POACEAE : TRIBE—ANDROPOGONEAE†

U. R. DESHPANDE*

DICHANTHIUM

Willemet in Usteri, Neue Ann. der. Bot. 18 : 11. 1796 ; Bor, Grass. Bur. Ceyl. Ind. Pak. 133. 1960. *Andropogon* L. sect. *Gymnandropogon* Benth. subsect. *Dichanthium* Willem. in Benth. & Hook. f. Gen. Pl. 3 : 1134. 1880. *Andropogon* L. subgenus *Dichanthium* Hack. in Hook. f. Fl. Brit. Ind. 7 : 195. 1897.

Annuals or perennials, culms slender to robust, simple or branched, erect or ascending, nodes glabrous or bearded. Leaf-blades linear-lanceolate, glabrous or hairy. Inflorescence of 2-many racemes, (rarely solitary) subdigitate or in simple or compound panicle, branches sometimes capillary, joints and pedicels terete or longitudinally grooved. Spikelets paired, one sessile, the other pedicelled. Sessile spikelet dorsally compressed ; glumes 2 ; lower 2-keeled, margins narrowly inflexed, pitted or not ; upper boat-shaped, keeled, lemmas 2 ; lower hyaline nerveless ; upper reduced to hyaline base of an awn. Lodicules 2, minute ; stamens 3 ; styles free, stigmas exserted ; grain oblong-ellipsoid or oblong. Pedicelled spikelet nearly as long as the sessile or longer, awnless, male or neuter ; glumes 2 ; lemma 1.

Distrib. : Ca 45 species, distributed in tropical Old World, viz. AFRICA, AFGHANISTAN, PAKISTAN, INDIA, BURMA, SRI LANKA, CHINA, MALAYSIA, SINGAPORE, THAILAND, INDONESIA, LAOS, JAVA, PHILIPPINES, AUSTRALIA ; 26 species in India, 16 species endemic.

Chr. No. : X = 10.

Notes : Due to intergeneric hybridisation (and production of fertile hybrids) between *Dichanthium* Willem., *Capillipedium* Stapf and *Bothriochloa* O. Ktze., de Wet & Harlan (Amer. J. Bot. 53 : 97. 1966 & Taxon 19 : 339-340. 1970) merged these three genera into one, the name *Dichanthium* Willem. taking priority. Following this, these three genera are treated here as sections of the genus *Dichanthium* Willem.

Roberty (Boissiera 9 : 159, 163, 170. 1960) and Clayton (Kew Bull. 32 : 579. 1978) have also transferred genera *Eremopogon* (Hack.) Stapf,

† Editor for Fam. Poaceae (Tribe Andropogoneae) S. K. Jain, Botanical Survey of India, Howrah-711 103.

* Botanical Survey of India, Pune.

Euclasta Franch. and a few species of the genus *Schizachyrium* Nees under the genus *Dichanthium* Willem. but in author's opinion they are morphologically very distinct from the genus *Dichanthium* Willem. and hence are treated here as separate genera.

- 1a. Joints and pedicels solid, not grooved ; racemes digitate or subdigitate not panicled ... 3. Sect. **Dichanthium**
- 1b. Joints and pedicels with translucent groove, if not grooved then racemes in panicles :
 - 2a. Branches of panicle stout, bearing a number of spikelets from a little above the base to the apex ... 1. Sect. **Bothriochloa**
 - 2b. Branches of panicle capillary, bearing few spikelets near the apex only ... 2. Sect. **Capillipedium**

Section 1. *Bothriochloa* (O. Ktze.) Roberty in Boissiera 9 : 159. 1960.

- 1a. Lower racemes shorter than the main rachis (that is the tip of the lower racemes not exceeding the apex of rachis) :
 - 2a. Plants aromatic ; joints and pedicels densely silky hairy ... 19. **D. odoratum**
 - 2b. Plants not aromatic ; joints and pedicels not so silky or glabrous :
 - 3a. Lower lemma of the sessile spikelet nearly as long as the lower glume ... 10. **D. glabrum**
 - 3b. Lower lemma of the sessile spikelet half as long as the lower glume ... 5. **D. caucasicum**
 - 1b. Lower racemes longer than the main rachis (that is the tip of the lower racemes exceeding the apex of rachis) :
 - 4a. Joints and pedicels terete, if grooved, groove not translucent :
 - 5a. Leaf sheath inflated ... 11. **D. grahamii**
 - 5b. Leaf sheath not inflated :
 - 6a. Sessile spikelet 3-4 mm long ; anthers *ca* 2 mm long ; pedicelled spikelet 4-5 mm long ; lower glume of pedicelled spikelet *ca* 9-nerved ... 7. **D. concanensis**

6b. Sessile spikelet 4.5-6.25 mm long ; anthers 3.0-3.75 mm long ; pedicelled spikelet 5.5-9.0 mm long ; lower glume of pedicelled spikelet 15-19 nerved ... 15. **D. jainii**

4b. Joints and pedicels with translucent groove :

7a. Leaves distichously arranged ... 6. **D. compressum**

7b. Leaves not distichously arranged :

8a. Lower glume of sessile spikelet pitted ; pedicelled spikelet pitted or not :

9a. Lower glume of sessile spikelet hairy below middle ; lower glume of pedicelled spikelet 0-1 pitted ... 22. **D. pertusum**

9b. Lower glume of sessile spikelet glabrous ; lower glume of pedicelled spikelet 2-3 (-4)- pitted ... 13. **D. insculptum**

8b. Lower glume of sessile spikelet pitted or not ; pedicelled spikelet not pitted :

10a. Lower glume of sessile spikelet glabrous :

11a. Racemes 3-6 ; sessile spikelet 4 mm long ; lower glume not pitted ; nodes glabrous ... 9. **D. foulkesii**

11b. Racemes 12-15 ; sessile spikelet 4.5-5.0 mm long ; lower glume pitted or not ; nodes thickly bearded ... 16. **D. kuntzeana**

10b. Lower glume of sessile spikelet hairy below the middle :

12a. Leaves markedly pruinose on the lower surface ; sheaths terete ... 24. **D. pseudoischaemum**

12b. Leaves green ; sheaths keeled :

13a. Leaves caudate ; lower glume of sessile spikelet 8-12 nerved ; plant smelling of camphor ... 26. **D. woodrowii**

- 13b. Leaves mainly at the base of the culm ;
 lower glume of sessile spikelet 5-7
 nerved ; plants not smelling of camphor
 ... 14. *D. ischaemum*

Section 2. *Capillipedium* (Stapf) Deshpande *Stat. nov.*

- 1a. Sessile spikelets awnless ; pedicels spathulate
 ... 23. *D. planipedicellatum*
- 1b. Sessile spikelets awned ; pedicels terete, not spathulate :
 2a. Awn 4.5-6.0 cm long ; lower lemma sometimes aristate
 ... 18. *D. magdaleni*
- 2b. Awn 0.6-3.0 cm long ; lower lemma never aristate :
 3a. Peduncle of raceme pectinately hairy below the lowest
 spikelet ... 25. *D. pteropechys*
- 3b. Peduncle of raceme glabrous :
 4a. Sessile spikelet shorter than the pedicelled spikelet :
 5a. Callus shortly bearded ; sessile spikelet oblong or
 linear-oblong, truncate ; pedicelled spikelet at least
 0.5-1.0 mm longer than the sessile ... 3. *D. assimile*
- 5b. Callus densely bearded ; sessile spikelet oblong-
 lanceolate, obtuse ; pedicelled spikelet equal to or
 slightly longer than the sessile ... 8. *D. filiculme*
- 4b. Sessile spikelet as long as the pedicelled spikelet :
 6a. Leaves rounded at the base, lower glume of sessile
 spikelet channelled ... 21. *D. parviflorum*
- 6b. Leaves tapering to the base, sometimes petioled ;
 lower glume of sessile spikelet not channelled
 ... 12. *D. huegelii*

Section 3. *Dichanthium*

- 1a. Lower glume of sessile or of pedicelled or of both spikelets pitted ;
 if both spikelets not pitted then margins of lower glume of pedi-
 celled spikelet armed with bulbous based bristles :
 2a. Lower glume of both the sessile and pedicelled spikelets not
 pitted ... 17. *D. maccannii*

- 2b. Lower glume of either both spikelets or only sessile spikelets pitted :
- 3a. Lower glume of sessile and pedicelled spikelets pitted ... 20. **D. panchaganiense**
- 3b. Lower glume of sessile spikelet pitted ; pedicelled spikelet not pitted ... 2. **D. armatum**
- 1b. Lower glume of spikelets not pitted ; lower glume of pedicelled spikelet armed with bulbous-based hairs :
- 4a. Lower glume of sessile spikelet oblong, bulbous-based hairs present on the keels and near the apex ; pedicels of the pedicelled spikelet equal or slightly longer than half the length of the sessile spikelet ... 1. **D. annulatum**
- 4b. Lower glume of sessile spikelet obovate, hairs without bulbous bases scattered on the dorsal surface of the glume ; pedicel of the pedicelled spikelet less than half the length of the sessile spikelet ... 4. **D. caricosum**
1. **D. annulatum** (Forssk.) Stapf in Prain, Fl. Trop. Afr. 9 : 178. 1917 ; Haines, Bot. Bih. Or. 3 : 1039. 1924 (Repr. ed. 3 : 1087. 1961) ; Fischer in Fl. Pres. Madr. 10 : 1741. 1934 (Repr. ed. 3 : 1206. 1957) ; Bor in Fl. Assam 5 : 371. 1940 ; Raizada et Jain in Ind. For. Rec. 4(7) : 233. 1957 (1961) ; Bor, Grass. Bur. Ceyl. Ind. Pak. 133. 1960 ; de Wet & Harlan in Bol. Soc. Arg. Bot. 12 : 209. 1968. *Andropogon annulatus* Forssk. Fl. Aegypt.-Arab. 173. 1775 ; Hook. f. Fl. Brit. Ind. 7 : 196. 1897 ; Prain, Beng. Pl. 2 : 1205. 1903 (Repr. ed. 2 : 908. 1963) ; Cooke, Fl. Pres. Bomb. 2 : 988. 1908 (Repr. ed. 3 : 508. 1958).

Figs. 1-2

Densely tufted perennials, *ca* 1 m high ; culms smooth, erect or ascending, nodes long hairy. Leaf-blades 5-30 × 0.3-0.6 cm ; ligule 1.0-1.5 mm long. Inflorescence digitate or sub-digitate, racemes 2-9, 2.5-8.0 cm long ; peduncle 4-13 mm long ; joints and pedicels *ca* 2 mm long hairy. Sessile spikelets *ca* 4 mm long, elliptic ; glumes equal, lower hairy below middle, margins incurved, 5-9-nerved ; upper lanceolate, keeled in the centre ; awn 1.5-2.0 cm long. Pedicelled spikelets as long as the sessile ; lower glume 7-11-nerved.

Type : Egypt : *Forsskal* s. n. (LD, Photo !).

Fls. & Frts. : Sept.-Dec.

Distrib. : INDIA : Common all over ; widely distributed from Western N. Africa to Indonesia, Australia.

Chr. No. : 2n = 20 (de Wet et Harlan, *l. c.*).

2. **D. armatum** (Hook. f.) Blatt. et McCann in J. Bomb. Nat. Hist. Soc. 32 : 425. 1928 ; Bor, Grass. Bur. Ceyl. Ind. Pak. 134. 1960 ; de Wet et Harlan in Bol. Soc. Arg. Bot. 12 : 214. 1968. *Andropogon armatus* Hook. f. Fl. Brit. Ind. 7 : 197. 1897 ; Cooke, Fl. Pres. Bomb. 2 : 987. 1908 (Repr. ed. 3 : 507. 1958).

Figs. 3-4

Annuals, 15-45 cm high, erect, tufted, nodes bearded. Leaf-blades 10-15 cm long, linear, bulbous-hairy on both surfaces ; ligule 0.5-1.0 mm, ciliate. Inflorescence subdigitate, racemes 1-5, simple, 1.5-4.0 cm long, peduncles capillary with whorl of long hairs in the axil ; joints and pedicels ciliate, slender. Sessile spikelets 3.0-3.5 mm long ; callus bearded ; lower glume 3.0-3.25 mm long, elliptic, upper 3.0-3.5 mm long, hairy at back, awn 2.0-2.7 cm long. Pedicelled spikelets slightly longer than the sessile ; lower glume armed with marginal bulbous based, *ca* 6 mm long bristles.

Type : India : Concan Stocks (K).

Fls. & Frts. : Oct.

Distrib. : INDIA : Western Ghats in Maharashtra ; endemic.

Chr. No. 2n = 20 (de Wet & Harlan, *l. c.*).

3. **D. assimile** (Steud.) Deshpande *comb. nov.* *Andropogon assimilis* Steud. in Zoll. Syst. Verz. 58. 1854. et in Syn. Pl. Glum. 1 : 397. 1854 ; Hook. f. Fl. Brit. Ind. 7 : 179. 1897 ; Prain, Beng. Pl. 2 : 1203. 1903 (Repr. ed. 3 : 907. 1963) ; Cooke, Fl. Pres. Bomb. 2 : 981. 1908 (Repr. ed. 3 : 501. 1958). *A. glaucopsis* Steud. in Syn. Pl. Glum. 1 : 397. 1854. *Capillipedium assimile* (Steud.) A. Camus in Lecomte, Fl. Gen. de l' Indo-Chine 7 : 314. 1922 ; Haines, Bot. Bih. Or. 3 : 1028. 1924 (Repr. ed. 3 : 1074. 1961) ; Bor in Fl. Assam 5 : 363. 1940 ; Raizada et Jain in Ind. For. Rec. 4(7) : 226. 1957 (1961) ; Bor, Grass. Bur. Ceyl. Ind. Pak. 110. 1960. *C. glaucopsis* (Steud.) Stapf in Hook. Ic. Pl. Sub tab 3085. 1922 ; Fischer in Fl. Pres. Madr. 10 : 1730. 1934 (Repr. ed. 3 : 1199. 1957). *C. subrepens* (Steud.) Henr. in Blumea 3 : 463. 1940 ; Raizada et Jain in Indian Forester 77 : 749. 1951.

Figs. 5-6

Perennials, 1.5-3.0 m high, culms decumbent, rooting at nodes, nodes glabrous. Leaf blades 4.0-17.0 × 0.2-0.6 cm acuminate; ligule hairy. Inflorescence 4-15 cm long, branched, bearded in the axils; racemes 7-10 mm long; joints and pedicels 1.5-2.5 mm long, filiform. Sessile spikelets 2-3 mm long, pale green or reddish; lower glume oblong or linear-oblong, glabrous; awn 6-12 mm long. Pedicelled spikelets 3.0-3.5 mm long, linear-lanceolate.

Type : Java Zollinger 859 (holotype, P).

Fls. & Frts. : Sept.-Dec.

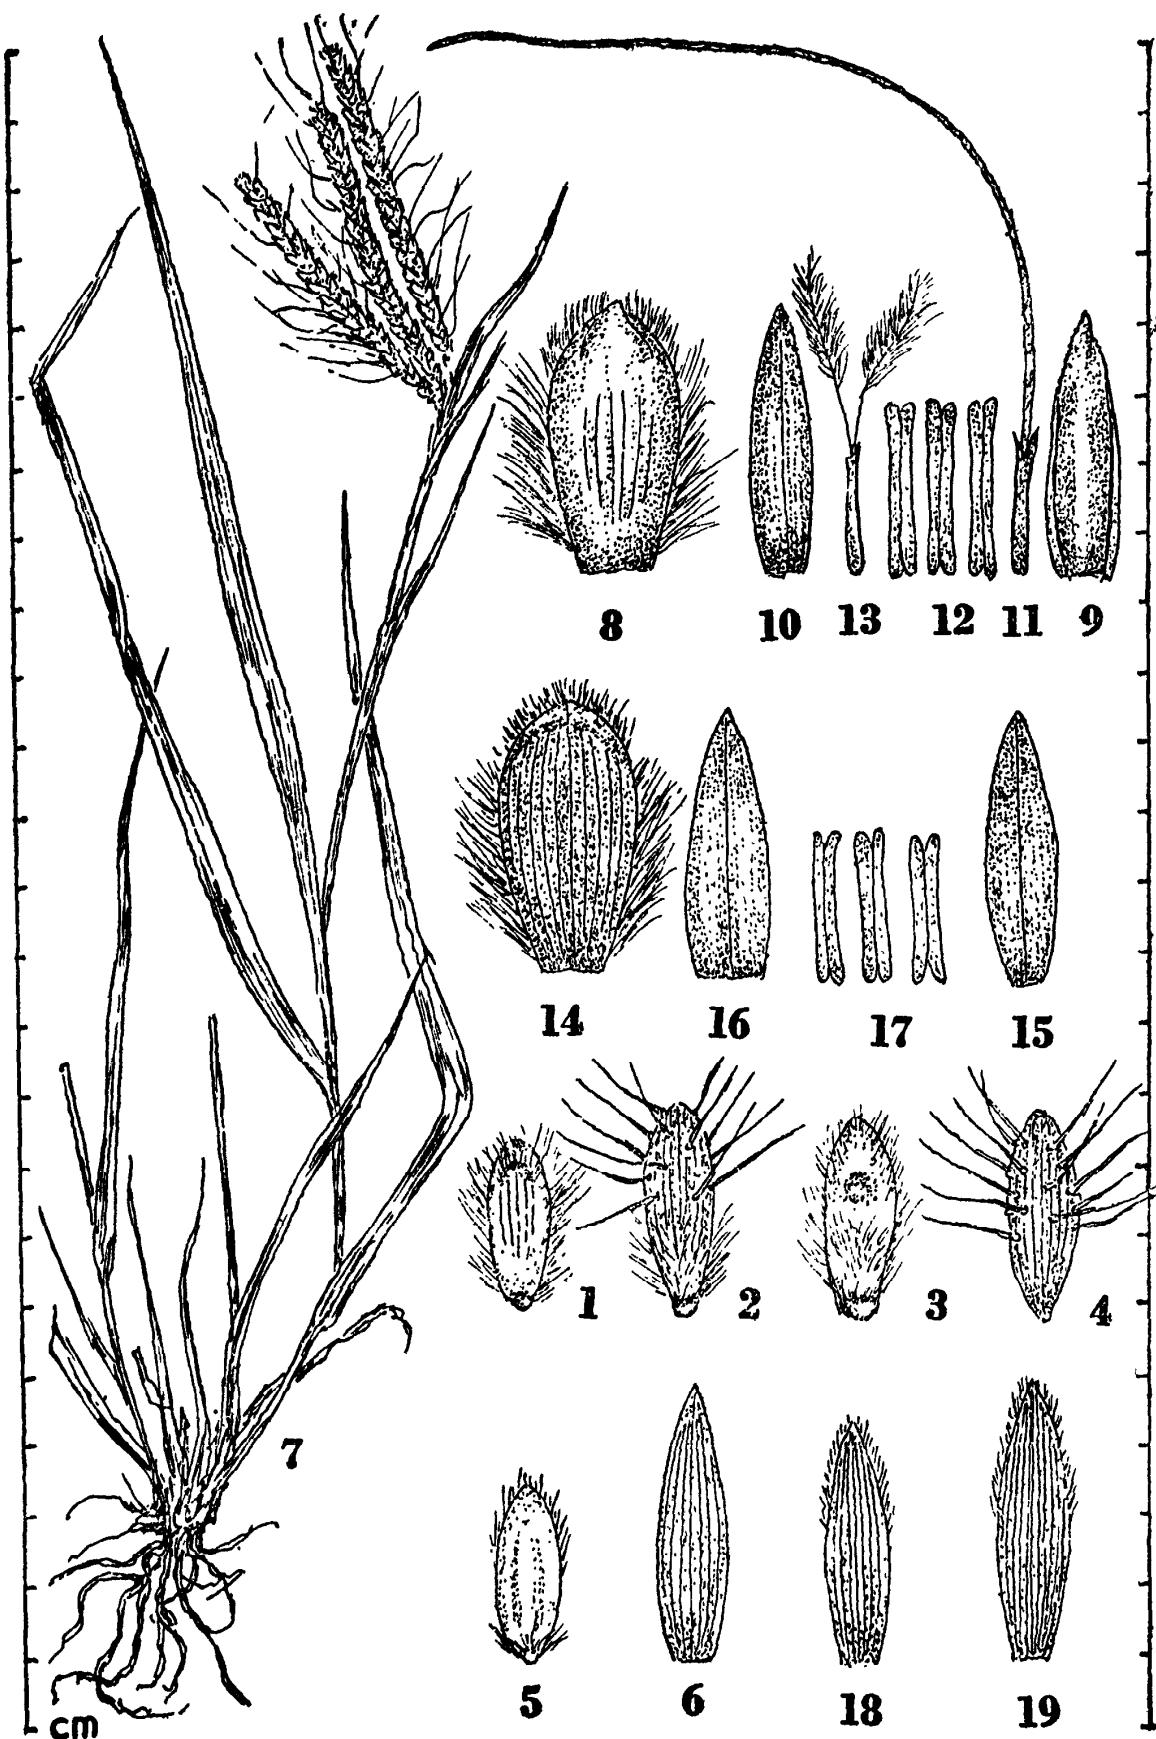

Distrib. : INDIA : Widely distributed : Himachal Pradesh, Sikkim, Arunachal Pradesh, Bihar, West Bengal, Assam, Nagaland, Manipur, Meghalaya, Rajasthan, Madhya Pradesh, Maharashtra, Andhra Pradesh, Orissa, Karnataka, Kerala ; PAKISTAN, NEPAL, BHUTAN, BANGLADESH, BURMA, CHINA, JAPAN, JAVA.

Chr. No. : n = 10 (Khosla & Mehra in Taxon 22 : 647-654. 1973); 2n = 20 (de Wet *et al.* in Caryologia 16 : 47-55. 1963); 2n = 40 (Largen in Dansk. Bot. Arkiv. 20 : 211-275. 1963).

4. *D. caricosum* (L.) A. Camus in Bull. Mus. Hist. Nat. Paris 27 : 549. 1921; Haines, Bot. Bih. Or. 3 : 1039. 1924 (Repr. ed. 3 : 1086. 1961); Fischer in Fl. Pres. Madr. 10 : 1741. 1934 (Repr. ed. 3 : 1206. 1957); Bor in Fl. Assam 5 : 370. 1940; Raizada *et* Jain in Ind. For. Rec. 4(7) : 234. 1957 (1961); Bor, Grass. Bur. Ceyl. Ind. Pak. 134. 1960; de Wet *et* Harlan in Bol. Soc. Arg. Bot. 12 : 215. 1968. *Andropogon caricosum* L. Sp. Pl. ed. 2 : 1480. 1763; Hook. f. Fl. Brit. Ind. 7 : 193. 1897) incl. var. *mollicomus* Hack. in DC. Monogr. Phan. 6 : 569. 1889; Prain, Beng. Pl. 2 : 1205. 1903 (Repr. ed. 2 : 908. 1963); Cooke, Fl. Pres. Bomb. 2 : 987. 1908 (Repr. ed. 3 : 507. 1958). *Dichanthium nodosum* Willem in Usteri Ann. Bot. 18 : 11. 1796, *nom. illeg.*; Fischer l. c. 1741. 1934 (Repr. ed. 3 : 1207. 1957). *Andropogon aristatus* Poir. in Lamk. Encycl. Meth. Bot. Suppl. 1 : 585. 1810. *Apocoris pallida* Hook. f. l. c. 143. 1897. *Dichanthium pallidum* (Hook. f.) Stapf ex Fischer l. c. 1741. 1934 (Repr. ed 3 : 1207. 1957); Bor l. c. 135. 1960. *D. aristatum* (Poir.) C. E. Hubb. in Kew Bull. 1939 : 654. 1939; Raizada *et* Jain in Ind. For. Rec. 4(7) : 232. 1957 (1961); Bor l. c. 134. 1960; de Wet *et* Harlan in Bol. Soc. Arg. Bot. 12 : 213. 1968. *syn. nov.*

Figs. 7-17

Perennials, 30-100 cm high, culms erect or creeping, nodes glabrous, sometimes bearded. Leaf-blades 5-30 × 0.3-0.6 cm, finely acuminate,

Figs. 1-19 : See page 9 for caption

glabrous or sparsely hairy ; ligule a short ciliate membrane. Racemes 1-6, 3-10 cm long, solitary, 2-nate or digitate ; peduncle below the inflorescence and pedicels of the racemes hairy or glabrous ; joints and pedicels 1.0-1.5 mm long, solid, hairy on one side. Sessile spikelets 3-5 mm long, lower glume obovate or oblong 5-7-nerved, keels winged near the apex, dorsally more or less hairy ; awn *ca* 2 cm long. Pedicelled spikelet nearly as long as the sessile.

Type : India *Linnaeus* s. n.(?).

Fls. & Frts. : Oct.-Dec.

Distrib. : INDIA : Jammu & Kashmir, Punjab, Uttar Pradesh, Bihar, West Bengal, Assam, Manipur, Rajasthan, Gujarat, Maharashtra, Madhya Pradesh, Andhra Pradesh, Orissa, Tamil Nadu, Karnataka, Andaman ; BURMA, CHINA, MALAYSIA, THAILAND, LAOS, INDONESIA, SINGAPORE, SIAM, AFRICA.

Chr. No. : $2n = 20$ (de Wet et Harlan, *l. c.*).

Notes : Bor (*l. c.*) differentiated *D. caricosum* (L.) A. Camus and *D. aristatum* (Poir.) C. E. Hubb. by mere glabrous or hairy nature of the pedicels of the racemes. de Wet and Harlan (*l. c.*) have given some differentiating characters which appear to be useful but on practical examination of a wide range of material, they prove to be very variable and cannot be relied upon.

Cytologically these two species may be different but it is not possible to distinguish the two on the basis of morphological characters. Since the plants are very variable, as also suggested by Pandeya (J. Ind. bot. Soc. 32 : 86-100. 1953), *D. aristatum* and *D. caricosum* are treated here as conspecific.

Caption of figs. 1-19

- 1-2 : *Dichanthium annulatum* (Forssk.) Stapf. 1. Lower glume of sessile spikelet. 2. Lower glume of pedicelled spikelet.
- 3-4 : *D. armatum* (Hook. f.) Blatt. et McCann. 3. Lower glume of sessile spikelet. 4. Lower glume of pedicelled spikelet.
- 5-6 : *D. assimile* (Steud.) Deshpande. 5. Lower glume of sessile spikelet. 6. Lower glume of pedicelled spikelet.
- 7-17 : *D. caricosum* (L.) A. Camus. 7. Habit. 8-13 : Sessile spikelet. 8. Lower glume. 9. Upper glume. 10. Lower lemma. 11. Upper lemma. 12. Stamens. 13. Pistil. 14-17 : Pedicelled spikelet. 14. Lower glume. 15. Upper glume. 16. Lemma. 17. Stamens.
- 18-19 : *D. concanensis* (Hook. f.) Jain et Deshpande. 18. Lower glume of sessile spikelet. 19. Lower glume of pedicelled spikelet.

The identity of *D. pallidum* (Hook. f.) Stapf ex Fischer with reference to *D. caricosum* (L.) A. Camus is also doubtful. Recently it has been reported by Bhattacharya and Uniyal (Bull. Bot. Surv. Ind. 15 : 167. 1973) from N. India, besides its representation at Kew herbarium from 24 Parganas in West Bengal and from Nellore in Peninsular India. The distinguishing characters as given by Bor (*l. c.*) are very variable. After examining the specimen (*Bhattacharya* 13640) of this species matched and identified at Kew, no remarkable difference could be found between this species and *D. caricosum*. Therefore, *D. pallidum* is treated as a synonym to *D. caricosum* as also suggested by de Wet and Harlan (*l. c.*).

5. ***D. caucasicum*** (Trin.) Jain et Deshpande in Bull. Bot. Surv. Ind. 20 : 133. 1978 (1979). *Andropogon caucasicus* Trin. in Mem. Acad. Sci. Petersb. ser. 6(2) : 286. 1833. *A. intermedius* var. *caucasica* (Trin.) Hack. in DC. Monogr. Phan. 6 : 486. 1889; Hook. f. Fl. Brit. Ind. 7 : 176. 1897. *Bothriochloa caucasica* (Trin.) C. E. Hubb. in Kew Bull. 1939 : 101. 1939; Bor, Grass. Bur. Ceyl. Ind. Pak. 106. 1960.

Annuals *ca* 30 cm high, culms glabrous. Inflorescence a sub-simple panicle, 8-10 cm long; joints and pedicels hairy 2.0-2.5 mm long. Sessile spikelets *ca* 3.5 mm long; lower glume 5-7-nerved, puberulous, not pitted; upper more or less equal to lower; lower lemma nearly half as long as the lower glume; awn *ca* 6 mm long. Pedicelled spikelet *ca* 3 mm long, glabrous.

Type : Caucasus Orient Wilheme 1827 (holotype, LE).

Fls. & Frts. : Aug.-Oct. (Apr.).

Distrib. : INDIA : West Bengal, Manipur, Madhya Pradesh; PAKISTAN, U.S.S.R., AMERICA (introduced).

Chr. No. : $2n = 40$ (Harlan *et al.* in Oklahoma State Univ. Tech. Bull. T-72 : 5. 1958).

6. ***D. compressum*** (Hook. f.) Jain et Deshpande in Bull. Bot. Surv. Ind. 20 : 133. 1978 (1979). *Andropogon compressus* Hook. f. Fl. Brit. Ind. 7 : 172. 1897; Cooke, Fl. Pres. Bomb. 2 : 977. 1908 (Repr. ed. 3 : 496. 1958). *A. ensiformis* Hook. f. Fl. Brit. Ind. 7 : 175. 1897; Cooke, *l. c.* 979. 1908 (Repr. ed. 3 : 499. 1958). *Amphilophis compressa* (Hook. f.) Blatt. et McCann, Bomb. Grass. 83, t. 53. 1935; *A. ensiformis* (Hook. f.) Blatt. et McCann, *l. c.* 86. 1935. *Bothriochloa compressa* (Hook. f.) Henr. in Blumea 3 : 456. 1940; Bor,

Grass. Bur. Ceyl. Ind. Pak. 106. 1960. *B. ensiformis* (Hook. f.) Henr. in Blumea 3 : 457. 1940; Bor, l. c. 107. 1960.

Figs. 20-21

Tall or densely tufted perennials, 0.6-1.0 m high, nodes glabrous. Leaf-sheaths compressed, keeled; blades 20.0-45.0 × 1.0 cm, linear-lanceolate, finely acuminate; ligule scarious. Panicle ca 7.5 cm long; joints and pedicels with long silky hairs. Sessile spikelets 4.0-5.0 mm long; ovate-oblong; lower glume 5-7-nerved; hairy or sparsely hairy below middle; upper 1-3-nerved; lower lemma narrowly oblong; awn 12.0-17.0 mm long. Pedicelled spikelets linear-oblong, as long as the sessile but narrower.

Type : India : Deccan *Lisboa* (No. 6. *A. odoratus*) (K, Photo !); Deccan Woodrow s. n. (K, Photo !).

Fls. & Frts. : Oct.-Nov.

Distrib. : INDIA : Western Ghats of Maharashtra; endemic.

Chr. No. : 2n = 20 (de Wet et al. in Caryologia 16 : 47-55. 1963).

Notes : A scrutiny of the type photos and herbarium specimens of *A. compressus* Hook. f. and *A. ensiformis* Hook. f. showed no significant difference to treat them as distinct species.

7. **D. concanensis** (Hook. f.) Jain et Deshpande in Bull. Bot. Surv. Ind. 20 : 134. 1978 (1979). *Andropogon concanensis* Hook. f. Fl. Brit. Ind. 7 : 174. 1897; Cooke, Fl. Pres. Bomb. 2 : 980. 1908 (Repr. ed. 3 : 499. 1958). *Amphilophis concanensis* (Hook. f.) Blatt. et McCann, Bomb. Grass. 87, t. 58. 1935. *Bothriochloa concanensis* (Hook. f.) Henr. in Blumea 3 : 457. 1940; Bor, Grass. Bur. Ceyl. Ind. Pak. 106. 1960.

Figs. 18-19

Perennials, 60-80 cm high. Leaf-blades 20-30 × 0.2-0.5 cm linear, finely acuminate, glabrous. Racemes 5-8, loosely fasciculate, 5-7 cm long; rachis and peduncles filiform; joints and pedicels 2 mm long, silky hairy. Sessile spikelet ca 4 mm long; callus bearded; glumes as long as the spikelet; lower glume 7-9-nerved, margins incurved, keeled near the apex, shortly ciliate; upper acuminate, faintly 3-nerved; awn ca 2 cm long. Pedicelled spikelet as long as or slightly longer and narrower than the sessile.

Type : India : Bombay Woodrow (Herb. Bomb. n. 28) (K, Photo !).

Fls. & Frts. : Oct.-Nov.

Distrib. : INDIA : Western Ghats, Maharashtra fairly distributed, Karnataka rare; endemic.

Chr. No. : $2n = 20$ (de Wet *et al.* in Caryologia 16 : 47-55. 1963).

8. **D. filiculme** (Hook. f.) Jain et Deshpande in Bull. Bot. Surv. Ind. 20 : 134. 1978 (1979). *Andropogon filiculme* Hook. f. Fl. Brit. Ind. 7 : 181. 1897; Cooke, Fl. Pres. Bomb. 2 : 982. 1908 (Repr. ed. 3 : 502. 1958). *Capillipedium filiculme* (Hook. f.) Stapf in Hook. Ic. Pl. subtab. 3085. 1922; Fischer in Fl. Pres. Madr. 10 : 1730. 1934. (Repr. ed. 3 : 1199. 1957); Raizada et Jain in Indian Forester 77 : 753. 1951; Bor, Grass. Bur. Ceyl. Ind. Pak. 111. 1960.

Figs. 35-36

Annuals, 50-90 cm high, culms slender, trailing. Leaf-blades 5-11 \times 0.3-0.5 (0.7) cm, tip filiform. Panicle 4-6 cm long, branches filiform, spikelets 2-3, pale green or white, sessile spikelets 2.5-3.0 mm long, oblong-lanceolate; lower glume 2.5-3.0 mm long, 5-7-nerved, hairy below the middle or all over, sometimes glabrous; awn 13-16 mm long. Pedicelled spikelet narrower than the sessile.

Type : Poona Jacquemont 310; Dhomsha Woodrow 26 (Syntypes, K).

Fls. & Frts. : Oct.-Dec.

Distrib. : INDIA : Maharashtra, Karnataka and Tamil Nadu; endemic.

9. **D. foulkesii** (Hook. f.) Jain et Deshpande in Bull. Bot. Surv. Ind. 20 : 134. 1978 (1979). *Andropogon foulkesii* Hook. f. Fl. Brit. Ind. 7 : 174. 1897. *Amphilophis foulkesii* (Hook. f.) Fischer in Fl. Pres. Madr. 10 : 1732. 1934 (Repr. ed. 3 : 1200. 1957). *Bothriochloa foulkesii* (Hook. f.) Henr. in Blumea 3 : 457. 1940; Bor, Grass. Bur. Ceyl. Ind. Pak. 107. 1960.

Perennials, ca 90 cm high, culms erect, nodes glabrous. Leaf-blades 10-35 \times 0.4-0.6 cm, often involute. Inflorescence digitately fascicled, racemes 3-6, ca 10 cm long; joints and pedicels ca 2 mm long, hairy. Sessile spikelets ca 4 mm long, oblong-lanceolate; glumes as long as the spikelet, lower dorsally longitudinally depressed, 7-nerved, nerves distinct or not, upper 3-nerved; awn ca 2 cm long. Pedicelled spikelet slightly longer and narrower than the sessile.

Type : India : Pykora Aug. 1878, King s. n. (Syntype, CAL !); Kaity Foulkes s. n. (K, Photo !).

Fls. & Frts. : July-Sept.

Distrib. : INDIA : Tamil Nadu ; endemic.

Chr. No. : $2n = 20, 40$ (de Wet *et al.* in *Caryologia* 16 : 47-55. 1963).

10. **D. glabrum** (Roxb.) Jain et Deshpande in Bull. Bot. Surv. Ind. 20 : 134. 1978 (1979). *Andropogon glaber* Roxb. Fl. Ind. 1 : 267. 1820. *A. intermedius* auct. *non* R. Br. 1810 ; Hook. f. Fl. Brit. Ind. 7 : 175. 1897 ; Prain, Beng. Pl. 2 : 1204. 1903 (Repr. ed. 2 : 907. 1963) ; Cooke, Fl. Pres. Bomb. 2 : 980. 1908 (Repr. ed. 3 : 500. 1958). *A. montanus* Roxb. Fl. Ind. 1 : 267. 1820 ; Hook. f. l. c. 176. 1897. *Amphilophis glabra* (Roxb.) Stapf in Fl. Trop. Africa 9 : 172. 1917 ; Haines, Bot. Bih. Or. 3 : 1028. 1908 (excl. syn. *A. intermedius* R. Br.) (Repr. ed. 3 : 1075. 1961) ; Fischer in Fl. Pres. Madr. 10 : 1732. 1934 (Repr. ed. 3 : 1200. 1957). *Bothriochloa glabra* (Roxb.) A. Camus in Ann. Soc. Linn. Lyon, 1930, n. s. 76 : 164. 1931 ; Raizada et Jain in Ind. For. Rec. 4(7) : 230. 1957 (1961) ; Bor, Grass. Bur. Ceyl. Ind. Pak. 107. 1960. *B. intermedia* *sensu* Bor in Fl. Assam 5 : 367. 1940.

Fig. 22

Perennials, 90-100 cm high, culms tufted, glabrous. Leaf-sheaths glabrous, smooth ; blades $14-40 \times 0.5-1.1$ cm, linear, with a setaceous tip ; ligule truncate. Panicle 10-20 cm long, lower racemes simple or branched ; joints and pedicels 2.0-3.5 mm long, ciliate. Sessile spikelets 3.0-3.5 (-4.0) mm long ; glumes equal, lower hairy below the middle (sometimes glabrous), pitted or not. Pedicelled spikelet 2.5-3.25 mm long, linear.

1a. Sessile spikelets pitted or not ; pedicelled spikelets not pitted
... var. **glabrum**

1b. Sessile and pedicelled spikelets pitted ... var. **punctatum**

var. **glabrum**

Type : India : Bengal *Roxburgh* s. n. (Roxb. Ic. 1194, CAL !, K).

Fls. & Frts. : Sept.-Feb.

Distrib. : INDIA : Uttar Pradesh, Bihar, West Bengal, Sikkim, Assam, Manipur, Meghalaya, Rajasthan, Maharashtra, Madhya Pradesh, Orissa, Andhra Pradesh, Tamil Nadu ; PHILIPPINES.

Chr. No. : $2n = 40$ (de Wet *et al.* in *Caryologia* 16 : 47-55. 1963).

Notes : According to de Wet & Harlan (Taxon 19 : 339-340. 1970) this is a hybrid between tetraploid *D. parviflorum* (R. Br.) de Wet et Harlan and tetraploid *D. bladhii* (R. Br.) Clayton.

A scrutiny of the type photo of *A. bladhii* Retz. [*D. bladhii* (Retz.) Clayton] and Roxburgh's Icones no. 1194 of *A. glaber* Roxb. (*D. glabrum*) shows that the two taxa are entirely different, and all Indian specimens belong to *D. glabrum*. *D. bladhii* has lower racemes longer than the central axis and is not represented in India.

Supposed to be a good fodder.

var. **punctatum** (Roxb.) Deshpande *comb. nov.* *Andropogon punctatus* Roxb. Fl. Ind. 1 : 268. 1820 syn. nov. *Bothriochloa intermedia* (R. Br.) A. Camus var. *punctata* (Roxb.) Keng. Clav. Gram. Prim. Sin. 244. 1957 ; Bor, Grass. Bur. Ceyl. Ind. Pak. 108. 1960.

Type : India Roxburgh s. n. (Ic. 892, CAL !).

Fls. & Frts. : Sept.-Dec.

Distrib. : INDIA : Punjab, Uttar Pradesh, Bihar, West Bengal, Sikkim, Manipur, Meghalaya, Rajasthan, Maharashtra, Madhya Pradesh, Orissa, Kerala ; AFRICA.

Notes : Earlier workers, including Bor (1960), followed Keng, in treating *A. punctatus* as a variety of *A. intermedius* R. Br. (*D. bladhii*). But, in *A. punctatus* (Roxb. Ic. 892) lower racemes are shorter than the central axis and it resembles *A. glaber* more closely ; hence it is transferred here and treated as a variety of *D. glabrum*.

11. **D. grahamii** (Haines) Deshpande *comb. nov.* *Andropogon grahamii* Haines in Kew Bull. 1914. 189. 1914. *Bothriochloa grahamii* (Haines) Bor, Grass. Bur. Ceyl. Ind. Pak. 107. 1960.

Woody, often branched, perennials, branches fasciculate at nodes ; nodes pilose. Leaf-sheaths inflated ; blades 6-12 × 0.3-0.4 cm linear ; ligule short. Racemes 3-7, 3.5-5.0 cm long ; joints and pedicels densely ciliate. Sessile spikelet oblong, ca 3.5 mm long ; lower glume truncate, 5-nerved ; upper lanceolate acute, 3-nerved ; awn ca 2 cm long. Pedicelled spikelet narrower than the sessile spikelet.

Type : India : Central Provinces, Bewars, Lormi forests, Haines 3646 (K, Photo !).

Fls. & Frts. : May.

Distrib. : INDIA : Madhya Pradesh, rare ; endemic.

Chr. No. : $2n = 40$ (de Wet et Higgins in Phyton 20 : 205-211. 1963).

Notes : According to de Wet & Harlan (Taxon 19 : 339-340. 1970) this was an intergeneric hybrid between *Bothriochloa* [*D. bladhii* (Retz.) Clayton] and *Dichanthium* [*D. annulatum* (Forssk.) Stapf] it is one of the main grounds for merging these two genera.

12. ***D. huegelii* (Hack.) Jain et Deshpande** in Bull. Bot. Surv. Ind. 20 : 135. 1978 (1979). *Andropogon huegelii* Hack. in DC. Monogr. Phan. 6 : 492. 1889 ; Hook. f. Fl. Brit. Ind. 7 : 180. 1897 ; Cooke, Fl. Pres. Bomb. 2 : 982. 1908 (Repr. ed. 3 : 501. 1958). *A. foetidus* Donna Lisboa in J. Bomb. Nat. Hist. Soc. 6 : 205. 1891. *A. schmidii* Hook. f. l. c. 180. 1897. *Capillipedium huegelii* (Hack.) Stapf. in Hook. Ic. Pl. subtab. 3085. 1922 ; Fischer in Fl. Pres. Madr. 10 : 1730. 1934. (Repr. ed. 3 : 1199. 1957) ; Raizada et Jain in Ind. For. Rec. 4(7) : 227. 1958 (1961) ; Bor, Grass. Bur. Ceyl. Ind. Pak. 111 : 1960. *C. foetidum* (Lisboa) Raizada et Jain in Indian Forester 77 : 752. 1951.

Figs. 29-30

Perennials, culms slender, simple or branched, 0.75-1.2 m high, nodes densely bearded. Leaf-blades 8-20 \times 0.5-2.0 cm, narrowed at the base or sometimes petioled ; ligule membranous. Panicle 5-15 cm long ; joints and pedicels ciliate. Sessile spikelets 2-3 mm ; lower glume 2-3 mm, ovate, glabrous or hairy below middle. Lower lemma nearly half as long as the lower glume, ovate ; awn ca 3 cm long. Pedicelled spikelet equal to, or slightly longer than sessile.

Type : Asia *Huegel* 2243 (holotype, W !).

Fls. & Frts. : Aug.-Dec.

Distrib. : INDIA : Uttar Pradesh, Sikkim, Rajasthan, Gujarat, Maharashtra, Madhya Pradesh, Andhra Pradesh, Tamil Nadu, Karnataka ; endemic.

Chr. No. : $n = 20$ (Khosla & Mehra in Taxon 22 : 647-654. 1973) ; $2n = 20$ (de Wet et al. in Caryologia 16 : 47-55. 1963).

Type : India : East of the third table land, Panchgani (Satara Dist.), Oct. 1925, McCann, s. n. (BLAT !).

Fls. & Frts. : Oct.

Distrib. : INDIA : Maharashtra ; endemic.

Chr. No. : $2n = 20$ (de Wet et Harlan *l. c.*).

18. **D. magdaleni** (Almeida) Jain et Deshpande in Bull. Bot. Surv. Ind. 20 : 135. 1978 (1979). *Capillipedium magdaleni* Almeida in J. Bomb. Nat. Hist. Soc. 72 : 813. 1974.

Figs. 37

Perennials, *ca* 20 cm high, culms geniculate. Leaf-sheaths *ca* 3 cm long, striate; blades 4.0×0.3 cm, acuminate; ligule a thin membrane 0.5 mm long. Panicle 1-2 cm long, simple; rachis capillary, glabrous; joints and pedicels *ca* 1.5 mm long. Sessile spikelet *ca* 3 mm long, linear-lanceolate; lower glume *ca* 3 mm long, 5-nerved, hairy; lower lemma linear, acuminate, hyaline, sometimes looks like an awn; upper lemma a 4.5-6.0 cm long awn. Pedicelled spikelets 4-5 mm long; lower glume lanceolate, acute 7-9-nerved.

Type : India : Karnataka, Agumbe Nov. 1972, Almeida 2566, (BLAT !); Agumbe Almeida 2941 (Paratype, BSI !).

Fls. & Frts. : Nov.

Distrib. : INDIA : Karnataka, collected by the sides of a waterfall on rocky substratum only from one spot at Agumbe ; endemic.

Notes : This is a very distinct species having the longest awn in the section *Capillipedium*.

19. **D. odoratum** (Lisboa) Jain et Deshpande in Bull. Bot. Surv. Ind. 20 : 134. 1978 (1979). *Andropogon odoratus* Lisboa in J. Bomb. Nat. Hist. Soc. 4 : 123. 1889; Hook. f. Fl. Brit. Ind. 7 : 177. 1897; Cooke, Fl. Pres. Bomb. 2 : 981. 1908 (Repr. ed. 3 : 500. 1958). *Amphilophis odorata* (Lisboa) A. Camus in Rev. Bot. Appl. 305. 1921; *Bothriochloa odorata* (Lisboa) A. Camus in Ann. Soc. Linn. Lyon, 1930, n. s. 76 : 165. 1931; Bor, Grass. Bur. Ceyl. Ind. Pak. 109. 1960.

Robust, aromatic perennials, 1-2 m high ; leaf-sheaths compressed, glabrous ; blades $30-60 \times 0.4-1.0$ cm, linear-lanceolate, acuminate, margins scaberulous ; ligule, truncate. Inflorescence a dense panicle, racemes simple or branched, silky ; joints and pedicels silky hairy. Sessile spikelets 4-5 mm long ; lower glume oblong-lanceolate, hairy below middle, 7-nerved, rarely pitted ; awn 13-16 mm long. Pedicelled spikelets equal to sessile, pitted or not.

Type : India : Bombay, Oct. 1890, *Lisboa* s. n. (K, Photo !).

Fls. & Frts. : Nov.-Jan.

Distrib. : INDIA : Rare in West Bengal ; widely distributed in Maharashtra ; endemic.

Chr. No. : $2n = 40$ (de Wet *et al.* in *Caryologia* 16 : 47-55. 1963).

Notes : In the Plate given by Lisboa (*l. c.* opp. p. 118), the inflorescence is so made as to resemble that of *D. pertusum* (L.) Clayton.

The National Chemical Laboratory, Poona extracted an aromatic oil from this grass but it is not commercially used so far.

20. ***D. panchaganiense*** Blatt. et McCann in J. Bomb. Nat. Hist. Soc. 32 : 357. 1927 ; Bor, Grass. Bur. Ceyl. Ind. Pak. 135. 1960 ; de Wet et Harlan in Bol. Soc. Arg. Bot. 12 : 220. 1968.

Figs. 33-34

Annuals, 5-35 cm high, nodes bearded. Leaf-sheaths bulbous hairy ; blades $3-8 \times 0.3-0.4$ cm, acuminate, bulbous hairy. Racemes 1-3, solitary or digitate, *ca* 3 cm long ; peduncles capillary, *ca* 8 mm long ; joints and pedicels hairy. Sessile spikelets *ca* 3 mm long ; lower glume broadly oblong, pitted, 5-7-nerved, hairy except near the pit ; upper oblong-lanceolate, keeled ; awn 10-20 mm long. Pedicelled spikelets 3.5-4.0 mm long, glume pitted, armed with spreading marginal bulbous-based bristles.

Type : India : Maharashtra, Panchgani, Nov. 1925, *McCann* s. n. (BLAT !, K).

Fls. & Frts. : Oct.-Nov.

Distrib. : INDIA : Maharashtra, Panchgani, Satara District ; endemic.

Chr. No. : $2n = 20$ (de Wet & Harlan *l. c.*).

21. ***D. parviflorum*** (R. Br.) de Wet et Harlan in Amer. J. Bot. 53 : 97. 1966. *Holcus parviflorus* R. Br. Prodr. 199. 1810. *Andropogon mic-*

ranthus Kunth, Rev. Gram. 1 : 165. 1829 ; Hook. f. Fl. Brit. Ind. 7 : 178. 1897 (incl. var. *vilosulus* Hack. in DC. Monogr. Phan. 6 : 440. 1889) ; Prain, Beng. Pl. 2 : 1203. 1903 (Repr. ed. 2 : 907. 1963). *Capillipedium parviflorum* (R. Br.) Stapf in Fl. Trop. Afr. 9 : 169. 1917 ; Haines, Bot. Bih. Or. 3 : 1027. 1924 (Repr. ed. 3 : 1074. 1961) ; Bor in Fl. Figs. 38-40

Perennials, 0.75-1.5 m high, culms tufted, nodes bearded. Leaf-sheaths glabrous, villous at the junction with the blade ; blades 7-30 × 0.3-0.9 cm, tapering to a fine point. Panicle 10-25 cm long, branched. Racemes reduced generally to 1 sessile and 2 pedicelled spikelets, rarely 2-3 jointed ; joints and pedicels ca 2 mm long. Sessile spikelets 3.0-4.5 mm long, oblong ; awn 1.25-2.0 cm long. Pedicelled spikelets 2.8-4.2 mm long, narrower than the sessile spikelet.

Type : Australia R. Brown s. n. (BM).

Fls. & Frts. : Aug.-Jan.

Distrib. : INDIA : Jammu & Kashmir, Himachal Pradesh, Uttar Pradesh, Bihar, West Bengal, Sikkim, Assam, Nagaland, Manipur, Meghalaya, Rajasthan, Madhya Pradesh, Orissa ; PAKISTAN, BURMA, MALAYA, JAVA, AUSTRALIA, AFRICA.

Figs. 42-44

Sandhur (Hind.) ; *Palva* (Mar.) ; *Palwan* (Punj.) ; *Chinna-karai Pully* (Tam.) ; *Janugaddi* (Tel.) ; *Basana* (Urd.).

Very variable, culms erect or geniculately ascending, 30-60 cm high, nodes densely bearded. Leaf-sheaths glabrous or villous; lower leaves short, crowded at the base, upper *ca* 30 cm long, acute or acuminate. Racemes 3-15, digitate or subdigitate, silky hairy; joints and pedicels *ca* 2.5 mm long, densely long silky hairy. Sessile spikelets 3.5-4.0 mm long, oblong-lanceolate; lower glume elliptic-oblong, obtuse or truncate, pitted, 5-9-nerved; upper lanceolate 3-5-nerved. Pedicelled spikelet narrower than sessile, pitted or not.

Type : East India Orientalis Linnaeus (microfische no. 1212. 16, BSI !, K).

Fls. & Frts. : Sept.-Jan.

Distrib. : INDIA : Punjab, Uttar Pradesh, Bihar, West Bengal, Assam, Rajasthan, Gujarat, Maharashtra, Madhya Pradesh, Orissa, Andhra Pradesh, Daman, Tamil Nadu, Karnataka, Kerala; BURMA, SRI LANKA.

Chr. No. : n = 40 (de Wet *et al.* in Caryologia 16 : 47-55. 1963).

23. **D. planipedicellatum** (Bor) Jain et Deshpande in Bull. Bot. Surv. Ind. 20 : 135. 1978 (1979). *Capillipedium planipedicellatum* Bor in Kew Bull. 1949 : 222. 1949 et Grass. Bur. Ceyl. Ind. Pak. 112. 1960. *Filipedium planipedicellatum* (Bor) Raizada et Jain in J. Bomb. Nat. Hist. Soc. 49 : 683, t. opp. p. 681. 1951.

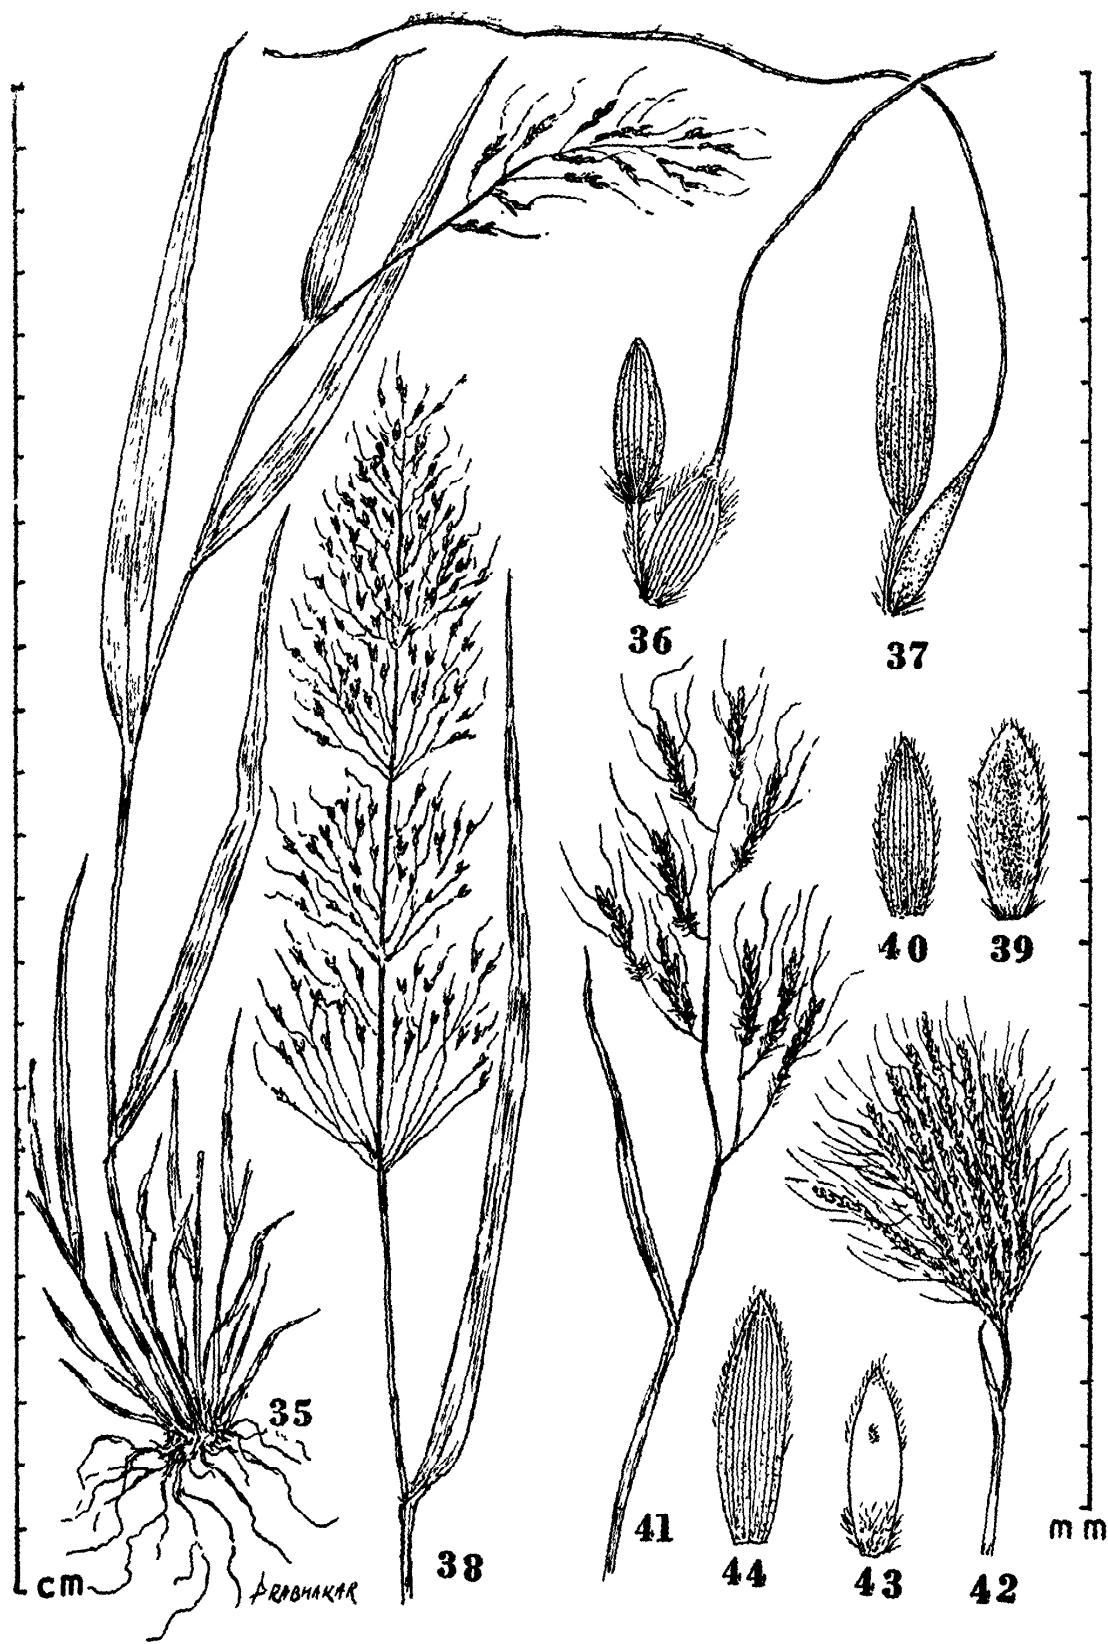

Perennials, 90-120 cm high, culms simple, erect; nodes glabrous. Leaf-sheaths striate, smooth; blades *ca* 8.0 × 0.3 cm, apex a fine point; ligule membranous, ciliate above. Panicles 15-20 cm long branched, branches whorled, capillary. Racemes fragile; joints and pedicels 1.5-2.5 mm long, glabrous; sessile spikelet 2.5-3.0 mm long, elliptic-oblong; lower glume 2.5-3.0 mm long, glabrous, 9-nerved; pedicelled spikelet *ca* 1.5 mm long, reduced to 2 small glumes.

Type : Manipur, Palcl 2500 ft. 10th Oct. 1942, Bor 17059 (isotype, DD !, K).

Fls. & Frts. : Oct.

Distrib. : INDIA : Manipur State; rare and endemic.

24. **D. pseudoischaemum** (Nees ex Steud.) Jain et Deshpande in Bull. Bot. Surv. Ind. 20 : 134. 1978 (1979). *Andropogon pseudoischaemum*

Figs. 35-44 : See page 25 for caption.

Nees ex Steud. Syn. Pl. Glum. 1 : 380. 1854 ; Hook. f. Fl. Brit. Ind. 7 : 172. 1897. *A. ischaemum* sensu Roxb. Fl. Ind. 1 : 264. 1820, non L. (1753). *Amphilophis pseudoischaemum* (Nees ex Steud.) Fischer in Fl. Pres. Madr. 10 : 1731. 1934 (Repr. ed. 3 : 1200. 1957). *Bothriochloa pseudoischaemum* (Nees ex Steud.) Henr. in Blumea 3 : 457. 1940 ; Bor, Grass. Bur. Ceyl. Ind. Pak. 109. 1960.

Culms 60-100 cm high, stout, nodes bearded. Leaf-sheaths terete; blades 15-30 cm long, acuminate, pruinose on the lower surface; ligule very short, ovate. Spikes fasciculate, 4-10, ca 10 cm long; joints and pedicels silky hairy. Sessile spikelet ca 5 mm long; lower glume silky hairy, not pitted, 7-9-nerved; upper 3-nerved; lower lemma hyaline; awn ca 16 mm long. Pedicelled spikelet ca 6 mm long, not pitted.

Type : Coromandel *Roxburgh* s. n. (?). Steudal (*l. c.*) cited 'Heyne herb. in Wall. Cat. nr. 8815 Ind. Or.' (microfische !) which may be treated as type.

Fls. & Frts. : July-Sept.

Distrib. : INDIA : Andhra Pradesh, Tamil Nadu; SRI LANKA.

Bur. Ceyl. Ind. Pak. 113. 1960.

Figs. 41

Culms 30-90 cm high, nodes bearded. Leaf-sheaths striate, glabrous, except for few long hairs at mouth; blades 7.5-20.0 × 0.5 cm, acuminate;

Caption of figs. 35-44

- 35-36 : *Dichanthium filiculme* (Hook. f.) Jain et Deshpande. 35. Habit. 36. A pair of sessile and pedicelled spikelets.
 37 : *D. magdaleni* (Almeida) Jain et Deshpande. A pair of sessile and pedicelled spikelets.
 38-40 : *D. parviflorum* (R. Br.) de Wet et Harlan. 38. Inflorescence. 39. Lower glume of sessile spikelet. 40. Lower glume of pedicelled spikelet.
 41 : *D. pteropechys* (Clarke) Jain et Deshpande. Inflorescence.
 42-44 : *D. pertusum* (L.) Clayton. 42. Inflorescence. 43. Lower glume of sessile spikelet. 44. Lower glume of pedicelled spikelet.

ligule 0.5 mm long, ciliate. Panicle 5.0-8.5 cm long, sparingly branched. Racemes few, 1-2 cm long; joints and pedicels 2.0-2.5 mm long, hairy along the margins. Sessile spikelets 3.75-4.5 mm long; lower glume oblong, obtuse, 5-7 (-9) nerved, keels pectinately ciliate; upper boat shaped 3-nerved; awn 10-15 mm long. Pedicelled spikelets nearly equal to sessile but narrower.

Type : India : Kohima, alt. 5500 ft., *Clarke* 41187 (K); Jakpho, alt. 7500 ft., *Clarke*, 41896 (K).

Fls. & Frts. : Nov.

Distrib. : INDIA : Nagaland; endemic.

Chr. No. : $n = 20$ (Mehra & Sharma in *Taxon* 21 : 341. 1972).

Notes : Besides the type specimens this grass has been collected only once again from Naga hills (*Bor* 6712) in the year 1935 (DD !).

26. **D. woodrowii** (Hook. f.) Jain et Deshpande in Bull. Bot. Surv. Ind. 20 : 134. 1978 (1979). *Andropogon woodrowii* Hook. f. Fl. Brit. Ind. 7 : 173. 1897; Cooke, Fl. Pres. Bomb. 2 : 978. 1908 (Repr. ed. 3 : 497. 1958). *Amphilophis woodrowii* (Hack.) A. Camus in Rev. Bot. Appl. 305. 1921. *Bothriochloa woodrowii* (Hook. f.) A. Camus in Ann. Soc. Linn. Lyon 1930, n. s. 76 : 165. 1931; Bor, Grass. Bur. Ceyl. Ind. Pak. 110. 1960.

Tufted grass with woody rootstock, *ca* 1.5 m high. Leaf-sheaths keeled, smooth; blades 30-60 \times 0.3-0.4 cm, scaberulous on both surfaces; ligule *ca* 2.5 mm, truncate, ciliate. Racemes 3-5, *ca* 2.5 cm long; joints and pedicels slender, silky. Sessile spikelets *ca* 4 mm long, oblong-lanceolate; lower glume hairy, ovate-oblong, many-nerved; upper equal to lower one, 3-nerved; awn *ca* 16 mm long. Pedicelled spikelets as long as the sessile but narrower.

Type : India : Mawal, Dec. 1894. *Woodrow* 27, (isotype, BLAT ! K, Photo !).

Fls. & Frts. : Dec.

Distrib. : INDIA : Maharashtra; endemic.

Chr. No. : $2n = 40$ (de Wet *et al.* in *Caryologia* 16 : 47-55. 1963).

Notes : After its original collection in 1894, this has been collected only once by Harlan in the year 1960 and again from the type locality.

EXCLUDED SPECIES

Capillipedium nagense Bor in Brittonia 16 : 228. 1964.—*Type* : India, Naga Hills, Dzulake Valley, 2670 m, Sept. 1933, *N. L. Bor's collector* 353 (Holotype, K). The author has neither seen the type nor any other specimen from India. According to Bor (*l. c.*) this species differs from the closely allied *D. assimile* (Steud.) Deshpande [*G. assimile* (Steud.) A. Camus] in having larger sessile spikelet and distinctly 4-6 jointed racemes. These are qualitative and variable characters.
