

18 Oct 1835
I am very anxious to hear of your
health & sincerely hope that your stay in Europe
has enabled you to buy **vt*#v*** sufficient stock to last
you for many years.

Believe me to be

My dear Sir

Ever most truly yours

Mount Morris

I have taken the same liberty with Mr Telford's
the Manuscripts that I formerly took with you. I have
applied to him for plants. **7** I do this personally or
through you - maybe you know - in, & if so will say
something to him in my favor.

The *Sarcocolla guttata* is I think a Saccolobium

Pr (name rec'd)
21 Sep.

I am afraid that you will consider
me as the worst troublesome of your correspondents
& the most importunate of Beggars but I cannot
resist the temptation which has been thrown in my
way by my friend Mr W. of Liverpool who has
kindly offered that the Captains shall each on you
& take charge of any thing which you may be pleased
to send me. you are well as are Miss & I find
it is to induce the Captain of a ship to take care
of plants, but I really hope that the person who
delivers this to you will do so & if you are of
some opinion, I petition in the next season!/?
that you will by then send me a

JL proper instructions for their preservation
believe I enclose you my last letter
manuscript for these plants
even since

Hi

... you would wish for a supply to me
... you brought over your invaluable collection of
... in person in his letter please in his management
... I should obtain a supply of them
... they will share the fate of their predecessors
... which have mostly perished at least, very few remain
... at the Horticultural ...
... nearly anxious to obtain the beautiful
... in your garden ~

I have so fully described in my former letter
many seeds that I am ashamed to repeat them
... I never mention any more from Japan
... seeds of which I presume you cannot
... Is it more than an annual?
... to wish of you
... I hope

A. VC^ C&* to say fie-

Should you be disposed to send me some
seeds I only beg that they may be of rare or beautiful
plants, as I have not room for a general collection
I have lately obtained many valuable additions
& among others a fine collection of seeds from the
Himalaya through our friend Lambert, but I
know not from whom I received them - may
from yourself.

I flatter myself that it will give you pleasure
to hear that I am better than when I last saw you
I feel however that age is rendering me unfit for
the gay world, & I chiefly reside here where my
gardens afford me a tranquil & healthy retirement
It is my intention to spend somewhat of this
winter in London, chiefly to keep up my botanical
acquaintances - I did not leave London till August
last, but that was owing to business, & I hope it will
not again happen. I thought our friend Lambert
was improved in health & that, as I have known
him for above 40 years give

as finishes me - fortune leaves
kind of effort. You will have
a very being, not improved as you are,
from you with will not hide a more
and more concepts, nor yet the weakness
one who asked help of destiny comes denied.
Reason therefore all my kind of punishment.
Your happy spirit has long failed to inspire
a transient life into mine, & all the pleas-
ing opportunities you have about you of
a true for nature, a taste of feeling for
society - the noble zeal in imparting all your
had to others have passed away, & I have
found nothing in their place but declension
and a rampant intercourse with
my friends - cases increasing - hopes being
a lack of the head & heart. - Therefore I
suffer from all my kind, as others must &
as I trust God will, & I shall be I -
accepted as I am unprosperous here.
You probably think that the same sort
of society things where it once did, but
you break the chains & I have not seen
it since these three or four months. & the blame
sometimes hangs! If calls, it is not
held on, & there are conferences in our
city, but scarcely concerned. He has
been to Boston at the meeting of the
Society, & left back about a fortnight

te^: ^*rfE" -J>

London. Monday

My dear Mallick.

recd 15 June 1800.

When I tell you that

is the first attempt at my writing a
page in verse, you will be less disposed to
indulge in ire at my long silence, if only
from the consideration of my having expos-
ed myself so widely to the consequences of
the displeasure & resentment of all my
friends. - My feelings towards you & yours
can never change, but years make me
more & more serene & resigned, & I feel
little disposition to put myself on
paper, because I have little worth to
impart to others. - To you who have
arrived in time at your post, & have
wherever it shall be to feed & clothe you, it would
be helpful to spread the misery & care worn
condition of a man & his poor, not with
respect to his own wants, but those of his
Wife & children. I have none. You can recollect
- at any of your past anxieties, think of me
& your own knowledge of me judge whether
I would willingly do anything to offend one I
love so sincerely & so well as I do you.
I have not had my usual health & I have lost
much of my usual spirits. The illness that in
May has overtaken me much. I have had

rec^d from Mr. A. J. ...

10th November i/&te

Delivered the 2nd June 1852. ...
The only thing I have found ...
the Episcopus of plants - that ...
said in returning Charles Bell's book on the
hand, "It was good, for so foolish an objection
now the object was to show the existence in
myself of God - therefore I suppose the first
philosopher conceived that the whole earth
was left money to be expended in proofs
was not wise, as the earth-air & water suff-
ficiently already declared this former spe-
sence of an omniscient creator.

Mother was here for a day or two in Sept. &
I saw him well. She had gone to France to
to see James - & came up to James to take
body palpable down to her father.

^^4t&>

of your with living love. -
Balthazar I have not seen for nearly 5
months - whether he has been in France
with his wife. Lindley has published
what he calls a *Wise's Plantarum* - so Brown
says who speaks of it. Stinking, as an extract
attempt to correct orders. Sally James
see. We assembled on the 5th at the ...
Society - the paper was read on Insects. ...
- best in the choir - Taylor. Foster - Kelly &
Spence were there. Not Brown on the ...
I left early & heard nothing new. -
Smith one of lady's best I have not
seen since - for I am sitting up till 2 1/2

t^ti^Z,

Apprentice volume. The 1st I think
we - across was sent to the

we see Your last letter

of May - in which You give us a list
of your garden, also from ---+ A- one of your scientific
studies however being so well appreciated
in Calcutta. Never mind, Mrs Wallis &
your children are with you & they esteem
you for some thing more than the article
to the 1st volume. I have also your kind

/&^<L - your kind letter of your announce-
-ing my honour as member of the Calcutta
Society. God bless you & would you had
the gift of miracles. **fe*s£ me into

r&A* the circle of competency. I have told Brown
of your microscopical obs. & he says you
must send us some papers. He has no

S* letter from you yet. Rep's safety will
delight you. what a chance to find a ship
in such a region. The old couple of the party

died a few days ago - they could not find
anything for him, & the papers
help. Rep is puzzled on the same point.

I do not hear of any arctic plants from him
& letter has gone to Back to them bring
to geographical discoveries.

Goodnight. It is yours - & I must be
c/£***- *fad. /& * > ~ '*^'

Nov 10. You will have heard ere this reaches you
of our great loss in Rammabam Day. The dies of in-
struction on the membranes of the Brain, more
deeply laminated by me than I can possibly tell you,
lasting widely over the world, I know none I can come
pare with him, she has left indelible impressions
on my mind & affections - those immaterial atoms which
are to subvert the wreck of my body, he had one
of the noblest minds - & the most refined nature
I ever knew - this influence is to work great changes
in India. Make my very grateful ack^t to Dr
Fulmer for his letter & for the favour he has
expressed upon me. My friend Richard is going
shortly to Calcutta & I will write to Dr
Fulmer, & if I get my 2 cent. out will send
the note to the Society.

Nov 11. My dear children are I hope
with you - & all well & happy. May you keep
so - in spite of heat - & the winds around you -
would I could know that you had a few
confidential friends around you - men who you
patronized in all your generous aspirations - You
have of course - friends & the pure affections -
I hope you will send some papers for the
Trans. when a barbarous plot lies in your
way, put it in said stand it to my mother.
She is like your excellent mother - patient
in well doing - & her great amusement is her
pearl house. She feels very sensibly your kindness
to me, & thinks the fig. of Bostia the highest
of the honours of friendship.
We are all well - Mrs Bostia will write by Richard

Barton
November 20, 1833.

My dear Sir

When you, in a few lines, to
acknowledge the receipt of two letters
from you addressed to W. V. Jones, had
incorporated communications from our
very valuable and active friend Mr
Madya of Madras. The letter was
brought to me by Captain Barnes, who
arrived here a week since. I have
perused the paper in communication
with some of our Societies; but I have

Dear Sir

I am so glad to present
with as much earnestness as
I dare, the design of printing
the tea plant into India.
are perfectly convinced of the
practicability of the measure,
and all that is required to ensure
success, is, as far as the plant
in place and soil, well adapted
to the climate, with an able
management of the soil.

J. M. Smith

Reached me since,
I shall be multi-
plied, if possible.
I have lost your
letter which came to
me in London, &
by consequence
can't tell how
many receipts
short my draft
was. But what
a queer horn you
are to let to
the servants

repeatedly play
such tricks!
I thought of course
you had secured
me from loss!
Are you in better
spirits? Has the
wife arrived?
What say you
to a Fanny Trip.
be companion your
Flora?

Yours truly
J. M. Smith

1 UWA

I purpose beginning with first
 accounts they give, and I now
 suggest for your consideration
 as a preliminary step, the
 formation of a Committee
 of five persons to report upon
 the whole question. I should
 be glad to see you at 4 o'clock
 tomorrow at any hour
 on this day, after eleven &
 before 5 in the Evening.

Another thought has occurred

and that is the hope to
 some part of the portion of the
 memorable part of the Botanical
 Garden. This to be proposed
 that "full many a flower
 have to blush unseen, & bend
 the Botanical Garden, which
 as a source of amusement
 to all & of particular gratifica-
 tion to the learned & scientific
 is unaccountably desired & them
 by the maintenance of the Hoaghy.

Sir

on my return home from

absence of five weeks in Yorkshire I found
letter of the 8th of August, which must have arrived
a few days after I left town. It would give me
much pleasure to be of any service to you
present undertaking, but most of my botanical
relating to the flora of Yorkshire are disposed to leave
not the means at present of recovering them.

In looking over Revels papers the following
specimens are noted which I feel quite certain of.

- Humulus lupulus - sweet herb
- anemone - in the wood by the side of Stamens
- Lychnis viscaria - E. side of the Winton
- Fumaria repens - bridge about Stamens
- Adiantum vulgare - the Penitence hills near the Winton
- Androsace officinalis - Penitence hills about a mile from Winton

In reply to your letter of the 23rd Jan
 I have much pleasure in answering your queries
 the most of which you put me specimens in
 in order to adopt the opinion of those who regard
 them as varieties only; but a series of
 observations & experiments are required to
 determine in a satisfactory manner. In the meantime
 I consider your oak from Kipliffe to have only
 claim to be regarded as a distinct species with the
 other two (St. Robert & Kipliffe). The three have been
 long distinguished, your being about as true as the
 St. Robert oak, and consequently denoting the variety of

Leicester 6th Aug. 1842.

Dear Sir,

I thank you most sincerely for
valuable additions to my herbarium,
I have lost no time in depositing in their
habitats. Some with brand or specimen
labels - Syrpho - De Galium pusillum.

Letter I have not yet found in Lewis's notes;
I deem the majority of the plants in your
list of a few of them I hope to be able to
you a supply during the year. I have
seen a leaf of the species of stalk of a Rubus
I was gathered by a young man from a
place near Southampton in Aug. 1839. I have only
one branch, or would have sent more, if
I knew what it is. Perhaps you can tell

My dear Sir

I should have answered your letter long
but I have been waiting for some specimens of the
Drosophalaria which I expected, in order to forward
to you. - They, however, have not arrived, and I
do not seem likely to do so. - I have therefore taken
off my own specimen one of the lateral Cypris, the
form of it, the form of the Plumicodites, the shape
of the capsules and bracts. - One of these bracts is
tripartite, and this form seems not unusual. »t

I am very much obliged to you for the Bellota.
I have for some time thought that there ~~were~~ ^{are} two forms,
I have never been able to detect any other than B. fatida
in Kent. - I have, I think, a specimen of B. subrelii from
Mr. Baber from Southdown. - I say 'I think' because
I speak only from recollection, my herbarium being at
my other habitat, Farleigh, whether I do not return by

Bill

Herbarium There are 3
specimens. One from the Department,
labeled "Participation. Bonn," is the
first & appears to be a copy. A
second specimen marked "England"
has the rounded base of the leaves.

The third & smaller specimen is
apparently the same. In neither
of these two can the complementary
length of capsule be stated. The
determining, & both are nearly equal
of them, but the separate leaf
marked as belonging to the second is
so distinctly rounded at the base as
to leave no doubt, so far as that
character is concerned. In the
last two the bases are specimens

from a more or more different
localities, of which we will make
a note on a separate paper, for
the day's work.

If the short-fruited plant
is the called natural, it is then
that we need a new name,
& perhaps the *Lythrum* will give
us, as his description will
stand good, only that the name
of *Lythrum* (L.) belongs to the
macrocarpum, & his latter will
be a very bad name for the
short-fruited form.

Walter has not a copy of the
small one, & therefore not only
the more obvious characters, that
the more obvious characters, that
the *Lythrum* *Lythrum*. This observation
was made by the name of *Lythrum* &
not from the *Lythrum* *Lythrum*.

- 8 - Millport Water - (McWhinck) Leaves clearly rounded at base, distinctly denticulate, 5 inches long, 1 1/2 broad.
 Plants here small from immaturity.
 9. Fellon Church, Durham (McWhinck) Leaves rounded at base, denticulate, 4 1/2 long by 3/4 broad.
 in flower; petals slightly exceeding sepals.
 10. Brouke House, Richmond, Yorks. (McWhinck) Leaves 4 1/2 by 3/4, decidedly rounded at base, distinctly denticulate 2/3 down from joint.
 Sepals & petals equal. Caps. shot 3/4 inch but one (of three) specimen, there is two caps 1 1/2 long, & between these are two shorter & scarcely more than 3/4, as are many others.
 In this plant, one leaf is denticulate the whole length.
 11. Look Park, Perthshire. Leaves narrow, denticulate, rather tapering at base. The only two caps. seen from which the petals have fallen are shot, but it can scarcely be said certainly that they would not have lengthened.
 12. Abden, 1000 feet elevation. Leaves narrow, attenuated at base, denticulate only slightly. Caps. long.
 13. Moray (Red Cow) Leaves narrow, slightly denticulate, base shot rounded at base. Plants first expanded.

20. V. edouardi.

Dear Cliff

March 20. 1852.

My dear Sir

Dichona is now I believe considered a
genus by Mies. In South Carolina specimens the
structure is thus ; it is however very probably

that ascigerous forms also
exist, and if so the production
may after all be a lichen.

It is believed that all the *Pyrenothecae* are
merely the sporiferous forms of ascigerous
species. I have not studied the matter enough
to give any opinion. Mr Bromme lately sent
me a *Phoria* or rather *Phoma* on
fir cones in which contiguous perithecia
were sporophorous & ascigerous, and
we have published cases in which the same
lichenium produced both. I send you a copy

of the mucosa. It is - has it about 8-10
 for it to form. It is a kind of
 what I mean by the formation of spores in
 this. Perhaps you have a specimen then

It is 'apparently' alike. This may be found
 on two different types

The thidium consists of two parts, one
 of which has ultimately four nuclei. The
 other two.

in this case. The endochromy are formed in
 succession in one cell and advanced

the former

difference between the thidium of *Stylople Sabrytonia*
 relations are not yet constructed.

f*. it/.) A

a good example of 4 the changes which /&:/&<_ in spores
 is afforded by p. Phasia on skin. In certain stages of
 growth there are "spores" in each *?CK#; but these *%<*+,
 from the fracture of the original eight. It is rare to find
 the original state consisting of four joints; sometimes I
 find three. In this case as in many other the mode
 of formation requires to be attended to.

Also, Sir, if I do not presume too much upon that courtesy
which Botanists exercise to each other, I would ask another favour;
I am ^{s^ZsC^A^<-MT} a little work on the British Ferns, and am
puzzled with some ^{' ^ ^L^^ tCe*^^} even our best botanists differ
from each other, as I have received the same species from Dr. Hooker,
Mr. Wilson, Mr. W. Christy & others under very different names. any
new remarks on the Cisteas, or Aspidium lobatum, aculeatum, angulare
rigidum, variegatum, decumbens will be particularly valuable, as well
as all the original habitats which you can recollect of the rarer species
I mean such situations as you have yourself found them - and not
those included in books - Also the Southern limits of Hymenophyllum Wilsonii
and Northern of H. Cambriogenicum - and what effect the sea has upon their
growth, ^{if any in general} whether to render it more or less luxuriant.

Regretting to trouble you so much and I fear so unwarrantable
I remain

Sir
Yrs Respectfully
G. Francis.

55 Great Prescot Street
Sept 19 - 1835

Anti-Slavery Society
Dr. T. M. M.

Dear Sir

In looking through your
statement some spirit felt
you have blots to put away
of the Devonian Sea.

People of the friends of the
cause for the friends of the

Anti-Slavery Society, who are
the duty to make you a witness
in kind if they know what to
be said to you

Wm. Lloyd Garrison

Wm. Lloyd Garrison

36. N. Mansa, 1846.
Black Stone of Gungy!

25 Coleridge Street

Apr 23

Dear Sir,

In reply to your inquiries respecting
the extent of publishing Mr. Parker's Sermons,
I shall be very happy to afford you any
information in my power; although the probability
of sale, and the small number of publications
will be more correctly judged of by yourself.
I am acquainted with the quantity of it printed
of both sides and so. I should think the sale
may from the quantity would probably be sufficient
to pay for

39. V. *abipolae*, etc.

First Series of Sermons! *Caracanthi*. Spang and at the College.

If you print 100 copies in quarts,

I believe the expense for 10 plates
would be about 7/6. Hence —

3. 5. 0

Plus for the same

2. 12. 0

5. 17. 0

Should you attach my description letter.

Sup. if you allow about 1 leaf to each
plate, it would form, with the 10th two
two sheets, which might be printed for —

3. 3. 0

If this you would add something for
binders, as stitching, binding. &c —

1. 0. 0

If 100 copies might be produced for 170. 0. 0
in the form of a book, or 2 shillings a copy.

If you advertised the publication, that expense
might be added considerably to your charges.

If you think you may venture to issue
the above work, we shall be happy to get
the plates, &c. printed for you

There can be no doubt but the prints will
form an excellent illustration of your article on
Styngame Abbey in the Collection but we have
not yet given any plates in that publication,
and its limited circulation will not at present
afford it. R. Stedings, however, will form a
good illustration to my work, & I should think
it w^ould be better for that purpose.

Perhaps you think you intended to give
some with a view you to form a distinct volume
on Heywood Abbey, I should hardly expect
you to confound the latter with your former! & the
drawing of a brief description of the ruins, &c. is
an extra page, and sending the drawings
evidence for preservation in the Collection. The
third Part of that work is just finished, but
we shall be happy to include your article in
the Fourth, if you can shortly forward us another
sheet of manuscript.

I remain, Sir,
Yours very sincerely
John Gough Nichols

W. A. Leighton Esq
Shrewsbury

Readington April 19th 1838

My dear

I am sure you must long before this have
at my long continued silence, and I am anxious to obtain
(Oct 10th) but communication. I certainly did not
to do so. and yet I must confess that your regard for
me and the same with such plants has not the
stimulated me for this season, that already the
expectation by Mr. Boscawen in the botanical garden
of Bangor, in some other publications, that
has been
been done
are made
Brookton
Sants for
Bangor
Bangor, and cannot quite permit the possibility of an edition
publication or at least promise the Botanical also a prospect
the work you allude to, an extensive sale, of the same edition
of lists of Cryptogamic plants is to constitute the only portion of
work. I have shortly written her catalogue for Cambridge
at Bangor, (submitting the Common species of the Bangor Botanical
which is not already too late, an old year since - the list would
certainly have been long, if the Bangor and the district in
A. C. C. or even if the Bangor and the district of Bangor standing
the district of Bangor, but much of my time has been occupied
with studying the Cryptogamic on the spot found in former collection
of duplicate specimens or a state for distribution; in the event of
my undertaking the publication of specimens for work with both countries

Hi il <

Wp Wtt

12th. 1838. I have examined the map of the
of Bangor this winter for the list of
Vernonia angustifolia
"Siphonanthus" 1838. an obsolete state of
not very far in more than one locality of
specimens of a decidua for three years!!
Dissertation showed no trace of species. I think it is a very old
species.

then my heart and he got off with a Britain - Perhaps he thought
that you detest him - he seems pleased in the task of providing
conspicuous with specimens of the specimens of
specimens has held the pleasure of publishing others
concerned with both when the demand became very
specimens of specimens - I have had much of the
both and several others but my chief wish has been
specimens of specimens which have been
then a thorough revision and giving down a specimen
letters from each individual group of specimens, the value
often of others in very many different ways, and steps of making
practice - the last requires a good specimen and it is complicated
specimens a variety of things for some time to come - I am very
1826 to have specimens with the British has been some time and a way
then a specimen of specimens - I regard the latter has been some time and a way
in a state of utter inactivity as to the specimens of the specimens and I have
not find that Mr. Brown a thing which has studied the British and the
of the illustration of the specimens - I think have succeeded in some
a more to them our satisfaction - I am a little surprised to learn how
should consider said in regard to the specimens which I have
sent of specimens (now) in study a very distinct specimen, and I have
do as I believe from my other British specimens - Mr. Brown has lately
arrived at correct notions of it, but you specimens made by himself
then not again that he is correct in the facts - I cannot give you any
specimens with having about the specimens you send in detail as to them
identity with a specimen of the specimens, please specimens in order
from Mr. Brown, a specimen from each other as to specimens in order
then in a range - and should take up in the specimen of specimens
in the illustration of many of the specimens of specimens
The plant you have marked 'Chlorophytum' is marked with a
specimen of specimens of specimens - I think a specimen of specimens is what
I call Chlorophytum - that is not a Chlorophytum is what
the colors remaining and perhaps in the fruit - it differs from
specimens of specimens in being the seed with it very
specimens of specimens - Chlorophytum - specimens of specimens of specimens

Ink * * l
inntii

by the elements of well distinguished from Chlorophytum which
it must resemble in its aspect -
Another cause of my thinking in referring to you against her
my very small means of supplying your society list of specimens
which I am sure will be of great use to you in your list of specimens
think them small the cause - an opportunity has been
half of sending it to you as far as
out for you that I actually have
If you think I really can do
list of N. C. plants, I shall be
that is not already made for
the very same specimen, an article
of the kind when I have a table
As to the Anglesworth Wright
Mr. Brown knows all this for
my original sketch of specimens
& specimens - I have had my
sent on it since I began to collect
at all Mr. Brown in supply more specimens
I do not know whether you attend to papers - if you do, I should be
glad to have a sketch of specimens of specimens - specimens of specimens
specimens of specimens if you should ever be so fortunate as to find them - I
and some a few others that would be very useful but I am very sorry
and I think that you have a prospect of getting them -
I remain
With much respect
Yours sincerely
W. Wilson

July 24

My dear Sir

It is now a long
time since I have had
the pleasure of seeing
or hearing from you
a long absence on
the Continent has
necessarily interrupted
most of my Correspondence

for the last three years
but I have not within regret
abandoned the pursuit work
of Natural History
I trust permanently
to have communication

with its cultivators
I was very happy to
see that you have
brought to so successful
an issue your intended

Flora of Shropshire & only
that to excellent a
was not made to
include a larger sphere
& thus secure strictly a
wider circulation. I trust

you received some plants
which I made up for you
about 3 1/2 years ago
on my part I have
to acknowledge the
presents which you

sent to me thro' Dad. I am particularly anxious
at present my immediate ^{to learn more as to the}
subject in the way of Books.

Effects cultivation ~~is~~
is to complete a Monog^{id} not as ^{which} upon an orig^{inal}

of the very troublesome gas upon the susceptible progeny
HIERACIUM at which of these parent plants produced

I have been worried by sowing the seed ~~of~~ ^{by sowing} ~~of~~ ^{the seed of} I

for some time I am also am still ignorant as
say that I have yet to the extent to which hybrids
arrived at any very are formed in this tribe. I
interfactory results whether under favourable
circumstances there

be or not permanent *H. microides* of Fausch but
hybrids? Capable of propagating also seeds
gaining themselves by the way of *H. rufes* the Allem.

I have recently observed you should visit the British
fact in Sligo which this year you will much
tend to call in question. Oblige me by information

All my previous ideas as to this plant whether there
or to the species of this plant concerning it
with *H. murorum* or rather

Phylloporus seems the *Diaphanum* of Fries of
is a plant from the British specimens (with respect
of which have seen specimens would be still more
which looks very like *Saturnia* — Any

specimens or information, commands for me
as to this or other British
or Foreign species will be I had a letter from
very acceptable. I then Babington who said
any thing that I can do he was stopping with
towards any tribe as to you but he did not say
you are interested to you what this future money
I still intend a man of rough months were to be I
the Kololets it is wanted. I have therefore been
just about sailing for Ferno I have therefore been
to return in October after unable to write.
Wm. 85 Stephens Green Dub. if you write to him
is address Poste Restante A. pray say so and believe
I can have any immediate me very sincerely yours
A. B. A.

13 t.r A.

Cross Chepping
Cumbria.

Feb. 13. 1868

Dear Sir

Your kindly promise
of some specimens of my *Thropachia*,
about that I might wish in
return for the *Hieracium* & I am
now about to claim the fulfilment
of that promise by requesting
specimens of

Panicum fluitans
circumscriptum &
Leucocoma

I note for the last with some
diffidence as I know it is at
present considered rare.

I have noticed an ~~one~~
rowing amongst *H. sylvaticum*
but differing from that in texture
in seldom having more than one
set on the stem. It is not
micromum as it has not

retroflexed" teeth - but it
approaches much nearer to *H.*
microrum than *H. sylvaticum*.
I cannot find any dried specimens
of it although I recollect gathering
it several times, or I should have
forwarded me. If you could furnish
me with a specimen or two of
any species of *Theriacum* except
H. Pilosella, *H. microrum*, *H. sylvaticum*,
H. ver. peritum, *H. brevis* (Duis) & *H.*
umbellatum, I should feel
highly obliged.

I have been confined to the
house with a severe cough, which,
my doctor fears will settle on
my lungs unless I get some
taken; since the 1st. Inst. I have
the new year has not at present
been very pleasant to me.

I must not omit to thank
you for the prospectus of your

specimens of *Urtica*. I saw the
notes respecting it in the
Phytologist - but can only regret
that my business is not
sufficiently lucrative to allow
of my acquiring it - I have
long marked your *Flora of Shrop.*
& this is a most desirable book
but has hitherto been unable
to procure it -

Hoping you will not think
I have taken too great a

liberty I remain
Yours Respectfully
Thomas Mordaunt

Rev. W. A. Leighton

Wm A. Leighton Esq.

Dear Sir

I feel particularly obliged to you for your kind communication, to which my attention had not been previously turned, but which puts the history of the propeus of the lobcheium - bulb in a clearer point of view than I have hitherto found it stated by authors. Your observations correspond precisely with those I had made ~~ten~~ seven years ago, and which I have since then been accustomed to mention in my lectures in the University here; but yours are more minute and anatomical, and therefore such as ought to be more satisfactory to scientific botanists.

The announcement in the billets of the Botanical Society, which attracted your notice, was made in consequence of the Secretary, upon an occasion of dearth of materials, having urged me to supply something on the spur of the moment. More important papers however turned up by accident in good time; so that my little communication was all needed, and has been in fact withdrawn at my request, because farther time was required to finish certain observations.

The department of the infundibulum to which my attention was lately directed is the formation of infundibular lateral lobes which happens to form, in midwinter or a little later, a close between the bulb and root-proper, as you know, little lobes are produced upon the body of the parent, - true I suspect, about the same time, - often during the winter and ensuing spring, when the original bulb, though plump and large, is quite water, free of starch (so as to shrivel to a thin if dried), and probably so long as you see towards the summer.

What I have called the principal spring bulb (the pushing up its former amidst its leaves), but nearly during the purpose of preparing infundibular lobes for propagation, which are speedily thrown off straight from the parent, and may be found about the size of lemon-seeds contained in its nodules. What I wish still to ascertain is, how long these infundibular lobes must take to attain such maturity as to throw up flowers, and what changes take place in the interval. I suspect several years are necessary; and it is not improbable that during the interval the little nursing parent, ~~may~~ ^{may} not only die naturally dying, exactly like the mature, flowering bulb. Perhaps you have some observations on this head. If so, I wish you would draw them up, and I shall cheerfully lay them before the Botanical Society, now, I am sure, will be very glad to receive them. If you do not happen to have looked back the whole history of these lobes, I shall be glad to see that

you have undertaken to do so, because my own numerous observations and distance from a garden cause me often to forget the points for drawing what is going on. Perhaps for me are the persons who are here for such observations; be careful to keep the collection in any other respect than the community, it may rarely complete its life by ripening its seeds.

It is a very curious instance of triple propagation, - by seeds - by infundibular lobes thrown off from the parent, - and by a triple bulb (which we may almost call it in comparison with the others) according to the barrel of feeding or it to its destination.

I am

Your most Obedt. Servt.

J. P. Christian

Edinburgh

Sir

I am very particular
in my engagements for
to have fitted to forward
me containing your
letter of the 14th. I shall be
happy to receive them
and as I intend departing
hence for Town in the
course of a few days, I
will when in London give
directions as to the delivery

your work to your
brother and acquaint
you in what manner
I should please you,
been promised you
Flora of the Province.
I am Sir your Obedt

D. S. Lee

Sir

I received your note with the boxes
and now return my best thanks for the same
the Carex flava is the same as our plant and
what I should refer to C. Ederi the C. stricta
is the same as my specimens from near Manchester
I have enclosed the specimens which I presented
in my last I have also enclosed two specimens
of C. ampullacea one from Hale near the other
from Chorlton near Manchester if you examine
them you will find the fruit to be very different
perhaps you will procure me ^{with} your opinion on them
when I first saw them I was inclined to think
they were distinct species but I have some
intermediates state

I have also enclosed the C. Beckloui and
C. cespitosa var. from my own Herbarium
when you have examined them you can
return them in the same way perhaps you
will let me have your opinion on the
C. cespitosa var. at the same time
as you tell me that the nuts of Carex flava
and Ederi closely correspond in form I have
enclosed my seed of the fruit of the flava
perhaps you will be surprised when I

MM

it 3

say that all the fruit on the ear was taken from the same specimen. I was to return the card the ear imperfectly you can keep, the specimen of *C. flava* is the true extreme of the specimen of *C. which* I had just. I find them in order that you may be better able to judge on the water the other specimens will show you the fruit a very state you will observe that is taken a low road. Section seen in a very state to pay to bear from you here I remain Sir, your

Hobbes Bred
 Jan 10 1841

Sir, I was forwarded with your note and was able to say that our Editor as so mentioned my name that I fear you have not been able to find it in your magazine. The Lakes tonelle figure this is my type. I can find you a specimen of *C. flava* that the *C. which* you mention is not the same as the one I have given you. I have given you all my specimens with the exception of the plant he is giving you and the other not inserted in the note being irregular. The rest of the note is given irregularly. I only consider a state of *C. flava* the same as the one I gave to Mr. Bred. I consider a good specimen in the *C. flava* of the *C. flava* Society at page 76. I have a few observations on the *C. flava* which he says speaking of *C. flava* is therefore to correct the article of *C. flava* of a variety of *C. flava* this is the *C. flava* of *C. flava* so far as regards the *C. flava* in *C. flava* it was my opinion that we had in that specimen up to September 1841 which a few specimens from *C. flava* that common

London Ap. 7. 1840

Sir

I can only remember
- how that I thought your
fig. of the fruit of *C.*
paniculata not charac-
-teristic - I enclose, as
you desire it, some
fruit - observe the
form of the bract,
which has an elevated
central line running
along it, giving it a tri-
-angular form. The base
of the style is bulbous
as your sketch shows -

Sketches figs are without
my pretensions, but requisite,
I think. Yrs sincerely
T. Booth

London March 25. 1840

Sir I enclose you such
seeds of Carex as I have &
can only regret it is not in
my power to send all you
want. In saying you have
collected "a hit to unobserved
character - the form of the
nut" you surely forget
the opposite figures of
Schulker published nearly
40 years ago - in which the
Achenium is accurately
represented - & all the later
writers on the Continent on
Carex have described it -
like all the parts of Carex
it is variable in form -
your fig. of C. paniculata
is not accurate I think -

W. R. Leighton Esq

Dorchester July 28 42

My dear Sir,

I send you a specimen with a
few threads of *Comp. quadrangula* Linn. & several
with *Synsarcia pectinata* 
Mr. Berkeley & Mr. Worror considered this
plant allied to *Dendroica succorum* Hook.
with this opinion I could by no means
agree, & referred it doubtfully to *Synsarcia*
calling it *Synsarcia? anomala*, nor am
I even now by any means certain that it is
not a *Synsarcia* in fact. Mr. Shuttleworth
sent me the following remarks upon it
"The *Synsarcia anomala* Kalf. is an interesting
plant but by no means belonging to the

mmmm

"Corymbosa" - The apparent diversity of the specimen rather than two more or less nothing in common (genetically) with *Sp. densa*!

I collected many years ago the same plant in trucking box water in former zone of the Alps & Hungary, this with one specimen of *Conf. glanduligula* *Syzygias* an opinion with which I coincide, although standing from plants in *Syzygias* character should not agree with our plant.

The same plant gathered at Keryessa differs from the one now sent in being of a dark green colour, although the same difference is retained last year. I also send a specimen of *Sp. densa*

specimen as it somewhat differs from the *Sp. densa* plant.

I am sorry that I cannot put them up better but I have no oil cloth left and cannot get any in Dolythy. I had ordered some to be sent from Prague but soon the specimens were sent to reach you in a state fit for examination. The only plant I have gathered in addition to my former bits of the *Syzygias* plant is *Sp. densa* lately from Dolythy.

Yours most truly
John Kalf

I think the specimen marked Conf. *flavescens* is *Dryopteris*
tenax but as my eye became so painful I was not able
to examine it minutely, the other I have not yet looked
at - It would greatly assist in determining the plants if
you were to make a rough sketch similar to those I have
done in this letter.

I sincerely know how to answer your question about *Dryopteris*
I quite envy you the possession of it - it is the best work
on the *Congyate* yet published - Mr. Borser who is better
acquainted with the tribe than any other British Botanist
of the continent that *Dryopteris* is not sufficiently studied
but Mr. Harvey knows nothing of the *Congyate* and I
have only ever looked at *Dryopteris* of the value of a translation.
I have no doubt - but if I was asked whether it would grow
I must say I do not think that it would, because there
are so few Botanists that pay attention to the herbaceous
Alga or could appreciate the work - Dr. *mesemii* *Alga*
I think we are before the Continental Botanist but
in the fresh water species we are much behind them
I intend remaining at *Alga* *mesemii* about a fortnight
longer. I remain
My dear Sir
Yours most truly
John Relfe,

Conf. *flavescens* I think is right.

Dec. 3. 1847.

Dear Sir

I have received
a prospectus of your
"Shropshire Rubi" and
wishing ^{4^} to obtain a set

^{w&} of these specimens for

the ^{S^ffii^SSi} ^{^ . J ^ ai,} ^{um}

I beg ^{yfc:} to enclose you

a post office order

£1.1.0 in your favour,

as payment for them.

The parcel may

be addressed:

D. W. H. Harvey
Trinity College

Care of

Phineas Howell Esq
15 Eden Quay
Dublin

Dublin Steam Packet Co.

and sent, by rail, to the
Office of the Dublin
Steam Packet Company,
Water Street, Liverpool.

As I wish the specimen
to be incorporated with
our Herbarium, I should
prefer having them loose

instead of being fastened
in a fasciculus?

Believe me, Dear Sir,
Yours faithfully &c.

Last December I brought with me from New York
a number of dried plants from my worthy friend Mr. Long
of that city. He desired me to try and find out your
exact habitat of which he was not quite aware.

Not being much of a botanist and having few botanical
friends it was only a short time since that I learned from
Dr. Don where to direct to you.

My object in now writing to you is to beg that you will
write soon to inform me by what conveyance you
would wish me to forward them from London by sea, a whether
you would wish them left any where in town.

My address is at "Spffing, Essex."

Yours

W. J. F.

Dear Sir

Enclosed is a packet of plants for

the society with names and localities some
of the specimens are very bad ones, but they
will fill up the gaps until better can

be procured. Among them is a specimen
of a scirpus and of an Eriophorum of which
I have more duplicates, if they are of any service
to you I will send them. I have good many proper
names but have not at present time to
look them out but will do so some of these
days and send the duplicates of the correct
and a list of the Prophyta ones, or you
send a list of the Prophyta ones that
have occurred to ^{us} which I am afraid

you will think a very many one
but such as it is if I say so to you you
may see it as you like there are many
of the very common species not included in

Dear Sir,

I had the honour of receiving from you some time since, a letter requesting any specimens I could give towards your Flor. of the baron.

I am sorry to say, that the subject is one which I know little or nothing of, & I have delayed so long, to inform you so, in the

hope, that I should be able to show some little information of the localities of some

of the rarer plants, from a friend who has been curious in such things for many

years: & with this expectation when I

went to visit him - about some time since, I took with me a list of

plants, these birds, you may be surprised,
which I do find in his paper;
birds with: he was known to party
with the subject.

The work, I think, to do
with, is pretty nearly the subject
of the paper. I think

Dear Sir,

I had the pleasure of receiving your letter of the 8th Inst. some days since; and as I fear I must have expressed myself in my former letter, rather diffidently for what I intended, I ought to have written immediately to you; but having been much engaged, & suffering much too, from tooth-ache, I have not

In the haste of preparing to leave home, my letter was written to you. & I confess, I cannot efficiently change my recollection with its contents; but certainly I am untroubled, enjoying in such a task, as you propose: for which, indeed, I have some time & ability. All that I intended was, that if you could supply me with a Tabular list of any of the places, in South Hampshire, I would endeavour, as far as I was able, to give the Geological form & in which they are respectively situated, according to the arrangement of Mr. Sturton, published (for abstr. of his paper read before Nat. Soc. Lond.) in the Annals of Philosophy: If this would be of any use, I should have pleasure in attempting it, though

&jj* ^

je viens de recevoir l'envoi que vous m'avez fait l'obligeance de m'adresser le 10 de l'année. Je me suis hâté de vous en faire parvenir mon sentiment par expédient comparé des échantillons avec ceux de mon herbier qui ont été de multiples aux tables de votre monographie, avec quelques spécimens que les formes propres de cet ouvrage se reproduisent et dont les pages très éloignées l'une de l'autre. Je ne suis pas sûr que les formes propres par feu mon ami M. Weiche comme espèces, doivent être considérées comme telles, mais, à mon opinion, c'est absolument nécessaire de rechercher la plupart des formes différentes que nous présente un genre quelconque avant que de s'engager à juger des espèces et d'en fixer les limites. Je ne suis pas sûr que l'on ait pu de tout à la venue, tomber en distinguant comme espèces la plupart des formes de l'ance qui viennent ou lui ressemblent, ou M. Weiche qui veut de les réduire toutes à une seule espèce. Il est vrai dans ce cas, purement de l'objet d'observation qu'en observant fidèlement la nature nous trouverons enfin le juste milieu de ces extrêmes. En vous faisant part de la nomenclature de vos herbiers avec la monographie de Weiche et Herod. Lombardi je dirais en plusieurs lieux l'avis pour vous donner mon avis sur les celles qui, proposées comme espèces dans cet ouvrage, ne sont plutôt que des variétés d'une seule espèce. Je dirais l'avis de ce que notre ouvrage, et qui nous évite la répétition de même nom en plusieurs lieux. Les nombres ajoutés aux noms sont ceux de vos échantillons. 1) *Rubus plicatus* H. & W. (n. 74.) Votre échantillon se rapproche beaucoup du *R. festigiatus* qui n'est qu'une variété du *R. plicatus* (n. 74.) var. β (n. 75.) var. γ (n. 50 & 12.) Je n'ose pas le rapporter cette espèce au *R. plicatus*, puisque je n'en ai jamais trouvé des formes intermédiaires en est une variété. — 2) *Rubus rhemifolius* H. & W. (n. 76.) Les nos 2, 7, 11, 15 représentent la forme ordinaire et est une variété à fleurs roses, n. 17 est d'une plante élevée à l'ombre et se rapproche du *R. cordifolius* dans une variété d'une autre espèce que je tiens pour bonne espèce. Souvent en vertes majoritairement, et oppositifolies, testiculaires recurves. — 3) *Rubus vulgaris* var. β n. 77. H. & W. 5) *Rubus villosus* L. Koch. var. *conditior* foliis brevibus serratis, et quibus spectet *Rubus vulgaris* & *mollis* H. & W. 6) *Rubus villosus* var. β et communis abondant dans les prés. (n. 18 & 19.) 7) *Rubus villosus* var. γ et communis abondant dans les prés. (n. 20.) 8) *Rubus villosus* var. δ et communis abondant dans les prés. (n. 21.) 9) *Rubus villosus* var. ϵ et communis abondant dans les prés. (n. 22.) 10) *Rubus villosus* var. ζ et communis abondant dans les prés. (n. 23.) 11) *Rubus villosus* var. η et communis abondant dans les prés. (n. 24.) 12) *Rubus villosus* var. θ et communis abondant dans les prés. (n. 25.) 13) *Rubus villosus* var. ι et communis abondant dans les prés. (n. 26.) 14) *Rubus villosus* var. κ et communis abondant dans les prés. (n. 27.) 15) *Rubus villosus* var. λ et communis abondant dans les prés. (n. 28.) 16) *Rubus villosus* var. μ et communis abondant dans les prés. (n. 29.) 17) *Rubus villosus* var. ν et communis abondant dans les prés. (n. 30.) 18) *Rubus villosus* var. ξ et communis abondant dans les prés. (n. 31.) 19) *Rubus villosus* var. \omicron et communis abondant dans les prés. (n. 32.) 20) *Rubus villosus* var. π et communis abondant dans les prés. (n. 33.) 21) *Rubus villosus* var. ρ et communis abondant dans les prés. (n. 34.) 22) *Rubus villosus* var. σ et communis abondant dans les prés. (n. 35.) 23) *Rubus villosus* var. τ et communis abondant dans les prés. (n. 36.) 24) *Rubus villosus* var. υ et communis abondant dans les prés. (n. 37.) 25) *Rubus villosus* var. ϕ et communis abondant dans les prés. (n. 38.) 26) *Rubus villosus* var. χ et communis abondant dans les prés. Admiralty 10th Jan 1835.

Sir,

Your letter of the 10th inst. & contents
had have remained so long unopened were
in such that I was from home, with
my family, when it arrived; - in reply
therefore I beg to state that upon
carefully looking over your statement,
the collation of my work, the
copy in your library is perfect &
& I presume are the same that
to be has reached you, being been
duly forwarded to Messrs Longman's
on the 31st Ult^o.

S^r A^r

I believe I mentioned that payment
of the first portion sent may be

would to me here, & for the remainder
of interest either half-yearly, or yearly
as most convenient - with regard to
first under the unfortunate circumstance
that have occurred with regard to my
work & the large sum I have yet
to remit in consequence, I need
not say that its receipt will be
very acceptable at this period of the
year.

I am

Sir

Yours faithfully

J. Stephens

91 Blackman St. Bow
London
26th July 1847

Sir
In some conversation I had with
Mr W Pamplin last week, I said I had found
the *Tragopogon* which grows at Cobham, the
same that Mr Irvine mentioned in the *Phytologist*
and Mr Pamplin informed me that you had written
to him for specimens but, he had none by him
and he wished me to write and send some if
I had any to spare. I was at the locality
yesterday and gathered a few specimens, but
they are very small to what it was earlier in
the season, when I first observed it, there is but
little now except dried stems, it grows about three
feet high, and the leaves in young plants are
very long, so as to resemble *S. Cornifolium*. I have
found in Sussex a plant (which I think
must be the *S. minor* Fr.) in which the
involucre is nearly three times the length of the

11
flowers, but I have not been able to compare
it with the description of that plant. I have
seen all the plants mentioned by Mr. Irvine
as growing near Cobham with the exception of
Althea rosea, Berberis fuscus, for which I was
too late this year, and the Bupleurium Rotundifolium
and found some others which are not common
met with. Brachypodium Pinnatum and spha-
raticum grow here almost to the exclusion of
the commoner grasses elsewhere, and I send a
specimen which I almost thought to be a
distinct one the B. Horticola, but I have not
been able to examine it properly, it is most
likely but a variety, but I have observed that
when B. pinnat^m is very luxuriant, it does not
produce more than one spikelet, tho' at times a
long bractea at the base of the lowermost
I trust my specimens will arrive without
material injury and prove acceptable.

I am Sir
Yours Respectfully
William Mitchell

11 of August 1891
Miss [unclear]
Almondburg

Edm. 'tj April 1840

of Durbin

I have received your letter of

X / ^

accompanying specimens of oak - For both
into you -

Now the confusion about the British forms of
is increased by Smith, & not diminished by
his observations which you are so good as to quote.
Myself seems to have had totally precise notions

regarding these forms - which you will understand
my using the terms *permutata*, *intermedia*,

albiflora - The first & third you will not mis-
take my meaning in referring to, the first having a
developed peduncle, & the third, according to
my absolutely no peduncle - The second has one
short

that *Q. laevis* is of the same group *Nepalica* oak,
 the specimen sent to you from Lachlanensis. It
 is the *Q. laevis* oak of *Messia*, & not his *Q. laevis*
 which is the same group according to him in the
 New Journal to the first of the three, *Q. laevis*.
 Smith in *Eng. Bot.* considers the 2 & 3, *Q. laevis*
 & in *Eng. Flora* he strongly considers the 2? the
 type of *Q. laevis* & the 3? the β of that form, the
 & thus make Q to be the intermediate, & B the last
 which alone the name could apply - *Q. laevis* in
Cherwell that, & naturally considers the Q of *Q. laevis*
 the true *Q. laevis* & B the intermediate, which
 the intermediate is the true *Q. laevis*, which according
 to *Messia* it is not - The form of the leaves which
 now and then, I alone have considered
 true of the true *Q. laevis* - the true *Q.*
 = the New Journal oak of *Messia*, in t. 12,

and you find on Lachlanensis exactly such leaves
 with opposite Quercus long - *Q. laevis* *Q. laevis*
 any *Q. laevis* *Q. laevis* *Q. laevis* at all - This has
 to wrong all my notion upon *Q. laevis*, that I
 find it absolutely impossible to send you
 any other form of Lachlanensis oak - I do indeed
 believe there are fifty other forms, & the character taken
 from *Q. laevis* & the *Q. laevis* to cross each
 other, that I must believe no means exist for
 separating species in Britain -

You have taken to me the very *Q. laevis* oak
 the *Q. laevis* - but I think there you are quite right
 to the possibility of obtaining some character from
 form of the fruit - I do not think I ever saw this
Q. laevis *Q. laevis* till last year, but then I
 to no purpose the *Q. laevis* *Q. laevis* *Q. laevis*
 which it has both *Q. laevis* *Q. laevis* *Q. laevis*
Q. laevis (I think from *Q. laevis*, but I think there are
Q. laevis) - It is not *Q. laevis* and *Q. laevis* *Q. laevis*

bein that the observation was new, & notwithstanding
my own letter, I cannot yet think it is - You have looked
more extensively at this character over the years
than I have, but I quite believe that you are right.

Wm. A. Lightow

Shrewsbury

MS

circumstances,

Wm. A. Lightow

I cannot take upon me to say from memory what
Gay is right in the observation you quote, & at present
I am too much occupied to pore over your letters, and
to show, which only could determine the question at least
for all my leisure at present, but shall try & collect some

Wm & Leighton Esqrs Newbury

Edin^g 11 April 1840

Dear Sir

A

I have this morning received your
letter of 8th April, & the specimens of
all which accompanied it. I have
some very slight doubts about them being
specimens of oak in Britain. Certainly
the leaves vary without the least reference
to the above; as for instance, as respects
length of the peduncle, & tooth
whether in the habit of the tree seen
we can find any strong features -
I have thought differently -
Your plant is certainly
what

Believe me you will always
be well-served for me by commu-
nicating with me on any historical
subject which may interest you
Yours very truly

Robert Schenck

what has been often called Quercus
brevifolia, & is certainly in the
form which I have noticed as in-
ordinate between Quercus
& what I supposed to be their near-
tine Q. subulifera - robur
as common as the Q. pedunculata I find
on the banks of Loch Lomond -
you a specimen which I found there
in August 1836. It is certainly
the plant figured in Martyn's
illustr. t. 11. - from Narwood, Sup-
p. 10

Believe

17. Manchester St, Gray's In Rd

July. 18th 1837

Dear Sir

I forward herewith
eight plates of the Lichens
for your inspection and for
the correct lettering to be
put upon them.

I please to return them to
me, as I have undertaken
to look after them, and
I will see that any
Directions respecting them,
which you may make known
to me, shall be attended to.

Believe me, dear Sir

Yours very truly
Wm. Steudler

R. W. A. Leighton

P.S. I do not suppose that your own drawings will be wanted
again.

Oswestry, V***. 29.
1840

*-3 - * < ^, A^'

Since I sent you my list of Shropshire lichens
it occurred to me to refer to an old list of
plants which I made out some years ago for
my friend the late Mr Purton of Alcester
preparatory to a 2nd Ed. of the Midland Flor.
which he was at that time contemplating.
I wrote them down with their habitats, &
sent some of the Vol. of Mid. Flor. as well
them, & as I have no doubt of their correctness
(except in one instance of which I will speak)
& as the list contains some habitats both of
lichens & other plants which I believe I
have not previously sent you, I now send
you from that list some additional habitats
of lichens, not contained in the one lately
sent you - I forget however if my list I
mentioned "*Lecanora glaucocarpa* - Craig. & Rhy. det.
This is an unpublished British lichen which
I name on the authority of Mr Borrer to whom
I sent a specimen some years ago - It has
only been found previously I believe by the
late Mr Harriman in Thredale, & by Mr
Borrer himself somewhere I believe in Scotland.
I will send you a specimen when I supply
upon us
to be seen to

The rest of *V. desidentata* which I was not
 aware had been so numerous. But first
 let me tell you what I meant by the 2 banks
 * P. I. transferred to *brachia desidentata*. Pch.
 & *Leiden*, in Rome canals - *nigricans* - the
 marks in *prestin* was merely meant to refer
 to the notes for these 2 plants & indicates that
 Taylor compounds these 2 together, whereas
 Mr. Borner & I consider them as distinct -
 the *brachia desidentata* has never been
 published as such in Eng. Bot. but Mr. Borner
 reports my plant as he here. *desidentata*
 & Pch. and strong distinct from *brachia*.
nigricans. Taylor is too fond of getting me
 a difficulty & slipping into plant ^{was really} that is
 not familiar ^{with some} ~~with some~~ ^{has been} well
 known one - If that is the case the two plants
 both growing together as I do upon one
 limestone rocks here, I think that would
 be the difference of *brachia* & *prestin*
 Hyem. Wilson & *brachia* & *prestin*
 that I saw them both together till
 & then became aware that they were distinct.
 I have another *brachia* which is a very pretty
 one, for which I only know 2 habitats, with
 respect to which I am at present at home
 both with Borner & Taylor - It is a yellowish
 green *Parmelia* of a very peculiar mode of
 growth & here - Taylor says it is a form of *crosta*

which is invariably as far as my experience
 goes of a white pearly color, & inflated at the
 tips, & rarely naturally with *Physodes* or *dictya*
 thence we are in question is not inflated, &
 instead of being *remora* has invariably an
spined *terminatus* of the scales. Borner
 thinks it a form of *Pitrysa*, which I think
 it be proper of Pch. & that *brachia* are distinct
 but not be difficultly amongst *brachia*.
 I now proceed to list you a few additional
 lichens with their habitats as extracted
 from my list for Mr. Purton -
Lecanora rubra - on dead trunks at Craig.
 Y. Pch. This is a very scarce lichen -
 he only then habitat but I know
 for it is on dead trunks on the walls
 of Wycombe Castle - *Porpordichia* -
 the habitat in Eng. Bot. is I think
 in Yorkshire.
Lecanora hypnum - longwood.
Lecanora }
Porpordichia } *Blakelock* rocks,
Opographa lyana - Pch. (woods near
 ledge in *Porpordichia*)
Borreria purpurea - additional habitat
 Stone walls, in my coll. My Pch.
Gyrophana polyphylla - *Beisopon*
Gyrophana abnormis - long
Opographa caliana - add. hab.
Parmelia pleurota - Craig. *brachia* *brachia*
Parmelia longata - Taylor. in Eng. Bot.
Parmelia - *brachia* - *brachia*

Asymptotylus Wilmsi
Plectiden horizonalis - *Brevitidius* - under the
Rocks on the N. side - 1 *Colobus* in
in *Altophonia*.

Leucana plumeo-campa - Craig. y. Rh.
Opographa montalis - add. habitats - *Altophonia*
Rocks.

dentifera.

Prunella perforata - Craig. y. Rh. I think
I must have made some mistake about this. I
will have a search for it this summer.

Upon referring to most of the hibernus you sent me
2 or 3 years ago, I perceive,

No. 30. *Vanidonia divaricata* - *Humphreys* - *Wile*

8. *Boronia profumata* - *Wile*.

38. *Plectiden horizonalis* - *Humphreys* - *Wile*.

1. *Prunella* - on willows, *Wile*.

29. *Leucana hirsuta* - *Humphreys*.

3. *Mythenus pubescens* (*Thunberg*)

42043. *Vanidonia* *Wile*

12. *Spharothrom concolor* - *Wile*

16. *Leucana confusum* - *Wile*

31. *Comandaria auctore* - *Wile*

49. *Prunella proleta* - *Wile*

27. *Umbellinaria posticata* - *Wile*

I have not yet stumbled upon the hibernus in
you sent me, except the primary I mentioned in
my last letter - but I think I have the remains
in some of my drawers. I shall have several
of the specimens to further speak for *Wile*, but

Dear Sir,

Could you obtain
me a copy of your work on the
Angiospermous lichens? I am not
a subscriber to the Ray Collection,
nor wish to be one, but I should
very much like to have the benefit
of your experience in the study of
lichenography. For some years
my attention has been directed
to the mosses - of which I have
about 350 species - perhaps 250
duplicated, and if you care any-
thing for the subject I should
be very glad indeed to exchange
with you, mosses for lichens.

A few weeks ago I bought
second-hand the three first parts
of your lichens Brit. Lichen; are
the after parts still to be had?

and if so about how many

has much pleased with you
but ~~the~~ *Galtonia dubugnum*
do without it I expect that
you determine the plant.

I also observe that my specimen
of *Platanus occidentalis*, var. *hans-*
lyi Wilmott gives a bright yellow
reaction with N.

Coniospora patula grows in
the same mass a very set when
with N, but with C. *Agalunella*
var. *protellaria* this is not the case.
I determine this in my *Reinhardtia*.

pg 57. The specimen of *Sten-*
thronia was not C. *protellaria* but
a form of C. *patula*.

In the case of *Sten-*
thronia the specimen under the microscope
from *penicillata* with N & C while
Sten-
thronia presents brown spots of
a striation of *protellaria* in

Sten-
thronia *ovata*. Sept 3
I have much like to know and
should be much obliged for
a small specimen, also of
Graphis septentrionalis. Oct.

The *lichen* you report in your
letter of the 12 Jan I send you
Lecleria variegata Nyl.
Eutrochium *parvulum* Nyl.

I cannot find the *lichen* &
my *lichen* having lately got
out of order - I decaying *lichen*
septentrionalis of them.

My excuse for not having
answered you *letter* earlier.
I wish were in my office
I would have presented me.

Dear Brother

I recd. your letter; I presume I should
not have heard from you now, if you had not
wanted something as usual; however I have sent
you some of the newest ~~things~~ ^{music} published this day at
Leitch; I had the pleasure of seeing Captain
Filmer when he was in town; I inquired after him
at his uncle's, & was informed that he was gone to
his father into the country; if he is returned to Selby
I beg my Compliments to him, & also to the charming
Mrs Filmer. I am not certain yet whether I shall be
able to go into Wales this summer, ^{but} I have promised Sir
John Leicester to go to Cheshire before September;
I should like to take a little tour along the coast
if we could continue it, particularly to the Wales ~~that~~
I wish to see. I have a second hand Harpichord
made by Kirkman, which I was obliged to take instead
of Money, ~~and should~~ be glad if you will dispose of
it for me, you shall have it ~~at~~ a reasonable price
& I will send it to Mr. Kirkman to see if it want
any repair first. From your

Affectionate Brother

Edw. Jones

Compliments to Mr. Edwards.

H. J. WHITLOCK. PHOTO.

BIRMINGHAM.

May 24/73

My dear Sir

I have lately been studying much the colouring matter found in birds, and some day or other would much like to send you a series of those common birds. However now I merely write to ask if you would be so kind as to tell me the accurate names of the material.

to which I must refer
in a long paper on the
colouring - matter of plants
to be sent very soon to the
Royal Society.

Yours very truly

H. C. Sorby

F.R.S.

Kew

15/9/72.

Dear Sir

Thanks for yours of 7th inst.

As I have no other means of getting my specimens properly identified, I will send them to Lunenburg to await your arrival. And you can take your own time to identify them.

Only I should be glad if you can send me to the above address, any of them you finish, with the names by the 2nd of next month. Those that remain undone here - can be sent to the

Care of "Prof. Dr. Oliver
Royal Herbarium
"Keew".

as other specimens of
mine still unidentified
as I have been busy with
the preparation of a
Forest Flora of ^a western
& central India, for Govt.
I am to be sent out to me
in the Punjab, where
they have been identi-
fied by one of the em-
ployes here.

I am preparing, & will
finish when I get, this
out, a list of "Punjab
Herbarium L.S.S." which
will contain all the
plants I have found in
my many years travelling
over my Province in
Plains & N. W. Himalayas,

of Fossil Indian plains & hills - with a very
short botanical diagnosis for N. O.'s
Genus, & spp. - This the Govt will doubt-
less print, & I am to offer a handsome
prize with a 2nd of half the value,
to my European officers, of whom there
are about 30. This will tend to
give them some knowledge of
botany, & on the bases of my own
collections, we may expect by long
to have a good Provincial Herbarium,
at Head Quarters, Lahore, the capital of
the Province, where the Forest officers
can study & identify their specimens,

When they attend the annual Town
Conventions -
In these they are being paid some
to these they appear -
the parcel a unit of localities & attention
of the latter, so far as these are needed in
my city -

Yours truly

A. L. Stewart. M.D.

Pottsgrove Rectory

Woburn, Beds.

1st March 1873.

Dear and dear Sir.

I shall be glad if you will kindly send me a copy of "Lichens of Spitzbergen" for which I enclose a Post Office Order.

In the course of next summer I expect to spend a few days on the island, as I have arranged to accompany

Mr. B. Leigh Smith on
his Polar Expedition as
naturalist. At present
I have no knowledge of
Lichens; but I hope to
familiarise myself with
facies of genera in
's class of plants during
few weeks of my
stay in England. With
object I have furnished
myself with your Lichen
Flora of Gt. Britain, and
with the necessary reagents,
and shall work out such
specimens as I may be able to

find in this neighbourhood.
I mention this in order
that you may not be
disappointed with the
results of the expedition
if they should not be
equal to my opportunities
of collecting in the
Arctic Regions.

Yours, most and dear Sir,

Faithfully yours
A. E. Eaton.

My dear Sir
G. J. S. P. P.

13 May 1872.

Dear Sir.

Only on Saturday evening
I returned from Italy after an
absence of many months, caused
I am sorry to say by a break down
in my health.

I find here your note of
Feb 10.

The very first opportunity I
have, you shall be furnished
with the specimens of
vegetation you wish for,

it may be that in speaking
of it as lichen I have
erred as I am no botanist.

Pray pardon a delay
in acknowledging your note,
which, under the circumstances
was unavoidable.

Yours very truly
J. G. Jeyes.
You perhaps know that I live
at a considerable distance from
Fairport, & cannot send at once.

5 Devonshire Terrace
Newington
January 20th 1869

My dear Sir

Many thanks for your
kind note of the 16th and for the
present of *Mylon Lichens*, which no
doubt I shall find of use. Nylander's
distinction between *Stictina* and
Sticta ^{o 4} ^o is in every case
clear and satisfactory. The colour
of the granules in old specimens
may sometimes be a little obscure
though I have not found it so
under a proper light. The nodular
arrangement, ^{in *Stictina*} is well marked,
and when the nodules are
broken up, the bluish green granules
are found without a cellular
envelope. In *Sticta* the broken up
fornidia are perfect (true fornidia), as
Nylander says, each collection of
endochrome being enclosed in its
proper sac. I have been through
Spence's collection of S. A. ~~and~~ *Sticta* &
Stictina and find your determination

are correct.

It is probable an examination of the paper to which you have drawn my attention, that I shall find Alexander has corrected his mistakes and you let me have his paper for perusal. Just before I left New Zealand he received a paper from him, in which his latest views ~~etc~~ were stated, and I noticed that he had transferred the Stictia appressa or S. hookeri or S. punctata (I forget which) to the genus Sticta - in doing so he was wrong.

I shall take an early sitting for my photograph & with them add to your collection and claim yours in return.

Believe me

My dear Sir

Yours very truly

Charles Wright

Thompson's Quay
Newington
25th Jan'y 1869

My dear Sir

I find an specimen of my own specimen of Sticta punctata that Dyakson is collect in Newberry that plant to Sticta.

Being this plant, in the New collection, is one of those to which you allude as being difficult to determine.

My impression is that Dyakson made the late transfer on examination of specimens with which I had supplied him from

New Zealand.

Bellevue me

Yours very truly

Charles Wright

I'm very glad that *Sticticia*
Hookeri & *Sticticia fraudulenta*
resemble each other - and
their spores are alike. It is
very likely one has been
mistaken for the other, and
hence the confusion - I
look over the Kew collection
of acids:

L. K.

Sticticia
New Zealand
27 May 1869

My dear Sir,

Your Ceylon lichens
reached me yesterday evening.
They are exceedingly interesting
to me. I saw this morning
examined the foliaceous plant
marked "*Sticticia pagellina*
var. *subpunctulata* Hyl." It is
the *Sticticia punctulata* Hyl.
(*St. guineifolia* Tyl.) I
inquestionably a *Sticticia*.

Believe me

Yours very truly
Charles Wright

50 Canhamwell Green

Feb. 22, 1872.

Dear Sir,

Many thanks for your
kind notes, up to L, & the
book: all received. In your No. 9.
article Collemia - there is no Pyrenidium;
which is described in the book. I suppose
this is ^{an} accidental, not intentional
omission? Your nomenclature appears
very hard! The terms not to be found
in Botanical works; which, you
will excuse my saying, makes the
study $stttU^{^^}$, $\langle J L^{3i}$, too difficult,
state were so. The distinction between
Zonidia & Fraxella zonaria (why not
Kützinger's zonaria?) appears to relate only
to size. What is the distinction in the

Case of *Leucostoma* + *Spilostoma*? (Haw)
at p. 36, (*Leucostoma*), *Spilostoma*
Iridiate forms of *Leucostoma*, in a
few only of *Trametes conicoides*?
Where is *Trametes conicoides*?
What work?

Then you refer *Scutula* + *Abraxothus*
to *Leucostoma*. But what says De Bary?

Trametes *Stromatolites*: That these
Fungi than all go. I take a slight
Orstrom in *Brook*, (London, *Pyrenopeziza*
4, 141 - .D. be by, *Thif.* I shall try to
use your article, but upward, as far
as space permits. I must willingly
have added all, except for *Trametes*
Stromatolites.

I am Dear Sir,
Sincerely yours,
Rev. W.A. Leighton, B.A. *W.A. Leighton*

I do intend to propose that your
name might be added to the *Leucostoma*
I do; subject to any reasonable
Remarks in *Propose*; or notes in
a supplementary number. I am
sure, all concerned would readily
give to this; but then comes the question,
whether you would consider yourself
sufficiently represented as regards the
Leucostoma.

In your article *Leucostoma* - *Trametes*
ought to be defined. But you will
excuse my saying, that your terms
are so very hard to ~~understand~~ read (p. 4)
that I cannot use them. Yours

Franklin

Charter Nov 5. 1874

Dear Sir,

I cannot thank you sufficiently for
your interesting letter, and its welcome, and only
wish I could meet with a dozen kind
friends who would give me like assurances.

iu have collected Border Counties
U, - Charter School, Manuscripts and Monuments

for about forty years, as supplementary to my
collected volumes of literature which perhaps is
the largest of its kind ever formed, and

finding it difficult at times to identify authors
of the Boston Convention I began many years ago
to put down into an alphabetical column those
book titles that -

- A. B. in Chinese
- B. B. , Latin
- C. C. , Greek
- D. D. , Germanic

and some of my reading I put under such
infants I know much into with

light did not see the 1 that
handwritten names have been put to it just
simple infants to make the description
character.

During the long 1 of 1 1
then each book 1 If ^ my club J
opinion, and in the regard of

see that I to finish
of the Convention and
by each

I have about 200 slips with nothing but the names
of particular authors or pamphlets - under for
instance as

- Andrew W. G.
- John Nichols

and many others which belong to this time of I have
had to ask friends to assist me for time of time
and very slowly they are being filled in

I hope if my slip is open to make in
that my 1500 Boston Convention booklets

Office in my indebtedness to the honor of those
four hundred friends.

I should like you that my knowledge show with

have done later than the end of 1862 for after
the close of that year I had to give up collecting
books of a later date for two reasons.

1st My collecting books became unavailably containing
in them about 14,000 volumes of Cambridge
and London binding detection.

2nd, because my rooms were full - too full
indeed - of books there to the above I had
to find time & room for a fine library of
general detection.

If you like kindly allow me to trouble you there
is a difficulty I shall enter it - perhaps however
if you know any other collectors, who would be
help me I should be glad of their names.

I am Dear Sir

Yours

E. G. Haliburton

Lambert

London W. Dec 29th /62

Dear Sir

They to acknowledge your note of the 26th inst, intimating that the deposit on "Punch" had been paid. Also that the money for the head of "Night" had been paid over to the Leicestershire Relief fund as directed it to be and I am gratified to know that the Society has far exceeded my design as to pierce the percentage to which they were entitled. The purchaser is Messrs W. Campbell of Macclesfield in Derbyshire the famous sportsman & a liberal person where good is to be done. Messrs the sum will be acknowledged in the regular subscription book.

I had an offer some time ago from a person in Birmingham of £40 for the picture of "Life among the sea birds", but although on this adverse season I would not **f-** to make

46 Montagu Square W
30th June 1863

Dear Sir

It is a long absence - more
than 5 months! - I supposed that 3
bonds had sufficed -

It would not, however, be
wise to enlarge this time? - I wished
especially to have ^{the} picture back at Xmas.

However - if your rules are
so, and you act upon them invariably,

P. H. Miles Esq

of Birmingham and its neighbourhood
You may therefore rely on my
giving Mr. Green the necessary
instructions towards sending
the picture at the proper
time -

I remain, dear Sir -

Allen S. Sweetser Esq.

Abbey Villa - Hill Road

Dr. Johnis Wood

May 27th 1863

Sir

I have received your letter and
thank you for your complimentary
remarks on my picture - They are,
I know, quite kindly meant, though
unmerited -

The original purchaser of my picture
(a dealer) sold it early on the day
of the Purate Show to another dealer,
who in his turn disposed of it in
the course of the afternoon to some
gentleman whose name I do not
know - Should I receive any
communication of **A**~t ^4*/ A®** man

or hear, by any means, that he
has no objection to the picture being
exhibited again - I shall be
happy to put in my plea

Believe me, Sir

Yours truly,

Philip J. F. & Co. Boston.

J. F. Howley R.A.

1. High Honor
Knox's son.

August 14th 1882.

Dear Sir -

I am extremely

sorry to say that

that he was the ^{son of} ~~son of~~

son of the son of

of "Knox's" son of

to son of the son of

exhibition as

because the property

stands immediately

After you were with me,
a gentleman at
L'pool, who in reply
to a very urgent letter
I wrote to him to let me
picture for J. B. Lane,
replies that he thinks
it "only fair" to his
own town that he
should be inhibited
here - I am, I
can assure you, in the

as every as you can be
for this disapproval -
I have been endeavoring
to enter for you in the
directions & have strongly
solicited Mr. M. Callahan

by writing to you & to
you two of his best
landscapes -
Believe me dear Sir,
with respectful
services.

J. B. Lane
A. Lane

4 Upper Hillmore Gardens
Reading 1870
July 31 / 62.

My dear Sir

I am going
today to my Academy
to show to you next
to me also a pair
of pictures in white
marble, double the
size of those I sent
last year - so that I
shall be very strong
one of the pair I have
sold to a Liverpool
purchaser, who sadly
wants it for their

Gardner, but I would
not separate the
Alphabets of the two
together, & having
promised them to pay
I have promised him
to let me have it, only
one will be for sale,
which is not quite
finished - I write
you to c. H. how much
since you can give
me. I write Abbotts
to Mr. Green to send
the paper picture
- show the sketches the

manuscripts & Liverpool
- thirty if I can have
a good copy bought
I have this plain sent
off at once - with
you write to Green to
that effect - they
are very nicely done
(I played) & will be
some case - where
with delay
Yours faithfully
Wm. C. Duff

19 Hyde Park Gate South

Kensington Gore

Sept 5, 1864

My dear Sir

I am glad to hear that
the pair of pictures look well.

You enquire whether they are for
sale - I shall be glad
if they can be placed together in
some collection - the fact is
they were separated, & I have
had some difficulty in getting the
owner of the "Industry" to let me
have the picture, & if he parts
with it, it is wholly to oblige me

as he wished to have it returned
to him, if my wish of having them
united is not carried out -

The fact is they help each other
very much & I regret that
they are not in one frame
(divided) -

The price is the same as I
originally asked £1500 guineas
for the two -

I remain

Yr faithfully M

A. S. Everett Esq

Chancery -

How Lee

London August 12.

Dear Sir

I am sorry I cannot
send the picture I alluded
to as being at Messrs Agnew's
at L. Inst. to the Birmingham
Exhibition - nor have I been
able to find a suitable
picture in time -

Yours very truly
Samuel Prichard

A. L. Bonitt Esq -

2 W. Salisbury St
August 13/62

Dear Sir

In reply to yours
I sent at once to Mr
Green to get "Bonitt's"
you I wrote this to tell
you so the size is
about a small half length
upright so you may
keep a place for it.

Yours very truly
Allen & Son

Allen & Son Esq

E Newburgh

Sept 6th 1762

R. S. Smith Esq

Birmingham

Dear Sir

Advance from
home & the accumulation of
woud waiting my return
must plead my excuse for
not sooner replying to your
kind favour of 28th June.

I regret now to say I cannot
give you three or four; as I
am very doubtful of some
proposals of mine for our
Academy; I have tried
what I could for you in

the quarters but failed -
I have written to one party
who is willing to send you
something but not of the
importance I should wish
to exhibit to you - This

year I must ask you
to take the will for the
aid, for my own sake
I understand I shall keep

your society before me
another year when I
hope to send you something
I write in great haste

Yours as we are on the
point - I leave you to

I trust you may have
both a good & successful
exhibition & you may
rely on my doing some-
thing for you another
year In great haste

With kind regards
& many thanks for your
kind letter

Believe me
My dear Sir
Very truly yours
Edmund West

Dear Sir

I have just received a
reply to my letter from the Publishers
of the Poem from the Prince of Wales's Poetical
stating that arrangements having been
made with the Engraver to commence the plates
as soon as the Subscription of the Royal Academy
closes the Picture cannot be spared. I am
therefore very sorry that you cannot have
the picture for your Estimation but the
fault is ~~with~~ the publishers are more
anxious to bring out the front with as
little delay as possible

Very truly yours

John Watkinson

123 George St

Edinburgh July 9th 69

Peter Holdway Esq

Strasbourg, 23 Mars 1865.

Monsieur,

Depuis 1863 Haberhoss et Hamiger ont fait une
attention spéciale à ce genre d'algues dans quelques
10.- & Af<£ pays pour recueillir des Cryptogames. En 1864 Rodex de
a exploré, pour le Muséum de Paris, le littoral méridional; en 1864
la de son Klinggräff a visité divers points importants de la Russie
orientale. Toutes les récoltes ont été distribuées aux conservateurs à
la Halle ou à la pharmacie. Cette année Haberhoss lui-même explorera pour
le Muséum tous les points importants de la grande Neustadt; il y
viendra à la fin de Mai. C'est ainsi qu'elle me sera chargée de
recueillir les collections de Muséum français. Les dix-neuf jours
l'année prochaine un collecteur en Sardaigne.

Après de longues recherches incessantes du Lichen esculentus
du Sahara algérien, j'ai enfin réussi à avoir une grande
provision de cette plante grâce à l'intervention de général
Yusef. Je l'ai donné à Kopp et à Haberhoss qui l'ont
publié dans leurs collections à l'histoire. Il m'en reste encore
une bonne provision et si cela peut vous être agréable j'en
enverrai à votre disposition la quantité que
vous m'indiquerez. S'il y a quelque chose de plus à charger à vos
appartenances cette plante.

Je ne suis ni un amateur ni un collectionneur de lichen, du Sahara

A Francoise publiee par le sieur Arssol. J'ai vu
la collection le volume de 155 numéros, contenant environ
90 fr. **I - A" - ' jtA.. A** J'en ai encore un exemplaire
complet, le sieur Arssol n'est plus dans la possibilité de
faire.

J'ai reçu récemment d'un ami, médecin en chef à
Orléans, un autre grand cahier de plants. Il n'y avait point
de listes, pas de point de noms, mais environ 90 feuillets
sur le professeur Matheron à ce l'obligance de s'adresser
à qui est autant recommandable, et sur 11 à 12 plants environ
environ en nombre.

J'ai l'honneur, Monsieur, de vous offrir l'expression
de mes sentiments les plus respectueux

Fruchinger

Oxford Mount, Warrington

Jan 15 1849

Dear Sir,

^ym&=L A. • v^

I fear you have been expecting a
 from me while I delayed writing under
 the impression that I should soon have another
 communication from you in the interim, & the
 more so because I could scarcely answer your
 enquiry definitively until I had explored the
 Muscularian of Mr Dawson Turner, but
 having now got through this task I may hope
 to get my MS. ready in the course of a month
 or so for the press, if no unforeseen impediment
 arise - As to the publication itself, my treatise will
 be virtually a third Edition of the Musculosi
Britannici, and Sir D. Hall's name will
 more (in the room of D. Hall's) will appear as
 sponsor (or author if you like) and the rest

7^X

?<~*-S***L*1

have also the pecuniary profit as well,
 for works of this kind are rarely remunerative to
 the author himself - I am in some perplexity about
 illustrative plates, for there are so many additional
 ones wanted and so many of the old ones require
 to be corrected, that I dare not hope that the
 Publisher will undertake the expense, and I

cannot afford to do an ordinary, even if the limits
of publication were more in my favour - on this
subject however I feel out at all responsible, as
I merely answered Dr. W. S. Porter's invitation to
write a new edition: if he or others concerned
with publication wish to do the rest, I cannot
help it - but I contemplate the issue of a set of
author's specimens at a moderate price for all
care to have them instead of forms, if I
that I cannot (as Dr. W. S. Porter) state the
is myself decently on paper plates printed
at cost of the publishers, without too great a
expense of time & health. In perfect safety, I am
my hand at all at this kind of work, though
I have written directions from Mr. G. Peacock
to encourage me to think such a book quite
feasible. There are about 100 additions, some
new not previously mentioned in the list. I have
not in Mr. S. Porter's handwriting, & it is not
likely that some which have been recently detected in
British species, having long been wanting in
collections of specimens, or which have been
lost by Dickenson, Storer & others. I should like
very to have sent my specimens to the pub-
lisher without having first explored the collection
yet until very lately I had given up the hope
of seeing it, for the imperfections of the list
and the very imperfectly collected materials
the Mr. S. Porter's collection from London
it - as a collection it is far superior to that

dmmwufU

of the late Dr. J. L. Smith, with which I was
much disappointed -
I once (in 1830, I think) attended pretty closely
to the Repts - since then, I have done very little
with them - we have about here a few which
I could never refer to any described in the Eng.
Flora - Perhaps we might at some future time
make an exchange of papers for Repts - at
present I am too busy for this -

Believe me

Most truly & respectfully
Yours

W. Wilson

Rev. P. W. A. Deighton

Oxford Mount. n. Coarumplin
Feb. 1. 1849.

Res^d & dear Sir,

Your notes on the *Lippidenter* have
never yet come to me, and I fear they have
fallen into other hands -

Thanks for your kind intentions
in asking the Rev^d Mr. Bloxam for more of
F. Bloxami; Sfr* > s£ s#fc: d*^*/- in that he has already
supplied me as far as I could have expected of
him, (not that more from any place would not
be acceptable enough) and I merely wished to
obtain it from other localities, I thought that your
neighbourhood might furnish it - This moss has
given me very great trouble to investigate - After
having, as I thought, made sure by specimens from
that source, that it was not *Dicran. viridulum*

f&t*4U~~ f, ^£~* ascertained the contrary by
Dickson's sp. in Herb. Turner - Then again it is *D.*
viridulum Eng. Bot. quoad iconem, but the description
there clearly refers to *Lipid. succurvy*, & in fact
both grow together at Hurst Pierpoint (the Eng. Bot.
Station) - ~~*F. Bloxami*~~ Both again, conjointly,
represent *D. viridulum* of Herb. Kew. *F. of Sargent*
and *F. Bloxami* is *D. paucifolium* of Wethering
which latter name I fear must be retained for
the moss, which is found in Scotland as well as
in several parts of England - It is a very
distinct & well marked species -

As to illustrations for the work on Mosses
I should be glad to know in what consists

the Anatidae group, of which I know nothing
whatsoever. It is probably another my friend
better than Tricoryphus, but one of the other
might do, provided I could do the figures with
greater rapidity than Etching - Printing with
traces of the fine lines, and probably require
time & patience, as well as great steadiness &
nicety of touch; defects which do not attend
the Etching needle - Ralph's Desmisses are
indeed most beautifully executed -

Thanks for your kind offer of Prints
in exchange for Maps - I will let you know
by & by how they can be sent but there is
no need of haste, and at present I have no
time to study them - They will come with
my engagements for Maps, containing
them -

Yesterday I saw, occupied in clearing
up the difficulties about *Hesperomys* (Diction,
Diction, about which several *Muscovora* are
carried - The very map has at times been called
H. palustris even by very clever modern
Even by Mr. Spence it is so named in
Warburton's time, and to me yesterday I
written an advertisement with *Hesperomys*
Larner 1822, which I think a new species
want perfect specimens to judge by - a the
other hand a variety of *H. palustris*, which I do
to the W. P. Hoister in 1828 from Lady, from
Larner to call it *H. palustris* - The two however
are essentially distinct -
Hesperomys palustris is not very
with an engraving - in a sense that it is
frequent -

Your other Map of *Mosium rostratum*
(affine) with barren shoots
(without any trouble)
Can you give me any precise information
about *Calamagrostis stricta* at Oak Grove,
Cheshire, & the present residence or address of
the Rev. G. P. Smith or whoever it was, who
found the plant there -

Have you heard about any new maps
found after another by Gwynne, Colman
found in Leicester? I have some vague
intelligence of this, but nothing definite or yet -
Probably the Rev. Mr. Bloxam is in the
secret - The genus, &c. I have not learned -

I fear that complete sets of British
Maps will be very few indeed, unless I
can increase my stock of duplicates of
certain species - My collection is large, but
still, I have had but only on the bounty of
Correspondents for about 100 copies of several
newly discovered species, and of some of
the Scottish Maps, e.g. *Wendellia latifolia* H. &
& *Swignonia glaucocarpa*, I have scarcely any
fit specimens for my own Museum - but
of these I have sufficient if specimens of fresh
growth are admissible - Nothing would please
me better than to take an excursion to the
Lakes, & I want to make up an ample stock
of such as are wanting in my existing collection -

Believe me

Most truly yours,

W. Wilson

W. S. Leighton

THE LATE M. INGRES, THE ARTIST.

Medical Services
Nov 21 1866

Dear Sir,

By my return to town
after my vacation, I find the
13th furnished you with
"Britannic," a payment of
which I now enclose a draft.
My dear Sir for 19th. Will you
kindly acknowledge payment
by signing the receipt on the
14. Copy of the same.

Yours faithfully

Lancaster, Wigan Lane &
16/Jan/1867

My dear Sir,
I beg to inform you that
my notice of exchange of plants
in "Lancaster" referred
to please send blank of the
country and name of the person
I should be happy to communicate
to any botanical club or
society in the name I am Sir
Yours very truly
John Murray

P. D. Lighter

Principal Librarian
and Secretary's Office
British Museum

S V

4/1/67

0

If you will be good
enough to send me
the amount due by me
to the Librarian of the British Museum £5-

Yours truly
John Murray

Your very obedient Servant
Thomas Butler

Assistant Secretary

Rev. W. A. Lighter

Dear Sir,

The set of the Lich. Brit
I have arrived safely. I enclose
here a form of receipt, and
enough to give you to the good
it to Mr. Butler, who will ex-
pect the amount in any way
that will be most convenient to
you - perhaps by cheque with the
the book - or by P. O. order. There
forms which are dispensed with
no public dealing, are necessary
no public establishments.

Our collection of British Col-
lections is a very fair one - com-
prising the published set of Mr
Salway, of Mudd & some smaller

ones - then contents of 'specie' additions
to 'months' for this but collections from
him - besides the original herbarium
of Lowerby used in the preparation of
Engl. to B. Gray - and the herbarium
of Edw. Forster who had obtained by
some means. Specimens from
of the collectors who attended to them
plants -

The general collection is not
so good - The original Bankasian
collection consisted of specimens from
Dickson & Yarrow from Meungin &
Swarty - to these have been added
collections by Cumming, Wright (Cala)
Zollinger, Flourens, The Arctic Expedition
Belwitich & others - & the published

collections of Funck, and the
Haitian Cryptogamia Society -
and finally a large collection
made by an Italian - whose

have I do not at this moment
 know her - The rest of what I
 believe to be Prof. Brewster's
 description of the contamination
 of the museum is an interesting
 account of the duplication, and the
 judgment as you put it - But
 if you would be good enough
 to let us have specimens from
 your duplicate collection, but
 they to be contained in seals
 he would be of great service
 to me -

Yours very truly
 Wm. Brewster

 Newark N.J.

MR. JOSEPH DURBIN, A.M.

Leitcham near Totnes Devon
Aug 2. 66

My dear Sir

many thanks for your
letter of the 31st ult.

I am greatly obliged by
the trouble you
kind taken about my drawing

It will be safest to
send the cheque to my
Town address (Pump Court
Temple (crossed and registered)
as I am occasionally away
from here.

as regards your autograph

Exhibition I shall have
great pleasure in contributing
a little oil picture that
I am at present at work
upon and expect to finish
in a few days. There
would be no chance of
borrowing my academy
picture or drawing of this
year or the Royal Commission
I have applied for them for
the Paris International Ex.
but if you think it

worth while to borrow
my academy picture of the
~~last~~ previous year I should
have great pleasure in
seconding your application.
There is a companion
picture to this which has
not yet been exhibited.
The former is in the possession
of P. M. Martineau esq. of
Essex, the latter in that of
George Martineau esq. of
Walton on Thames. Both
these gentlemen are friends
of mine and I imagine
it would be possible to

to borrow of either.

believe me my dear Sir

very sincerely yours

John Bull

25. WILTON PLACE.
S.W.

June 13/66

Dear Sir

I have to thank you for your note of the 7th which only reached me yesterday. I will have D. Nylander's note read at the next meeting of the Luncheon Society 21st inst. We shall be very glad to have the note you mention on the characters he has found in the thallus of lichens. It cannot now be laid before the Society till after the recep for our meeting on the 21st is the last till November.

The little plant you send (which I return) appears to be a tuft of seedling *Junci* which in germination have carried up with them the

Hymn. 186

1. Happy the saint of former days
Who first continued in the Word,
A simple, lowly, loving race
True followers of their leader /&> sKstJ
2. In holy fellowship they lived
Nor waned from the commandment more
But every year day receiv'd
The tokens of expiring love.
3. Not then above their Master wise,
They simple in His path, remain'd,
And called to mind His sacrifice
With steadfast faith & love unfeign'd.
4. From house to house they broke the bread
Impregnated with life divine,
And drank the Spirit of their Head
Transmitted in the sacred wine.
5. With Jesus's constant Presence blest,
While dwelling? £ ffe in dying word,
They kept the Eucharistic feast,
And supped in Eden with their Lord.
6. Throughout their spotless lives was seen
The virtue of this heavenly food,
Superior to the sons of men
They soared aloft, & walked with God.

7. O what a flame of sacred love
Was kindled by the altar's fire!
They liv'd on earth like those above,
Glad rivals of the heavenly choir.
8. Strong in the strength here with received,
And mindful of the Crucified;
His confessor, for him they liv'd
For him His faithful martyr died.

To men of lips & hearts profane,
To dogs, to swine & heathen cast
Thine holy ordinance contemned
Hath let the flood of evil in,
And those who by Thy Name are named
The sinners unbaptized on sin.

9. Their souls from chains of flesh released,
By torture from their bodies driven,
By violent faith the kingdom seized,
And fought & forced their way to heaven.

14. Thine holy ordinance contemned
Hath let the flood of evil in,
And those who by Thy Name are named
The sinners unbaptized on sin.

10. Where is the pure primordial flame,
Which in their faithful bosom glowed?
Where are the followers of the Lamb,
The dying witnesses for God?

15. But canst thou not Thy work receive
Once more in our degenerate years?
O wouldst thou with Thy rebels strive,
And melt them into glorious tears!

11. Why is the faithful seed decreased?
The life of God extinct & dead?
The daily sacrifice is ceased,
And Chant to heaven is fled.

16. O wouldst thou to Thy Church return!
For which the faithful remnant sigh,
For which the drooping nation mourn,
Restore the Daily Sacrifice.

12. Sad, mutual causes of decay
Sticketh & vie together now,
Thou wilt, or cast the meaner away,
And quench'd the latest spark glow.

17. Return, and with Thy servants set
Lord of Sabaoth, with heavenly host,
And make the world Thy happy guest,
And us Thy spouse, ecclias in thee,

13. We saved signs Thou didst ordain,
Our pleasant things are all laid waste.

18. We let Thy spouse, ecclias in thee,
Come up from every brook & vale,
And was spotted in a sea.

14. Thou hastest the poor wretched
Thou knowest the way to the
Come in Thy gains
And all Thy ransomed souls

19. Thou hastest the poor wretched
Thou knowest the way to the
Come in Thy gains
And all Thy ransomed souls

Clayton House. New-
May 15th 1877
Rev. W. A. Leighton

Sir

I enclose you
- proof & your drawings
for approval & correction
the M^s. I have returned to
the Lin. Society - I arranged
to put all the subjects onto an
8vo plate - by taking a smaller
bit of the M^s. size in some
cases & reducing the spaces
to half - viz 600 -

Do you not think it would be
better to divide each species
by a line as in the plate - it
is a matter of taste generally -
but in this case I would

be more convenient - the
Ms reference would in that
case have to be altered

Please to send the proof
to Mr. Kippard if satis-
fying

Yours respectfully

W. H. Citch

Rev. W. H. Leighton

19 Summer Hill

Cork, Aug 30/65

My dear Sir

Ben Lawers is about the easiest mountain to ascend that can be imagined - there is a road thro parts of the way up, & a very cheap & comfortable little inn at the foot. - Mrs. Adm. Jones & I staid 3 or 4 days last year. But the weather is the point. Nearly all the peculiar Lichens grow amongst broken rocks a little below the summit on the S. side - but I found great rarities on the North side too, a circle of 100 yards radius (no yards in length, not elevation)

from the summit,
would probably include as
many rare lichens as any
spot of the same size in
Europe. But the species are
very minute & very scarce.
Adm. form has been about
30 times on Lawes & got
I found last summer a dog
plant or more he had never
seen! The fact is you can't
find the rarer lichens with-
out careful searching with a lens,
& in crevices out of ten, the
rather will prevent your
finding any one. I found *Taronea*
substans, *Lecidra cuprea* & %
in crevices of a rock near the
top in so exposed a spot
that the admiral told me
he never before was able
to examine it from the

wind scold! The lower
parts of the mountain
are comparatively poor, but
the high rocks to the North
near Loch na-leat would
repay a careful search.
During one day, hurried
examination, I found *Per-*
tusaria glomerata, *Lecidra*
cuprea, *alpestris*, *Sabulito*,
Thru v. pygmaea, *Platys-*
ma commixtura & c. &c.

I look forward to a second
visit to Lawes next summer
& it can be managed if
I could give me great
pleasure to give you.
On the way to Lawes one
should stop at Killin
& explore a mountain

called Mal-a-fasha which
is said to have the same
rich micaceous rock - Cray
Chailback also might be
examined - If time & money
were plentiful I would attack
the Grampians - they are
difficult to reach & very much
poorer than Lawus, but one
might find some arctic
species on them - a few
Lichens as *Alectoria ochroleuca*
Cetraria nivalis - do not con
as far south as Lawus
Will you look at the ^{near}
enclosed "*Spilonema*" ^{of a}
what it is? - Thank ^{for} the
the tract

Yrs sincerely

Kind w. l. lights

The friends mentioned in
your letter will I suppose be Great Britain near Thetford
be from Wales or Yorkshire
I have found you help the rest of
England when I need it.
Yorkshire
<tt*~£. 12 Dec. 1863

Sir
I am pleased to hear that you are about to
publish a new edition of your Anglo-Saxon, and that you
are preparing another for another translation. I am
glad because I am sure that those publications will
throw more light upon our Teutonic history, and that
they will act as another stimulant upon those who take pleasure
in this study. It has been long deeply impressed on my mind
that one individual, however skilful, cannot produce or collect
the masses of the history of Great Britain, the large
I know and the more I study, the more firmly the conviction fastens
itself upon me, that a critically correct plan, can only be accomplished
it by the hearty co-operation of all who take a more than
ordinary interest in that portion of our Anglo-Saxon history.
Seeing that there is a probability of our correspondence being
resumed, I can only hope, that if such should be the case, that
the collection of information, opinions, &c will be established,
and that honest frankness, combined with liberality, will
be the basis of all our dealings.

£*^.

My publications have been all named in the combined, and by exchanging specimens with each other as they have proved in the last specimens of the bulk of European letters. I have also added a large number of British specimens to my collection. My time has been very much taken up in examining and sorting out as much as I can, and I have not yet been able to bring all my collections into one. I hope however to be able to do so after the end of the year. If you wish it I will examine with a portion of my European specimens, and also let you have the names of them. Requested by the 2nd month of the next sufficient examples for your purpose. — I would send you specimens of the species named in your letter, but I have a very good specimen to recommend. — My time after that will be over. — How the loss of your paper from Italy and the rest will be?

During the last six months I have been collecting spiders of all the British Islands. Old I have and will in my collection, with the intention of publishing a Monograph of them. (size 2 inch) I will be happy to send you specimens of about 60, or more, of the most typical, or the most extreme forms. I hope to have it ready for publication by the end of the month of June. — Do you like any other spiders in this genus? If not, then you are very much obliged. I should be glad to find any further copies of the work for 180 specimens of either *S. alacranis*, *S. m. d. m. m.*, or

for 100 of any of the number of the specimens. Will you send this to any of your correspondents whom you think will accept of the offer. I would purchase the specimens if the price was small.

I suppose you will have seen the *Agalops* of *Spinn*, *Agalops*, and *Agalops* of *Spinn*, both in the *Spinn* *Spinn*. After my copy of *Agalops* in the form of *Agalops*. The *Agalops* which you send me in your letter are *Agalops* *Agalops*, I repeat as a distinct species. It is, I think, *Agalops* *Agalops*. The *Agalops* 220. — How far are the *Agalops* specimens of *Agalops* sent of *Agalops* 220 compared there has appeared in the manuscript in my list. I planing to purchase in a specimen named by *Agalops* and *Agalops* sent by you in your *Agalops*. All the specimens in my *Agalops* of *Agalops*, being the *Agalops*, and all of *Agalops* to *Agalops*.

The specimens in your letter thought to be *Agalops* specimens of *Agalops*. I am only desirous of specimens with specimens of *Agalops*. Do not *Agalops* specimens, but *Agalops* of your *Agalops* specimens, and *Agalops* distinct from *Agalops* specimens, *Agalops*? I think the structure of *Agalops* is more that of an *Agalops* than an *Agalops*?

Will you have the kindness to preserve one a good example of
Succisa muricata, Kbr. for my herb. - You will find examples of
this amongst the specimens sent to you by me about 6 or 7 years ago.

Have you any objection to give me your opinion on the
genus and classification of the German authors, Th. Thun,
Marschall, &c.?

My projected work on the Opuntia books will not be
published by subscription. I intend having it printed in
London, and pay for it at once, and will solicit purchasers
as soon after I have received it into my own hands, as probably
I may turn it over into the hands of a regular publisher.
In any case I will take care to furnish you with a copy gratis.
There will however be a great deal of labour yet before it is
ready for either printer or publisher.

I thank you for your kind promise to send me a copy
of your 12th Fasciculus when ready. I need hardly say that
I shall be happy to receive a copy of your Angiosperma!
But I had rather pay you for this as I cannot I fear make
you anything like an adequate return, and moreover I now
know that books are neither written nor published without
a vast expense -

I fear I shall have exhausted your patience with
this long letter, but hope you will forgive my freedom.
Believe me to be with profound respect,
to be your humble servant,

Rev. W. A. Leighton

1

W. Marshall

30 Jan 1865

My dear Sir

Make what use you like of the few observations I made respecting the Lichens, and distribute the specimens as you please. When you write to Dr Asa Gray do me the favour of giving him my kindest remembrances, I made his acquaintance nearly 40 years ago in London, and received kindness from him, at Harvard Coll.

By this post I send you a
copy of the Bot. Aph. to
Franklin's first Journey
as it contains a list of

the Lichens I obtained in
1821-22 - It may chance
that you have not seen the

Reader of the 28th no. and

I therefore think it well
to say, that it contains a

notice of a Report on the
Cladoniae by M. l'Abbe Coen.

read at * *Bulletin* Royal
Academy of Sciences Jan. 14.

M. Coenans has consulted the
herbarium of Acharius

Helsingfors, the collections
at Rostock, in Paris and
elsewhere and purposes to
complete a monograph of the
family -

According to your kind
wish I enclose a carte de
vite and shall prize one
of yours -

I remain faithfully yours
John Richardson

Dr. J. H. ...

*Richardson
1848*

Kurospierpoint
Sussex.

Sept. 20. 1865.

My dear Sir,

I have again been too unwell to reply to your last so quickly as I should have wished. I am very much obliged for the photograph.

Before I left Clapham I happened to be called upon by the very friend from Yorkshire who has charge of my duplicate collections, and I gave him the necessary directions about the lichens. He wrote to me immediately he got home the letter I now enclose. I am sorry the information it contains about the lichens is so unsatisfactory. In further explanation I may add that when I left ^{England} ~~home~~, my neighbour & very kind friend the late Lord Carlisle lent me a room ~~to~~ in Castle Howard to deposit my collections & little library; but when that mansion remained deserted for many years, on acct. of the owner's viceregal duties, keeping him almost constantly in Ireland, Mr. Teardale (the writer of this letter) ~~to~~ believe that my goods were

not well taken care of had them ~~removed~~
removed to his own house, { / / 4* - v E - M ~ ~ y
duplicate European Crusts still remaining,
as I have never since needed them. I
now distinctly recollect a packet nearly
2 ft. high chiefly of crustacean lichens -
many of them on bits of rock, which were
doubtless the "coarse gear" Mr. T. speaks of.
I suppose that the parcel may have
fallen to pieces in the handling, & that
Dr. Carlisle's servants, finding it impossible
to reassemble it, may have saved themselves
further trouble by throwing the " rubbish " out.

I am sorry therefore I have nothing
to send you now, but if I am ever able
to turn over the remainder of my collection
& find anything therein likely to interest
you, you shall have it forthwith.

Very many thanks for the copies of
your Memoirs on Lichens.

Yours ever faithfully

Rich. Spruce

Rev. W. A. Leighton.

Huntspoint

7 Hex.

1/ftfl

My ^{fit**} Sir / Indisposition has prevented
 any replying promptly to your letter.
 If you will send me a list of the localities
 attached to my specimens, I leave a space for
 you to add to each its country (or region) and
 alt. supra mare, I will endeavour to supply
 that lack.

As I hoped originally to have a hand at
 making up all my Cryptogamia for publication,
 I was very minutely local in specifying many
 of the localities, and these left in the hands of
 others lacking that precise knowledge of the country
 which one who has lived in it possesses may
 tend to confusion rather than to precision.
 In general, writers who have to treat on botanical
 geography take no pains to acquire the necessary
 acquaintance with common
 The S. American habitats in
 Moore's Index Filicum (for instance, see
 this case hopefully embodied:

I am sorry I cannot supply your friend
 Stizenberger, all the sets of Lichens being already
 taken up. Yours ever faithfully?

Res. W. A. Seighton

Andglass. Nov 3. 1886.

Dear Sir

I forwarded you box
of Lichens about ten days ago, of
which I have not had time until
now to apprise you; I hope they
have ere this arrived safely.

I enclose a list of my desiderata
a few only of which I expect you
can be able to send me.

I hope the Lichen transmitted
in my last communication will
prove to be new.

I remain Sir

Yours truly

Alex. C. Mearns

P.S. Are you in want of specimens of
Lectina confinis or *pygmaea*
for your *Fasciculi*? If so I
can supply you. I can also
give you if you want *Parmelia*
agula.

I enclose a curious state of
Leucanora caudata growing
upon soil.

I should like to know what Lichens
you are in want of for your *Fas-*
ciculi. ~~and~~ perhaps I could pro-
cure you some of them.

I addressed you from *Leipzig* & *Wismar* & *Wismar*
near *Neuburg*.

Aberdeen
7th March 1856

Sir

It would have given
me much pleasure had I
been able to have
promoted your work
by procuring for you the
loan of the specimens of
Luzula collected by
Dr Macgillivray which
are now in the Museum
of Marschal Blige.
However on sub.

making your request to be trusted to you without
the consent of the Trustees and were unwilling
I found that in consequence to exchange a collection
of some valuable specimens which has considerable
having been lent some local interest.

years ago and never re-
turned they had made
not again to incur similar
marks.

Were you visiting
there then I should be
most happy to afford
you every facility in my
power for consulting the
collection.

They were also afraid
from the nature of the
specimens that they
could not be trans-

Believe me

Chelsea Botanic Garden

June 22. 1853-

• / X ^

I find in Francis's "ferns"
a variety of Aspidium Foley-
hus which he names spinosum,
of which I know nothing. He
states its habitat in these words:-
"Bomen pool, of Setton Spa, both
near Shrewsbury, Mr W Leighton"

I presume the reference is to
you. Can you give me any ^{further} infor-
mation, or specimens of this plant?-

In the "nature-printed ferns" I

am endeavouring to enumerate
all the variations from the
normal plants, of which I have
my information; & I have
met with most valuable & ready
help from those who have made
this branch of botany their
study.

I enclose one of the early
prospectuses, in case you may
not have seen it.

An early reply will much
oblige me as I am now preparing
Philip-mas for the press.

Yours truly

Rev. Dr. Leighton.

Wm. Moore

Thurs July 5 1850

My Dear Sir

Your packet
of Cryptograms has reached me
safely and is a very acceptable
addition to my collection for
which I am greatly obliged to
you; but I fear I have omitted
to inform you of one general rule
that the list of numbers was not
of my desiderata but that of
my collection: you seem to have
understood it as being that of
my desiderata as what you

have sent with these exceptions
are included in it; the other
however will be very acceptable
for comparison and I hope
will excite my anatomical
compleat. I enclose you what
Gillman in Paris has said
of I must with any more will
take care to remember you. I
should be glad to know of the
names of the persons you wish and
also if you have heard anything
more about the Physicians Colman
or the Laisant's but
I have but a few more specimens
of the same species mentioned
in your note; as the set

includes above the specimens
it is must too large to come
by post and on the other hand
it is rather small for the use;
so that I think with your
consent the best plan will
be to receive them till the
end of autumn unless you are
in want of any immediately;
by that time I shall probably
be able to present you with
some others that may be accept-
table and shall most likely
require a little of your kind
assistance with the rest.

J. Pennant

June 17th

John Galt

19 George St
Manchester

July 3rd 1848

My Dear Sir

I received
in safety the parcel of
Kubi this morning I send
you my best thanks for them
& the kind letter of the 30th
ult. Allow me to thank you
also for the seasonable
kind wishes, to offer you
the same in return I do
hope some day to have
the pleasure of seeing you

to offering them personal

The right I am not

yet secured but promise

myself a treat in doing so

this evening. Your parent shall

be got together as quickly

as possible for I will have

strict specimens are more

valued in such weather as

this than in the spring

when there is more temptation

to botanize in the fields.

Can I assure you in

the cryptogamia of your

second root? if so I shall

be most happy. You shall

have duplicates of some

Peucedan &c as soon as

I can select them.

I will trust to you for

the review of Flora Keanaway

I think the new Bot. Gazette

~~the~~ would be a good place

to insert it in, I shall

patronize it in preference

to the Phyt. which has now

lost most of its interest, do

you ever see it? Watson

is not very fond of me

I imagine.

with kind regards
Remain

Yours Sincerely
Joseph S. S. S.

W WALKER & SONS

64 MARK LANE ST CAVENTISH SQUARE

ALTERED BY *A. Ward*

James Dittou
May 31. (189)

My dear Sir

Thanks to you for the notes on the Violets. The differences in the author's species of the larger & smaller "Surrey Violets" are seen together when a series is examined.

We are at one, in referring the Surrey Violet to Reichenbach's

4501 ericetorum, Lucorum, sabulosum.
(Phytol iii, 404.)

But you must be wrong in referring it to Eng. Bot. Sup. 2736, because Foster is the authority for that plate & description, & he himself said that it was not intended to represent the "Surrey Violet" (See Phytol vol. 3, p. 31.) - On the contrary, he says by implication that the dwarf form of *V. sylvatica* is intended by that plate & description (l.c. page 31.)

The error is with Foster's
with Washington's reference to his fig.
& description; - also, with the
specimens preserved as *V. Cactea* in
Smith's Herbarium, which are only
the larger form of the *Sunny* variety,
different from *V. Cactea* of Eng. Bot.

Your (Bourne's) *V. Cactea*
is the plant of Eng. Bot. - but
not of Smith's Herbarium, & not
of Foster.

I had not seen
Bourne's plant alive, till some
fortnight ago, when he gave me
a root of it & also of *Ruppia*.
He promises to bring more than one, next
Tuesday, to complete my series.

I am quite aware that the
"*Cactea*" which I sent you, are
not identical with the *Bardley's*

plant. By the *Bardley's* plants
shown have been called "*Cactea*"
in the Phytologist, for it is giving
the established vernacular name
of one thing, ^{the name of R. Viregani,} to another which probably
had no true English name, or
only one of very local application &
use. - I am, Very truly Yours

Hewitt C. Watson

Rev. W. A. Leighton

1853

Cambridge

Feb 4th. 1850

Dear Sir,

I shall be glad to examine
your specimens of Ulex as well
as I can, when I have some
leisure, but at present I am
a good deal occupied. I cannot
however undertake to determine
the species with certainty, even
after a minute & careful inspection.
Under any circumstances a number
of the dried and pressed plants
would ^{afford} but imperfect data.
But I have not even the ad-
vantage of being well ac-

Plan however that you to the least
inconvenience, I shall be obliged if
you will send it at once by the
N. Western & Eastern Counties lines;
unless the regular route of parcels
from the Railway office be different.

Believe me, dear Sir,
faithfully yours,
Frederic J. A. Hort.

P.S. I forget to mention what has
not been noticed with sufficient
prominence, viz, that *Ulex Gallii*
is a large stout upright or somewhat
bushy plant with rigid shoots;
these last seen never to be
pendulous or slender & flexible
to even a moderate degree.

Dalhousie 7th Jan. 1852

My dear Sir

I am sorry that we have no Cactas near at hand. That yield *Mammalia despalorum*. I gathered some very fine large specimens some years ago from Druidical stones in the Island of Arran, but I have lost them.

I have long ago disposed of the proposals for publishing your *Beckens*. Be so good as send me a few more to be distributed.

I am sorry that I can
not put in Gunt & Jew.
show you Lichens.

Wen you send me
your first fasciculus
I would be happy to
send you an album of
algae! I think my Daughters
are in the habit of selling
for charitable purposes at
15/- "This Homeless"
wants not send the spring
Then Miss Thelma of
Alga: wants to Lichens.

If you were at Kent
two days and send

your Lichens in exchange
Perhaps you could send it
by same bookseller to
Mr. Boyce Bookseller -
Glasgow, or if sent to
Van Noort send him
word to send it to
Glasgow as he sends
monthly packets to Boyce
and Boyce sends me
a monthly packet to me

I had an offer to go
to Aberdeen & officiate
for six months. I have
declined, but should the

After he repeated in Spring
I would be disposed to
accept.

With all the
good wishes of the
Season I remain

My dear Sir

Yours very truly

D. Lumsden

Proc. W. A. Lighter

17. Manchester St, Finsbury Rd
London Dec^r 3rd 1850

Dear Sir

I am very much
amoyed to think that you
have been left in ignorance
respecting the decision of the
Council; I concluded that
Dr Lankester would write to
you immediately. I am
glad to say that it was at
once determined, on the receipt
of your last letter, to publish
your work and it is now
actually in progress. so far
as the plates are concerned.
I would take the liberty

of advising you to demand
a right of proof of the plates
if I know that the engravers
are sometimes careless about
the lettering. Such is of
importance in the present
case. Believe me dear Sir

Yours very truly
W. M. A. Sneyton

Dresden d. 8^{ten} Januars 6

Bestellter Heft!

Ich bedaure auf Ihren Vorschlag
nicht eingehen zu können: espenz
bestenfalls ein großer Theil Ihrer Lichenen
zweites sind von den meingegen
jetzt Tage. XIXVI erscheint, nur noch
2 complete Exemplare vorräthig.
Ich würde mir ein Vergnügen darauf
machen, Ihnen ein Exemplar zu schenken,
allein ich bin kein reiches Mann und
müßte sehen, diese beiden Exempt. zu ver-
kaufen, um einen Theil der bed.
Verlagskosten zu decken.
Wollen Sie jedoch Theilnahme
heiß, wollen Sie mir Lichenen-
gabe liefern, freilich aber a

oder Form 120 Expt., so erhalten
Sie ein Treierexp. und ich nehme darauf
Bedacht, dass Sie von Frankfurt so weit
Sie noch da sind oder nicht ergängt werden,
jedes eine Anzahl von 40-50 Nummern
zu erhalten, so dass Sie in Laufe von
einigen Jahren in Besitz der ganzen
Sammlung sind.

Commissar Franz Dag, so werden Sie
uns bald eine Sendung.

Gand, 21 Juillet, 65.

Je vous remercie beaucoup de votre
bonne et aimable lettre du 13 juillet,
qui m'a annoncé le prochain envoi
du dernier fascicule de vos Licences
Pratiquées. Je le recevrai avec infiniment
de plaisir et de reconnaissance. Quant
au mode d'envoi, je vous prie de
m'expédier simplement votre petit
paquet par chemin de fer, ce qui me paraît
être la voie la plus économique.

Monsieur,

W-ftifiajt L%ViiVc- F%icement, j'ai été chargé d'un
message pour vous par mon ami M^r. le Capit. Duby,
amateur distingué de Cryptogamie. Il possède les
4 premiers fascicules de vos Lichenes exsiccati,
savoir les n^{os} 1, 11, 12, et serait très désireux
de posséder ce qui a paru Wf.aU -CrJ ; il vous
prie en conséquence de me faire remettre les livraisons
subséquentes que vous pourrez adresser
à M^r. le Capit. Choisy, chez M^r. Siordet,
Clapham Common, ou si cela vous est plus
commode, chez M^m. Siordet Meyer & C^e
Bishopsgate St, London.

Celeberrime et Reverendissime W. A. Lighton!

Secundum promissum meum hodie mitto tibi collectionem par-
vam Lichenum Luccorum, quorum nomina hic enumeratus sum:

H. Lounroth

Brookland

M. le Prop. Christy m'a très
fidèlement rapporté la lettre qu'il
avait reçue, de vous, &c; au retour
d'un voyage que j'ai fait au nord
de l'Écosse, je n'aurais trouvé beaucoup
d'occupation, je me fusse déjà em-
pressé d'accepter les communications
que vous avez bien voulu m'offrir.
Ce bon amour un grand intérêt, que
je me trouvais en rapport avec un
savant, dont les ouvrages que je m'é-
tais empressé de faire venir, vos langes
carpenterie lichens, British Graphideae,
Lich. Britannici exsiccata Vol. 1-6 m'ont
généralement intéressé, & m'ont paru fondés
sur les vrais principes de la science. Je
serais donc très heureux de recevoir à
l'avenir les ouvrages que vous publierez
& particulièrement les fascicules de vos
Lich. exs. & de vous envoyer ce que j'au-
rais qui pourrait vous intéresser en
fait d'échantillons & de livres. Je puis

mettre à votre disposition un
grand nombre de lichens de fuchs,
de Rimont, de midi de la France, &
un certain nombre d'espèces exotiques
si une négociation que j'ai entamée
pour l'achat d'un herbier cryptogame
= originaux considérable réussit, je pourrais
avoir encore d'autres lichens exotiques
à vous offrir, mais je ne sais si elle
aboutira. — Si vous avez Montcau,
quelque envoi à ma façon, je vous pro-
= rair de l'acheter ou vice, ou à Paris
chez M^o Gault de Saint-Germain architecte
Rue Jambouy St Martin 158.

Recevez, Monsieur, l'assurance de
sentiments de haute considération avec
lesquels j'ai l'honneur d'être

Votre très obéissant serviteur

Gènes 23. Octobre 1854.

Monsieur

J'ai l'honneur de Vous ^(voilà de Paris) apprendre
que je fais partir aujourd'hui, franco
à l'adresse de Mr. St. Pamplon, les
lichens et les brochures dont je Vous ai
parlé dans ma lettre du 24. Gmtre.

Le paquet contient les lichens dont j'
ai pu disposer, et une poignée d'épices
cueillies par Mr. le Dr. Baglioni, jeune
Médecin qui s'occupe beaucoup de
Lichenologie, et qui donnera sous peu
le catalogue des lichens de la Ligurie. J'espère
que Vous voudrez recevoir avec bienveil-
lance ce petit essai de ma bonne volonté
et de mon impuissance all at once!

Encore je me ^{^r^y^fpz*if f*~} f/4/f £. '1' de

Berne en Suisse le 24 Avril 1854.

Reverend Monsieur !

Vous avez regretté comme nous la mort de notre
vénérable pasteur et lichénologue Schärer.

Vous aurez appris, que sa grande collection de lichens,
a été vendue à M^r Edm. Boissier à Genève.

Il reste encore à vendre la collection, qui servait à
l'édition des N^{os} 650 de ses lichens exsiccata, dont
excepté quelques Numéros, il y en a 10:50 exemplaires
de chaque.

Comme ancien ami et tuteur de la famille S. (il
lui fait une veuve et 5 enfants) je prends la liberté, de
m'adresser à Vous, célèbre éditeur, Vous-même de lichens,
et par conséquent infatigable des provisions pour

vous prier, de vouloir bien m'aider, de trouver un
acheteur de ces lichens, étant en communication
avec tant de lichénologues de votre patrie, j'espè-
rerais des offres avec plaisir.

Mon ami Shuttleworth les a tassés avec moi à
1500 francs de France, mais, quoique cette taxation
est beaucoup au dessus de leur valeur, M^{me} Schärer
ferait peut-être encore un petit rabais. Vous
trouverez certainement parmi vos connaissances,
quelques amateurs, qui acheter cette riche collection
en commun.

En attendant je continue de soigner les
demandes sur les 13 cahiers (chaque format 50 N^{os})
que feu Mr Schärer a mis en vente, le cahier
à 12 fr de f. c.

Vous priant, d'excuser ma liberté, de Vous
importuner de cette affaire, je Vous présente mes
hommages respectueux.

Votre bien dévoué
Guthrie
Directeur du jardin
botanique

Cher et Révérent Monsieur,

En lisant les comptes-rendus de l'Association britannique pour l'avancement des sciences, je vois que M^r. W. Jardine cite un travail de M^r. J. Lindsay, ayant pour titre: Recherches sur les organes reproducteurs des Lichens. Comme je m'occupe beaucoup de cette question, et que cet ouvrage m'est pas, à ce qu'il paraît, dans le commerce, vous me feriez un plaisir sensible en voulant bien m'indiquer de quelle manière je Jt*U~fi+*" me le procurer. J'ai cru dans cette occasion ne pouvoir faire mieux que de m'adresser à votre obligeance. J'ai écrit cet été une notice anatomique et physiologique sur le Cilobolus crystallinus Tode, et un travail plus étendu sur la genèse et les métamorphoses de la Cedrina sclerotiorum Hil. J'ai encore mes exemplaires d'auteur, mais dès qu'ils me seront remis, je m'empresserai de vous en faire hommage.

Quel vain le beau Synopsis Lichenum
de William Nylander? le premier volume
a déjà paru, et le second s'imprime
actuellement à Paris, ce sera un ouvrage
précieux. Comme j'attends 2 exemplaires,
il me serait agréable de pouvoir vous
l'offrir en présent, au cas que vous
ne l'ayez pas encore.

Je suis charmé que cette petite occasion
me donne le plaisir de me rappeler à vos
bons souvenirs, et vous prie de me
les conserver toujours, je me nomme

Mon humble et dévoué serviteur

Eugène Cosman

Collega Shimazu. ed amant.

Venova 19 Otogio
57

Per l'altro ebbi dalla postta il pacco con due volumi
dei vostri opusculti di lingua Britannica unitamente ai tre
vostri opusculti di lingua Italiana unitamente ai tre
vostri opusculti di lingua Francese. Ma
quanto non ho dovuto pagare? Ventisei franchi! Se voi
gli aveste posti come pacco, anziché come lettera, forse
con un paio di fiorini avrei soddisfatto. Pazienza. Ho
inteso dalla vostra lettera ogni cosa, vi mandavo in cambio
i volumi XI e XII di Shimazu Mattei appena saranno stampati,
e se volete girare innanzi senza che vi paghiamo a denaro,
io vi manderò tutto quanto stampato di Shimazu Mattei, e voi
fate altrettanto, e così saremo compagni a vicenda. Non
ho ancora avuto l'ultimo mio opuscolo Descrizione di alcuni
Nidari nuovi con 5 tav. col. di oggi che ne abbia le copie separate
e gli manderò subito.

Orn devo pregarvi di un favore, che vi raccomando col maggior
calore possibile. Sappiate che senza volerlo io ho
provato dei dispiaceri e dei dispiaceri al sign. Charles Robertson.
Egli gentilmente diede ordine ad un banchiere di Londra
che aveva corrispondenza con un banchiere di Verona, che mi
pagasse le lire 120 che mi doveva per 10 Vol. di Shimazu
Mattei. — Ma per mia grande sventura questo banchiere
di Verona è uno dei più avidi ed avarici che esistano al
mondo, e che prova ogni fatto di Shimazu Mattei. — Io mi recai
da questo banchiere per ristabilire il mio credito, ma
siccome voleva sottogovernarmi a delle regole di onorevoli, ho
dovuto per mio dolore e cavata, rifiutarmi di

...riceverne il pagamento. Prezzi quindi il signor Choudet
Babington di farne il favore di ritirare egli
dal suo Banco il pagamento, e non arreso invece
in una lettera dove vi avete fatto menzione
aveva ancora risposto e perciò che io non ricevo
mai affetti mi abbiate ad Babington questa
spina, dicendogli che sono disposto a dare
quello che egli avrà dovuto per fare in forza di
questo ritiro del pagamento. Amici e colleghi
mi resti. Se non ottenete questa faccenda
eterna mente obbligato

Collega Venerabilissimo

27

Verona 11 Marzo 1855

Ho ricevuto or ora la pregiatissima vostra del 5 Marzo 1855, e vi
rispondo tosto. — Il vostro gesso di libreni che fin dall'anno
scorso mi approvate di avermi spedito, io non l'ho ancora ricevuto,
e non ho più speranza di riceverlo! Di ciò non doletti, perché
abbisognava assai di quell'opera, per ristampare molti dei miei
errori; e sono tanto più dolente, in quanto che voi mi dite che non
ne avete altri esemplari disponibili — Do attendervi ancora fino
alla fine del mese corrente di Marzo, ed allora vi tornerò a scrivere
se si sono avuti nulla ricevuto — Se si vi manderò i libreni promessi,
se no, vi pregherò di mandarmene un'altra copia. — Intanto io vi manderò
domani la mia Monografia dei libreni Blasparisponi sotto fascià
nella posta, franca fino ai confini — Spero non vi costerà molto,
do desidero che abbiate i miei libreni Statini expositi, e per questo
penso che facciamo un reciproco cambio, tanti numeri dei miei, e
tanti numeri dei vostri, il di più ci compenseremo in denaro — Per
questo io penso di allestire questi 6-7 volumi per voi solo, e di mandarveli
il primo di tutti, e quindi gli altri si sono associati per un volume
ogni due mesi — Così compenserò subito i vostri libreni Britannici.
Avete ricevuto i miei Fragmenti librenografici? Sono caduti in un grave
errore! ho fatto il genere Montinia che già esiste nella Famiglia Onagrae,
per ciò vi avviso che esso lo ho mutato in Pheochroa e l'ho pubblicato
in un nuovo opuscolo che vi manderò — Con tutta stima
mi dichiaro

Sevo. Unity. AP Mattalongo

the opinion of the
I have the pleasure to find
the first part of your
very kind and interesting
papers, which I have
the pleasure to find in
your hands, and I am
very glad to hear that
you are so interested in
the study of the British
Rubi, which you have so
liberally given me for
study of this interesting
genus. I am very sorry
that I do not have any
occasions other than
to request my present;
but I have that you will
trust upon my word
I promise to send you
from my land all what
I may think valuable
for you. From Mr. Watson
I have received a lot of
the genera, which you
particularly require, and
the next spring I hope
to send you a little parcel
of them.

If that, what I can give
you will make you a
pleasure and if I can hope
anything more from your
rich and beautiful collection
it were principally the
Salicy and Gramineae from
all countries which are for
my of the greatest interest,
because I am occupied in

the especially parts of them.

I have taken the opportunity to send you
the first part of my Terra Scandinavica;
may it find you a pleasant judge. The next
parts will follow, when ready.

The address in Sweden, if you will send my some
thing, is: Stockholm, Stora Trädgårdsgården
N^o 13.

I remain, dear Sir,
Your most affected
servant,
A. Andersson.

London, 17 Oct. 1850.

Amherst Massachusetts
15th June 1856.

My dear Sir

I am sorry not to have
been able before this to send you the 1st or
2^d Fasciculi of Lichenes Amer. I have had the pleasure
of receiving your valuable Lichenes Britan-
ici. But my book is not offered for
sale, and I only propose for some time to
send the present, as I am able to do so
merely for the purpose of presenting copies
to my very kind correspondents. What
really holds the work back more than
anything else is the labour required to
put up an edition of 50 copies of one of
my volumes, which I must undertake
myself, or which I really have not often
time for. The 1st & 2^d Fasciculi are
ready also to pass the collection of spec-
imens, and the books into about the
same to go, are concerned - but must
wait till I can posten
them into their places.

They you will believe me, dear Sir,
that I should gladly buy at the
book store present in London & ad
if I can get a person to do the sketch
with plate & parts - it may yet be.

At least I shall try to advance it.
The title of the Study of Lichen is
getting, as it appears to me, a little
confused. There will be added "
Constitution, and form of, of all these
new results of the microscopical
study. We cannot expect at
longer study lichen without a
microscope - but the microscope
as I look at it, must not be
limited to simplicity, I have a doubt
exceeded to it higher than the other
means which we are to attain to
results in systematic botany.
Expect to be long devoted to the study.

that is the microscopical study,
but I do not believe that a system
based on-sidedly upon them alone, will
stand as well as the old system, which
gives the altogether! Nature does
not compel us to cut her in pieces
to become acquainted with her, always.
But she does always speak to us from
her expression, in her suspensions, in every
place of the ever varied light or her match-
less countenance; - and there is something
betwixt; in the study of this her own
expression, which we lose in the systematic
loom. Still I employ the micro-
scope have settled the question that
the lichen shall not be any longer
be studied without a microscope without
it I am sorry, and shall long wish,
in the best study I can give to them
results.

D^r Gray will kindly send the
volume of Exsiccata at his first
opportunity & and I shall have
great pleasure in sending the
next one to soon as I can get
it out.

Believe me Dear Sir

Very truly yours

Edw. Tuckerman

not accon the dissections are
the species, but it must be remembered that the addi-
tional expense would have been great, and very bad
lithography is absolutely unfit for matters which require
great skill in designing, and clearness of outline. As
the sources from whence the specimens (generally
authentic), were derived are uniformly indicated, the
botanist may be content to refer to the figures which
are quoted. The preceding remarks, we would observe,
are made in no unfriendly spirit, but in the hope of
rendering the succeeding volume or volumes more
perfect.

Quart. Journ. Bot. Soc. Lond. 1851. p. 101.

[From the ANNALS AND MAGAZINE OF NATURAL HISTORY,
March 1852.]

by Rev. Churchill Babington M.A.

The British Species of Angiocarpous Lichens, elucidated by their Sporidia. By the Rev. W. A. LEIGHTON, B.A. London: Printed for the Ray Society, 1851.

THE present volume is to be regarded as one of the most valuable contributions to European Lichenology which has been made for some years. It is, in fact, the only work with which we are acquainted which supplies analytical figures of any considerable group of European lichens. The plates in 'English Botany,' however excellent and characteristic, are almost without exception void of all microscopical dissections. The same remark is to be made concerning the recent publication of Dietrich. Mr. Leighton has given figures of the sporidia of those British Lichens which are comprised in the division *Angiocarpi* of the immortal work of Fries on the European Lichens, and has accompanied them by descriptions and a selection of synonyms. So far as we can judge, the task has been on the whole faithfully and admirably executed: and if we venture to notice a few points which appear capable of improvement, it is mainly with the hope that Mr. Leighton and the Ray Society may take them into consideration, in bringing out plates and descriptions of other families of the British Lichens, expectations of which are held to us in the commencement of the present treatise. To proceed to the work itself. In the introduction, Mr. Leighton gives an historical account of the attention paid to the asci and sporidia by preceding lichenologists, showing them to have been known even so early as the time of Micheli and Dillenius, but not to have received much attention until a very recent period. "The only writers who have devoted anything like attention to the subject," he says, "are Eschweiler and Fée" (p. 2). Without in the least undervaluing the labours of the learned writers here mentioned, we must remark that Mr. Leighton has, unintentionally of course, made important omissions. Dr. C. Montagne, whose cosmical acquaintance with Lichens is probably greater than that of any botanist living, has rarely omitted to take notice of the forms of the *asci* and *sporidia* of those lichens which he has figured and described both in the 'Annales des Sciences Naturelles,' and more particularly in his magnificent 'Cryptogames de Cuba.' His ob-

Ach., no distinction whatever is drawn, the description of the sporidia running in exactly the same words for each. According to our[^]atioM, indeed>. *leptophyllum* is only a dwarf form of *h.* " J T ' TM¹ which Fries associates it; and this view is much « ^-« * ^^ Leighton's discovery, that the analysis is the same for both, - ma the work been constructed on a different plan, a small additiona[^] amount of labour and expense would have made it a portioni «-a History of British Lichens, instead of its being simply a e ^ J supplement to other works, and one which can only be employed oy a person in some degree acquainted with his subject.

Mr. Leighton is considerably more inclined to divide species than ourselves, and in some cases constructs them out of scarcely sufficient materials. Thus we should hardly have distinguished *dectm albidum*, Leight., from *C. myrticola*, Fée (pi. viii. «) >rF« >TM£ *codonoidea*, Leight., from *V. margacea*, Wahl- Still less « « TM 7 does it appear to us prudent, in so very difficult a genus, to describe a new species of *Verrucaria* (*V. linearis*, Leight.) from the portions of the plant which grow on the Borrerian specimens of *V.* "fTMTM (=• *V. Borreri*, Leight.). The plant, it seems, TM^{b1} f * f ; £ ^ X in almost everything except in the smaller-size, and in the ^{jun.} shaped sporidia. These sporidia appear to us to be in >>> likelihood simply the young or abortive ones of *V. Dufourn* & ^ nough in appearance from the normal form, but havin[^]m & eTMTM? a very suspicious shape. How much caution shouldTe employed m usm⁶ the shape and subdivisions of the sporidia will be evident[^]from the following passage of Montagne's (*Cryptogames de Cuba* m. i J, • -"Mafgre' la forme en apparence dissemblable ^us laquelle se sont présentées les sporidies a M. Fée et à moi, je ne puis me Pe» TMJ« quemon lichen soit une 'espece différente. C^{anan-jn} de surprenant pour qui a analyse' un grand nombre «' « * « " . e. # pu voir beaucoup dethbques. J'ai observe' maintes fois des spor[^]M, qui plus tard devaient être marquées de vingt cloisons, n'en pres[^]ter d'abord qu'une seule et être ainsi dans leur enfance, fulement bilob[^] u auora qu'une seule et être ainsi aans leur ai»»»»" . 7. ;,;,,; culeés." With respect to the shapes of the sporidia, it is the opinion of Dr. Montagne (and no one's opinion can be entitled to S^{TM*}TMTM" consideration) that the sporidia of the same species, h^oTMf f J "1 "": themselves in their young or abnormal state, do n e TM " f TM7t but little in the same species, when well-developed. We have as: yet made too few observations on this obscure subject to have much cc.' - fidence in our own judgement, but both from these few and tr « i m figures and remarks of others, it appears to us to be necessary that very great care should be taken not to distinguish lichens at oncedy a difference in the sporidia, when that difference may arise solely from a difference of age in the plant or from other and TM»^oTM the causes. Mr. LeightoS's figures themselves show how much sporidia vary in the same species (see *V. Hooker*, plate xxvii.;

Although Mr. Leighton's bias is different from our own as to the adjustment of species, we are far from saying that his views may not often be correct, where we are disposed to entertain suspicions, wis careful analysis, moreover, and excellent descriptions will make any

THE

LONDON.

MDCCCLI.

Edinburgh 2 Queen Street

Friday 23rd July 1857

Sir

I take the liberty of writing you with reference to the Sticta here enclosed.

I found it on the ~~bank~~^{trunk} of a beech tree in the Park at Inverary Aug. 1856. Taking it for Cetraria glauca

as it somewhat resembles at first sight, I paid no attention to it, until on examining my collections on my return here, I found it to be a veritable Sticta

I have compared with the Stictas in the University & in Dr Greville's herbaria & find none like it.

It most resembles the description of S. querciana Tuckermann's N. American lichens.

Approaches most closely to S. sylvatica but is distinguished by its deeply divided narrower lobes lucid & by the central sessile fruit (you will see under the slip of paper)

The only specimen I have you would greatly oblige me by returning it with your opinion

is an ~~Graphis~~^{Graphis} from the same spot upon that S. fuliginosa occurs in fruit in Brylleshire

investigating the lichens (principally

Pluzance. Cornwall.

Sept. 22. 1856

Dear Sir.

I should be much obliged
if amongst your numerous corre-
spondents you would give me the
names and addresses of a few
who would be likely to exchange
their duplicates of Flowering plants
and Lichens for those of Cornwall
I have been a collector for some
time past in this neighbourhood
and am anxious to obtain
additions from the parts of

England. The greater number of
the Scottish Flowering plants I
already possess as from having
studied in Scotland and
being acquainted with Dr Smith
Balfour & Jeville I have been
enabled to obtain them. Trusting
you will excuse my troubling
you but your eminence in the
Science must plead my apology.

I remain

Yours faithfully

J. Bowdler Montgomerie
M.D.

Dear Sir

I feel that some apology is necessary to excuse the liberty I now take in addressing you being entirely a stranger to you - The subject on which I write to you must be my excuse. I am anxious to acquire a knowledge of the Botany of my own district and having long since arrived at an acquaintance (I believe I may say) with all of the Phanerogamous species to be met with ^{here} I have been endeavouring to master the various tribes of cryptogamia - of Mousse &c I have identified about 100 species and of lichens very many. With regard to lichens I am in want of accurately named specimens to compare my collections with. Schaeerer's "Lich: Exs." and your "Lich: Briti." (of D. Mousse the 1st fasc.) being at present out of my reach on account of the expence. The P.B. figures

(I have only the receipt) CLX ^Jfc 3u/ffpCu*

Would you object from time to time for me, or you in exchange for what may be easily procured here send me some specimens correctly named?

I believe North Hamts and particularly the district round the town of Wasingham to be almost unknown to Botanists in Achidea it is rich; in Carices tolerably so - in esculent Fungi I believe peculiarly so, abounding in Truffles and Helvelles with the occasional occurrence of the more ~~of~~

I have herewith enclosed a few specimens of my Lichenological labours of this winter & spring about the names ^{of some of them} I am doubtful

1. Parmelia pulverulenta?
2. ?
3. Peltusaria Cornuensis?
4. Lecidea guerneae?
5. ? common on exposed blints
6. Lecanora exaristata?
7. Calicium? on Bark of beech
young apothecia starting every where over
the whitish layer -

8. ? common on bank of young
trees -

These ^{numbers} refer to those small spec^{ies}

w'ta-

boy -
Would you kindly look over those
in the small envelopes which I
have likewise v, numbered and
help me to their correct names?
I have numbered them likewise

if therefore you **wWD** ****~0"~***
the name attached to the
number it would be sufficient

and at the same time state
whether a supply of any of
them would be acceptable
to you and I will forward
the same -

Believe me to be
Yours very truly
Wasingstone
May 10th 56 Robt. Southey Hill
Rus^d - Leighton

158. Overgate, Dundee
Mar. 7th 1848

My dear Sir

I thought that
I had acknowledged your last
favor, but cannot find a
copy of such, and therefore beg to
pray that the P.O. order was
duly received; and should be happy
to procure a copy of the
Shropshire Public on the terms
provided it could be
at a small expense,

as my means just now will not
admit of much outlay in these
matters. The best way probably
would be to send it Messrs.

Longman & Co. or Messrs. Actonman
& Co. London, to be transmitted per
their monthly parcel to Mr. Chalmers
Dundee

Dumfries, or to Messrs W. & R.
Chambers, or David Mathews,
Dumfries St. Edinburgh; with
directions for transmitting
the things in exchange.

In haste, believe me
to be dear Sir

Most faithfully yours

William Garrow

The Rev.
W. A. Leighton

6 Upper Portland Place

Wandsworth Road

May 19th 1859

Sir

It will give me great
pleasure to make the ex-
change you propose if
I can make up a Com-
plete Copy of my Mycologia
but I do not feel certain
that I can do so, for
very few copies were
left I lost all interest
in the matter & I fear
that many of the specimens

Have by me are probably
changed. However as
soon as I have leisure
I will hunt them over
and endeavor to
you have them. I am
now actively engaged
in practice which must
furnish some excuse
for any delay that may
occur in forwarding
them. I shall put you
pleasie at any time
in naming specimens
of fungi (particularly
the more numerous ones)

As far as I am able
although I believe you
are they much better
acquainted with botany
than myself and it
may appear almost an
intellect in making the
offer. I am anxious to
obtain some Microspor
specimens of any of the
Fam. freshwater algae
and of the lower forms
of marine alga which
can only be put up in
a fresh state. Should you
wish with any of these you
will do me a great favor
in supplying them in

a parcel of oiled silk
or bladder enclosing
them in a letter. Will
you excuse the intrusion
of my wants to yours
where I believe me

Yours faithfully

Th. B. Hayes

The Rev. W. A. S. Titon

Dear Sir,

I shall be happy to make
the exchange you propose
and will direct my publisher
to forward a copy of the 'Essential
Funguses,' according to your
direction. It will give me
pleasure to hear that you
succeed in identifying any
of the kinds I describe
making trial of their merits,
and become a convert
to the cause. I am

anxious to see the taste
spread through the country
particularly among the
poorer classes

If you will direct your
London Agent to send you
word to me addressed to

The Rev^d C. D. Badham
26 Tower Hill ^{London}, I will
give orders to have it forwarded
by the first opportunity

I am dear Sir

Your Obedient Servant

May 16/57

Dear Sir

I have 33 francs
from Dr. Dylander for you
say to 1.6.8^d. Shall I
forward you a P.O. for the
amount or how shall I trans-
mit.

I forward the parcel of books
for Mr. Dunsall by this post

Yours very truly

H. J. S. ^{AL, -vE}

Rev. W. A. Highton

17. Compton Terrace. Kingston.
Sept. 28th 1853.

Dear Sir,

I shall be happy to collect
Lichens for you in the
Islands I visit. On the 5th
of Oct. I sail for Madeira
where I shall probably remain
at least a year and then
go on to the Canaries for
a similar period. Whether

I wish the Bones is
uncertain but I shall
either do so or go to the
Cape returning however to
England presently.

I enclose a paper from
which you will learn
more of my plans.

My dear Plant will
be £2. per hundred -
Should you wish any

other Cryptogamic Plants
included?

My agent is W. Samuel
Stevens of Bloomsbury St.
New Bedford Street & whom
or to my Brother W.

Prasa at this place any
letters, or expensive money
be addressed during my

absence -

Respecting your further
instructions I am, dear Sir,
Yours faithfully

W. A. Leighton Esq.
Nathl. H. M. Esq.

Oxford Mount near Warrington
Feb 1849 -

Rev. J. Dean Esq.

I feel much obliged to you for the trouble you have so kindly taken in my behalf to have returned the enclosed with thanks - I send you a scrap of the true *Hypnum rotundifolium* of Scopoli, in the hope that it may lead to its discovery as a British species - It is apt to be overlooked as a variety of *H. confertum*, having nearly the same characters, though very different in habit and in the appearance of the dried foliage - It is one of the masses which has given rise to much confusion in Dickson & Smith's works - Dickson hastily assumed a variety of *H. confertum* for this species, & sent it along with *H. palustre* to Turner & Smith - In Eng. Bot. t. 2555. The two species (*confertum* & *palustre*) are blindly treated as the same, and some false criticism on Scopoli is the result - In Musc. Hib. Turner has lost sight of *confertum*, and looks only at Dickson's specimen of *H. palustre*, to which he superadds an Irish barren specimen of *H. atropurpureum* to make up his *H. late virens*, a species which Nature never owned, any more than *Boezium obtusifolium* of Linn. Musc. Hib -

I have a very long list of such factitious species, unknown to Nature, manufactured by various incautious authors of note, some of ~~whom~~ ^{whom} are still living - *Hypnum palustre* has been sadly misused in the days of Swartz, ~~Dickson~~ who compounded it under the name *H. curidum* with *flavivatum* & misled Redwig, Turner, & others, so completely, that it was long before the species

could get a comfortable parish or other
settlement by name in Britain - In Eng. Bot.
it appears twice, first on the skin (too slender)
"H. palustris", & then (by adoption of Turner's error)
as H. adnatum - Turner in Musc. Herb. knows
it merely as H. adnatum, & confounds it with the
true Hedwigian species of that name, a very
distinct moss - Dickson misled Hedwig
& others about his new H. flagellare (name)
by tacking to it the fruit of H. plumosum var.

< ^ £ ^ ~ ^ (^ < £ ^ . < / ^ ^ , M \$ 6 , ^ U — t ^ - ?

lance (as made for Dickson is attempted) and
Hedwig is completely misled; so much so as to
figure H. alpinum entire for Dickson's flagellare -
at length when the true flagellare of Dickson
appears with fruit, Smith fails to recognize it,
& publishes it as H. umbratum (Eng. Bot. t. 2365)
though quite different from the true species
of Ehrh. & to complete the disorder, Hooker &
Taylor omit all notice in Musc. Brit. of this
rough fruit, talk of H. flagellare which is so
important a character to separate it from
H. umbratum & -

H. rugosum Eng. Bot. t. 2250 is an amusing
instance when two species are figured, and
neither of them the right one - W. Smith's species
(the slanting, soft unripe one in the figure) is
H. lyco-podioides - the other from Dickson is
H. commutatum var. alpinum - The proper
H. rugosum is H. rugulosum of H. & T. -

I have not been able to make out H.
crenulatum Eng. Bot. t. 1261. - I did not see
it in Herb. Smith. & that portion of Herb.
Turner. has unfortunately been omitted to be
sent from Yorkmouth, but is doubtful what
I shall ever see it -

In Herb. Turner there is a considerable number
of authentic specimens from Dickson of the
herbs described in the 14 fasciculi of Crypt.
^{^^T/K^L^^JC} ; but not a complete set -
also numerous specimens from Hedwig, and
from Swaen - As a collection Herb. Turn. is
infinitely superior to that of Smith, which is in
fact little more than a collection formed when
he was a young student at the Edinburgh
University -

I once met a Clergyman in Auchincloss, whom I
made out circumstantially as the Rev. W. Williams,
plants
!.*.*. ^^UU^Z=t ..^C~ *'f** ^ ^ 1
to Smith - He resided in or near Woburn -
I suppose he will not be living now - He assisted
me in Beaumont's Green, as I was gathering
Trifolium suffocatum &c - The Rev. W. H. D.
Davis sent several papers to M. D. Turner for
^^A» ^ ^2c ^~-P ^ ^ before I began to visit
his hermits, or knew anything of Botany; but I
have seen his Herbarium in Beaumont -

Yours most truly
W. Wilson

Rev. W. A. Lupton -

6 Inghiston Street,
Roxburgh Terrace,

7 Oct. 1857.

Reverend Sir,

I am very sorry I did not
know some months ago of yr
intention to publish the Brit.ichen,
else I should have been able to send you
thousands of ~~the~~ specimens from the
Clons, having recently had over large
quantities to a chemical friend for
analysis, & otherwise distributed them
freely to all who asked for them.

I have, however, sent you all
I have left, save a few laid out for
our Herb., & hope you will receive

in safety ^{through} 2 Pamplics; I have
closed ~~them~~ ^{the packet} to Messrs. Groombridge who
will send it to the Pamplic in a few
days. I beg you will excuse the

very rough manner of the
packet, labels &c., as had I
delayed reading it till I got
time to put all in proper
order, I perhaps sh^d. not
soon have found that
opportunity.

"? "

y n. y. I have distributed the pros-

pectuses you sent, & I hope to
procure advantage. May I take
the liberty of asking you in return
to circulate among your friends
& your prospectuses of my
"Waterlilies," sh^d. are enclosed in
the parcel. — I have recently
been visiting many of the Gardens
Woblesham to about London

trying to pick up information
concerning ^{ornamental} Aquatic Plants,
native and exotic; I
shall esteem it a very
great favor if you can
in any way assist me in
this. There is great room for
extending the ^{C.A.} culture
of ornamental Aquatics.

Respectfully,

Chas. W.

Yours very respectfully

Lawson

May let me know if I can assist
you to any lectures given in this
quarter or in the Southern parts of
Florida

This is my leisure time now,
if I may probably have a day
now & then in the country
so that if you have any
special wants obtainable
in this neighborhood I shall
be glad to endeavor to
supply them.

and that you have enjoyed
good health since I last saw
you

I suppose you will come up to
town to see the great exhibition
if so I trust you will find
out

I think you will be with
completeness to two Lighters and
remain
Very dear Sir

Yours sincerely

Joseph T. Kelly

Handwritten text, possibly bleed-through or a separate note, partially obscured by the paper fragment.

Jan 26: 1875

Newbourn Rectory, Woodbridge

Dear Sir,

I suppose that I have to thank you for so kindly having sent me the interesting notice of the old house at Shiffnal, for which accept my best thanks.

Some time ago I was engaged in the British Annotated called "our Old Book and its Story" and would gladly send you a copy of it had I one in my possession but as I have not, must content myself with referring you to it. It appeared in Vol.

As to being finding the Old

Vertical handwritten notes on the right margin of the paper fragment, including words like 'accept', 'sent', 'thanks', 'copy', 'vol', 'old', 'book', 'story', 'find', 'old'.

Jan 26: 1875

Folio in the manner described
of that there is no question, but
whether the transcript was made
by Thomas Blount is most
doubtful. I have seen the
Old Folio, and had it in my
hands.

I used in my earlier days to
visit a good deal in the neigh-
borhood of Shrewsbury where
I had many friends, about the
only one now remaining is
W^m Mitchell Vicar of Alberbury
who was at Oxford with me.
I ^{gave} given a promise to pay
W^m Hubert Smith of Bridgenorth
a visit in the summer, if all
be well, in order he introduced

by him the birthplace of Paul
and see the many interesting
places in that neighborhood
hitherto unexplored - If it
could be managed it would give
me much pleasure to make
your acquaintance during my
stay with him

Believe me

Yours very truly

John Pickford

Falaise 13 juil 54.

Monsieur

Sans une absence qui m'a éloigné
de chez moi pendant quelque temps,
je n'aurais pas été si en retard
avec vous. Je voulais vous exprimer
tout le plaisir que m'a causé
votre lettre et avec quel empressement
j'acceptais les rapports que vous
vouliez bien me permettre d'établir
avec vous.

J'ai, depuis longtemps l'honneur
de vous connaître de nom et
de savoir avec quel soin vous avez
étudié les lichens, qui après les

Paris le 10 Mars 1844

Adieu, ont mes premières sympathies.
Je serai bien heureux de vous

soumettre vos espèces les moins
communes et quelques autres sur
lesquelles j'aurais besoin de votre
opinion.

Je connais vos Graphidea, car

je me suis empressé d'acheter les
vos

mais au Magasin qui

les renfermait. A ce propos, je vous

serais reconnaissant de me dire quel

N^o renferment vos nouvelles espèces

de Verrucaria et de Soredia, je pense

qu'elles sont dans le N^o de janvier 54.

J'ai les 2 dernières planches dans

le N^o d'avril.

Je vous remercie beaucoup de l'offre
généreuse que vous me faites de

Microscopiques,
des Diatomées
et des Remèdes
Surtout à l'usage
de l'intérieur
pour vous,
je pourrais vous
en offrir un
bon nombre en
grande partie
gratuite.

Fascicules de Lichens d'Angleterre, j'y
mettrais le plus grand prix. Si vous
apportez quelque intérêt aux Mousses
je serais heureux de vous offrir à
mon tour mes Mousses de la
Normandie, que j'ai publiées autrefois
en 8 fascicules.

J'étais un jour à Paris avec M. Nylander
qui venait de recevoir de vous une lettre
où étaient collés des Lichens et il me
fit remarquer votre Chiodecton Graphidoides
que j'ai trouvé à Falaise sur l'érable
et sur le tilleul, mais très-rarement.

Peut-être pourrai-je m'entendre avec
quelqu'un de vos correspondants de
France, M. Lermouin, Nylander, etc.
pour vous faire parvenir mon
offrande. Paillier, libraire, qui a

une maison de Librairie à Londres
pourra aussi, j'espère, me servir
d'intermédiaire. Je pense qu'il
ne demandera pas mieux que
de déposer les envois chez M.
W. Pamplin. Dans tous les cas
je vous avertirai du moment
de départ, je n'ai pu m'occuper de la
recherche des espèces qui peuvent
le plus vous intéresser.

J'ai l'honneur d'être, Monsieur,
avec la plus parfaite considération

Votre tout dévoué,

De Bréville

Jan 26: 1875

Newbourn Rectory, ¹ If*0 iwz?. AfC^

Dear Sir,

I suppose that I have /riC^Jt
you for is kindly having sent
me the interesting notice of the
old house at Shiffnal, for
which accept my best thanks,

Some time ago I was chapman
in the British Architect called "an
Old Book and its Story" and
would gladly send you a copy of
it had I one in my possession
but as I have not, must content
myself with referring you to it. It
appeared in Vol. 1. p 394 -
As to Percy finding the Old

Jan 26: 1873
Folio in the manner described
of that there is no question, but
whether the transcript was made
by Thomas Blount is most
doubtful. I have seen the
Old Folio, and had it in my
hands.

I used in my earlier days to
visit a good deal in the neigh-
borhood of Shrewsbury where
I had many friends, about the
only one now remaining is
Mr Mitchell Vicar of Alberbury
who was at Oxford with me.
I ^{have} given a promise to pay
Mr Hubert Smith of Bridgenorth
a visit in the summer, if all
be well, in order he introduced

by him the birthplace of Percy
and see the many interesting
places in that neighbourhood
hither to unexplored - If it
could be managed it would give
me much pleasure to make
your acquaintance during my
stay with him

Believe me

Yours very truly

John Dickford

Indocarpus cinereus, *effusum* *remissum* *cinereum*: *fructus* *in* *pac* *caulis*.
Provant ad ...

... *Indocarpus cinereus* ... *Country* Dec. 27. 1861.

Research I have the pleasure of
forwarding to you a ball of the *Truby Manuscript*
(*Apoc. lobulosis* of *Acroth*) together with one of the
true var. of *N. pseudo-indica* which was original-
ly procured from the meadows of the adjoining Pa-
ra to this (Mendocino), it has since been
before the flower produced is a very handsome var-
ety. At this season of the year it is just possible
that the plants I now send may not be correct, but
I am all but certain that they are, if not, however,
I will engage to send you the true things in the spring,
and a much more plentiful supply, if you wish it. The
this ball, I am certain was raised from seed from
the *Truby N.* and I think you will find it in no material
point differing from the present. - I am much obliged by

Lewes 30 April 1841

My dear Sir

On my return to Ireland last summer I set aside a few plants for you, but the packet was so small that it seemed hardly worth sending. Your packet of Shropshire plants has however encouraged me, to add some plants which came under my hands in looking thro my herbarium, ~~in~~ -&£*, *££ although not new to you they still be acceptable, and may serve to distribute among your friends if you do not find them worthy a place in your own Herbarium. I hope you will not think I have added to the size of the packet without adding to its value. There are some plants of which any quantity is acceptable for presents or as articles of exchange. Your Shropshire flora contains several such, and I am afraid we can hardly match you in this respect in Sussex, but in other respects, in the number of plants, and of rare plants, it seems to me that we are your superiors. I intend to be in town in about a fortnight & shall bring your packet with me. It will also involve a Catalogue desiderata which are very numerous, partly ~~by the Pinus~~, but partly owing to the little attention I have lately paid to

Black. Common in; Hartmann Hill, Stuttgart.

Woodford July 1891
Dear Sir

I am exceedingly sorry that

I have not answered your letter longer
than I should have done, I had not been
very much engaged, * ftiXp
filled with friends staying with me while
my mornings are **/M^UU^I ^7** business in London

The two Cherries which you saw
in my garden, both came from Sussex
I am not aware that *P. Ceranus* can be
said to be an Epic plant, *P. Avium* is very
abundant the only individual of *P. Ceranus*
I know is a wood of my own where I am
independent it was seen by a bird from the
garden & from a *Magnificans* probably, which

T'iX^^, ~V h //

4t Laver

Your etc. is undoubtedly
Y. Ceranus

P. Avium Lin. Sp. Pl. 630. (Thunb. Linnæus says
the fruit is red) Hud. Fl. Ang. ed. pr. (1762) 187.
Willus in

P. Cerasus (L.) B. 10. 716.

P. Cerasus L. Hud. Fl. Ang. ed. sec. 213.

P. Cerasus L. Sm. Engl. Fl. vol. 2. 355.

Cerasus sylvestris fructu nigro R. Br. Sept. 63

W. 2 in

Prunus Cerasus L. Sp. Pl. 679

P. Cerasus L. Sm. Engl. Fl. vol. 2. 354 I can hardly suppose

I must ought to have referred to P. avium. It has

Linnæus shows knows his own plant I write

was probably led by the reference to Banks

which I should say describes to this plant

to this I refer

Cerasus sylvestris fructu nigro J. Benth. ex R. Br.

Syl. 463 Cerasus with Cherry trees & compound

as varietal.

β. Cerasus sylvestris fructu nigro J. Benth. ex R. Br.

cordiforme, R. Br. Syl.

γ. Cerasus sylvestris septentrionalis fructu

parvo serotina. The type of the variety is to
be found in the best gardens of what variety
is your Anemone plant? It seems
to be a Chinese plant called Merry tree by the
peasants of Warford in Durham, the fruit very
large before the beginning of
Sept. - Unfortunately my P. Ceram has no
fruit this year. With respect to the plants on
my P. Avium, ^{these} are on the petiole, conspicuous,
large & red, ^{as} Ceram, two glands if any at the
base of the leaf, green. On my plant very few
leaves have glands whereas in Avium there are
very few without. I have no duplicate specimens
in Avium but I send leaves of each species. These
leaves seem to have been well enough known
until Hudson absurdly put them together in his second
Edition, in which unfortunately he was followed
by Smith who probably had not paid sufficient
attention to them.

I cannot conceive that Boerhaave could have
have the Sales you sent P. Meyerian female

ad. and was I hope down Pacific, N. B.
January 26. 1842

My dear Sir,
I have to acknowledge with many
thanks the receipt of your obliging letter
and envelope parcel of plants - and this
I should have done immediately upon their coming
to hand but the very serious illness of my
father has since then occupied my thought
to the exclusion of almost every thing else -
You will I am sure receive this as a sufficient
excuse for my apparent neglect -
Accompanying I have the pleasure of
sending you some plants of *Sedum. caespitosum*
gathered on Mt. Vincent's Rocks yesterday and
which I hope you will receive unimpaired by
the carriage - Upon referring to your
Catalogue I find that there are so few of your
desiderata that I can at present supply
from my stock of duplicates, that it would
be scarcely worth while to make up a

I will just at present to send
 I wish lay aside such as I have that you are
 in want of - and when the season for
 collecting comes round, I will forward them
 must you with others which it will then be
 all my power to add to them - I will
 all that I can have the greatest pleasure in
 endeavoring to get subscribers at the book
 you are about to bring out - and I beg
 you will put down my name and a subscriber
 It will also afford me much gratification if
 I shall be enabled, in the course of my observations
 upon the genus *Phobos* during the ensuing year
 to supply you with any facts of sufficient value
 for insertion - I shall not want to avail
 myself of your kind offer to compare any
 specimens I may send you with the authentic
 ones in your own collection - In studying
 this genus it will be my endeavor not only
 to get extreme forms but as complete a series
 as I can of intermediate ones and as many

varieties as possible from the same plant - It
-£ ^ & struck me that a good deal of
light might be thrown upon some of our
puzzling genera by ascertaining whether
the reputed species crop readily one with another
and whether the plants produced from such crossing
possess all the characters of species, as at present
defined - It would also be interesting to

grow the seeds of the same plant (in preference to
planting cuttings) in a great variety of
situations as possible - and it is more than probable
that the seeds sown in precisely the same
circumstances as to soil &c would produce
varieties - and this would afford a clue to the
extent of variation to which the species are liable,

17^^ remain
hyde

Yours very truly & obliged

Dear W

In passing
through London last
week, I called on your
publisher, Van Nostrand,
who gave me a copy
of your Therapeutic Flora
and at the same time
I left with him a copy

P. Commensal
Augsburger Hllk.; i. Witten; i. Caraga; i. Sinspoken; i. Dat

of my papers of that
kind which I hope
you have by this

time received in safe
by. Your very excellent

Flora I have frequently
seen in our Botanical

Society's Library and also
in the possession of

of Dr. Gravelle and others
but I am almost ash-

ed to say that I had
not been

not previously a
copy in my possession
as there is not a word

of you as to its being
the most accurate work

of the kind since published
in the English language
and it will be a great

pleasure if you do not con-
sider it to a British
author a work

of some special
importance

As I am at present inter-
ted in the Profus. France
and business. I would in
in a future letter (by
your permission) to you
a few remarks on the
characters of some of
your genera and espe-
in the near time will
you have the kindness
to enclose me a sketch
of your *Anna castreana*
maps

Believe

Dear Sir

Yours in earnest

Dec^r 20. 1841

Dear Sir

You would have heard me
sooner had your letter been addressed to me here
instead of being sent to Richmond from whence
I received it this morning. I am exceedingly

ly
sorry that I have only one specimen left of
Meds Smptlyti, if however you subscribe to
Berkeley's Fungi you will find me in his
next Fasciculus which I believe will appear
in March or April. I enclose a specimen
of *Cladium Thesis* of which I happen to
have a few remaining. I have also added
a small *Tuber ferrugineum Vittadini* and

Watson's Valley, Utah.
May 2nd 1871

a society of our Pastor around the
Rocky S. Finches. I like to see
happy to read any thing, in the way of
Pamphlets or tracts, which may happen to
pass here. but I am only with a layman
in the state of Egypt. I have not
any very little about them. All you
are so kind as offer me a portion of
your pamphlets I should be extremely
pleas'd to have specimens of the
Stone which you must with and explaining
of the matter in the state of Utah. There
has for some time been a
petition in
Utah.

Yours very faithfully
W. H. Phelps
