteries produces complete cerebral ischaemia resulting in a profound fall in cephalic b.p. but a marked systemic hypertension. Death occurs if the occlusion is maintained. The same result occurs if the external carotids are occluded in the sheep. By contrast in the calf, the pressure of an arterial connexion between the vertebrates and the rete mirabile, namely the basi occipital plexus prevents development of cerebral ischaemia when the external carotids are clamped or when the carotids and occipitals are clamped at the same time. The results support the view that the haemodynamics of the cerebral circulation is governed by physical mechanisms and not by baroreceptor reflexes. *

4415. INVESTIGATION OF CEREBRAL BLOOD-FLOW IN HYPERTENSION, USING RADIOACTIVE-XENON INHALATION AND EXTRACRANIAL RECORDING. B.L. Mallett and N.Veall: Lancet, 1963, i, 1081-1082 (Radioisotopes Lab., Dept. Expt. Med., Guy's Hosp. Med. Sch., London, England) There is no difference in the cerebral perfusion-rates of normal subjects and patients with essential hypertension; and therefore there is no evidence of cerebral ischaemia in the hypertensive group. CH.Bell

4416. CEREBRAL CIRCULATION STUDIES DURING HYPOTENSIVE ANAESTHESIA USING RADIOACTIVE XENON. W.K.Black and W.W.Walther: Lancet, 1963, i, 1082-1083 (Whipps Cross Hosp., London, England) Cerebral perfusion-rates were studied by means of a recently developed method using radioactive Xe in 30 patients under anaesthesia with induced hypotension, and also in 24 of them while conscious and normotensive. In 7 patients the clearance-rate was accelerated in the hypotensive state compared with their conscious level. In 23 it was slowed by 6-33% (in 1 case by 37-57%) compared with the average normal rate, but this slowing might be more apparent than real. In 19 cases the clearance-rate in the conscious patient was slower than the average normal. CH.Bell

4417. CHANGES IN CORTICO-PIAL CIRCULATION DURING HAEMORRHAGIC SHOCK IN RABBITS. G. Breda, M.Concioli and R.Villani: Atti. Acad. med., Lombarda, 1962, 17, 247-251 (1st. Farmacol., Univ. Milano, Italy) Arterial bleeding of rabbits caused arteriolar vasodilation of the cortico-pial circle which lasted only a short time and fell after blood transfusion. This effect occurred after successive bleedings, unless shock was induced by excessive, repeated bleedings, in which case the vasodilation did not fall even after massive blood transfusion. Vasodilation may be due to release of bradykinin. Similar effects were not observed in the conjunctival circle. (Italian) CN.Gjdson

4418. STUDIES OF RETINAL CIRCULATION WITH FLUORESCCEIN. C.T.Dollery, J.V.Hodge and M.Enget: Brit. med. J., 1962, ii, 1211-1215 (Postgrad. Med. Sch., London, England) Fluorescein was given via a polythene catheter in the antecubital vein and its passage across the retina photographed. Dye passes rapidly along arterties, through capillaries, and layers into veins from small tributaries as individual bright streams along their walls. Mixing of streams is slow except where a-v. nipping

sets up turbulence in veins. Laminar flow is seen in arteries. Individual capillaries are visible in some photographs. Vascular abnormalities invisible by ophthalmoscope are revealed as are changes in vascular permeability.

M.E.Nutt

4419. UMBILICAL VENOUS PRESSURE IN NEONATES DURING EXCHANGE TRANSFUSIONS. I. EFFECT OF CATHETER POSITION ON AMPLITUDE AND OSCILLATIONS OF VENOUS PRESSURE. A.Hintze: Z.Kreisl.-Foisch., 1963, 52, 209-217 (Kinderklin., Univ. Bonn, Germany) Venous pressure measured by strain gauge was determined in the catheterised umbilical vein of 28 neonates. The mean pressure was 62 n.i7'6 mm. H₂O. Inspiration caused a rise in pressure. Pulse waves were recorded when the catheter was advanced into the vena cava especially after infusion of 20-30 ml. blood; their form differed from the usual venous pulse presumably as a result of tachycardia and of damping effects.

(German) PJ Meyer

4420. MECHANISM OF THE RESPONSE OF THE CHRONICALLY SYMPATECTOMIZED FOREARM OF INTRAVENOUS ADRENALINE. W.E.Glover and R.G.Shanks: J. Physiol., Lond., 1963, 167, 263-267 (Dept. Physiol., Queen's Univ., Belfast, N. Ireland) Adrenaline (10 jg./min.) given i.v. to 3 subjects after unilateral cervical sympathectomy caused a sustained increase in blood flow to the normal forearm only. Following i.a. infusion of dibenlyline (0.5 mg./min. for 6 min.) the sympathectomised forearm showed the same response. It is suggested that the change in response to i.v. adrenaline following sympathectomy is due to an increased sensitivity to the constrictor but not the dilator action of adrenaline. *

4421. FOREARM BLOOD FLOW DURING PROLONGED INTRA-ARTERIAL INFUSIONS OF ADRENALINE, AND THE EFFECTS OF INTRA-ARTERIAL ADRENALINE ON POST-EXERCISE HYPERAEMIA. W.E.Glover and R.G. Shanks: J. Physiol., Lond., 1963, 167, 268-279 (Dept. Physiol., Queen's Univ., Belfast, N. Ireland) When adrenaline is infused into the brachial artery in doses of 0*25-0*5 jg./min. the marked fall in blood flow seen during the 2nd-5th min. decreases as the infusion is continued and frequently gives way to a vasodilatation. This dilatation does not occur with prolonged infusions of noradrenaline in the forearm or with adrenaline and nor-adrenaline in the hand. The i.a. infusion of 0.1 jg./min. noradrenaline causes a fall in the size of post-exercise hyperaemia in the forearm, whereas the i.a. infusion of 0*25 jg./min. adrenaline causes an increase. It is suggested that the level of metabolic activity in skeletal muscles may play a part in determining the effect of adrenaline on blood vessels. *

4422. OBSERVATIONS ON THE RELATION BETWEEN THE VASODILATOR AND METABOLIC ACTIONS OF ADRENALINE IN THE HUMAN FOREARM. W.E.Glover and R.G.Shanks: J. Physiol., Lond., 1963, 167, 280-287 (Dept. Physiol., Queen's Univ., Belfast, N.Ireland) Dichloroisopropylnoradrenaline [DCI] infused i.a. at 0.05 mg./min. blocked the vasodilator action of 0*25 jg./min. adrenaline administered into the brachial artery. DCI did not affect the rise in the lactic acid concn. of forearm muscle venous blood produced by adrenaline. Larger doses of DCI, 2 mg./min., reduced the rise in the lactic acid concn. It is concluded that the vasodilator action of

adrenaline is not due to its ability to raise die lactic acid content of muscle venous blood. *

4423. RESPONSE OF SPLANCHNIC BED OF CHRONICALLY SPLENECTOMISED DOGS TO ADRENALINE AND NOR-ADRENALINE INFUSION. A.D.Bender and S.M.Horvath: Arch. int. Physiol., 1962, 70, 523-532 pept. Physiol., Jefferson Med. Coll., Philadelphia, Pa., U.S.A.)

Sixteen dogs, splenectomised 1-24 months previously, were anaesthetised with Na pentobarbital (30 mg./kg. body wt.) and heparinised (5 mg./kg. body wt.). Hepatic blood flow was measured by BSP and total O₂ consumption and femoral arterial and hepatic venous O₂ content also recorded. Splanchnic O₂ consumption and splanchnic vascular resistance were calc. Infusion of 1 jg./kg./min. adrenaline for 10 min. produced an increase in splanchnic blood flow with no change in mean b.p. During the first 5 min. of infusion increase in flow was less than that Previously reported in intact animals, presumably due to absence of splenic contribution to portal flow. After the infusion blood flow was markedly reduced in splenectomised dogs, but returned to control values in normal animals. Reduction in flow in splenectomised animals is probably due to absence of the splenic bed since splenic-mesenteric systems form a parallel circuit. Infusion of 1 fig./kg./min. of (-)-noradrenaline for 10 min. caused no change in flow during the infusion, but flow decreased after the infusion was stopped.

M.E.Nutt

4424. DYE DILUTION METHOD OF MEASURING RENAL BLOOD FLOW IN MAN, WITH SPECIAL REFERENCE TO THE ANEURIC SUBJECT. F.C.Reubi, R.Gurtler and N. Gossweilen: Proc. Soc. exp. Biol., N.Y., 1962, 111, 760-764 (Med. Polyclin., Univ. Berne, Switzerland)

A dye diln. method of determining renal blood flow in man is described involving catheterisation of renal artery and vein but no urine sampling. Comparison with PAH clearance indicates that the results of the dye method are probably valid.

M.M.Shapland

4425. EFFECT OF LOW OXYGEN AND OF CARBON MONOXIDE ON RENAL CIRCULATION IN UNANAESTHETISED RABBITS. P.J.Komen: Circulat. Res., 1963, 12, 361-374 (Sch. Physiol., Univ. New South Wales, Sidney, Australia) Renal blood flow and GFR during diuresis were both reduced when the animal breathed either 9*6% £2 in N2 or 0*1-2% CO in air. Evidence is given suggesting ^at in hypo-oxia these reductions were due to renal vascular constriction (nervous) and in carboxaemia to hypo-nis-on.

R.E.Moore

4426. RENAL BLOOD FLOW, GLOMERULAR FILTRATION RATE, RENAL PAH EXTRACTION RATIO, AND THE ROLE OF THE RENAL VASOMOTOR NERVES IN THE UNANAESTHETISED RABBIT. P.I.Komer: Circulat. Res., 1963, 13, 353-360 (Sslj. Physiol., Univ. New South Wales, Sidney, Australia) Catheters were inserted under local or general anaesthesia. A series of control values are presented, and evidence is given that ^nervation of a kidney only increases the renal blood flow and GFR by about 6%.

R.E.Moore

4427. EFFECT OF BED REST ON RESTING CALF BLOOD FLOW OF HEALTHY ADULT MALES. N.L.Browse: Brit. med. J., 1962, i, 1721-1723 (Dept. Surg., Univ. Bristol, England) Resting calf blood flow was measured in 29 healthy patients, 12 living normal ward life and 17 confined to bed. Resting flow (principally due to

calf muscle flow) was very const, and there was no day to day variation in the 12 active patients. Rate of flow did not change when another 12 patients were confined to bed for 12 hr. and a further 5 for 2-5 days. Calf blood flow reaches its resting level before 1 hr. of rest and this explains why early ambulation after surgery has no effect on incidence of post-operative deep vein thrombosis.

M.E.Nutt

4428. EFFECT OF SURGERY ON RESTING CALF BLOOD.

N.L.Browse: Brit. med. J., 1962, i, 1714-1721 (Dept. Surg., Univ. Bristol, England) Resting calf blood flow was measured in 45 patients undergoing routine surgery. In 75*5% of cases resting flow fell after surgery, the fall being immediate in 53*3% and gradual in 22-2%. Mean flow was 47% below the pre-operative level and the effect lasted 8 days. In some cases flow fell by 70-80%. Calf flow rose post-operatively in 15% of subjects and in 9% there was a rise followed by a fall in blood flow. Extent and duration of fall in flow is related to the age and fitness of the subject and the severity and length of his operation. Resting calf flow is constant from day to day in patients in normal ward life and is not decreased by long periods of bed rest or by anaesthesia alone. Changes in flow after surgery occur after local as well as general anaesthesia. It thus appears that surgical trauma alone is responsible for changes in blood flow.

M.E.Nutt

4429. STUDY OF BONE-MARROW CIRCULATION IN MAN BY ISOTOPE TECHNIQUE. Y.Najean and F.Clemenc

Nouv. Rev. franc. Hemat., 1963, 3, 133-138 (Inst. Rech. maladies du sang, Fac. Méd., Paris, France)

5-7 fie. of 51Cr were inj. into the bone-marrow and the appearance of radioactivity in the inguinal area measured every 30 sec. The obtained curves consist of a very brief first component which may be related to the intravascular transport of SICr and therefore to the medullary blood flow. It is reduced in myeloid splenomegaly. A second, exponential component corresponds to the diffusion and equilibration of 51cr. (French)

V.Eisen

4430. INDUCED ARTERIAL OSCILLATIONS OF BLOOD PRESSURE AS A METHOD FOR INVESTIGATING REGULATION OF LEVEL OF BLOOD PRESSURE. P.Rudomin and L.Macpherson: Nature, Lond., 1963, 197, 1266-

1267 (Dept. Physiol., Centro de Invest. y de Estudios Avanzados del Inst. Politécnico Nacional, Mexico,

D.F.) The regulation of arterial b.p. in the rabbit was investigated by stimulating the aortic depressor nerve so that b.p. oscillation fell; at a certain min. value, the stimulus ceased, the pressure rose, and the cycle repeated. Simult* pressure, e.c.g., heart rate and stimulus records were made. Two patterns of oscillations were described differing in the lengths of stimm. and non-stimm. periods. The mechanism of the homeostatic system controlling b.p. in vivo is discussed.

G.M.Lewis

4431. ARTERIAL BLOOD FLOW DURING ELEVATED INTRA-PULMONARY AND INTRA-ABDOMINAL PRESSURES.

S.F.Marotta: Proc. Soc. exp. Biol., N.Y., 1962, 111, 611-615 (Aeromed. Lab., Univ. Illinois Med. Center, Chicago, 111, U.S.A.)

In the dog under Na pentobarbital carotid and femoral arterial blood flow and mean carotid pressure decreased inversely proportional to increasing continuous pos. pressure breathing while femoral pressure remained unaltered. Raised levels of intra-abdominal pressure had no effect except for a slight depression of femoral flow.

M.M.Shapland

PHYSIOLOGY

NERVOUS SYSTEM

4432. AN ANALOGUE CROSS-CORRELATOR TO STUDY NATURALLY INDUCED ACTIVITY IN INTACT NERVE TRUNKS. J.U.Casby, R.Siminoff and T.R.Houseknecht. *J. Neurophysiol.*, 1963, 26, 432-448 (E. Pennsylvania Psychiat. Inst., Philadelphia, Pa., U.S.A.) An analogue cross-correlator has been devised to sort peripheral nerve traffic as to velocity and direction. This is done by the simult. recording of intact nerve activity from at least two sets of electrodes. The recorded data are then fed into the cross-correlator which performs the task of displacement, multiplication and integration. A cross-correlogram is plotted which relates activity to delay time. Natural stimuli only are used to induce activity; thus, the instrument is capable of giving the spectrum of afferent and efferent fibres responding to a 'physiol.' stimulus such as touch, pressure, noxious stimulus, etc. The validity of the method was demonstrated by the use of various differential blocks such as pressure, temp, and local anaesthetic. In addition, the cross-correlogram showed the typical pattern of temporal dispersion. In response to mechanical stimuli, three peaks were shown and identified as a, 0, and C. Noxious stimuli were especially effective in inducing C activity* * *

4433. INFLUENCE OF Ca IN STABILISING STRUCTURE OF MYELIN SHEATH. M.Wolman and H.Wienei: *Bull. Res. Counc. Israel A*, 1963, 11, 297-301 (Dept. Path., Tel Hashomer Govt. Hosp., Israel) The migration of granular material from the myelin sheaths of transversely cut nerves immersed in water or various soln. was described. Cations inhibit the migration, especially Ca and Mg, probable due to their stabilising effect on the sheath structure. This might be caused by metal bridges between phospholipids and proteins. The force responsible for the migration was not identified, osmotic or colloid-osmotic pressure was ruled out.

L.G.Gillies

4434. RELEASE OF CALCIUM IN MYONEURAL JUNCTION. B.Csillik and G.Sávay: *Nature, Lond.*, 1963, 198, 399-400 (Dept. Anat., Univ. Med. Sch., Szeged, Hungary) In rat diaphragm in which fasciculation was evoked by prostigmine and in the deep plantar muscle after stimn. of the sciatic nerve, Ca is detectable by staining with Alizarin Red after liberation in the sole plates. It is confined to the 1-2 μ granules histochem. resembling telosomes. The role of Ca in myofibrillar contraction is discussed.

G.M.Lewis

4435. CHANGES IN NERVOUS EXCITABILITY DURING PHYSIOLOGICAL DEFICIENCY IN CALCIUM. PREVENTIVE AND CURATIVE EFFECTS OF LACTOSE. H.Mazoue, Y.Dupuis, P.Chauchard and P.FournieK C.R. Soc. Biol., Paris, 1962, 156, 1596-1598 (Hautes Etudes, Lab de Neurophysiol., Fac. Sci., Paris, France) In rats kept on a Ca-free diet there was a decrease in the blood Ca level from 96 to 64 mg./l. after 36 days, with an increase in chronaxie of the extensor and flexor nerves to the toes. Addition of 20% lactose to the diet prevented the decrease in blood Ca and the increase in chronaxie. Administration of a diet containing lactose to animals which had received a Ca-free diet for 40 days restored the blood Ca and the nerve chronaxie.

(French) M.A.Price

4436. REFRACTORY AND SUPERNORMAL PERIODS OF HUMAN MEDIAN NERVE. R.W.Gilliat and R.G.Willison: *J. neurol. neurosurg. psychiat.*, 1963, 26, 136-147

fDept. Appl. Plectrophysiol., Nat. Hosp., Queen Sq., London, England) In 4 healthy subjects it was found that after stimn. of the wrist with a single supramax. shock a second propagated response could not be obtained for 0*6-0*7 msec. Normal excitability was complete by 2-5-5*5 msec, after which there was a period of supernormality lasting for a further 5-15 msec. The conduction velocity of an action potential travelling in the relative refractory period was reduced, normal velocity was not recovered with 30 cm. of the site of stimn. A 12 min. period of nerve ischaemia increased the duration of the refractory period by at least 50% and abolished supernormality.

A.Angel

4437. REGENERATION OF THE SPINAL CORD IN RAT. EFFECTS OF PIROMEN^R AND ACTH UPON THE REGENERATIVE CAPACITY. R.E.McMasters: *J. comp. Neurol.*, 1962, 119, 113-125 (Dept. Anat., Univ. Texas Med. Branch, Galveston, Tex., U.S.A.) Following spinal cord transections in 5-7 day old rats, only a relatively small no. of those specially treated showed evidence of functional return, the majority dying within 2 months due to urinary tract infection and gangrene. Piromen and ACTH, by inhibiting the formation of a pia-glial scar barrier, permitted the growth of neuronal processes and allowed true spinal cord regeneration in some instances. Sensory perception preceded motor return by 2 weeks and became manifest 2-3 weeks post-operatively.

G.M.Lewis

4438. REFLEX REGULATION OF PRIMARY (ANNULOSPPIAL) STRETCH RECEPTORS VIA GAMMA MOTONEURONES IN THE CAT. R.B.Wuerker and E.Henneman: *J. Neurophysiol.*, 1963, 26, 539-550 (Harvard Med. Sch.* Boston, Mass., U.S.A.) Reflex regulation of primary stretch receptors by Y" motoneurones has been studied by recording the discharges of single end organs during stimn. of peripheral nerves in the ipsilateral hind limb of the cat. Single shocks applied to skin and muscle nerves did not alter the rate of discharge significantly, but repetitive stimn. at 50-100/sec. caused prompt acceleration or deceleration of firing. By limiting the intensity of stimn. these effects could usually be elicited without accompanying contraction of the extrafusal muscle fibres, hence they may be attributed to reflex excitation or inhibn. of Y motoneurones. The range of freq. produced by Y reflexes alone, unsupported by stretch, was large. By stimn. of the sural nerve or the nerve to the lateral gastrocnemius muscle the rate of discharge of end organs in the medial gastrocnemius muscle was transiently increased to levels equiv. to those produced by 1000 g. loads. By stimulating the tibial or lateral peroneal nerves, receptors in the same muscle could be almost completely silenced for many seconds. Acceleration of primary endings frequently occurred in conjunction with reflex discharge of a-motoneurones. Examples of opposite effects upon a and Y-motoneurones were observed, however, indicating that these 2 kinds of motoneurones are to some extent served by different spinal mechanisms functioning independently. As a part of the control observations the tensions produced by 13 single motor units in the media gastrocnemius muscle were measured by direct methods. The max. tetanic tensions ranged from 0*7 to 55-4 g.

4439. IPSILATERAL EXCITATION OF EXTENSOR MOTONEURONES. V.J.Wilson: *Nature, Lond.*, 1963, 198, 290-291 (Rockefeller Inst., New York, N.Y., U.S.A.) In unanaesthetised, decerebrate cats, stimn. of group II fibres in certain muscle nerves can elicit an excitatory action of brief latency in gastrocnemius-soleus motoneurones, and stimn. of group III fibres in several muscles

PHYSIOLOGY

427

leads to later excitatory effects, thus demonstrating that both group II and in afferent* have an excitatory pathway to ipsilateral extensor motoneurones. G.M.Lewis

4440. LOCATION AND MODE OF ACTION OF PRESYNAPTIC INHIBITORY PATHWAYS ON TO GROUP I AFFERENT FIBRES FROM MUSCLE. J.C.Eccles, R.F. Schmidt and W.D.Willis: *J. Neurophysiol.*, 1963, 26, 506-522 (Dept. Physiol., Australian Nat. Univ.,

Canberra, Australia) The presynaptic inhibitory action of Group I afferent fibres has been further investigated by the standard techniques: the intracellular and extracellular recording of depolarisation of the primary afferent fibres; the testing of excitability changes of the Primary afferent fibres; the recording of dorsal root potentials and potentials from the cord dorsum. Group Ia afferent fibres are depolarised by synaptic action of both Group Ia and Ib afferent volleys from flexor muscles. Three properties demonstrated for the central pathways subserving presynaptic inhibitory action indicate their Polysynaptic character: temporal facilitation, spatial facilitation, and post-tetanic potentiation. During prolonged repetitive stimm. there is firstly a building up of Primary afferent depolarisation by the first few impulses, [hen a progressive decline to a plateau that is reached in half to one sec, after which it is well maintained over many sec. *

4441. MODE OF OPERATION OF SYNAPTIC MECHANISM PRODUCING PRESYNAPTIC INHIBITION. J.C. Eccles, R.F.Schmidt and W.D.Willis: *J. Neurophysiol.*, 1963, 26, 523-538 (Dept. Physiol., Australian Nat. Univ., Canberra, Australia) Several procedures have ^een employed in investigating the synaptic mechanism that produces primary afferent depolarisation [PAD] and so effects presynaptic inhibn. It was assumed that the syn-^Aptic transmitter acted on the primary afferent fibres in the same manner as transmitters at other synapses and ^au_{sec}i a sp. increase in ionic permeability. The equilibrium potential probably is at a level of more than 30 mV ^Polarisation relative to the resting membrane potential. /*fc PAD recorded intracellularly from an afferent fibre has been subjected to the action of an impulse propagat-^{ing} down that fibre to its central terminals. The slow ?e course of the PAD is thus shown to be due to a trans-puter action persisting for 100 to 200 msec. The spike Potential of an afferent fibre was reduced when super-^{J.J & ed}ed on a PAD in that fibre, and this effect was in-^{reased} when there was post-tetanic potentiation of the PAD. There was also a study of the effect of PAD in de-^{pressing} monosynaptic excitatory post-synaptic potentials that were potentiated either during or after a tetanus. •

4442. SEGMENTAL REFLEX RELATIONS OF CUTANEOUS AFFERENT INFLOW TO THORACIC RESPIRATORY MOTONEURONES. T^umi: *J. Neurophysiol.*, 1963, 26, 478-493 (Johns Hopkins Univ. Med. Sch., Baltimore, Md., U.S.A.) Recordings fr6m individual dorsal root ^suberving cutaneous sensations of thoracic wall as exten-** r@ cording fr^m muscle fibres of internal and exten-^la Intercostal muscles were obtained from uiianaes-therised, spinalised and from anaesthetised cats. Average cura-^sqeceptive fields for 144 afferent fibres was 53 an? . Excitatory reflexogenic fields for 29 expiratory 67 v^ inspiratory intercostal muscle fibres were 51 and 67 v^ respectively. Respiratory muscle fibres showed ^utal?^ respectivly. Respiratory muscle fibres showed ^utal?^ and / or equilibrating behaviour during repetitive fibres. J?* cu* aneous field at rates < 15/sec; afferent fibres aid not. Available evidence suggests participation

of intemuncial neurones in reflex regulation of spinal respiratory motoneurones. *

4443. ACTIVITY OF BRAIN-STEM RESPIRATORY NEURONES AND SPINAL RESPIRATORY MOTONEURONES DURING SWALLOWING. T.Sumi: *J. Neurophysiol.*, 1963, 26, 466-477 (Johns Hopkins Univ. Med. Sch., Baltimore, Md., U.S.A.) Extracellular action potentials from medullary respiratory neurones in unanaesthetised, decerebrate cats produced a short burst discharge and/or cessation of their spontaneous activity during reflexly induced swallowing. Spinal respiratory motoneurones also showed momentary activation during swallowing but of lesser intensity. Onset of burst discharge of medullary inspiratory neurones preceded activation of geniohyoid muscle. Modifications by swallowing of respiratory neurones activity was not abolished by motoparalysis. Data suggest a close relationship in central regulatory mechanisms for respiration and swallowing as well as complexity of efferent connections between medullary and spinal cord respiratory neurones. *

4444. INNERVATION OF THE DIAPHRAGM. B.R.Landau, K.Akert and T.S.Roberts: *J. comp. Neurol.*, 1962, 119, 1-10 (Dept. Physiol., Univ. Wisconsin Sch. Med., Madison, Wis., U.S.A.) Fibre composition of the phrenic nerve was studied bilaterally in dogs after unilateral destruction of dorsal root ganglia of segments giving rise to the nerve 3-6 weeks previously. The peripheral distribution of spinal roots making up the nerve was studied and responses of the diaphragm to electrical stimm. of the tributary branches was recorded. Within the diaphragm, a medial to dorsolateral arrangement of myotomes corresponding to the C5, C6 and C7 spinal roots was found, but no evidence of contralateral innervation. G.M.Lewio

4445. ANALYSIS OF ROLE OF PRESYNAPTIC AND POST-SYNAPTIC SLOW POTENTIALS IN SYMPATHETIC GANGLIA. LDempsher, LZabaia and R.Gelfand: *Int. J. Neuropharm.*, 1962, 1, 251-257 (Dept. Anat., Univ. Pennsylvania Sch. Med., Philadelphia, Pa., U.S.A.) Rat superior cervical ganglia infected with pseudo-rabies virus were studied in vitro. Dissimilar slow potential changes were recorded from pre- and post-ganglionic nerves which are considered to be associated with two different operations. Theoretical electronic and mathematical models are derived to account for the observations.

G.F.Blane

4446. ROLE OF ACETYLCHOLINE AND CHOLINESTERASE IN SYMPATHETIC GANGLIA. J.Zabara and J.Dempsher: *Int. J. Neuropharm.*, 1962, 1, 259-264 (Dept. Anat., Univ. Pennsylvania Sch. Med., Philadelphia, Pa., U.S.A.) The effects of applied ACh and cholinesterase were studied upon the slow potential changes recorded from pre- and post-ganglionic nerves in the prep, described in the preceding paper. The markedly different effects observed with the 2 drugs are interpreted in terms of the electronic model.

G.F.Blane

4447. SYNAPTIC TRANSMISSION IN THE SYMPATHETIC GANGLION OF THE FROG. J.G.Blackman, B.L.Ginsborg and CRay: *J. Physiol., Lond.*, 1963, 167, 355-373 (Dept. Pharmacol., Univ. Edinburgh, Scotland) Synaptic transmission in the sympathetic ganglion of the frog has been studied with intracellular electrodes. The action of the transmitter is similar to that at the neuromuscular junction of the frog. The action of ganglion blocking agents, anticholinesterases and ionophoretically applied ACh support the idea that the transmitter is ACh. •

PHYSIOLOGY

4448. SOME EFFECTS OF CHANGES IN IONIC CONCENTRATION ON THE ACTION POTENTIAL OF SYMPATHETIC GANGLION CELLS IN THE FROG. J.G.Blackman, B.L.Ginsborg and CRay: *J. Physiol., Lond., 1963, 167- 374-388* (Dept. Pharmacol., Univ. Edinburgh, Scotland) Action potentials were recorded with intracellular electrodes, and the effects of changes of (K_+)_o, (Na^+)_o and (Cl^-)_o were studied. Replacement of (Cl^-)_o by methyl sulphate was without effect; reduction in (Na^+)_o had no effect on the resting potential, but reduced the rate or rise and the amplitude of the response; increase in (K_+)_o reduced the resting potential and, to a greater extent, the membrane potential at the peak of the 'positive phase'. The membrane potential at the peak of the positive phase was also reduced during trains of stimuli, probably due to the accumulation of K^{+} immediately outside the cell. *

4449. SPONTANEOUS SYNAPTIC ACTIVITY IN SYMPATHETIC GANGLION CELLS OF THE FROG. J.G.Blackman, B.L.Ginsborg and CRay: *J. Physiol., Lond., 1963, 167, 389-401* (Dept. Pharmacol., Univ. Edinburgh, Scotland) Miniature synaptic potentials were recorded from single cells of sympathetic ganglia of Rana pipiens. They persist in K^{+} concn. which block orthodromic conduction, but are abolished by tubocurarine and they are presumed to be due to action of spontaneously released packets of ACh. The recurrence frequency of the miniature synaptic potentials is increased at least 50-fold in 10-14 mM K. This effect is reversed by high external Mg^{2+} . *

4450. ON THE QUANTAL RELEASE OF THE TRANSMITTER AT A SYMPATHETIC SYNAPSE. J.G.Blackman, B.L.Ginsborg and CRay: *J. Physiol., Lond., 1963, 167, 402-415* (Dept. Pharmacol., Univ. Edinburgh, Scotland) Synaptic potentials from single cells in sympathetic ganglia of the frog Rana pipiens have been recorded with intracellular electrodes. Successive evoked responses in the presence of a high external Mg/Ca ratio showed marked fluctuations, quant, consistent with the idea that they were composed of summated miniature synaptic potentials. The actions of Mg and Ca were mainly pre-synaptic, that of tubocurarine, post-synaptic. *

4451. SYMPATHOMIMETIC EFFECT OF ACETYLCHOLINE ON SPLEEN OF CAT. CB.Ferry: *J. Physiol., Lond., 1963, 167, 487-504* (Univ. Lab. Physiol., Oxford, England) Injn. of 10-250 / μ g. ACh into the splenic arterial blood caused centripetally directed activity in the C fibres of the splenic nerve of a chloralosed cat. This effect remained after section and degeneration of the splanchnics, which should remove most of the splenic sensory fibres. It was concluded that ACh excited the sympathetic post-ganglionic C fibres within the spleen. This could be abolished by hexamethonium, but not by atropine or 'hydergine' (Sandoz). It was considered that the excitation of C fibres by ACh might account for the sympathomimetic effect of this drug on the spleen. *

4452. PHARMACOLOGICAL EXPERIMENTS ON THE RELEASE OF THE SYMPATHETIC TRANSMITTER. A.G.M. Blakeley, G.L.Brown and C.B.Ferry. *I. Physiol., Lond., 1963, 167, 505-514* (Univ. Lab. Physiol., Oxford, England) Eserine, neostigmine and cocaine affect neither the liberation by the nerves nor the uptake of the sympathetic transmitter in the spleen of cats under chloralose anaesthesia. The release of noradrenaline by arterial injn. of large amounts of ACh is prevented by hexa-

methonium. Hexamethonium does not affect the motor response of the splenic blood vessels to nerve stimn. and has no effect on the output of transmitter'. The results throw doubts on the validity of some of the evidence advanced in support of a cholinergic link in the post-ganglionic sympathetic adrenergic neuro-effector pathway. *

4453. FUNCTION OF THE NUCLEUS SUPRA TRIGEMINALIS. CRJerge: *J. Neurophysiol., 1963, 26, 393-402* (Univ. Pennsylvania Sch. Med., Philadelphia, Pa., U.S.A.) Responses of cells of the nucleus supratrigeminalis were examined using stainless steel micro-electrodes for extracellular recording. All of the units studied responded to movements of the mandible and pressure stimn. of intraoral structures. There were three functional categories of cells: (1) those activated by pressure stimn. of intraoral peripheral fields; teeth, gingiva, palate, tongue, (2) those activated by jaw-opening movements, and (3) those inhib. by jaw opening. Many units showed convergence of afferent inflow from several types of peripheral stimn. The responses of units in the supratrigeminal nucleus closely resemble responses attributed to spinal interneurones. It is likely that cells of the nucleus participate in trigeminal motor reflexes. *

4454. REVERSIBLE COOLING OF CEREBELLUM IN AWAKE, UNRESTRAINED RATS. E.Manni, L.W.Mills and R.S. Dow: *J. appl. Physiol., 1963, 18, 597-599* (Neurophysiol. Lab., Good Samaritan Hosp., Portland, Ore., U.S.A.) The cerebellum of unrestrained rats was cooled by applying Pt foil followed by dry ice to the surface of the cerebellar cortex. The temp. of the tissue 2-6 mm. below the surface dropped 1(f in 4-5 min. H.Clones

4455. NEW INTERPEDUNCULO-DIENCEPHALIC PATHWAY IN RATS AND CATS. L.CMassopust, jun. and R.Thompson: *J. comp. Neurol., 1962, 118, 97-105* (Div. Neurophysiol., Cleveland Psychiat. List, and Hosp., Cleveland, Ohio, U.S.A.) Lesions in the interpeduncular nuclear area of the brains of rats and cats resulted in degeneration of fibres in a pathway which extended rostally along the roof of the interpeduncular space just medial and dorsal to the mammillary peduncles. The possibility that this pathway is involved in learning certain visual, auditory and kinaesthetic habits is discussed. G.M.Lewis

4456. EFFECTS OF THALAMIC LESIONS UPON CEREBELLAR DYSKINESIA IN THE RHESUS MONKEY. M.B.Carpenter and CRJianna: *J. comp. Neurol., 1962, 119, 127-147* (Dept.Anat., Coll. Physn. and Surg., Columbia Univ., New York, N.Y., U.S.A.) The physiol. effects of localised lesions in the thalamus on cerebellar dyskinesia in the monkey produced bilat. by large lesions destroying portions of the intracerebellar nucleus were studied. Modification of the cerebellar tremor was effected by interruption of thalamo-cortical fibre projections from the ventrolateral nucleus (pars oralis) or by removal of potent intrathalamic influences exerted by the centromedian nucleus over the activity of the ventrolateral nucleus. CM.Lewis

4457. THALAMIC LOCALISATION OF AFFERENTS FROM THE TONGUE IN ALBINO RAT. R.Emmers, R.M.Benjamin and AJ.Bлом奎斯 J. comp. Neurol., 1962, 118, 43-48 (Lab. Neurophysiol., Univ. Wisconsin Med. Sch., Madison, Wis., U.S.A.) The organisation of the lingual thalamic relay in the rat was analysed electrophysiol. The thalamic areas responsive to electrical and mechanical

stmn. of each of the 3 nerves innervating the tongue were mapped in detail. Both taste nerves projected to the most medial extension of a morphol. distinct sub-nucleus in the most ventral and post. part of the n.ventralis. The lingual nerve projection filled in the lateral part of the subnucleus, its projection was contralateral and co-extensive with the area activated by mechanical stmn. of the tongue. G.Me Lewis

4458. THALAMIC LOCALISATION OF AFFERENTS FROM THE TONGUE IN SQUIRREL MONKEY (SAIMIRI SCIUREUS). AJ.Bломquist, R.M.Benjamin and R.Emmers: J. comp. Neurol., 1962, 118, 77-87 (Lab. Neurophysiol., Univ. Wisconsin Med. Sch., Madison, Wis., U.S.A.) The organisation of the lingual thalamic relay in the squirrel monkey was analysed electrophysiol. The results paralleled those previously obtained in the rat and supported the proposition that the taste thalamic relay is confined to the post. portion of the ventromedial complex independent of other lingual modalities.

G.M.Lewis

4459. INTRACELLULAR RECORDING FROM THALAMIC NEURONES DURING RETICULOCORTICAL ACTIVATION. D.P.Puipura and RJ.Shofer: J. Neurophysiol., 1963, 26, 494-505 (Coll. Physn. and Surg., Columbia Univ., New York, N.Y., U.S.A.) Intracellularly

recorded activities of thalamic neurones during recruiting responses have been compared with activities elicited by hiⁱ-freq. (25-75/sec.) midline thalamic [CM] stmn. in encéphale isolé cats. Neurones in which long-latency inhibitory post-synaptic potentials [IPSP] were prominent during recruiting responses evoked by low-freq. (7/sec.) CM stmn. showed either increased discharge freq. without significant membrane depolarisation or long-latency sustained depolarisation during high-freq. CM stmn. Neurones with prominent excitatory synaptic drives during recruitment exhibited short-latency depolarisation during high-freq. CM stmn. Synaptically induced depolarisation inactivation of spikes was characteristically observed in these elements after variable periods of repetitive firing. Persisting effects of high-freq. CM stmn. on thalamic neurones consisted in elimination of evoked IPSP and marked potentiation of excitatory synaptic bombardment. These effects were observed in cells with residual post-activation depolarisation and elements in which repolarisation was complete. Blockade of inhib. and the development of sustained excitatory synaptic drives are major intrathalamic synaptic events involved in the transition from synchronisation to desynchronisation of thalamic neuronal activity. *

4460. UNIT ACTIVITY IN HYPOTHALAMUS OF CYCLIC FEMALE RAT : EFFECT OF GENITAL STIMULI AND PROGESTERONE. CJL.Barracough and B.A.Cross: J. Endocr., 1963, 26, 339-359 (Sub-Dept. of Vet. Anat., Univ. Cambridge, England) The firing-rate of hypothalamic unit neurones was studied using stereotaxic technique and suitable amplificati&n-recording systems. It was accelerated by a variety of stimuli including cold, stnell and noise as well as tactile stmn. of the cervix. Modifications of responsiveness at different stages of estrus are described and the significance of the selective J^APression by progesterone of response in lateral hypothalamic neurones to cervical probing discussed with reference to the neural control of LH secretion. CF.Blane

4461. GROWTH FOLLOWING HYPOTHALAMIC LESIONS IN WEANLING RAT. L.L.Bernardis, B.M.Box and J.A.F. Stevensnre Endocrinoloav- 1963. 72. fifi4-f?99. f#neveo

Dept., Univ. W. Ontario, London, Ont., Canada) The effect of hypothalamic electrolytic lesions on growth has been studied in rats. The results show that the most effective lesions for reduction of growth were in the supra-optic nucleus and posteromedial region. With some lesions food intake and temp. regulation were affected. H.Clones

4462. INHIBITORY SYSTEMS IN OLFACTORY BULB STUDIED BY INTRACELLULAR RECORDING. C.Yamamoto, T.Yamamoto and K.Iwama: J. Neurophysiol., 1963, 26, 403-415 (Univ. Kanazawa Med. Sch., Kanazawa, Japan) Responses of the olfactory bulb neurones to electrical stmn. of the lateral olfactory tract [LOT] olfactory mucosa and ant. commissure [AC] were studied in rabbits immobilised with Flaxedil. LOT stmn. generated in the mitral cell antidromic firing followed by the inhibitory post-synaptic potential [IPSP]. The deep layer cells discharged, often rhythmically, to a LOT shock. The mitral cell responded to olfactory mucosa stmn. with spike firings and/or the IPSP. This stmn. also excited the deep layer cells. Upon repetitive stmn. the AC generated the IPSP in the mitral cells and destroyed the IPSP produced by a LOT shock. A small no. of the deep layer cells were activated but most of them were inhib. by AC stmn. The neuronal pathways participating in generation and abolition of the IPSP were discussed. *

4463. CHICKEN TELECEPHALON, DIENCEPHALON AND MESENCEPHALON IN STEREOTAXIC CO-ORDINATES. A. van Tienhoven and L.P.Juhász: J. comp. Neurol., 1962, 118, 185-197 (New York State Coll. Agric, Cornell Univ., Ithaca, N.Y., U.S.A.) A series of semi-diagrammatic illustrations of the brain of Gallus domesticus in stereotaxic coordinates are presented to aid in the placing of electrodes for physiol. studies.

G.M.Lewis

4464. ORGANISATION OF AUDITORY, SOMATIC SENSORY AND VISUAL PROJECTION TO ASSOCIATION FIELDS OF CEREBRAL CORTEX IN THE CAT. R.F.Thompson, R.H.Johnson and JJ.Hoops: J. Neurophysiol., 1963, 26, 343-364 (Univ. Oregon Med. Sch., Portland, Ore., U.S.A.) Organisation of auditory, somatic sensory and visual projection to association cortex of the cat was studied, using chloralose anaesthetic. All modalities of stmn. resulted in identical topographical distributions of association responses in the 4 cortical association fields. These fields included two on the middle suprasylvian gyrus, one on the ant. lateral gyrus, and one on the cortex surrounding the cruciate sulcus, including ant. sigmoid gyrus, banks of cruciate sulcus and cingulate gyrus. Association responses were present after total bilat. removal of all other cortex. The depth distributions of association responses in cortex were identical for all modalities of stmn. and paralleled those for primary responses. All of the evidence presented in this and the other papers of the series supports the hypothesis that a peripheral stimulus delivered to any portion of the auditory, somatic, or visual receptive fields activates one and the same central association system in an undifferentiated manner. This system projects in an equiv. fashion to the same 4 cortical fields. Evidence is presented suggesting that primary type auditory responses of the ant. suprasylvian gyrus do not represent cortical activity in this region of the cortex. *

4465. AUDITORY, SOMATIC SENSORY, AND VISUAL RESPONSE INTERACTIONS AND INTERRELATIONS IN ASSOCIATION AND PRIMARY CORTICAL FIELDS OF THE CAT. R.F.Thompson, H.E.Smith and D.Bliss: J. Neurophysiol., 1963, 26, 365-378 (Univ. Oregon Med.

PHYSIOLOGY

Sch., Portland, Ore., U.S.A.) Interactions and inter-correlations of cortical association and primary responses to auditory, somatic sensory, and visual stimuli in the cat were studied. Relatively and abs. unresponsive periods for response amplitude to the second of two stimuli were found to be much longer for association than primary responses. Further, the same recovery cycle was found for association response amplitudes to the 2nd of two stimuli of different modalities as was found for the same stimulus delivered twice. Correlational analyses demonstrated perfect correlations between response amplitudes recorded simult. in any two association response fields to any modality of stimn., this in spite of the very large variability of association responses. Correlations of association and corresponding primary response amplitudes were all zero. All of the data are consistent with the hypothesis, that a peripheral stimulus of any modality activates one and the same central association system in an undifferentiated manner. This system projects in an equiv. fashion to the same 4 cortical fields. Visual responses of the suprasylvian sulcus were found to be unrelated to association responses, and not to interact with primary auditory responses. *

4466. LONG-LASTING NERVOUS SYSTEM RESPONSES TO PROLONGED SOUND STIMULATION IN WAKING CATS. A.Starr and R.B.Livingston: *J. Neurophysiol.*, 1963, 26, 416-431 (Nat. Inst. Hlth., Bethesda, Md., U.S.A.)

Conscious cats with multiple implanted bipolar electrodes were exposed to prolonged steady white noise. Summated electrical activity was recorded before, during, and after exposure to the unchanging stimn. All major stations along auditory pathway were examined in respect to their dynamic responses to this standard stimulus. Whereas click responses were obtained in widespread regions throughout the brain, sustained response to sustained sound stimn. was limited to the classical auditory pathway. Middle ear muscle and central neural mechanisms both powerfully and independently modify responses during continuing stimn. Central neural processes yield prolonged after-effects characterised by depression below control level of activity. These several phenomena of non-correspondence between characteristics of the physical stimulus and electrical activation of the auditory pathway may be related to perceptual effects and after-effects associated with long-continuing sensory stimn. *

4467. UNIT RESPONSES TO SOUND FROM AUDITORY NERVE OF THE CAT. A.Rupert, CMoushegian and R. Galambos: *J. Neurophysiol.*, 1963, 26, 449-465 (W.Reed Army Inst. Res., Washington, D.C., U.S.A.)

Tungsten microelectrodes were placed in the auditory nerve of both anaesthetised and unanaesthetised cats and the sound-induced activity of 45 units was recorded and studied. Three criteria (anatomical, slow-wave morphology, and spike latency) were used to establish unequivocally the location of the electrode tip and every 8th nerve unit described in this paper met all three criteria. The spontaneous discharges of auditory nerve units can be inhib. by sounds, but since some are inhib. promptly and others considerably after tone onset, two mechanisms of inhibn. are inferred. Some units discharge with interspike intervals related primarily to stimulus period while others do not. These latter units seem related to the stimulus intensity and presumably may mediate intensity information. Finally, some spontaneously active units respond to certain continuous tones by grouping their discharges with no increase in discharge rate. These results of the

behaviour of auditory nerve units suggest that highly complex processing occurs at the cochlear level where the impulses are generated. *

4468. CORTICAL INTERCELLULAR SYNAPTIC POTENTIALS IN RESPONSE TO THALAMIC STIMULATION.

Choh-Luh Li: *J. cell. comp. Neurol.*, 1963, 61, 165-179 (Surg. Neurol. Branch, N.I.H., Bethesda, Md., U.S.A.)

Changes in potential recorded from the interior of cortical neurones and from the surface of the post. sigmoid gyrus were produced by stimn. of the nucleus centromedianus and nucleus ventralis posterior lateralis in the thalamus of the cat. The results support the concept that a surface-neg. wave is caused by a wave of depolarisation travelling along ascending dendrites from cortical neurones to the cortical surface. A shift in the surface steady potential to negativity upon repetitive stimn. of the thalamus appeared to be closely related to sustained hyperpolarisation or increased negativity in the membrane potentials of cortical neurones. G.M.Lewis

4469. RELATION BETWEEN SECONDARY OPTIC FIBRE SYSTEM AND CENTRENCEPHALIC SYSTEM FOR CONVULSIONS. LOCALISATION OF A SUB-CORTICAL PACEMAKER FOR CONVULSIONS. JJ. van Straaten: *Arch. int. Physiol.*, 1962, 70, 483-495 (Lab. of Gen. Physiol., Roman Catholic Univ., Nijmegen, Netherlands)

Histol. methods have confirmed fibre connections from deep layers of dorsal lateral geniculate body and demonstrated fibre tract from the lateral post. thalamic nucleus to the ventral ant. and central lateral thalamic nuclei in the cat. Electrical stimn. of the lateral post. thalamic nucleus produced ipsilateral head movements, loss of posture and fully developed epileptiform seizures with loss of bladder control and e.g. spike-wave activity in the unrestrained cat. Stimn. of ventral ant. and central lateral nuclei produced only jerking of legs which ceased on termination of the stimulus. Stimn. of the dorsal lateral geniculate body resulted in shivering and a minor e.g. arousal reaction, whereas stimn. of rostral colliculus and nucleus cuneifonnis produced alertness and flight reaction with marked arousal. The lateral post. thalamic nucleus is a major part of the centrencephalic epileptic system having a direct connection to the occipital cortex and an indirect connection, through the ant. thalamic nuclei, to the frontal cortex.

4470. SYNDROME OF INTENTION OR ACTION MYO-CLONUS AS A SEQUEL TO HYPO-OXIC ENCEPHALOPATHY. J.W.Lance and R.D.Adams: *Brain*, 1963, 86, 111-136 (Neurol. Serv., Massachusetts Gen. Hosp., Harvard Med. Sch., Harvard, Mass., U.S.A.)

It is suggested that the basic disturbance is the synchronous and repetitive firing of cells in the ventrothalamic nucleus in response to afferent impulses from the cerebellum resulting in thalamocortical volleys. R.H.Kimberlin

4471. ACTION TREMOR AND THE COGWHEEL PHENOMENON IN PARKINSON'S DISEASE. J.W.Lance, R.S. Schwab and E.A.Peterson: *Brain*, 1963, 86, 91-110 (Neurol. Serv., Massachusetts Gen. Hosp., Harvard

Med. Sch., Harvard, Mass., U.S.A.) Evidence is presented that the physiol. tremor mechanism is preserved in Parkinson's disease and that in the majority of cases it is exaggerated, giving rise to an 'action tremor' on exertion. R.H.Kimberlin

4472. E.E.G. CHANGES ACCOMPANYING THYROID DEFICIENCY IN MAN. R.W.Lansing and J.B.Trunnell:

PHYSIOLOGY

431

J. clin. Endocr., 1963, 23, 470-480 (Dept. Psychol., Univ. Arizona, ^Tucson, Ariz., U.S.A.) Serial e.e.g. were recorded during deprivation and replacement of thyroid hormone in patients who were dependent on exogenous hormone for maintenance of a euthyroid state. The results indicated that the e.e.g. is potentially useful in the detection of c.n.s. effects of thyroid deficiency and in monitoring the efficacy of hormone replacement therapy.

K. Jones

4473. ORBITOFRONTAL CORTICAL LESIONS AND LEARNING IN CATS. J.M.Warren, H.B.Warren and K.Akert J. comp. Neurol., 1962, 118, 17-41 (Dept. Psychol., Pennsylvania State Univ., Philadelphia, Pa., U.S.A.)

Cats with orbitofrontal lesions were retarded in serial learning (double alternation) and in learning to inhibit spontaneous or acquired stimulus preferences, while cats with prestriate lesions, were impaired on visual tasks (umweg problems or size discrimination). Lesions in both areas did not have summative effects on learning performance.

CM.Lewis

4474. LOCALISATION OF A MEMORY TRACE IN ONE CORTICAL HEMISPHERE AND TRANSFER TO THE OTHER HEMISPHERE. I.S.Russell and S.Ochs: Brain, 1963, 86, 37-54 (Dept. Physiol., Indiana Univ. Sch. Med., Indianapolis, Ind., U.S.A.) Spreading cortical depression of Leao was used to depress the cortical functions of one hemisphere in rats for several hr. During this time, animals were exposed to bar-press training, and testing showed the establishment of a memory trace in the functional but not in the non-functional hemisphere.

R.H.Kimberlin

4475. EFFECT OF PROLONGED SHOCK STRESS ON TIMIDITY AND EMOTIONAL ELIMINATION IN THE RAT. K.E.Moyen J. genet. Psychol., 1963, 102, 37-43 (Dept. Psychol., Carnegie Inst. Technol., Pittsburgh, Pa., U.S.A.)

Rats were subjected to shock every 3 min. for 22 hr. and 50 min./day for 5 days. Together with control animals they were tested in a timidity apparatus after each stress period. They were then given ad lib food and water for 48 hr. and tested in the open field. Increased emotionality was observed in the timidity box and also in the open field after 48 hr.

J.R.Broome

4476. PENETRATION OF LIGHT INTO BRAIN OF MAMMALS. W.F.Ganong, M.D.Shepherd, J.R.Wall, E.E. Vanbrunt and M.T.Clegg; Endocrinology, 1963, 72, 838-839 (Physiol. Dept., Univ. California, San Francisco Med. Center, San Francisco, Calif., U.S.A.)

Small amounts of light were found to penetrate the hypothalamus of rabbits and rats and the temporal lobes of sheep and dogs.

H.C.Jones

4477. INFLUENCE OF ALCOHOL ON GENERAL ACTIVITY OF RATS. H.Wallgreen and A.Arvala: Ann. Med., exp. Fenn. 1963, 41, 88-93 (Res. Lab., State Alcohol Monopoly (Alko), Helsinki, Finland)

The effect of a moderate dose (3 mg./g.) of alcohol on the general activity of mice for 1 hr. following its administration was studied in undisturbed conditions and during exposure to an irregularly recurring, intense rattling noise. When activity after administration of water was used as ref., no changes in total activity were observed in undisturbed conditions. However during noise, alcohol significantly increased the no. of impulses recorded. Noise changed the activity patterns of the animals radically and this changed pattern was to a significant degree 'normalised' after alcohol.

G.Faulkner

4478. ACCUMULATION OF CALCIUM BY BRAIN CORTEX SLICES. J.S.Chamock: J. Neurochem., 1963, 10, 219-223 (McGill-Montreal Gen. Hosp. Res. Inst., Montreal, Canada) Slices of rat brain were prepared in Ca-free media and ⁴⁵Ca added from the side arm of a Warburg vessel. 40% accumulation of ⁴⁵Ca occurred within 5 min. and was unaffected by anaerobiosis, or varying respiratory activity (QO₂ 3-17) by Na glutamate, ouabain, DNP, Na salicylate, phospholipase A or alteration of K/Na ratio in the medium. On this evidence a metabolically independent mechanism for Ca accumulation, such as binding, is suggested.

R.J. Woodman

4479. RESPONSE OF CEREBRAL CORTEX OF RAT TO PROLONGED PROTEIN DEPLETION. TISSUE WEIGHT, NITROGEN, DEOXYRIBONUCLEIC ACID AND PROTEINS. P.Lehr and J.Gayen J. Neurochem., 1963, 10, 169-176 (Lab. Gen. Physiol., Fac. Sci., Univ. Nancy, France) Rats were fed on a complete (defined) diet, partially protein-deficient and completely protein-deficient diet. Although protein depletion caused a fall in body wt. over 100 days from 250 g. to 50 g., there was scarcely any change in the cerebral content of DNA phosphorus (control value 57 pg./g. fresh wt.), protein N (14*7 mg. N/g. fresh wt.) or total -N (18.2 mg. N/g. fresh wt.). Constancy of cell no. and cytoplasmic mass during protein starvation are concluded from these results.

(French) R.J.Woodman

4480. GLIAL RNA CHANGES DURING A LEARNING EXPERIMENT IN RATS. H.Hyden and E.Egyhazi: Proc. nat. Acad.Sci., Wash., 1963, 49, 618-624 (Inst. Neurobiol., Univ. Gothenburg, Sweden) Pure-pyrimidine analyses

were carried out on glial RNA immediately surrounding Deiter's neurones from rats subjected to a learning expt. during which complicated motor and sensory behaviour was established. Adenosine:uracil ratio of glial RNA increased significantly while a significant decrease occurred in the cytosine value of glial RNA. Several control expt. precluded the possibility that formation of RNA with sp. base ratios was due to demands on neural function per se. Significance of glia-neurone RNA changes in learning is discussed.

J.R.Sargent

4481. ELECTROPHYSIOLOGICAL AND NEUROCHEMICAL STUDIES FOLLOWING INJECTION OF MONONUCLEOTIDES AND THEIR DERIVATIVES. V. Bonavita, N.Bonaser, M.Zito and E.Scarana J. Neurochem., 1963, 10, 155-164 (Dept. Neurol., Univ., Palermo, Italy) I.p.

injn. of uridylic, cytidylic and guanylic acids; uridine, cytidine, uracil and guanine produced changes in the e.e.g. pattern similar to that produced by Na pentothal. 0*5-1*5 hr. after injn. of nucleoside or nucleotide, levels of acid sol. u.v. absorbing materials and ribose in liver and brain rose to a max. and decreased thereafter. Total -P in brain and liver rose only after injn. of nucleotide and because of previous evidence that the brain is not permeable to inorg. PO₄ incorporation of the entire nucleotide mol. is concluded.

R.J.Woodman

4482. LOCALISATION OF CHOLINESTERASES IN ADULT MAMMALIAN BRAIN CELL CULTURES. R.S.Geiger and W.CStone: Int. J. Neuropharm., 1962, 1, 295-302 (Res. Ub., Dept. Psychiat., Univ. Illinois Coll. Med., Chicago, Ill., U.S.A.) The distribution of AChase and non-sp. butyrylcholinesterase in cells from long-term human and rabbit brain cortex cultures is described. Effects of adding Na barbital, adrenaline and anticholinesterases to the cultures upon the histochem. are also detailed and discussed. Both forms of cholinesterase could be identified in grey as well as white matter.

G.F.Blane

PHYSIOLOGY

4483. EFFECT OF LYSERGIC ACID DIETHYLAMIDE[LSD] ON ACETYLCHOLINESTERASE ACTIVITY OF SINGLE NERVE CELLS FROM RETICULAR FORMATION.

R.Pavlin: J. Neurochem., 1963, 10, 195-199 (Patho-physiol. Inst., Med.Fac, Ljubljana, Yugoslavia)

Using microdialysis techniques A Chase activity of single neurones in 4 regions of rat brain reticular system, was estimated. A Chase activity in cells from one region (nucleus reticularis ponds caudalis) was inhib. by LSD at 2×10^{-5} M and activated at lower concn.

R.J.Woodman

4484. ISOLATION OF SYNAPTIC VESICLES AND STRUCTURAL ORGANISATION OF ACETYLCHOLINE

SYSTEM WITHIN BRAIN NERVE-ENDINGS. E. De Robertis, G.R. De Lores Amaiz, L.Salganicoff, A.P.de Iraldi and L.M.Zieher: J. Neurochem., 1963, 10, 225-235 (Inst. Anat. Gen. Embriol., Fac. Sci. Med., Buenos Aires, Argentina)

An improved method is described for prep. of synaptLc vesicles from rat brain homogenate in sucrose and 10 μ M Ca by repeated centrifugation of die mitochondrial pellet in 0.032M sucrose which releases the vesicles from the nerve-endings by osmotic shock. Electron micrographs of the vesicles are shown. The vesicles are rich in ACh and choline acetylase whereas AChase activity is higher in the ruptured nerve-ending plus mitochondrial fraction. Evidence is discussed for the theory that AChase is confined to the nerve-ending membrane while the vesicles act as synthetic and storage sites of ACh.

R.J.Woodman

4485. UPTAKE OF LABELLED NORADRENALINE BY ISOLATED BRAIN AND OTHER TISSUES OF CAT. H.J.

Dengler, I.A.Michaelson, H.E.Spiegel and E.Titus: Int. J. Neuropharmac., 1962, 1, 23-38 (Lab. Chem. Pharmacol., Nat. Heart Inst., Bethesda, Md., U.S.A.)

Slices from brain and peripheral sympathetically innervated tissues were found to take up labelled noradrenaline against the concn. gradient and store (bind) it intracellularly. This transport activity was inhib. by reserpine and cardiac glycosides while an apparently passive outward diffusion continued, leading to eventual depletion of the amine from stores. Studies with inhibitors of the enzymes normally concerned in the catabolism of noradrenaline confirmed the 'non-available' nature of the cellular stores.

C.F.Blane

4486. INFLUENCE OF pH ON UPTAKE AND RELEASE OF NORADRENALINE [NA] IN ADRENERGIC NERVE GRANULES. U.S. Vom Euler and F.Iishajko: J. Neurochem., * 1963, 10, 145-149 (Dept. Physiol., Karolinska Inst., Stockholm, Sweden)

After expressing juice from bovine splenic nerves, the 1000 g. 10 min. sediment was discarded and die 50000 jj, 30 min. sediment retained as the storage granule prep. Granules suspended in isotonic phosphate lost their native NA at a linear rate which increased as the pH was reduced from 8.5 to 6.0 or if the temp. was raised from 20° to 37°. Rate of uptake of NA by depleted granules incubated with 20 μ g./ml. of Na, increased as pH was raised from 6.0 to 8.5 but was not affected by temp. (2(f-37°)). Re-depletion rates of these granules in a NA-free medium was similar to the initial depletion rates.

R.J.Woodman

4487. DIAMINE OXIDASE [DAO] IN BRAIN OF VERTEBRATES. W.J.Burkard, K.F.Gey and A.Pletscher: J. Neurochem., 1963, 10, 183-186 (Med. Res. Dept., F. Hoffman-La Roche and Co. Ltd., Basle, Switzerland)

Using radioactive cadavexine or putrescine as substrates DAO activity could be measured down to 1 m/mole

diamine/g. fresh wt./hr. In whole rat, mouse, guinea-pig and 6 regions of rabbit brain, lizard, frog, tortoise and Boa snake brain, no DAO activity could be detected. In pigeon and hen 1-1.5 μ moles/g./hr., was noted and in 8 spp. of fish (whole brain) 6-120 m/jmoles/g./hr. In carp, activity was highest in the diencephalon (99 μ jmoles/g./hr.), prosencephalon (37 m/jmoles/g./hr.), medulla oblongata (30 m/jmoles), metencephalon (15 m/jmoles) and mesencephalon (7 μ jmoles). These rates were similar to 5-OH tryptophan decarboxylase but *Vfo* those of MAO in the same regions.

R.J.Woodman

4488. CHEMICAL AND PHYSIOLOGICAL CHANGES PRODUCED BY ARTERIAL INFUSION OF DIHYDRCK Y-PHENYLALANINE INTO ONE CEREBRAL HEMISPHERE OF CAT. R.Dagirmanjian, R.Laverty, P.Mantegazzini, D.F.Sharman and M.Vogl: J. Neurochem., 1963, 10, 177-182 (A.R.C. Inst. Anim. Physiol., Babraham, Cambridge, England)

Dopamine was infused i.a. into one half only of the brains of anaesthetised cats and also in cats with partially transected brains producing an e.e.g. pattern with characteristic sleep spindles and max. constricted pupils (the cerveau isolé condition). Dopamine levels in caudate nucleus of the infused half were higher by 12, 27, 58, and 145% in anaesthetised animals and 130, 109, 138 and 138% higher than that of the non-infused side in cerveau isolé animals. Noradrenaline levels in hypothalamus and midbrain were unaffected in either case by dopa infusion but in anaesthetised animals dopa levels of these regions were higher in the* infused half by 30-200%.

R.J.Woodman

4489. UPTAKE OF 5HT BY SUBCELLULAR PARTICLES OF RABBIT BRAIN. AJnouye, K.Kataoka and J.Shinagawa: Nature, Lond., 1963, 198, 291-292 (Dept. Physiol., Univ., Kyoto, Japan)

Uptake of 5HT, but not histamine, by subcellular particles from rabbit brain is reported. The uptake was not affected by DNP, CN", j>chloromercuribenzoate, ATP, cysteine, glutathione, insulin or vasopressin, but slightly depressed by K.

G.M.Lewis

4490. SUBCELLULAR DISTRIBUTION OF HISTAMINE, SLOW-REACTING SUBSTANCE AND 5HT IN BRAIN OF RAT. E.A.Carlini and J.P.Green: Brit. J. Pharmacol., 1963, 20, 264-277 (Dept. Pharmacol., Yale Univ. Sch. Med., New Haven, Conn., U.S.A.)

Brain extracts are prepared with dil. and cone, acid, acetone and n-butanol. Histamine is found in small particulate material, slow-reacting substance in particulate material of greater density and 5HT in both. No relationship is found between the distribution of these substances and succinic dehydrogenase.

A. E. Brooks

4491. INFLUENCE OF COLD ENVIRONMENTAL TEMPERATURE AND HISTAMINE TREATMENT ON EFFECT OF RESERPINE IN RAT. R.Laverty: J. Neurochem., 1963, 10, 151-154 (Pharmacol. UrJc, A.R.C. Inst. Anim. Physiol., Babraham, Cambridge, England)

Exposure to 4° for 4 or 20 hr., and multiple injn. at hourly intervals of histamine (20 mg./kg.) had no effect on the rate of depletion of elevated brain 5HT induced by reserpine injn. (2-5 mg./kg.).

R.J.Woodman

4492. TRANSPORT OF 5HTP and 5HT INTO BRAIN. SM. Schanberg: J. Pharmacol. exp. Ther., 1963, 139, 191-200 (Yale Univ. Sch. Med., New Haven, Conn., U.S.A.)

Uptake by rat brain slices of [$1-^{14}$ C]labelled 5HTP but not of labelled 5HT, was enhanced by O₂ or glucose, DNP interfered. Various drugs which depress brain tissue

respiration or influence 5HT metabolism did not alter the facilitated transport of 5HTP. Naturally occurring amino acids decreased the uptake of 5HTP.

J.M.Whitmarsh

4493. TURNOVER OF ^{24}Na IN THE CEREBROSPINAL FLUID AND ITS BEARING ON THE BLOOD-BRAIN BARRIER. H.Davson and M.Pollay: J. Physiol., Lond., 1963, 167, 247-255 (Dept. Physiol., University Coll., London, England) It was shown that, during ventriculo-cisternal perfusion, the kinetics of penetration of ^{24}Na from blood to the perfusion fluid would be fundamentally different according as there was, or was not, a 'blood-brain barrier*' to this isotope. Equations describing penetration for the two cases were developed and it was shown that the expt. values accorded with the case in which the barrier was assumed. *

4494. INFLUENCE OF VARIOUS DRUGS ON THE TRANSPORT OF 1311 AND PAH ACROSS THE C.S.F.-BLOOD BARRIER. H.Davson and M.Pollay: J. Physiol., Lond., 1963, 167, 239-246 (Dept. Physiol., University Coll., London, England) The effects of various drugs on the rate of secretion of c.s.f. and on the absorption from the ventricles of 1311 and PAH have been studied in rabbits using the technique of ventriculo-cisternal perfusion. Diamox and DNP reduce the rate of secretion very markedly. The absorption of the substances is inhibited by ouabain and J>NP and β -chloramercurobenzoate; the effects of acetate, higher fatty acids and amino acids on the absorption of RAH were reminiscent of their action on renal tubular secretion. *

SENSE ORGANS

4495. VITREOUS HUMOUR: POSTMORTEM POTASSIUM CHANGES. W/2.Stumei: Lancet, 1963, i, 807-808 (Dept. Forensic Med. Guy's Hosp. Med. Sch., London, England) K concn. in the vitreous rises steadily after death for at least 100 hr. It gives a remarkably accurate measurement of the postmortem interval especially after 24 hr.

CH.Bell

4496. A THEORY OF BINOCULAR FUSION. P.C.Dodwell and G.R.Enget: Nature, Lond., 1963, 198, 39-40, 73-74 (Queen's Univ., Kingston, Ont., Canada) A theory is put forward to explain the binocular fusion of intermittent stimuli, which gives a rational explanation of the process of binocular fusion and recognition of depth.

CM.Lewis

4497. VISUAL FUNCTION IN PATIENTS WITH HOMONYMOUS HEMIANOPIA. II. OCULOMOTOR MECHANISMS. UM.Gassel and D.Williams: Brain, 1963, 86, 1"36 (Nat. Hosp., Queen's Sq., London, England) 15 patients were examined over 3 yr. to analyse their capacity for adjustment to the visual field defect. Eye movements were recorded by electro-oculography and a series of standardised tests were devised and the patients' performances compared with normals. Oculomotor defects were related to the site of the lesions, type of visual field deficit and the patient's visual functional proficiency in ordinary life.

R.H.Kimberlin

4498. PERCEPTION LAG AS FUNCTION OF STIMULUS LUMINANCE. J.A.J.Roefs: Vision Res., 1963, 3, 81-91

(Inst. voor Perceptie Onderzoek, Eindhoven, Netherlands) Perception lag as a function of stimulus luminance has been measured over the intensity range of about 10-1000 trolands using 3 techniques based on (1) a subjective concurrence of 2 flashes with different luminance, (2) a subjective concurrence of a flash and a tone pulse, (3) reaction time to a flash. The results of these methods agree reasonably and show a simple logarithmic relationship.

J.Whiting

4499. SPATIAL SUMMATION. P.E.Hallett: Vision Res., 1963, 3, 9-24 (Dept. Neurol., Churchill Hosp., Oxford, England) Ricco's law provides evidence for spatial summation in the human visual pathways. The literature is reviewed and it is found that spatial summation in all observers increases with distance from the fovea, is small for cone vision and is partly dependent on the test object. For a given test-object variation between observers is sufficiently striking to justify their division into 2 groups, A and B, according to whether summation is large or small at a given eccentricity. If 2 different sizes of rod receptive field co-exist at the same point, a no. of variables will determine the sensitivity of these receptive fields and hence, for an individual observer, regardless of the size of summation or the slope of the freq.-of-seeing curve. The freq. distribution of summation estimates is probably multimodal and many other visual data conform to this pattern. Limited evidence for the co-existence of two sizes of receptive field and the role pf techniques are also discussed.

J.Whiting

4500. EFFECTS OF CORTICAL AND COLLICULAR LESIONS ON BRIGHTNESS AND FLICKER DISCRIMINATION IN CAT. A.C.Norton and G.Clark: Vision Res., 1963, 3, 29-44 (Dept. Psychol., Univ., Buffalo, N.Y., U.S.A.)

The visual cortices and superior colliculi were removed bilat. in 6 cats previously trained in a modified Yerkes runway to make brightness and flicker discriminations. After a 2-week recovery period the animals were tested for retention and for ability to relearn these two discriminations. There was no retention and relearning was greatly impaired. Comparisons with previous expt. with only cortical removals indicated the additional effect of the collicular removals impaired learning. The neuro. basis for these findings is discussed.

J.Whiting

4501. ACQUISITION OF FLICKER DISCRIMINATION IN CORTICALLY BLIND CAT. A.C.Norton and G.Clark: Vision Res., 1963, 3, 75-79 (Dept. Psychol., Univ.

Buffalo, N.Y., U.S.A.) The visual cortex was removed from a cat who had been given training in lever pressing until he would press either of 2 levers for a milk reward. After the removal he was trained in the discrimination of IPS from a steady light. The discrimination was learned postoperatively, and transfer to higher freq. of IPS was possible up to 40 c/s. In the light of previous studies, this finding is interpreted as demonstrating a non-striate mechanism active in the acquisition of this discrimination, the mechanism acting in parallel with the visual cortex.

J.Whiting

4502. THE SUBJECTIVE DIFFERENCE OF LUMINANCE TEMPORAL GRADIENTS. H.Bomschein: Vision Res., 1962, 2, 463-467 (Physiol. Inst. der Univ., Wien, Austria) In the cat the influence of temporal gradients of luminance is very marked on the off-responses but less so on the on-responses of retinal ganglion cells. Using the same stimuli, similar results were obtained in psychophysical expt. with 6 subjects. The discrimination of stimuli with different rise times becomes progressively

PHYSIOLOGY

more difficult the higher the finally attained level of luminance. The opposite is true for decreasing stimuli. With a strong illumination (830 cd/m^2) over the entire visual field, a lengthening of decreasing time from 7 to 100 msec, can be easily detected, whereas a similar lengthening of rise time is scarcely perceived.

4503. EFFECT OF HYPERTHERMIA ON PERIPHERAL DARK ADAPTATION RATES. A.T.Kissen: *J. appl. Physiol.*, 1963, 18, 600-602 (Biomed. Lab., 6570th Aerospace Med. Res. Lab., Wright-Patterson A.F. Base, Ohio, U.S.A.) Rectal temp, in man was raised to and maintained at 0.56° above control temp, during which time, dark adaptation curves were obtained. Dark adaptation was facilitated under this thermal stress condition.

H.C.Jones

4504. CAN THE ENUCLEATED VERTEBRATE EYE GIVE AN ELECTRICAL RESPONSE TO ILLUMINATION? J.A. Bernards, G.P.M.Horsten and J.E.Winkelmann: *Arch. int. Physiol.*, 1962, 70, 356-363 (Lab. Gen. Physiol., Roman Catholic Univ., Nijmegen, Netherlands)

Potential changes with no measurable latent period were recorded en Xe flash illumination of the enucleated cat's eye. Similar changes were recorded on illumination of cats' eyes preserved at -6° for 24 hr. and of 2 unprotected electrodes in 0.9% NaCl soln. All the above changes are due to a photoelectric effect on the electrode surface and disappeared when an i.r. absorbing filter was placed in the light path. Illumination of the frog's eye immediately after enucleation gave a potential change, with latent period, identical in shape with the e.r.g. of the frog's eye in situ and which persisted after absorption of the i.r.

M.E.Nutt

4505. THE IMAGING PROPERTIES OF THE OPTICAL KIEDIA OF THE EYE. R.R.Thler: *Vision Res.*, 1962, 2, 391-429 (Inst. für medizinische Optik, Univ., München, Germany)

The optical image produced by the human eye was investigated using a point source focused on the retina, and analysing the light distribution leaving the eye after reflection from the retina. Animal eyes were used to test the adverse influence of scattered light from the optical surfaces and inhomogeneities of the optical media of the eye on the results, and the effects were found to be negligible. The imaging properties of human eyes were measured in the form of the contrast transfer function. By means of an analytical approximation of the results, the spread functions of point and line on the retina were calc. The dependence of the transfer function on the angle against the optical axis and on the diam. of the pupil were measured. The point and line spread functions, calc. from measured transfer functions, provide an easy explanation of the min. separable points and lines and vernier acuity. The contrast threshold of small circular objects as a function of diam. is explained quant. by the contrast loss in the optical image. (German) J.Whiting

4506. PROPERTIES AND NATURE OF THE R MEMBRANE OF THE FROG'S EYE. G.S.Brindley and D.L.Hamasaki: *J. Physiol.*, Lond., 1963, 167, 599-606 (Physiol. Lab., Univ. Cambridge, England)

The potential developed across the R membrane by a rectangular pulse of current is not simply exponential, but can be adequately represented by $E = a(1 - e^{-VO}) + b(1 - e^{VP}) + c$, where JL is about 10 msec, and g about 0.3 msec. The R membrane can persist, and its complex effect on a rectangular pulse of current remain unchanged, after complete removal of the pars optica retinae. Two 'R membranes' in series could never be detected. When a small advancement of a microelectrode had sent its tip through the R membrane,

withdrawal by as little as 12 ji would often bring it back. The observations support the hypothesis that the R membrane is die inner bounding membrane of the pigment epithelium, and exclude the hypothesis that it is the external limiting membrane or any other structure in the pars optica retinae. *

4507. POSSIBLE MECHANISM FOR AMPLIFIER EFFECT IN RETINA. T.L.Jahn: *Vision Res.*, 1963, 3, 25-28 (Dept. Zool., Univ California, Los Angeles, Calif., U.S.A.)

Light transforms the 11-cis¹¹-retinene of the rhodopsin mol. into all-trans-retinene, producing a longer and highly resonant mol. It is proposed that these changes permit electron flow through the lamellar membranes, with the electrons provided by and received by oxidation-reduction enzymes, one on each side of the membrane. This conductive state of retinene occurs only in the lumi- and metarhodopsins. While conductive, a mol. of retinene, under electron pressure from oxidation-reduction enzymes, might conduct many electrons, thus providing an amplifier system and causing depolarisation of the membrane.

J.Whiting

4508. ROLE OF RETINAL RECEPTORS IN FORMATION OF POSITIVE VISUAL AFTER-IMAGE. C.A.Padgham: *Vision Res.*, 1963, 3, 45-49 (Northampton Coll. Adv. Technol., London, England)

Pos. visual after-images have been formed with white light stimuli of different angular size, and measured with a binocular matching apparatus. Different power-law decay curves were found for large and small stimuli and these are attributed to the influence of rod receptors in the former. Monochromatic stimuli in the red, green and blue-green were used to form after-images. The different exponential decay curves produced are attributed to the action of 3 different types of colour receptor. From the tinjje const. of after-image decay it is suggested that the c\$e of the after-image may be predominantly electrical rather than photochem.

J.Whiting

4509. OFF-RESPONSE OF ELECTRORETINOGRAM INDUCED BY X-RAY STIMULATION. C.S.Bachofen and S.E. Wittry: *Vision Res.*, 1963, 3, 51-59 (Dept. Biol., Univ., Notre Dame, Ind., U.S.A.)

The retina of frog, *Rana pipiens* responds to flashes of X-rays and produces an e.r.g., the on-response of which resembles the on-response to light. The off-response to X-rays, besides differing considerably from that to light differs in different frogs. An alteration of nutritional status of the frog changes the off-response, well-fed animals showing a very small off-response and starved animals showing a very slow off-response characterised by considerable amplitude and duration. All degrees of response between these two extremes have been observed.

J.Whiting

4510. DUAL NATURE OF OCTOPUS ELECTRORETINOGRAM. K.Tasaki, T.Iokawa and A.C.Norton: *Vision Res.*, 1963, 3, 61-73 (Dept. Physiol., Tohoku Univ. Sch. Med., Sendai, Japan)

Micro-electrodes inserted through the octopus retina detect a sustained neg. response on the ant. surface, next an equipotential area, and deeper a sustained pos. response. The existence of at least 2 potential origins in the octopus retina was suggested on the basis of differences between the two responses with respect to stimulus variables. Evidence suggests the receptor cells of the squid retina act as a dipole, but the assumption of only one dipole does not account for the data from the octopus retina. *

J.Whiting

DIGESTIVE SYSTEM

4511. EFFECT OF ALDOSTERONE, CORTISOL AND CORTICOSTERONE UPON Na AND K CONTENT OF SHEEP'S PAROTID SALIVA. J.R.Blair-West, J.P.Coghlan, D.A.Denton, J.R.Goding and R.D.Wright: *J. clin. Invest.*, 1963, 42, 484-496 (Dept. Physiol., Univ. Melbourne, Parkville, Australia) Infused glucocorticoids at levels similar to those max. secreted by the sheep's adrenals had little or no effect on the parotid salivary Na/K concn. ratio, but infused aldosterone had equiv. effect of endogenous aldosterone in sheep. The sensitivity to aldosterone of the parotid gland in Na-replete and in Na-deficient sheep was strikingly different. The parotid gland of a 30 kg., Na-depleted sheep seemed to respond to as little as 1-2 µg./hr. KJones

4512. ELASTIC PROPERTIES OF OESOPHAGUS IN STATIC MEASUREMENT OF INTRATHORACIC PRESSURE IN MAN. K.P. van de Woestijne: *Arch. int. Physiol.*, 1962, 70, 533-546 (Clin. Univ. St. Raphael, Louvain, Belgium) Elasticity of the oesophagus varied during respiration, increasing as intrathoracic pressure became more neg. during inspiration. This variation in elasticity during the respiratory cycle also depends on the position of the balloon, in the oesophagus. Oesophageal elasticity decreases with increase in the vol. of air initially present in the balloon*. The above variations in elasticity cause only minor errors in measurements of intrathoracic pressure. They do not explain the differences in intraoesophageal pressure recorded at different levels in the oesophagus. Compression of the lower oesophagus by mediastinal structures is the most important factor in this.

(French) M.E.Nutt

4513. BIPHASIC NATURE OF GASTRIC SECRETORY RESPONSE TO HYPOGLYCAEMIA AND OTHER STIMULI WITH SPECIAL REFERENCE TO THE ROLE OF THE ADRENALS. W.Sircus, C.J.W.Huston, R.M.Preshaw, H.Bassoe and R.A.Harkness: *Gut*, 1963, 4, 42-57 (Dept. Med., Univ. Edinburgh, Scotland) Dogs with fundal pouches show 2 peaks of gastric secretory response to insulin hypoglycaemia. The 1st response depends upon intact innervation; the 2nd, which follows after some hr., does not. The 2nd peak neither coincides with a period of hypoglycaemia, nor with changes in plasma cortisol level. U is not abolished by adrenalectomy. It is only evident when there is long contact of acid secretion with the gastric mucosa, and it is removed by antrectomy. The suggestion is made that this second peak is evidence of the prolonged secretory activity mediated through the antrum and gastrin, being suppressed by an inhibitory period due to lowering of pH to some critical level over the antral mucosa. When this pH rises again the secretory activity mediated through the antral gastrin persists to produce the second peak. B.Greenwood

4514. PITUITARY-ADRENAL COMPONENT IN GASTRIC SECRETORY RESPONSE TO INSULIN HYPOGLYCAEMIA. W.H.Bachrach: *Gastroenterology*, 1963, 44, 178-189 (Univ. S. California Med. Sch., Los Angeles, Calif., U.S.A.) The evidence for their being a pituitary-adrenal activation of the acid-secretory mechanism of gastric glands in cases of insulin hypoglycaemia is weighed against the evidence for the effect being mediated via the prasynthetic system. The author argues strongly in favour of the latter hypothesis. 'A review). D.N.Wheatley

4515. PANCREAS AND GASTRIC SECRETION: FAILURE OF PANCREATECTOMY TO PREVENT INHIBITION OF GASTRIC SECRETION BY SECRETIN. J.A.Kennedy and G.A.Hallenbeck: *Gut*, 1963, 4, 58-60 (Mayo Clin., Rochester, Minn., U.S.A.) There is evidence that acidification of the duodenal contents can diminish, by some humoral mechanism, the secretory response of the stomach. A commercially available secretin used on dogs with Heidenhain pouches inhibits the acid secretion in response to food, but not to histamine. The pancreas, as the mediating factor, was excluded by pancreatectomy failing to prevent the inhibition.

B.Greenwood

4516. 'MUCOUS BARRIER': EVALUATION OF SIALIC ACID AS A PROTECTIVE FACTOR AGAINST DEGRADATION OF GASTRIC MUCUS BY PANCREATIC ENDO-PEPTIDASES. L.Choskins and N.Zamcheck: *Gastroenterology*, 1963, 44, 456-462 (Gastrointest. Res. Lab., Mallory Inst. Pathol., Boston City Hosp., Boston, Mass., U.S.A.) Warren's thiobarbiturate method was used to estimate sialic acid components of the gastric mucus. By simulating the conditions of the gut by using pancreatic at pH 8*1 and incubating at 37° for 24 hr., it was found that gastric mucus released very slowly small amounts of bound sialic acid. Subsequent treatment of this treated mucus with trypsin was no different from trypsin treatment of untreated mucus. It was concluded that sialic acid has no protective role in gastric mucus against endopeptidases. D.N.Wheatley

4517. IN VIVO EXTRALIJMINAL CONTRACTILE FORCE TRANSDUCER FOR GASTROINTESTINAL MUSCLE. H.I.Jacoby, P.Bass and D.R.Bennett: *J. appl. Physiol.*, 1963, 18, 658-665 (Pharmacol. Dept., Univ. Michigan Med. Center, Ann Arbor, Mich., U.S.A.) Longitudinal and transverse gastrointestinal motility has been recorded in unanaesthetised animals using an implanted miniature foil strain gauge bonded to a metal strip attached at 2 points to the outside of the intestine. The effects of expt. conditions on the muscular activity are described.

H.C. Jones

4518. EFFECTS OF TEMPERATURE AND Ba ON ISOLATED VAGUS-STOMACH PREPARATION OF RAT. D.Della Bella, A.Gandini and U.M.Teotino: *J. Pharmacol. exp. Ther.*, 1963, 139, 208-215 (Selvi and C, Milano, Italy) At a bath fluid temp. of 22-25° motor responses to electrical presynaptic vagal stimm. were inhibited but response to ACh or a ganglionic stimulant drug was not. The cold block is therefore located at the ganglionic synaptic site and may be due to reduced ACh output at lower temp. Ba strongly antagonised the cold block effects. J.M.Whitmarsh

4519. ANOREXIA AND GASTRIC EMPTYING IN THIAMINE DEFICIENT RATS. M.J.Veen: *Canad. J. Biochem.*, 1963, 41, 826-829 (Dept. Nutr., Sch. Hyg., Univ. Toronto, Canada) There was no delay in gastric emptying time, as measured by the rate of emptying of a BaSO₄ test meal, in thiamine deficient rats at the time when food consumption began to fall, only in the terminal stages of the deficiency, these effects were confirmed by quant. measurement of the rate of emptying of Phenol Red. Prelim. comm. J.B.Parish

4520. EFFECT OF GASTRIC DISTENSION ON DUODENAL ASPIRATES IN MAN. T.T. White, R.A.Me Alexander and D.F.Magee: *Gastroenterology*, 1963, 44, 48-51 (Dept. Surg., Univ. Washington Med. Sch., Seattle, Wash., D.C., U.S.A.) Previous expt. with dogs

PHYSIOLOGY

had suggested that gastric distension played a role in increased pancreatic secretions probably by a reflex response mediated primarily by the vagus and secondarily by the splanchnic nerves. The same has been found in the case of man. The blocking action of atropine and vagotomy presents further evidence for there being neural rather than hormonal reflexes involved. D.N.Wheatley

4521. ABSENCE OF HYDROCHLORIC ACID, THE CAUSE OF ASCORBIC ACID DEFICIENCY AFTER GASTRECTOMY. J.Warter, H.Schirardin and P.Metais: C.R. Soc. Biol., Paris, 1962, 156, 1921-1923 (Clin. Méd.A, Fac. de Méd., Strasbourg, France) Blood ascorbic acid level was estimated in man during 2 hr. following ingestion of 500 mg. ascorbic acid. After gastrectomy where no HC₁ was secreted, ascorbic acid absorption was decreased. The absorption of ascorbic acid was normal in acid secreting subjects after gastrectomy. Simult. administration of vit. C and HC₁ to the 1st group increased the level of absorbed ascorbic acid. (French) M.A.Price

4522. POST-GASTREXCTOMY DUMPING SYNDROME. L.D.Miller and G.W.Peskin: Amer. J. med. Sci., 1963, 245, 218-243 (Harrison Dept. Surg. Res., Univ. Pennsylvania Sch. Med., Philadelphia, Pa., U.S.A.) Review. 147 ref. E.E.Jiobbiger

4523. MUCOSAL BLEEDING MECHANISM IN UPPER PART OF GASTROINTESTINAL TRACT. T.R2s3nen: Gastroenterology, 1963, 44, 168-177 (Dept. Pathol., Sect.n, Univ., Helsinki, Finland) Mice and rats were used to study the effect of stress and hormones on gastrointestinal bleeding in the mucosa. The mast cells were followed closely and it was found that there was degranulation of these cells in cases of haemorrhage within a short time (3 hr.) after treatment of the animals with insulin and histamine; ACTH and glucocorticoids did likewise only far more slowly and it was found that large doses of glucocorticoids were necessary to induce haemorrhage over a short period of treatment (7 hr.)- Growth hormone increased mast cell no. in the mucosa and inhibited the glucocorticoid effect. Subjection of mice to severe stress, to near drowning, was found to cause considerable mucosal bleeding in both heparinised and non-heparinised animals. D.N.Wheatley

4524. RELATIONSHIP BETWEEN PEPTIC ULCER AND CORONARY OCCLUSION. F.P.Brooks, DJ.Sandweiss and J.F.Long: Amer. Joined. Sci., 1963, 245, 277-282 (Dept. Physiol., IMi' Pennsylvania Sch. Med., Philadelphia, Pa., UJJ.A.Y Expt. in dogs indicate that the enterogastrone mechanism for the inhibn. of gastric secretion is activated equally well by fats containing a high % of polyunsat. fatty acids and by fats containing mainly sat. fatty acids. E.E.Hobbiger

4525. ROLE OF HC₁ AND PEPSIN IN MECHANISM OF CINCHOPHEN ULCER. K.J.HartLala and L.G.Antila: Ann. Med., 1963, 41, 9-15 (Dept. Physiol., Univ. Turku, Finland) Segmental gastrectomy was performed on 36 dogs. Cinchophen, known to produce pyloric and duodenal ulcers in dogs, failed to do so after gastrectomy. Feeding of 0*1 N HC₁ with or without pepsin 5 times daily also failed to produce ulcers. One ulcer was seen in 1/9 dogs, which received 0-1 N HC₁, pepsin and cinchophen together. When acidity was raised to 0*146 N HC₁ cinchophen feeding constantly produces typical duodenal ulcers. Acid alone did not produce ulcers. These studies indicate that interference with protective

mucoprotein production plus gastric acidity participate in this type of expt. ulcer formation. " G.Faulkner

4526. PRESENT STATUS OF INTESTINAL TRANSPLANTATION. R.C.Iillehei, S.Goldberg, B.Gott and J.K. Longerbeam: Amer. J. Surg., 1963, 105, 58-72 (Dept. Surg., Univ. Minnesota Med. Sch., Minneapolis, Minn., U.S.A.) The small intestine, except for a few cm. of the duodenum, was removed from dogs, stored at 5° for 5 hr. and replaced in the donor without reconstituting its nerve supply. Animals appeared normal through 3 yr. after recovery from the operation: normal fat absorption through regenerated lymphatics occurred within 1 month. Homografts of 10-15 cm. segments of small intestine to a pouch in the neck, with vascular attachment to the carotid-jugular vessels, were rejected in 6-30 days. Orthotopic homografts of the whole* small intestine were not rejected, but the animals died after 6-9 days. The cause of death is thought to have been a graft-v-host reaction.

B.Cruickshank

4527. EFFECT OF VAGOTOMY ON SMALL INTESTINAL MOTILITY USING THE RADIO-TELEMETERING CAPSULE. B.Ross, B.W.Watson and A.W.Kay: Gut, 1963, 4, 77-81 (Univ. Dept. Surg., Royal Infirmary, Sheffield, England) In a group of human patients, 11 patients had vagotomy, 11 patients had upper gastro-intestinal surgery, and 4 patients had operations involving no handling of the abdominal viscera. After vagotomy- the mean time for inhibn. of small bowel movements was 10 hr. The longest time was 25 hr. Without vagotomy, the longest time was 9*5 hr. The time for the radio pill to be excreted was similar in these groups. The height of the peristaltic waves on their return was similar in the groups.

B.Greenwood

4528. CALCIUM ACCUMULATION AND RESPIRATORY ACTIVITY OF SMALL INTESTINE OF RAT. L.S.Charnock: Canad. J. Biochem., 1963, 41, 1013-1022 (McGill-Montreal Gen. Hosp. Res. Inst., Montreal, Que., Canada) The O₂ consumption of rings of tissue prepared from the small intestine of young hooded rats was measured manometrically at 37° in a medium containing Na, K, Mg, and Sr in a Tris-HCl buffer pH 7. 45 Ca was added from the side arm of the flasks. O₂ consumption was relatively insensitive to Ca concn. The accumulation of Ca by the tissue was dependent on the ambient Ca concn. and at low concn. of Ca in the medium it accumulated against die concn. gradient whether in a gas phase of O₂ or N₂. J.B.Parish

4529. INFLUENCE OF THE CALCIUM CHELATOR, EDTA, ON CONTRACTIONS OF ISOLATED INTESTINE OF RABBIT. S.Cottin and J.Paupe: C.R. Soc. Biol., Paris, 1962, 156, 1557-1559 (Lab. de Physiol. anim., Fac. des Sci., Montpellier, France) Variations in amplitude of contraction of the isolated rabbit intestine, in a medium where the Ca was progressively removed by EDTA, were different from those obtained by increasing the amount of Ca in an initially Ca-free medium. In the presence of EDTA the contractions disappeared when the Ca concn. was 15-35 mg./l. When Ca was added to the medium contractions appeared with a Ca concn. of 1*5-3-5 mg./l. (French) M.A.Price

4530. LOSS OF 45Ca FROM ISOLATED GUINEA-PIG ILEUM. G.Valette, Y.Cohen and C.Carron: C.R. Acad. Sci., Paris, 1962, 255, 415-417 (Lab. de Pharmacodyn.. Fac. de Pharm.de Paris, Paris, France) 10 J guinea-pigs were given 20 JJC. 45CaCl₂ i*o. 5 hr. before being killed. 0-4 g. sections of ileum were immersed in 10 ml*

PHYSIOLOGY

437

TVrode soln. or Tyrode soln. without Ca at 37° with and without aeration and at OP without aeration for 30 to 150 min. The 45ca less of the ileum increases with the temp, and with aeration but is unaffected by the Ca concn. in the bath. In a medium containing Ca the loss is replaced by 40ca. (French) S.A.Thistlewood

4531. ELECTRON MICROSCOPIC CHANGES ASSOCIATED WITH ABSORPTION IN THE JEJUNUM. A.W.Williams: Gut, 1963, 4, 1-7 (Dept. Pathol., Univ. Edinburgh Med. Sch., Edinburgh, Scotland) Rats, deprived of food and water for 24 hr., were given injn. of water into clamped-off mid-jejunal segments, with intact blood supply. Groups of the animals were killed at intervals from 10 sec. to 1 hr. E.M. demonstrated rapid movement of water from the free surface of the mucosal cells to the lateral intercellular spaces. Ten min. after water injn., some epithelial cells showed changes in the size and alignment of the microvilli, and swelling of the mitochondria. B.Greenwood

4532. INTERACTION BETWEEN ACTIVE SODIUM TRANSPORT AND ACTIVE SUGAR TRANSPORT IN THE ISOLATED RABBIT ILEUM. S.C.Schultz and R.Zalusky: Biochim. biophys. Acta., 1963, 71, 503-505 (Bi-nucleonics Dept., U.S.A.F. Sch. of Aerospace Med., Brooks A.F. Base, Tex., U.S.A.) Active Na transport appeared to be stimulated by the active transport of sugar per se. B.M.Stevens

4533. ACTIVE ABSORPTION OF (+)-GLUCOSE BY INTESTINAL SEGMENTS OF THE GROUND SQUIRREL, CITELLUS TRIDECEMLINEATUS. X.J.Musacchia and S.S.Neff: Comp. Biochem. Physiol., 1963, 9, 37-40 (Dept. Biol., St. Louis Univ., Mo., U.S.A.) Segments of various parts of the gut were filled with and suspended in soln. of 1 mg./ml. (+)-glucose made up in Krebs Ringer. Incubation was carried out for 1 hr. after which glucose was estimated within the gut lumen. The Active transport of glucose from the mucosal surface to the serosal side varied from 23-48 fmole/g. dry wt./hr. There was no difference in uptake rates shown by the duodenum, jejunum or ileum. Considerable amounts of ¹⁴C glucose do not pass to the serosal fluid but are retained * & the gut wall. M.S.Laverack

4534. DIGESTION AND ABSORPTION OF SUCROSE BY THE INTACT RAT. A.Dahlqvist and D.L.Thomson: J. Physiol., Lond., 1963, 167, 193-209 (Dept. Physiol. Chem., Univ., Lund, Sweden) The digestion and absorption of sucrose and an equivalent amount of a water-sol. non-absorbable marker, polyethylene glycol. This allowed the calcn. of the % gastric emptying, the intestinal transit and the absorption indices. Information about the rate of absorption of the sugars and their sites of absorption was obtained. The marker was recovered virtually quant. The hydrolysis of sucrose was not rate-limiting for its absorption. After the intracellular hydrolysis of sucrose, the fructose diffused back into the gut lumen to a large extent and was then absorbed further down in the intestine. Some of the fructose was absorbed in the large intestine. The efficiency of small intestinal lactase was high in vivo when compared with its efficiency in vitro. *

4535. INTESTINAL ABSORPTION: EXPERIMENTAL FAT AND (-)-XYLOSE STUDIES. W.O.Bamett, J.K.Goodrich and T.L.Kilgore: Amer. J. Surg., 1963, 105, 73-79 (Dept. Surg., Univ. Mississippi Med. Center, Jack-

son, Miss., U.S.A.) The absorption of [131I]glyceryl trioleate was observed 2, 4, 6 and 8 hr. after the ingestion of 50 jic doses in mongrel dogs after various operative procedures. Laparotomy alone depressed absorption for 7-10 days; diversion of bile from the duodenum to the jejunum had no effect; diversion of bile/pancreatic juice to the colon caused marked depression of absorption; this was more severe when bile and pancreatic juice were so shunted; partial gastrectomy with several methods of reconstruction of continuity also depressed absorption. All procedures depressed the absorption of (-)-xylose throughout the 4-hr. period of study. B.Cruickshank

4536. ABSORPTION OF [¹⁴C]TRIOLEIN AND [¹⁴C]OLEIC ACID BY DIFFERENT REGIONS OF THE SMALL INTESTINE. J.F.Grenier, M.Hatano and A.C.Weiss: C.R. Soc. Biol., Paris, 1962, 156, 1695-1697 (din. Chirurg. B., Fac. Med., Strasbourg, France) Oleic acid was absorbed preferentially from the duodenum of dog with little absorption by the ileum. Triolein was absorbed by the ileum and to a lesser degree by the duodenum. The onset of absorption of triolein occurred more rapidly than of oleic acid. The max. absorption of oleic acid occurred after 4 hr* and of triolein between the 5th and 8th hr.

(French) M. A .Price

4537. INTESTINAL ABSORPTION OF VITAMIN B12 IN LIVER CIRRHOSIS. K.Okuda: Bull. Yamaguchi med. Sch., 1962, 9, 19-23 (Dept. Med., Yamaguchi Med. Sch., Ube, Japan) Cirrhotic patients absorbed the test dose of vit. B12 less than healthy individuals, suggesting the general impairment of intestinal absorption of nutrients. The clinical implications are discussed.

K.Jones

4538. ENHANCEMENT OF JEJUNAL ABSORPTION OF HEPARINOID BY SODIUM EDTA IN THE DOG. C.S. Tidball and R.J.Lipman: Proc. Soc. exp. Biol., N.Y., 1962, 111, 713-715 (Dept. Physiol., G.Washington Univ. Sch. Med., Washington, D.C., U.S.A.) The presence of Na EDTA in die lumen of isolated canine jejunal segments in situ produced significant enhancement of intestinal absorption of heparinoid as measured by die loss of heparinoid from the lumen. Increases in clotting time of recalcified citrated plasma accompanied the enhanced absorption verifying that heparinoid had been absorbed without loss of activity. M.M.Shapland

4539. SMALL INTESTINE TRANSIT TIME AND MAGNESIUM ABSORPTION IN THE CALF. R.H.Smith: Nature, Lond., 1963, 198, 161-162 (Nat. Inst. Res. in Dairying, Shinfield, Reading, Berks., England) % of Mg absorbed from digesta by calves was significantly correlated with the time taken for digesta to traverse the small intestine. The mean transit time for digesta in the small intestine was $3 \cdot 7 \pm 0 \cdot 2$ hr. J.R.Sargent

4540. HISTAMINE-FAST ACHLORHYDRIA AND IRON ABSORPTION. A.Goldberg, A.C.Lochhead and J.H. Dagg: Lancet, 1963, i, 848-850 (Univ. Dept. Med., Gardiner Inst. Med., Western Infirmary, Glasgow, Scotland) The mean absorption of radio-Fe in 7 achlorhydric patients was 18*5% of the dose given ; and in 8 patients with acid gastric juice 57-&70. G.H.Bell

4541. INTERFERENCE WITH FAECAL EXCRETION OF ZINC-65 BY CADMIUM. S.A.Gunn, T.C.Gould and W.A.D.Anderson: Proc. Soc. exp. Biol., N.Y., 1962, 111, 559-562 (Dept. Path., Univ. Miami Sch. Med., Coral Gables, Fla., U.S.A.) Cd caused a block in faecal excretion of ⁶⁵Zn followed by a build up of liver, kidney and pancreatic 65zn. M.M.Shapland

PHYSIOLOGY

LIVER AND BILE

4542. USE OF SCINTILLOGRAPHY IN LIVER DISEASE

DIAGNOSIS. L.J.Minetti and F.Reisi: Atti. Acad. med. Lombarda, 1962, 17, 103-110 (Ist. di Clin. Med. Gen., Univ., Milano, Italy) An autoradiogram [ARG] of the liver, obtained after i.v. injn. of 100 μ g colloidal ^{198}Au , when used in conjunction with an X-ray picture, is useful for diagnosis of human liver diseases. A technique of scanning the ARG is described which can be used to detect malposition of the liver, hepatic size, localisation of areas of radioactivity which indicates tumours, abscesses, cirrhosis and hepatitis. (Italian) G.N.Godson

4543. EFFECT OF PERFUSING INSULIN VIA PORTAL VEIN

ON ARTERIAL BLOOD SUGAR AND HEPATIC GLUCOSE OUTFLOW IN THE DOG. J.R.M.Frankson, H.A. Ooms, R.Bellens, Y.Arnoold and V.Conard: Arch. int. Pharmacodyn., 1963, 142, 293-311 (Expt. Med. Lab., Univ. Brussels, Belgium) In anaesthetised dogs, infusion of [^{131}I]insulin into the portal vein was compared with infusion via the femoral vein. With portal infusion, fall of blood sugar was less marked than after femoral vein infusion, and glucose hepatic outflow was increased during the infusion. Hypoglycaemia, which occurred was due only to increased peripheral utilisation. The speed of the latter was proportional to the quantity of insulin passing through the liver.

(French) T.J.Sullivan

4544. EFFECT OF COLD AND RESTRAINT ON INTRACELLULAR DISTRIBUTION OF GLUTATHIONE IN RAT LIVER.

D.A.Stout, R.L.McCartney, B.M.Lewis, H.M. Smith and U.D.Register: Proc. Soc. exp. Biol., N.Y., 1963, 112, 334-335 (Dept. Biochem., Med. Sch., Univ. Loma Linda, Calif., U.S.A.) Sprague-Dawley \ddagger rats were stressed by keeping them at 17° ; controls were kept at $19\text{-}20^\circ$. The intracellular glutathione level in the liver of the stressed rats was at a lower level in the sol. fraction than in the control animals. Mitochondria! non- protein -SH (mainly glutathione) was not significantly changed. D.N. Wheatley

4545. DEVELOPMENT OF FATTY LIVER DUE TO MAL-NUTRITION OR PHYSIOLOGICAL INSULT ACCORDING TO STRAIN AND SEX OF RAT.

E.Chany: Arch. Sci. physiol., 1962, 16, 255-272 (Centre de Rech. physiol. sur la cell. normal, *et* cancéreuse, C.N.R.S., 16 bis, avenue Vaillant-Couturier, Villejuif, Seine, France) The liver fat contents of δ and γ rats were studied after (1) maintenance on a protein, vit. B12 and choline deficient diet (2) 18 hr. at 4° and (3) partial hepatectomy. In rats of the same sex the degree of fatty infiltration depends on the strain. Rats on a low protein diet showed infiltration of the left and left medial lobes only. Females show significant fatty infiltration after sudden stress, but only moderate transient infiltration rapidly removed by oestrogenic effects during malnutrition. Males showed less response to stress but their liver fat content slowly increases to a const. level during malnutrition.

(French) S.A.Thistlewood

4546. ULTRASTRUCTURAL STUDIES OF HEPATIC PIGMENT FOLLOWING ADMINISTRATION OF I.V.

FAT. W.Neglia, L.Burrows, S.W.Tompson and F. Schaffner: Lab. Invest., 1963, 12, 378-385 (Pathol. Dept., Mt. Sinai Hosp., N.Y., U.S.A.) Lv. administration of fat emulsion to dogs daily for 30 days results in the accumulation of pigment in hepatic cells, macrophages and granulomas. Eventually a lipofuscin pigment

results. E.M., the pigment alters from a round fat-like body to clusters of granules in lysosomes of pinocytic origin.

- A.M.Mackay

4547. EXPERIMENTAL INVESTIGATION OF SECONDARY

BILIARY STRICTURES. J.T.Goswitz, C.R.Macpherson and D.W.Elliott: Amer. J. Surg., 1963, 105, 221-227 (Dept. Surg., Ohio State Univ. Coll. Med., Columbus, Ohio, U.S.A.) Primary stricture of the common bile duct was produced in dogs by suturing cellophane around the duct: 5-10 days later the stricture was excised and end-to-end anastomosis performed. In animals given penicillin and streptomycin i.m. for 2 days before and 5 days after repair no evidence of secondary stricture was found 4-8 months later; pos. bile cultures (*E. coli*, enterococci, *Clostridium perfringens*) were present in 3 out of 7 animals; serum alkaline phosphatase was normal. In animals where the duct was devascularised or put on tension at repair, or were untreated except for the repair, secondary stricture and pos. bile cultures were invariably present; serum alkaline phosRjiamse was elevated in 4 out of 13 animals.

KIDNEY AND URINE

4548. A THREE-DIMENSIONAL STUDY OF JUXTA-GLOMERULAR APPARATUS IN RAT. LIGftT AND E.M. FINDINGS.

L.Barajas and H.Latta: Lab. Invest., 1963, 12, 257-269 (Pathol. Dept., California Univ. Med. Center, Los Angeles, Calif., U.S.A.) The ascending loop of Henle runs closely apposed to the efferent arteriole, briefly touches the afferent arteriole and becomes the distal convoluted tubule. The efferent arteriole becomes sinusoidal some distance from the hilus and granular cells may lie in its wall. The importance of the efferent arteriole and its relations in the juxtaglomerular apparatus is discussed.

A »M Mackay

4549. RETENTION OF POTASSIUM BY RABBIT KIDNEY SLICES AT 0° .

J.R.Robinson: J. Physiol., Lond., 1963, 167, 328-343 (Physiol. Dept., Univ. Otago Med. Sch., Dunedin, New Zealand) Rabbit kidney slices equilibrated for 4 hr. at tf still contained K^+ in concn. up to 8 times the external concn., but ratios of concn. of Na^{+} and Cl^- in tissue and medium were never far from unity. Hence Id^+ appeared to be bound to constituents of the tissue. 'Bound IC^{+} ' was calc. as excess of tissue K^+ over K^{+} expected from Donnan ratios for CV . In neutral media 'bound K^+ ' was proportional to the external concn. of Na^+ . As pH was lowered towards 2 in media containing 40 to 80 mequiv. Na^+/l , $(\text{Na}^+ + \text{K}^+ - \text{Cl}^-)$, an index of fixed anionic changes in die tissue, passed through zero between pH 4 and 3 and became negative. 'Bound id' changed parallel with $(\text{Na}^+ - \text{K}^+ - \text{Cl}^-)$ and little or none remained at pH 2 \cdot 1. 'Bound K^+ ' in cortical tissue varied inversely with tissue water over a wide range of pH and external $[\text{Na}^+]$.

4550. ROLE OF THE KIDNEY IN CATABOLISM OF THYR0"

STIMULIN. L.Asch and C.Aron: C.R. Soc. Biol., Paris, 1962, 156, 1693-1694 (Clin. Méd. A_f Fac. de Méd., Strasbourg, France) The level of TSH was estimated in the kidney of rats 10 min. and 1 hr. after injn. of TSH. 80% of the hormone disappeared from the blood and was fixed by die kidney. A small amount of hormone was eliminated in the urine. (French) M.A.Pr»rc

4551. OSMOLAR AND FREE WATER CLEARANCE DURING HAEMORRHAGIC SHOCK IN THE DOG. E.E.^elkurt: Proc. Soc. exp. Biol., N.Y., 1962, 111, 626-629 (Dept. Physiol., Indiana Univ. Sch. Med., Ind., U.S.A.) Comparison of renal venous and arterial concn. of osmolality and Na^+ and relating these to changes in GFR and effective renal plasma flow, evidence was supplied that indicated that the loss of concentrating power during haemorrhagic shock was due to wash-out of the papillary zone of hyperosmolarity. M.M.Shapland

4552. POLYURIA IN PAROXYSMAL TACHYCARDIA AND PAROXYSMAL ATRIAL FLUTTER AND FIBRILLATION.

P. Wood: Brit. Heart J., 1963, 25, 273-282. An analysis of 64 cases of paroxysmal tachycardia showed that a brisk water diuresis of limited duration frequently accompanied any form of paroxysmal tachycardia with a heart rate of over 120/min. and that this occurred especially in cases of paroxysmal atrial fibrillation; diuresis was more profuse in recumbency; it was prevented by left heart failure and by mitral valve disease. The diuresis suggested a state of temporary diabetes insipidus, Possibly caused by inhibn. of ADH as a result of impulses from stretch receptors on the left atrium distended by a rise in pressure and vol. P.F.Meyer

4553. REABSORPTION OF GLUCOSE, FRUCTOSE AND MESO-INOSITOL BY THE FOETAL AND POST-NATAL SHEEP KIDNEY. D.P.Alexander and D.A.Nixon: I. Physiol., Lond., 1963, 167, 480-486 (Physiol. Dept., St. Mary's Hosp. Med. Sch., London, England)

Studies have been made upon the reabsorption of glucose, fructose and meso-inositol by the renal tubules of the foetal, neonatal and adult sheep. Elevation of the plasma glucose has shown that active tubular reabsorption of glucose is developed by the middle of gestation. *

4554. DECREASE IN TUBULAR REABSORPTION OF SODIUM IN HYPOTHYROID RATS DURING OSMOTIC POLYURIA DUE TO MANNITOL. H.Jahn, P.Reville and F.Stephan: C.R. Soc. Biol., Paris, 1962, 156, 1927-1931 (Fac.de Méd., Strasbourg, France) The urine of normal and hypothyroid rats was analysed during perfusion of the animal with 20% mannitol soln. The osmotic concn. of the urine, the urinary osmotic output, urine/plasma osmotic ratio and clearance were lower in hypothyroid rats. The urinary concn. of Na was increased by hypothyroidism. The concn. and output of urinary urea and the concn. of plasma urea were similar in both groups of animals. (French) M.A.Price

4555. ADRENAL CORTEX AND RENAL SODIUM AND POTASSIUM EXCRETION IN NEWBORN RAT. P.J. Bentley: J. Endocr., 1963, 26, 361-365 (Dept. Pharmacol., Univ., Bristol, England) Rats were sensitive to endogenous aldosterone from the 1st day after birth but exogenous aldosterone-antagonist failed to influence the urinary Na/K ratio until the 12th day, it is concluded that endogenous aldosterone is not secreted before that time, Results are also given for the effect of exogenous cortisol and ACTH on urinary Na and K of neonatal rats. G.F.Blane

4556. URINARY EXCRETION OF PHOSPHORUS IN DOGS. L.Brull and G.Barac: C.R. Soc. Biol., Paris, 1962, 156, 1920-1922 (Inst. de Clin. méd., Univ. de Liège, Belgique) Evisceration did not modify the increase in P^{32} induced in chloralose anaesthetised dogs by injn. of P^{32} U. parathormone. Connection of the perfused kidney to the heart-lung circulation decreased urinary P in animals

receiving parathormone. Injn. of pituitary extract increased urinary P in hypophysectomised dogs and hypophysectomy decreased the effect of parathormone injn. (French) M.A.Price

4557. EFFECT OF CALCIUM INFUSION, PARATHYROID HORMONE, AND VITAMIN D ON RENAL CLEARANCE OF CALCIUM. D.Bernstein, C.R.Kleeman and M.H. Maxwell: Proc. Soc. exp. Biol., N.Y., 1963, 112, 353-355 (Dept. Med., Mt. Sinai Hosp., Los Angeles, Calif., U.S.A.) Ca clearance was measured in the urine of human patients and expressed as a % of the serum diffusible Ca^{2+} concn. This relationship was studied in two cases of hypoparathyroidism in §. When Ca and vit. D infusion were performed, renal Ca clearance was higher than when parathyroid extract was inj. as well. Vit. D had no direct effect on renal Ca clearance.

D.N.Wheatley

4558. RENAL EXCRETION OF BILIRUBIN IN COMMON DUCT LIGATED DOG. M.M.Laks, I.J.Pincus and D. Goldberg: Gastroenterology, 1963, 44, 469-474 (Inst. Med. Res., Cedars of Lebanon Hosp., Los Angeles, Calif., U.S.A.) The ligation of the common duct and removal of the gall-bladder in dogs resulted in elevated levels of serum bilirubin. When this was at a peak some 6 to 8 days later, the stop-flow technique was used to study renal excretion of the bilirubin. Active secretion of the bilirubin as a conjugate in the distal region of the renal tubule must occur.

D.N.Wheatley

4559. VARIATION WITH AGE AND SEX OF KIDNEY TUBULAR READSORPTION OF CITRIC ACID. M.Bertolini, F.Palo and L.Mombelli: Atta. Acad. med. Lombarda, 1962, 17, 122-126 (1st. di Patol. Speciale Med., Univ. Milano, Italy) Blood and urinary levels and the tubular readsorption of citrate were determined in 78 healthy human subjects, between 29-90 yr. old. Withincreasing age, there is a steady, marked decrease in urinary citrate; a decrease of from 7.69 to 1.94 mg./kg./24 hr. citrate excreted in the 20-30 age group to 1.95 ± 1.04 mg./kg./24 hr. in the > 70 yr. old age group. There is a corresponding increase in tubular reabsorption and plasma citrate content, with age. (Italian) G.N.Godson

4560. GONADOTROPHIC ACTIVITY IN URINE OF YOUNG CHILDREN. R. Van Den Driessens and M.J.Hans-Berteaut: C.R. Soc. Biol., Paris, 1962, 156, 1732-1733 (Lab. Pharmacodyn., Univ., Bruxelles, Belgium)

24 hr. urine samples were collected from children aged 3-5 yr. Extracts of total urine inj. into young mice resulted in an increase in uterine wt. A greater increase was obtained with urine extracts from which mucoproteins had been removed. (French) M.A.Price

4561. UPTAKE OF GLUCOSE DEPENDENT ON INSULIN IN THE ISOLATED BLADDER OF THE TOAD. B.F. Bower and CM.Grodsky: Nature, Lond., 1963, 198, 391-392 (Metabol. Res. Unit., Dept. Med., Univ. California Sch. Med., San Francisco, Calif., U.S.A.)

The isolated toad bladder is capable of glucose uptake from the medium in which it is incubated at the rate of 0.94 fmole/2hr.; this was stimulated on addition of insulin to 1.55 fmole/2 hr.

G.M.Lewis

4562. STIMULATION OF Na TRANSPORT AND 32p INCORPORATION INTO PHOSPHOLIPIDS OF ISOLATED TOAD BLADDER. S.Hestrin-Lemer and L.E.Hokin: Bull. Res. Coun. Israel A, 1963, 11, 345-350 (Dept. Physiol. Chem., Univ. Wisconsin, Madison, Wis., U.S.A.) The effect of oxytocin, aldosterone and

PHYSIOLOGY

carbamyl choline as well as the combined effect of oxytocin and aldosterone on Na and water transport and on the incorporation of 32p into toad bladder tissue phospholipids was studied. Gycytocin alone and with aldosterone stimulated Na and water transport to the same extent while aldosterone alone had only a slight stimulatory effect, and carbamyl choline had no effect. The first two agents, alone and together, had no effect on 32p incorporation into phospholipids except, with oxytocin, into phosphatidyl ethanolamine. Carbamyl choline increased incorporation into total phospholipids, the most striking increase being into phosphoinositide. L.G.Gillies

4563. EFFECT OF NEUROHYPOPHYSIAL HORMONES ON OXIDATIVE METABOLISM OF TOAD BLADDER IN VITRO. T.Goodfriend and J.Kirkpatrick: Endocrinology, 1963, 72, 742-748 (Med. Dept., Washington Univ. Med. Sch., St. Louis, Mo., U.S.A.) Oxytocin and vasopressin stimulated the metabolism of glucose, pyruvate, lactate and palmitate in the toad urinary bladder. The effect does not appear to be related to the effect of these hormones on permeability and Na⁺ transport.

H.C.Jones

ENDOCRINE GLANDS

4564. EFFECT OF ADRENALECTOMY AND ADRENODEMULLATION ON EXPERIMENTAL OEDEMA AS MEASURED UNDER REPEATED ETHER ANAESTHETISATION. A.C.Levy, T.H.Beaver, R.D.Strain and D.E. Holtkamp: Proc. Soc. exp. Biol., N.Y., 1962, 111, 576-578 (Sci. Lab., W.S.Merrell Co., Cincinnati, Ohio, U.S.A.) Two or more anaesthetisations with ether within a 6 hr. period decreased the amount of expt. oedema inducible in the hind limb of intact rats. This decrease was not observed in comparably anaesthetised adrenalectomised or adreno-demullated rats or in unanaesthetised intact rats. M.M.Ehapland

4565. ACTH AND LIPID CONTENT OF THE ADRENAL CORTEX OF CRICETOMYS GAMBIANUS. A.Quenou: C.R. Soc. Biol., Paris, 1962, 156, 1681-1682 (Fac. Med., Dakar, W. Africa) Administration of 50 I.U.-ACTH/week for 25 days to *C. gambianus* decreased the sudanophilic content of the adrenal medulla and the Schutze-pos. granules. Administration of ACTH to castrated rats depleted the lipid content of the external zones with *inx?* appearance of a large sudanophobic area. (French) M. A.Price

4566. FUNCTIONAL INTERRELATIONSHIP BETWEEN THYMUS AND ADRENAL CORTEX. J.Fachet, E.Stark, K.Vallent and M.Palkovits: Acta med. Acad. Sci. hung., 1962, 18, 461-466 (Dept. Pathophysiol., Res. Inst. exp. Med., Acad. Sci., Budapest, Hungary) Corticosterone levels in the peripheral blood of rats had fallen by 30% within 5 days after thymectomy although the in vitro corticosterone-producing activity of the adrenals taken from these animals was not reduced. At the same time aldosterone production was increased, an effect which could be reversed by treatment with heparin. Stress-induced thymic involution may be associated with disturbances in mucopolysaccharide metabolism which influence the aldosterone producing activity of the adrenal cortex. G.F.Blane

4567. ASCORBIC ACID AND CORTICOSTERONE CONCENTRATION OF INNERVATED AND DENERVATED ADRENAL GLANDS. S.Shapiro: Endocrinology, 1963, 72, 836-837 (Psychiat. Dept., Univ. California Med. Center, Los Angeles, Calif., U.S.A.) Denervation or sham operations on the adrenal glands of rats did not affect the ascorbic acid or corticosterone concn. of the gland following mild stress. H.C.Jones

4568. RELATIONSHIP OF THYMOLYTIC AND GLYCOGENIC ACTIVITIES OF ADRENOCORTICOIDS. L.Ringler and J.L.Haynes: Proc. Soc. exp. Biol., N.Y., 1962, 111, 606-609 (Dept. Metabol. Chemother., Lederle Lab., Pearl River, N.Y., U.S.A.) Steroids exhibiting a thymolytic potency equiv. to hydrocortisone, possessed liver glycogen activity averaging 40% higher. In compounds of greater potency the divergence was smaller, reaching zero when the relative thymolytic potency was about 16. Beyond this point a reversal was apparent, a thymolytic potency of 100 being equiv. to a glycogenic activity of 75. M.M.Shapland

4569. BINDING CAPACITY OF CORTICOSTEROID-BINDING GLOBULIN IN PLASMA. B.P.Murphy and C.J.Pattee: J. clin. Endocr., 1963, 23, 459-464 (C.U.N. Invest. Unit, Queen Mary Veterans' Hosp., Montreal, Canada) Oestrogen administration increased values of corticosteroid-binding globulin [CBG] binding capacity to approx. twice the control levels in various human subjects. No change was found after the administration of ACTH. A good correlation was found between CBG binding capacity and plasma corticosteroid levels when the latter were determined at a sp. time of the day. CBG levels showed no diurnal variation. K Jones

4570. EFFECT OF ANGIOTENSIN INFUSIONS ON ALDOSTERONE AND ELECTROLYTE EXCRETION IN PATIENTS WITH HYPERTENSION AND ADRENOCORTICAL DISORDERS. P.Biron, M.Chretien, E.Koiv, and J-Genes t: Brit. med. J., 1962, i, 1564-1575 (Hôpital-Dieu, Montreal, Canada) In 6 normal subjects given infusions of angiotensin (1-6 hr.) creatinine clearance decreased by a mean of 23% and Na excretion by 63%. In 6 patients with essential hypertension creatinine clearance decreased by only 5% and Na excretion rose by 290%. Similar increase in Na excretion occurred in 1 case of Cushing's syndrome and 1 of primary aldosteronism. Na retention occurred in 1 bilaterally adrenalectomised patient, 2 with Addison's disease and 1 with coarctation of aorta. There was no close relation between creatinine clearance and Na excretion. In all normal and hypertensive subjects aldosterone excretion increased markedly during angiotensin infusion. This increase persisted after infusion and was then accompanied by Na retention. Metabolic effects of angiotensin were produced by doses with no pressor effect. The greater effect on Na retention than on GFR in normal subjects indicates a direct effect, through aldosterone, on tubular reabsorption of Na. Haemodynamic and tubular responses in hypertensive subjects differ from those in normal controls. M.E.Nutt

4571. HORMONAL FACTORS AFFECTING SODIUM EXCRETION IN THE RAT. M.F.Lockett and C.N.Roberts: J. Physiol., Lond., 1963, 167, 581-590 (Dept. Physiol. Med. Sch., Birmingham, England) Adrenalectomised rats were approx. 12 times more sensitive than normal rats to the renal salt retention caused by i.m. aldosterone mono' acetate in oil. In hypophysecomised rats i.m. injn. of

PHYSIOLOGY

aldosterone caused, diuresis and an increased rate of Na excretion. This diuretic natriuretic effect of aldosterone in hypophysectomised rats was converted to one of salt retention either by administration of growth hormone, or by removal of part of the diencephalon underlying the Pineal stalk, or by adrenalectomy. Growth hormone caused retention both of Na and K in adrenalectomised, hypophysectomised and adrenalectomised-hypophysectomised rats, *

4572. ACTIONS OF A SPIROLACTONE AND TWO RELATED COMPOUNDS IN HYPOPHYSECTOMISED RATS.
M.F.Lockett and C.N.Roberts: *J. Physiol., Land,*
1963, 167, 591-598 (Dept. Physiol., Med. Sch.,

1963, 107, 591-596) (Dept. Physiol., Med. Sch., Birmingham, England). The actions of salts of the 3 steroid acids, SC-11480, SC-11927 and SC-9420 were examined in normal and operated rats in the presence and absence of exogenous aldosterone. In the absence of exogenous aldosterone these compounds increased the rates of excretion of urinary Na and Na/K of normal water-laden rats kept at 30-32°, but were inactive in adrenalectomised and in hypophysectomised animals. They caused Na retention in adrenalectomised-hypophysectomised rats. SC-11480 and SC-9420 failed to antagonise the Na retention caused by aldosterone in adrenalectomised-hypophysectomised rats but SC-11927 did so. None of these compounds antagonised the effects of aldosterone in hypophysectomised animals. *

4573. 'SUCCESSFUL' PARATHYROID TRANSPLANTATION. S.W. Jacob and J.E. Dunphy: Amer. J. Surg., 1963, 105, 196-204 (Dept. Surg., Univ. Oregon Med. Sch., Portland, Ore., U.S.A.) A review. 51 ref.

Review by Prof.
B Cruickshank

4574. TOLERANCE TO HYPOCALCAEMIA DURING EXPERIMENTAL PARATHYROID DEFICIENCY IN DOG.

J.F.Cier and A.Frederich: C.R. Soc. Biol., Paris, 1962, l&b, 1844-1846 (Inst. de Physiol., Lyon, France)
 JTyro-parathyroidectomised dogs received injn. of parathyroid hormone for 4 weeks, maintaining the blood Ca level at 80-100 mg./l. Interruption of the hormone administration did not result in the tetany characteristic of the immediate post-operative period. Although blood Ca fell ¹⁰ a low level (50 mg./l.) these dogs remained without convulsions for 2-4 weeks. (French) M.A.Price

4575. PROBLEMS OF HYPERPARAIIHYROIDISM. C.E.
Dent: Brit. med. J., 1962, ii, 1419-1425, 1495-1500

4576. HOMOPLASTIC TRANSPLANTATIONS OF PITUITARY GLAND TO MAMMARY GLAND IN GUINEA-PIG.
 A.Russel: C.R. Soc. Biol., Paris, 1962, 156, 1919-1920 (Inst. d'Histol., Fac. Méd., Strasbourg, France)
 In 17 of 60 expts a transplant of pituitary beneath the skin of the mammary gland of guinea-pig was successful, there was no modification in the structure of ducts and acini of the mammary gland receiving an implant.

4577 (French) M.A.Price
 PITUITARY-ADRENAL DYNAMICS DURING SURGICAL STRESS. H.L.Estep, D.P.Island, R.L.Ney and G.W.Iiddle: J. clin. Endocr., 1963, 23, 419-425
 (Dept. Med., Vanderbilt Univ. Sch. Med., Nashville, Tenn., U.S.A.) A study was made to determine what role, if any, the neg. feedback mechanism plays in regulating ACTH secretion during the acute stress of ^{Pa}Parotectomy. It is concluded that during the stress of ^{Pa}parotectomy the behaviour of the human pituitary-adrenal

system does not conform to the specifications of a negative feedback mechanism. K.Jones

45¹ X T **MAN^{R0}** WIH HORMONE IN PITUITARY INFANTILISM. J.A.P.Trafford, D.A.Lillicrap and M.H. Lessof: Lancet, 1963, i, 1128-1130 (Guy's Hosp., London, England) Four patients with pituitary dwarfism - two primary and two due to craniopharyngioma were treated with human growth hormone for periods from £, £¹ r⁰ ! ^ ! ?! ^{ab} cases *^ te of growth has been more than doubled. Ab to growth hormone were found in two cases. G.H.Bell
