15-7-64

Langue de l'homme, l'homme est un être sensible & raisonnable
qui se distingue par son entendement de tous les autres animaux & par
son langage de tous les autres hommes. L'homme est un être social &
politique, qui ne peut vivre utilement que dans une société civile, &
qui est obligé de se soumettre à la loi, & de respecter les droits
d'autrui. L'homme est un être libre, qui ne peut être contraint
à rien, que par sa propre volonté, & qui est responsable de ses
actions. L'homme est un être raisonnable, qui doit chercher la
vérité, & la justice, & qui doit vivre en paix & en concorde
avec ses semblables.

Il est évident que l'homme est un être sensible & raisonnable. On
peut le démontrer par son entendement, & par son langage. L'homme
est un être social & politique, qui ne peut vivre utilement que
dans une société civile, & qui est obligé de se soumettre à la loi,
& de respecter les droits d'autrui. L'homme est un être libre,
qui ne peut être contraint à rien, que par sa propre volonté, &
qui est responsable de ses actions. L'homme est un être
raisonnable, qui doit chercher la vérité, & la justice, & qui
doit vivre en paix & en concorde avec ses semblables.

Introduction
de l'homme à la civilisation

Il est évident que l'homme est un être sensible & raisonnable. On
peut le démontrer par son entendement, & par son langage. L'homme
est un être social & politique, qui ne peut vivre utilement que
dans une société civile, & qui est obligé de se soumettre à la loi,
& de respecter les droits d'autrui. L'homme est un être libre,
qui ne peut être contraint à rien, que par sa propre volonté, &
qui est responsable de ses actions. L'homme est un être
raisonnable, qui doit chercher la vérité, & la justice, & qui
doit vivre en paix & en concorde avec ses semblables.

Sponoxia (cont'd from p. 29)
 Boottii Wall & Peck from J. Booth Esq. Boston since 16 Sept 1835. Early 1836 a
 stem had been shot out, but it was cut off by some mischievous insect.
 In May fresh shoots appeared, and 3^d Sept 1836 the first flower opened.
 leaves cordate smooth, no glands on peduncles, and ² anterior two
 cal. leaflets broadovate strongly veined, as yellow at the base.
 The white large, deep purple within. Root tuberous. ^{Dr Peck} says
 his ~~plant~~ ^{plant} ~~is~~ ^{is} a double of his. Hence the true *C. Jalapa*;
 he seems to think it is not, and most ^{likely} it is not. — ^{see below}
 Jalapa Peck! Lord Auckland from ^{London} ^{at} 8 March 1836. 3^d Sept.
 not yet flower? but unequivocally the plant ^{is} in Bot. Rey. 628 and
 Bot. Voy 1872 (under *Cassia*) also in *Annals*. The true ^{is} ^{from}
 the leaves. The plant ^{is} ⁱⁿ the 2^d Sept 1836 for the first time.
 and proves undoubtably to be the plant figured in Bot.
 Rey. 624 ^{of} *Jalapa* ^{is} ^{from} *rosea*. — See Peck's notes. *Cassia*
^{chrysoidea} ^{the} ^{13^d Aug} ¹⁸³⁶ ^{is} ^{from} ^{the} ^{11th Sept 1837} ^{is} ^{from} ^{China}
ⁱⁿ Bot. Voy 4. 270. C. Marcott ^{is} ^{from} ^{China}
 6th Nov 1835. M. 22 Sept 1836. —

Not probably *Cassia*
 — *ambigua* ^{is} ^{from} ^{China}
 Bot. Voy 39 1603

Salween continued from p. 50

- my own 2nd Cent. London

! Cent. ^(from Kailash) Madras to January 1837

Pl. N. 86

(Toothum Gub. Khoad the name on the packet "Cinnamon flav")

Flora 31 March same year. This is probably the same

Bengal Gool Kramala. Perhaps this may be the red way

which I refer to in Pl. Ind. I Carey vol 2 p. 240 & Lab. rep.

y. yellowish hairs. Emysl. Bot. vol 4 p. 289. See note in Pl. Ind.

(to visit)

- diffuse Root. probably Sagittate Root. leaflets 10-12 pairs

Sept 11 1836 found at the end of Salween

think the plants must be his species

Antispormium *arvensis* var. *frans* p. 38 Engli. Bot. 2, no 123. Pl. J. 3. 2 456.
Very likely that there is some difference in ^{the} ~~the~~ plants, which come from
Capt. Webb's garden (about town) 13 January 1837 No 115
and flower & seed about the middle of April. Fruit red-brown.
Corolla pale pinkish. —

Panicum
Panicum *chinensis* *continua* from p. 45
- *Heterium* the spec^s sent from Carl. Luthers with note of 22nd — 37 from
Geneva are the species. Perhaps *Heterium* had his plants from
the Rhapic hills!

Randia shrubs R. An Mearnsom. Shrubs Rock. Malabar. Ind. ex cult. Ind. in
Cyl. Rec. in Ky. Florida.

 oblongis immixtis, nervis alternatis basi acutis 2-4-jugis, ^{longis}
 nervis quibuslibet suber ad axillis ^{ramis} cavato-palescentibus,
 bracteis peltatis, stipulis multianatis, cyathaceis - conatis,
^{inter} specie unguis subulata adpropra ^{ramis} verrucata vix liberis, pediculis
 triplis bracteatis, capitulis globosis ^{ramis} ^{monofloris} 2-5 umbellatis
 terminalibus globosis (magaludinae corosis parvis, divipectis
 corollis tantum pisi-magnitudine) suffultis pedunculis gracilibus
 peltis archis, pediculis triplis longioribus, corolla intus barbata;
 the double ^{triple} angles Radermacher *M. scandens* [*M. Ind.* 2 p. 202
M. Ind. 4 p. 449 who had specimens and herbar. adds the
 Radermacher's description), but the leaves are not acuminate
 at both ends; the stipules are ^{obovate} unguis. The
 peduncles are not short. *M. microcephala* Parlat. in *Herb.*
Reince ex Deccand l. c. differs from ^{Asian} ^{mexican} maybe this
 had it not acute leaves, triangular small ^{bracteatis}. It
 resembles very much *Morinda Tada Kora*, J. p. 57 t. 37 which
 Deccand says is ^{very like} *M. parvifolia* Parlat. in *Herb. Reince*,
 this it be referred to *M. Khondro* J. p. 57. Both these plants
 have four ^{or five} andro. — Flav. in *Trans* and Dec 1833

Maia rubra continued. It appeared above in 1832. - It is certainly smaller than *M. coriacea*; at least it is so very much, after being 5 years in the garden. Leaves more lanceolate than in *coriacea* which has oblong leaves with parallel margins. Veins more reticulate in our plant. The inflorescence is glaucous flesh-colored. It is like that of *M. ornata* but the inner sepal or petal is 1/3 shorter than the outer, imbricate acuminate, shape flat and oblong, obtuse. The leaves of *ornata* several times larger glaucous on the ribs & petiole - anthers partly free from glaucous.

Spadix erect, *epithes* *rudians* *conspice* *ovata* *2-flora*; *inner* *petal* *1/3* *shorter* *than* *the* *outer*. *Leaves* *lanceolate*

Hamilton 1820 Fl. Ind. & Voy. - Early [?] *coriacea*
prosp. [?] *latifolia* *Paraguay* and may be
*one very doubtful *Carex* 71167.*

Lollya heterophylla Lindl. Bot. Voy. vol 7, 1806 *Walt. Lediges, var. [?]*
with fruit which ripened early in December same year!

Ehretia graveolens Wall. *Flul W. Ind. 1826. Fl. Fibry 1837*

Chrysophyllum macrophyllum Lam. *Plant. Cap.* 3. p. 122. 2027. This is *C. macrophyllum*
 of this Cat. p. 17, which is certainly not the same as the *C. macrophyllum* of
 Jacquin, fruit in size, shape and colour. The anatomy agrees perfectly with
 Gussone's description, & figure. It is certainly the same as *C. peruviana* L.,
 which is Swartz's *C. macrophyllum*, which name Gussone omits to mention. It
 is the same as the character - Young & Wats name is *Ch. peruviana*? Gussone? $\frac{1}{2}$.
 In Schult. & Roem. *Syst. Veg.* I cannot find the species (*C. peruviana*) either
 in Gussone's work with the name *C. macrophyllum* under *Ch. macrophyllum*.
 The fruit abounds in milk. There is no doubt of its being
 being a *Chrysophyllum*. Repens in *Hand. Bot. Voyag.* Nam. 6.
 — *Passifloraceae* Wall. *C. acuminatum* $\wedge \wedge \text{CO}$ i4w«.— X

Oxytelma? rubra

Oxytelma rubra (Weyl & Arn.)
Catal. p. 57, t. 1.
p. 57

—flow. in Sept 1883. Think that this is bel. intermedia Part. perhaps also
has. M.D. Pasburgh's figure agrees - not so his description. P.D. 1883
vol. 2.33. at least one fruit: fully mature. leaves ovate, subcordate
apex rounded with a short beak-like blunt apicis; of a somewhat
fleshy texture 2/3 leaf long, pedicel 2 inch long; lobes bifid
retro-axillary from the side of the annular interspaces
which is most prominent and yellow longer than the pedicel, round
pedicel twice the length of the annular, fulvous very slender, pedicel
at the base 1-1 1/2 long with 2 inches sometimes; the webbed
is sometimes very much divided; bracts linear. basal annular
grows. Flows about 8 leaves on stem: greenish yellow, purple
in the webbed perfectly smooth outside, when with some grey hairs
articulation globose velvete; leaves calyx beak-like basal
acuminate flatly of spreading membrane; margin, reaching
beyond the sinus' of the corolla; of linear corolla ovate acute
1/2 X ~c < *i ~ ^ pedicel, stalk, small; corolla corolla of 5 round
dissected fleshy to lobes ^{annular} - the first two by a nodule, and
fleshy prong or horn, as long as the tube itself, with, however, toward
the opposite anthers a little to bent inward at the apex. Protop
ventricles, almost round, ovary very small inserted above the
middle or nearly at top, obliquely pendula; carpovels almost geminate
cuticle with a broad membrane. Nymph ^{rather winged} round oblong,
B. ^{usually water reared -} lobes of the corolla corollated which
unusually any teeth or appendices.
simple crown - ^2S lobes opposite the membrane ^***-^
advent of .icfc^ ^/i among the genera there is none to which the character
of such oppis will there only temporarily to put the pth among Oxytelma

Bot. Gard. at 29 May 1833

113

var. p. 101

Bot. Cabinet 12 N. 1157! Leaves are remarkably fleshy, lustrous, like the
offspring of *Scilla* 29 May 1833. Bot. Gard. 26 May 1836. Leaves very
glaucous minutely glandular lobes lobed lobes with scattered
longest hairs. Leaves numerous succulent. Origin from *Cornwall* & *Wiltshire*

Bot. Cab. 12 N. 1109
equally doubtful about this and the preceding cases; this; they
are equally alike except that this is branched, much so and decumbent
leaf flat fleshy. The stem is not branched. In point of fact this is
completely contemporary, especially since we can refer to the subdivision
of *Scilla* - and yet I regard it as a luxuriant plant of *O. corymbosa*
I can under the name of *O. corymbosa* - which I do not
not. Leaves by the first dotted (minutely) lobed. *Barrow*
11 Dec 27 fls. *Barrow* 26 1836.

Dryopteris (continued p. 117)
— *terrestris* Linn. var. (sp. Nat. L. 2. 529) In hoc parte D. Elmerius (Dry.)
— *D. (L.)* ?
— *D. (L.)* ?

repens Rostk. Schmidt 1856 - April 16 1833
— *racemosa* Rostk. Sch. 2. p. 586 ? Illust. Janey 24, 1825. This first
in 1822. Rostk. says that both ♂ & ♀ fl. are racemose, tho' in his drawing
the latter are represented solitary as in our plant (♀ ?) generally they
the calyx of ours is whitish brown from the spreading or remaining wings of
the calyx lobes. - History of the genus is represented by Rostk
the leaves of ours are a little hairy, especially below, young
shoots & calyx very densely pubescent, hairy, the leaves are
very attenuate, almost acuminate, tho' the point dull or
obtusely. If distinct they may be called *D. attenuata*.
What was it to mean by the "condensed racemes" is this Group?

pubescens Wall. Bot. Lich. 4132
— *pubescens* Rostk. Sch. 2. p. 586 ? Illust. Janey 24, 1825. Fl. 3 April 1834
laevigata Rostk. Sch. 2. p. 586 ? Illust. Janey 24, 1825. Fl. 3 April 1834
— *laevigata* Rostk. Sch. 2. p. 586 ? Illust. Janey 24, 1825. Fl. 3 April 1834
The tree in culture is *D.* This new about
16 feet high, flowers not strictly upright for they have a common
pedicel which has a scarcely a line long and later the calyx
as well as several broad acute scales surrounding the base
covered with short, dry, capitate, ferruginous, appressed
tomentum or rather villosity. Calyx expanded about 1 1/2 lines
or 2 lines long; with broad acute, slightly yellowish, red
keeled acute lobes about 1/2 inch long or more, convex
or 3 or 4 times longer than the calyx; the lobes
downward, contracted under the throat, abruptly bent
markedly 4-veined, strong and strong without grey lanuginous
brown toward the base, covered with villosity, long
grady 4-lobed; lobes acute, points 2/3 the length of the
tube, base deeply laminate, on one side of the
almost keeled middle lobe. Anthers all the specimens
without any and without hair.

119

Vilga septentrionalis, Waller. Annot. Bot. Hort. Kew. 1827. H.C.
— ampla, Waller. Frome 1827. D.W.

~~Hyssopus~~ ~~septentrionalis~~ Wall. ~~Handb. Bot.~~ 7-1827. H.C.

- Prenanthes pinnatifida*, Moon - Ceylon, Johnson 1821 H.C.
 - aquilonica* Waller. Annot. Bot. Hort. Kew. 1827. H.C.
 - laevis*, Waller. *Maryland Bot. J.* from Kew. 1825. H.C.
 - scandens*, Rostk. *Bot. J.* 1829. Fl. 1/27. Long leaves very divided.
 - grandifolia* Waller - 1821. H.C.
 - cordifolia* Rostk. *Bot. J.* 1827. Fl. 1/27. (This may perhaps be *P. verticillata*.)
- 35. 1827* is unguis catapav. plant, which in *Ann. Bot. Soc. Lond.* 1827 is called *P. umbellata*.
 Blyth's small of the leaves rather faint, and in Rostk's says that it is not so like
 the true species, but more like *P. verticillata* in its structure. Blyth calls the
 plant *P. verticillata* (Rostk. p. 815). It seems they are synonymous. *Ann. Bot. Soc. Lond.*
 1827. 1827. *Ann. Bot. Soc. Lond.* 1827. 1827. *Ann. Bot. Soc. Lond.* 1827. 1827. *Ann. Bot. Soc. Lond.* 1827. 1827.

Hyssopus acuminatus, Brown. H. S. Kew. H.C. & H.

Pentstemon pinnatifidus, Rostk. *Bot. J.* 1827. H.C.
— angustifolius H. B. & K. *Ann. Bot. Soc. Lond.* 1827. Fl. 13. 1122! R. not rose but purple-
 cal! H. B. & K. *Ann. Bot. Soc. Lond.* 1827. Fl. 13. 1122! (under the name *P. arborescens*)

Hyssopus pinnatifidus! Many variety with large leaves & flowers white
 from the banks of the Stour - 1827. H. B. & K. *Ann. Bot. Soc. Lond.* 1827. Fl. 13. 1122!
 53. long & propy. Whole plant 3-4 feet high square

- Scrophularia staminea*, Waller. *Ann. Bot. Soc. Lond.* 1827. Fl. 1/20
- regeliana* Waller (see *P. verticillata*, Waller 1827. H.C.)
- verticillata*, Waller. *Ann. Bot. Soc. Lond.* 1827. Fl. 1/19. H.C.
- bicolorata* Rostk. *Bot. J.* 1827. H.C.

- paniculata* — — — — — H

Strobilanthes callosa Nees (see *Ruellia*) 78
 - *canaliculata* Nees (see *Ruellia*)
 - *laevigata* Wall. *Herb. Hort. Bot. 1830* - *Ruellia ovata* Nees (see *Ruellia*)
 It has entirely the habit of a *Ruellia* the last I think it has been described
 by Nees, though I am not certain.

anniculata (see *Ruellia*?) *Herb. - O.A.P. 3. 69 t. 295. Type 1830 in*
nodosa Wall. *Herb. Hort. 1830* 8: 92 in *Nees* 1830 in *Nees* 1830 in
 described by Nees, and seems to belong to his *Ruellia ovata* - perhaps
 immediately the base of the filaments monadelphous - perhaps
 gnosis - amongst in habit it is a *Ruellia*. *Herb. Hort. Bot. 1830*
callosa Nees, *Herb. Hort. Bot. 1830* 8: 95 *Ruellia callosa*

Wall. Cat. n. 2357 *Ruellia* very obscurely *Ruellia callosa* in *Nees*
 and again in the middle of *Ruellia*. *1830* *a most beautiful & easily raised
 hybrid from *Nees* at 1826 by *J. Nees*.

finestrata
elysae Wall. *Ann. Bot. Soc. Lond. May 5 1834* 11: 12 *Nees* *Herb. Hort. Bot. 1830*
Goldfussia vrophylla Nees (see *Ruellia*) *Monog. p. 88. Herb. Hort. Bot. 1830*
ovata Nees (see *Ruellia*)

Asteriscia pallens Will. fol. ^{undulata} 4-5 lobis (10 peltatis) lobis
acutis (minime acuminatis) subtus pallidius villosis peltatis
folia opposita (longioribus) ramisque quibusdam et alio. terminalibus
stipulis lanceolatis (2. lanceolatis) lanatis deciduis subulnis

fr+> >••"£ +pt-- <^u.+* . . -3 t^f*~-'./u Gyp -4£»~*. ^£- t£&frmftUi

Many associates think they are &* that spec. they are here, light
and acute only. *» dead sometimes only oblong; besides the
are villous underneath and the branches a peltate
state at least are smooth (probably what Nash says in
R. Ind. 3 p. 147) and the base of the leaf peltate a young X ^
only glaucous, besides having red flowers. —

Asteriscia Will. Cal. Lichag. No. 1135 ? fol. max 13-peltatis
oblongis cordatis 7-lobis lobis angul. acuminatis, subtus
villosis, peltatis longipetis. This flower in 1832 very readily
from hence (as no specimens were preserved) A* means
young. Sauty assumes it is the spec. under which I have
temporarily placed y. — *Reverend* (1837)

Asteriscia Nash ? Will. Cal. Lichag. 1121 B. An *A. undulata* Olin. Bijdr.
n. 3 ? 2 to the Cat. — *Reverend* Ind. 3 p. 147 as this is from *Tropaeum* L.
compared the pla. spec. from the *Reverend* (Dr. Lichag.)
at home and described them with *Reverend* specimens to
11. paraflora of Nash. — *Reverend* has laminae (leaves underneath)
and are scarcely pubescent even AJZ ____ young. Think be further
examined. My own description of the *Tropaeum* plant must be compared
with the *Reverend* tree. — *Reverend* 1824 90 (July) -&/M) _____

Papilionaceae continued from p. 146
caeruleo-racemosa Sabine in *Herb. Lox.* *Trans.* vol 4 p. 258 tab 9! *Bot. Lib.* vol 6. 18573! *Flora* 29th July 1837
 perfect. Miss Laddys are quite right I think in not agreeing
 with Robinson as to the beauty of this tree, but considering
 it as inferior in this respect to either of its parents. This was
 culd. by Lord Bunsford in April 1826. It made an attempt in the 16th Aug.
 last year but the buds fell off without opening. The time the flower was very fine
 they is also a fine plant which was culd. Nov 11 1836 by Miss
 Laddys. They has not yet flowered. ~~It is a beautiful tree~~

incarnata-alba Virens *P. incarnata* D. S. *Bot. Reg.* 4. 11.
 but ^{and very} *fragrant*. Miss Laddys 11 Nov 1836. Flowers were
 for the first time the 13 Jan 1838 and continues still 14.
 Sept. A most charming flower. Leaves gland-denticulate
 not entire as the above figure.

Phaccolus (part)

- *lunatus* Linn? Mahomed Lalic April 24, 1834. Flawed by Feb 27
 same year. I think it is this species; it agrees well with Decond's
 character (Prod. 2. p. 393). Prod. is very deficient in his Fl. Ind.
 3. 286 as to his plant. This & Mart. Beng. says status loc. is
 uncertain. Decond says Bengal. - I can only determine the
 plant when the fruit is produced. -

- *prostratoides* Willd & Des. Prod 1. p. 244. I should take this to
 be our plant to be *P. semicretus* L. if the leaves were
 not much narrowed & charted in cross. This is what the
 authors quote) have joint out. In all these respects
 the color of the flowers etc. and plant resembles the
 figure in Jacq. Ind. Bot Tab. 558 and Willd. Ill. p. 301.
 The color of the flowers dark brown. I am not sure that
 the seeds will be oval, as yet they are anisop and look
 subcylindric. Moos. Seed from Java 10th Aug 1834. Fl.
 May 1837 (and no doubt before also). The fl. in our seeds
 is wrong, or else the name *Cost. venosum* wrong.
 The leaves have large peltate glandular dots - not
 many, but rather large; they have a tendency to
 be a little serrate. I don't know in what respect
 %o, l & h rather different" as W. Allen. **V**
P. 2-creatus (L. c. 245).

Crotalaria

incana Lam. (L. Desf. p. 159) Dec. Prodr. 2. 132. Jacq. obs. 14. p. 4. 282 | o/ft.
 that the undersurface of the plant means; *#; Bot. Mag. v. 377 agreeing with the
 name the stipules are very large, subovate, the leaves almost sessile, very
 glaucous, below serrated - obscurely, nearly round, retuse or pubescent, with
 a few hairs along the nerves below; calyx glaucous with a few hairs
 margin of the fulcra corolla very unequal. The plant with long
 spread, spreading, soft hairs. Anthers very heavy. Leaves tend to
 glaucous - In the Prodr. Reg. it is stated that the Rev. Mr. W.
 Herbert had the plant from the E. Ind. - Wright & Arn. properly
 remark (Prodr. 1. p. 180) that the spec. is only cult. in Indig; and
 that *C. affinis* Dec. l.c. from the Maurit. is probably the same
 spec. as *C. incana*. What is *C. cubensis* Dec. l.c. p. 131 (*C. tertia*
Lagaria var. *Wald*)? Bourc. Bot. Gard. Paris. *Guertel* 1 had
 1835 n. 62. ff. ~~from~~ to April 1837. -

fulva Prodr. Ind. 3. p. 206. *Wald* & Arn. Prodr. 1. p. 185. - This is very disagreeable
 smelling uniform stipules! - long glanded & fragrant.
 - *madurensis* Willd. l.c. p. 159. This hangs on very close together on the pedicel
 is different, is also especially distinguished. The stipules (the young)
 called *lyopodites*. See p. 157.

pubescens Prodr. - First seen on the 20 Aug 1835. f. & Arn.
 How? beautifully end of Prodr 1834. See Willd.

grandis Willd. See *C. longipes* Willd. Arn. Prodr. 1. p. 183? - See
 Willd. - ~~Wright & Arn. Prodr. 1. p. 183? - See~~
fulva - 1826. - I thought this former *C. madurensis*
 Willd. Arn. but it is no doubt being see p. 157.

cornuta (Diard's list). *Prodr.* *C. Savata* Willd. Arn. Prodr. 1.
 p. 194. - Mons. Desf. *Lava* March 1835. H. Apoc. Fruit ripe
 in May.

labriformis Prodr. Ind. 3. p. 263. *Deland* Prodr. 2. 128. *Desf.* *Repos.* 9. 11. 578.
 [undoubtedly young] *Long.* *Lyd.* 3p. *Wald* & Arn. Prodr. 1. p. 185. - This
 had the plant from Guayana by which, by *Long.* *Desf.* - *Desf.* 1835
 flowering March 5. year (probably from the hills) -

uncinella Lam. *Cyl.* 2. 200. *Deland* l.c. p. 133. *Long.* *Lyd.* 2. p.
 p. 239 *Boj.* *Hort. Maur.* p. 88. *Mons. Richard* [Bourc.]

Conovalia glabrata Desv. *Dalzielia* Jacq. Rarb. Ind 3. 300 et in ped. oppos!
 Brea. Maraca Mhu Mal. 8. 85 L. 44 surgen long. each of the
 got from Capt. Graham on my calling at Guatpaca. They were
 some time after my return to the garden - towards end of
 April - and began blooming about 14 July. Capt. G. represents
 this *Conovalia* to be better than any he has ever before
 met probably his ^{5531.6} *Conovalia glabrata* *Dalzielia* sp. *herb. Mar.*
Guatpaca, Lk. *Chiffonjeaux* herb. -

virosa Nutt & Arnott Prud. Finas. R. 1. p. 253. *Dalzielia* Rarb. Ind 3. 301.
 (Also under *Dalzielia* in the obs. on the same page? at S.
 Males. ^{5531.6} Arthur 29 June 1835. Reading flow? July 26 1836.
 This is perhaps only *D. rotundifolia* (*Conovalia*) of which
D. obtusata Rarb. Ind 3. 303 is probably only a variety (namely
Dalzielia *C. obtusata* Prud. 2. 404. - I cannot say
 Mr. M. Arthur's tree is the *Conovalia* I think I
 have referred it to. Its flow. are rather smaller
 than those in Rarb. the drawing of *D. virosa*
 (suppl. vol 5. t. 137), and the leaves are perfectly
 round-obovate.

obtusata Bicond. l. c. *Dal. rotundifolia*. Voll & Rarb. Ind 3. 302.
 Rarb. has no drawing of this (unless *D. obtusata* it
 be true as a variety - which however the slenderest
 legumen seems to fit ^{^ j} but greater *Rhodes* ~~is~~
 figure of *Rhodes* *legum.* *herb. Mar.* 8. 83 t. 43. The leaves
 of our plant though obtuse are by no means round-
 obtuse - being they are better with Rarb. *D.*
virosa at least with *Rhodes* *legum.* *herb. Mar.*
maraca l. c. p. 47 t. 43. Our plant was introduced
 many years ago (i. /r>>>~'4). Legum. oblong
 unilobed, imbricate-pointed, dorsal 3-ribbed, seeds gray.
 At *Dalzielia* (*Conovalia*) *multiplicata* ~~is~~ *herb. Mar.*
 may perhaps after all be this species. Its flow. large, beautiful,
 lilac, ^{^ v < / > W < ^ fv*yr+~*'~ **% / * > * ...}

Artemisia Absinthium L. 74 P. D. 1228 *Artemisia* *absinthium* — R. & G. 1828
This is a small plant, with thick stems, and
leaves glandular, very much aromatic, and
the flowers yellow. It is found in the
mountains of the Alps, and in the
Pyrenees. It is also found in the
Mediterranean, and in the
eastern part of Europe. It is
used as a medicine, and is
said to be useful in the
treatment of the stomach, and
in the treatment of the
nervous system.

- Epipactis luteana* R. et Paganis & Wall. Cat. Litt 7599.
- *varicata* P. Paganis Wall
- *picata* P. Paganis W. ^{St. Petersburg} ^{and} Rosdoby 2.5 11. 321!
- *** *graminifolia* R. is altogether diff. fr both genera
- *latifolia* R. Lycop. R. and (omitted in the Fl. Ind.) Caucasus Hills.

Pogonia vireidiflora Wall. I cannot go any further about the leaves, which I learn they are glaucous and somewhat lifted up from the earth, round cordate. Fls. numerous on the scape, a petal (all 5) linear-globulate nearly equal. Lip somewhat, somewhat 3-lobed, lateral 3-ang. acute, middle lobe acute lobed, oblong, shallowly notched and along the channel. - *Pogonia* *Epipactis* larger than the lateral in size, although in the other way. *Fl. Ind.* 2 p. 454, it is half the length of the staminal tube. *Fl. Ind. N. Gray*, March 22, 1835. *Fl. Ind.* 2 p. 1534. - Can this be *Pogonia flabelliformis* Lindl. Cat 7480? - *Comp. Herb. ubi folios perennis*

*The upper portion or oblongate middle lobe of the labell. is not directed to by least fr aspect. to it the plant is named *E. elongata* Jacq. J. Nov. 1803! *Fl. Ind.* May 68 Dec 1803 as well as *Epipactis* the middle lobe. *Pogonia* plant part of the length of the flowers is clear as in many the the *Fl. Ind.* 2 p. 454. *Fl. Ind.* 2 p. 207. has the middle lobe very small. After all there is to my former opinion that *Pogonia* *Fl. Ind.* 2 p. 454. *Fl. Ind.* 2 p. 1534.

- Epipactis propifalium* Lindl. *Orch. 107* *Epip. ellipticum* Lindl. Cat. 13 n. 1276 (non Grub.). *West* *Ladiges* under the name of *E. ellipticum* 30 May 1835. *Fl.* July 10 1836.

 Jenkins from Lewis Apr. 25 1827 fl. 8 July same year.

Dendrobium *caudatum* p. 192
puberulum Hook. & G. Bot. Beech. 1. 71? Chirra M. G. G.
 3. *Distichium*
 M. G. G. brought four plants with him on the 1 July 37
 about flowered beautiful about the middle of the same month. It is
 closely allied to my *D. aboriginum*, which however seems not to be but
 fig. by Lindl. - Bot. vol. 5. 1299. On the whole I suspect that there
 are two yellow sorts in Nepal and two - tillot of which *D. chry.*
 & *D. puberulum* are two types, and that the other two remain yet
 to be named, forming altogether 4 diff. but closely allied and
 beautiful species. -

Pandanus pedunculatus. This grows large, has a greenish fruit and
fruit. At Java there is an area of low lands entirely covered with it.
In July 1833 I sent nearly a purpose to see if any small flowers or
the fruit could be obtained but there were none. - Ruchberg's makes
this the same as *P. Millore*, this may be the case, but if the
plant which commonly goes by that name in the N.S. is different
from the circumstance of the Andaman. *P. fruit green*
in a different locality is a different species.

P. Millore. The plants continue small and very bushy, noris-
nally producing fruit, which are very large. I dare say this
is a different species from *Millore* - I certainly is different
from *P. adonoprosmus*. In the great part of the Andam.
P. adonoprosmus is represented as attaining 30 to 35 feet
high. The plants called *Millore* are 5 or 6 feet only and have
a very short stem.

P. factives. This small species grows commonly on Sumat.
The fruit is well represented by Ruchberg in his drawing.
It has a very fine smell. Children eat the central part.

P. furcatus Rarb. The description of Ruchberg, the fruit is
not good for the fruit is rose-colored, consisting of several
very doubtful. But I judge of Ruchberg's meaning this
plant by the decided furcate state of the branches. *Stems*
andia appropriate! Leaves very large - but not so large as in *P. furcatus*.

P. crispipes Wall. This, too, in the garden has long been by
the name of *P. furcatus* Rarb; but it certainly is totally
distinct, and it has no tendency to be furcate; lobes
nearly very thick and wide apart. It is a noble spec.
with gypallic stem & leaves. - *Tab. Paggad verona*,
Rumph. Amb. 14 p. 150 may perhaps be this, but I doubt
it much. It is necessary to see how *St. Manilla* differs
upon *Alcedas* & Rumphius's species of *Pandanus* - of
all genera the most difficult to discriminate from
ancient authors. It goes with *P. furcatus* p.

P. moschatus Rumph. Amb. 14 p. 150, is no doubt Ruchberg's
P. inornis, and the fruit name *J* of leaves be retained perhaps
much anterior - Date

Ar;

J

P. ameyliferus Nash. I can find nothing about this in *Pamph.* - *Mix*²¹⁸
a young plant, with narrow leaves.

P. ... *Proc.* *Acad. Nat. Sci. Phila.* 1894 p. 212

P. macynatus Nash. I see the name in the side of *Proc.* for
Europe. No doubt, however, the genus being from the same source, is
- *... the described plant*.

P. humilis Nutt. *Blume's Cyclo.* *fcr7 *Ind. Bot.* 1824. This plant
21 July 1840, namely a *P. plant.*, and is undoubtedly the same as the next
Proc. Acad. Nat. Sci. Phila. 1. p. 37 t. 21. l. 22.
(T) *Andromeda laudatissima* *Bot. Beechey.* *Sp. Gray* *Bot.* 3. p. 898. x
Bot. Beechey. *Bot.* 1837. *Andromeda* (Beechey) 14. *Bot.* 1840
* *Proc. Acad. Nat. Sci. Phila.* 1. p. 576.

P. ... *Andromeda*, *Andromeda* introduced into and as the preceding
*t-r. (that is under the same name of *Andromeda*) - 1837, 31 July
seems to be different in having much broader leaves
(three times) at the base, and the sides erect, not
ved or spreading to an angle as in that plant. The
sides of these broad leaves not being thus [?] [^] [^]
in the other it is thus ✓.

Malacodina

I. Malacodina a Pleurothallis

- ✓ *Olavonia iridiflora* Lindl.
- ✓ — *phylostachya* Wall. (noni mont?)

✓ *Stelis micrantha* Sw.

- ✓ *Liparis bracteata* Walp. ex Guss.
- ✓ — *concinna* Wall. ex Guss. (noni adscipina)
- ✓ — *capitata* Lindl. ex Walp.
- ✓ — *undulata* Walp.
- ✓ — *phylostachya* Walp.

- ✓ *Otachites alba* Lindl.
- ✓ — *fusca* Lindl.

Pholidota imbricata Lindl.

- ✓ — *undulata* Walp.
- ✓ — *aristata* Lindl.
- ✓ — *pallida* Lindl. an distincta a *Rimbria*?

Coelogyne maculata Lindl.

Coelogyne fimbriata Lindl. ex A. DC. in Bot. Voy. II p. 868. Orch. p. 41. (3 var. form distincta spec.)

- ✓ — *interrupta* Walp.
- ✓ — *Wallichiana* Lindl.
- ✓ — *maculata* Lindl.
- ✓ — *prolifera* Lindl.
- ✓ — *pitida* Lindl.
- ✓ — *ocellata* Lindl.
- ✓ — *media* Lindl.
- ✓ — *longicaulis* Walp.
- ✓ — *procera* Walp.
- ✓ — *ovata* Lindl.
- ✓ — *diversa* Walp.
- ✓ — *viridis* Walp.
- ✓ — *flavida* Walp.
- ✓ — *undulata* Walp.

- ✓ *Bombylium flexuosum* Wall.
- ✓ — *repens* Lindl.
- ✓ — *auricomum* Lindl.
- ✓ — *Carayanum* Lindl.
- ✓ — *umbellatum* Lindl.
- ✓ — *fuscescens* Walp.

Cirrhopetalum Lindleyanum Wall.

- ✓ — *capitosum* Wall.
- ✓ — *macrophyllum* Wall.
- ✓ — *Rocherianum* Lindl.

- ✓ *Iris racemosa* Wall.
- ✓ — *oblonga* Lindl.

MalayidesMalayides 6 Dendrobium

- *Erica excavata* Lindl.
- *paniculata* Lindl.
- *pusilla* Wall.
- *densiflora* Wall. Griff.
- *longipes* Lindl.
- *leviniana* Wall.
- *grandiflora* Wall.
- *remorsiflora* Wall.
- *annulata* Wall.
- *planicaulis* Wall.
- *flava* Lindl.
- *carinata* Wall.

Aporosa *anceps* Lindl.
cuspidatum Wall.

Dendrobium *Picardi* Rehb.

- *multicaule* Wall.
- *aggregatum* Rehb.
- *moschato* Wall.
- *uncinatum* Wall.
- *chrysanthinum* Wall.
- *Dalhousieanum* Wall.
- *Densiflorum* Wall. (probably the same as 2. *laevigatum*.)
- *formosum* Rehb.
- *Calceolaria*, Carey
- *longicornis* Lindl.
- *clavatum* Rehb.
- *denudans* Don.
- *heterocarpum* Wall.
- *isovulvaceum* Wall.
- *insigne* Wall.
- *candidum* Wall.
- *crispatum* Wall.
- *puberulum* Hooker (von Blum.)
- *Venturingii* Wall.
- *villosulum* Wall.
- *angulatum* Wall.
- *acmulum* Wall.
- *aduncum* Wall.
- *seriatum* Wall.

Epidendrea

- Epidendrum pagoras Sw.
- cochleatum Linn.
- ciliare Linn.
- crispifolium Lindl.
- pygmaeum

Epidendrea

Dinema polybulbon Lindl.

Cattleya Forbesii Lindl.

Spathoglottis pubescens Linn.

Plethia hyacinthina Br.
 — *secunda Br.*

Arundina | *VH**-i~l-**-4-*J**U0-* | *lcl* | *(Z#L)L>*

Epidendrea

- Phajus Wallichii Lindl.
- albus Lindl.
- maculatus Lindl.
- grandifolius Lamourso.

Apathura Smithiana Lindl

[Faint, illegible handwritten notes and bleed-through from the reverse side of the page are visible in the background.]

Th. Vandae

Ornithidium coccineum Labill.
Gongora atropurpurea Ruy. Pavon.

Lymbidium alaifolium Sw.

- *hirsuta*
- *Mastusii* Wall
- *striata* Wall.
- *pubescens* Wall
- *longipetala* Wall
- *gigantum* Wall
- *striatula* Wall
- *reflexa* Wall
- *inconspicuum* Wall
- *versifolium* Swamy

Grammatophyllum? *Pinlaysonianum* List. M. at. L. m. inf. R.

Geodorum dilatatum Br.
- *pallidum* Sw.

c * * _ s r

Acanthophippium Sylhetense List.

Eulophia viridis Br.
- *turida* List.
- *fusca* Wall.
- *exaltata* Griff.

Cryptochilus sanguinea Wall

Cyrtopodium glutinosum Radd
Psidium *sumida* H. Kunt.
Zygopetalum Mackayi Hook

Monachanthus viridis Lindl.

Oncidium flexuosum Linn
— *amplexatum* Linn

Propia maculata Br.

Vanda Parishii Br.

- *teres* Lindl. (opt. Lindl. *teres* Parish.)
- *multiflora* Lindl. *multiflora*
- *ovata* Lindl.
- + *pendulata* Wall.

Camardis purpurea Lindl.

Rha

Renanthis coccinea Linn.

Cymbidium striatum Wall.

- *libronii* Wall.
- *maculatum* Wall.

III Vanda

- *Saccolabium guttatum* Lindl.
- - *rigidulum* Wall.
- - *maucolens* Wall.
- - *pallens* Wall.
- - *papillosum* Lindl.
- - *denticulatum* Wall.
- - *micranthum* Lindl.
- - *urmetum* Wall.

25

Vanda
Saccolabium guttatum
rigidulum
maucolens
pallens
papillosum
denticulatum
micranthum
urmetum

- *Sarcanthus prophyllus* Wall.
- - *affinis* Wall.
- - *patulus* Wall.
- *Oeceoclada ampullacea* Wall.
- - *maculata* Lindl.
- *Orthochilus polygonoides* Wall.

Vanda
Sarcanthus prophyllus
affinis
patulus
Oeceoclada ampullacea
maculata
Orthochilus polygonoides

- *Teridion ornatum* Linn.
- - *affine* Wall.
- - *repactum* Wall.
- - *odontochilum* Wall.
- - *schistellum* Wall.

Vanda
Teridion ornatum
affine
repactum
odontochilum
schistellum

- *Ornithochilus striatulus* Wall.

Vanda
Ornithochilus striatulus

- *Calanthe viratrifolia* Br.?
- - *Mosuca* Lindl.
- - *triflora* Lindl.

Vanda
Calanthe viratrifolia
Mosuca
triflora

Aphydie

Natanthera decora Wall

Paristylis elata Wall.

Hohmaria tenuicarinis Wall.
