CAROLI CLVSI ATREBATIS,

IMPP. CÆSS. AVGG.

MAXIMILIANI II.

RVDOLPHI II.

Aulæ quondam familiaris,

RARIORVM PLANTARVM HISTORIA.

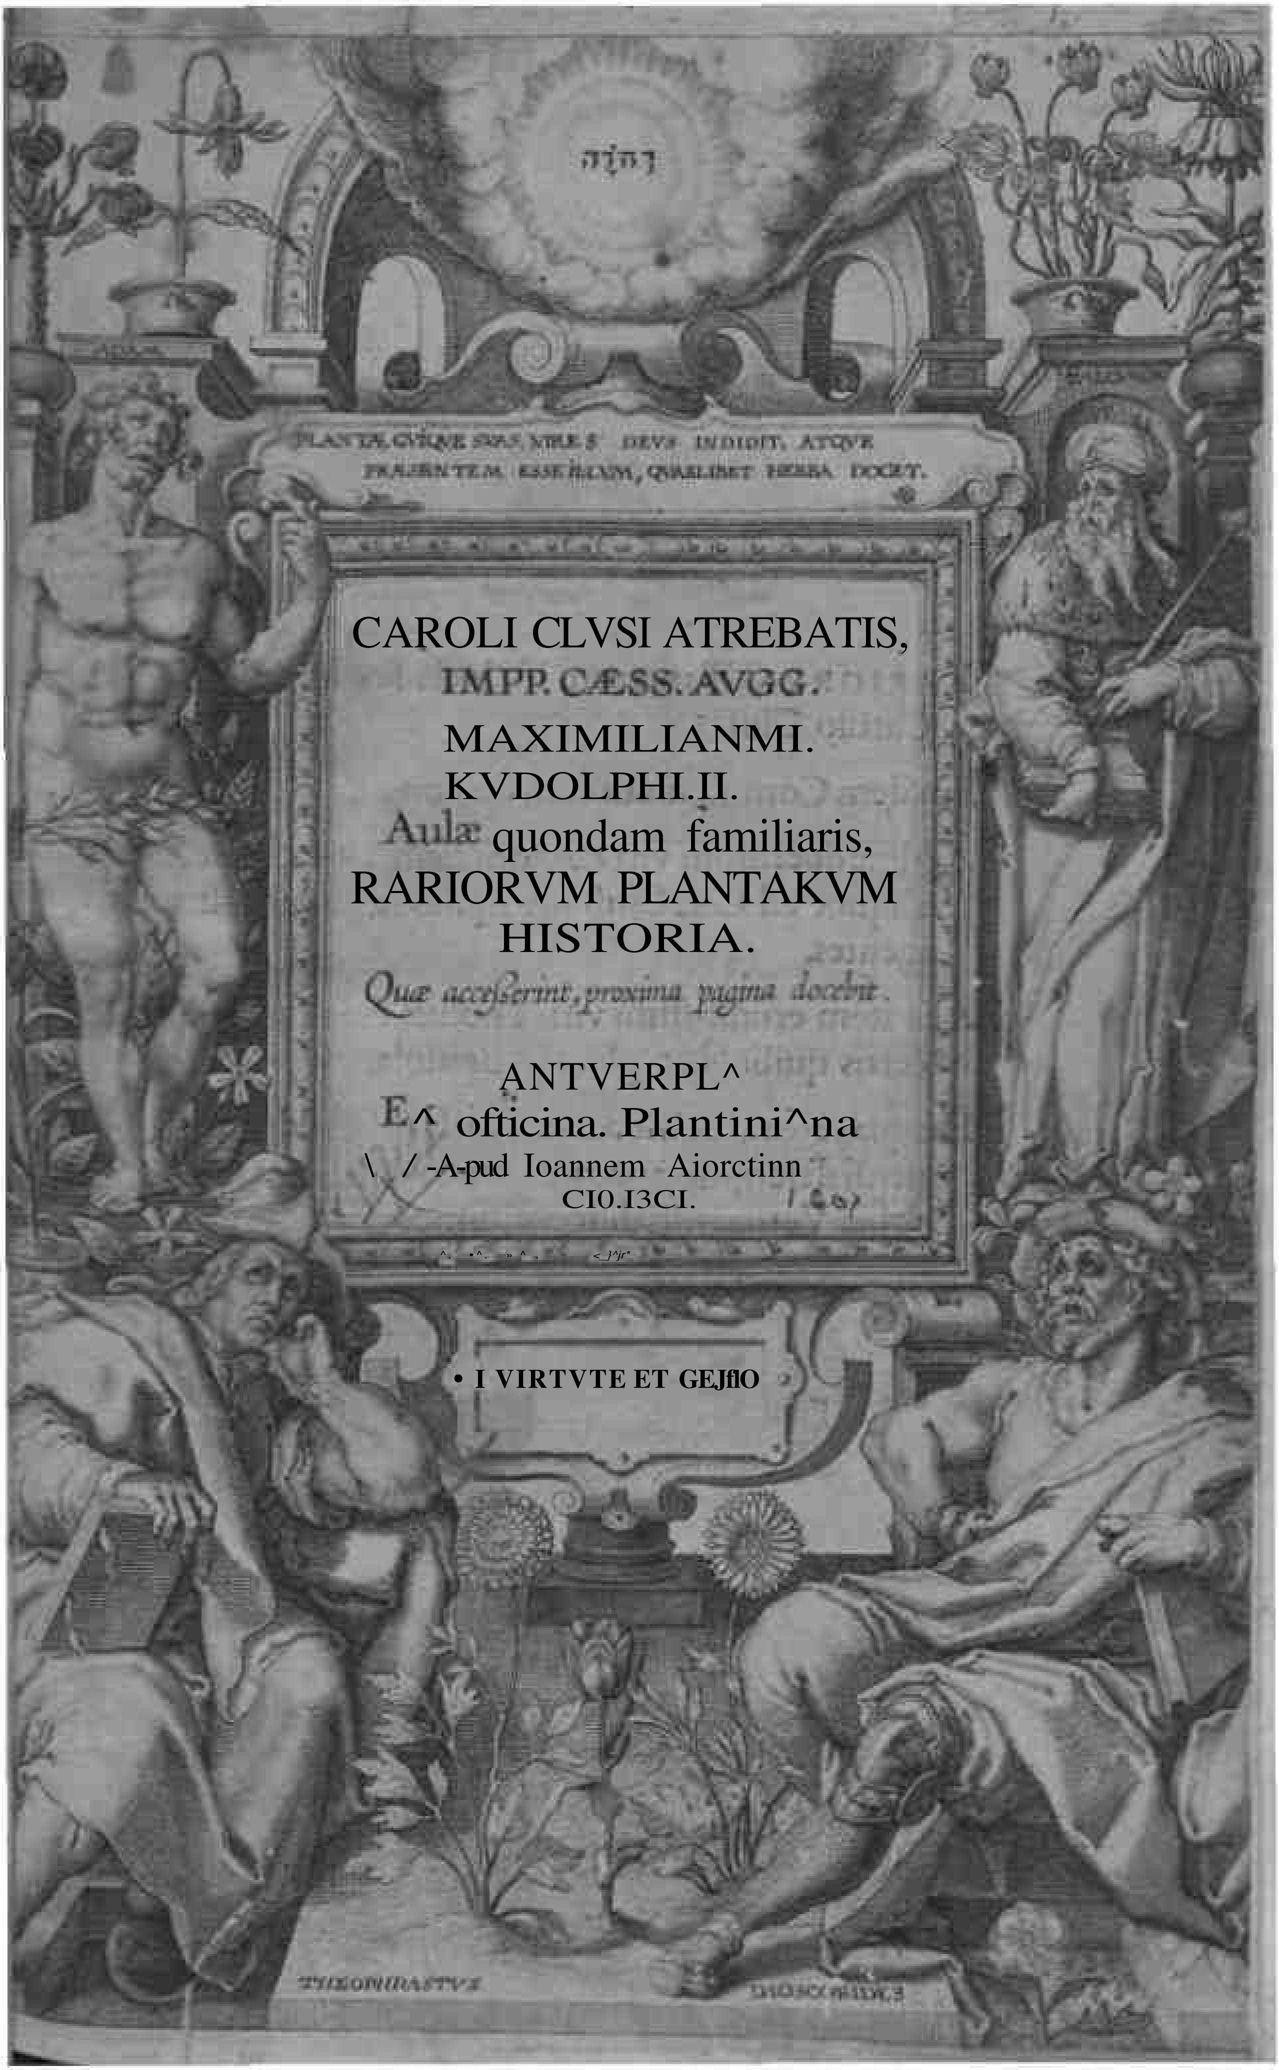
Quæ acceſſerint, proxima pagina docebit.

ANTVERPIÆ

Ex officina Plantiniana

Apud Ioannem Moretum.

CIↃ.IↃCI.



Clusius suas partes egregie tuitus est, [illegible] alios, et prae aliis, Lobelium.

INDIAN BOTANIC GARDEN
CALCUTTA

RARIORVM Plantarum Hiſtoria ſex libris deſcripta à Carolo Cluſio.

Eiuſdem Commentariolum de Fungis.

Additæ doctiſſimi viri Honorij Belli Medici percelebris aliquot ad Car. Cluſium Epiſtolæ de variis ſtirpibus agentes.

Alia item eruditiſſimi viri Thobiæ Roelfij Medici, de certis quibuſdam plantis, Epiſtola.

His præterea acceſſit accurata Montis Baldi in agro Veronenſi deſcriptio, auctore Ioanne Pona, pharmacopæo vrbis Veronenſis diligentiſſimo.

adverfari,

adverſari, excalfacere, urinam movere, venerem excitare, contra phalangiorum morſus [illegible] in vino bibi. Ejus reſina reliquas antecellit, teſte Dioſcoride: Galenus tamen nonnullarum [illegible] ratione Maſtichen præferendam cenſet.

Bellonius lib. II. Obſervationum cap. xcvi. refert, cum in Ciliciæ [illegible], in Arabem incidiſſe, qui Carodum Terebinthi fructu onuſtum ageret, [illegible] vulgo [illegible]. Quod vel [illegible] Thraciæ & Macedoniæ ruſticos menſe [illegible] Terebinthi ramulis [illegible], cum primum formiatæ glandium magnitudinem ſunt, antequam in [illegible] cornicula excreſcant, & illas magno vendere in Pruſa Bithyniæ urbe, magnus enim earum uſus ad ſericea ſtamina varijs coloribus imbuenda, [illegible] duntaxat in uſum plusquam ſex millia pondo ſingulis annis inſumi.

C. V. Leonardus Rauwolfius Hodœporici lib. ii. cap. viii. ait Terebinthi [illegible], quod Arabes [illegible] vocant, præter vulgarem duo genera obſervaſſe, unum majus, alterum minus. [illegible] appellant piſtacijs forma valde ſimilem, ſed breviorem tamen & rotundiorem; minoris, qui [illegible] dicitur, cum ſuo cortice magnitudine piſo majorem, qualem eſſe in rotundum nonnihil concavam, veluti milium [illegible] Indicum ſive Dura: [illegible] jucundi ſaporis eſſe piſtacijs, eamque ob cauſam inquilinos abunde ijs veſci, perinde ut nos pineis nucleis & avellanis. Naſci magna copia in Perſia, Meſopotamia, Armenia, racematim cohærente fructu [illegible], vel potius ut Terebinthi vulgaris, cujus etiam genus æſtimantur, cum arbores illum fructum ferentes oblongiuſculis folijs Terebinthum ſatis æmulentur, quamvis [illegible] quæ habet folia, differunt. [illegible] piſtaciam, quæ rotun- [illegible] præſertim majus genus, ad Theophraſti lib. IIII. cap. v. Indicam Terebinthum refert, & ad Fiſti Serapionis, Avicennæ, & [illegible], quemadmodum minus ad eorundem [illegible], quandoquidem illi ipſi Auctores ſimi- [illegible] his nucibus tribuunt.

Bonrquibir.

Terebinth. Indica Theophr.

Fiſti. Bel.

COGGYGRIA.

CAP. XII.

Coggygria

B[illegible] [illegible] libus con- [illegible] altitudinis, nigrican- [illegible] divi- ſis, [illegible] firma, denſa, nervoſa, tere- binthinis folijs fermè paria, latiora tamen, & orbiculara ferè mucrone, oblongis, ſubruben- tibus pedicellis nitentia: tenuiores ramulos am- biunt, odore quodammodo ſemiſcino, guſtu- que adſtringente, non injucundo tamen: ea ſub æſtatis finem rubeſcunt, elegantiſſimoque nitore oculos oblectant: emicat è ſummis ra- mulis quidam veluti racemus multorum floſ- culorum ex herbido palleſcentium, [illegible] longis [illegible] purpurantis coloris pedicellis inhæ- rentium: paulatim deinde ſeſe explicant illi pedicelli in latam longamque [illegible] faciem, [illegible] ſumac [illegible] longe minora ſuſtinent: radix illi dura lignoſa, [illegible] tans [illegible] ſimile Terebintho.

Naſcitur

Naſcit ſponte in monte Badenſibus ther- mis, quæ à Vienna quatuor milliaribus abſunt, imminente, vicinisque quibuſdam montanis locis, ubi interdum adeò pumilam crui, ut vix cubitalē altitudinem attingeret. Olim etiam legere memini, dum Avenione per Arauſio- rum agrum & Boulline ad Montelimar profi- ciſcerer, Valentiam Allobrogum [illegible] potim petiturus.

Floret circa Viennam Auſtriæ inferioris me- tropolim Maio, calidioribus locis maturius: fructus matureſcit Iulio & Auguſto.

Nomina.

Vulgus Herbariorum appellat hunc fruticem Cotinum, & [illegible] à Plinio ita vocari exiſtimat. Cotini certè breviter meminit Plinius lib. xvi. cap. xviii. his verbis: Eſt & in Apēnino frutex qui vocatur Cotinus, ad lineamenta, conchylij colore inſignis. Ex quibus ſanè nemo facilè colligat, an ei ſtirpi quæ apud Herbarios tale nomen obtinuit, Cotini appellatio rectè tribu- ta ſit: ſed ab illis hoc nomen potius inditum ſuſpicor, à foliorum tabeſcentium rubro colo- re, quo Cotinum inficere ſcribit Plinius.

Cotinus Plin.

ROBVR, QVERCVS, CERRVS, CAP. XIII.

Robur II. Robur III.

Roboris varia genera Theophraſto.

ROBORIS quina genera à nonnullis [illegible], ab alijs ſolùm quaterna. Theophraſti lib. III. Hiſt. plant. cap. ix. & x. [illegible] nomine diſcrepare [illegible] Robur, Gaza nunc [illegible] nunc Quercum vertit [illegible] Quercus: φηγὸς, quæ Eſculus: ἁλίφλοιος ἢ εὐφλοιος, [illegible], alijs Cerrus fœmina: omnia fructifera: dulciſſimam autem glandem eſſe φηγῷ, ſive Eſculo, deinde ἡμερίδι, tertiam πλατυφύλλῳ, quartam ἁλιφλοίῳ, poſtremam & amariſſimam αἰγίλωπι, ſive Cerro. Macedones autem quatuor genera faciunt, ἐτυμόδρυν, quæ Gazæ Veriquercus, πλατύφυλλον quæ dulcem, φηγὸν quæ amaram, ἄσπριν, ſive Gazæ Cerrum, quæ rotundam glandem ferre; hanc nonnulli ſterilem omnino, alij vitioſum fructum ferre aiunt, quem nullum animal guſtet præter ſuem.

Qui plura de his volet, conſulat Theophraſtum quo diximus libro, & Plinij Naturalis Hiſtoriæ lib. xvi. cap. v & vi. [illegible] Robor [illegible] Quercu non vulgari [illegible] Cerrum, & nonnulla [illegible] caudice magis co[illegible] ciſa quàm quercus, [illegible] averſa parte molli canaque lan[illegible]

Robur I.

Frequens eſt in celſis Caſtellæ veteris montibus, atque in Aquitania ſupra Burdegalam, ubi *Roble* dicitur: tametſi idem nomen Hiſpani etiam tribuant vulgari Quercui, quæ in Hiſpanijs frequens eſt, & montibus Calpi fretoq; Herculeo vicinis ſemper viret. Quercum etiam propriè *Quexigo* Hiſpanis dici, & *Enzina de bellotas gruessas* à quibuſdam vocari, mihi relatum eſt.

[illegible] ſemper virent.

Robur II.

ALTERA, Quercus ferè magnitudine in Auſtria, Sty[illegible] Pannonia creſcens, ſtrigoſior eſt Quercu, ligno duriore, folio minùs amplo, altera [illegible] incano, [illegible] glandem fert: incolæ à [illegible] Steinaichel appellant, Vngari [illegible]

Robur III.

TERTIA, humilior [illegible], & interdum humanam altitu[illegible] cedens, alto qui prior facie, foliorum forma, caniciéque omninò ſimilis, [illegible] pumilum [illegible] fert hæc prægrandem gallam, exigui mali magnitu[illegible], adeò copioſam, ut aliquando ramulum, vix palmum ſuperātem, novem aut pluribus [illegible] onuſtum colligere meminerim: inhærebant eæ gallæ ipſi ramo contiguæ ferè, ſed ſine ullo ordine, rotunda quidem & veluti ſphærica

NVNQVAM alte aſſurgit hæc Ilex, ſed multis ab eadem radice prodeuntibus ramis fruticat, duorum aut trium (quando pluſimum) digitorum craſſitudine, ſæpenumero [illegible] aut etiam virgultis tenuioribus, ramulis: folia illi ſuperiore Ilice minora, aliquantulum ſinuota, magis virentia, nec averſa parte adeo incana, angulis aculeis armata, quæ vetuſtate interdum rubeſcunt: pusillæ & valde amaræ [illegible] calice ſpinoſo & echinato.

Natales.

CRESCIT multis Hiſpaniæ locis, in Narbonenſi etiam Gallia & Provincia non dubium, quin & plurimis aliis, ſed non ubique coccum gignit. Nam [illegible] regionibus quæ Mediterraneo mari vicinæ ſunt, & magno Solis ardore torrentur, naſci animadvertebam. Sed neque [illegible] perpetuo fert: cum enim frutex adeo adoleverit, ut glandem alere incipiat, Coccum non gignit [illegible] urere, ut proximo anno novelli [illegible] ramulis [illegible] exiguorum piſorum colore cinereo [illegible] gignunt. Hunc pauperes & mulierculæ colligere ſolent & mercatoribus vendunt, qui magnam ejus copiam [illegible]

Nomina.

Coccus [illegible] Plinio aquifolium [illegible] qui vero coccum gignit [illegible] ipſum Dioſcoridi etiam κόκκος βαφική. Plinio coccum & cuſculium, unde Hiſpani ſuum coſcoja depravata voce ſumpſiſſe videntur: ait enim lib. IX. cap. XLI: Hiſ[illegible] Coccum Galatiæ rubens granum, aut circa Emeritam Luſitaniæ in maxima laude eſt. [illegible] lib. XVI. cap. VIII. Omnes tamen has ejus dotes Ilex ſolo provocat cocco. Granum hoc, primoque ceu fruticis parvæ aquifoliæ ilicis, cuſculium vocant. penſionem alteram tributi pauperibus Hiſpaniæ donat. Arabibus *chermes*, Hiſpanis *grana de tintoreros*, Gallis *vermillon & graine*, vel *graine d'eſcarlatte*, dicitur.

Facultates.

PORRO coccum vim adſtringendi habere, vulneribuſque & præciſis nervis convenienter ex aceto illini, teſtis eſt Dioſcorides. Meo tempore in Mompelio mulieribus in difficili partu, & collapſis viribus, ſcobem ejus ex vino, aut confectionem alchermes præberi memini.

Coccus Pauſaniæ.

CETERVM Cocci etiam meminit Pauſanias in Phocaicis. Perpetui inter vices ejus fruticis ordines, quem Iones & reliqui Græci coccum, [illegible] patria voce *Hys* nominant. Creſcit eadem magnitudine qua [illegible] folio nigriore & molliore quam Lentiſcus, in reliquis Lentiſco ſimilis: ejus fructus [illegible] magnitudine: gignitur in cocci fructu puſillum animal. id ſi maturo fructu [illegible] statim volare [illegible] m. Verum priuſquam concipiatur animalculum, coccum legunt: eſt etiam animalculi ſanguis tingendis lanis utilis. Hæc Pauſanias. Veteres

Pauſaniæ animalculum.

autem codices, ut ab [illegible] viro Iacobo Suſio, græcæ & latinæ linguæ peritiſſimo admonitus ſum, non habent [illegible] nec σχῖνος, ſed πρῖνος & πρίνου, hoc eſt ilex & ilici pro lentiſcus & lentiſco: quæ ſane lectio legitima eſt. nam quæ ſimilitudo cocci infectoriæ cum Lentiſco? facilis autem eſt lapſus à πρῖνος in σχῖνος.

Hyſginum.

AB *Hys* autem Galatarum deducta videtur *Hyſgini* vox apud Plinium lib. IX. cap. [illegible] Quin & terrena miſcere, coccoque tinctum [illegible] cum [illegible] quam tyrium, aut petuliniæ purpuræ. Cauſa [illegible] quod hyſgi[illegible] Vitruvius etiam lib. VII. cap. XIIII. hyſgini meminit.

COCCVM quo modo gignatur, & ejus colligendi rationem Quiqueranus libro ſuprà

c i = ill.

Hactenus illi *Nabca* dicunt, Loti magnitudine ſpectatur, inſtar Acaciæ ſpinoſa, folia [illegible] ximia, verumtamen latiora: flores Iujubæ floribus quodammodo [illegible] ſunt planè ſimiles, albos ac parvos, à quibus exeunt pomula rotunda, odorata, dulcia, guſtuique valdè ſuavia, [illegible] majorum Maroſticenſium appellatorum æmula, quæ apud primates Ægyptios [illegible] ſunt in magno pretio. Arbor bis in anno floret, [illegible] eſt, ſed vernus [illegible] Autumno [illegible] ejuſque ſummè jucundi [illegible] puntur, cumque offendunt, ſi immoderate [illegible] Eam ſine dubio eſſe [illegible] ito quam Connarum ſive Paliuram olim ab Alexandrinis appellatum [illegible] conſtat [illegible] videantur *Nabca* fructui & oſſi [illegible] luc pomo ſimilis eſt, & os rotun[illegible] dum [illegible] inſtar olivæ. Nuſquam tamen in Ægypt[illegible] [illegible] Sed præcipuus uſus ipſorum eſt recentium [illegible] atque noſtris ceraſa mandere, conſuetudo eſt.

Sed & in medicum uſum [illegible] cum eorum facultas frigida ſit & ſicca, immaturorum, frequens eſt uſus ad [illegible] alvique relaxationem firmandam, ſucco ex ipſis expreſſo [illegible] iiſdem fructibus ſiccis in aqua maceratis [illegible] [illegible] & ulcera. Sed maturorum ſiccatorum decoctum aut infuſio, familiariſſima eſt ad omnes peſtiferas febres: aiunt enim hos fructus [illegible] ſus venenoſas qualitates & putredinem efficaciam habere, corque firmare, roborare. Succus item perfectè maturorum, optimus eſt ad purgandam bilem [illegible] rum ductibus. In omnibus etiam putridis febribus [illegible] dandum calorem utuntur, &c.

Ceterùm Oenopliæ iconem ſpinis carentem, qualem ipſe Honorius ad me mittebat, exprimi curavi, ut huic capiti adderetur. Ipſius quide[illegible] compegerat cum aliquot ſtirpibus ſiccis, & ſemin[illegible] Pinelli operâ, curarentur: verùm navis, quę iſta ferebat, ſævis tempeſtatibus acta, in Siciliam ejecta eſt, & corrupta, ut faſciculus ille cum magno meo dolore perierit. Exemplum tamen Epiſtolæ quam faſciculo addiderat, Ianuario mẽſe inſequentis anni M.D.XCIIII. accipiebam Maij ſub exitum, Lugduni apud Batavos: quæ quoniam earum ſtirpium quas mittebat, amplam mentionem facit, exiſtimavi me operæpretium facturum, ſi illam ad calcem Obſervationum adderem, præſertim cùm pleraſque contineat, de [illegible] tionibus ago. Eam ob cauſam Lectorem rogatum velim, illam ep[illegible], & reliquas quas poſtea ad me miſit, legere ne pigeat: nam & eruditæ ſunt, & de multis ſtirpibus agunt, quæ à Veteribus quidem ſcriptæ ſunt, ſed pleræque vulgo Herbariorum nondum ſatis cognitæ.

ZIZIPHVS RVTILA.

CAP. XX.

Ziziphi rutila hiſtoria.

PYRI magnitudine interdum aſſurgit Ziziphus rutila, plerumque minor, contorto caudice, ſcabro cortice: læves ſunt rami ex nigro ruſeſcentes, ad ſingula internodia binis ſpinis firmis ejuſdem coloris armati, alterâ rectâ, alterâ hami modo incurvâ, ut in Rhamno tertio. Ab illis ramorum internodijs bini, terni, pluréſve tenues ramuli exeunt lenti & flexibiles, coloris palleſcentis, ſpithameæ longitudinis, in quibus alternatim & impari ordine folia naſcuntur Rhamni tertij, ſive Paliuri Theophraſti folijs ſimilia, tribus nervis diſtincta, per ambitum crenata, dilutiore tamen viriditate prædita, & majora quàm in Rhamno, ad quorum exortus aliquot flores exigui pallidi, quinque foliolis conſtantes, quales in Rhamno tertio naſcuntur, deinde fructus ovali figura, olivę magnitudine, primùm viridis, ubi maturuit [illegible] dulcis ſaporis.

Ziziphus Cappadocia, Plin. admodum latiorem habebam, a Plinio Ziziphum Cappadociam appellari putat, cuius in hæc verba meminit, de coronis agens lib. xxi. cap. ix. Natur. Hiſtoriæ. Duo earum genera, quando alii flore conſtant, alii folio. Florem dixerim eſſe gemſtas, namque & his decerptitui lutcus, itera rhododendron, item zizipha quæ & Cappadocia vocantur: his odoratus ſimiliſque olearum floribus.

Iouis barba Plinij. NON dubium quin Iouis barbam arborem operis topiarij eſſe, & in roranditate in ſpiſſam, folio argenteo, cuius Plinius lib. xvi. cap. xviii. Natural. Hiſt. meminit, et Anguillara in libro de ſtirpibus, qua in opinione, binas alias proponit an Kisomnino tolijs, magis ut videtur ad deſcriptionem accedentes.

Theophr. ET [illegible] Theophraſti [illegible] lib. iv. cap. xi. Hiſt. Plantarum deſcribit, quæ dicitur Salicis genus eſſe: & aliquando illud eſſe exiſti[illegible]

Salix Latifolia. [illegible] ad mali folium nonnihil accedentia, ſed longiora: florem ſeu illum mollem, [illegible]

Elæagnus Rauwolfij. [illegible] expandat populi albæ [illegible] ſimilem [illegible]

[illegible] nimidioma [illegible] ſcripto [illegible] arborem obſerua & apud [illegible]

[illegible] ab incolis appellatam [illegible] magis accedere videtur, odorato [illegible]

[illegible] ex quo [illegible] roborandum corpus utilis. Eam vero eſſe [illegible]

Arab[illegible] ibus [illegible] & [illegible] Scrapioni *zurumbnh* appellatur

Nomina. HANC autem [illegible] ſponte creſcere, & ab [illegible] lae, & legitimum eſſe [illegible] Caſtellani & Granatenſes *Arbol parayſo*, hoc eſt, Arborem paradyſi: Galli, teſte Bellonio, *Inſiluer blanc & Oliuaſtre*. Matthiolus commentarijs in Dioſcoridem Oleam Bohemicam appellat & Ἐλαίαγνον Theophraſti eſſe cenſet.

AZADARAC Herbariorum. CAP. XXII.

SVPERIORI hanc arborem ſubiiciendam putavi, quoniam a nonnullis eodem cum illa nomine [illegible] inter eas differentia.

Azadarac hiſtoria. EST [illegible] vaſta & ſpecioſa [illegible] aliquando [illegible] craſſo, cortice in nouellis leui ad ficus corticem fere accedente, in adultioribus ſcabro & rimoſo: illius folia ad fraxini folia aliquantulum accedunt, ſed plura mox ramo [illegible] oblongo pediculo dependentes [illegible]

[illegible]

[illegible] florum exortu, multis longiuſculis [illegible] ribus purpuraſcentibus, odoratis [illegible] cohærentibus exornati: quibus ſuccedit fructus initio viridis, [illegible] maturitate autem candicans [illegible]

[illegible] fere in nonullis [illegible] conſpicitur. [illegible] hieme perdurat [illegible] in arbore, nullis degustantibus auibus.

Natales. Nuſquam hanc arborem ſponte naſcentem vidi: ſed in multis [illegible] regias vias alitur: nuſquam [illegible] major mihi conſpecta, quam Hiſpali in Regio palatio. Italiæ pleriſque locis frequentem eſſe intelligo. Memini & in Mompelio olim videre.

Arbor ſancta. ISTIC meo tempore Arbor ſancta dicebatur: Doctiſſimo & celeberrimo viro Gulielmo [illegible] Mompelienſi Epiſcopo Lotus alba exi[illegible] ominis viros

[illegible] miror, cum nullas notas habeat [illegible] notas quas Azores Zizipho albo ſiue Cappadociæ tribuunt: [illegible] namque [illegible] vocari audio, non minus [illegible] imperite quam Herbarij Galli [illegible] Herbarijs Sycomorum [illegible] co nomine donarunt. [illegible]

Nomina. Bæticis vulgatur: [illegible] *Arbol parayſo*, quemadmodum Caſtellanis Ziziphus alba dicitur; [illegible] *Zenſelacht*, teſte Rauwolfio, qui eam ibidem naſcentem [illegible] ad umbram præbendam, atque alijs locis in ſua peregrinatione

Pinaſter II. Hiſpanicus.

Pinafterim.Auftriacu*.

Pinaſter II. Hiſpanicus.

MINOR Hiſpanicus duorum hominum altitudinemrarAfii^«*, i~*a*nflexo & contorto caudice, ut plurimum ab imo ramoſo: folia illi majori ſimilia, ſed breviora, & diutius virentia: coni etiam minores, oblongi tamen, turbinati, & candicantes, multa plerumque reſina infecti, non admodum iis diſſimiles qui Auſtriaco, albo cognominato, innaſcuntur: nuclei quales in majore, nigra membrana contecti. Murciano & Valentino regno frequens.

Pinaſter III. Auſtriacus.

PINASTER pumilio Auſtriacus humanam non ſuperat altitudinem: ſed ſtatim à radice in lentos & obſequentes, tametſi craſſos, rugoſóque & denſo cortice tectos, ramos dividitur, atque in latitudinem diffunditur: hos per ſingulas ſquamas bina ſemper ex eodem tubulo ſimul prodeuntia & juncta folia ambiunt, quemadmodum in Pinu & vulgari Pinaſtro, magis tamen carnoſa ſunt, craſſiora, breviora, & obtuſiore mucrone prædita, coloréque ſaturatius virente: ſtrobili unciales ſquamatim compacti laricis conis haud majores, ſed magis turbinati, rectique, pediculo retrorſum non inflexo ut in prædictis generibus, nucleus alatus ut reliquorum, & inter compactiles ſquamas latens: radix craſſa, lignoſa, in diverſa tendens.

Naſcitur

Naſcitur in ſummis Auſtriæ & Stiriæ alpium ſupercilijs, inter ſaxa & ſcopulos ut plurimum, ubi nullæ aliæ arbores proveniunt.

Pinaſter III. Hiſpanicus. | Picea Pumilio.

ALTER [illegible] ſecundum [illegible] ramos diviſus [illegible] tamen [illegible] cis foli [illegible] diſſimilia, non adeò tamen [illegible] folia: ſtrob[illegible] [illegible] us etiam puſillus & nigricans, alatus ut reliquorum. Solo Murciano [illegible] ſe putatur, quemadmodum [illegible] Pinaſter III. Hiſpanicus.

Nomina. [illegible] minor [illegible] Nuctim P[illegible] lonio lib. III. Obſervat. cap. XLI. Pinum [illegible] vocabulum Piceæ Pinuſ- ſtri fructus Plinius Pityidas appellat. Dioſcorides tamen [illegible] que fructui indifferenter tribuit: quem vim adſtrictoriam & aliquantum excalfa- cientem, tuſſi pectoriſque vitijs auxiliari, per ſe, aut ex melle ſumpt[illegible] t.

E Pinaſtri majoris Auſtriaci inferiore parte, radicibus viciniore, [illegible] Germani [illegible] ad [illegible] & lumen præbendum idoneæ, [illegible] per [illegible] enim humor ad radices [illegible] arbores, [illegible] in Tedam [illegible] Vindas [illegible] Eſt verò Tedæ vocabulum [illegible], [illegible] cap. X. Natur. Hiſt. ſextum [illegible] [illegible] colligere non obſervavi, [illegible] genus [illegible] Reſinam [illegible] [illegible] ejus rei cauſa ſingulis annis novum tabros, & alijs Hiſpaniæ locis, ubi arbores vulner[illegible] vulnus ſupra annotinum infligentes, donec ad [illegible] perveneriunt, & humor ab ea parte manare deſierit [illegible] ac deinde alia aperitur.

Picea Theoph. Qvæ verò Theophr[illegible] ſit, ex Gazæ verſione & vul- gatis græcis codicibus, difficile admodum judicari poſſe [illegible] quandoquidem ejus materiam operibus in[illegible] [illegible] uſq; erectam aſſurge- re ſcribit. At ut ex melioris notæ codice colli[illegible] [illegible] omnium doctiorum judicio ea eſt ar- bor quam Plinius appellat Piceam, & apud [illegible] rei herbariæ Scriptores eodem no- mine donatur; arbor procera, & in metæ modum creſcens, folijs brevibus, rigidis, & pungen- tibus, undique [illegible] ramos [illegible] plerumque [illegible] ſtibus, qui [illegible] naſcuntur [illegible] cauſam Vngari [illegible] nuncupant. Fert verò [illegible] Maio menſe in extremis ramis ſingulares [illegible] palleſcentes [illegible] deinde [illegible]

ſtrobilos ſive conos mollibus ſquamis imbricatim compoſitis conſtantes, purpuraſcentes dum novelli ſunt & primum nati, deinde paulatim in longitudinem excreſcentes, quæ in maturis ſeptem aut octo interdum unciarum eſt, ſub quibus exiguum alatum ſemen, Pinaſtro ſimile fovetur.

Ἐλάτη ἄῤῥην. SED & multas habet notas [illegible] memorato ἐλάτη ἄῤῥην eſſe, hoc eſt, ab [illegible]

Pinus ſativa. Germani ſ[illegible] Meminit etiam Plinius lib. xv. cap. x. Piceæ ſativæ quæ ſapiniam nucem ferat.

Pinus pumilio. Illius autem genus reperitur, quod numquam valde aſſurgit, ſed pumilum manet, fertque quædam nucamenta nucis ponticæ magnitudine, e ſquamulis [illegible] imbricatim compoſitis, ſed [illegible] foliolum deſinentibus compacta [illegible] maturitate dehiſcenti a concava ſui parte & veluti cellulas oſtenduit, a ſummis & [illegible], & pungen[illegible] tota arbuſcula brevioribus & [illegible] allidioribus foliis quam ſuperior prædita eſt. In hac neque florem, neque [illegible] obſervavi: & haud ſcio an [illegible]. Videtur eam C. V. Dalechampius non ignoraſſe, ſed Pinum Tubulum, ſive Tibulum vocare. Plinio tamen Tibulus Pinaſter eſt gracilis, ſuccinctior, enodis, liburnicarum ad uſus, pæne ſine reſina.

Pinus tibulus.

ABIES CVM SVIS IVLIS.

Abies. ABIES autem Plinij, θήλεια ἐλάτη, abies femina Theophr. lib. III. cap. x. eſt, arbor celſiſſima & formoſiſſima, cortice lævi, & candidiore quam in Picea, [illegible] ramis crudce[illegible] ubus, & in latera, velut alæ, expanſis, quos ambiunt folia plana in junioribus & bifido mucrone conſpicua, ſuperne viridia, averſa parte cineracea, & utrimque in ramulis veluti pectinatim diſpoſita, ut totus ramus complanatus, & compreſſus videatur: in vetuſtis autem arboribus folia [illegible]um ordinem (niſi in tenellis ramis [illegible] obtuſo mucrone, ſic [illegible] redduntur. Adultæ arbores circa majorum ramorum extremos quaſi ſurculos, in ſingulorum foliorum [illegible] alis prona parte exigua quædam nucamenta interdum ferunt, è quibus ſingulares breveſque iuli [illegible] plicantur [illegible] nonnumq[illegible] [illegible] raſſiores habet quam Piceæ conos, obtuſa cuſpide, latioribuſque ſquamis præditos, Cedrinorum ferè modo, inter quas prominent veluti membranacea foliola: non propendent ut Picearum coni, ſed firmi & quoda[illegible] cælum ſpe[illegible] [illegible] is ramis [illegible] arboris cacumen ſolummodo naſcuntur. [illegible] rent Autumno, & multam reſinam fundunt. Sub Autumni finem & hiemis initium maturitatem conſequi feruntur.

Stelis. In hac porro arbore viſcum quod [illegible] nius ex Theophraſto appellat obſervavi [illegible] anno M. D. LXXIII. ſed longe majore deinde copia anno M. D. LXX[illegible] Hyneck à Waldſtain Pro[illegible] principibus [illegible] (cuius arcem incolebat) albis, pennide atque vulgare viſcum, baccis præditum.

Nomina. Tenuiores hujus arboris ramos ſolent Viennenſes, venali vino ante ſuas ædes ſuſpenſos proponere, ut aliarum regionum incolæ hederam. Itali *Abeto*, Hiſpani *Abeto*, Galli *Sap & Sapin*, Germani Weiſſ Thannenbaum/ Auſtriaci ſimpliciter Thannen nominant, Vngari *fenyö* [illegible] *ſza buk aleuele eny feloi all.*

Larix. SED celſiſſima etiam eſt Larix, à Theophraſto minimè deſcripta ut arbitror: nam Gazæ Larix nihil aliud quam πίτυς eſt, quam prioribus libris perpetuò Piceam interpretatus eſt, interdum autem eodem πίτυος vocabulo & piceam & laricem ſimul expreſſit.

Abies Plinii Theophr. CETERVM Plinius de Larice agens, omnia illi adſcribit quæ Theophraſtus πεύκῃ tribuit, ut ex multis locis inter ſe collatis videre licet, quorum aliquot in medium proferemus. Theophraſtus Plantarum Hiſtor. lib. III. cap. IIII. [illegible] οἱ φύεται: [illegible] ἐλάτη, πεύκη, πίτυς, ἀγρία, φιλύρα, &c. Plinius Hiſtor. Natural. libro

libro x /iii. Montes amant cedrus, larix, teda, & cæterx e quibus refina, itemaquifolium, buxus, ilex, &c. Rurfus eodem capite Theophr. [illegible] Idem lib. cap. XXI. Silveſtri uro generis folia non decidunt abieti, larici, pinaftro, junipero, cedro, terebintho, buxo, ilici, aquifolio, &c. Theop. præterea ejufdē lib. cap. x. [illegible] ultis radicibus non repullulat, picea repullulat, ut in Lesbo accidit, incenfo nemore pyrrhæo.

Hinc fatuum efle arbitror, ut eodem capite perpetuam comam Larici tribuat: nam fcribit, Omnia ea perpetuo virent, nec facile decernuntur in fronde, etiam apertis: tanta natalium mixtura eft, fed picea minus ab aquam Larix, &c. Ipfa autem experientia aliud docere fabla facnjm, quæ vicena, fi^plura non numquam fimul ab eodem exartifc tuberculis rain Dsconfuro ordine ambientibus exeunt pent Cillimodo. ienuiaj molliaj viridia, Ijs fcrifitailk quarin Corruda certii Hifpanica a me defcripta nafcmuur, perennia nō funt, fed incunce hicmedecidanr, 5£novo vectalizex ijCdctn tuberculis renafcuntuf: rarr:i longi fuiit Ar^racilcSjdcorrumpropcndenteSjinquibusuncialesconidmollibusfquamisimbncatim fibiinviccm incumbentibus compofici jexrjbropulceri'imcpnrpuraft'cntes. dum novelli Sc iceenes funt, ex ijfdem tuberculis c cjnibus folta prodeunt, brevi & craſſo fiimoqjpetiolo, furfam hoc eft^d brachiorum ahsredcxo^nirentcSjUt mucrone carlum fpeftent, qui alata parvula ftminaconrincnt.

Laricis folia hieme deci-dua.

Græcis dicitur *Xa.^%,* Latinis Larix, Italis *L4rice,* Hi(panis \^*ilers,t›* ut aflcrunt nonnulli, nam nullam in Hifpanijs nafcentem videre meraini: Gallis *'jMrUz./,* Germanis *HtuhtnHmt* Vngaris *vör'osftnp kibil tmbintina lez.'6».*

Ai lorum

[illegible] referebant, ut pumi- [illegible] diſpoſitis, ſed fragiles admodum, & puſillæ, rarò palmi altitudinem excedentes, ex tenuibus videlicet ſquamis contextæ, nonnullæ omnino planæ, in orbem prominentibus ramulis aliæ.

Cupreſſus marina [illegible]

Aliæ Cupreſſos ita æmulabantur, ut ſatis mirari nequirem Providentiæ divinæ opus & artificium, ramulis frequentibus in orbem, ſed nullo ordine naſcentibus, & ſurſum ſpectantibus cupreſſinorum foliorum modo efformatis. Harum tameſi aliquot annis inter chartas aſſervatarum & compreſſarum rami, ſi in vitrum aut aliud vas aqua plenum injiciantur, ſtatim ſeſe explicare & in orbem diffundi, ſeque ſurrigere incipiunt: eaq; adeò de cauſa piſcatorum vulgus ſatis obſcœnum illis nomen indidit.

Plures adhuc collegeram, ſed cum pleriſque alijs Naturæ miraculis in ciſtā repoſitas à Divo Maximiliano II. Viennam evocatus, in Belgica reliqui, nec ad manum habui cùm hæc deſcriberem, nec etiam ab eo tempore conſpexi, ideoque earum hiſtoriam dare nequeo.

HARVM autem marinarum plantarum, uti & reliquarum ſtirpium, atque omniū Naturæ miraculorum diligentiſſimus obſervator erat Illuſtris vir Carolus à S. Audomaro [illegible] Dn. de Dranoutre, Moerkercke [illegible] Dynaſta.

Myrica marina Batavica.

SED & anno M. D. XCV. in [illegible] littore arenoſo aggeres non procul Lugduno Batavorum [illegible] quatuor aut quinque plantulas conſpicit [illegible] conchis Tellinarum adnatas, graciles valde, digitalis aut majoris longitudinis, in breves & falſugine obductos ramulos diviſas, quæ Myricæ vel Ericæ ramulos mirum in modū referrent.

ARBOR VITÆ. CAP. XXIIII.

Arboris vitæ patria.

ADMODVM elegans eſt ea arbor, cujus ramum hîc expreſſum damus, perpetuò virens, caudice eſt recto, aliquot orgyias alto, nodoſo, paulatim ſuccreſcente, cortice ex rubro in cancelli[illegible] nodoſo, frequentes habet ramos in alarum formam expanſos, qui in alios ramulos planos alternatim [illegible] diviſi, [illegible] oblonga folia [illegible] quaternis [illegible] Cupreſſo, puſilli, flaveſcentes, quorum nonnulli deinde in exiguum fructum pinei nuclei magnitudine efformantur, coni modo è ſex ſquamulis tenellis compactū, initiò viridem, deinde palleſcen[illegible] [illegible] ſaporis) paululum [illegible]. Tota arbor graviter odorata [illegible] odore, quem [illegible] quis folium nonnihil duntaxat digitis confricaverit, facilè eluere non poſſit. Hunc autem non modò viridis ex ſe exhalat, ſed etiam multis jam annis exciſa & reſiccata retinet.

Natales.

OXYCEDRVS. CAP. XXVI.

IVNIPERO fere ſimilis eſt Oxycedrus, magnacx parte contorto ut illa caudice, interdum eciam in arbuſculam excreſcens, tenui & ruſeſcente cortice: folia habet Iuniperi vji nsraodopungentia, aliquantulum tamen longiora & rariora, terna ſemper circa umulos ſtimulo naſcentia ut in Iunipero: fructum initio viridem, deinde flaveſcentem, poſtremo, cum maturuit purpurei coloris, Iuniperino multo majorem, interdum avellanam magnitudine æquet, & tuberculis quibuſdam, veluti ſquamarum rudimentis obſitum, nucleos tres aut quatuor inæqualis continentem, majores quam in ſuperiore, medulla intus alba. Florem Iuniperi modo, & eodem tempore utriuſque fructus maturitatem adipiſcitur.

PROVENIT plerisque Hiſpaniæ & Narbonenſis Galliæ aſperis locis: nuſquam autem majorem vidère memini, quam ſupra Segobiam & Guadarramæ jugum ſupra Madritiano, ubi arborum magnitudinem & altitudinem interdum æquat, trunco humani corporis craſſitudinem æquante, ex quo, veluti ex trunco Iuniperi, qui ſimul cum iſto eadem altitudine creſcit, ſcdium trabes & contignationes incolæ faciunt.

Ulicporrò in ejus ramis menſe Octobri en.l- c.im plantulam obſervabam digiti longitudine, inſtar viſci ramoſam, geniculatam, viridem, interdum flaveſcentem, ramulis mirice recenter natis, five ejus plantæ quam nonnulli Salicorniam, Monſpelienſes marinum Scrapcrviuum vocant, (ed paulo minoribus conſtantem, quorum extremis aliquando inhæret veluti fructus Muſci, qui in arboribus aut ſaxis naſcitur, fructui perſimilis. Acido & valdè adſtringente guſtu eſt tota hæc plantula, Oxycedro, veluti viſcum malis & arboribus innaſcens.

THEOPHRASTVS hunc fruticem * « 4 » » 1 » ^ Auxiw appellat Hiſtor.Plant. lib. III. cap. XII. Plinius, cum ſequutus, Natural.Hiſt.lib.XIII.cap.V. Cedrum minorem Lyciam & Oxycedrum. Nam quam alij pro Lycia exhibent, … meo judicio, quam … ſive Cedri minoris Phœniciæ planta, quæ baccas proferre non ſolet, donec Taai aricis ſive Cuoreſli folia contraxerit, hect non define, qui quarum Tliuiac ea facere non vercantur. Minorem autem Phœniciam voco, ad majorU Comferæ … drelate Plinio eſt, in Syria, Phœnicia & alijs locis crescentis differentiam. Hiſpani Oxycedrum à Iunipero non diſcernunt, ſed eodem nomine *Embre* utramque vocant. Narbonenſes Galli … appellant, acoleum … confcaum A««fc<&e«dlr,c.npitisma. … bici ciuxi!Hs A^dicitur, pecorum ſcabiei & ulceribus, quibus a tonſura noſl. namque ſæpe infeſtantur, adprime utile. Idem oleum, quod cedriæ ſimile eſt, Hiſpani *Miera* appellant.

MYRICA. CAP. XXVII.

DVo Myricæ genera Veteres nobis prodiderunt, ſilveſtre unam, aliud ſativum ſive domeſticum.

MYRICA ſilveſtris magna ex parte tantummodo fruticat interdum in vaſtam arborem adolescit: ſcabro caudicis cortice, ramis eorum verò pumicante: folia habet Cupreſſi aut Ericæ … iuimilis vulgaris, coloris ex viridi ad cinereum accedentis; Flores extremis ramis in oblongis pediculis confertos & racemum compactos, exiguos, foris purpuraſcentes, cum expanſi ſunt candidas, quinque foliolis conſtantes: qui deinde in exiguum ſemen tomentoſum …

Myrica ſylveſtris I.

Myrica ſylveſtris II.

[illegible] exiguis veluti valvulis incluſum, quibus maturitate dehiſcentibus ef- [illegible] lo & ſimilibus. Ter plerumque in anno floret, vere, æſtate, autumno: [illegible] jam evaneſcens ſemper ſubſequentibus. Hanc Plinius inter eas recenſet quæ nullum fructum, imò ne ſe[illegible] li fructum tribuat [illegible] amen Dioſcorides il-

Natales. Naſcitur plerumque juxta flumina, aliquando [illegible] atis etiam procul ab illis: Obſervabam & in Narbonenſi Gallia ſtagno Volcarum vicinam [illegible] ni, quam ſupra Madritium Regium Hiſpaniæ Re[illegible] contir[illegible] Xarama & H[illegible] enares confluentibus, ſub Compluto Hiſpa[illegible] Henares nuncupato, quòd fluvius Henares eam urbem alluat: magnæ tamen iſte arbores, quas hominis ulna amplecti vix potuiſſet, [illegible] diverſum florem non [illegible] umtaxat tamaricibus proveni[illegible] Frequens jam eſt in Belgicis hortis. [illegible] quam eam neque in Hiſpania, neque in Gallia, perpetua coma virentem vidi: ſed novo vere ſingulis annis nova foliorum germina proferentem.

Myrica II. ALIVD hujus ſilveſtris genus in Pannonia naſcitur ſolummodo fruticans, nec unquam, veluti ſuperius, arboreſcens: brumam etiam fert, [illegible] det: craſſiores huic ſunt virgæ, folia craſſiora [illegible] cit cubitales, virides, ut plurimum deſinente [illegible] longitudinis, è floribus ex albo purpuraſcentibus, [illegible] etiam foliolis conſtantibus confertam: iis ſuccedunt oblongi & mucronati caliculi, qui de[illegible] ſemen pappo ſalicis [illegible] volutum oſtendunt [illegible] ramuli exigu[illegible]

Natales. Copioſe ad flumen Draſen, ante D. Hippolyti urbem, vulgò [illegible] octo à Vienna Auſtriæ [illegible] milliaribus diſtantem, creſcit: [illegible] nec etiam [illegible] oppidum [illegible] ſupra Neapolim Auſtriæ milliaribus, præſertim arenoſis illis locis quæ hieme ab iis amnibus inundantur.

Tempus. Floret Maio & Iunio, ac deinceps tota ferè æſtate flores & ſemen proferre non deſinit.

Huic ſimilem, quibuſdam Germaniæ [illegible] Rheni [illegible] naſci intelligo: frequentem etiam vidi [illegible] comitatu [illegible] ante paucos annos Londini [illegible] in ali[illegible] quot hortis.

Myrica ſativa. SATIVAM, quam Dioſcorides mitiorem vocat, & in Ægypto Syriaque naſci ſcribit, fructu Gallæ proximo, guſtu adſtringente, cujus etiam Plinius meminit, numquam conſpexi. Bellonius obſervationum lib. II. cap. XXV. & XXVIII. [illegible] gypto ſe vidiſſe ait magnas arbores My-

[illegible] r Myrtum, Ciſtum, & alios frutices provenit, ſemperque fere aut florens aut fructibus onuſta conſpicitur, imò interdum utroque abundans: ſolet enim deciduo flore novum germen extremis ramis proferre [illegible] alterius floris. In Narbonenſi Gallia ruſcentem etiam obſervabam. Crevit ctu [illegible] gas Tcmine & i nonnullis ſiſtibus exceptus, cum alijs perpetua fronde virentibus [illegible] adſervari ſolebat.

Bellonius lib. i. Obſervationum cap. XLiii. refert in vallibus montis Athos veteribus adeò [illegible] Arbutos magnitudinis, cum alibi [illegible] nt minus mirum videri debeat, quod Plin. Natur. Hiſtor. lib. xv. cap. xxiii [illegible] quinquagenum cubitorum in Arabia eas eſſe auctor eſt.

Kiaeg. Mace. Dicitur [illegible] Græcis, [illegible] Latinis Arbutus. [illegible] Hiſpanis [illegible] Luſitanis, addita aſpiratione [illegible] Gallis [illegible] Latinis vicinis [illegible] ni Adr/sSo t [illegible] illis *arbouſti*.

Plinius Nat. Hiſt. lib. xxiii. cap. viii. ai: unedonis fructus eſſe difficilis concoctionis & ſtomacho inudum: lib. vero xv. cap. xxiiii. pomum [illegible] nomen ex argumento [illegible] unum tantum edendi. Athenæus lib. ii. [illegible] capitis dolore vexari. Longe tamen plures ab alijs [illegible] m per Bæticam & Luſitaniam, Vlyſſiponem profecturus, iter faciens, & ipſe multos ed [illegible] ne ullâ noxâ [illegible] verum [illegible]

Facultates. Amatus Luſitanus ex Arbuti folijs & floribus aquam ex [illegible] ore ſtillatitiam [illegible] ſervari [illegible] adverſus peſtem & venena antidotum [illegible]

ADRACHNE THEOPHRASTI. CAP. XXXI.

Portulaca ſive ad ſagyra. Iſtius etiam iconem breuemque hiſtoriam, cum Ocnoplia ſuprà deſcripta, mitte-bat idem Honoratus Bellus. Portulaca, inquit, Theophraſti, frequens provenit in Creta, montibus Leucis & aliis [illegible] arboris modo: perpetua fronde viret, foliaque habet lauri, & ad eò ſimilia, ut ſolo odore dignoſcantur: nam Adrachnes folium odore caret: caudicis & ramorum omnium cortex adeò lævis, rubens & ſplendens eſt, ut coralli rami eſſe videantur: [illegible] tur cortex, & in tenuiſſimas bracteas decidit, quo tempore neque rubens neque ſplendens cernitur, ſed medium quendam [illegible] pallidum [illegible] accum tolo- [illegible] florem & fructum ha[illegible] ut Arbu-tus, proſert, & [illegible] quidem [illegible] ut alterum ab altero [illegible] modo dignoſcere queas. Differt tamen arbor hæc ab Arbuto [illegible] tantum [illegible] montibus [illegible] neque folium ſerraturum habet, neque corticem [illegible] ſcabrum: ligni materia duriſſima eſt, fragilis tamen, quia flecti non poteſt [illegible] ad verticilla [illegible] ſuis appendenda. Theophraſtus [illegible] hanc arborem [illegible] perpetua fronde virent [illegible] in cacumine folia retinent [illegible] à me obſervatum eſt [illegible] ad te mitto.

Nomen vulgare. Vocatur hæc arbor in Creta [illegible] Hæc Bellus.

Andrachnes hiſtoria ex Theophr. Nos autem ex Theophraſti de Hiſtoria Plantarum libris i. iii. iiii. v. [illegible] (ſic enim habent exemplaria græca, tametſi potius [illegible] legendum videatur [illegible] herba eſt [illegible]) hiſtoriam quàm pauciſſimis verbis co[illegible] [illegible] inquit [illegible] Andrachne quidem atque unedo, inferior [illegible] Arbutus & Andrachne [illegible] ſummi autem rami [illegible] folio [illegible] Andrachne [illegible] [illegible] plantam, cortice albo [illegible] ſimili. Andrachne & Apharca primum [illegible] Arbutum cum floret [illegible] fructum [illegible] dum uva dulceſcit: poſterior [illegible] arbores fere [illegible] Coniſtit autem in [illegible] germenque futur[illegible] [illegible] & ipſa [illegible] omnibus [illegible] except[illegible]

FRVTEX CORONARIVS. CAP. XXXVI.

Syringa vulgaris.

VALDE eleganscfthicfrutcx, multisabradicclongisvirgispriditus, reflis, cincrco corticetcflis,digitalisautmajoriscraflitudinis(quaEvtandombrachialisinrerdumevadii) nodofis&quodammodogeniculatis, multam mcdullaminrccoiitinennbus: lixdcmum in mu1tostcncnosviridcsramosfpargutur,quoscxLntcrvallisbinafenipcr folia contunopctliculorumcxoftunafcentiacxornatir,]autuiismajora,obl6ga,perexircmunimucronata TUPnra Vmdiainambitu tc na U amifl igni dl t t b u s f pri d ceitiJcacnsiHoresextrcraisramulisinfidcntjternt^uini.fcpteni.nonnumcjuampiurcs.biiH kmpcr mter feoppoGtijCXtrcmoimparc JconJbntijquatuorfolijsinucionatis, albis, numcrolisfibnspallidismcdiamfloriscaviutem&umbilicum occupantibus, odor jutunde gravis.qualisinaufcorummaloriim&rcitnoiuniflonbus: hisfucccdumcapitulacmulus ... compacta, ſuperne obtuſa, primùm viridia, deinde maturitate nigricantia,

quibus

quibus dehiſcentibus, oblongiuſculum & tenue ſemen excidit, quod pleromque novellas plantas ſequente anno proveniat: naſcitur etiam avulſione, & ſtolonibus radices ſpargentibus mirè ſe propagat. Floret Iunio, ſemen Auguſto maturum eſt.

Nuſquam ſponte naſcentem hunc fruticem vidi, ſed in Belgicis hortis mihi primum conſpectus eſt. Neſcio vtrum Hiſpanis an alteri è Belgio haud dedit; Nunc pauci ſunt in Germania, aliiſque vicinis regionibus horti, in quibus ob odoris ſuavitatem & elegantiam non alatur.

Frutex coronarius. | ὀστρυς Theophraſti.

A veteribus ſuſſe cognitus hic frutex, nondum ſtatuere poſſum: paſſim vero ab Herbarijs Frutex coronarius, quod ejus flos odoratus in coronas interdum addatur, & Syringa virgarum rectarum longitudine & fungoſa interiorum medulla copia appellatur: Auſtriaci ... peregrinam ſambucum a florum odore vocant.

Sunt qui ὀστρυν Theophraſti eſſe cenſeant. Sed cùm illius ὀστρυν, quam à nonnullis ὀστρυαν appellari dicit, adeò luculenter ſit ab ipſo deſcripta Hiſt. Plant. lib. III. cap. x. non video quibus rationibus ſuam opinionem ſtabilire poſſint. Nemo enim in re herbaria vel mediocriter verſatus eſt, qui non agnoſcat Oſtryn ſive Oſtryam, illam eſſe arborem quæ in omnibus penè Germaniæ, Galliæ, Pannoniæ, & multarum aliarum Europæ Provinciarum ſilvis obvia eſt, ... ſive fago, non ... Plinius lib. XIII. cap. XXI. ... deſcribit, corpore & cortice ſimilis, folijs fagi ſed minoribus, durioribus, per ambitum ſerrate, non ſplendentibus ſuperne ut illa, ante hiemem tamen, priuſquam defluant, ſimiliter fleſceſcentibus, extremis ramulis ſpicam alatarum ſingularum, in quibus ſemen hordeo ſimile latet, propendentem ferens. Herbarijs quibuſdam Fagulus dicitur, neſcio quo auctore, niſi fructûs ſimilitudine nominis occaſionem ſumpſerint. Germani ... appellant, Galli *charme*, ... populares ad græcam vocem alludentes ... cujus craſſioribus virgis crates texuntur.

Coronarius porrò frutex an ullum in medicina uſum obtineat, nondum intellexi: ſed nobiles apud nos matronæ, floribus ſyndone mundà exceptis, & in conclavi ab aëre perflato ſuprà ... ſtratis, ſinguliſque diebus marcidorum & pridianorum loco recentibus ſuppoſitis chirothecas ſuavi odore imbuere ſolebant.

Eſt aliusquidam frutex à noſtris etiam Syringa vocatus ſuperiori non diſſimilis. Namque is ab eadem radice multas profert virgas rectas & nodoſas, magis tamen fraxini, quam Syringæ ſuperioris, quæ nella ... virgas referre videtur ... multis ... circa quos ad ſingulos nodos bina folia concurio ſitu naſcuntur, latiora quam in præcedente, ſed longiore

mxa

Secundi genus. Periclym. I

lib. III. cap. XXIII. Hiſtoriæ ſtirpium Clariſs. Viri Remberti Dodonæi Cæſarei Medici, hic repetenda eſſe non duxi: Lectorem tamen admonitum volui, [illegible] baccas non ferre, quemadmodum nonnulli exiſtimant, ſed geminas ſemper, eaſque perpetuò ferè æqualis magnitudinis, cùm in Pannonia, Auſtria, Moravia, Bohemia, ubi plurimum, tum in Allobrogum, Helvetiorumque Alpibus, & aliis locis in quibus ſponte naſcitur. In Belgicis autem hortis cultum, vix unquam æquales ad maturitatem perducere deprehenſum eſt; at cùm altera excreſcat & turgida fiat, una ſemper exilis, plena tamen remanet, [illegible] cucurbitulam [illegible] quodammodo videtur.

Periclymenum rectum II. Periclymenum rectum III.

Eiuſd. gen. Periclym. II. ALTERVM humilius eſt, [illegible] altitudinem rariſſimè attingit: multò graciliores & rariores ſubjicit ramos albicante cortice rectos: folia priore teneriora, longiora, in ambitu nonnihil ſerrata, ſuperne virentia, inferne minus incana quam primi: tenelliſque germinibus enaſcuntur inter folia graciles pediculi; unum interdum, ſed binos ut plurimum flores ſuſtinentes, ſuperiore minores & teneriores, non palleſcentes ut illi, ſed purpuraſcentes, quibus ſuccedunt gemelli fructus æque magni ac in priore, etiam æquales, nigri tamen, non rubri, ſucculenti, [illegible]. Radix dura eſt & lignoſa.

Hujus unum fruticem in Pyrenæis montibus, binos aut ternos apud Allobroges, deinde frequentiores variis montibus Auſtriæ & Stiriæ, inveniebam.

Eiuſdem gen. Periclym. III. TERTIVM [illegible] craſſiuſculo [illegible] ſtipite, multos in ramos diviſo, nigricante cortice obductos, qui ſcabreſcit, & plerumque multis locis hiat: interdum ſtatim à radice in [illegible] ramos ſe dividit: tenelli ramuli purpuraſcunt, & incana lanugine pubeſcunt; folia contrario ſitu inter ſe diſpoſita, ut in reliquis Periclymeni generibus, illi quod rubras baccas fert non diſſimilia, exſiccata & amariuſculi guſtus: flos non fuerat mihi conſpectus dum hujus hiſtoriam primum evulgarem, quandoquidem ſub finem Iulii ſolummodo obſervatus fuit ex ſuo maturo fructu notus: at aliquot deinde annis elapſis, è ſemine natæ ſtirpes [illegible] anno, flores è tenello tum ramorum alis pediculo inhærentes, protulerunt geminos, [illegible] palleſcentes, cavos & in quinque lacinias diviſos, ut reliquorum Periclymeni ſuperiorum generum flores, è quorum umbilico prodeunt quinque ſtaminula flava appendice inſignita, fructus ſingularibus baccis, utrimque intercedente foliolo brevi pediculo [illegible] continet, Chamæmeſpilo Geſneri magnitudine æqualibus, ſed longioribus, [illegible] vinoſo & acidiuſculo ſucco plenas, manus rubro colore inficiunt, & multa plana grana continent. Radix lignoſa late diffunditur, & multis fibris prædita eſt.

[illegible] ad radices cujuſdam montis parvo Malitz vocato contigui, ad Cniſtram, [illegible]

ſericum eſſe diceres: deinde paulatim aſſurgens, & ſe explicans, multum de priſtini coloris [illegible] remittit, & cytinos ſuos profert candicantes & turgidos & lento ſucco plenos: qui a [illegible] pharmacopoeis [illegible] & in uſum adſervatur.

Frequens eſt hic Ciſtus, cùm in Hiſpania, præſertim ea parte quæ Bætica appellatur, tum in Luſitania & Galliæ Narbonenſis maximè [illegible] monte.

Ciſtus mas II.

Ciſtus mas V.

SECVNDVS eadem altitudine qua ſuperior aſſurgit, interdum etiam majore, nonnunquam [illegible] frequentius [illegible] candicat: folia habet [illegible] ordine diſpoſita, molliora tamen, longiora, anguſtiora, & magis mucronata: flos ejus ſuperioris [illegible] colore: capitulis etiam & [illegible] differt.

Naſcitur & in Hiſpania, & diutius reliquis maris generibus floret: illius item ramuli teneriores [illegible] ſub Autumnum [illegible].

Dubium non eſt, quin Hypociſtis ſub hoc genere etiam creſcat: nullam tamen, quemadmodum nec ſub tribus ſubſequentibus [illegible].

TERTIVS ſuperioribus brevior eſt, non minus tamen fruticoſus: tenuiores ſubinde [illegible] folia [illegible] breviora, viridiora, [illegible] rugoſa, [illegible] & [illegible]: [illegible] in aliis ſimilem, ſed dilutius rubentem, & aliquantulum odoratum, quam notam in reliquis Ciſti maris generibus non deprehendi: [illegible] involucris, quæ [illegible] diutius occultantur, [illegible].

Hunc duntaxat in Luſitania ſponte naſcentem, ſupra Olyſipponem itinere Conimbricenſi, atque etiam in maritimis obſervabam.

QVARTVS humana altitudine plerumque attollitur, ut reliqui fruticoſus, & ramulis aliquantulum incanis: ejus folia reliquis majora & quaſi orbiculata, nonnihil hirſuta & rugoſa: flos ſuperioribus forma ſimilis, paulò major, & colore ſaturatiùs rubente: hirſuta, dura, pentagona capitula, ſuperioribus majora, in quibus ſemen rufum, majus quam alterius continetur. Ciſtus mas IV.

Invenitur Regno Valentino & Arragonum, audio etiam in Italia frequentem eſſe: natus [illegible] hortis, ſemine ex [illegible] provinciis miſſo.

QVINTVS ſimilis eſt, & ſupinus ut plurimum, multis pedalibus aut paulò amplioribus ramis ex eadem radice prodeuntibus: folia criſpa ſunt & quodam modo ſinuoſa, candicantia [illegible], guſtus acerbi & adſtringentis: flores ramulorum faſtigiis naſcuntur, æquali altitudine & quaſi umbellatim [illegible] ſuperioribus paulò minores & elegantis ex rubro purpuraſcentis coloris & [illegible] quàm in quarto: capitula reliquis minora, [illegible] involucris plerumque [illegible], ſemen continent reliquis ſimile ſed magis [illegible]. Ciſtus mas V.

Chamelæa tricoccos.

dur. Abſinthij panes ad imam Chameleæ miſceantur, & Hydromelite exceptæ in catapotia cogantur: in ventre tamen non liquefieri, ſed quotquot aſſumpta ſint reijci. Hujus etiam folijs cum melle tritis ſordida ulcera & cruſtoſa repurgari. Eaſdem pene facultates ei tribuit Plinius lib. xxiiii cap. xv. Nat. Hiſtoriæ; ſed lib. xiii cap. xxi. Chamelæam cum Thymelæa confundit.

ALIVD porro Chamelææ genus nobis ex Italia delatum eſt, ab hac plane diverſum. Id cubitali altitudine fruticat, ramoſque habet admodum flexibiles, tenaci cortice, & qui difficile diſrumpi poſſit, obductos, folia admodum conferta, carnoſa, Daphnoidis foliorum formam imitantia, multo tamen minora, & incana lanugine, inferne præſertim, pubeſcentia: flores ſimul congeſtos quatuor foliolis conſtantes, dilutiſſime purpuraſcentes, ex lanuginoſo colorisque argentei calyculis prodeuntes: fructum non tricoccum ut ſuperior, ſed unicum, oblongiuſculum, tenui miniata membrana tectum, ſucculenta carne & fervidum nucleum in ſe continente præditum. *Chamelæa* [illegible]

Eum fruticem dumtaxat apud nos videbam in hortis cultum, biſque interdum eodem anno florentem. Viennæ autem aliquoties illius ſemen terræ credidi, & natas plantulas diligenti ſummaque cura conſervare volui, ſed ſubſequens hiems ſemper corrupit.

THYMELÆA.

CAP. LVII.

FRVTEX eſt Thymelæa pollicaris interdum craſſitudinis, cubitalis vero altitudinis aut amplioris, & multas virgas edens cubitales, pulchras, tenues, rectas: quas ambiunt perpetuo virentia folia Lini fere, ſed majora & latiora, non obtuſa ut ſunt Chamelææ, neque adeo craſſa, ſed mucronata, lenta, & gummoſi guſtus, adeo ut dentibus atterantur. Flores in extremis virgis copioſi, quatuor foliolis conſtantes, Oleæ floribus ſimiles, candidi, racematim ſere propendentes: deinde fructus baccarum myrti interdum magnitudine, paulo longior, initio viridis, poſt coccineus modo rubens, carne ſucco plena Ceraſorum inſtar, ſub qua tenue eſt ſemen, nigra ſplendidaque pellicula albam & fervidi ſaporis medullam obvolvens: radix lignoſa eſt & dura, in tenellis plantis raphani modo formata, multo cortice tecta, ſed, quemadmodum tota planta, lento atque admodum tenaci. *Thymelæa* [illegible]

Naſcitur per totam Hiſpaniam locis aſperis & plerisque Narbonenſis Galliæ. Floret autem Julio, ac toto nonnumquam Autumno, ſemenque ſubinde profert.

GRAECI θυμελαίαν vocant, nonnulli etiam χαμελαίαν, teſte Dioſcoride, πύρον, κόκκον κνίδιον, & κνέωρον (nam eo capite folia peculiariter κνέωρον appellari dicat) Eubœenſes [illegible], alii λῖνον. Latini Thymelæam appellant [illegible] bac- [illegible] *Nomina.*

bus cir-

bus circa Antequeram, Marrioaurem, inter Velez & rubio & Lorca, quae Eliociota veteribus dicicur, Murciani regni urbes, toto que Valentino regno.

*BAETici, Ceroni/ade{rd*tej›hocel\coron\i\a.mt'nttun\ſive* monachorum. quaſi coronam orbicularem tonſuram ſuperferentem, *&zjttmprt t*x*ta*, quia tempera ida & exſucca videtur, appellant. Murciani verò & Valentini vulgari voce />**/vWj. Nomina.

Nonnulli Valentinæ academiæ Profeſſores Hippogloſſum eſſe cenſebant; ſed nihil cum Hippogloſſo Dioſcoridis deſcripto commune habet, niſi quis forte ob foliorum ejus cum Ruſci folijs affinitatem ei hoc nomen donandum putet, quæ tamen in hoc frutice circa pediculum oblongiora & anguſtiora ſunt: præterea diſſimiles utriuſque facultates.

Alij Alypum nominare malunt: ſed cùm plane amara ſit & ſucci expers, non video qua ratione ſuam ſententiam ſtabilire poſſint. Aliqui quod nominant.

CETERVM circunforanei Bæticæ medici ejus decoctum propinare dicuntur ijs qui GALLICA ſcabie ſive Venerea lue laborant, non ſine magno (ut aiunt) ſucceſſu. Facultates.

CASIA QVORVNDAM. CAP. XXI.

SVBTILIS eſt hæc planta, fruticoſa, tenues virgas ferens, vireſcentes, lentas, interdum etiam nigricantes, præſertim dum novellæ ſunt: & in his folia Lini rariùs per ramos ſparſa, amari ſaporis: flores aliquot ex luteo vireſcentes & palliduli, minuti, corniculorum naſcentium facultatis, in eodem pediculo congeſti innaſcuntur: fructus deinde quales Myrti, initio virides, ubi maturuerit ruber, Coralli aut Aſparagi maturo ſimilis, ſubdulcis, lentus que, tandem nonnihil acrimoniæ excreſcens, oſſiculum nucleo, qui medullam continet albam & dulcem. Radice nititur dura & lignoſa. Floret æſtate, fructus Octobri, vel etiam ſerius maturescit. Oſyris Plinij.

Varijs Hiſpaniæ locis credit iucundiſſima viæ: frequentiſſima autem Granatenſi & Valentino regno. Monſpelii quoque ejus agro non obſervare memini, ad Ingreſſum Peraul, paſſim ad ſtagnum Volcarum ſiti, deinde in inſula Egremonte Lo.nobio proxima, in qua multis locis illæ Virgæ.

Eo quoſdam verbis antè tempore à ſtudioſis pro Oſyride ſubeb^cur: ſubſequentibus annis Caſeam appellare maluerunt, quod ſic in nonnullis Hiſpaniæ locis obtineret. Doctiſſimus Plantarum Medicus & Profeſſor Valentinus Plinij Polygonum eſſe exiſtimabat: verùm ad quod Polygoni ab illo deſcripti genus referri poſſit, non video. Hiſpanorum vulgus *Badtysz*, & vicina loca Bæticæ, quæ Luſitaniæ conjungitur, incolens, *guardaleña* vernacula lingua appellat. Caſia. Polygonum Plinij.

Si quis cum Oſyride Plinij deſcriptam conferret, aliquot notas communes habere deprehenderet: nihil tamen ſtatuere volo. Certè *wia/pos* Theophraſti, quam Caſiam ab Hygino vocari Plinius tradit, cujus ipſe lib. xxi. cap. ix. Nat. Hiſt. ex Theophraſto duo genera conſtituit, eſſe non poteſt. Sed neque etiam Virgilij Caſia, planta odorata, cujus in Bucolicis & Georgicis meminit.

VVA MARINA VVLGARIS. CAP. XXII.

HVIVS duo genera per Hiſpanias mihi ſunt obſervata, ſola duntaxat magnitudine inter ſe differentia.

PRIMVM humana interdum altitudine fruticat, Spartij quod Hiſpani *faw*|vocant, modo, brachiali craſſitudine, aliquando ſtipite, oblongis ramis, nigricantibus, quidem multas virgulas ferunt pedales, tenues, multis internodijs diſtinctas, ut Equiſetum ferè, propendentis, ſine folijs, adſtringentis ſaporis: florem ſecundum internodia confertim, minimum, & muſcoſum, cornis floribus non diſſimilem, pallidum: deinde fructum exiguis moris ſimilem (ſic mihi quidem retulerunt incolæ, nam florentem duntaxat vidi) rubentem, quo paſcuntur nigra, intus alba: radix duplex lignoſa que eſt. Polygonum I. Plin.

ALTERVM humilius & gracilibus, ſarmentoſis & frequentibus ramulis fruticorum, qui ut, humi ſparſa & protuſa coma, ſine folijs, ut Primum, nec Polygonum II. Plinij nomen.

Polygonum II. Plinij majus.

Polygonum IIII. Plinij minus.

nec minus adſtringens: flores ſunt muſcoſi palliduli corni floribu[illegible] [illegible] aut alterum granum mi- [illegible] ſe: fructus Auguſto vel etiam ſerius matureſcit. Primam [illegible] am de [illegible] ubi plurima naſcitur, nul [illegible] *rubia*, regno Murciano, [illegible] am.

Alteram frequen[illegible] antica mi[illegible], totius ferè Hiſpaniæ meditullio [illegible] mirari non poteram, cùm antea nuſqua[illegible] illo tr[illegible] u inter ſtagnum Volcarum & ipſum mar[illegible] rancum, [illegible] & Magalonam, ad montem uſque Setium.

Nomina. HISPANI primum genus *belcha* vocant. Alterum genus Narbonenſis Galliæ incolę *raſins de mar*, hoc eſt, uvam marinam appellant. Cùm iſtic vivebam, peritiores pumilium genus ad Dioſcor. τράγον quod & τράγανον dici ait, lib. IIII. deſcriptum referebant: cujus [illegible] notæ non ineptè huic plantæ quadrant. Poſtea nonnulli ad Androſacen retulerunt, Bellonium ſequuti, qui Obſervation. lib. III. cap. XLI. de Androſac[illegible]

Peritiſſimus Anguillara, Crotonis, cujus Nicandri inter[illegible] entionem facit, nomine, hanc, ni fallor, deſcribit opinione duodecima. Creſcit, inquit, ad flumen Sebenicum in Dalmatia humilis frutex, Pino valdè ſimilis, frequenti[illegible] nodis, cujus folia [cirri ſeu ramuli potius] Equiſeto minori ſimilia ſunt, ejus flos ruſeſce[illegible] inde in fructum extuberat rotundum Ceraſo m[illegible] colorem rubrum contrahentem, qui etiam edi poſſit. Naſcitur locis aſperis, montoſis & ſaxoſis, &c.

MVLTIS verò notis, hujus primum gen[illegible] in Polygono quarto Plinij quadrare mihi videtur, quod his verbis deſcribi[illegible] II. Quartum genus ſilveſtre appellatur, penè arboris modo frutex, radice [illegible] cedri rubicundo, ramis ſparti, binum palmorum, nigris geniculorum ternis quaternisve articulis. Huic quoque ſpiſſandi natura, ſapor mali cotonei.

Deinde quas Dioſcorides Polygono tribuit facultates, adhuc hodie apud ejus regionis, ubi hic frutex naſcitur, incolas, in uſu ſunt: illius enim decoctum penis & veſicæ ulceribus conferre aſſerunt.

Ephedra. Camon. Anabaſis. POSSET tamen [illegible] ,cujus idem Plinius lib. XXVI. cap. VII. in hæc verba memin[illegible] n, quæ & Ephe[illegible], ab alijs Anabaſis vocata, naſcitur ventoſo ferè tractu, ſcandens ar[illegible] & ex ramis propendens, folio nullo, cirris numeroſa, qui ſunt

Sparcium DiofcoriduGccfih Plin.

{parrium 11. Hifpan.

Illius hiſtoriam, cùm à pleriſque diligenter & accuratè ſit perſcripta, hic proponendam non duxi: ſed ſi alia quædam ejus genera, quæ in Hiſpanijs obſervabam, tanquam nova, & à nullo adhuc exhibita, oculis ſubijcerem, operæprecium me facturum exiſtimavi.

Spartium II. Hiſpan.

Est verò unum cubitali plerumque ſtipite, pollicem craſſo, ſcabro & ſtriato cortice tecto, qui in plures cubitales vireſcentes & ſtriatos ramos dividitur, & *" deil {dcil1)f- ceas, ſtriatas, virides virgulas quæ novellæ adhuc & primùm germinantes, aliquot ... lijs exornantur, ſtatim atque ... cipit decidui, ut tota d... * ? ? t otCon R* ciatur: è virgula rum btc.ibusprodcunt longi pediculi è quibus dependent aliquot exigui flores, glycyrrhizæ vulgi lgi Wl i j floribus pæne ſimiles, lutei, inodori: ſuccedunt cartilaginei, rotundiuſculi lobi ... bæ quæ in jumentorum pabulum cedit, perſimiles, ex flavo ruſeſcentes, in quib... maxima ex parte ſemen (rarò bina) continetur, durum, nigrum, exiguo reni ſimile, quod in lobis agitans aut concuſſis crepitat, & ſonitum edit: radix dura eſt & lignoſa.

Spartiũ III. Hiſpan.

Alivd longè majus, & hominis altitudinem ſuperans invenitur virgulis priore tenerioribus, lentioribus, & magis obſequentibus, flore ejuſdem cum ſuperiore formæ, ſed paulò majore, & omnino albo: lobi etiam conveniunt, minores tamen ſunt & minus ſemen continent.

Natales.

Primum varijs Caſtellæ utriuſque locis creſcit arenoſo ſolo, & Maio floret, ſemen matuIu?udtIaUo.A][ctumCiadlbUSdunmati&:loc1svicinJJautamanniPc1flaC1S) mihi conſpectum

Spartium Hiſpan.

¶ Cum caſtaneo & ſterili ſolo, ſuis floribus ornatum Februario. Lobos obſervare non potui in ipſa planta: ſed mihi deinde ab amicis miſſi ſunt ex Hiſpaniis.

VTRVMQVE genus Hiſpani Retamas vernaculo ſermone appellant: Geniſtam vero odoratam [illegible] vulgarem & Septentrionalibus regionibus peculiarem, [illegible] illa, quemadmodum noſtrates, ſcoparum, quibus aſſeres purgant & everrunt, loco utuntur. — Nomina.

CETERVM iunceum Spartium, quod Dioſcorides σπάρτιον vocat, [illegible] exiſtimo. Alii vero iiſdem facultatibus praedicant, non intelligo.

De Sparto autem Hiſpanico junci folio, de cujus uſu Plinius lib. xix. cap. ii. Natur. Hiſtor. [illegible]

CHAMÆGENISTA.

CAP. LXXI.

GENISTAE illius, quae per univerſam ferme Germaniam, Galliam, Angliam atque Belgicam vulgatiſſima eſt, cuiuſque flores nondum expanſos ſale muriaque condiunt, & capparum loco edunt, ſponte naſcentis nulla veſtigia obſervare potui in Pannonia & Bohemia, nec ſub ditione Auſtriae & Moraviae. Sed duo Chamægeniſtæ genera plerumque [illegible] ſunt. — Geniſta vulgaris.

Chamægeniſta 1.

PRIMVM multis palmaribus, interdum etiam pedalibus aut majoribus virgulis humi diffunditur, teretibus, lentis, ſtriatis, virentibus, & in aliquot ramulos diviſis: per quos confuſo ordine, & quaſi tenui [illegible] ſparſa ſunt foliola, bina, interdum terna, ab eodem exortu & tuberculo prodeuntia, Geniſtæ vulgaris Germanicæ foliis [illegible], & quaſi complicata, ſuperne viridia, inferne nonnihil incana, amariuſculi guſtus: ex illorum [illegible] quatuor foliolis conſtantes, Geniſtæ Germanicæ floribus ſimiles ſed minores, nullo interdum, aut certe perexiguo odore praediti, nonnullis locis ſatis odorati, naſcuntur: quibus deinde ſuccedunt planæ ſiliquæ, hirſutæ, exigui [illegible] ſemen continentes. Radix eſt dura, lignoſa, aliquot fibris donata: ſed & virgulæ ſecundum radicem, qua terra integuntur, plerumque fibras agunt.

Naſcitur multis Pannoniæ locis ad viarum & ſilvarum margines, collibus, ſiccis, atque deſertis nonnumquam agris. In cultis & inter vepres aliquando magis luxuriat, & in majorem altitudinem excreſcit. Floret Maio, interdum etiam Aprili.

ALTERIVS, quæ plano caule altero ex altero naſcente eſt folio, quod deinde in cauliculum convertitur, hiſtoriam, cum abs me ſit prodita, hic retexendam non exiſtimavi.

Hanc plantulam olim apud Helvetios [illegible] & quibuſdam Germaniæ locis colligere memini. Deinde in Pannonia [illegible] naſcentem obſervavi; in

tv4

Chamægeniſta II. Chamægeniſta peregrina.

Aſpalathus alter III.

Aſpalath. alter II.

ALIVD ejus generis robuſtius, & altius quantum ſcimus, nonnunquam altius excreſcens; cujus flos perpetuò pallidior eſt, alioqui non multum priori diſſimile.

Aſpalath. alter III.

TERTIVM genus ad cubiti nonnunquam magnitudinem accedit, plerumque tamen minus eſt & ſeſquipedalis tantum altitudinis, eo cum etiam tenerius: ramuli in multo plures ſpinas diviſi, iiſque denuo in alias, ſic ut ſingulis ſpinis totidem Abrotoni multifida folia videantur, niſi aculei obſiſterent, qui, ne negligentius conſiderantibus, vix animadvertuntur. Verum ex ramulorum lateribus exigui alij prodeunt ramuſculi cani & hirſuti, quibus adnata ſunt mollis & incana lentis folia, majora quam in primo genere: in ſummis illis ramuſculis flores priori ſimiles, paulo majores, lutei naſcuntur.

Aulaga.

Creſcit Primum ſecundum in Cantabris ſuperato Pyrenæo ſaltu, itemque varijs alijs Hiſpaniæ locis, & Narbonenſi Gallia. Secundum in Caſtella veteri tantummodo obſervabam. Tertium in Cantabris duntaxat, tertio à Victoria urbe miliari, ad radices Pyrenæorum, quæ Hiſpaniam ſpectant.

Nomina.

PRIMVM genus ab Herbariæ rei ſtudioſis Salmanticæ & Monſpelij Aſpalathus alter vocabatur, vulgo Salmanticenſium, & aliorum, apud quos naſcitur, Hiſpanorum, *aulaga*: ſecundum Caſtellanis *aulaga*: tertium Cantabris *ballada*.

[illegible]

FLORIBVS prioris cum ſaccharo fermentatis Salmanticenſes ad firmandas & reſtaurandas collapſas vires utuntur.

SCORPIVS. CAP. XXXIIII.

Scorpius I.

Nepa.

DVO plantarum genera, quæ plurimùm ad Scorpij, quem Gaza Nepam interpretatus eſt, hiſtoriam accedere videntur, in meis peregrinationibus obſervabam.

Scorpius I.

PRIMVM cubitali aut ampliore altitudine aſſurgit, multis virgis ex atro virentibus, ſtriatis, denſiſſimo ſpinarum vallo obſitis fruticoſum, quæ deinde ſpinarum alijs tenuioribus ſunt circumſepta: folia nulla, niſi primo vere appareant, & ea decidua. Flores Geniſtæ minores pallidi, interdum vero adeo rufeſcentes, ut tunc rubentes videantur. Præſcit ſub Autumnum ſiliquæ deinde ſuccedunt breves, cylindraceæ, magna ex parte inanes, aliquando tamen ferentes exiguum ſemen pallidum, aut ſubſiſtere, ut Geniſta vulgaris Septentrionalium: radix ſingularis in alias terjuncs ſe ſpargens, & ſubinde latè ſe propagans.

Floret Maio & Iunio, & quandoque tota æſtate: circa Autumnum vero, denuo floribus onuſta conſpicitur, eoque tempore ſaturatiores & magis rutili ſunt, ut plurimùm, flores.

Scorpius II.

ALTERVM pedalem altitudinem raro ſuperat, totam denſiſſimis ſpinis horrens, quæ non confuſo ordine, ut in ſuperiore, naſcuntur, ſed ... quendam ſervant, & item e regione inter ſe exortæ binæ naſcuntur, viſcoſæ quidem, ſed languidius quàm ſuperioris, neque aliæ ex alijs: ſummis ramulis inhærent bini aut terni

cantia

cinctia inferne habeat, minora & teneriora, ſpinas molles hinc inde per ſuperiores circulos tenues ſimul & oblique ſparſas (cujus icon quam nunc Pimpinella ſpinoſa appellatur) & radicem tenuem, duram, exſuccam. Poterium vero teſte Dioſcoride & Plinio frutex eſt longos habens ramos, ſpinis horridos lanugine ſpiſſa tectos, Tragacanthæ proximos, radices longas admodum, nervoſas & firmas, quæ proxime terram reciſæ dant ſuccum gummi ſimilem. Pimpinellam illam ſpinoſam aliquando mihi ſeminatam diligenter in horto fictilibus conſervare volui, ſed tempeſtas hiemis ſubſequens abſtulit. nonnunquam etiam mihi miſſum ejus ſemen Scorpios Theophraſti nomine: & vulgo adhuc ipſam plantam in Creta vocari [illegible]. De illa conſule Honorij Belli literam epiſtolam, quæ ad calcem harum Obſervationum adjecta.

Anguillara opinionem ſibi viri. *videtur Pimpinellam illam ſpinoſam* id [illegible] Stœben Theophraſti referre. Dodo autem Rauwolfius, qui eam in Libano nunc etiam naſci ſcribit libro 3 cap. jam memoratis, ab incolis *Betan* vocari.

... ſcribit circa novam Carthaginem plantam quandam eſſe, de cujus cortice ... conficiantur: an hæc mea ſit ignoro, nullam enim qualem ille deſcribit, dum ibi verſarer, obſervabam, aut ſi ea talis ab incolis intelligebam.

CETERVM Dioſcorides Poterij radices tuſas, præciſis nervis & vulneribus glutinandis illini, decoctumque ejus nervorum affectibus prodeſſe, refert. Eaſdem facultates tribuit illi etiam Plinius, & addit, in vino potum, rubetarum veneno auxiliari.

RHAMNVS. CAP. LXXVII.

DVo Rhamni genera Theophraſtus lib. III. cap. XVII. Hiſtor. Plant. facit, album & nigrum, utrumque aculeis ſeptum, & ...

Rhamnus 1.

Rhamni 1. altera ſpecies.

Dioſcorides tria genera deſcribit, niſi mendoſum ſit exemplar, ut periti ſimus Anguillara ſuſpicatur, qui tertium adſcititium eſſe putat. Et ſane, cum Dioſcorides eaſdem facultates ſuo Paliuro tribuat, quas Theophraſtus Paliuro libro 1. cap. 18. prædictis deſcripto: verisimile eſt tertij Rhamni deſcriptionem quæ apud Dioſcoridem extat, ad Paliurum ejus hiſtoriam revocandam, propterea quod multas notas habet cum Theophraſti Paliuro communes.

Primus vero Rhamnus frutex eſt ſatis procerus, ſæpe ſeſquicubitalis virgis, in multos ramos diviſis, candidis, quæ validis ac firmis aculeis horrent: folia plerumque quaterna aut quina ſingula ſimul ex ortu ſingulari naſcuntur, oblonga, ſubpinguia, ſubalbida, olea ſimilia, ſed tenera & ſucculenta. Autumno, novis ſuccreſcentibus, veteribus decidua; flores Autumno ... candicantes, extremo ſuo in quinque crenas diviſi: quibus decidentibus ... unis

quoddam rudimentum ut in latino, relinquitur: numquam tamen eius fructum vidi [illegible] radice (nnatur.

[illegible] Rhamnus [illegible] floribus [illegible] ramis folijs, magis carnoſis, falſi eius [illegible] ſuperiore candidiore: Hon [illegible] cum illo [illegible] purpurei plane coloris.

Rhamnus II. Rhamnus III. forte niger Theoph.

Rhamnus II. ALTER flexibilioribus eſt virgis & ramis, ſpinarum etiam valde horrentibus, anguſtioribus folijs, neque adeò carnoſis, perpetuis tamen ut in priore: flos oleæ [illegible], maturitate flaveſcens & tota hieme in frutice perma[illegible]. Totus autem frutex pulvere reſperſus videtur.

Rhamnus III. TERTIUM [illegible] bus ramis, Spini in ſepibus naſcentis & pruna[illegible], & longis ſpinis armatis: folia ex quibus[illegible]ntur, longa & anguſta, carnoſa, viridia, ad[illegible]nque referentis, [illegible] Confeſtim juxta folia naſcens [illegible] nigrum fructum rotundum acerbum.

Natale. Prior Rhamnus [illegible] Luſitaniæ, Narbonenſis [illegible] locis naſcitur. Illius alteram ſpeciem uno tantum [illegible] proxime Horiuelam urbem [illegible] appellatum, Valentini regni extremis l[illegible]. Alterum non modo in Belgicis maritimis, ſed etiam in quorundam montium vallibus, ſecundum amnes creſcit. Tertium incultis Granatenſis & Murciani regni [illegible] frequentem inter alios frutices inveniebam.

Nomina. NOMEN Græcum ῥάμνος, Latinum etiam Rhamnus. Hiſpani priorem *cambrones* appellant; alteram ejus ſpeciem *ſpino*; tertium *ſpino negro*, qui ad Theophraſti Rhamnum [illegible] forſitan referri poſſet. An verò is ſit quem Bellonius [illegible] invenit ait nigro fructu, ignoro. Miſſus eſt ad nos ex Hiſpanijs ejus fructus Lyci[illegible] quo nata plantæ.

Facultates. DIOSCORIDI omnium folia igni ſacro, & ſerpen[illegible]tibus efficaciter illinuntur. [illegible] Salmanticæ & alijs quibuſdam Ca[illegible] locis prioris folia cum turionibus, ex oleo, [illegible] & ſale eduntur primis menſis, habent enim acrimoniam [illegible] cum aciditate conjunctam, quæ ſaporis gratiam conciliat. [illegible] ejus fructus decocto, relaxata & diſſoluta membra, podagræ etiam dolores utiliter foveri incolæ referebant.

LYCIUM.

LYCIVM QVORVNDAM. CAP. LXXVIII.

SVPERIORIBVS adjiciendus videtur hic peregrinus frutex, multas a radice virgas pro-ferens, cubitales, vel etiam ampliores, teretes, tenues, nitentes, multis ramulis præditas, qui [illegible] aculeos hinc inde ſparſos habeant breves interdum [illegible] nunquam vero firmos, & multis ſaliis [illegible] ut in Rhamno priore: folia nullo ordine digeſta [illegible] foliorum [illegible] ſed multo breviora, Myrti [illegible] canus. Nec florem, nec fructum videre contigit: nam Novembri, & [illegible] hunc fruticem inveniebam [illegible] folia vidi [illegible].

Apud Complutum [illegible] Hiſpani [illegible], quod propterea [illegible] Henares, alijſque nonnullis locis, & Bætica parte, quæ vulgo [illegible] nominant, circa [illegible], & declivibus locis, hieme [illegible] obſervabam.

QVONAM referendus eſſet hic frutex dubitavi, & etiamnum dubito. Sunt nonnulli qui ad Lycium referendum [illegible] & in falces [illegible] vocant.

CETERVM, vox *[illegible]*, mihi in memoriam revocat quendam ſuffruticem in incultis [illegible] appellant. [illegible] lignum [illegible].

Fueritne autem veteribus cognitus hic frutex, & quo nomine ab illis vocatus, ignoro.

Legitimum porro Lycium, in ſua Peregrinatione obſervavit Doctiſs. Leonardus Rau-Wolfius, [illegible] monte ubi ab incolis [illegible] vocari ait. [illegible] Hieroſolymam [illegible] proficiſcens, cujus ſiccum [illegible] Arabibus [illegible] lib. [illegible] inter plераſque alias exhibet.

SPINA INFECTORIA PVMILA. CAP. LXXIX.

INFECTORIA Spina, cujus baccarum ſucco, viridem colorem conciliant pictores, & [illegible] quæque Rhamnus ſolutivus a [illegible] nuncupatur, multis Pannoniæ locis vulgatiſſima eſt, ubi interdum arboream amplitudinem adipiſcitur. Dicam nobis [illegible] ſed de alijs duobus fruticibus, qui illi admodum affines eſſe videntur.

PRIOR [illegible] ramis, in multas [illegible] Spina [illegible] qui membrana ſuperiore detracta, ex viridi pallescit, & amaru [illegible] ramuli paucis ſpinis horrent, ſed [illegible] plerumque [illegible] r'oluilli [illegible] minora, anguſtiora, ad Pruni ſylveſtris ſive Spini folia [illegible] guſtu [illegible] florem ut in vulgari [illegible] coloris & formæ, [illegible] quatuor foliis conſtantem, minorem tamen habet, radicem [illegible] ſtructi [illegible] cibus lignoſam.

CVBITALES habet Alter ramos, minimi interdum digiti craſſitudine magna ex parte [illegible] nigro rugoſoque cortice obductos, [illegible] parte in ramulos diviſos, qui tenuiores [illegible] cortice [illegible] plerumque [illegible] ſpinam definiunt: *folia* Myrti, aut Pruni ſylveſtris [illegible] viridia per ambitum [illegible] *ſerrata*, adſtringentis primum [illegible] guſtus [illegible] flores inter folia herbaceos, quatuor folijs conſtantes [illegible] deinde [illegible] vulgari non abſimilem [illegible] nonnunquam [illegible] radicem craſſam, lignoſam [illegible].

Exit [illegible] in [illegible] ſylvis. Alter abundat in monte Badenſibus

numquam ſemen perficit. Milii magnitudine, parte altera duntaxat à ſatu anno germinare cœpit, nonnumquam ſecundo. Perpetuò folia retinet.

Creſcit prior varijs Hiſpaniæ locis, & in Narbonenſi Gallia aſperis & aridis ſitu, & in alijs calidioribus regionibus: raram in Luſitania conſpiciebam. Alteram autem pleraque illius Provinciæ loca circa ſepes, & collium convexa, & extrema Bæticæ parte, quà Luſitaniæ conterminæ eſt. Natales.

Σμῖλαξ τραχεῖα Dioſcoridi appellatur, σμῖλαξ ſimpliciter Theophraſto. Gaza Hederam Ciliciam interpretatur, quia Plinius lib. xvi. cap. xxxv. ſcribit Smilacem Hederæ ſimilem, primùm è Cilicia profectam. Hiſpani priorem *Zarçaparrilla*, hoc eſt Rubi viticulam appellant: Secundam extremæ Bæticæ incolæ *Uva de perro*, id eſt, uvam caninam, Luſitani conterminæ *Alegra campo*. Nomina. Ciſſa, cis.

CETERUM Dioſcorides ait folia & acinos, ante & poſt epotos, venenorum Alexipharmaca eſſe: & acinorum ſucco, inquit Plinius, infantibus ſi ſæpius inſtilletur, nulla venena poſtea nocitura. Mihi in Hiſpanijs relatum eſt, ejus radice uſos, Americanæ Zarçaparillæ loco, non ſine ſucceſſu: & nonnullorum opinio eſt Zarzaparillam Smilacem eſſe novi orbis. Facultates.

ROSA. CAP. LXXXI.

Roſa centifolia Batavica.

NON minus varia Roſarum genera conſpiciuntur in Auſtriæ hortis, quam in alijs pleriſque Provincijs. Aliquot tamen iſthic alunt, quæ ante videre non memini. Sunt & Sylveſtres prius mihi non conſpectæ, de quibus omnibus ſingulatim. Sed antequam ſingularum hiſtoriam deſcribere aggrediar, quædam de Centifolia roſa, cujus Theophraſtus, deinde cum eo Plinius & Athenæus meminerunt, præmittere conſultum exiſtimavi: & de quibuſdam alijs roſis, quæ poſtea ad meam notitiam pervenerunt, dicendum. Roſa Centifolia.

Theophr. ergo Plant. Hiſt. lib. vi. cap. vi. ſic ait: Πολλαὶ δ' εἰσὶ διαφοραὶ τοῦ ῥόδου, ἐν τῷ πλήθει τῶν φύλλων, καὶ τῇ τραχύτητι, καὶ λειότητι, καὶ χροιᾷ καὶ εὐοσμίᾳ. τὰ μὲν γὰρ πεντάφυλλα, τὰ δὲ δωδεκάφυλλα, καὶ εἰκοσίφυλλα, τὰ δ' ἔτι πολλῷ πλείονα ὑπεραίροντα τούτων· εἶναι γὰρ ἐνίας φασὶν ἃς καλοῦσιν ἑκατοντάφυλλα. πλεῖστα δὲ τοιαῦτά ἐστι περὶ Φιλίππους, οὗτοι γὰρ λαμβάνοντες ἐκ τοῦ Παγγαίου, φυτεύουσιν, ἐκεῖ γὰρ γίνεται πολλά. μικρὰ δὲ σφόδρα τὰ ἐντὸς· ἡ γὰρ ἔκφυσις αὐτῶν οὕτως, ὥστε εἶναι τὰ μὲν ἐκτὸς, τὰ μὲν ἐντὸς, οὐκ εὔοσμα δὲ, οὐδὲ μεγάλα τοῖς μεγέθε- [illegible] [illegible]

Plinius autem lib. xxi. cap. iv. Nat. Hiſt. de Roſa hæc ſcribit. Genera ejus noſtri fecere celeberrima, Prænestinam & Campanam. Addidere alii Mileſiam, cujus ardentiſſimus color, non excedentis duodena folia. quenā

quemadmodum alba & Præneſtina: odore fere ... in Alba vulgari plena fructum nondum vidi ... radix late admotum ſerpit, & vivax eſt, novas virgas ſubinde producens.

Vnde primum Viennam allata ſit, plerique dubitant: nonnulli tamen ex Tyrolenſi Comitatu ... ex Italia ... pleno rubro flore ... Tunc in omnibus Cæſareis hortis, quotquot tum Principum virorum, & Nobilium matronarum, & aliorum qui herbariæ rei ſtudio oblectantur, alebatur; multo vero frequentiorem postea apud Mag. ac Generoſos Dominos Adolphum Hermannum & Georgium ... Hæreditarios Marschalcos hereditarios: ſed omnium frequentiſſimam Caſſellis in amœniſſimo cultiſſimoque horto Ill[mi] Principis Wilhelmi Landgravij Haſſiæ: Sic alius multo ... attullentem, iterum Autumno rurſus florentem, quæ tamen flore minus pleno ... quæ Viennæ eſt, ... mihi viſa ... ramos minus rubeant.

Roſa campeſtris odorato flore. Roſa campeſtris cum ſuo fructu.

QVARTA humilis eſt & fruticoſa, foliis illi quæ album florem fert, perſimilis: ſed ejus flores ... albi, longe minores, nequeunquam plane ſeſe explicantes, ejuſdem cum alba vulgari odoris & coloris ... tamen ... carne admiſtum habet. Paulo ſerius alia floret.

Hanc primum obſervabam in cultis D. Ioan. Aicholtzij hortis, unde illam ... ignoro; deinde ... in quorundam Patriciorum hortis. Plurimum autem ... judicio accedere videtur ad Græcam ... Plin. ... lib. XXI cap. XXX deſcribit.

QVINTA cubitalibus ... ſed rariſſime bicubitalibus aſſurgit virgis firmis ... rubeſcentibus, denſis ... villoſis, ex quibus ... ramuli virides, ſinguli ſuum florem ſuſtinentes album, odoratum, quinque foliis conſtantem, luteæ aut Canellæ roſæ vulgari ... medium floris umbilicum occupantibus: fructu rotundo, ... initio viridi, ... plena ... maturum ... ſemen ... continet ... inter eam quæ luteos ſimplices fert flores, & illam quæ ... provenit ... pinellæ foliorum ſimilitudine nomen apud Belgas accepit ... ambitum ... radix dura, lignoſa, in diverſa tendit.

Invenitur multis circa Viennam locis, præſertim editioribus montoſis. Floret Maio, quo tempore ... ejus ... ob odoris gratiam, venales in urbem deferunt. Fructus Auguſto matureſcit.

SEXTA

SEXTA pedales, atque aliquando cubitales etiam ex eadem radice profert virgas virides, lentas, ...iLiiiepaucis, [iif cine mulcisfpinisrifjciKCS. folioru alas rubrarjjiiujlunas. qiiinquc ...jitcm toJ \s lupeme vmdibus interne candicantibus co iltanr.es; fummis virgis & ramulis LnfKiKLiiKLit{atism.tgiiicahces(ivcatdbafln, liir[ibarbaciciuc, quaics in rofis lubris « ſimplici foliorum ordine conſtantibus, ex quibus deinde ſeſe explicant magnæ, non omnino odoris expertes roſæ, quinque foliis præditæ, initio rubræ, deinde paulatim remittente & quaſi evaneſcente rubedine, carnei ferè coloris, multis luteis ſtaminibus floris umbilicum, quemidiiiodun]i(ia!.jsroiis, occupantibus: fructus ruber, rotundus, omnium maximus, pyri inmudum turbinatus, fulvo ceiitcpulpa, inæqualia alba ſemina continet. *Roſa pumila.*

Naſcitur paſſim in ceduis ſilvis, aliarumque ſilvarum marginibus, ſublimioribus & deſertis agnspi r Aultnaminfciiorcm & utiLveifam Pan no mam." Floret Iunio, fructus maturescit Aui; allo, 5i plerumque tota hicmc if fi ftirpiinliatrct.

Non incpcc. meo qmdem judicio, χαμαιρόδον græcè dicetur hoc Roſa genus, Latinè Roſa pumila. Autlnac i -erbttorcn wrt ... Vngari vero *PAragi roſa* appellant. *Χαμαιρόδον.*

milem, paullo majorem, confertim tamen in eodem pediculo non naſcentem, ſed ſingilla-tem ut in uvâ criſpâ.

Groſſularia fructu obſcurè purpuraſcente.

CERTE anno M.D.XCIII. Leydæ conſpiciebam Groſſulariæ genus amplioribus nigrioribuſq; folijs, ſpinas ad ſingulos foliorum exortus binas vel unicam habens (interdum etiam nullas) breves & vulgari multò [illegible] longè breviores & parſim ramis cortice ex fuſco purpuraſcente tectis innaſcentes: fructum [illegible], dum immaturus eſt, vulgaris inſtar virentem, qui maturus purpuraſcit, plenâ autem maturitate ex purpurâ atrum colorem contrahit perinde ac nonnulla pruna. Atque id eſſe arbitror, quod paullo ſu[illegible] unum.

[illegible] autem [illegible] obſcurè [illegible] id eſt, minorem marinam uvam appellat. Quidam, teſte C. V. Iacobo Dalechampio, hunc fruticem & Groſſulariam ſive uvam criſpam [illegible] an verò Groſſulariæ hæc appella-[illegible] [Theo]phraſtus nullas ſpinas [illegible] (quem Gaza [illegible] adeò inſignem & ſingularem diligentiſſimus [illegible]

[illegible]

Ribes legitimum Arabum.

De Ribes autem legitimo, libenter acquieſco ſententiæ C. V. L. Rauwolphij, qui naſcentem ejus plantam in monte Libano obſervavit, ut ipſe lib. II. cap. XII. ſuæ per ea loca Peregrinationis ſcribit. Legitimum, inquit, Ribes Arabum iſthic inveni Septembri menſe, tamquam primùm, & præter anni tẽpus erumpens, ſine flore & ſemine, duobus duntaxat folijs præditũ, hirſutis, orbicularibus, Petaſitis foliorũ vulgo credito amplitudine, quæ brevibus, ſed craſſis & nõ minùs ſucculẽtis, quàm ipſi caules, pediculis inhærebãt: e quibus caulibus fit (quemadmodum in Halepo conſpexi) legitimũ Rob Ribes Serapionis. Gaudet humidis locis, craſſam habet radicẽ ex nigro purpuraſcentem, longiuſculã, rugoſam, incurvã & [illegible] tis ingrati ſaporis: caules, ut præcedẽte capite adnotat, pæne cubitales, hirſutos, virides, infernè (ut etiam Serapio prodidit) purpuraſcentes. Ant[illegible] porrò, etiam in eo pro loco obſervabat Petrus Bellonius, ut apparet ex libro, in quo de [illegible] eris arboribus agit.

TVLIPA, CVC t I L I O N A R C I S S V S. CA P. VII.

LILi ACE AS ftirpesfubfequideber peregrins *Hit, ScobinCt^ncmin* florccolorurn va-ricutcin omnibus rci herbaria: (ludiofisincnw grattiTima plunta, quam vulgus Tuli-

Illis autem duo hactenus primaria genera obſervabam, præcox unum, ſerotinum alterum; ſi tamen inveniantur quædam veluti dubiæ, quæ medio inter utrumque genus tempore florere ſoleant, potius tamen inter ſerotinas habendæ, quam inter præcoces; De utroque genere peculiari capite agemus, atque hoc uni præcoci tribuemus.

Tulipa præcox [illegible]

PRÆCOCIOR Tulipa unicum fert caulem, pedalem maxima ex parte, interdum ampliorem, rotundum, virentem, & brevi quadam incanaque lanugine pubeſcentem, non concavum, ſed firma medulla plenum: huic plerumque terna amplectuntur folia, nonnunquam quaterna [illegible], inferiora lata admodum, ut etiam palmarem latitudinem explere viderim, & Liliaceis longiora tamen & craſſiora, carinata, ſupra terram ſeſe pandentia & contorquentia, ſuperiora autem minora & anguſtiora, eaque vel propendentia & nutantia, aut interdum ſurrecta: Omnia autem colore ex cæruleo virente aut ærugineo, & veluti farina aſperſo. Summo caule [illegible] magnus flos ſingularis (geminos etiam aliquoties vidi [illegible] naſcentes, vel bifido caule hærentes) ſurſum ſpectans, (ex ſex [illegible] conſtans [illegible] ſta- [illegible] terram ſeſe inclinantem, [illegible] cumbentis [illegible] paulatim ſeſe ſublevans [illegible] colorem [illegible] ſeſe expli- cans, [illegible] in fundo pandens, ex quo ſena [illegible] ſtamina ſurgunt, [illegible] in modum variantibus. Excuſſo flore, triangulare caput ſuccedit, oblongiuſculum, vel brevius, [illegible] partes a ſummo dehiſcente conſpiciuntur ſex ordines ſemi- num [illegible] circinatæ propemodum rotunditatis [illegible] parte, quorum capitis centrum & interiora [illegible] oblongiuſculi plurimum [illegible] ſubeſcentis, & [illegible] etiam fuſci. Radix bulbacea [illegible] brevior eſt, non- [illegible] craſſa inferiore ſede [illegible] radix fere fi- bris aliquot tenuibus donata, [illegible] foris vel fulveſcente, ſed magna ex parte nigricante membrana [illegible] tem adeo denſo tomento plena ut molliſſime recubet bulbus, qui ſolidus eſt [illegible], & veluti albumen ovi coctum candidus, guſtu dulcis & ſaliens non ingratus.

Tulipa præcox flava.

T. Præcocis ſumma varietas.

SVMMA autem in Præcoce eſt coloris varietas: nec majorem in ullo alio flore videre memini, niſi forte in Papavere. Etenim aut omnino luteus eſt, aut ruber, aut albus, aut purpureus: interdum etiam bini vel plures ex his coloribus in eodem flore permixti conſpiciuntur. Non tamen quicquam omnino coloris [illegible] vidiſſe aſſeram, [illegible] hactenus videre non contigit.

I. T. p. lutea.

Lutea Tulipa vel ad auri fulgorem accedit, aut pallet, foliorum autem ungues plerumque [illegible] (licet etiam habuerim veluti [illegible] aſperſos: odor [illegible] recentis [illegible] croci, interdum nullus, vel admodum imbecillus.

II. T. p. rubra.

Rubræ color nunc ſaturatior eſt, modo dilutior & [illegible] aſpectus, interdum etiam inelegans, & obſoletus: foliorum ungues vel luteo [illegible], aut tanquam leviquadam fuligine in luteo aſperſi, in quibuſdam nigra macula medium unguem [illegible] tantummodo [illegible], in aliis totum fere [illegible] occupat, [illegible] quædam linea nigrum unguem [illegible] conſpicitur: [illegible] magni ſunt iſti ungues, ut dimidiam folii partem occupent. Hujus vero odor aliis gratus, aliis ingratus, magna vero ex parte valde obſcurus, vel papaveris virus quodammodo referens.

III. T. p. alba.

Albi omnino candidus eſt [illegible] exteriora folia dorſo cineracea vel interdum etiam [illegible] color [illegible] habere vide- rentur; ungues lutei, nonnunquam veluti fu- ligine aſperſi, apices & ſtamina pallent. [illegible] quibus [illegible] albicant, apices [illegible] nicantes.

IIII. T. p. purp.

Purpurea aliis ſaturatior eſt, & violaceum, ſive amethyſtinum colorem habet, aliis Pæoniæ flo-

NARCISSVS TERSICVJ. CAP. XV.

AK ATA 02 plane eft hxc planta, & floris duntax.it pcdictiloprxdua,vc"...um Crocum, Colchicumque -icxilitctgotnicu ...branaceo cu- cullo,

Narcissus Persicus.

cullo, tamquam ex vasculo aurea floris oblongi, Croci instar, lacinijs sex simul iunctis constans ex flavo pallescentibus, quorum tria interiora paullo angustiora sunt, exteriora latiora, & summo mucrone nonnihil incurva, sive ἀκίδα quandam habentia, quae interiorum mucronem amplectuntur & comprehendunt, ingrati odoris, & paululum quasi virus redolentis. Stamina sex medium florem occupant, ex ipsorum unguibus nata, sed interiorum tribus reliquis longiora, exilibus & oblongis apicibus, gestantia, & stilus medius sex trifido capite. Folia illi sunt Hemerocallidis Valentinae, de qua paullo post, non multum absimilia, lata, plana, ejusdemque cum illis coloris, licet ad extremum rectius quae pluribus involvuntur, & sese circumdant: radix crassi bulbi, ball (quae multis fibris donata est) tunicam extuberans, intus candida, foris palludior quidem, sed aliquantum etiam nigricans.

Semel duntaxat Constantinopoli allatum est hoc bulbi genus, mihi ejusque iconem communicatum a Philiberto de Brouxelles, cujus antea memini, anno M. D. LXXV. initio, quem postea varijs amicis communicavi in Belgica atque in Germania ad Utrumque. Initio Narcissum Autumnalem majorem sequente capite describendum ex bulbi forma esse existimabam, in qua opinione videlicet me confirmavit flos sub finem septembris emergens. Sed postquam folia conspicui animadverti, & ineunte vere primum vt reproducere observavi, caque ab illius folijs colore differre; tum ex ejus collari inter summa plaiuajditparescC- (coianifcftcdeprtlicndi; arfhte breve inter folia caput.pontccmcrafTijm, brevi pcdiculoitiha.Tens,&; fumm.itc!lurc viiccmcr^cnsjferreali-qurtrie*obfer^avijquodciirn inanecflcr/cmifiisconfpiciendi fpesomnisfubUta.

NOMEN (chedxilliaddita:]nfcriprumcrat^j^»3f4d'j«ry?j»(i,ideflNarcin'iisPcrficus. Multum vero convenire videtur cum Narcisso vel Lirio alcero Theophrasti, cujus meminit lib. ; . aſſ palleſcentia: tota etiam planta tenerior, nec niſi primo vere, folia protrudit.

Q Alterius

Hyacinthus botryodes albo flore.

XI.

Alterius flos niveo quidem colore præditus eſt, ſed cui perfuſa videatur tenuis quædam & dilutiſſima purpura, qualis in roſis albis nondum plane expanſis, præſertim circa ungues, hærere videtur & marceſcente flore intenſior redditur: caulis e viridi purpuraſcit, folia viridiora ſunt, & in ima parte quodammodo purpuraſcunt.

Omnium ſemina in triangulis quibuſdam vaſculis continentur, rotunda, nigra, exigua: omnium quoque radices plurimos exiguos bulbos circa ſe generare ſolent, nulli tamen abundantius quam duorum poſteriorum. Florent ut plurimum Aprili, interdum etiam Maio, ſi vernum tempus ob præcedentis hiemis aſperitatem ſerius incipiat.

Baldo.

Poſterior ſpecies olim nobis communicata à C. V. Alphonſo Pantio, inventa in Baldo monte eruta à ſtudioſis qui Iam ex Italia redeuntes Viennam adferebant. Altera ab ampliſſimo V. Cortuſo Dipcadi albi nomine in Belgicam miſſa.

Hyacinthus ſtellatus Peruanus.

HYACINTHVS STELLATO FLORE.
CAP. XXX.

Hyac. ſtellat. varia genera.

MVLTA ſunt Hyacinthi ſtellato flore genera, quorum ſex [illegible] hoc capite deſcribenda duxi; ad quæ nonnulla etiam de Hyacintho vulgari ſtellato flore dicebus.

Hyac. ſtellat. Peruanus.

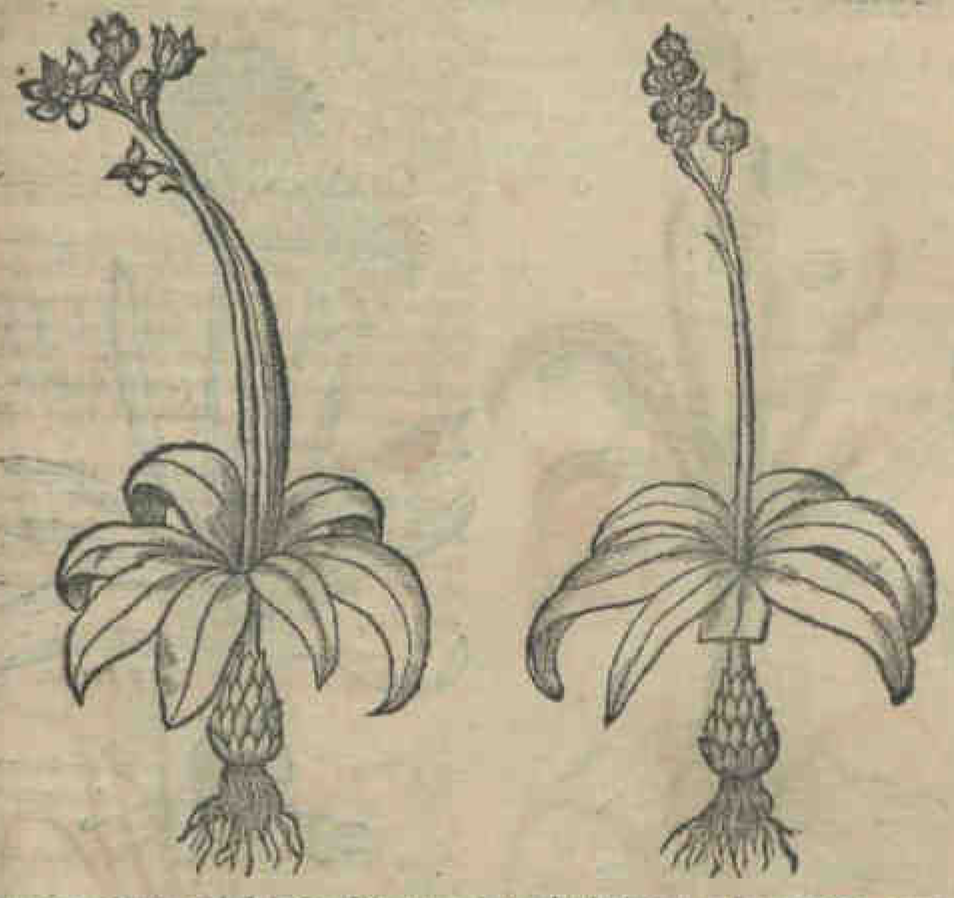
PRIMVM autem locum merito ſibi vindicabit elegans & rariſſimus ille, quem, ex Peruano urbe delatum, in ſuo horto alebat Everardus Munickhoven (cui hæc ſtudia cordi) & florentem ſuis coloribus exprimi curabat: cujus deinde exemplar ex archetypo Everardi [illegible], ad me mittebat Nobilis vir Carolus de Tiſnacq, Regius Antuerpiæ Curiarum Præfectus, menſe Auguſto anni [illegible] quæ mihi & [illegible] gratiſſimum.

LATA, craſſa, multaque ſtatim ex radice emittit folia, Hyacinthi orientalis, ſeu potius Eriophori bulbi foliis ſimilia, humi, magna ex parte, ſparſa, & viridia, inter quæ prodit nudus caulis vireſcens, ſummo faſtigio multis floribus, in ſpicæ modum congeſtis, onuſtus, qui ab imo faſtigio ſeſe explicare incipiunt, inſtar Scillæ, Ornithogali & ſimilium: pediculi oblongi, ex atro vireſcentes, ex quorum faſtigio flores naſcuntur, ſex foliis ſtellæ inſtar expanſis conſtantes, purpurei coloris, intus ex purpura cærulei, umbone quemadmodum vulgari, florum umbilicum ſtaminibus ſex ambientibus, occupante. Flores nullo odore, [illegible] radix bulbus [illegible] craſſa [illegible] Hyacinthi [illegible] talis, ſubfuſci coloris præditus tunicis, & [illegible] fibris ab ima ſede prodeuntibus firmata.

ALTERVM etiam [illegible] nobis deſcribendum, conſpectus cujus [illegible]

Hyac. ſtellat. [illegible]

Hyacinth. ſtellatus Lilij folio flore. Hyacinthus Lilij folio ſem.



Iconem cum ſequente deſcriptione Viennam ad me mittebat Tornaco, Ioannes Moutonus, meâ Pannonicarum ſtirpium hiſtoriâ jam evulgata,

ATTVLIT, inquit, qui Pſeudonarciſſos juncifolios communicat, atque [illegible] bulbum [illegible] ſimilem, ſed oblongiorem, flaveſcentis coloris, [illegible] rotundum [illegible] Lilij ſylveſtris & montani purpurei radix: ſena aut octo vel plura fert folia, Lilij albi (antequam in cauliculum abeat) foliis ſimilia, e quorum medio cauliculus prodit brevior, multos flores in ſummo ſuſtinens, Hyacinthi ſtellaris vulgo nuncupati floribus, non impares, ſex foliis conſtantes intenſè cæruleis, ſive violaceis, cujus [illegible] ſummo [illegible] Hyacinthi [illegible] appellavi: [illegible] ſuſtinet [illegible] M.D.XCVI. ejus bulbum ex aliis [illegible] pallescentibus ſquamis imbricatim diſpoſitis conſtantem [illegible] flaccidus ad me pervenit [illegible] ſcor-tupit. Alterum deinde bulbum ab eo accipiebam, [illegible] etiam à Iacobo Plateau: ſed omnino ſimiliter corrupti. Hujus porro iconem à [illegible] accepi, in appendice ad ſuam Scirpium hiſtoriam, exhibet Lobelius noſter. Sed anno M.D.XCVI. CIↃ bulbum à [illegible] accepi [illegible] tandem [illegible] mihi ſucceſſit.

TERTIO [illegible] ſunt folia humi fuſa, longa, carinata, dilutè virentia, Hyacinthi [illegible] ſtellaris [illegible] longitudinis, [illegible] pnurcamiotctnosfalli-pensfiore [illegible] floribus, ex foliis [illegible] dilutè cærulei coloris, [illegible] Hyacinthi ſtellati [illegible] explicari [illegible] ſex [illegible] quarum apices purpurei, ipſo in medio [illegible] aſſurgente: [illegible] igitur capitulum, quale in vulgari, [illegible] ut ſemen obſervare [illegible] ma-dix bulboſa eſt, non magna, nigro cortice tecta, & fibris ſubtus prædita.

HVIVS bulbum Hyacintho accepimus cum aliis ſtirpibus Francofurtum ad me mittebat anno M.D.XC. Generoſa Domina [illegible] appellatione in-titulatum Lilium Suſianum inſignitum, deinde, Iris illa bulboſa perpetuò quam Matthiolus pro Hermodactylo Conſtantinopolitano exhibuit, Dodonæus pro Iride tuberosâ. Flores mihi protulit Aprili [illegible] Hyacinthus [illegible]

QVARTVM [illegible] Walachia [illegible] M.D.XCIIII. Doctiſs. vir Cl. [illegible] vir Wilhelmus [illegible] Duyn, cujus [illegible] urbis [illegible] communicabat; iconem mihi cum ejus parvo bulbo [illegible] Thobias Roels, illius urbis Medicus.

Hyac. ſtellat. Byzantinus.

Hyac. ſtellat. [illegible]

Hyacinth. ſtellatus Byzantinus, Hyacinth. ſtellat. cineracei coloris.

Aſphodelus I.

Aſphodel. I.

ſed non minus firmum, ſtriatum, qui ſummo faſtigio membranacea tunica multos floſculos profert, in orbiculare caput [illegible] ſtriatum Iſtlele gancicjrcpurpui.i nitctes: capitulis & ſtamine cum priore reſpondent ſimiliter & radice, quæ nodoſa eſt, & [illegible] ſe propagat.

Illius etiam genus invenitur longioribus & [illegible] caulibus [illegible] infirmioribus, floribus etiam multo dilutioribus. in reliquis ſatis convenit.

Vtraque hæc ſpecies ſerius priore genere floret, nempe Iulio & Auguſto. In omnium [illegible] quæ iam veſtigia caulis, præcedentibus annis nati, impreſſa habentes, Polygonati radicum inſtar, non adeo tamen læves.

Naſcitur omnes in Leytenberg ſupra Manderſdorff [illegible] ſpidæ ſunt aquæ, quarum uſu multi [illegible] calculo obnoxij] [illegible] montibus urbi Viennæ [illegible].

SECVNDO generi ſimiles plantæ mihi natæ ſunt Viennæ: [illegible] Lutetiæ [illegible] doctiſſimo viro, [illegible] peritiſſimo Nicolao R[illegible], Chirurgo Regio, Bulbi vomitorij nomine, [illegible] vomitum ciet eius [illegible] manſa. Eodem etiam nomine aluit in ampliſſimo [illegible] Lilleſio, in horto Caſtelli [illegible] Principis [illegible]. Non [illegible] qui Alum, quod Plin. Natur. Hiſt. lib. xxix. cap. vi. [illegible] naſci ſcribit. [illegible] ſed cum ille formam non deſcribat, & Allij genus [illegible] dicat, certi quidpiam ſtatuere difficile eſt: [illegible] qui ſe periculum fecerit, [illegible] tanquam [illegible] capi poſſint.

ASPHODELVS. CAP. XXXIX.

ASPHODELVM cum plerique deſcripſerint, alij [illegible] operæ pretium. Quia autem aliquot [illegible] eius genera [illegible] in Hiſpanicarum ſtirpium obſervationes [illegible] rratient^leAonbpf rumrr.^.i.jturunipuubaro, (icoruqualcmcumque hiſtoriam [illegible] denuo hic [illegible] adeat [illegible].

PRIMVM [illegible] longa folia, anguſta, triangula, & [illegible] carinata, [illegible] & lenta, [illegible] rotundum, lævem, [illegible] in ramulos ſuperne fiſſum, qui a medio fere ſurſum vergendo exornant multi Qcllatifi [illegible] foliorum flores, coloris intus albi, foris [illegible] purpurei [illegible] ſingula folia [illegible] quaſi diſtinguente [illegible] dilutiore linea [illegible] totidem quot foliola ſtaminibus medium occupantibus [illegible] ligneum, rugoſum, atrum, & figura triquetra, capitulo [illegible] fere, [illegible] in [illegible] eminentioribus [illegible] & ex [illegible] purpuraſcente [illegible] permaturum [illegible] decidente, cadit: [illegible] Theophraſtus, & incipit ab imis.

imis. Radices ab uno capite numeroſæ exeunt, oblongæ, exiguis napis ſimiles, ſed inferiore ſede craſſiores, atque in fibras deſinentes, ſucci plenæ, candicantes, ingrati & acris guſtus.

Iſtius radices videre memini, dum Olyſippone Hiſpalim proficiſcerer, aratro erutas, quæ ducentos aut plures ab eodem capite pendentes, eoſq; craſſos admodum napos haberent quinquaginta aut amplius libras totam plantam pendiſſe putem. Itaque nihil mirum, ſi Plinius octoginta ſimul acervatis ſæpe bulbis referat.

Iris bulboſ. verſicolor [illegible]

Iris bulboſi flavo flo. ſive [illegible]

Tulipæ bulboſæ. Multos etiam dedit is annus Tuliparum bulboſi in infima (quod ſucci & humori[illegible] abundantiæ tribuo) naſcentes.

Iris bulboſa XIII. ſive lutea. QVARTA, jam dictæ Tertiæ per omnia ferè ſimilis, breviore tamen eſt caule, gracilioribuſque & ex viridi palleſcentibus folijs: flo[illegible]iores, latiores tamen, ex vaginulis ſummo cauli inhærent[illegible]dori mediæ inter ſecundum & tertium genus magnitudinis, quemadmodum & ſili[illegible] in quo ſemen ſuperiori ſimile continetur: radix tertij ge[illegible] quæ non [illegible]is, non ſecus ac illa, propagatur.

Varietas. Sed hæc in flore quandam etiam differentiam [illegible]t, licet ex[illegible] breviore & craſ[illegible] [illegible]a emergunt, ſanguineo colore, a [illegible] ungui non hoc colore caret. Vtrumque em germinare ſolent.

Natales. Naſcitur p[illegible]o, & petroſis collibus ad Tagum ſitis ſupra Olyſipp[illegible] m Decembri anno M.D.LXIIII, cum aliq[illegible] Belgium mittebam. Floret paullo maturi[illegible] por[illegible] tamen ſe mutuo conſequuntu[illegible] interdum ſimul fl[illegible] conſpiciuntur.

Iris bulboſa [illegible] ſive [illegible]. [illegible] mihi primùm conſpecta e[illegible]rum anno ſupra milleſimum & quingenteſimum, nonageſimo quarto. Nihil verò ea[illegible]is & forma florum ab Iride bulboſa, cujus flores verſicolores, ſolius floris co[illegible] folijs conſtat, quorum terna inflexa & terram ſpectan[illegible]ulum habent colorem, venis ſaturatioribus à medio folio in latera excurrentibus d[illegible] & ab illo ad unguem uſque, maculam flavam ſatis latam, medium folium per l[illegible] ſecantem: terna illis incumbentia & gibboſa ejuſdem etiam ſunt coloris, pau[illegible]tioris: tria ſurrecta folia magis ſatura, odor pæne florum Tiliæ: binos autem, ternóſve in eodem caule fert flores, qui reliquarum Iridum bulboſarum floribus magis ſunt ſerotini, iiſque marcidis demum aperiuntur ſub initium Julij. Floribus ſuccedunt triangula oblonga capita, ut in verſicolore Iride bulboſa.

Natales. E Luſitania porrò hoc Iridis bulboſæ genus, paucos ante annos, primùm in Belgicam delatum fertur.

Sequente autem anno, è tribus bulbis ab amico acceptis, unus florem longè elegantiorem jam deſcripto tulit, amplioribus labris nempe conſtantem, tribuſq; folijs ſurrectis latioribus,

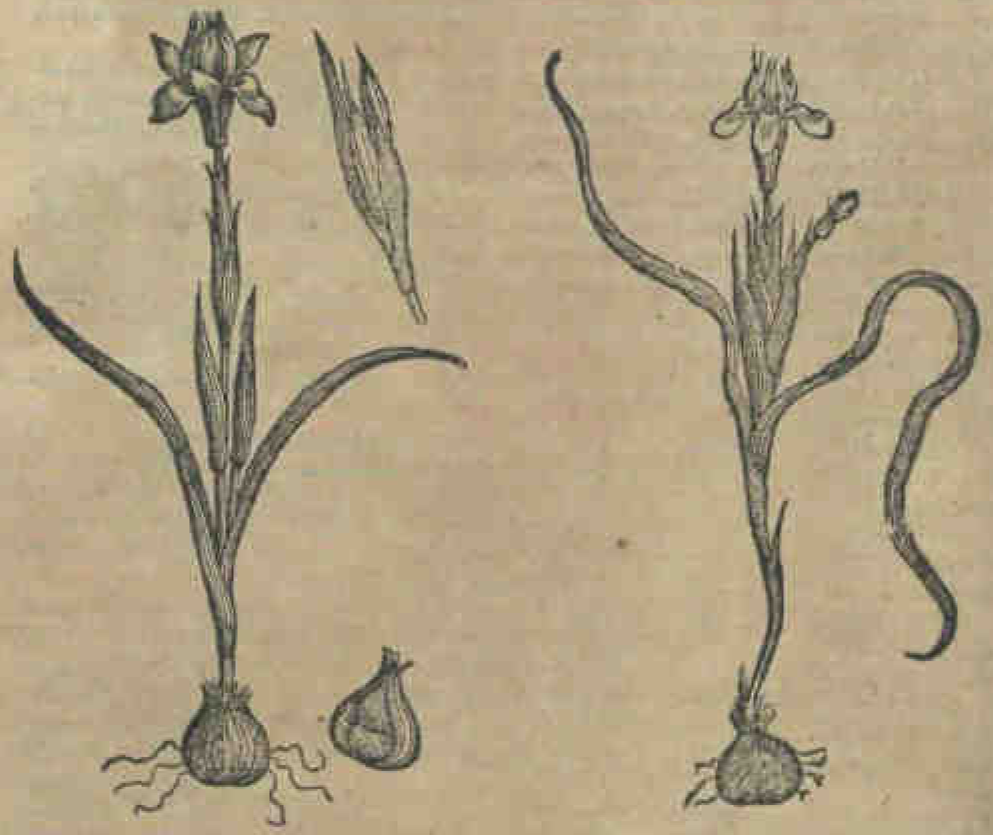
SISTRIN-

SISYRINCHIVM. CAP. XLV.

IRIDES bulboſas proximè, ſine controverſia, ſubſequi debet planta quædam flore Iri- [illegible] ut Xyphium, cujus duo genera in Hiſpanica peregrinatione animadverti.



Siſyrinchium majus. VNVM oblongis anguſtiſq; folijs, mollioribus quàm Iridis bulboſæ folia, & ad Allij aut Hyacinthi botryoidis folia proximè accedentibus, ſtriatis, viridibus, & humi plerumque fuſis, rotundo, dodrantali, ſtriato firmoq; caule, qui ex multis involucris tanquam è vaginulis flores promit quatuor aut quinque, alternatim prodeuntes, hoc eſt, ut primo marceſcente alter ſuccedat, deinde tertius, & ſic deinceps, Xyridis potius florem referentes, quàm Iridis, ex novem foliolis compoſitos, quorum tria, ut in jam deſcriptis Iridibus bulboſis, deorſum inflexa, pro fimbriâ, luteam maculam etiam habent; alia tria ſurſum aliquantulum attolluntur: tria verò reliqua, quæ in alijs ligulam tegere ſolent, ſurrecta, ſummâ parte diviſa & bifida. Eſt verò totus flos pulcher aſpectu, coloris cærulei, præter maculas illas, & odore quidem præditus, ſed valde fugaci: floribus ſuccedunt folliculi, vaginis quibuſdam cutaceis incluſi, adeò tenui membranâ conſtantes, ut ſemen rotundum, parvum ſubrufum, quod in illis continetur conſpici poſſit: radix bulboſa, gemina, plantâ ipſâ florente, & altera alteri inſidens Xiphij modo, (ſuperior plena, candida, dulcis, edulis, & pueris expetita, inferior flaccida (totam nimirum ſubſtantiam ad ſe trahente ſuperiore, ut in Croco, Xiphio) & tandem evaneſcens cum inhærentibus fibris: *Natales.* multiplici verò cortice reticulato, craſſo, nigro integitur Xiphij radicis inſtar, & adnatis ſeſe propagat: nam quinas interdum, etiam ſenas, aut plures plantas, quarum ſinguli bulbi ſuo retiformi tegmine involuti erant, alio villoſo capacioreque tegumento ſimul comprehenſas eruere memini, in collium ſupra urbem Olyſipponem acclivitatibus, apud ſuburbanum Magnifici & Generoſi viri Ferdinandi Cotinho, equitis Luſitani, multis peregrinationibus in exteras regiones factis, clari: atque etiam Gadibus non procul à ponte, qui eam inſulam continenti nunc conjungit: unde ejus bulbos in Belgium ad amicos mittebam N. & C. V. Caroli Tiſnac, concilij Belgici tunc in Hiſpania Præſidis, operâ: qui ſucceſſorem deinde habuit C. V. Ioachimum Hopperum.

Siſyrinchium minus. ALTERVM genus ſuperiori ſimile eſt, minus tamen, gracilioribuſq; folijs: flores è vaginulis prodeuntes, colore ſuperioris floribus ſimiles, ſed magis odorati, tenuiores etiam folliculi minore & exiliore ſemine pleni: radix item minor, non minus tamen, quàm ſuperior, reticulato cortice tecta, & gemina.

Natales. Creſcit Valentino Hiſpaniæ regno, ſed Murciano frequentiſſimum obſervabam, atque

Iris latifol. major XI.

ILLI parta Tertium habet folia, inter quę cubitalis ferè & ſuperiori æqualis aſſurgit cau-
lis, ternos aut quaternos è vaginis viridibus, oras purpuraſcentes habentibus, ferens flores,
quorum tria inflexa folia Decimæ quartæ non valde abſimilia, longius tamen protėſam ha-
bent fimbriam illam villis conſtantem, quàm ut à bifidis & gibboſis folijs tota tegi poſſit,
quorum color obſcurior & ſaturatior, quemadmodum & ſeſe attollentium, quibus non un-
quam inſperſæ luridæ maculæ: Odor idem cum ſuperiore. Paulo tamen ſerius hæc floret.

Iris major latifol. XII.

QVARTVM (quod mihi perijt) huic colori ſatis reſpondere ſcribebat, & peculiare id habe-
re, ut inflexa folia duobus diverſis coloribus ſecundum longitudinem ſunt diſcreta, altera
videlicet parte reliquorum foliorum colori reſpondente, altera diverſo: eamq; à Bruxellenſi
cive accepiſſe, qui ſemine natum ſibi aſſereret, cum alijs Iridibus, quarum nonnullæ unicum
duntaxat folium variegatum habebant, quædam verſicolorem tantum nervum medium ſo-
lium ſecantem, eumq; vel ampliorem & latiorem, vel anguſtiorem, ut mirum dictu ſit quo
modo Natura in his floribus ludat.

Iris major latifol. XIII.

ALIVD præterea genus eidem civi ſemine natum
rum conſpicuum, non adeò tamen elegans, ſed colo... ſulphureo pallescentis. ut vaiko-
lor cærulea dilutior dici queat ea Iris.

Iris major latifol. XIIII.

AMPLA ſunt XIIII folia, & latiora longioraq; quàm in præcedentibus, viridia admodum,
rugoſa, aliquantulum criſpa, mucrone nutante, e quorum medio emergit cubitalis aut ma-
jor caulis, lævis rotundus, viridis, in aliquot ramulos diviſus, qui è virentibus vaginulis ſatis
amplos promunt flores, nonnihil odoratos, & ad vulgaris Oxyacanthæ floris odorem acce-
dentes, quorum tria reflexa folia pallida multis craſſis purpureis venis a folij infima ſede & à
fimbria, ad extremas oras ſparſis prædita ſunt, labris etiam ſatura purpurea nitentibus: tria il-
lis incumbentia, ſub quibus occultantur ligulæ, coloris pallidi tamquam fuligine perfuſi, ut
etiam ſunt tria erecta, ſed magis luridi: nullum mihi hactenus ſemen tulit, tametſi multos
annos illam jam aluerim. Maturius paullo floret ſecunda, & color floris aliquando ſatura-
tior, interdum dilutior.

Aotun

ſtoriam, quia poſt traditum Typographo meum exemplar plantam nactus eram, in Appendicem rejeceram; ſed quandoquidem propter [illegible] exemplaris aliquot [illegible] Plantarum hiſtoriæ libri procuſionem, typographi [illegible]: huc revocare libuit, & peculiare caput illi tribuere inter Irides latifolias & anguſtifolias.

Iris Tripolitana.

EST vero hæc Iris celſiorum aut altius aſſurgentium generis, folia habens reliquis quas conſpexerim multo longiora, [illegible] latitudinis, unciam videlicet lata, reliquarum Iridum foliis magis viridia, non tamē ſplendentia ut Xyridis: caulem habebat inter folia prodeuntem, quinque pedes longum, vel etiam longiorem, rotundum, firmum, licet non valde craſſum, & aliquot internodiis foliis præditum, in cuius ſummo bini & terni flores e vaginis prodeuntes, novem foliis [illegible] conſtantes, [illegible] floribus non diſſimiles, aurei coloris, quorum tria majora verſus terram valde reflexa, [illegible] incumbentia tria alia minora [illegible] ligulam flavam tegentia, tria reliqua e [illegible] majorum prodeuntia [illegible] mucronem [illegible] floribus [illegible] trigona capita, [illegible] coſta ſive nervo ſecundum longitudinem eminente, non diſſimilia capitibus Iridis anguſtifolii majoris, ſimilibus ſeminibus plena: radix digitali [illegible] nigricans & nodoſa [illegible] [illegible] arum.

IRIS ANGVSTIFOLIA. CAP. XLIX.

RESTAT nobis ut Irides perſequamur quæ anguſtiore ſunt foliorum [illegible]: tria genera in Pannonia & Auſtria obſervavi, [illegible] in reliquis, quas aliis Provinciis non conſpexi.

Iris anguſtifolia I.

Iris anguſtifol. major ſive 1.

PRIMA autem & major multo [illegible] fert folia longa, rigida, anguſtiora & [illegible] quam Tripolitana, quæ compreſſa vel confricata, ingratum [illegible] odorem ſpirant, [illegible] ut Spatulæ fœtidæ vulgo appellatæ folia, minus tamen graveolentem: inter quæ caules teretes, oblongi & cubitales, interdum etiam longiores exurgunt, quaternos aut quinos flores ex vaginulis lateralibus promentes, [illegible] Iridis bulboſæ verſicoloris floribus [illegible] admodum diſſimiles, colore cæruleo ſaturatiore præditos, quibus ſuccedunt oblonga capita trigona, [illegible] firmiora, magiſque cartilaginoſa quam latifoliarum Iridum, [illegible] Tripolitanæ, angulis etiam eminentibus, & quodammodo geminis [illegible] dehiſcentibus [illegible] duplici [illegible] aliquantulum compreſſum & anguloſum, oſſeæque duritiei, ſubruſeſcente membrana tectum [illegible] graciliores quam in latifolia Tripolitana radicibus [illegible] candicantes [illegible] [illegible] fibras ſpargentes.

Natales.

Eam primum [illegible] M.D. LXIII. [illegible] qnodam [illegible] flumini [illegible] vicino, [illegible] ducit, [illegible]; aliquod [illegible] herboſis quibuſdam [illegible] juxta vias, & ad quorundam pratorum margines non procul a Mandcrſtorf, quinto a Vienna [illegible] lapide: [illegible] poſtremum anno M. D. LXXIX. in pratis quibuſdam Hungariæ apud [illegible] [illegible].

[illegible] omnia ſimile, [illegible] conſpicitur.

Floret utrumque genus Maio, interdum duntaxat Iunio, ſi aſperior [illegible] præceſſerit: ſemen maturum eſt Auguſto.

Iris anguſtifol. II.

ALTERA, [illegible] Auſtriaci [illegible] [illegible]

Iris anguſtifol. II.

Iris anguſtifoliæ II. ſpecies altera.

ciſcere: ſubinde, cubitalia interdum etiam longiora folia, admodum anguſta, minimi digiti vix ſemiunciæ latitudinem non excedentia, Vindiarum [illegible] ſunt ſpar-ſe mucronata; in ſinu avero, quod ſub terra latent, purpuraſcentia, nullo ingrato odore, utpote [illegible] aliarum anguſtifoliarum præditæ. Caules habet ſeſquicubitales, nonnunquam ſeſquicubitales aut ampliores, rectos, teretes, firmos licet intus cavos, geniculatos, virides, ſummo faſtigio in binos aut ternos ramulos diviſos, quibus inſident bini aut terni flores, Iridis bulboſæ verſicoloris latifoliæ floribus forma ſimiles, odorati, quorum terna folia deorſum reflexa, à parte qua tenus viridi alaco [illegible] folio ligulæ occultæ teguntur, furvo colore ſunt, reliqua vero parte (qua in nonnullis brevior & latior eſt, in aliis oblongior & anguſtior) nonnunquam candicante, majori purpureo, ſeu violaceo colore, venis ſaturatioris purpuræ, [illegible] per folij longitudinem & latitudinem excurrentibus, & [illegible] ſupercilio carentes: tria ſurſum erecta anguſtiora ſunt, & cum bifidis illis [illegible] ligulas tegentibus, purpurei (itum (ive violacei) coloris; breves deinde [illegible] triangulæ breviora quam [illegible] mucronata [illegible] coſta eminente [illegible] nigricantem colorem contrahu[illegible] Mcunr. [illegible] [illegible] compreſſum & durum [illegible] [illegible] fupenons, fibris dons & tenuibus prædita.

[illegible] inveni illam ſponte provenientem, non procul Viennæ Auſtriæ in pratis ſupra Himberg, Eberſtorf [illegible] Auſtriæ pratenſibus locis reperiebam. Mittebat poſt-ea ad me [illegible] ſiccam, in [illegible] montibus [illegible] Ludovicus Camerarius, [illegible] S. Annæ monte. Anno vero ſeptuageſimo nono ſupra milleſimum [illegible] circa Sackturniam III. Comitis de Zrinio [illegible] inter Muram & Dravum Hungariæ [illegible] flumina, [illegible] Comitatu [illegible] inter Lindwa & Muram fluvium obſerva-[illegible] Floret & ſemen profert eodem quo ſuperior tempore.

[illegible] commode Pannonica anguſtifolia verſicolor dici poterit, non autem Byzantina, ut quidam appellant; peregrina quidem eſt flore, at tamen Conſtantinopoli non advecta, [illegible]

[illegible] Nobilibus viris Ioanni de Brancion & Ioanni van der Dilft atque aliis amicis [illegible] Belgium mittebam Viennæ Auſtriæ: quia vero ex ea urbe raras quaſdam plantas Conſtantinopoli [illegible] ab amicis [illegible] communicabam, contigit nonnulli illam etiam Byzantio allatam putarent, propter ea ridem [illegible] Byzantinam appellatur,

parte dilutè purpuraſcentibus,& ſplendentibus; valde magni [illegible] interna autem violaceis, quorum ungues [illegible] nullo odore & vix ſenſibili præditus, cujus umbilicum occupabat villoſum [illegible] nigricans capitulum, multis ſtaminulis nigricantibus cinctum, quorum apices nigri. Florebat Maij initio.

Ceterum eidem Porreto ſemine nata eſt alia Anemone latifolia, quæ etiam primum protulit anno M.D.C.

Anem. hort. latifol. XIII. ſimplici flore. Ea autem ex tuberoſa & nigra radice, qualis ſuperiorum, multa producebat folia, ſuperiorum folijs ſimilia, inter quę prodibat ſingularis caulis craſſior & firmior, ex viridi purpuraſcens, & brevi lanugine ſeptus, in cujus ſummo faſtigio naſcebātur tria folia, ſuperiorum folijs paullo ampliora & longiora, omniáque laciniata, è quorum medio aſſurgebat pediculus craſſior quàm in ſuperioribus, ex viridi purpuraſcens, & brevi lanugine obſitus, veluti etiam terna ſuperna illa folia, ſuſtinens ampliorē florem quàm ſuperiorum, duodenis item folijs conſtantem, foris ex purpureo albeſcentibus & ſplendentibus, internè ex violaceo purpureis & etiam ſplendentibus, quorum ungues albi quidem, verùm non adeò ampli ut in pręcedente, umbilicum floris occupante villoſo capitello nigro, quod ambiebant ſubfuſca ſtaminula, ſubcæruleis apicibus prædita. Florebat Maio.

Anem. hort. latifol. XIV. ſimplici flo. Istis adjiciemus eas latifolias quæ flores quidem purpureo colore præditos habent, ſed multo dilutiore & veluti carneo. Omnes autem, radicis & foliorum formâ non ſunt diſſimiles ſuperioribus, præſertim Tertiæ, caules etiam habēt teretes & brevi lanugine obſitos, atque ex viridi purpuraſcentes, ut illius, ad quorum faſtigium naſcuntur uncialis longitudinis folia, quorum unum, ut plurimum, paucis lacinijs ſectum, inter quę exilit triuncialis pediculus, ex viridi etiā purpuraſcens, ſuſtinens florem octo plerúque folijs conſtantem, quorum externa pars nonnihil purpuraſcit, interna coloris eſt ferè carnei, ejúſque vel ſaturatioris vel dilutioris, unguibus item vel amplioribus, vel minoribus, omnium tamen albis, & capitellum medium obtinentibus nigrum & villoſum, quod ambiunt multa albicantia ſtamina apicibus cæruleis prædita. Flores autem ſunt vel majores vel minores pro terræ ratione & ubertate.

Florent omnes eodem tempore quo ſuperiores, aut interdum paullo ſerius, pro loci, in quo repoſitæ, ſitu. Quædam florem habent nonnihil odoratum, aliæ minimè.

Anem. hort. latifol. XV. ſimplici flo. Est & altera Anemone latifolia, quam habui munere N. V. Ioannis Boiſot, cuique Decimumquintum locum dabimus. Ea autem habet radicem nodoſam & tuberoſam inſtar radicis præcedentium atque foris nigram, è quâ prodeunt multa folia, ut in præcedentibus, ſed majora & craſſiora atque in majores lacinias diviſa, inter quæ ſingulares aut plures exoriuntur caules ſatis firmi, virides, vel ex viridi purpuraſcentes, breviq; lanugine obducti, deſinentes in terna æqualiter naſcentia folia, aliarum latifoliarum inſtar, longiora tamen, ut quæ binas uncias ſuperent, & quadam lanugine pubeſcentia, è quorum umbilico prodit pediculus tres aut quatuor uncias longus, ex viridi purpureus, ſuſtinens florem octonis magna ex parte [illegible] m etiam novem folijs conſtantem, coloris externè carnei, & un[illegible] ntibus, internè verò carnei valde diluti, illum, qui incarnati hiſpanici nomen obtinuit, prorſus referentis, & à nonnullis orangeus dicitur, ſuave rubens enim color flavo dilutiore vel pallido ſuffuſus eſſe videtur: medium florem occupat capitellum villoſum ad violaceum colorem tendens, cinctum ſtaminulis ejuſdem coloris, quorum apices ſaturè purpurei & quaſi nigri [illegible] maturitate in pappum diffluit illud capitulum, cui implicatum planum ſemen nigrum, [illegible] in præcedentibus.

2. Aliud ejus genus etiam mittebat, jam deſcripto per omnia minus, cùm folijs tum caulibus & flore, cujus color licet ferè idem [illegible] men paulo [illegible] videtur, in [illegible] reque tamen nulla odoris gratia.

Tempus. Floret utrumque genus cum ſuperioribus: & pro ſoli, in quo repoſitæ, ubertate, ampliores vel minores flores proferunt. No[illegible] ex ipſarum ſemine natæ, et interdum varient, & flores proferant [illegible] ſaturatioris, vel dilutioris coloris.

Anem. hort. latifol. XVI. ſimplici flore. Similem quidem habebat Anemone Decima ſexta cum Latifolia pleno flore (de qua ſequente capite) radicem, ſed ejus folia, quæ etiam multa ex illa oriuntur, non erant adeò ampla & craſſa ut illius, neque adeò dilutè virebant, ſed ferè erant ijs ſimilia quæ in latifolia purpureo flore, ſive Tertia (quæ omnium prima Belgio cognita) naſcuntur, inter quæ aſſurgebat caulis dodrantalis vel etiam pedalis, ſatis gracilis, viridis, in cujus faſtigio naſcebantur terna folia uncialis longitudinis, quorum unum paullo latiùs extimas oras laciniatas habebat, alia duo mucronata erant, interdum etiam alterum illorum nonnihil crenatum: inter quæ aſſurgebat triuncialis aut amplior pediculus, teres, viridis, aliquando ſummâ parte ex viridi purpuraſcens, brevi lanugine obſitus, cui inſidebat flos octo plerumque folijs conſtans uncialis longitudinis, interdum brevioribus, nonnumquam longioribus, ut ejus, cui Pavonis majoris nomen dederunt, florem ſimplici foliorum ſerie conſtantem æquare poſſit, pro ſoli in quo planta alitur, videlicet ratione: floris color idem qui in plenæ latifoliæ flore, hoc eſt, elegantiſſimo coccineo int[illegible] pitens; ſimiles etiam ungues palleſcente orbe illos ambiente [illegible] externa autem, quadam lanugine pubeſcens: medium

Anem. hortenſ. latifol. ſimpl. flore XVI.

Anem. hort. latifol. ſimpl. flore XVII.

medium florem occupabat capitellum villoſum cinctum ſtaminulis purpuraſcentibus, quorum apices nigricant.

DECIMVM ſeptimum Anemones ſimplici flore latioréque folio genus habuit Conſtantinopoli allatum Generoſa Dn. de Heuſenſtain, quod anno M. D. XCVII. menſe Aprili in *Anem. hort. latifol. XVII. ſimplici flore.* [illegible] cujus fragmentum ſequente Iulio mihi donabat, et [illegible] amicis in Belgio [illegible] communicabam. [illegible] autem ſimilibus ſuperiori erat folijs, [illegible] valde virentibus & quaſi [illegible] aſperſa [illegible] folijs ſuperiori [illegible]

Hæc planta cauleique inter [illegible] ne f[illegible] exilibat pediculus dua[illegible] elegantiſſimo cocc[illegible] dilutioribus [illegible] apparebant ungues [illegible] ſanguinei erant colores, eorum apices ex[illegible] obver[illegible] lanuginem [illegible] prædictis, [illegible] tomentoſam reſolvebatur [illegible] radix craſſa, nodoſa, [illegible] nigra intus alba, multis fibris ſparſa [illegible] obſervavi apud N. V. A. vander Duyn [illegible] locum dabimus. [illegible]

CETERVM [illegible] mo ſupra milleſimum [illegible] elegans Anemon[illegible] genus, cui Decimum octavum [illegible] tubero[illegible] in inſtar aliarum latifoliarum [illegible] dibant [illegible] in tres partes uſq. [illegible] ta, dein [illegible] lata in tres etiam partes [illegible] ſuſtinentem [illegible] ſecta, q[illegible] erant diviſa, inter quæ aſſur[illegible]bant pedalis longitudinis caules craſſiuſcu[illegible] idi purpuraſcentes, [illegible] quorum umbilico ex[illegible] pediculus duas aut [illegible] brevi quadam lanugine obductus, quemadm[illegible] m florem octo folijs conſtantem, odoris ex[illegible] Anemonidum generibus, ſuſtinens ſatis amp[illegible] coccineo phœnicei, qualis ferè in papave[illegible] [illegible] villoſo, nigro, cincto multis ſta[illegible] occupante medium florem ca[illegible] initio nigricantes, deinde ex [illegible] uraſcentibus, quorum apices [illegible] flaveſcentes.

Tempus. Florebat [illegible] duntaxat Maio, quia is annus va[illegible] fuit, propter præcedentem aſperrimam [illegible]

Anem. hort. latif. ſimpl. flore xvm.

[illegible]

rimam hiemem, qualis totis triginta quinque annis in his regionibus non fuerat conſpecta.

HABEBAT etiam alias ſeminæ naras, quarum folia erant latifoliæ Tertiæ; folijs non valde diſſimilia, ſed quæ flores habebant [illegible] Quidam novis, ab ijs quarum ſeminæ Datæ erant, diſcretos: ut Natura non minus pæne ludat in coloribus florum hujus plantæ, quam in Tulipis, & Iridibus. Id quod etiam obſervabam in illis quas nobiles viri Carolus de Bentynck, Ioannes Hoghelandus atque ornatiſſimus vir Chriſtianus Porretus ſemine adquiſiverant: nam nonnulli flores habuerunt colorem vel ſaturatiorem vel dilutiorem, quidam etiam ferè albicantem, alij ſanguineum variantibus etiam mirum in modum florum unguibus. Ipſe Hoghelandus inter omnes eas plantas tum latifolias, tum anguſtifolias quas ſemine adquiſivit habuit latifolias quæ hoc anno ſexcenteſimo ſupra milleſimum, primum florem tulerunt, in quarum floribus plus quam triginta coloris aut unguium diſcrimina obſervavit, tum etiam in foliorum numero: quas differentias ipſe ſcripto tradidit.

ABSOLVTA latifoliarum Anemonarum ſimplici flore præditarum hiſtoria, ut ad Anguſtifolias tranſeat ſermo conſentaneum eſt. Earum etiam variæ ſunt ſpecies: illæ quidem folijs & radice inter ſe diſtantes: major vero in florum colore & eorum unguibus conſpicitur differentia.

Anem. hort. tenuif. ſimpl. flore i.

Anemone i. tenuif. ſimpl. flore.

PRIOR, multa habet folia, novo vere quum prodeunt purpuraſcentia, deinde viridi pallentia, multifida, Coriandri, vel Limonij, vel potius Anemonidi [illegible] folijs ſimilia, trigemina plerumque ſimul pediculo connexa, nunc [illegible] & in terram, ut Dioſcorides ait, inclinantia: inter quæ caulis exit nudus [illegible], quem terna folia, tenuiter profundius inciſa, media parte amplectuntur, quæ aliquamdiu florem occultant, donec Solis calore ex ijs ſeſe explicans, & emergens, expandatur in quattuordecim aut quindecim folia mucronata. [illegible] coloris [illegible] albi, vel utroque mixti, hoc eſt, externa parte [illegible], interna albi, ſtaminulis albis, ſuorum apicibus pallidis, medium florem occupantibus: decuſſo flore, apparet capitulum [illegible] Ranunculi, conſtans ex ſeminibus [illegible] ſimilibus, non tomentoſis ut in Latifolia Anemonide: radix digitalis plerumque longitudinis & craſſitudinis, [illegible] tuberculis obſita, fibras [illegible] hac illac ſpargens, foris nigra, intus alba, quæ ſimiliter fragmentis ſeri & pangi poteſt.

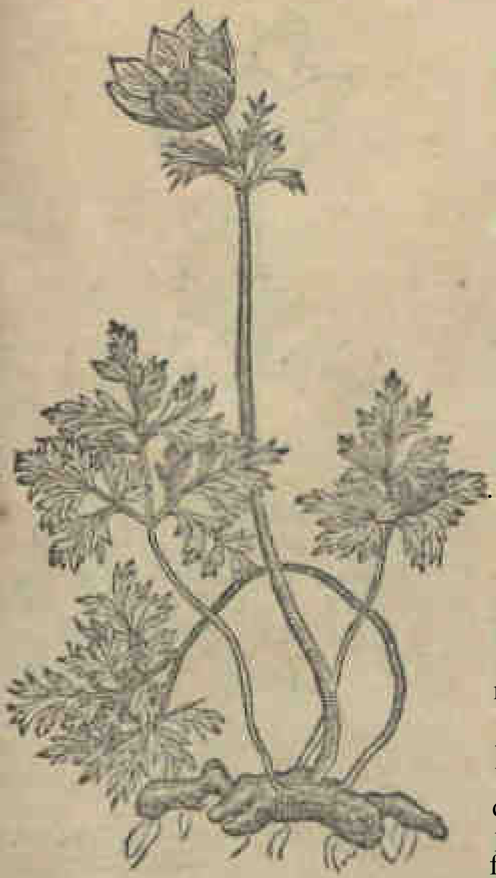
Natales.

Hanc primum ex Italia [illegible] Alphonſo Pancio, Sereniſſimi Ferrariæ Ducis Medico [illegible], ejus radicibus [illegible] Viro Ioanni de Brancion, qui reliquis de communicavit.

floret

Floret novo vereeum Anemonidis latifoliæ generibus: ejus ſemen etiam cum illorum maturefcit, aut paullo ſerius.

Anem. hort. tenuifol. ſimpl. flore II.



ALTERius folia ante hiemem prodeunt quinaaucfena, multo minoribus & crebrioribus incifuris divifa, quam Prioris Anguſtifolia: Bulbocaſtani, ſive Oenanthes primæ foliis non valde diſſimilia, magis tamen carnoſa, & denſiora, dilutius que viridia: caulis ſeſquipedalis aut major, nicus plurimum, nudus, ſolo eſt nudus lis ſcapus, quadam lanugine pubeſcens. Ultra caulis ſummum foliorum, quem circa faſtigium ambiunt tenuiora & multifida folia, ad tempus floris occultantia, quibus explicatis apparet flos ſummo ciuli inſidens, qui caloribus apertus, majore qua ſuperiora amplitudine conſpicitur. Sex dumtaxat foliis conſtare ſiccet interdum ſeptena auto totidem adquirat, purpurei violaceis coloris, extrema parte lanuginoſi, cujus umbilicum occupantibus nigricantibus apicibus prædita, capitellum villoſum nigrumque ambientia, quod nullum umquam ſemen proferre animadvertere licet, cum tot annis velut in pluribus in hortos aluerim: radix nodoſa eſt, multos in obliquum quaquaverſum ſpargens tenues fragilesque ramos foris nigricantes intus albos.

H*c etsi in Belgica primum miſſa a Pantio: poſtea alio ordine a Conſtantinopoli Viennam Auſtriæ. Floret Aprili, & interdum denuo Autumno, radice minim in modum propagatur: nam vel tenuiſſima ejus fragmenta facile comprehendunt & repullulat, etiam abjecta & nulli terræ te<fra.

2\. Hvic non diſſimilis nec foliis, nec radice nec floris forma conſtantinopoli cum ea qux violaceo eſt flore, aiv cila, iii floris colore dumtaxat eſt differentia, qui non eſt violaceus, ſed ex purpura rubens.

IN Hiſpanicarum ſtirpium hiſtoria dixi meum eſt, ex Italia miſſam fuiſſe Ill. V. Ioanni de Brancion Anemonem, ſimilem radice & foliis ſecundæ tenuifoliæ, qua rjo carrulcum florem multiplici foliorum textura condanrem ferre dicebant: quem conſpicere mihi non licuiſſet. Deinde in Plurimis per Pannoniam & vicinas Provincias obſervatarum Hiſtoria, Conſtantinopoli Viennam eſſe allatas Gen. Dn. de Heuſenſtain ſolidas & recentes minime quoque ſiccas Anemonidis radices ejus tenuifoliæ, qua multorum foliorum ſanguineo eſt flore, radicibus pectinibus quæ quiſque cebat *Bimxaat* yocan, & ctou cani plenum floreiucell. ircftnbcoat: qua licet Bulbocaſtani foliis ſimilia folia produxiſſent, florem tamen tantum ſimplicem, nec caruleum, ſimpliciem & alterius coloris. Hoc etiam nomine, vel j?/*/5^, omnium autem frequentiſſime J«/5^f appellant in Conſtantinopoli poſtea miſſæ ſunt & illi & Generoſo Dn. Vngnadio, atque aliis, Anemonidis radices, quæ tametſi multifida habuerint folia, inſtar foliorum Bulbocaſtani, floris tamen colore variarunt. Singulas porro ordine deſcribemus.

PRIMA igitur hoc nomine miſſa, Tertia autem in claſſe earum quæ tenuiore folio ſunt & multifido, foliorum quidem forma cum Secunda foliis reſpondebat, commode tamen tenuifolia dici non poterat, ſingulorum enim foliorum alæ, licet terna numero ut in illa, mitius frequentibus, latioribusque lacinijs diviſæ erant, Ranunculorum quorundam foliis quadantenus reſpondentes: quæ tamen poſtremo germinabant folia, Ultioribus Anemonæ tenuifolis Polyphylloſ flore foliis valde diſſimilia non erant inter quæ prodibant ſingulares caules (ummo faſtigio terna ut in aliis folia ſuſtinentes, Ut in omnibus tamen lacinijs diviſa quibus in ceteris Binizade (pecicbus, e quorum medio prodiens pediculus binas uncias longus ſimplicem ſex foliorum texturaconſtantem, ſed ampliſſimi & floridi coccinei coloris, quorum ungues ſatis magni, ex pallido fuſco & albo coloribus mixtus tinfti erant, paucis ſtaminibus capitellum cingentibus & floris umbilicum occupantibus.

[illegible] dc [illegible] pro ea qui florem cæruleum plenum ferret.

Anem. hort. tenuif. II. Bini.

FOLIIS, caule, radice, jam dictis reſpondebat Nona Bini [illegible]: at Tenuifolia Undecima Anemone: [illegible] pediculo [illegible] tribus lacinatis folijs emergenti, [illegible] brevior tamen (ut plurimum folijs prædiris) [illegible] odoris aut plur ibus) colons externa parte carnei albo mixti, interna [illegible] [illegible] vireſcentibus: medium florem etiam occupabat hirſutum capitulum albis ſtaminibus cinctum, quorum apices [illegible]. Matura utriuſque rapitam [illegible] ſemen continet [illegible] diſpergebantur.

Vtramque hanc Anemonidem tenuifoliam ex albido flore Decimam videlicet & Vndecimam, [illegible] eadem tabella [illegible] dumtaxat florem, quum [illegible].

Et hæ quidem omnes Anemoni[illegible] Bini [illegible] appellatione [illegible]. Cerenim iſtam varietatem ſatione fieri [illegible] quibuſdam etiam [illegible] idem contingere obſervabamus.

CETERVM aliam Anemonidem tenuifoliam albo flore conſpicit [illegible] apud N. V. Ioannem Hogelandum, quam alterutrius iſtarum ſemine natam dubi[illegible].

Multa autem promebat ex radice folia multifida inſtar aliarum Anemonarum tenuifoliarum, viridia non ſplendentia; inter quæ exibant bini aut plures cauliculi dodrantales vel etiam pedem longi, [illegible] quorum [illegible] folia multi[illegible] diviſa, ut in reliquis Anemonibus multifido folio præditis, è quorum media ſede exibat pediculus, binas, ternas, aut plures uncias longus, gracilis, purpuraſcentis ex viridi coloris, ſuſtinens amplum florem, ſex folijs prorſus candidis conſtantem, exceptis foliorum unguibus, qui externa parte nonnihil vireſcebant: medium florem occupabat capitulum nigrum, pluribus ſtaminibus albis cinctum, quorum apices nigri magnam venuſtatem candido flori addebant: radix erat tuberoſa [illegible] inſtar radicis ſpeciorum, aut [illegible] Anemonidis tenuifoliæ, quæ plenum [illegible] florem proferre [illegible].

[illegible] Genero ſi vir D. [illegible] exſuccas Anemonidum radices, quæ ſtatim telluri creditæ, ſubſequente Maio & Iunij initio flores protulerunt non unius generis. Nam licet omnes multifida inſtar Bulbocaſtani haberent folia, [illegible] forma [illegible] radice Tenuifolia [illegible] phyllo flore rubro ſive [illegible] quarundam tamen flos [illegible] ex foliis [illegible] conſtans prorſus [illegible] capitulum [illegible] cibus ex obſcura [illegible] florum umbilicum occupans [illegible] candicans [illegible] fuit coloris ſanguinei, & [illegible] nus. Singularum radices [illegible] & nodoſæ. Omnes autem [illegible] nomine, & ſubſequentis hiemis inclementia corruptæ.

Qyjmro,

Caryophyll. V.

QVINTO, craſſa & nigra radix eſt, dura, lignoſa, multos ramulos humi ſparſos un-[illegible] item illis ſerpitque, & ſubinde fibras agentes: ex iis cauliculi exeunt dodrantales, geniculati, inſtar graminis quibuſdam brevibus anguſtis coloris caeſii foliis, binis ſemper ex adverſo inter ſe oppoſitis, deinde ſecundum genicula ad nodos aliis ramulis [illegible] in extremis cauliculis incidunt longi calices, ut in aliis Caryophylleis ſilveſtribus, florem continentes album, odoratum, quinque foliis valde laciniatis conſtantem, quorum umbilico binae emergunt ſtaminula longiuſcula, corniculorum papilionis inſtar inflexa: ſemen deinde in longioribus capitulis, planum, quale reliquorum Caryophylleorum.

Provenit ſponte in Hamburgenſi monte inter ſaxa, qui Auſtriam & Septentrionem ſpectat. Floret Maio.

Caryophyllei ſilv. V. ſpecies altera.

Caryophyll. ſil. VI.

2. Iſtius etiam genus ibidem invenitur, longioribus cauliculis, & plures flores proferens, ſuperiori quidem forma & candore ſimiles, ſed inflexorum corniculorum expertes, atque eorum loco decem ſtaminula ipſius floris ſuperficiem paululum exuperantia habentes: capitula etiam, in quibus ſemen continetur, longiora.

Varietas

Eſt & in hoc genere, quod flores circa umbilicum purpuraſcente lanugine hirſutos proferat.

3. Aliud tertium paulò majus inveni [illegible] eminentis, tertio fere à Vienna milliari: firmioribus tamen & longioribus eſt cauliculis, majore etiam flore, licet non [illegible] tis omnino, aut dilutius r[illegible] umbilici circumferentiam [illegible] decem [illegible] ſummitatibus, ut in ſuperiore prominentibus; reliquis notis, radice, ſ[illegible] tempore conveniunt.

Caryophyll. VI.

SEXTVM plures ſimul ex una radice prodeuntes habet cauliculos, cubitales, teretes, multis geniculis praeditos: & in his [illegible] amplectentia [illegible] reliquorum Caryophylleorum foliis ferè ſimilia, viridia tamen, non incana [illegible] in ſummis cauliculis [illegible] tenuiſſimas [illegible] anguſtaſque lacinias diviſos, aut candidos, aut purpuraſcentes, ſuaviſſimi odoris, [illegible] umbilico vireſcente, & purpuraſcente lanugine hirſuto, è quo aliquot ſtaminula prominent; in oblongis deinde corniculis ſemen [illegible] reliquorum Caryophylleorum more: radix fibroſa eſt. Habent autem no-

vulgares Lychnides ſilveſtres, [illegible] id eſt, ſilveſtrem Caryophyllorum [illegible] herbam appellant: nonnulli autem [illegible], hoc eſt, leporis Caryophyllum.

Quibus facultatibus ſint prææditæ, compertum non habeo: omnes vero degustatæ ſu[illegible] avam, quæ, ut diximus, acidi uſculi eſt ſaporis.

Lychnis Byzantina miniato flore.

Odontitis Plinij ſimplici flore.

Lychnis Byzantina miniato flore. AD Lychnides ſilveſtres haud [illegible] referenda eſt ea planta, quæ a vulgo Herbariorum Conſtantinopolitana [illegible] dicitur, Doctiſſimus Fuchſius Struthion eſſe cenſebat. Ejus hiſtoria ex recentio[illegible] iconem tamen [illegible] adjiciendam non putavi.

albo flore. Illius verò genus habe[illegible] Viennæ, ſemine è Belgica miſſo natum, tenerius paulò, nec adeò numeroſos flores in umbellâ ferens, qui miniati non erant, ſed omnino albi: ceteris nonſ vulgari, quæ miniato eſt flore, conveniebat: ſed ætate non minus firma redditur ipſa planta, quàm alterius.

verſicolore flore. Tertium item ejus genus in Bruxellanis hortis ali, ſcribebat ad me N.V. Ioannes Boiſot, huic jam dicto ſimile, ſed flor[illegible] miniatus eſt, deinde [illegible] totus ferè niveus evadit, ſic [illegible] umbella con[illegible], videlicet [illegible] Semine tamen [illegible] Francofurti [illegible] ortam non ita variantem tulerunt, ſed dilutiore rubro commixto præditum, ſive jocinoris colorem imitantem, aver[ſa] autem parte candicantem.

Lychnis ſilv. Plateau. SED & Lychnidis ſilveſtris genus eſt, cujus delineationem & [illegible] Iacobus Plateau ad me mittebat Belgio alterius nomine: cujus verò eſſet coloris, minime indicabat.

Lychnides ſilv. [illegible] PORRO, præter jam dictas [illegible] ſim etiam in Auſtria, Stiria, & Pannonia occurrunt [illegible] Lychnides ſilveſtres, [illegible] re albo, rubro, dilutius rubente, quæque [illegible] los cuculi vulgo appell[illegible] doctorum verò quorundam

Odontitis. judicio Plinij Odontitis eſt, anguloſum certè caulem habe[illegible] atque in prat[illegible] genus [illegible] memini à Ioſepho de Caſa bona, Sereniſſimi Ducis Hetruriæ Simpliciſta, cujus flos multiplici foliorum ſerie cõſtabat rubri coloris elegantis: verùm illæ plantas eaſdem æſtate amiſerunt, dum me monentem, ut meridianis ſolis ardoribus exponerent (tenellæ enim adhuc erant) ſed in umbrâ potius adſervarent, [illegible] nõ[illegible].

Odont. plena Belgica. Similem hi[illegible] repertam in pratis, ea Flandriæ parte, quæ inter Gandavum & Antuerpiã ſi[illegible] vulgo appellatur [illegible] ad me ſcribebat Ioannes Boiſot, cujus

Soldanella alpina minor.

Viola montana I.

SOLDANELLÆ nomen inditum, quod ejus folia Soldanellæ marinæ foliis ſint admodum ſimilia: Alpinam minorem cæruleam appellant nonnulli: vulgare nullum nomen edifcere potui ab alpinis paſtoribus & venatoribus. *Nomina.*

Sed neque ullas ipſius facultates notas habent. Noſter vero Lobelius, Empiricum quendam foliis ſuis ad aquas inter cutem educendas, vulneribuſque cicatricem obducendam, aſſerit.

VIOLÆ MONTANÆ.
CAP. XIII.

DVo Violæ rara, nec ante à mihi conſpecta genera in Auſtriacis & Stiriacis Alpibus inveniebam, quæ propter venuſtatem ſtudioſis rei herbariæ notas facere non dubitavi.

FOLIA habet Prior vulgari violæ ferè ſimilia, minora tamen, breviora & viridi colore pallefcentia, calido guſtu: anguloſos cauliculos, in quibus bini aut terni flores ex alarum ſinu prodeuntes, violæ minores, flavi & inodori, quinque foliis conſtantes, quorum infimum majuſculum eſt, & quinque radiolis ſive nervis nigris interiore parte diſtinctum, reliqua verò, exteriore parte: ſemen in triangulis capitulis, quæ maturitate dehiſcunt, exiguum, nigricans, aliis violis ſimile, proferunt: radix alba, craſſiuſcula, multas propagines è lateribus procreat, candidiſque & longis fibris hirſuta eſt. *Viola montana I.*

Abundanter naſcitur in omnibus Auſtriæ & Stiriæ alpibus: Iunio atque Iulio florens, in cultis autem Aprili. In Borealis etiam Angliæ montibus inveniri intelligebam. *Natales.*

Exit Altera in ſummo Sneberg jugi vertice, perquam exiguis foliis, & quadantenus circinatæ rotunditatis, in ambitu leviter ſerratis, craſſiuſculis, longiuſculo pediculo inhærentibus: cauliculus aſſurgit è medio foliorum duas uncias longus, unicum florem ſuſtinens purpureum, vulgari ſimilem, ſed longè majorem & inodorum, cui ſuccedit triangula ſiliqua: radix nonnihil ſerpit, & aliquot fibris donata eſt. Floret ſub finem Iunii. *Viola montana II.*

Hanc nonnulli Melanium montanum appellare videntur.

FREQVENS in earundem Provinciarum nemoribus occurrit elatior alia Viola martia, firmioribus & rectis cauliculis, quam cur Matthiolus arboreſcentem cognominarit, nullam cauſam video. *Viola elatior.*

NEC prætermittendum elegans Violæ genus, quod à Doctiſſimo Viro Gulielmo de Mera Medico in itinere obſervatum, dum ex Italia rediret, & mihi Francofurti communicatum M.D.XCIII. ſed reſiccatum, & (quod doleo) nullum retinens florem.

PROMEBAT autē à radice craſſiuſculâ, digitum longâ, & frequentibus fibris donatâ quina aut ſena folia longis pediculis innixa, nō orbiculata, aut hederæ foliorum formā referentia, ut alia Violarum genera, ſed multipliciter inciſa, & ad Ranunculi, ſive Anemones latifoliæ tenuiora folia, verius accedentia, erant enim in octonas aut plures profundas lacinias d[illegible]eſcant, nec ne, in ſiccâ plantâ obſervare non licuit: ſed inter foli[illegible] florem ſuſtinuerant, trigona capita, inſtar eorum quæ in vulgari violâ conſpiciuntur, ſed inania, adhuc [illegible]. *Viola montana laciniato folio.*

d 2 MINIME

Gentiana XI. minima.

Gentiana XII. punctato flore.

Minime verò prætermittendum fuit elegantiſſimum Gentianæ genus, quod à me quidem in nullis jugis obſervatũ, ſed ejus iconem [illegible]

Gentiana punctata. Pennæi. deſcriptionem C.V. Thomas Pennæus Londinenſis medicus, pro noſtrâ amicitiâ liberaliter communicabat, à punctorum, quibus flor[illegible] ſunt, frequentiâ, punctatam Gentianam cognominant.

Gentiana XII. dubia. Caulem autem habet geniculatum, cubitalem, ſupra radicem aliquantulum rubentem, folia Gentianæ ſimilia, ex intervallis bina, ſed multò minora, quorum inferiora majora ſunt & longiora, pediculos rubentes habentia, ſuperiora verò cauli ſine pediculis adhærent, cúmque ferè amplectuntur: à medio pænè caule ex foliorum cavis oriuntur flores pentaphylli, ſtriati, utrinque tres, rarius bini, niſi circa ſummum caulem, quinque ſubcæruleis conſtantes, nigricantibúſque punctis elegantiſſimè notati (unde nomen) quinque ſtaminibus, quorum apices lutei, præditi: floribus ſuccedunt vaſcula cum ſeminibus Gentianæ ſimilia, ſed minora: radix parva, multis fibris prædita, ex fuſco lutea.

Natales. Provenit copioſè in Bockemuto Suitenſium monte, & floret Auguſto. Amari guſtus eſt, cui acrimonia quædam ſubtilis conjuncta.

Annuis ſive biennalibus fugacibúſque ſubjeci, quòd ex radice conjecturam faciam (quantum quidem ex picturâ deprehendere licet) ſemine maturo planè perire, cóque deciduo renaſci: alioqui quinto loco reponenda fuiſſet, & forſitan etiam quarto.

Linvm silvestre.

Cap. XVI.

Miram etiam in Lino ſilveſtri conſpici varietatem, ſatis ex meâ Hiſpanicarum Pannonicarúmque ſtirpium hiſtoriâ patere arbitror: cùm verò Linum ſilveſtre dico, Linariam non intelligo, quæ aliquibus etiam hoc nomine appellatur, ſed plantam floribus Lini ſimilibus eodémque modo fugacibus, nonnumquam etiam Lini folia habentẽ. Nos ſingulorum generum hiſtoriam, concinniore qua poterimus ſerie, hoc capite dabimus.

Linum ſil. latifol. 1. Primvm ex eadem radice, quæ craſſiuſcula eſt & candicans, unicum, interdum plures profert caules, modò pedali, nonnumquam etiam majore altitudine aſſurgentes, craſſos, firmos, hirſutos, ſuperiore parte in plures ramulos diviſos: folia quæ eos ambiunt reliquis generibus majora, venoſa, hirſuta, minimum digitum lata, gummoſo guſtu, deinde amaricante: ramuli ab infimo ad ſummum floribus quinque folijs conſtantibus onuſti omnium maximis, Malvæ vulgaris ferè æmulis, cærulei coloris aut vegetioris, aut dilutioris, cũ quinque in-

Similis

Similis ſemine ex Hiſpaniâ miſſo mihi nata Viennæ Auſtriæ anno M.D.LXXXIV ſed longe elatior & pluribus cauliculis prædita, qui humidiſſimi, præter medium quia turgebat, floras agebant, & folia proferebant non minus incana & tenuiter incisa quam modo deſcriptæ, cujus etiam ſemen etiam ad maturitatem pervenit. Sed ſubſequentis anni aſpera hiems matrem cum prolibus ſeminis nondum corrupit.

Iſtam etiam habebat in cultiſſimo ſuo horto Illuſtriſs. princeps Cattorum Wilhelmus, cum ſequentis anni Autumno apud ipſum Caſſellis eſſem: ex ſemine iſtic collecto, etiam mihi nata eſt planta, quæ anno M.D.LXXXVIII. & florem dedit, & ſemen, quod deinde Francofurtum terræ commiſſum, ſtatim illo ipſo anno Viennæ pervenit; mihi quidem non enata, ſed alij quibus communicaveram, ſaltem aliquot ſtirpes habuerunt.

DICITVR porro Græcis forte ... Latinis Militaris: nullum vulgare nomen ſcio. Poterat etiam ad ... Dioſcoridis referri, quod luteo flore inveniri ſcribit. Verum parum refert, utrum Achilleam, an Stratiotem appellaveris, cum utriuſque facultates ſint ſimiles, & ad vulnera ſanguinemque ... abſcondendum. Nomina.

MILLEFOLIVM ALPINVM. CAP. XXIX.

ELEGANS eſt etiam hæc plantula, dodrantalem five palmarem altitudinem non excedens, multis folijs circa radicem ſtratis, tenuiſſime incisis, & velut e multis minutiſſimis alatis foliolis conſtantibus, nonnihil incanis: candicant etiam cauliculi, ſatis craſſi, hujuſmodi folijs, ſed minoribus, & tenuius incisis obſiti: umbella florum denſa, qualis in vulgari Millefolio, ſed dilutiore rubro colore five carneo niteſcens: radix vix a vulgari differt, fibroſa admodum, & ſumma tellure ſerpens. Millefolium alpinum.

Sponte provenit in Iudenberg & Sneal, iis circa alpibus, atque flores profert Auguſto; natales nec aura ſint illius varietatis, an cultura, neſcio. Natales.

Ab iis tamen differre virum illum, quod in horto alebamus, cum in Belgica viverem, ſimili propemodum flore. Sed & vulgarem circa publicas vias & ſemitas naſcentem ſarpiſſime flores variantem obſervavi, ut plurimum enim ſpuria: flore nonnihil niveo præter diſcum medium, qui eæteris colons eſt, conſpicerentur, alias ſuaverubentem ... interutrumque colons. Millefolium flore vario.

Millefolium rubro colore.

ANNO autem M.D.XC. multæ Millefolij plantæ, quas in ſuo horto ſeverat præcedenti Autumno Ioannes Mylerus Francofurtenſis Pharmacopæus, natæ folijs vulgari tenuioribus, quæ flores dederunt, non quales expectabat, videlicet flavos (nam eo loco flavifloris ſemen terræ commiſerat mihi referebat) ſed rubri coloris, dum primum apetiebant, tiegantiſſimi, qui paulatim ſenefcere florem elanguefcebat, & ubi dein carnei quodammodo coloris evadebat. Hallucinatus ſcimus credo, mihi non liquet. Sin minus, mira ſane metamorphoſis. Millefolium rubrum.

CHRYSANTHEMVM VALENTINVM.
CAP. XXX.

VNico plerumque aſſurgit Chryſanthemum valentinum caule, pedali, raro amptiore, ramoſo: folijs ſecundum radicem amcroſis, deinde tenuiore & ſine ordine per caulem ſparſis, & ulcifidis, Stratiotis paulo ante deſcriptæ foliis pæne ſimilibus, lanuginoſis & incanis, quidem quæ ... ad acidula ſunt: flos in ſingulis ramulis unicus, luteus, vel potius aureo ſplendore fulgens, quique re ... mukis annis nativum colorem etiam retinet, medio Anthemidis diſco ſive umbilico major, & ſine radiatis in ambitu naſcentibus foliolis, odoris non injucundi: radix unica candicans, firma, ... Chryſanthemum Valentinum.

Valentino regno ad arvorum margines juxta ſemitas repertum eruebam, nuſquam alibi mihi obſervatum. Florebat iſtic Martio. Locus.

Chryſanthemum Valentinum.

Buphthalmum vulg. Chryſant. cong.

Nomina. CHRYSANTHEMVM vocabant Valentinæ urbis peritiores, longè tamen a Dioſcoridis χρυσανθέμου diverſum, & ad Buphthalmi genera, meo judicio, potius referendum, niſi quis ἀχιλλείου ſpeciem eſſe malit. Matthioli tamen Chryſanthemum eſſe nego, licet id ſentiat, qui magnam illam Plantarum hiſtoriam Lugduni nuper concinnavit: ſed ipſum valde falli deprehendet, qui diligentius utriuſque hiſtoriam contulerit. Et ſane, magis ſolidum judicium in illo viro interdum deſidero.

Buphthalmo Narbonenſi differt. Ceterum hæc planta (ni fallor) plurimum a Buphthalmo Narbonenſis Provinciæ, mihi ſane non ignoto, differt: nam id obſervare & eruere memini apud oppidum illud vulgo Aquas mortuas nuncupatum, nonnulli Foſſam Marianam (quam aptè, neſcio) appellant. Habet autem id Buphthalmum radiatos flores Anthemidi vulgari ſimiles, majores, medium orbem luteum cingentibus luteis foliis, plerumque ſubtus nonnihil purpuraſcentibus ſive ſubrubentibus. Chryſanthemum Valentinum nulla radiata in orbis ambitu habet folia, ſed iis caret, non ſecus ac Chamæmelum illud Chryſanthemum odoratum: verùm Valentinum majoribus capitibus eſt prædicto, non tamen adeo protuberantibus, ut animadvertere potuerunt, qui ejus deſcriptionem minus oſcitanter legerint, & iconem eam affabre ad vivum expreſſam a peritiſſimo pictore, cum illa exactius contulerint. Præterea Chryſanthemum Valentinum recto aſſurgit caule, & tenuiora habet folia: Buphthalmi vero Narbonenſis ramuli plerumque humifuſi, & craſſiora ſunt folia.

Buphthalmũ vulgare, & eius natales. QVIA porro in Buphthalmi mentionem incidimus, vulgare illud Buphthalmum cubitalibus & amplioribus virgis, alatis foliis, flore Chamæmelino majore, luteo, illuſtri & fulgente, frequentiſſimum eſt per univerſam Pannoniam, citra illam quæ ultra Dravum flumen eſt, atque tota Auſtria; memini etiam id agris, & ſecundum vias paſſim naſci Moguntiaco agro obſervare, cum Viennam a Cæſare Maximiliano accerſitus, proficiſcerer: anno autem M.D.LXXIX. in Belgicam negociorum quorundam cauſſa ablegatus, in ea Moravia, Bohemiæque parte qua mihi iter faciendum fuit, & Norimbergenſi agro etiam conſpiciebam.

Nomina. Rhizotomi Auſtriaci & mulierculæ [illegible] vocant: Ungari [illegible]. Croatæ (quorum uxores eam ſtirpem certis utiliter vulneribus imponere aſſeverant) [illegible], hoc eſt ſerpentis herbam appellant.

Buphthalmũ Dodonæi, Pſeudohelleborũ Matthioli. NEC minus vulgare eſt in omnibus apricis collibus, & ſiccioribus utriuſque Pannoniæ & Auſtriæ gramineis campis Buphthalmum Dodonæi, ſive Pſeudohelleborum Matthioli, ſo-

Tanacetum inodorum I.

Tanacetum inodorum II.

Natales. Provenit ſ[illegible] montibus utriuſque Pannoniæ & Auſtriæ, montibus humidioribus & ſilvis cæduis: u[illegible]t Maio & [illegible] flores interdum producit ſequente Auguſto.

Tanacetum inodorum alter. Exit etiam iiſdem locis aliud genus, floris magnitudine ab hoc diverſum, qui Matricariæ vulgaris, aut Cotulæ fœtidę florem non excedit: folia etiam [illegible] minus elegantia, petiolo breviore cauli inhærentia, nullo etiam odore niſi herbaceo prædita: nullum ſemen obſervavi: radix alteri ſimilis, obliqua & multis fibris donata.

Nomina. An aliquo nomine vulgari prædita ſit hæc planta, mihi non eſt compertum, Tanacetum autem inodorum nũcupavi, quia cùm nullus manifeſtus odor in illo percipiatur, folia vulgari Tanaceto quodammodo ſimilia habeat. Secundo a[illegible]antam apud Valentiam Allobrogum obſervaſſe videtur Lobelius.

ABSINTHIVM. CAP. XXXVIII.

Abſinthij varietas. PASSIM naſcitur per Vngariam, Auſtriam, & reliquas vicinas Provincias Abſinthium illud majus, quod reliquæ, ut opinor, Europæ familiare eſt. Inveniuntur tamen alia quędam ejus genera, nulli adhuc Scriptori, ante meum in Auſtriam adventum cognita, quæ hoc capite deſcribere eſt animus, priùs obiter mentione factâ nonnullorum, quæ vel ſponte illic naſcuntur, vel aliunde delecta, in hortis colebantur.

SPONTE autem creſcit non ſolùm multis Pannoniæ, ſed etiã Auſtriæ locis, atque Vienneſi agro, cùm in ſaxoſis, tum aridis & ſalebroſis gramineiſq; deſertis agris, Abſinthium illud tenuifolium Abrotoni ferè folijs, vulgo Romanum vel Ponticum nuncupatũ, mira fœcunditate radicibus fibroſis & latè ſerpentibus ſeſe propagans, cujus duo videntur eſſe genera.
1. Vnum incanum, & quo potiſſimum Viennenſes officinæ utuntur, tanquam nobiliore, ita enim ſibi perſuadent.
2. Alterum purpuraſcentes habet cauliculos, folia non adeò incana, ſed interna parte viridiora: id à nonnullis ſuperiori præfertur: exiſtimo tamen natales iſtam varietatem duntaxat parere. Incano congener eſſe videtur, quod Boiſot ex Italia acceptum communicabat anno M D XC. & valde celebrabat.

Vngari, cùm hoc, tum vulgare majus, communi nom[illegible]

Abſinthium marin. Patavin. In cultiſſimo ſuo horto alebat C. V. Ioannes Aicholtzius Medicus & Profeſſor Viẽnenſis, duo Abſinthij marini genera, ut è diverſis locis advecta, ſic totâ facie inter ſe diſcrepantia. CHAM^E-

CHAMÆDRYS, CAP. XLVI.

TEVCRIVM [illegible] Chamædryn [illegible] Teucrium [illegible] Chamædryn Teucrium appellant, propterea quia in- [illegible] *Teucri & Chamædrys appellatio.*

CHAMÆDRYS autem, de qua nobis nunc ſermo, quæ fere omnibus nota jam eſt [illegible] regionibus eſt [illegible]: frequentiſſima Pannoniæ, Auſtriæ, vicinæque Provinciæ: [illegible] puulo [illegible] ſunt [illegible], qui [illegible] ſed & in aſperis, ſecundum publicas vias, gramineis locis naſcitur. Duorum porro generum.

Chamædrys vulgaris, ſive maior. — Chamædrys minor, ſive [illegible].

VERA, vegetior & uberior, longioribus, craſſioribuſque virgis, amplioribus & ſucculentioribus folijs, long[illegible] [illegible] & dilutius [illegible] florentibus floribus. *Maior.*

ALTERA, minor, gracilioribus virgis, minoribus folijs, breviore florum coma & minoribus [illegible] rubentibus floribus: vulgatior etiam, ex qua videlicet in plerisque Angliæ locis areolæ in hortis ſpatia claudontur. *Minor.*

Eam candido flore [illegible], apud Monaſterium Holtzkirche, infra Wirtzburgum, [illegible] Nonbergam [illegible] anno M. D. LXXIX. proficiſcerer, menſe Iulio obſervaram [illegible] eruebam. *Chamædrys minor albo flore.*

Omnium autem radix [illegible], [illegible] quæ humidi [illegible], fibras [illegible].

CETERVM elegans aliud genus reperitur, quod dodrantalibus interdum ſerpit ramulis, colore ex fuſco rubentibus, duris, lignoſis, folijs [illegible] Chamædryos [illegible] foliorum [illegible], ſed paulo rotundioribus, & ſubtus incanis, guſtu admodum [illegible]: Flores illi in oblongis pediculis ſingulis, albi, ſex, ut plurimum, [illegible] aliquando [illegible] folijs conſtantes, Ciſti feminæ florum penè magnitudine, multis ſtaminibus in medio præditi, inodori: quibus [illegible] ſuccedit ſemen [illegible] fere Caryophy[illegible] [illegible] aureo flore [illegible]: radix dura, lignoſa, in diverſa tendens, & [illegible] fibris [illegible] interdum [illegible] procumbentes & ſparſi [illegible] *Chamædrys alpina.*

Chamaedrys quorundam ſilveſtris,

Chamxirp /ilvejliit.

pendentia, colore viridi dilutiore prædita, amaro & acri ſapore: ex alarum ſinu rami etiam prodeunt foliati, qui ex lateribus pediculos protrudunt, floribus [illegible] ferme modo congeſtis, ornatos, coloris rubeſcentis, nullius odoris: deinde ſemi[illegible] [illegible]la, angu-loſa, hirſuta, cnici fere interdum magnitudine, ſtellatâ coronâ in[illegible] [illegible]nimi di-giti craſſitudinem nonnumquam æquat, longa, nigricans, ſtatim [illegible] [illegible]te quamtum fibras ſatis magnas ſpargens, & ſubinde ex lateribus novos caules producens.

Scabioſa la-tif. 4. in purp. flo. ſive 2.2.2. QVARTA magnitudine illam ſuperat, majoraque & nigriora habet folia, purpuraſcen-tem ex nigro florem: in reliquis ſatis conveniunt.

Natales. Provenit utraque in omnibus fere cæduis ſilvis, juxta ſepes, locisque umbroſis per uni-verſam Pannoniam, Auſtriamque infra Aniſum. Floret Maio & Iunio, quo tempore ſe-men plerumque etiam matureſcit.

Scabioſa vul-tana, ſive V. QVINA aut ſena habet Quintum genus folia, humi ſparſa, Scabioſæ vulgatiori, & in-ter ſegetes naſcenti ferè ſimilia, minime quidem villis obſita, ſed carnoſa admodum & ve-noſa, præ viriditate quodammodo ſplendentia, aliquot crenis inciſa, ſapore ſi manducen-tur lento, & gummoſo, deinde aliquantulum acri: ex horum medio creſcit palmaris caulis, aliquando paulò amplior, gracilis, teretiuſculus [illegible]

cauli[illegible] [illegible]is qu[illegible] [illegible]-ſtantibus congeſtum, quorum exteriores majores ſunt, eleganti colore ex [illegible] purpu-raſcente præditi, villis quibuſdam nigris ſingulorum floſcul[illegible] [illegible]: ra-dix longa, nigra, craſſiuſculis albis fibris capillata.

Natales. Invenitur in ſummis Snéberg & Snealben Auſtriæ & Stiriæ alpium jugis in tenui grami-ne naſcens, ubi floret Auguſto: ſimiliter in depreſſioribus nudiſque circa Viennam collium ſupercilijs, ubi Iunio & Iulio floribus onuſtum legebam.

Scabioſa In-dica, ſive VI. CVBITALI aut ampliore aſſurgit Sexta ſcabioſa caule, ſatis gracili qui in multos te-nues ramos dividitur, extimâ parte veluti umbellam floſculorum in ca[illegible] [illegible]c-ſtantes, exterioribus floſculis, [illegible] quinque lacinias diviſis, quemadmodum & [illegible] [illegible]tum, & ad purpureu[illegible] [illegible]rum generibus, ſemina, in caput morum forma congeſta. Fo[illegible] quæ conſpiciuntur in [illegible] viridiora ta-men, & ſplenden[illegible] amplectentia.

bam, nemini adhuc deſcriptum fuiſſe arbitror. Eius Hiſtoriam hoc capite dabimus: ſed legitimi iconem præponere volui, [illegible] collatione [illegible] cilius agnoſci poſſit quæ ſit differentia.

Marrubium alterum Pannonicum.

MVLTOS verò ex eadem radice profert Pannonicum caules cubitales interdum quadrangulos, firmos, nodoſos, in plures ramos diviſos: folia ad ſingulos nodos bina, [illegible] ſitu naſcentia, duas uncias longa, unam lata, in ambitu ſerrata, legitimo Marrubio pænè ſimilia, ſed anguſtiora, nec adeò orbiculata, imò paulatim à petiolo in latitudinem excreſcentia, ſenſimque in mucronem deſinentia, prorſus incana, non in[illegible] tudinis tamen manifeſtæ, & acrimoniæ: flores candidi, marrubij floribus ſimiles, in mollibus & caneſcentibus caliculis naſcentes, [illegible] que ramos ambiunt: radice cum legitimo convenit, quæ ſingulis annis novos ſtolones [illegible]

A[illegible] mar[illegible] liberæ) foſſis naſcatur. Nullo tamen, quod ſciam, apud illos [illegible] Floret Iulio.

Natum id apud Belgas, non Hiſpano ſemine (nullam [illegible] ſimilem plantam in Hiſpania videre memini) ſed Auſtriaco.

An porrò, Marva lantuſa Serapionis, cujus meminit lib. de Simpl. Med. ex plátis, c. 295?

ALYSSVM GALENI. CAT. XXI.

E[illegible] Galeni nomine circumferuntur plantis, nullam prorſus inveni, quæ [illegible] et. Sed [illegible] mihi videtur [illegible] lum dubitationi locum amplius relinqui poſſe exiſtimem.

Alyſſum Galeni.

PEDALI verò eſt altitudine, quadrangulo caule, ſtatim à radice in multos ramos diviſo, caneſcentes omnino, & veluti tomento obductos, circa quos, ad ſingula genicula bina folia contrarijs inter ſe pediculis ſemper enaſcuntur Marrubio ſimilia, breviora tamen magiſque criſpa & incana, inodora, amara; calices per intervalla verticillatim ramos ambiunt, quinque plerumque aculeis horridi [illegible] candidi, è quibus Marrubij flos exilit, ſed colore diverſus nempe purpuraſcens: ſemen in aculeatis vaſculis ſubrufum, Marrubiano ſemini par: radix dura, multifida, vivâxne an annua, iſthic obſervare non potui. Sed ſemine quod ex Hiſpanijs attuli, apud meos Belgas nata, [illegible] ſemine [illegible]

Alyſſum Galeni.

Lamium Pannonic. exoticum.

Lamium Pannonic. III.

Hanc ſtirpem primùm florentem obſervabam Viennæ Auſtriæ in meo hortulo ad parietem natam neſcio quo [illegible] anno aliquot plantæ, quæ demum al-[illegible] à Iunio [illegible] dicitur perit. nonnunquam tamen ex radice etiam re[illegible]

Si quis me hanc plantam minus aptè inter Lamij genera repoſuiſſe putat, liberum illi eſto, vel ad Galeopſin, vel aliam quampiam congenerem referre.

III. Lamium III. SED & ad Lamium fortè referri poſſit elegans hæc planta, quæ ex radice [illegible] (ut mihi relatum) urticæ ſimili, plures profert cauliculos pedales, teretes, quad[illegible] fre-quentibus nodis cinctos, ad quos alternatim bina contrario ſitu in longis pediculis æquali-ter naſcuntur folia, Lamio, ſive Vrticæ non mordaci [illegible] vulgari & ferulæ [illegible] flore eſt, ſimilia, proximius tamen ad Hederæ terre[illegible] tia, inter quæ caliculi terni, quaterni aut quini, [illegible] flores, hederæ terreſtris vulga-ris floribus forma proximos, hiantes, nulla ſupe[illegible] imminente, [illegible] latiuſculo dum-taxat folio reflexo, mixtis coloribus cæruleo, albo [illegible] purpuraſcente inſ[illegible]

Naſcentem [illegible] videre contigit: ſed iconem ſuis coloribus [illegible] anno M. D. LXXIX. Ill. Dn. de Batthyan: mu[illegible] tamen & ſine radi-ce, uti hic expreſſa eſt. Aliquot poſt annis radicem urticæ ſimilem [illegible] intellexi.

BETONICA. CAP. XXIIII.

Betonicæ vulgaris duorum generum. NVLLI ſunt in Pannoniâ, Auſtriâ, vicin[iſque Provincijs montes herboſi, nullæ ſylvæ], nullave prata, in quibus non abundant [illegible] flore rubro ſive purpureo: quæ duorum generum eſt. Vna [illegible] maturius florere. Altera [illegible] mollior, & magis [illegible] etiam [illegible] flores ſuis [illegible] terea hæc poſtrema [illegible] majorem altitudinem ex-creſcere, quàm [illegible] excolatur. [illegible] eo utraque ſponte naſcatur, vel eadem pulvino [illegible]

Betonica albo flore. VERVM illic mihi obſervat[illegible] in ambitu ſerrata, Betonicæ vu[illegible] ditate nitentia, ſed dilutiora: quadrangulares caule[illegible] us & villoſa, non adeo tamen [illegible] geniculati, [illegible] ex illorum immediò excurrit.

Cantabrica quorundam.

GRÆCVM nomen huic plantæ eſt φύλλον & ἐλαιόφυλλον: Latinum Phyllum: & prius quidem genus ἀρρενογόνον, alterum θηλυγόνον Theophraſto: contra verò Dioſcoridi, ut diximus. Hiſpani in agro Salmanticenſi utramque vocabant Yerva de Santa Maria, Granatenſes verò ... Nomina.

Arrhenogoni potu maſculi ſexus fieri partum, ut Thelygoni fœminei, Theophraſtus & Dioſcorides ſcriptum reliquere. Salmanticenſes autem docebant, quibuſcumque animalibus à cane rabido demorſis propinabant, magno, ut inquiebant, ſucceſſu. Granatenſibus Mauricis præſertim, ad muliebres morbos, frequentiſſimè uſurpatur. Facultates.

CANTABRICA quorundam.
CAP. XXXIII.

MVLTIS tenuibus, adeoque junceis ex eadem radice prodeuntibus ramulis, præ-dita eſt hæc planta, in terram procumbentibus, pedalibus, interdum cubitalis longitudinis, duris, flexibilibus tamen, lanuginoſis, qui in ſummo aliquot flores proferunt purpuraſcentes, inodoros, convolvoli æmulos, minores, unico folio conflatos, ita implicato ut quinque videantur, horum oris in eorundem angulos deſinentibus, & dum clauduntur, complicatis: folia per ramulos nullo ordine ſunt ſparſa, longa, anguſta, tenui lanugine obducta, ſalicis folijs haud abſimilia, gummoſa ſi quis mordeat, & aliquantulum amara: radix candicans, ſingularis, inſi-na parte ramoſa eſt, & vivax. Cantabrica.

Frequens eſt multis Hiſpaniæ & Luſitaniæ locis, ut & alijs in Gallia Narbonenſi obſervavi. Poſtea illam etiam inveniebam in colle Thermarum urbi, vulgo Baden, imminenti, quarto ab urbe Vienna Auſtriaca milliari. Floret Maio & Iunio, nonnumquam & Autumno. Apud Belgas, (ex ſemine ex Hiſpanijs accepto nata) non niſi Iulio & Auguſto, ubi nullum ſemen perficere obſervabamus, tametſi magna diligentia teſtaceis conſervatam: calidioribus autem locis, in quibus ſponte naſcitur, ſemen fert in vaſculis convolvoli non diſsimilibus, minoribus tamen, fuſcum, angulofum, inæquale. Natales.

SVNT qui hanc Cantabricam Plinio lib. XXV. cap. VIII. appellatam putent. In eadem, inquit, Hiſpania inventa eſt Cantabrica per Divi Auguſti tempora à Cantabris reperta. Naſcitur ubique, caule junceo, pedali, in quo floſculi oblongi, velut calathi: in his ſemen perquam minutum. Et eodem capite ejus, cum pice amno & radice Ariſtolochiæ, drachmam in vini hemina ſi pro ſe bibendam jubet, contra ſerpentum morſus. Cantabrica Plinij.

CONVOLVVLVS Altheæ folio.

Arisarum angustifolium.

Arisarum angustifolium.

Natalis.

Ἀρίσαρον, Arisarum, & Aris.

Facultates.

Latifolium in collibus Lusitaniæ frequens, [illegible] in sepibus & juxta vias: ubi Novembri & Decembri floribus suis præditum eruebam, atque etiam nonnullis Bæticæ locis solo fœcundo & pingui, secundum publicas vias [illegible], ubi Ianuario & Februario. Alterum autem illius genus umbrosis locis nascebatur ad Olearum radices pone urbem Vlyssiponem. Inde in Belgicam translata, nunquam [illegible] Limonis magna diligentia & cura, fictilibus, ut pleraque aliæ plantæ ex ferventioribus regionibus delatæ asservantur, pereunt.

Angustifolium sponte nascens non vidi, sed ad nos peregre datum, in hortis alebamus, cum in Belgio, tum Viennæ Austriæ: florebat Vere: Iulio & Augusto sine foliis fructum proferebat. Vivax magis hoc est, neque tanta cura indiget. Illud anno M.D.XCII. accipiebam ab Imperato, Neapoli missum.

GRÆCVM hujus plantæ nomen est ἀρίσαρον, Latinum, Arisarum: sed & Aris Plinio dicitur, qui eam duplicem facit, [illegible] [illegible]. Lusitanis [illegible] dicebatur, quod nomen etiam Aro commune est. Amatus Lusitanus [illegible] fraterculos Hispanis appellari ait, quia forte, ejus flos monachalem cucullum æmulatur.

ILLIVS vires præter [illegible] Dioscorides [illegible] [illegible] contra pestis [illegible] non possum [illegible] tempore [illegible] Arisarum non Belgicæ fuit cognitum, anno demum M.D.XCV. quo illud [illegible] ad amicos [illegible] mense Ianuario [illegible] Latifolium [illegible] Hispania, Angustifolium vero [illegible] ex Italia primum accipiebamus.

ARVM BYZANTINVM.

CAP. LIX.

Arum Byzantinum.

CVM ante aliquot annos aliquot Ari tubera cum aliis rebus [illegible] Constantinopoli allatis, Viennæ acciperem, [illegible] ad Ari, aut Arisari genus referrem [illegible] inde cum folia proferre cœpit, primis [illegible] annis pro Angustifolio habui, [illegible] [illegible] foliorum [illegible] [illegible] nam ea conspiciebam [illegible] Arisari latifolii folia accedentia, nec [illegible] [illegible] potius orbicularem figuram referentia: nec radicem valde [illegible] postquam ea augeri cœpit, digitalem longitudinem adquisivit, multis [illegible] inæqualem, & uncialem aut ampliore crassitudinem, multasque proles adnatas [illegible] [illegible] longe majora, ad Ari foliorum formam plurimum accedentia, [illegible] minus splendentia superne & inferne: cujus autem florem [illegible] [illegible] conspicere [illegible] M.D.XCVI.

SOL.ASI porTdgenmtilu 1 quod lethalcvocanr, &Theophrafti Mandragorascflc, a quibusdam non inepte forte cenfetur, apud vulgus Italorum *Bella donna* nomen obtinuit, *rn Tbttpk,*

Solanum lethale. Bella donna. Chriſtophoriana.

Nomina. apud Germanos *Dollwurtz* & *Dolkraut*, apud Belgas *Groote nachtſcaye* & *Belle donne*. multis Pan-
Natales. noniæ & Auſtriæ ſilvoſis montibus ſponte provenit: nuſquam verò frequentius unquam videre memini, quàm in ſilva illa Zollonok Ill. Dn. de Batthyan urbi vicina, tumulo quodam, qui ab urbe circiter germanicum m[illegible]lliare abeſt.

Solan. leth. duo genera. Id autem duorum generum eſſe dep[illegible]ditur. Vnu[illegible] amplioribus [illegible] diculo pendentibus, flore majore. Al[illegible]m minoribus [illegible] & magis a[illegible] culo fultis, minore flore. De Altero S[illegible]o manico, conſule Fabium Columnam, & meu[m] in caput de Datura Chriſt. à Coſta, ſcholia.

Chriſtophoriana. Actæa Plinij. FREQVENS eſt & pleriſque earundem Provinciarum ſilvis quæ vulgo Chriſtophorianæ nomen obtinuit, & à quibuſdam Actæa Plinij eſſe cenſetur, cujus meminit cap. VII. lib. XXVII. & gravi foliorum odore, caulibus aſperis, geniculatis ſemine nigro, ut Hederæ, baccis mollibus naſci aſſerit in opacis & aſperis [illegible] pleno interno-
Aconitum bacciferum. ribus feminarum morbis. Nonnulli aconitum bacciferum nominant, quia non minus exitialis ac noxia fertur, quàm Aconitum.

MANDRAGORAS. CAP. III.

Mandragoræ femina. MANDRAGORÆ Feminæ folia anguſtiora, minora, & nigriora ſunt quàm Maris, magis etiam rugoſa, criſpaque, viroſa & graveolentia, & humi expanſa: inter quæ longi pediculi exiliunt per terram ſtrati, quibus inſident flores, Melopeponum floribus forma fere ſimiles, coloris ex cæruleo purpuraſcentis: quibus ſuccedunt fructus, non turbinati inſtar pyri, ſed rotundi, Veſicariæ fructu triplo majores, initio virides, maturitate palleſcentem ex luteo colorem adquirentes, [illegible] ſucci pleni, ſemine abundantes plano, ut maris fructus, ſed minore nigrioreque: [illegible] alem aut ampliorem longitudinem æquat, interdum bifida, intus alba, foris vero [illegible] aliquot fibræ adnaſcuntur.

Natales. Supra Gades, itinere Hiſpalenſi, non proc[illegible] Xerez de la frontera dicta, ad arvorum margines quæ ſecundum flumina ſita ſunt [illegible] & quibuſdam alijs Bæticæ locis ubi [illegible] florêtem obſervabam initio [illegible] mo quinto ſupra milleſimum & [illegible] gentefimum: & paulo poſt, [illegible] Calpen & Malacam, nimirum toto [illegible] maritimo tractu ſupra fretum Herculeum ad Meridiem converſo, & valde ap[illegible] qui in mediterraneis, uſque a[illegible] communia ictie producuntur. In Belgio nunquam videre

Mandragora femina.

PAPAV»*

PAPAVER CORNICVLATVM. CAP. XI.

PRÆTER vulgare corniculatum Papaver quod flavo eſt flore, & omnibus fere locis c[illegible] [illegible] duo alia genera obſervabam [illegible] [illegible] Plantarum Hiſtoriarum ſcriptoribus nondum prodita.

Papaver corniculatum flavo fl. Papaver corn. phœniceo fl.

VNVM folio eſt Erucæ foliorum inſtar laciniato & alte inciſo, vulgari minore, tenuiore, non adeo incano, ſed hirſuto: caules interdum vulgari non minores, teneriores tamen & graciliores, procumbentes in terram: flores quatuor etiam foliis conſtantes, minores, [illegible] intenſo colore rubent, & illi primum ſunt, quos planta florere incipiens producit: interdum languidiore & quodam nitido opali ritu colore, mediis ſubluteis: adhæc [illegible] tendentibus, qualis fere in altero floris genere quod vulgo herbariorum Adonis flos dicitur, nimirum quando mediam ætatem ſuperat planta, jam deficere incipit, & minutus illa in caule & foliis dilabi: alioqui ſi quis vigentem & flores primum producentem plantam conſideret, deinde jam ad[illegible] ultam & ſeneſcentem, ex florum colore & caulis, ramorum, foliorum [illegible] facile quis diverſas eſſe ſtirpes ſibi perſuaderet, atque ut verum fatear: [illegible] impoſuit: [illegible] floribus ſuccedunt cornicula [illegible] quibus inſident latiuſcula quædam veluti opercula vel capita, ſemen in his nigrum, ru[illegible] fum, Papavere majus: radix longa eſt, alba, craſſa, & in ramos interdum diviſa, quæ [illegible] perennis non eſt, ſed plerumque prolato ſemine perire ſequente hieme ſolet.

Naſcitur agro Salmanticenſi ſecundum vias & agrorum marginibus, ubi florebat Iunio, ſemen autem Iulio proferebat. In Belgica ſatum nonniſi Auguſto & Septembri florere voluit, interdum etiam ſemen, nec niſi altero a ſatione anno, ut plurimum. Viennenſi etiam agro, & per Moraviam atque Bohemiam ſponte naſcens etiam obſervabam & flores proferens Iunio menſe, in arvis avena conſitis, præſertim ſecundum vias publicas. Omnibus autem in locis croceum in illa planta ſuccum videre mihi non contigit; tametſi quidam [illegible] ſimili ſucco turgere eam plantam putent.

ALTERI folia ſunt multo minora, teneriora, valde minutim diviſa, non candicantia, ſed viridia: cauliculi tenelli, ſubhirti: flos ſuperiori non minor, quatuor etiam foliis conſtans, coloris ex purpureo cæruleo ſaturati, & nigræ violæ prope æmuli, fugax admodum, [illegible] aureæ exiſtit: huic ſuccedunt cornicula digitali duntaxat [illegible] [illegible] [illegible] ſemen valde exile, coloris ex cinereo nigricantis: radix tenuis eſt [illegible] nec ſupra annuum ſpatium perdurat.

Geranium III. βατραχοειδὲς majus.

Geran. IV. bulboſum Pennæi.

ta, quinis urriculis ad eorum baſim turgentibus & ſemen continentibus, quod maturitate exilit, ſationum Geraniorum more: radix ſuperiori ſeré reſpondet, & ſummo lure in plures racemos, inque nonnulla capita excubcrat, quæ fibras etiam agentu, ſingulis annis augentur.

Natales. Creſcit hoc in Pannonicis Stiriacisque alpibus, nuſquam tamen abundantius, quam ſupra Gammgam, in illo aſcenſu ex Hercnalben jugo ad ſublimes ſcopulos Durrenibin. In quibus floret Iulio & Auguſto, in hortis autem Maio.

III. Geran. batrach. primũ. Natales. * GERANIVM autem illud Batrachiodes majus, cæruleo flore, quod in Belgicis hortis alebator, ſponte provenit abunde in pratis ad Corenncuburg non procul a Danubio, binis ſupra Viennam millianbus, aliiſque Auſtriæ pratis, tum etiam maxima copia in pratis Brunnæ Moraviæ, ibi vicinis, atque etiam Boiemiæ, non procul ab oppido Wcrawn, tribus millianbus a Praga diſtiti, VL cini(?) Francofurto pratis & horcis graminconſicis.

IIII. QVARTI, quod foliorum ſimilitudine Secundum refert, iconem mihi anno M.D.XXXI. communicavit Londini C. V. Thomas Pennæus ejus urbis Medicus, cum hac deſcriptione.

Geran. tuberoſ. Pennæi. Geranium bulboſum radicem habet ex multis parvis & longis bulbis conſtantem, ſuſum mittit fibram, quæ cubiti item geniculatum juxta radicem & genicula parva habentem: e ſingulis geniculis duo folia longiuſculis pediculis nitentia, in quinque præcipuas partes diſſecta, quarum ſingulæ in ambitu inæquali incifæ runt, ſingulis ſingulis, juxta foliorum exortum quinque foliola mucronata exoriuntur: flores in ſummis ramulis conjugatim parvis pediculis inſidentes, ſex quinque foliis conſtantes, colore purpureo rubeſcentes, Geranij cærulei floribus ſimiles, ſed paulo minores.

Natales. In Dania provenit agro Hathicnſi unde doctiſſimus ac diligentiſſimus Turnerus Medicus Anglus attulit & mihi dono dedit.

V. Geran. nodoſum Platani. ALIQVOT a radice promit Quintum folia latis firma, in quinque lacinias alte diviſa, inter quæ bini aut terni cauleſ aſſurgunt, graciles, ex fuſco purpuraſcentes, geniculati, nodoſi, binaad ſingulos nodos ſeu aniculos ferentes folia ex adverſo ſita, in tres duntaxat lacinias ſecta, deinde e medijs alis longiores pediculos, in quibus bini ſemper flores conjugatim naſcentes, quinque folij bifidis (ut malvacei) conſtantes, purpurei coloris, & quibuſdam ſaturatioribus venis diſtincti, protuberant in medio rubro umbone, lunim faſtigio in quinque partes fiſſo, quin longiuſculum deinde roſtellum tranſit, quod inferna parte in tumentibus ſeminulis ſemen continet, maturum, ut in reliquis generibus ſpecin

Quinquefolium Plinij.

Natural. Hist. describit. Quinquefolium illi ignotum est, cum etiam fraga gignendo commendetur. Vulgaris certe fragaria terna duntaxat folia habet, nec verisimile est ejus stirpis formam a Plinij tempore mutatam, quare ad eam plantam, cujus Plinius jam dicto loco meminit, minimè referri poſſe arbitror: hujus verò fructus eſui nō aptus, facit, ut Quinquefolium Plinij eſſe, noſtram hoc quintum, aſſerere non auſim. Niſi forte eo loco Plinius lapſus ſit, & Fragariæ hiſtoriam cum Pentaphyllo confuderit; quæ enim poſtea addit, ad Quinquefolium vulgare procul dubio pertinent. Vtut ſit, hoc meum Pentaphyllon fragiferum tantiſper appellabo, donec aliud aptius nomen mihi ab [illegible],

Pentaphyl. ſupin. Potentillæ facie.

Anſerina Tragi.

Non verò porro exiſtimare velim, hoc meum idem eſſe cum Pentaphyllo ſupino Tormentillæ facie, cujus iconem & hiſtoriam Lobelius in ſuis Obſervationibus exhibet; nam illud etiam frequens eſt agro Vienneſi in extremis pratorum marginibus circa ſilvas; & nonnihil affinitatis cum Anſerina Tragi, ſeu Potentilla Fuchſij habere mihi videtur, quàm cum Pentaphyllo, tametſi neque incana ſit planta, neque repat, ſed ſurſum duntaxat diffuſa ſit.

MVLTAS facultates tribuunt Veteres Quinquefolio, quas ex ipſorum libris percipere poterunt ſtudioſi. At verò quas hoc capite deſcripſi ſtirpes ſimilibus viribus [illegible], omnes tamen adſtrictionis participes, ex qua [illegible] colligere poſſumus [illegible] in quibuſdam, cum Quinquefolij facultatibus convenire.

HEPTAPHYLLON.

CAP. XIII.

Alchimilla vulgaris.

Heptaphyllon.

BINI aut terni huic plantæ [illegible] ab radice exeunt teretes, firmi, pedales, plurimum aliquot geniculis donati, cum quibus etiam folia, ſex, ſeptem aut pluribus [illegible] viſuris inciſa ad pediculum uſque, tota incana, & veluti argentea, adſtringentis & reſiccantis, ut & tota planta, guſtus: ex geniculis ſimilia etiam prodeunt folia, (minora: circa extremos & ſummos ramulos glomeratim naſcuntur numeroſi floſculi, Oleæ floribus pene ſimiles, parvi, [illegible] albi: radix illi ſatis craſſa, foris nigricans, dodrantalis.

Locus.

Provenit in Pyrenæis jugis apud Cantabros: memini & ante in Allobrogum Alpibus ſerius florentem videre, cum apud Cantabros Maio floreat.

Quo nomine aut Veteribus aut Neotericis, aut etiam a vulgo appelletur hæc planta, mihi incompertum eſt. Heptaphylli nomenclaturam indidi, quod plerumque [illegible] ex eodem pediculo dependentibus, aut folio ſeptifariam vel interdum [illegible] lacinias diviſo conſtet. Hiſtoria illa Vniverſalis Plantarum, quæ poſt mearum Hiſpanicarum Obſervationum vulgationem in lucem prodijt, Tormentillam candidam vocat. Ego id Alch[illegible]

Tormentilla candida.

HOLOSTEVM SALMANTICENSE.

CAP. XV.

NON ignoru varias oftcndi ftirpes HoicSea, five Holoftio, quacuni u lam ad h f f r puto,quæ Holoſtij variedefcnpcionicxadeco^emat. Qua: tame inter rcliquas proxmnusvctciu dtfcnpt) niaccedanc, illam cfTearbitroi:, cjuam ciif Mom ellianitumSalmanticenſes eo nomine donabaitc.

IILARVM autcm prior, Hcrbula eft fM? ferePlftncaginisangultifoliar, vetiin), long* &minonbus&;angu(tioribus, ctebris, terraftraris, incanalanugineobiitis iu fhingftegufta: inter qujquini aut{cnic4Uiiculi, feu potiuspcdiculi nudi cxiliunt, munialttjqaifcreamedioadfummuulS faftigiura .niultis&iefemur.uocontingc tibus flofculis ex hcrbacco di orti.'iti funt,uti Cutonopj ſpicæ: quibus deinde fuccedit (emen Plantaginis femini valde fimile,theculis incluſum:radix eſt longa,tenuis,dura,& quodammodo lignoſa.

An

aridis collibus Salmanticæ vicinis provenit. Nuſquam autem majorem aut candidiorem obſervabam quam juxta Valentiam Hiſpaniæ, ſi eas vias. Flores proferebat Salmanticæ Majo: Valentiæ autem Martio & Aprilis initio.

Holoſteum Salmantic. minus.

CRESCIT iiſdem locis alibi quoque genus multo minus, cujus folia Pſyllij foliorum latitudinem non excedunt, longiora tamen, & villoſa quidem illa, ſed minus incana ſuperiore, in ceteris prorſus ſimile, eodemque tempore florens.

Id genus etiam olim obſervare memini Monpelliano agro locis incultis & aridis.

VTRAQVE hac planta Salmanticenſibus Holoſteum dicebatur: potiori etiam apud Monpellianos hoc nomine inſigniebatur: mihi utraque Plantaginis anguſtifoliæ genus potius videtur, licet (ut dixi) nullæ proximius ad Holoſtei deſcriptionem accedant.

HOLOSTEI porro meminit Dioſc. lib. iiii. Holoſteum, extra terram ſupereminens, ſoliis viticulisque; Coronopo aut Gramini proximis, guſtu adſtringentibus. Radice alba, prætenui, uſque in capillamenti ſpeciem, longitudine quatuor digitorum. Naſcitur in collibus terrenis.

PLINIVS lib. xxvii. cap. x. Holoſteon herba ſine duritia eſt, ex adverſo ſic appellatum a Græcis, ſicut fel dulce, reliqua ut Dioſcorides.

VSVS ejus ad rupta, in vino potæ; nam & carnes coguntur decoctionibus additis.

LEONTOPODIVM CRETICVM. CAP. XVI.

FORSITAN & ad Plantaginis anguſtifoliæ familiam quoque etiam referenda ea planta, quam Francofurti a duobus amicis ex Italia acceperam, diverſa appellatione inſignitam. Ampliſſimus enim vir Iacobus Antonius Cortuſus mittebat eam adhuc tenellam, veſtigia autem capitum adhuc retinentem, una cum icone, ipſam ſtirpem ſatis ſcite referente, addito Catananees nomine. Ioſephus vero a Casabona ipſam plantam maturam & aridam, ac recenter e Creta delatam, Leontopodij appellatione. Diligenter autem conferens utriuſque tum Leontopodij & Catananees deſcriptione, animadverto notas aliquot habere ſatis inter ſe convenientes. Nam quantum ex tenella illa planta & icone, a Cortuſo miſſa, colligere licet, herba ſe ſtatim a terra profert, quaterna aut quina folia, longa, anguſta, tenella admodum & lanuginoſa, inter quæ multi emergunt pediculi, breves plane lanuginoſi, ad terram inflexi, ſummo faſtigio ſuſtinentes aliquot capitula, multa lanugine obſita, in quibus flos, nondum conſpicuus, ut qualis ſit, dici ribi queat: radicis ſummum caput quodammodo ſquarroſum, a quo deinde ipſa radix deſcendens paulatim gracileſcit, & in multas fibras deſinit, ſubcoloris pene candida. Planta autem matura & ſicca a Caſabona tranſmiſſa, inſimam foliorum partem duntaxat retinebat, cum craſſiore radicis parte fibris orba, pediculos deinde breviores, craſſos, maxima ex parte lanugine ſua deſtitutos, Capitula ferentes craſſiuſcula & brevia in quibus apparebant quidam albicantes floſculi magnitudine umbilici oris diſſiti, quandam foraminum impreſſionem præbentes: pediculi autem illi adeo incurvabantur & contrahebantur ad ipſius radicis caput, ut leonum quodammodo pedem referrent (unde forte Λεοντοπόδιον nomen) ut in nil vix animaticontr. iis articulis pedem exprimerent. quapoſtremano ta affinitate cum Catananee pri... habere cum reliquis verò noſcis

Cacalia

CACALIA. CAP. XIX.

AD Tuſſilaginis etiam genera, haud dubie referenda eſt plantа illa, quæ, in omtii-, Ly; Auſtriacis Stiriacisque jugis obvia, a nonnullis Cacalia appellatur, cujus duo genera obſervabam.

Cacalia incano folio. Cacalia glabro folio.

VNVM mnlnspriditum folijs, Tuſſilaginis vulgaris folijs pene ſimilibus, majoribus tamen, medioque inter illius & alterius majoris, Petaſitis vulgo creditæ, folia quodammodo magnitudine, circinata, & rotunda, in ambitu crenata, ſuperne dilutius virentia, inferne incanis, in quibus multæ apparent venæ & nervi, guſtu ingrato, amariuſculo, purpuraſcentibus & ſtriatis pediculis: caulis ſibi cubitalis ſtriatus, purpuraſcens, non ſecus ac foliorum pediculi, cui per intervalla innaſcuntur alia folia oblungis pediculis prædita, ſupradictis minora, magis angulofa, etiam ſerrata: ſupremus caulis extremis ramulis purpuraſcentibus apiculorum congeriem inſtar umbellarum ferunt, in quibus plerumque flosculi quaterni ſoliolis purpuraſcentis coloris, odoris valde ſtatim, non tamen ingrati, qui demde in pappum ſeu lanuginem abeunt (perinde fere ut Eupatorij aquatici flores) in qua oblongum ſemen. Radix in multa capita excreſcit, frequentibusque donata fibris, longis fibris donata eſt, ſingulis annis novos caules ad latera profcrens.

Cacalia vulgaris incano folio.

ALTERIVS folia magis cucullata (ſi ſic loqui licet) & duriora, ſuperne ſaturatius viridia, nec ſubtus incana, nec anteriore parte, qua pediculo inhærent, ſimul coffuntia ut priore, pediculis ſive ſtriatis inmixa, ſed rotundis & brevibus, perinde tamen ut illa frequentibus venis ornata, & in ambitu ſerrata, ingrato ſimuliter guſtu, amariuſculo & calido: caules majores, & floſculi dilutiores: in cæteris conveniunt.

Cacalia glabro folio.

Naſcuntur communibus jugis ad ſilvarum margines, inter frutices, & umbroſis locis.

Natales.

OBSERVABAM & aliam quandam plantam in montanis pratis naſcentem, ſecundum villarum ſtabula, cujus ſubſtantia Cacaliæ folijs valde erant ſimilia: nec radix neutiquam diſſimilis. Verum nondum potui comprehendere, an unquam ab illis rationibus ſit floremque ferat, an non.

Canted

QVAMVIS porro dubitari poſſit, an quæ Cacalia nomine vulgo agnoſcitur, cum Cacalia Dioſcoridis deſcriptione, & Plinij (quæ & ſimul Leontice nuncupata) conveniat: *facultates*

Petaſites florens.

Petaſites ſine flore.

Pyrola 1. vulgatior.

facilitates tamen vtrerque ſuæ Cacaliæ tribuit à noſtra Cacalia genus eſt, facultatibus non alienas. Scribit enim Dioſcorides lib. iiii. cap. De Cacalia, eius radicem in vino madefactam ut ... & arteriæ ſcabritijs mederi. Plinius autem lib. xxvi. Nat. Hiſt. cap. vi. radicem Cacaliæ commanducatam, & in vino madefactam, non tuſſi tantum, ſed & faucibus prodeſſe.

Petaſites vulg.

ABVNDE etiam in Pannonia, Auſtria & ... ſponte creſcentem reperiebam plantam illam quæ vulgo Petaſites credita eſt, doctiorum tamen omnium iudicio inter Tuſſilagines referendam, & a foliorum amplitudine Tuſſilaginem maiorem nuncupandam. Eam albo flore ... aliquando videre memini.

Petaſites albo flore.

terra latitant fibris, Aſphodelinos bulbos fertio ſtirmibus, & oblongis firma[illegible]

Naſcitur. Naſcitur in montanis pratis, circa ad piſcinarum udos margines inter ſalices amœnas quoque, & arundines. Floret Iulio.

Nardus montana Monſpelienſis. Similem plantam, ſed longe minorem mihi miſit Monſpellienſis vicinis collibus naſcentem, quam cum nonnulli qui in ſtirpium cognitione egregie verſati eſſe credebantur, pro montana Nardo nobis obtrudere volebant; Roſier Lobellius poſtea Carduum bulboſum Monſpelienſium appellavit.

Nomina. Κίρσιον potius nomine Græcis, Cirſij autem Latinis, commode, meo judicio, hæ ſtirpes nuncupari poſſunt: nullum vero nomen vulgare illarum intellexi.

An vero Cirſij veterum facultatibus reſpondeant, ignorare me fateor & judicium de ijs ferre difficile. Nam neque Dioſcorides ſuo Cirſio ullas vires tribuit, niſi quas ex Andrea deſcripſit.

Cirſium tertium Dodonæi. CETERVM non minus vulgaris agro Viennenſi, multisque Pannoniæ locis & apud Francofurtum, eſt, quam in Zelandia, Flandriæ Hollandiæque maritimis, Spina illa quam Clauſ. Dodonæus inter Cirſij genera tertio loco [illegible], magno, valde ſpinoſo, nutanteque capite, e quo flos multis purpureis elegantiſſimisque ſtaminibus conflatus emergit & explicatur: floret cum Cirſij generibus Iunio, & Iulio, quibus etiam perfici [illegible] tia bec. Id niveo flore variare aliquando memini.

CARDVVS MOLLIS. CAP. XLI.

CARDVI nomine has ſtirpes appello, tametſi inter Acanacei generis plantas recenſendi non videantur, cum nullo ſpinarum vallo munita ſint: propter ſimilitudinem tamen, quam cum mollioribus quibuſdam vulgaris notitiæ carduis habent, in illorum claſſem rejeci.

Carduus mollis I.

1. Carduus mollis laciniatis folijs. PRIMVS, multa ſecundum radicem habet folia, cum humi ſparſa & jacentia, (urrecta, intercedentia mollicula, [illegible] Cta, ſuperne virentia, valde laciniata, & ad medium uſque nervum diſſecta, Calcitrapæ five cardui mutato capite, mollioribus & tenerioribus folijs, [illegible] ſpinis horrentia, guſtu primum exſiccantia, deinde amariuſculo: e quorum medio [illegible] aut alter caulis aſſurgit cubitalis aut amplior, teres, rotundus, ſtriatus, purpuraſcens, molli quadam lanugine oblitus: inferiora folia per caulem ſparſa etiam laciniata ſunt, licet jam dictis minora, quæ vero [illegible] nullis lacinijs divisa, mucroni [illegible] purpuraſcente: extremi caules [illegible] incerdum dividuntur (magni [illegible] parte ſingulares ſunt, unicumque [illegible] caput quibus capitula [illegible] tenuibus ſquamis imbricatim diſpoſitis [illegible] ta, moliter recimbinata, quorum medium occupat [illegible] & villoſus flos, coloris [illegible] purpurei elegantiſſimi: flore flaccido & evaneſcente ſuccedit ſemen anguloſum: radix digiti [illegible] luidinem nonnunquam æquat, [illegible] nonnulla aliquot fibris donata.

Natalis. Invenitur in ſummo montium carena, quæ inter Calenberg & Danubio cui imminet ad [illegible] es uſque extenditur, & deinde per Ley [illegible] berg, rurſumque per Prellenberg & H[illegible] burgerberg ad Danubium duobus ſupra [illegible] ſonium milliaribus reflectitur. Floret Maio, ſemen perficit Iunio & Iulio.

II. Carduus mollis latioribus folijs. PEDALI aſſurgit Alter caule, utcumque crasſo, tenui lanuginoſo: folia circa radicem majora, latiuſculis fere ſimilia, aut potius illi ejus plantæ, quam vulgo [illegible] tam bonam [illegible] dammodo anguloſa, extrema vero parte mucronata, in ambitu ſinuata, mollibus vetuſtis aculeis oblita, ſupina parte virentia, prona vero dilutiore [illegible]

VOCABA-

Chamæleon Salmanticenſis.

Chamæleon alb. Dioſc. & Theoph.

Carlina elatior, Chamæleon alb. vulg.

VOCABATVR Salmanticenſibus Chamæleon, tametſi hiſtoria prorſus refragetur: affinitatem tamen habere videtur cum ea planta, quam Anguillara pro Chamæleonte nigro Dioſcoridis exhibet.

CETERVM, Chamæleon albus Dioſcoridis & Theophraſti, in Pannoniæ, Auſtriæ, & [illegible] montibus obſervabitur, capite amplo & echinato (ex quo flos multis albis folijs circa orbem medium naſcentibus conſtans) [illegible] e medio foliorum [illegible] laciniatorum, atque ſpinis [illegible]: radice craſſa, denſo cortice obducta, intus fuſca. *Chamæleon alb. Dioſc. & Theoph.*

SED multo frequentior invenitur Altera [illegible] caulem [illegible], angulo[illegible] in multas lacinias diviſa, [illegible] non pau[illegible], aculeis [illegible]oribus [illegible] amplum, horrida, caput in extimo cau[illegible] floremque minorem: radix perinde craſſa ac ſuperioris, foris etiam fuſci coloris.

VTRAQVE Carlinæ, à Carolo Magno, nomen adepta, ſive Carlinæ, qui illius uſum primus demonſtraſſe creditur; Germanis Eberwurtz dicitur. *Carlina Eberwurtz.*

ALIA verò eſt planta à quibuſdam Carlina minor appellata, humilis & ut plurimum caulis expers, folia habens, Secundæ Carlinæ folijs non valde diſſimilia, ſaturatius tamen virentia, *Carlina minor.*

Cirlinaminor,purpureo flore

rcntia,!i"™ollioribus fpirns p^dita: capita mul- tp minora,& purpurcum florcm. Hare freq in prntis montanis&fkcioribus, ctism in«- •cliviranbus hcibidorum collium.

Cynogloſs. pumil. ſive Auſtriac. alterum.

Lithoſpermum repens majus.

Echium vulgare.

AN vero hoc Cynogloſſi genus ea plan-ta ea ſit, quam Plinius Natur. Hiſtoriæ lib. xxv. cap. viii. ſcribit Cynogloſſo ſimilem & quæ fe-rat lappas minutas? cujuſque radix ranis & ſer-pentibus adverſetur? *Planta Cynogloſſo ſimilis Plin.*

VVLGARE Cynogloſſi nomen appellatur Italis, *Cinogloſſa, & Lengua canina:* Gallis, *Langue de chien:* Hiſpanis, [illegible] Belgis, [illegible] hondts-tonghe. *Nomina.*

CYNOGLOSSI porro folia, cum ſuillo adipe ve-teri, canum morſibus, alopeciis, & ambuſtis me-dentur: alvum emollit decoctum herbæ ex vi-no potum. *Facultates.*

ADMODVM etiam frequens eſt in [illegible] ad [illegible] ab urbe Vienna miliari, & Vien-nenſis [illegible] montis [illegible] vicinorum radices. inter frutices Lithoſpermum illud majus vulgo nuncupatum, cujus ſarmenta humi fuſa ſubinde fibras agunt, & ſic ſe propagant. *Lithoſper-mum majus.*

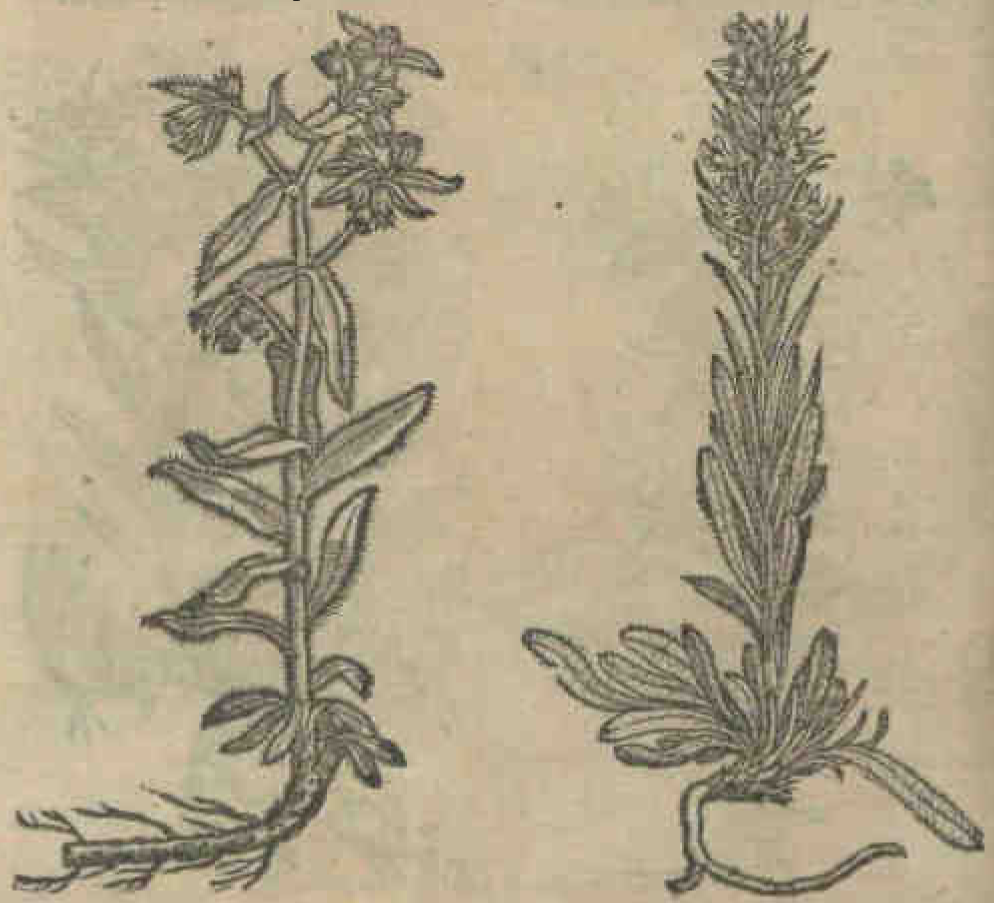
Nec minus frequens variis Pannoniæ & Au-ſtriæ locis, aliud illud *Lithoſpermi genus ignobi-lius,* ſemine candido, cujus in officinis uſus eſt. *Lithoſper-mum [illegible]*

ECHIVM. CAP. L.

VARIA, præter vulgare ſub cæruleo flore, quod Viennenſi agro & vicinis locis fre-quentiſſimum, etiam variante in ſubcinereum vel omnino album colorem flore, interdum re-periri, naſcuntur in Auſtria Echii genera, ci-que elegantia. *Echium.*

PRIMVM

Echium pullo flore. Echium rubro flore.



I. *Echium pullo flore.*

PRIMVM pedalem ſubet caulem, ſtrigoſum, vinoſum, folijs Echij, aut Buglosſi ſylveſtris, molli lanugine præditis, & in quo ſubinde ramuli ... multas alas ... breves ramulos ſeſe findentes ... flosculis onuſti, extremâ parte in quinque crenulas diviſis, coloreq́, ex atro purpuraſcente præditis, onuſti ſunt, qui e vaſculis aliis lanugine hirſutis & inter folia ... prodeunt: ... huiuſmodi generis plantis, vipennocapiti ſimile radix oblonga, minimi digiti craſſitudine ... quatuor ... fuſca, paucis tenuibus fibris prædita, a capite ad caulis prodit, extuberante, & præcedentis anni caulis veſtigia ſervante ... folia, nullum initio ſaporem peculiarem præbent: ſed poſtea nonnihil acrimoniæ habere videntur.

Locus. Creſcit multis locis Viennæ vicinis, tota etiam inferiore Auſtria, & Pannonia; parcius ... cionibus pratis, & graminis locis ad collium radices, atque in paſcuis ... nudis, ... graminea ... Floret Maio.

II. *Echium rubro flore.*

OBLONGA & anguſta ſubet Alterum folia, villoſa, ... Echij folijs ferè ſimilia ... Id tamen latiora, inter ... ſtrata, caulem ... modo pedalem, aliquando cubitalem, ... (uro, lanuginoſum, maculisq; purpureis conſperſum, quem ... ordine ... folia ... breviora & anguſtiora, non minus tamen hirſuta, ſummum caulem exornant multi breves ramuli in revolutionem ... Scorpiurus inſtar inflexi, plenis florum ... Echij floribus ſimilium, ſed colore rubro eleganti præditorum, qui proxime caulem ... aperire incipiunt: ex quibus floribus, ſemen, ut in alijs Echij generibus, ... caulis ... vipeꝛino capiti ſimile, ſed minus: radix ſatis longa, dura, & lignoſa, nigro cortice tecta, ... ſingulis aliquando ... unica.

Locus. Abundat admodum ſiccis pratis ſupra & infra Sopronium Vngariæ urbem, nuſquam ... Tunc plantam obſervabam Maio ... ... rubente ... colore præditam.

III. *Echium Creticum.*

... porro alia Echij genera Cretico ſemine, quod mittebam nata ... Ioanni ab Hogelande anno M.D.XCIII.

PRIMA initio ... Primum ... inter plantas ... & ... humi ſtrata, ... caules rotundi, ... & ... ui, quos ambit ... folia, ... extremi ramiciroa involverentur & inflectebantur, Echij & aliarum Anchuſarum inſtar, ... calicuIos ... foliolis anguſtis & hirtis conſtantes ... ex quibus ... flores, Echij floribus non diſſimiles ...

Corruda altera.

Corruda tertia.

Natales. Abundè creſcit agro Salmanticenſi locis petroſis, tum etiam Caſtellæ & Granatæ regno, non modò in ſepibus, ſed etiam in arvis incultis: vidi etiam Narbonenſi agro, inprimis autem juxta ſepes. Floret [illegible] maturescente hoc Auguſto, ſemen Octobri maturum eſt.

Alebatur apud Belgas à quibuſdam rei herbariæ ſtudioſis, ante quàm inde excederem: ſed fructum non proferebat.

II. FRVTICOSVS etiam eſt, ternis aut quatuor ſpinis ab [illegible] viridibus & mollioribus [illegible], ſive virgis ramoſis, [illegible] hinc inde ſparſas [illegible] ferens, virides itidem ut rami ſunt: florem nullum in hoc conſpiciebam, ſed frequentes baccas rotundas, ut in ſuperiore, initio virides, deinde per maturitatem nigricantes, ſucco & pulpa virente p[illegible] ut plurimum unicum, interdum bina [illegible] ſuperioris non valde diſſimiles.

Natales. Frequens eſt ad Tagum [illegible] in Luſitania, atque etiam in Bætica, ſolo petroſo, in collibus & ſepibus. Novembri [illegible] fructu onuſtum inveniebam. Crevit & iſte quibuſdam Belgis, ſemine à me è Luſitania delato.

III. Corruda tertia. TERTIVS cubitales habet virgas, ramoſas [illegible] ſimiles, candicantibus, firmis, deorſum ſpectantibus ſpinis alternatim, & ſecundum virgarum ramorumque inæqualium inflexionem horridas: ad quas quina aut ſena folia [illegible] ſimul prodeunt, ut in Larice, Prioris [illegible] longiora [illegible] diſſimilia, quæ commanducata [illegible] ſubdulcia, & aliquantulum gummoſa deprehenduntur. Flos inter folia ex alarum [illegible] petiolo dependens [illegible] fructus pene rotundus, [illegible] (tametſi unicum granum magna ex parte contineat, rarò bina) foris nigrum, intus candidum, firmum, ut in ſuperioribus) initio vireſcens, maturitate rubeſcens & carnoſus, ſive ſuccum & pulpam continens lentam & viſcidam: radice firmatur multiplici, inſtar aliorum ſilveſtrium aſparagorum, longa, craſſa, intus alba [illegible] ſtar altilis aſparagi, qui illorum modo eduntur cruda & cocta [illegible]

Natales. [illegible] abundantius quàm [illegible] non procul à [illegible] etiam, ſub [illegible] imminente, antequam in Oceanum [illegible] oneret. Na[illegible] Luſi[illegible] Novembri cum fructu maturo in Luſitania legebam, raris aliquot floribus hinc inde per ramulos ſparſis etiam onuſtum.

Illud Supinum minimum Septentrionalium Hypcrici nomine vfurpavit.

DIFFERT enim plurimum ab iſto Hypcricu illud fupinum Belgicum five Septentrionale, quia tota planta valde tenella eft, raros habet ramulos, raraque folia, nec ita incana: flores item luteum ſuccum, ptrroras/iigrispwiaulisdiftinaasr ... obfcrvare ... mi in illa minagrorum a^gcntuspofl mcflcilfeens,

Memini.

PARONY-

PARONYCHIA HISPANICA. CAP. III.

Paronychia Hiſp.

LONGE elegantiſſima eſt hæc planta: multas viticulas humi ſtratas ſpargens, dodrantales magna ex parte, interdum tamen etiam pedales aut longiores, nodoſas, quibus adnaſcuntur folia Polygoni minoris, minora, viridia quidem in novellis plantis: ſuccreſcente autem temporis [illegible] numeroſa & confertiſſima, eáque [illegible] membranacea, prorſus alba, ſic ut tota planta argenteis ſquamis conſtare videatur, grato ſane ſpectaculo: flos illi candidus Polygoni vulgaris floſculi inſtar, ſed adeò exilis, & inter membranulas illas latens, ut vix appareat: ſemen Polygoni: radix oblonga, gracilis, candicans.

Hujus iconem, quia veteres & perfectiores plantas, inter chartas repoſitas, ad manum non habebam, ex novella, & in ſemine tum hireſcente, quæ ſquameas illas membranulas nondum adquiſierat, exprimi curabam, atque apud Belgas, ubi mutatur, & candore [illegible].

Nascitur abundantiſſimè, quàm in petroſis & ſiccis collibus Salmanticæ vicinis obſervabam, trans flumen Thormini, ubi & Colchicum montanum cap. xi. lib. ii. deſcriptum copioſè provenit: etiam circa Valentiam & Murciam: obſervare etiam memini in lapidoſo illo campo [illegible] præ Arelatem, non procul à Divi Martini diverſorio, quà iter Maſſiliam eſt, ſed multò minorem, & unciales ramulos ſeu viticulas vix habentem. Florebat Maio & Iunio, ſemenque proferebat.

SALMANTICENSES & Valentini herbarij Paronychiam vocabant, meo quidem judicio non temere: nihil aliud eſt, quàm Polygoni minoris genus peculiare; etenim cum ſemine creſcens [illegible] prodit, à Saponaria vulgari nihil aut quàm minimum differre [illegible], itaque viribus multum abſimilis Paronychia, quæ teſte Galeno lib. viii. Simpl. tenuium partium eſt, exſiccatoria & mordacitatis vacans: talia enim [illegible] Paronychiæ [illegible]. Murcianorum vulgus [illegible] vocabat, ab exſuccorum foliorum, uti conjicio, aſpectu.

ANAGALLIS. CAP. IIII.

Anagallis flavo flo.

ANAGALLIDIS, præter vulgarem phœniceo & cæruleo flore, duo alia genera obſervabam floris colore inter ſe differentia.

DODRANTALES ſunt utriuſque ramuli, cubitales [illegible], teneri, ſucci pleni, humi (ſparſi, in quibus multa folia, Anagallidis [illegible]) bina ſemper inter ſe oppoſita, acidiuſculi ſaporis: ex alis prodeunt flores Anagallidi vulgari forma ſimiles, quinque foliis conſtantes, [illegible] colore præditi: capitula deinde exurgentia [illegible] vulgaris Anagallidis capitulorum æmula, minora tamen, ſemen etiam non diſſimile, tenui & ſerpente eſt radice: quinetiam ipſi ramuli humi ſparſi fibras agunt.

Naſcitur in Hogeberg [illegible] monte ferè jugo inter arbores, [illegible] ſcher, [illegible] vicinis [illegible] locis opacis. Floret Iunio, Iulio & Auguſto.

ALTERVM, tota facie vulgare illud, cui phœnicei aut cærulei ſunt flores, refert: ſuos etiam quinque foliolis ſtellatim expanſis conſtantes, cum totidem in umbilico ſtaminulis [illegible] floris tamen color diverſus, cum [illegible]

VVLGAHI

Nomina. VVLGARE nomen ejus Græcis dicitur, [illegible] Latinis Chelidonium majus: *officinis* Chelidonia: Gallis *Chelidoine*, & [illegible] a facultate: Germanis [illegible] inferioribus Germanis, [illegible]

Hoc vero alterum majoris generis commode nominari posse Chelidonium majus multifido folio.

Vires. DE vulgari autem Chelidonio majore hoc experiebar, ejus succum in [illegible] que vulnera recentia instillatum, [illegible] conferre.

AQVILINA; CAP. XXVII.

Aquilina pleno flore.

Aquilina pleno inverso flore.

Aquilina [illegible] ISTIVS plantæ non meminissem, nisi enim vulgatissima est, [illegible] tor. [illegible] nam prior illam qua [illegible] pleno flore, [illegible] in multis [illegible] ex uno flore [illegible] superiore [illegible] Sed nulus [illegible] Lusitanice [illegible] est [illegible] violaceus, vel incarnatus, vel blande rubens, vel saturé ruber, vel albus, vel ex albo & cæruleo, violaceove multifariam commixtus, [illegible] coloris, quis enim [illegible] nescit numerum? [illegible] corniculis inversis constans. [illegible] culorum [illegible] omnibus ex [illegible] bus.

Aquilina [illegible] flore. VERVM aliud elegans genus, paucis ab [illegible] observabam, cujus flores colorem quidem instar vulgaris mutant (nam albi, cærulei, sive blande rubentis, [illegible] que coloris reperiuntur) sed aliam formam habent. [illegible] [illegible] plana duntaxat habent folia, quæ [illegible] plici cornicula ab in-vicem segregant: constant vero flores [illegible] Foliorum ordine dispositorum [illegible] Rosæ [illegible] his illis ordo aut decem foliorum ordinibus, sena vel septena alia incumbant, interdum etiam [illegible] elegantis spectaculo, non alternatim [illegible] ut in Rosa plena, paucis staminibus [illegible] culis, quemadmodum in vulgari flore, floris medium occupantibus, & [illegible] [illegible] plenis. [illegible] planta [illegible] flores, quorum [illegible] & secunda foliorum [illegible] corniculo [illegible] instar vulgaris corniculam [illegible] habent. Sed etiam hoc genus [illegible] in modum [illegible] [illegible] rulcum, album, rubellum, suave rubentem, [illegible] purpureum [illegible] vel [illegible]

SS)

affirmare poſſum, quandoquidem ſub meum Francofurto diſceſſum, primum obſervabam illam in Ioannis Mulleri horto natam ſemine Creta accepto, ſtatim ſilveſtris appellatione.

Scrofularia 3 germanica.

HVIC non valde diſſimilem, cùm Lugdunum Batavorum perveniſſem, ad me afferebat eruditus vir Theodoricus Clutius Delphenſis, tum pharmacopola, quam ſubſequens hiems abſtulit.

Scrofularia Cretica II.

SED & aliud Scrofulariæ genus Cretico ſemine natum ſequenti anno conſpiciebam, aliquot ſtolones à radice proferens cubitales & ampliores, quadrangulares, ex atro purpuraſcentes: quibus folia inæquali & inordinato ſitu innaſcebantur longiuſculo pediculo appenſa, urticæ: foliis non diſſimilia, ſed lævia, non mordacia, ſenſuque mollia, ſuperne ſaturi viriditate nitentia, inferne nequaquam, ex quorum alis breves emergebant ramuli, quadranguli, in ſimiles alios ſed longe minores diviſi, ſuſtinentes parvos caliculos in quinque lacinias ſectos, & in his floſculos coloris ex atro purpurei, quatuor laciniis conſtantes, ſuperna bifida & ſurſum reflexa, inferna ut labellum propendente, duabus aliis lateralibus adhærentibus: iis ſuccedebant vaſcula ſive globuli duobus ſulcis tanquam diviſi, ex ima parte aliquantulum mucronati, in quibus ſemen vulgari ſimile. Tota planta vulgarem illam referebat, cujus radix nullis grumis prædita eſt; ſed odorem magis fœtidum ſpirare videtur.

ALECTOROLOPHOS ALPINA. CAP. XXXII.

Alectorolophi plura genera.

HANC plantam Scrofulariæ voluimus ſubjungere, propter foliorum quandam cum illius prima ſpecie ſimilitudinem. Eius autem plura genera in Auſtriacarum & Stiriacarum Alpium jugis montaniſque pratis inveniuntur.

Alectorolophos alpina.

Alectorolophos I.

VNVM enim plures ab una radice promit cubitales caules, minimi ferè digiti interdum craſſitudine, læves, per quos ſparſa foliorum, Filipendulæ vulgaris foliis non valde diſſimilia: flores innaſcuntur ſummis cauliculis copioſi, oblongæ ſpicæ inſtar, quemadmodum in Orchidibus confertim naſcentes, & illarum floribus perſimiles, è caliculis pentagonis inter minutiora folia prodeuntes, exalbido colore: iis ſuccedunt mucronata capitula, maturitate dehiſcentia, ſemenque oſtendentia exiguum, nigrum aut cineracei coloris: radix craſſiuſcula eſt, perennis, ut ex præcedentis anni reſtantibus caulibus deciſis tamen, conjecturam faciebam, in craſſas fibras Aſphodeli bulbis pene ſimiles diviſa.

Alectorolophos II.

INVENITVR & aliud genus per omnia illi ferè ſimile, ſed longè mollius, cujus flores modò pallidi, modò purpurei ſunt: radix etiam craſſas fibras Aſparagi radicibus ſimiles agens.

Vtrumque genus in ſummis Alpibus Dorrenſtain, Etſcher, aliiſque celſis & herboſis jugis naſcitur: poſterius etiam in inferioribus uliginoſiſque pratis. Memini & in Flandriæ pratis humidioribus, atque etiam pratis Gentilly pago vicinis, non procul Lutetia Pariſiorum obſervare.

Alectorolophos III.

TERTIVM in iiſdem Alpium jugis quibus Primum, creſcit, ſed longè humilius, utpote quod palmarem altitudinem non ſuperet: illius cauliculi graciles, & raris minoribuſque foliis obſiti ſunt: florum ſpica brevior, & eleganti rubro purpuraſcente colore nitens: caliculi floreſcentes incani, laciniati, & veluti ſcobiculis conſperſi: quæ floribus ſuccedunt capitula majora quàm in ſuperioribus, & veluti roſtrata, anguloſum & inæquale ſemen etiam continentia: radix minimi digiti craſſitudinem interdum æquat, fibriſque candicantibus & [illegible] donata eſt.

Alectorolophos IIII. ſive minima.

Ad illius genus referri poteſt tenerior alia planta cauliculis anguloſis & lanugine, non ſecus quam folia (quæ minora ſunt) caliculique (qui breviores & minores) ſubcaneſcentibus: flores

Alećlorolophi ni. genus alterum.

Filipendula vulgaris.

VV SPONTE

Clymenum Matthioli. Lathyr. Dodonæi. Eruum ſyl. Cordi.

SPONTE etiam graminoſis locis ſiccioribuſque Pannoniæ, Auſtriæ & Styriæ pratis naſcitur Clymenum Matthioli, ſive Lathyrus Dodonæi, vel Eruum ſylveſtre Cordi: cujus duo genera obſervabam, latifolium, & anguſtifolium: illud quidem in Auſtria duntaxat, hoc vero Francofurtenſi etiam agro.

Qui verò de Clymeno Dioſcoridis noſſe deſiderat, conſulat Plantarum hiſtoriam Fabij Columnæ.

OROBVS PANNONICVS. CAP. XLIIII.

ERVI, ſive Orobi nomen apud rei herbariæ ſtudioſos obtinuerunt aliquot plantæ, quas per Pannoniam, Auſtriam, Styriam, aliaſque Provincias naſcentes obſervabam, & antehac deſcripſeram, nunc [illegible] proderem. Eam hoc capite repetemus,

Orobus Pannonicus I. Orobus Pannonicus II.

Orobus Pannonicus I.

MVLTOS habebat priores caules ab una radice prodeuntes, pedales aut ampliores, ramoſos, [illegible] ſurculis, in quibus hinc inde ſparſa ſunt oblonga & pennata folia, ſenis, octonis aut pluribus folijs [illegible] poſitis, congeſta: flores in ſurculis ex alarum ſinu prodeuntibus ſpicæ inſtar naſcentes, piſi aut viciæ florum æmulos, coloris purpurei elegantiſſimi, deinde ubi evaneſcere incipit, cæ[illegible]: quibus ſuccedunt longi cylindracei lobi fuſci, in quibus ſemen rotundum interdum [illegible] plerisque ejus generis: radix vivax eſt, longa, nigra, dura, per intervalla extuberans, & ex lateribus novos ſtolones ſingulis annis producens. Tota planta acrimoniæ cujuſdam particeps.

Orobus Pannonicus II.

ALTERA tenuioribus & gracilioribus conſtabat caulibus, rarius tamen cubitalibus, [illegible] angulosis, & in multos ramos diviſis: folia alata ſunt, hoc eſt, ſena, octona, & interdum [illegible] ſunt coſtæ inhærentia, Superioris folijs longe minora, & Lenticulæ folijs haud majora, [illegible]nella, viridia, guſtu amaricante & calidiuſculo: flores ex ſuperioribus alis numeroſi, longis pediculis inhærentes, ſuperioris floribus forma ſimiles, minores tamen, purpurei coloris, qui vetuſtate in cæruleum etiam commutantur: lobi ſunt longi, nigri, [illegible] oblongiora majoraque ſemina quam habet ſuperior, [illegible] & [illegible] licentes atque ſe contorquentes: radix dura, lignoſa, fibroſaque eſt, in diverſa tendens, vivax, ſingulis annis plures caules proferens.

Copioſè

Copioſe naſcuntur in montanis illis ſyluis [illegible] ſupra Manderſdorf, ſimiliter ſupra [illegible] & in omnibus ſerme [illegible] ſyluis [illegible] productis à Danubio ad Alpes, va- [illegible] ſiccæ Pannoniæ locis. Florent Aprili atque etiam Maio: ſemen autem proferunt Iunio. Natales.

Orobus Pannonicus III.

Orobus Pannonicus IIII.

GRACILES promit Tertia cauliculos, rectos, firmos, anguloſos, pedales & cubitales: [illegible] per interualla unico ſinu exeuntia, quaterna plerumque ex adverſo ſita, erecta, an- [illegible] trium ſeu quatuor unciarum longitudinis, guſtu aliquantulum amaro initio, deinde amarulen- [illegible] nullis capreolis prædita, quod caules ſatis firmi adminiculis non egeant: flores in longis [illegible] ſpicæ inſtar congeſti, priorum pene ſimili forma, ſed [illegible] candidi coloris: deinde oblongi lobi nigricantes, priorum lobis pares, ſemine nigro, interdum etiam [illegible] pleni, qui per maturitatem cum ſtrepitu dehiſcentes ſemen abiiciunt: radicibus [illegible] nititur quinis aut ſenis minimi digiti longitudine craſſitieque, Aſphodeli, aut Pæoniæ fe- [illegible] minoris, oblongis bulbis fere ſimilibus, minoribus tamen, foris nigris, intus albis. Orobus Pannonicus III.

[illegible] copia in pratis non procul Walterſtorf, Maurpach, Medlingæ & Ther- [illegible] Badenſibus Auſtriæ: [illegible] Obſervabam etiam in montoſis ultra Danubium locis, ad [illegible] ſyluarum margines. Floret cum ſuperioribus, ſemenque perficit Iunio. Natales.

QVARTÆ abundè prodeunt aliquot caules, cubitales, ſtriati, recti, folia alterna- [illegible] proferentes pennata, quaternis foliis, amplis & mucronatis conſtantia (quibus ad- [illegible] [illegible] quinorum) virentibus, per quæ aliquot venæ tranſverſim [illegible] [illegible] ſubadſtringentis quidem initio guſtus, ſed poſtea amariuſculi: flores ex ala- [illegible] brevi petiolo [illegible] prodeunt quini aut ſeni, antrorſum ſpectantes, Viciæ flo- [illegible] non diſſimiles, albo colore præditi, quibus [illegible] reflexis pallescit, odo- [illegible] expertes: lobi quales in primo genere, in quibus ſemen fuſcum, maius quam in reli- [illegible] generibus: radix [illegible] vivax [illegible] prolato fructu [illegible] ut ceteris [illegible] in [illegible] generibus accidit. Orobus Pannonicus IIII.

[illegible] Auſtriæ [illegible] in Alpibus illius Provinciæ [illegible] naſcentem [illegible] & [illegible] altero anno flores mihi protulit Aprili, & Maio, deinde ſemen. Anno vero M. D. LXXIX. obſervabam Maio florentem maxima copia in ea Pannoniæ [illegible] quæ inter Dravum & Savum flumina in Danubium illabentia, [illegible] quæ ob eam [illegible] Pannonia nuncupatur, in monte quodam ſyluoſo Greben arci vicino. Natales.

[illegible] CYNOVM porro genus in Belgicis hortis aliquando videre memini & Aphacæ no- Aphaca.

VICIA

VICIA SILVESTRIS. CAP. XLVI.

VAHIA per Pannoniam, Auſtriam vicinaſque regiones inveniuntur Viciæ ſilveſtris genera, alijs Provinciis etiam communia: duo tamen tue obſervaſſe ibi videor, quia alibi videre non memini.

Vicia.

Vicia ſyl. albo flore.

MVLTOS ex eadem radice, quæ perennis eſt, profert Primum genus ramos teretes, pedales, etiam cubitales interdum, quos in ambitu foliorum alæ, quemadmodum in Vicia vulgari ſativa & ſilveſtri, ſed denſiore lanugine obductæ, & quaſi incanæ: capreolis, quibus vicino gramini ſe implicat, extrema alarum occupantibus: flores in ſuperius foliorum alis terni plerumque Viciæ vulgaris floribus perſimiles, candidi coloris, ſuperiore tamen folio obſoleti coloris venis interne diſtincto, inferiore foliolo ejuſdem coloris: floribus ſuccedunt ſiliquæ ſeu vaginæ planæ, quantum videlicet ex illarum rudimentis colligere licuit, nam Maio menſe florentem anno M.D.LXXIX. duntaxat obſervabam, Viciæ vulgaris ſiliquis ſimiles: radix fibroſa eſt, tuberculiſque ut Leguminum pleraſque radices videmus, donata. Vicia ſyl. albo flore.

Naſcitur in arvis deſertis apud Chyztreg oppidum Magn. viri N. Bamfy, in Pannonia ſitum, olim florens, cum vero illac iter facerem magna ex parte exuſtum, & ob continuas Turcorum in ea loca excurſiones, omnino fere deſertum, non procul a *Kttka* fluvio. Natale.

CVBITALIBVS alterum ramis, tenuis, lentis, infirmis, & humi ... capreolis ſe ſuſtinentibus obliquè modo in hanc, modo in alteram partem, ſecundum foliorum alas, inflexis, quibus frequentes plerumque ramuli enaſcuntur: foliorum alæ oblongæ, tenues, eorum incurvæ ſeu arcuatæ, & in binos capreolos deſinentes, duodenis, vicenis, vicenis ſenis, aut pluribus interdum oblongis anguſtiſque foliolis ſurrectis, & ex adverſo nunc æqualiter, modò inæqualiter naſcentibus, prædita ſunt: floſculi elegantes, ſuperioris floribus forma non diſpares, minores tamen & Onobrychidis quartæ floſculis propemodum reſpondentes, colore ex cæruleo purpuraſcentis, viceni nonnunquam aut plures, ſpicatim oblongi nudis ramulis ex ſuperiorum alarum ſinu exeuntibus naſcuntur: deinde uncialis longitudinis ſiliquæ, exiguum ſemen continentes: radix tenuis, late repens, & ſubter ſe condens, ſingulis annis novos frequentioreſque ramos profert. Vicia ſyl. II.

Paſſim in agris & inter vepres, illis ſe implicans creſcit, per Vngariam, Auſtriam, Moraviam & Bohemiam, atque Maio floret. Natales.

VNGARI cum ſuperiorem, tum hanc (quæ ſæpe plurimum in Belgica vepribus ſe implicantem differt) atque denique omne ſilveſtris viciæ genus, *Warjw borſo*, nuncupant, hoc eſt, cornicis piſum. Warjw borſo.

CICERCVLA

CICERCVLA ÆGYPTIACA. CAP. XLVII.

Cicercula Ægyptiaca.

NEQVE foliis, neque cauliculis, reliquisve partibus a sativa vulgari Cicercula valde differt ea, cujus historiam hoc capite damus. Tenuibus nam cauliculis habet infirmos, & qui vix sustineantur, humi procumbentes, in quibus hinc inde bina adnascuntur ex adverso sita foliola, e quorum sinu prodeunt oblongo pediculo innixa bina alia folia angusta & rigidiuscula, ac tandem is pediculus desinit in capreolum nonnunquam multifidum, quo sese vicinis herbis & virgultis implicat: flos etiam sativæ non dissimilis, sed color diversus, nam qui in sativa albus, in hac interne elegans cæruleus, foris exterior purpurascens: quos deinde succedunt siliquæ longiusculæ, utrimque petiolis alatæ vel superne pinnatæ, in quibus bina, terna, rare plura continentur grana, domesticæ Cicerculæ granorum magnitudine, inæqualia, frequentibus nigris maculis insignita: radix, ut in ejusmodi stirpium generibus, tenuis, non vivax.

Natales.

Primum mihi nata est hæc planta Viennæ Austriæ anno M.D.LXXXVII. e semine inter legumina pro Ægypto Constantinopoli misso. Floruit Iunio & Iulio, atque etiam in Septembrem usque: semen maturum fuit Augusto & Septembri. Natam etiam arbitror plerisque amicis, quibus semen communicabam: nam & Francofurti sequentibus annis provenit, flores misit & semen maturum produxit.

Nomina. *Cicercula.* *Cicerole.* *Pois cornus, dits San.* *Layri.*

GRÆCIS porro vocatur hoc legumen Λάθυρος, Lathyrus Plinio & Columellæ, Cicercula, (sativam intelligo) Galli *Cerres* appellant: Parisienses quoque, ubi Ægypto abundè colitur, *dits San*. An vero quam differt ab ea est, quam Bellonius cap. xix. lib. II. Observationum inter legumina recenset, & a Græcis vulgo *Layri* appellari scribit? certe ipsa appellatio ad Græcam alludit.

SECVRIDACA. CAP. XLVIII.

ALIQVOT plantas in meis peregrinationibus observare memini, quæ non incommode, meo judicio, ad Hedysari sive Securidacæ historiam referri posse arbitror.

Securidaca legitima.

MVLTOS, atque oblongos ex eadem radice fundit Prima caules, humi diffusos, virides, striatos, intus concavos, valde ramosos: folia alata, multis foliolis conjugatim, & æqualiter, contra notam tamen, situ unico ste in latere ac extremitatibus, constantia, ipso extremo in impari, Hedysari legitimi foliis per quam similia, amari saporis: e singulis superiorum florum alis, oblongi pediculi prodeunt, coronam flosculorum legitimi Hedysari floribus forma similium, gravi, & odoratorum sustinentes, non tamen unius coloris, sed varii: nam superiora folii carinæ, ut sic appellem, sunt coloris, hoc est, blande & dilute rubentis, laterum alæ niveæ, & carina infima, licet alba, rostro est purpureo: siliquæ flores subsequentes, non planæ, sed teretes, oblongæ, rostratæ, internodiis distinctæ, quemadmodum Polygalæ Valentinæ siliquæ, continentes subrufum semen, oblongiusculum.

Securidaca altera.

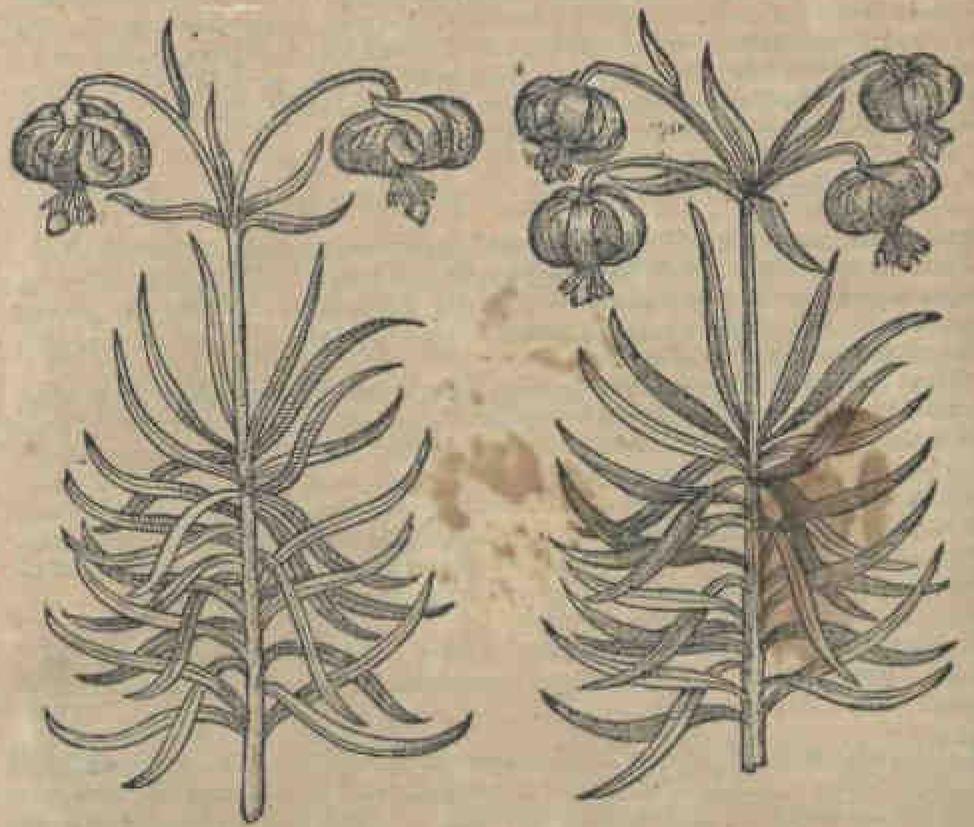
Lilium mont. flavo flo. maculis diſtincto. Lilium mont. fla. flo. nullis maculis diſtin.



CERTE ea quam illo ipſo anno Robinus donabat nobiliſſimo viro Philippo Marnixio Sanct-Aldegondio (ex qua ad poſteram iconem exprimi curabam) quatuor flores ſummo caule, ut & Lilium Byzantinum minutum, ab eodem exorti naſcentes, colore flavo dilutiore, ſeu quaſi pallente, circa umbilicum nigricantibus maculis diſtincto, & ſex ſtaminibus apicibus miniacis donatis habentes. Florebat extremo Maio, ſed nullum ſemen ferebat.

Lil. mont. fla. flo. varietas.

QVVM porro de Lilio montano flavum florem gerente cogitarem, mittebat ad me Burdegala eruditiſſimus vir Ioachimus Venerius, quatuor illius Lilij generis bulbos, monebatque duorum generum eſſe, alterum altero magis præcoces flores proferre: addebat me ut per ſe aliud ad hoc genus obſervaſſe, cujus flores nullis punctis interne diſtincti, ſed omnino flavi eſſent, illumque unicum bulbum duntaxat habere. Ipſo autem teſte, naſcitur Lilium iſtud de quo agimus, in *Cagtire en barechs* nuncupatis locis, atque Pyrenæorum montium alijs, unde ipſe retulerat, cum quibuſdam alijs elegantibus plantis, quæ in illis montibus proveniunt. Plures deinde hujus Lilij bulbos ab ipſo ſuperiore Maio accepi, quos amicis communicabam.

Lilij montani flavo flore pleniore hiſtoria.

CETERVM quatuor illi priores bulbi hoc anno ſexcenteſimo ſupra milleſimum ... ſtulerunt, non, ut ad ſemper numerat, alij præcociores alijs, ſed omnes eadem hebdomada, binis ternos, tertius quinos, quartus ſeptenos ſiquidem ternos, ex rivo caule ab eodem ortu natos: qui plures, paulo infra ſummum caulis faſtigium, in alabinos habebant. Erant porro omnes flores, quum primum aperiebantur, colore ex viridi pallentes, deinde pallidi, tandem flavi, foliis conſtantes rurſum reflexis & convolutis, ut tria florum Lilij Byzantini miniati & montani, a medio ad umbilicum interne punctis ſeu maculis ex atro purpureis diſtinctis, ſex ſtaminibus virentibus, miniato apice præditis, ſtipulo pallidiore, in extremo craſſiuſculo ex umbilico prodeuntibus, quo piſtillo nonnullos flores carere animadvertebam, etiam in eadem planta: quali odor medius inter gravem & ſuavem, qualis ferè in Sambuci & quarundam Indicarum floribus. Caducis floribus ſuccedentes, hic ubi tales aut ampliores fuerunt, rotundi & virides, quos incondite ordine plurimi ambiebant ... anguſta, viridia, mollia, tenera, oris albicantibus, & velut lanugine quadam obtectis: ... radicis Lilij albi. Flores produxit dumtaxat ... anno ſerotinus, ... quam Byzantino & montano.

I. Generis eſculentorum Fungorum ſpecies.

Morchen. Morilles.

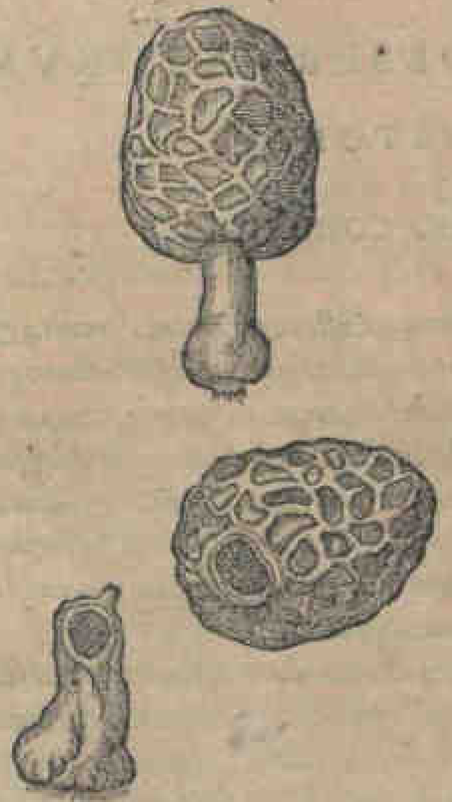
Fungus ſpongioſus.

Morilles.

Spongiole.

Parandi ratio.

Morchi, vulgo fungi ſpongioſi.



ſe ſtriis, habet: interna autem parte cava & hiante: Germani illas Morchen nominant.

Naſcuntur autem Prima ſpecies apud Vngaros plerumque ſub abietibus, in cumetis, atque pratis ſiccis: Altera pre ſertim vero Tertia vero & Quarta ſub quercubus, magna ex parte.

Videtur porro hic fungus is eſſe, quem Dalechampius ſpongioſum cognominat, in aſperis ſaxoſis nalcentem, lapide tamen ad Caſtaneam radice ſolare fulvo, corpore ſpongioſo, figura in metam deſinente, ſuaviſſimi guſtus: quam ob rem in delicijs haberi variji modis præparatum, ut hominum palatis variis condimentis oblectatur. Galios vocare Morilles, inde fortaſſe, quod ad mori fructui figuram nonnihil accedat. Et quem Baptiſta Porta, a Neapolitanis Spongiolas appellari ſcribit.

Ceterum Morchi vocatos recentes ſolent Vngari aſſare ſupra craticulam, vel ex oleo decoquere: ſedenam reſiccati ſervari poſſunt, prius tamen maceratur; qui vero delixis vesci mavult, in aceto coquere non oportet.

GENVS II.

VLTRA Balatonem lacum Vngariſe, in parva inſula cui nomē Fenes, Simondienſi Comitatu, Aprilium menſe nalci intelligebam Fungi genus delicatiſſimi ſaporis, cujus nomen indicare nemo poterat ſed illi ſimile eſſe ferebatur. qui inter perniciolos Decimum ſexti generis eſt, & ab Vngaris Kygio gomba, a Germanis Schlangen ſchwammen dicitur: pyramidali tamen dodrantali; neque & anguſtu hunc fungum eſſe.

Tertii genus fungi eſculenti. Szent Gyorgyi gomba. S. Georg ſchwammen.

Natalis.

Parandi ratio.

III. Genus eſculentorum Fungorum.

GENVS III.

TERTII generis, quod Vngari Szent Gyorgyi gomba, Germani S. Georgen ſchwammen appellant, quia circa diem D. Georgio ſacrum (qui in vicesimum tertium Aprilis incidit) invenitur, unicam obſervabam ſpeciem.

Parva autem illa eſt, duarum unciarū amplitudinem vix æquans, orbiculati fere forma, ſuperne quidem aliquantulum excuberante, & quodammodo pulvinacea, inferne vero concamerata, & quibuſdam veluti venis diſtincta, pediculo craſſo, brevique, coloris exalbidi, cui flavi quidpiam admiſtum ſit.

Creſcit in ſiccioribus atque paſcuis pratis: & fortaſſe is erit fungus, quem Horatius Satyra quarta lib. II. Sermonum, optimum pronunciat his verbis,

——————Pratenſibus optima fungis
Natura eſt: alijs male creditur.

Eſt vero Tertium hoc genus aliorum fungorum modo præparandum, qui repurgati, ut plurimum elixantur ſolene, & in ſartagine conciſi, qui inter binas lances repoſiti, inſperſo oleo olivarum vel butyro, & pipere addito, ſuper prunas coquuntur: aut cum lardo injiciuntur juſculum ex lardi cremore paratum, quod Germani Brühe appellant.

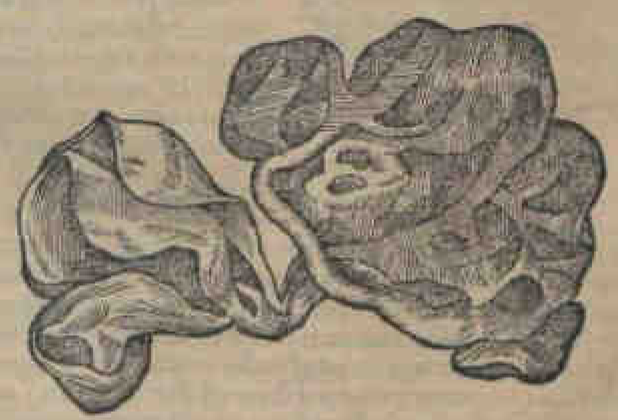
i. Genus pernicioforum Fungorum.



1. genus per- nicioſor. fun- gi. pRiMi generis unicam fpcciemobfcrvarcmemini, licet magnitudocjusunaron fir: J, (cjlcaradivcrfiuccraexxtaccoririatbitror. Quoiquotautemconfbcxi.brevidimo, vdpo.

vel potius nullo pediculo nituntur, ſed caudici arboris inhærent, ut ſingulare, aut gemini, membranaceâ cute conſtantes implicatâ & ſinuoſâ, coloris ex cinereo nigricantis. Vulgus auriculam Iudæ nominat. Cartilagineæ enim & membranaceæ eſt ſubſtantiæ, quemadmodum auris. Vngari *Bodzafa tetew*. Germani *Holder ſchwamm* appellant, quia in Sambuci caudice naſcitur, cum huic arbori primum prorumpunt folia.

Solet is fungus, tametſi non eſculentus, a plerisque ad diverſa exiccatus in uſum: nam in gutturis tumoribus, acetum in quo maceratus fuerit exhibere ſolent, ad gargarizandum & guttur eluendum.

Holder ſchwämmen. Sambucus.

GENVS II.

SVB Pruni arboribus novo Vere naſcitur Secundum genus, idedque ab Vngaris *Szilva* ... nuncupatur.

Illius unicam ſpeciem tantum obſervabam, numeroſam ex eodem pede, nullo tamen pediculo conſpicuo, confertim naſcentem, varia magnitudine & forma fungorum: nonnulli binas aut ternas uncias lati erant, atque etiam ampliores, vel orbiculati: ſiguratim anguloſi; alij paulo minores, nonnulli vix unciam lati: omnes coloris ex albo, pallido, & ruſo commixti.

II. Genus pern. fung.

GENVS III.

TERTIVM genus Vngari ... Germani ... appellant, quoniam in ſterquilinijs naſcitur primo Vere.

Vngaris admodum eſt hic fungus, propterea nemini non notus, forma orbicularis in plano velut circino ducta, exilis & tenui fultus pediculo, tenui non craſſo corpore, candidus omnino, & veluti farina conſperſus tum inferne, tum ſuperne: pars tamen averſa ſeu ſupina, fuſcis ſtrijs, a pediculo in oras ductis, diſtincta eſt.

III. Genus pern. fung.

GENVS IIII.

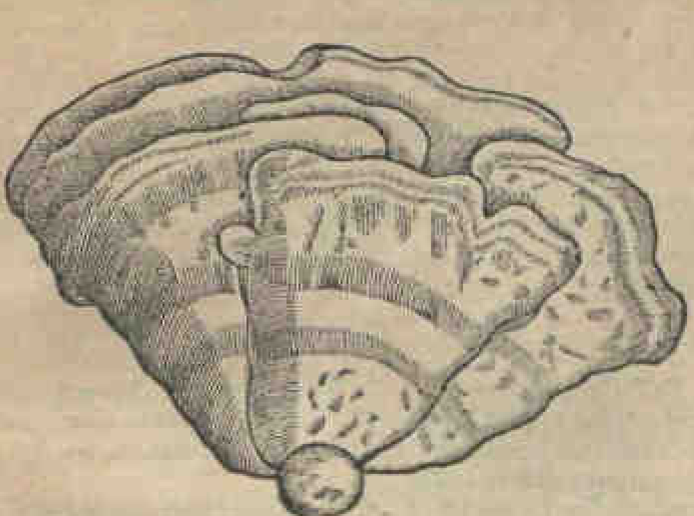
QVI Et novo Vere poſt prematuras pluvias plerumque naſci ſolet in Salicum caudicibus Quartum genus, ideo ab Vngaris *Fűzfa gomba*, a Germanis vero Felber ſchwammen vocatur.

Eſt porro hic fungus confertim ſæpe ex caudicibus Salicum ſuperiori parte erumpens, Lichenis inſtar, in corpus tuberoſum excreſcens varia forma & magnitudine: nam pleraque tubera uncialem magnitudinem non ſuperant, alia binas & ternas uncias interdum ampla ſunt, coloris elegantis & varie commixti: nam in eis & albedo conſpicua eſt, & pallor, & ſuave rubens color, & ſaturatus etiam flavus, addo his fuſcum ſive fuliginoſum colorem hinc inde ipſis inſperſum.

IIII. Genus pernic. fung. Felber ſchwämmen.

GENVS V.

v. Genus pernicioſorum Fungorum.



NASCITVR etiam novo Vere in putreſcentibus Ceraſorum caudicibus, Quintum genus pernicioſorum fungorum: eam ob cauſam apud Vngaros *Rewsceresfa gomba* ...

V. Genus pernic. fung. Kerſbaum ſchwämmen.
