7. Habit and Habitat: Medium sized deciduous tree (10-30 m tall), *L.gmelinii* occupies a very large area and therefore occurs in a wide range of habitats: on lowland subarctic plains, in river valleys, in mountains and also on the edges of moors and swamps. Its altitudinal range is between 300 m and 1,800 m a.s.l.

8. Life Form: Phanerophytes

9. Economic Importance: an extremely important timber tree in the Russian Far East, where it provides building logs for traditional log houses, railway sleepers, fences, and gates, as well as timber for construction, ship building (in Japan and Sachalin), and the pulp industry.
