7. Habit and Habitat: Tree (10-20 m). *P. gerardiana* grows in the mountains from about 2,000 m to 3,350 m above sea level. In the Himalayas this means that this pine is restricted to valley floors between very high

mountain ranges, which isolate different populations to a certain extent. It prefers dry, sunny slopes where the vegetation is more or less open.

8.Life Form:Phanerophytes

9.Economic Importance:The main economic use of this pine is of its edible, oil-rich seeds, highly valued as dry fruit.
