22. Banding pattern(s): Giemsa C-Bands located at secondary constriction region of nucleolar chromosomes³⁰;

Only 4 of the 16 chromosomes showed Giemsa bands in general. On the basis of banding pattern, 3 groups detected- a) Bulbs with chromosomes showing bands only on 1 pair having secondary constrictions, b) Bulbs with chromosomes showing bands on two pairs with secondary constrictions, but heteromorphism in banding pattern was noted in one pair, c) Bulbs with chromosomes showing bands on one pair with secondary constrictions and on two other chromosomes, whose homologues, however, did not reveal bands⁶⁰, Giemsa C banding to the neighbourhood of secondary constrictions and telomeres⁹³, N-banding used to identify bands at 4NORs of chromosomes whereas two of them were darkly stained after silver nitrate staining²⁵⁸
